5879. *Chairman.*] Is it your opinion, that the combination proposed would necessarily involve the removal of the site of the gallery?—I have been apt to take that for granted, understanding that there were difficulties in the way of greatly extending the present site. I consider the present site to be the most eligible, if the object be to give publicity and convenience to the public; if, on the other hand, it be found that injury to the pictures results from it, I think it is better that the pictures should be moved. There is one other observation which I would wish to make, and it is this: that if the whole artistic collections of this great metropolis are to be combined under one management, those views which I have ventured to bring before the Committee, with regard to the management of the National Gallery, might be considerably modified.

5880. Are you not of opinion that the crowds of all classes of people, children, nursemaids, peasantry, and people of that description, who come in merely for the purpose of sitting down on a bench, or for various other purposes, are injurious in this respect,—that they prevent those people who have a taste for pictures from going to see them at all?—I have very often been in the National Gallery, but it has never happened to me to be there when it was at all crowded, or when I have felt any inconvenience of the kind to which the question refers. I have observed, on looking over the printed Minutes, that an order was already given to exclude children under a certain age; an order which I think was exceedingly judicious.

5881. Mr. *Vernon.*] Have you ever been there on Whit Monday?—I have never been there on any holiday; I should studiously avoid it.

5882. *Chairman.*] If this plan of a combination of art collections were to be adopted, bringing in everything that could be classed under the head of antiquities and fine art, sculpture, vases, gems, and other objects involving a great number of apartments under their separate directors, that would probably require a modification of your scheme with regard to the special management of the National Gallery?—I should think so; but I should always be inclined to keep the principle in view of giving the entire and absolute control of the pictures to a small body of responsible individuals; that body might act with a head, who might also be the head of the other establishments.

5883. If the proposal were to have a general director of the National Gallery of combined objects, with a special director for classical sculpture and Egyptian sculpture, and a special director each for those other departments, forming a general Council or Board to the supreme director, you would still be disposed to adhere to your plan of having the National Gallery under its Board of five trustees, constituted as you have explained to us?—I should; because my experience would lead me to believe that many gentlemen are admirably qualified for taking charge of an antiquarian collection, who do not occupy themselves at all upon pictures, and who consequently would not be competent to perform the duties of the Council in reference to the management or purchase of them.

5884. Do you think that any great difficulty would arise with reference to the management of the gallery of paintings, if it were placed under one director, in a general system by which another director should have the charge of the classical sculpture, another of the Egyptian sculpture, and so forth?—I think the field that the pictures would fill is more extensive, and requires a larger amount of varied information; besides which, I consider that those parties who interest themselves in different branches of antiquity would, generally speaking, if they had confidence in the person placed over that department, be perfectly satisfied with his management, and would not be inclined to question it. But I think that

that the great majority of the public, who take much more interest in pictures than in antiquities, or in any branch of antiquity, and have more knowledge, or at all events presume that they have more knowledge, on that subject, would be proportionally more apt to criticise the management.

5885. Does it not appear to you that the gentlemen placed at the head of some of these other departments, such as the Grecian vases, the collection of ancient paintings, gems, coins, and sculpture, and the more beautiful objects of ancient art, might have such a general knowledge of art, and even of modern painting, that they might be able to afford advice and assistance in the general management of the establishment, so as to obviate the necessity of that more extended system of management which you have described to us in your plan of a Board of five trustees?—I think that, in many instances, they might have the necessary qualifications, and be desirable members of the Board; but I do not think that they would necessarily have them.

5886. Do you not think that with a general system, under one director, who should, of course, without being a professional man at all, be a man of taste and judgment, able to obtain the occasional advice and assistance of other competent persons not immediately connected with the management, you might establish a system of control which would be as satisfactory as that which you have suggested?—If those other heads are to be merely in the nature of an irresponsible council, I do not think that the objections which have occurred to me against leaving the charge in one person would be diminished; if they are to form a Board, the result would be a system very nearly approximating to that which I have suggested.

5887. Do you consider it desirable that the Royal Academy should be in connexion with any system established?—I think there should be no regulation upon the subject whatever; supposing the existence of a limited Board of Trustees, I think members of the Royal Academy should be eligible just as any other professional class of individuals; but I can see no reason why a Royal Academician should be necessarily connected with the National Gallery in any way.

5888. I allude more especially to the question of site and accommodation; there seems formerly to have prevailed a notion that it was desirable and proper that the Academy should be connected with the National Gallery, and the consequence was that they both obtained accommodation in the same building; do you consider that it would be desirable, in any new arrangement of the Art collections, that the Academy should have a position of that description?—I think that probably the reverse would be desirable; it seems obvious that if the National Gallery is to remain on its present site, all the accommodation which is now in the possession of the Royal Academy would require to be given up; or, on the other hand, if the National Gallery is removed to a suburban situation, their separation would necessarily take place, and I can see no reason for again uniting them; on the contrary, there are probably reasons for placing the building which is to contain modern works for exhibition in a more populous and frequented situation, which reasons do not apply to placing the National Gallery there.

5889. Mr. *B. Wall.*] Those observations of yours are made, are they not, upon the supposition that the ground now occupied by the National Gallery would be given up to the Royal Academy?—It does not follow; if the National Gallery is removed to another situation, a resolution to do so would not, in my apprehension, necessarily result in the removal of the Royal Academy; it would be for the Government and the Royal Academy to make any arrangement that circumstances might require, but the fact of removing the one without necessarily removing the other would occasion a dissolution of that temporary, and, as it appears to me, accidental tie of position, and I see no reason why that tie should be renewed.

5890. Would not that be practically giving up to the Royal Academy the finest position in the world?—I have no knowledge of the position of the Royal Academy with reference to that building. I should presume that the Government would be free to dispose in any way of the buildings now in the possession of the National Gallery, and for aught I know, the Government may have power at any time to remove the Royal Academy from their present position, provided any rights or claims that the Royal Academy may have upon the Government, about which I know nothing, were properly compensated, and amicably adjusted.

5891. *Chairman.*] To revert for a moment to the question of purchasing, is it not your opinion that any defects or errors that may be imputable to the existing system of management, in regard to the purchase of pictures, apply rather to the

J. Dennistoun, Esq.

14 June 1853.

omission of opportunities, than to the question of errors in the actual choice o particular pictures; that is to say, allowing pictures of a spurious description to be passed upon them as originals?—I think the error has been the want of system, but as to the practical result, it appears to me wonderful how, in so long a period, and considering the very large sum of money that has passed through the hands of the National Gallery trustees, so few mistakes have been made.

5892. Have you any further suggestions of your own to make, which have not been brought out by questions put to you by the Committee?—The only urther observation I would venture to make, is the extreme desirableness of something like an arrangement of the pictures. I believe that is a matter felt to be so important, that it is hardly necessary for me to speak upon it. I think a chronological arrangement in schools is desirable; but in the meanwhile, as that would be totally impossible in the present building, I think, as far as possible, an arrangement of the pictures might be made chronologically, without reference to schools; even that would be a step. I also think that new purchases ought, for a time, to be exhibited apart, or, at all events, in a portion of the gallery where they would at once be seen and recognised as new purchases, in order that the public might have an opportunity of seeing how far their interests have been consulted.

5893. Lord *Seymour*.] You have stated that, in your opinion, it is desirable to combine the different objects of art in one building?—I think that, on the whole, it is desirable, especially for those who are anxious to have an opportunity of improving themselves; but probably, with reference to the general public, it would be rather less, than more convenient.

5894. You think, with reference to persons who go there for the purpose of study, it would be desirable that, when they went to the building, they should have an opportunity, after looking at pictures, to look at prints, and sculptures, and other objects of art?—I think it would be a great boon to connoisseurs, and to other intelligent persons.

5895. Do you think that in a building provided for that purpose it would be desirable for persons, properly qualified, to give lectures on the progress of art, and exemplify those lectures by reference to the collection?—I had not thought of that question; but it appears to me that at present the fashion of lecture-giving is so much on the increase in this country, that probably such an arrangement might be desirable.

5896. You said, in your opinion, pictures were preferred by the public to antiquities, and that therefore greater care should be taken in regard to the pictures, than in regard to antiquities?—I meant to say, that a larger portion of the public took an interest in pictures than in antiquities, and felt themselves more competent to criticise them, and that there would be a larger number of the public whom it would be desirable or necessary to conciliate in any arrangements that might be made for the management of the gallery, while departments of pure antiquity are seldom visited, except by a limited number of cultivated persons, whose confidence in the management would be more easily obtained.

5897. If you combined together pictures and other objects of art, would you put in the same building all other objects of antiquity?—In certain views it might be perhaps difficult to draw the line, but I apprehend that if in a group of buildings, or a single building, the antiquities were wished to be united with the collections of art, such antiquities as the Egyptian and the Etruscan ought to be preserved there. I do not think it would be of so much importance to put there the antiquities of Mexico; but on the whole perhaps it would be better to put all matters of antiquity relating to art in the same department with the pictures.

5898. Mr. *B. Wall*.] Would not the process of removing them be exceedingly difficult?—I cannot speak to that, but I conclude that as all those objects have been, within a comparatively recent period, placed in the British Museum, the same means might be found to remove them; the whole thing appears to me to be a matter of expense, and to be a question how far the convenience counterbalances the expense, both of so extended a building, and the removal of the individual objects.

5899. Mr. *Vernon*.] Being of opinion that not much injury arises to pictures from dirt and so forth, do you consider that the advantage of having works of art all combined together, would counterbalance the disadvantage of having to remove them out of the reach of the general public?—I think that as regards the public, it is desirable that all the collections should be united in some such situation as

that

that which has been, I believe, already in the view of Government and Parliament; but with regard to the details, I think it is a matter very much of expense.

5900. If you can obtain, in the heart of the town, two sites, each of them sufficiently large for separate purposes, one for the purpose of sculpture, and the other for the purpose of pictures, would it, in your opinion, be preferable to keep the collections, although in that divided state, in the heart of the town, and therefore more available to the general public, than, for the sake of combining them, to take them to Kensington or any other place?—I think it might be very practicable to have two exceedingly interesting museums; one, consisting of the National Gallery, illustrated by collections of drawings, engravings, nielli, and, possibly, pottery and ivories; while, on the other hand, there might be a collection of antiquities, more properly so called, including those from Nineveh, Lycia, Greece, Rome, and so forth, in connexion with sculpture. At the same time, I repeat what I have before said, that if, without an undue sacrifice of the public funds, the whole can be brought to the same place, I think the results would be still more satisfactory; and it appears to me, that, besides the question of money, some weight might be given to the question of convenience. If, however, in order to provide a museum of a sufficiently large extent, a very long series of years must pass, during which those museums must necessarily be kept in a state of transition, without any great improvement being made in their management or otherwise, the disadvantage of that might counterbalance the advantage to be gained on the other hand.

5901. *Chairman.*] Are you aware of the historical series of pictures that exist in several of the Italian galleries, in the Academy of Florence, another at Siena, and another at Pisa; do you think it advisable, in enlarging and improving our own gallery, to have something in the way of a complete series, say of the Italian school, without reference to the higher merit of the pictures, in order to bring under one view the progress of art in Italy in particular, as the source and foundation of art throughout Europe?—I think I have already stated, that as a secondary object it is desirable to bring many such specimens together, although not to the extent to which it is carried in some galleries in Italy, where many works of exceedingly small importance are preserved, more from local interest than anything else; but up to a certain point, I think this is an object which the trustees of the National Gallery should carefully keep in view. I have already stated that I think they should omit no favourable opportunity of obtaining any monument illustrative of the progress of art in any school, such as pictures authenticated by signature or date, and of sufficient interest to be specimens of art of that period; but I think it is desirable that they should, in the first place, bestow their attention and dedicate their funds to that more particularly interesting and valuable period of Italian art which I have already considered in the course of my evidence.

5902. My question related not so much to procuring these specimens as to the arranging of them, because there are various modes by which the different schools might be chronologically arranged; I alluded to a series of them in one long gallery which should embrace a wider compass, a longer period, and a greater range of art, irrespective of those special arrangements of the individual schools in their own particular departments?—I think the principle is a very valuable one; it is followed, more or less, in all galleries which have been recently arranged, such as Munich and Berlin, and I believe it will be followed also in the new gallery which is now in the course of erection at Dresden.

5903. Has the plan of having an outer gallery, for exhibiting an enlarged historical series, and other smaller apartments giving the historical series of each school or period in detail, been adopted in any recently erected gallery?—No; I am not aware of any, because in those instances to which I have referred, the classification is carried out chronologically, also placing in juxtaposition the pictures of the same school. I think that principle is a very good one, but it is one which may be overdone; for example, in the Munich gallery, if I recollect rightly, there are two rooms, one of which, as I think, the largest room, and another, one of the largest of the smaller range of rooms, are dedicated exclusively to Rubens, where there is a greater display of Rubens than there is in any other collection; the effect of which, to my eye, is somewhat monotonous; and I think that a judicious intermixture of the pictures of Rubens with those of Vandyke and other contemporary masters of his school, is not objectionable.

5904. Is not the plan to which I have adverted, carried out in the outer

J. Dennistoun, Esq.
14 June 1853.

gallery of the Uffizj, in Florence?—Very inadequately; there is an attempt made to do so, but it is made very imperfectly; generally speaking, the pictures in the outer gallery, except a few early ones, are of very inferior interest.

5905. Mr. *B. Wall.*] Are they chiefly portraits?—Portraits above, and other pictures illustrative of the history of art below.

5906. Mr. *Vernon.*] Are you aware that there is an attempt to have a central gallery at Munich, lighted from the top, in which the greater works of art are, while the small chronological specimens are in side rooms, lit by side lights?—The centre is not a gallery; it is a series of large halls lighted from the roof, but the principle of the building is that which the Honourable Member describes it to be; one side of small rooms is dedicated to a chronological series; the other, when I was there, was not finished, but I believe it is now dedicated to ivories, &c.

5907. *Chairman.*] Do not the galleries to which I have alluded, take Florence, for instance, comprise specimens of all, or almost all, of the earliest Tuscan schools?—No; I have never been able to ascertain on what principle that gallery was arranged; there are in the outer corridor 10 or 15 valuable specimens of Italian schools antecedent to the year 1500; but equally valuable specimens, though perhaps smaller, are found in the two rooms dedicated to what are called the Tuscan schools.

Sir *Charles Eastlake*, P. R. A., called in; and further Examined.

Sir *C. Eastlake*, P. R. A.

5908. *Chairman.*] WE propose now to continue our inquiries as to the general management of the gallery; but there are some points with regard to that management bearing partly upon the subject of cleaning, which have been lately brought under our notice by the Return given in of the Minutes of the year 1844; it appears that during the interval between the close of the London season in 1843 and the commencement of the meetings of the trustees in the year 1844 Mr. William Seguier died; do you recollect the date of his death?—I do not, precisely.

5909. He died during that season when there were no meetings of the trustees held in the gallery?—That is my impression.

5910. The last meeting of the trustees was, I believe, on the 5th of August, and the next meeting was not until the 5th of February following?—My appointment was in November 1843.

5911. Your appointment was made by the Treasury, was it not?—Yes.

5912. Was there any meeting of the trustees held at the period of your appointment to receive you and give you your instructions?—No.

5913. Then, in fact, you entered into the management of the gallery without any communication whatever with the trustees in consequence of your appointment by the Treasury?—There was no special meeting on the occasion.

5914. You took up your official position without any kind of instruction or communication with the Board of Trustees?—Except with Sir Robert Peel and the sub-keeper.

5915. How long was it after your appointment before any meeting of the trustees took place?—In February 1844.

5916. Upon that occasion your appointment was notified to the trustees?—Yes.

5917. Was there any notification made to the trustees of the death of the previous keeper?—Probably there was; but I am not aware of it.

5918. During the intermediate period you had carried on the management irrespective of any meetings of the trustees, had you not?—Yes; I also suggested the purchase of some pictures from the Fesch Gallery; I ventured to do so after I had been in office scarcely a week, and I could only do so by communicating with Sir Robert Peel.

5919. I think that on the 23d of January a picture by Francesco Mola was destroyed, was it not?—Yes.

5920. Was there a meeting of the trustees called specially to consider that subject?—I do not remember that there was.

5921. How did you proceed yourself in the direction of the gallery to act on the occurrence of so great an emergency?—I think that at the very moment I was not in the way. I did not hear of it immediately, but Colonel Thwaites acted, and went to a public office, after the person who had committed the injury had been apprehended.

5922. Did

5922. Did you enter into communication with Sir Robert Peel immediately on he subject; was he in town?—I do not recollect whether he was in town or not.

5923. At that period, with regard to an occurrence of that description, or any other matter of importance, you were entirely dependent on the Treasury, and had no assistance from the trustees?—I remember afterwards communicating with Sir Robert Peel.

5924. With reference to the employment of Mr. Brown in the gallery, you mentioned having stated to the trustees that Sir Robert Peel had recommended Mr. Brown, and assented to his being employed; upon what occasion did you make that statement to the trustees?—At a meeting of the trustees, when Sir Robert Peel, if I mistake not, was present, because I remember his speaking on the subject himself; but there seems to have been an omission in not inserting anything relating to that transaction in the minutes; I believe, however, that it was formally brought before the Board, both by myself and by Sir Robert Peel.

5925. Was that before or after Mr. Brown had executed the work?—Before; it was to obtain the sanction of the Board for his employment. I do not imagine there was any irregularity in that transaction, except that it was not inserted in the minutes.

5926. Then Mr. Brown was in fact employed by the authority of the trustees? —No doubt he was.

5927. On the 5th of August 1844, it is stated, "Mr. Eastlake brought to the "notice of the trustees the expediency of causing such pictures in the National "Gallery as required cleaning, &c., to be dealt with during the ensuing vacation;" will you explain what is meant by the etcetera?—I imagine varnishing; cleaning being the strongest term that could be applied, I suppose the etcetera would relate to minor operations.

5928. It did not comprise "restoring"?—Not necessarily; I do not now remember whether any restorations were then reported by me as being required.

5929. Were you never authorised by the trustees on any occasion to restore pictures?—Never; Mr. Seguier, of course, made any restorations he thought necessary.

5930. And then it was resolved, in consequence of that statement of yours, "That Mr. Eastlake be authorised to take this opportunity of causing such work "to be executed by proper persons to be selected for the purpose;" does that imply that you were employed to select any picture in the gallery you thought fit, without any special order from the trustees?—Quite so.

5931. Then you had full discretion given to you to take down any picture you thought fit, and commit it into the hands of any proper person you might select? —Yes; indeed, I imagine I might have employed any picture-cleaner I chose.

5932. Then, in short, the trustees who have been in the habit of exercising rather a rigid control in regard to some other matters since, and during the period of your office, in respect to the cleaning of the pictures, transferred their responsibility entirely to you?—At that time and in such matters such was the case.

5933. And there was no specification made in the minutes of the particular pictures to be cleaned on any occasion?—It is very possible that I may have called their attention to certain pictures, and may have stated what I thought was necessary to be done, but nothing of the kind appears on the minutes. The Judgment of Paris, by Rubens, required a restoration, and was restored in the autumn of 1844.

5934. You stated in your former examination that you considered Mr. Seguier had overpassed his instructions in cleaning the late pictures; there was a meeting of the trustees held, I believe, on the 12th of November in the last year, when a resolution was passed by the meeting, as to the result of the cleaning, and its effects upon the pictures; that minute is to the following effect: "The trustees took "into consideration the cleaning and other restoration of pictures during the past "vacation, as directed by their minute of the 5th of July last, namely, the varnish "removed from the following pictures: numbers 12, 14, 61 by Claude, the old "varnish removed; 26, Paul Veronese; 22, Guercino; 57 Rubens; 127, 163, "Canaletti; 165, N. Poussin, the old varnish removed. Nos. 3, Sebastiano del "Piombo; 33, Parmegiano; 13, Murillo, the varnish partly removed; and the "whole of these pictures re-varnished." I presume we may understand that that implies that the whole of the varnish had been removed from the nine first mentioned

Sir *C. Eastlake*, P. R. A.

14 June 1853.

tioned pictures, having been removed only partially from the three other pictures? —I should gather as much from that statement.

5935. The Minute specifying that, from the three last-mentioned pictures, the varnish had only been removed partially, would imply, as to the others, that the whole had been removed?—I should so conclude from the statement; but there may be sometimes an incorrectness of expression in the Minutes; Mr. Seguier would be able to rectify such incorrectness, if it exists.

5936. Then the resolution that follows is, "Resolved, that the trustees approve "of the result of the instructions on this head, as evinced in the improved appear- "ance of the pictures, and of the manner in which the operations have been per- "formed by Mr. Seguier, under the superintendence of Mr. Uwins." The trustees therefore, after having inspected the pictures, were satisfied that the varnish had been entirely removed from nine of those pictures, and that it had only been partially removed from the remainder?—Yes; I do not remember that they took particular cognisance of the degree to which the varnish had been removed; I do not recollect that any such inquiry was made.

5937. You were present at that meeting?—I believe I was present at a meeting in November.

5938. And being of opinion that Mr. Seguier had over-passed his instructions, which were to the effect that he might remove the varnish from the pictures, did you express any dissent from the resolution of the meeting, as to their satisfaction with the mode in which he had performed his duty?—I merely stated, as I believe others did, that the pictures looked a little fresh, and hoped that time would restore them sufficiently to a due tone. I am not aware that I absolutely used the expression,—the instructions were over-passed; my impression is (but my evidence will show) that I said it would be a question whether the instructions were over-passed; if, however, it be a question, I should say that the instructions were over-passed.

5939. But you did not think it necessary on that occasion to dissent; you thought it not a matter of so much importance as to make it necessary for you to disturb the unanimity of the meeting?—No further than by the general expression to which I have referred.

5940. Lord *W. Graham.*] In what way should you say the instructions were over-passed?—It is still a question of degree; I think it was not necessary to remove so much of the old varnish.

5941. You confine it simply to removing the varnish?—Yes, I do not imagine that anything else was done; it is quite possible to make a picture look too fresh without damaging it, and by cleaning it unequally to injure its effect. I stated in my former evidence that I considered the Queen of Sheba Claude to be unequally cleaned, and therefore to have a somewhat inharmonious effect.

5942. *Chairman.*] In Question 4620 you were asked by Mr. Labouchere, "I understood you to say, that these pictures were finally cleaned against your "opinion," and your answer was, "No; the resolution that was carried was "not against my opinion; if you ask me whether the pictures have been cleaned "in conformity with that resolution, that is a different question. I believe that the "instructions of the trustees were over-passed"?—Then I stated it positively, and "so I should now; my impression was, that I said it was a question; but still my opinion on that question would be that the instructions were over-passed.

5943. We alluded, on a former occasion, to five regulations which you now explain, not as regulations, but as allusions to the practice of the gallery, one of those being a regulation against the temporary deposit of pictures in the gallery? —Does the question refer to pictures deposited by persons who have offered them for sale?

5944. No; it alludes to the temporary deposit of some remarkable picture, which may have been bought by a gentleman who considers it worthy of attention, and which he would be willing temporarily to deposit for exhibition in the National Gallery?—I was not aware of the existence of any regulation against such a proceeding.

5945. There is another regulation as to the vacation which you will find at page 13 of the first Return of Mr. Hume, as to the closing of the gallery; that was the original regulation, I think, when the collection was at Mr. Angerstein's house?—I am not aware of it.

5946. Is there not a board on the door of the gallery at this moment, which contains the regulation which was affixed to the door of Mr. Angerstein's house, prohibiting

prohibiting more than 200 persons entering the gallery at the same time?—I am not aware that it remains there.

5947. You are not aware that it is at the door of the gallery at present?—No.

5948. If it be, you would think it rather a singular notification, considering that there are sometimes 500 or 600 persons there at a time?—Yes; the number at present admitted is unlimited, I believe.

5949. There was also a regulation against occasional cleaning alluded to by Mr. Russell, which regulation was to be done away with by a minute of February 1851 or 1852; was that regulation in force during the period you held the office of keeper?—I do not clearly understand what the regulation is.

5950. It was at a meeting of the 9th of February 1852. The minute states: "Mr. Russell called the attention of the trustees to the existing regulations for "the care of the pictures in the gallery, by which the express authority of the "trustees is understood to be necessary for any positive act for the purpose of "improving the appearance of the pictures;" did that regulation exist during the period of your holding office as keeper?—No; I should have considered myself quite at liberty to direct cleaning in the mode referred to in that minute, with a silk handkerchief, at any time, and I did it myself frequently.

5951. To what, then, do Mr. Russell and the trustees, who seem to have acquiesced in this view, allude by this very stringent regulation?—I should find it difficult to explain the statement; it was Mr. Russell's mode of bringing forward the proposition; it was worded by him, and I do not see that that mode of expression was called for.

5952. So that in reality, even in regard to the practice of the gallery, the regulations that are alluded to from time to time do not represent, or represent very imperfectly, what was the practice of the gallery?—In the case to which you have called my attention, there was no such regulation; there was nothing to prevent the keeper from directing pictures to be cleaned with a silk handkerchief.

5953. There is one instance where, on the 2d of June 1845, at a meeting of three trustees, there was a regulation annulled which required the special sanction of the trustees for the introduction of any pictures for inspection into the gallery; but at a subsequent meeting on the 25th of January 1847 (of four other trustees who were not present at the former meeting), fault was found with parties who had introduced pictures upon the last occasion without the special sanction of the trustees, but with the sanction of the keeper, so that upon that occasion, the trustees present upon the later occasion overlooked the regulation of their colleagues who were present on the former occasion?—Yes; but is not the expression, "annulled," which you have made use of, rather too strong? It was set aside for that occasion only, I should imagine, not annulled altogether.

5954. On the 2d of June 1845, in Mr. Hume's Return of 1847, there is this minute: "The trustees having taken into consideration the inconvenience that "may occasionally be felt from refusing admittance to pictures offered for purchase, "and tendered for their inspection at their meetings: Resolved, That a discretionary "power be granted to the keeper, and in his absence to the secretary, to allow "pictures brought to the gallery under such circumstances to be received, when they "shall appear to them worthy the attention of the trustees"?—That gives a discretionary power to the keeper at all times.

5955. But on the 25th of July 1847, in a letter written by the instruction of the trustees to a gentleman who had forwarded his picture to the gallery, it is said, "I am further directed to inform you, that this picture has been forwarded to "the gallery contrary to their regulation, the consent of the trustees not having "been specially obtained for the purpose"?—It should have been "the consent "of the keeper not having been obtained." I believe that is the only error. The picture was sent without any permission whatever. I do not see that there is any important contradiction.

5956. The Committee may infer that, from the general mode in which both the regulations and the minutes have been made out, there was no system of intelligible or generally recognised regulation in force under the late system of the trustees, which could be a regular and constant guide to the conduct of the business of the institution?—In the minutes the wording is sometimes loose, as in this case; but I think it may be explained by substituting the word "keeper" for the word "trustees."

Sir *C. Eastlake*, P. R. A.

14 June 1853.

5957. That is rather an important alteration, is it not?—Yes, it is so. But the minute had reference to a case where a picture had been sent without any permission whatever.

5958. Was there any regulation whatever with regard to the number of trustees requisite to constitute a valid meeting?—I have always understood that it was necessary that there should be three trustees to constitute a quorum.

5959. You have understood that to be the practice?—Yes.

5960. Were there not very many occasions when only two were present, and even in some instances only one trustee?—I think it will be found that when one or even two trustees only have been present no important business has been transacted. I think there was one instance when Lord Colborne alone was present, and he declined to do anything.

5961. Are you aware of the date of that?—Not at this moment.

5962. On the 7th of May 1849, was there not a meeting held when Lord Colborne was present alone?—Yes.

5963. Referring to the minute, does it not appear to you that any business of importance was transacted on that occasion; were there not various pictures offered for purchase and declined, and various other matters of business transacted?—It might appear so from what is stated in the minutes, but it sometimes happened that full information was before the trustee, so that he might have very sufficient grounds for acting; but the question of the legality of acting at all in regard to important or unimportant business is another affair, and I imagine that it would be always incorrect, or at least always irregular, for one or even for two trustees to transact any business whatever. The instance to which I alluded when Lord Colborne was alone, and when another meeting was called in consequence, was the 5th August 1850.

5964. But has it not, in fact, been the practice, as appears not only on the occasion to which I have called your attention, but on several others to which I might refer you, that the business of a trust comprising a large number of members has sometimes been carried on by a single one?—That appears to have occurred.

5965. Lord *W. Graham.*] On those occasions would the minutes be acted on before they were confirmed by the next meeting?—I should imagine so. I do not know what took place in the instance in question.

5966. Because at the next meeting the minutes are always confirmed and signed by the chairman?—Yes; no doubt letters were written in consequence of Lord Colborne's decision at the meeting to which you have referred, without waiting for the next meeting.

5967. *Chairman.*] When no trustees happened to be in town, the business of the gallery was transacted by communications between the keeper and the First Lord of the Treasury?—Yes, when I had the honour to be keeper.

5968. And his authority was considered sufficient, without obtaining the authority of the trustees?—Yes, on the understanding which I before explained; Sir Robert Peel always guaranteed the consent of the trustees; bringing the matter before the trustees at their next meeting, reporting to them what he had done, and obtaining their sanction.

5969. When you speak of his guaranteeing the consent of the trustees, how do you understand that?—In cases where there could not possibly be, as he conceived, any difference of opinion; I have no doubt there may have been cases in which he would have said he could not act alone, although I do not at this moment remember any such case occurring.

5970. On other occasions there are instances, are there not, of individual trustees, not the First Lord of the Treasury, suggesting changes to the subordinate officers; for example, in the case of Mr. Russell suggesting to Mr. Seguier that he should adopt a different varnish for the pictures of the gallery?—Yes, so it appears: as regards the suggestion itself, it may have been judicious.

5971. Do you consider it was expedient that in a matter of such great importance, as we now find it to be, as the varnish with which the pictures were to be covered, one trustee should have the power to give instructions, without any communication or appeal to and meeting of his colleagues?—No; my opinion is that all that is irregular.

5972. Then your opinion is, generally speaking, that the late system of management, partly from the want of a concentrated responsibility, and partly from the want of a distinct understanding, by the different individuals or bodies, of their respective

respective duties, or individual responsibilities, is defective, and requires improvement?—I think so.

5973. Have you considered in what mode you think that improvement should be carried into effect, or what changes should be made?—I had the honour to submit a paper to you on the subject; I do not know whether I may be permitted to make use of it.

5974. That was a paper containing valuable suggestions on many points connected with the management of the gallery, and which it may be desirable to print in the Appendix to the Report of the Committee; but, in the meantime, perhaps you can favour the Committee with the substance of the matters adverted to in that paper?—The first principle which I have advocated there is individual responsibility; I should prefer that to such a constitution as the present.

5975. From what class of persons would you propose that the director should be appointed, and with what special functions invested?—I adhere to the opinion which I have expressed in the paper before you: the qualifications required are so varied that it would be well to subdivide them; to entrust to a secretary the task of compiling much of the knowledge that would be desirable for the use of the keeper; I think the keeper, or, as I have called him, the director, should have the sole responsibility with regard to the purchase of pictures, and their conservation. I think that he should have nothing whatever to do with the management of the establishment, properly so called, the admission of students, and so forth; all such details should be under the control of another person.

5976. How many officers holding positions of a certain eminence and responsibility would you propose to appoint; you have mentioned a secretary and a keeper?—I have implied that there should be three, because I would entrust the general management of the gallery to a superintendent.

5977. Would you give co-ordinate power to these three gentlemen, as a Board, or would you make one the head and the two others his council or assessors?—The superintendent might, perhaps, be considered as the chief, but they would be quite independent of each other, especially the director of the gallery. I think that he alone should be responsible for the purchase of pictures, and for their preservation in a good state.

5978. Being himself a subordinate officer to the superintendent?—Or co-ordinate with him, if it could be so managed. The director might not be willing to consider himself a subordinate officer; he would be, in fact, the most important officer of all.

5979. You would propose that the director should be entirely responsible for purchases?—Yes.

5980. I understood that by your plan the secretary was to be the person to undertake journeys or researches for the purpose of obtaining a knowledge of pictures that it might be considered desirable to purchase?—That would be his special department; much of the information which he would collect might be furnished by the director himself; but the object of employing a secretary for such purposes would be to collect a mass of facts and records which would be for ever valuable and available.

5981. You would invest the superintendent with the management of the general economy of the institution?—Yes.

5982. Would he have any authority over the two other officers?—I have not considered the minuter details of such a scheme; but I can conceive that such a superintendent might be quite independent of the others, as his office would chiefly be to regulate the admission of students, to pay the attendants, to look to the order, cleanliness and ventilation of the apartments, and to such matters as are now unfortunately mixed up with much more important concerns, and which take up the keeper's time unnecessarily.

5983. Then there would be still a divided responsibility?—Divided in the sense of separate; the officers would be mutually independent and severally responsible; but I assume that they would all be controlled by the Treasury, or by officers appointed by the Treasury.

Veneris, 17° *die Junii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Lord Seymour.
Mr. Ewart.	Mr. Raikes Currie.
Mr. Marshall.	Lord William Graham.
Mr. Baring Wall.	Mr. Stirling.
Mr. Vernon.	Mr. Labouchere.
Mr. Charteris.	Mr. Hardinge.
Mr. Monkton Milnes.	

COLONEL MURE IN THE CHAIR.

Sir *Charles Eastlake*, P.R.A., called in; and further Examined.

Sir *C. Eastlake*, P. R. A.

17 June 1853.

5984. *Chairman.*] A STATEMENT occurs very frequently in the minutes with reference to offers of pictures, which are said to have been declined "on the usual grounds;" can you explain to us what those words, "the usual grounds," imply?—There are several forms of letters which the secretary is directed to write in answer to offers of pictures. Sometimes a picture may be at a distance; and then there is a form for declining it because it is impossible to inspect it.

5985. A return has been made to the Committee of the number of pictures which have been offered to the Gallery, and which have been declined for want of room, since the year 1847. I think there are only three pictures included in that return. Does that embody your impression as to the number of pictures that has been declined by the Gallery?—Does the question refer to pictures offered as gifts or bequests?

5986. It refers to pictures offered for sale or as gifts since the year 1847, and which were otherwise eligible, but were declined by the trustees for want of room for their accommodation; it appears that there have been only three pictures declined on that ground; do you believe that to be the fact?—I should not suppose that there have been more. I am even surprised to hear that any pictures have been declined for want of room, if they were otherwise eligible, because it is now possible to accept pictures on the condition of their being afterwards presented to some provincial museum. I had the honour of making that suggestion to Sir Robert Peel, and it was adopted immediately by him; that was at a time when a Bill was brought forward in the House of Commons by Mr. Ewart, if I mistake not, respecting provincial museums. I suggested on that occasion, that pictures not of the highest merit, and which sometimes embarrassed the trustees, from not knowing whether to accept or decline them, might be accepted conditionally, with a view to placing them afterwards in provincial museums. Sir Robert Peel immediately recommended that course to the trustees, and it was adopted.

5987. You found some difficulty, did you not, on the part of many of the proposed donors in respect of that condition?—I believe so.

5988. In this return there is mention made of an offer to present to the gallery a picture by Santo di Titi having been declined for want of room; but I observe in page 4 of Mr. Hume's last return that the same picture is described in the minutes as having been declined on the usual grounds; was want of room one of the usual grounds?—Does it appear whether it was offered for sale or as a gift?

5989. There is no distinction made in the return as to whether it is offered for sale or as a gift?—I suspect that that picture by Santo di Titi was offered for sale; I remember seeing it, and certainly I should not have recommended its purchase.

5990. Then it was not declined for want of room, and it ought not to have been so stated in this return?—If it was offered for sale, it was not declined for want of room.

5991. Then that is a mistake in the return?—It appears to be a mistake.

5992. That is number one; then number two of the return is a picture by Domenico Panetti; but in page 22 of the same minutes it is stated to have been declined,

declined, because the trustees were unwilling to exhibit such a picture in the gallery; that is another mistake, I presume?—I have no recollection of that picture; the subject may have been the ground for declining it.

5993. Under the date of the 7th April 1845, it is stated in the minutes that Mr. Woodburn offered to the consideration of the trustees his collection of original drawings, and that his proposal was declined by the trustees because they were not within the sphere of their power of acceptance; what was the exact meaning of that expression?—The drawings were offered for sale, I presume; the word "acceptance" could not be correct, because they were offered for purchase; the minute may have meant to imply that.

5994. Lord *W. Graham.*] Are those drawings still in Mr. Woodburn's possession?—I do not exactly know what drawings are alluded to; there are a great many drawings in the possession of the surviving Mr. Woodburn.

5995. *Chairman.*] Is there any peculiar meaning attached to the expression "that they do not come within the sphere of the trustees' acceptance," which would seem to be rather a circuitous mode of declining an offer, and might apply to any objects that they had not sufficient reason for receiving?—There may have been an understanding that drawings could only be purchased for the British Museum, and not for the National Gallery.

5996. Lord *Seymour.*] You say there may have been an understanding that drawings could not be bought except for the British Museum?—That is one mode of explaining it.

5997. Was it an understanding of the trustees of the National Gallery that they had no authority to buy original drawings?—It is the only mode which I can think of, at the moment, for explaining the minute referred to.

5998. *Chairman.*] Perhaps I had better read the minute; it is in these words: "Read a letter from Mr. Samuel Woodburn, addressed to the Marquess of Lans-"downe, submitting to his Lordship an arrangement by means of which a collec-"tion of drawings in his possession might, on certain terms named, be made "available for the advancement of art. Resolved, that this offer not being within "the sphere of their power of acceptance, they find themselves compelled to "decline it"?—That appears to furnish a sufficient explanation; there was something peculiar in the offer which rendered it impossible to accede to Mr. Woodburn's terms.

5999. What were those peculiarities?—I do not know.

6000. Were you present, as keeper, at that meeting?—I have no recollection of the circumstance; but Mr. Woodburn's letter could be produced.

6001. Do the trustees consider that they are not entitled to purchase original drawings in crayon, or otherwise, as not coming within the designation of pictures in the proper sense?—I know of no law to prevent their purchasing such works, but since the failure of the purchase of the Lawrence drawings there has been an indisposition on the part of the trustees to entertain any offer of the kind.

6002. Mr. *Charteris.*] You say, "failure;" was there any attempt to purchase?—No doubt of it.

6003. Mr. *Ewart.*] There was an offer made of them?—There was an offer made of them; I was not connected with the National Gallery at that time; but there were attempts enough to secure them to the nation on the part of many.

6004. *Chairman.*] On the 8th June 1846, which is previous to this return, it is stated, that Mr. Ozias Humphrey's collection was declined, owing to limited space; do you remember that collection?—No, I have no recollection of it.

6005. During your tenure of office as keeper, how, and to what extent, were the trustees judges of the value of pictures submitted to them for purchase, or in what way did you share responsibility with them in respect to the purchases?—As far as I was concerned, I never offered an opinion on the value of a picture; I considered myself but little competent to give an opinion on that point; the usual mode of arriving at a proper judgment on such points was by consulting competent persons, and by referring to previous sales.

6006. When you were appointed to the office of keeper, being a professional artist of some eminence, and I presume owing your appointment to that circumstance, were you not expected to act as professional adviser with regard to purchases submitted to the trustees?—I had a clear understanding with Sir Robert Peel on entering the office, which I entered reluctantly, that I was never to be asked to give an opinion upon the value of pictures; I said I was not competent to do so, and that was among my reasons for wishing to decline the office;

Sir C. Eastlake, P. R. A.

17 June 1853.

Sir Robert Peel pressed me to accept it, and when I did so, as I stated on a former occasion, it was upon the understanding that I was chiefly to be consulted with reference to Italian pictures, for I professed that I was comparatively ignorant of other schools.

6007. If you considered yourself not competent to give an opinion as to the value of any pictures, upon what ground did you make an exception in favour of pictures belonging to the Italian schools?—In that case, also, I only spoke as to the merit of the pictures.

6008. And not as to their originality?—Yes, as to their originality, but not as to their value; I understood the question to apply to their market value.

6009. But you considered yourself competent to give an opinion how far a picture was an original picture by the artist to whom it was ascribed, and as to its merits as a specimen of the work of that artist?—That was what I undertook to do, as far as my knowledge extended; but I professed my ignorance of the market value of all pictures, and my comparative ignorance of all schools except the Italian; I stated that strongly, in order that Sir Robert Peel might know the conditions on which I was willing to accept the office, and I accepted it only on that clear understanding.

6010. When a picture, or a collection of pictures were offered, perhaps by correspondents abroad, or even by persons in London, to the consideration of the trustees, was it or not their custom to send the keeper to examine the collection or the picture, and to make a report upon the subject?—Yes.

6011. And you undertook that duty?—I undertook that duty, and it is extraordinary how few the occasions were on which I had to report any degree of merit whatever.

6012. Did you limit your reports so entirely to the pictures of the Italian school, that, if you were called on to examine pictures of the Flemish or other schools, you would make no report whatever?—I made a report, and as I stated before, the pictures were in general so very inferior, that no matter what the school was, I had no hesitation in saying, they were not worthy of the National Gallery.

6013. What is your reason for making the distinction that you were merely expected to give an opinion on pictures of an Italian school, if, on these occasions, you also gave an opinion on pictures of other schools?—There is a certain amount of demerit upon which persons, with even less judgment than I possess, can give an opinion.

6014. In short, you were in the habit of giving your opinion of pictures of all schools, but you did not consider yourself so responsible for your opinion with respect to pictures of any other school, as you did with respect to pictures of the Italian school?—That was the understanding; but there never was an instance in which I could not give an opinion without hesitation when I was invited to look at pictures such as you have referred to, though not of the Italian school.

6015. Mr. *Charteris.*] To whom did the trustees refer as to the commercial value of pictures, you having felt yourself incompetent to give an opinion upon the subject, and the trustees not being in the habit of referring to you?—I could give the trustees facts respecting previous sales, and the prices which pictures fetched at sales; you ask what persons the trustees were in the habit of consulting; I do not remember particular names, but the trustees were in the habit of consulting various persons; they were always very active, and so was I, in collecting information of the kind.

6016. *Chairman.*] When intimation was given to the trustees that a picture was at their disposal, were you sent to examine it?—Yes.

6017. If you reported that the picture was not worthy their attention, nothing more was thought of it?—No.

6018. Suppose you thought it was worthy their attention, what course did they then pursue?—I do not remember any case in which a picture, previously unknown, was reported by me as being fit for the National Gallery; but I have frequently brought pictures before the notice of the trustees which I thought were eligible, which were, in fact, offered, although not formally, to the trustees; they may or may not have been so offered.

6019. Did they decide, with reference to the purchase of that picture, on their own judgment, or did they take further advice upon the subject?—Up to the time of the purchase of the Holbein, advice was collected where it could be had, but after that time, in consequence of a letter from the Treasury, the trustees were directed to consult any two competent persons whom I might name.

6020. When

Sir *C. Eastlake*, P. R. A.

17 June 1853.

6020. When you say the trustees took advice where it could be had, will you define a little more closely to what that refers?—I can give an instance, by referring to a circumstance that took place before I had the honour to be keeper: I forget the precise year; an unfinished picture, attributed to Raphael, was offered to the trustees; it belonged to Sir Augustus Forster, I think. I was consulted by the trustees upon that occasion. I pronounced it to be a picture by Fra Bartolommeo, and I furnished some documentary evidence, which tended to confirm that judgment. That picture was declined, partly in consequence of the evidence I gave them, as to its not being the work of Raphael, though it might be very valuable as the work of Fra Bartolommeo. That is an instance of the mode in which the trustees proceeded before I was keeper, and on subsequent occasions they may perhaps have consulted persons competent to give an opinion on works by Flemish and other artists, in which I rather abstained from giving advice.

6021. Can you mention the names of any of the principal authorities they were in the habit of consulting?—I cannot distinctly say; I know Sir Robert Peel was in the habit of consulting Mr. Nieuwenhuys and some others, but he was not always in the habit of stating his authorities for the opinions he offered.

6022. Then the trustees being, in their own official capacity, in the habit of consulting other gentlemen as to the value of pictures, you did not hold yourself responsible?—I do not remember any distinct or particular occasion on which advice was called for, in the mode in which mine was asked for in the case of the Fra Bartolommeo. I might afterwards recollect such cases, but at this moment I do not.

6023. Do you recollect whether the trustees, during your keepership, were in the habit of regulating their purchases by reference to any historical or chronological system, with the intention of obtaining the works of particular schools, or with a view to improving public taste?—No; I do not think there was any such system. I am bound to say that Sir Robert Peel rather opposed the purchase of works by the early Italian masters; his expression always was, "I think we should not collect curiosities."

6024. Then the course was, that any picture, of whatever school, that appeared to the trustees to possess a general value, on whatever grounds, whether from its beauty or from the peculiar mechanism of its painting, was taken on its own merits, without reference to any general principle of forming a collection?—Quite so.

6025. Did you yourself ever give an opinion in opposition to that mode of purchase?—I always advocated the purchase of good Italian pictures.

6025.* Did you yourself suggest to the trustees, the desirableness of improving the tone and character of the collection as it exists by introducing into it pictures of the earlier and purer stages of art?—I did frequently.

6026. But your suggestions were not responded to by the trustees?—Not by all, and particularly not by Sir Robert Peel.

6027. And Sir Robert Peel's influence was very considerable, was it not, with the trustees?—Undoubtedly it was.

6028. In fact, the purchases that have been made during your keepership have been all purchases of pictures that have been picked up, without reference to any principle whatever?—Sir Robert Peel's object was to get the finest works of art, without reference to history.

6029. And those works of art have been chiefly, during the period of your keepership, of the Flemish and Bolognese schools?—That appears to be the case. The proposed purchase of pictures from the Fesch Gallery failed. That was the first instance when I recommended the purchase of some Italian works.

6030. In what year was that?—That was immediately after I was appointed keeper. I proposed it, and Sir Robert Peel objected, not because the pictures were not desirable, but because it was impossible for the trustees to see them; and it required a great deal of persuasion on my part to induce the trustees to listen to my recommendation, and to trust me; I always felt very grateful to Sir Robert Peel and the trustees for the confidence they reposed in me at that time.

6031. Mr. *Vernon.*] Those pictures were practically for sale for some years, were they not?—The sale was contemplated, I think, in the year 1844; I forget when it actually took place; I was quite in time for it, but the result was unsuccessful.

6032. *Chairman.*] Did you attend Mr. Solly's sale in 1847 on behalf of the trustees?—I attended the sale, but not for the trustees.

Sir *C. Eastlake*, P. R. A.

17 June 1853.

6033. Were any purchases made at that sale?—Not for the trustees.

6034. You had no instruction whatever from the trustees to look after the pictures in that sale?—No. In justice to the trustees, I should observe, that observations were sometimes made in Parliament as to the inexpediency of adding to the collection, and those remarks naturally influenced the trustees. There were periods of inaction from a certain indisposition in Parliament to sanction the purchase of pictures.

6035. What were supposed to be the grounds of that indisposition?—That must rest with those who made the observations; there seems to have been that sort of caprice occasionally in the House of Commons.

6036. How was a disinclination to sanction purchases expressed on the part of the House of Commons?—I remember Mr. Hume saying that he thought it inexpedient at present to continue purchases for the National Gallery, and I remember that having had an influence upon the trustees.

6037. Did Mr. Hume on that occasion allude to any particular class of purchases?—To purchases of any kind.

6038. Was that from an impression that the late purchases had not been judiciously selected?—Very possibly; I do not remember the precise period; but it is very probable.

6039. Mr. *Ewart.*] Is it not Mr. Hume's general custom to show great willingness that the public money should be applied in this way?—Yes; I am quite aware of his general readiness on such occasions.

6040. *Chairman.*] Were there no purchases made from other collections besides Mr. Solly's at the period when you say that disinclination was manifested?—There was, I am sorry to say, an opportunity lost when the Ottley Collection was sold; that collection consisted almost entirely of early Italian pictures; they are now dispersed.

6041. Mr. *Charteris.*] Did you recommend the purchase of those early Italian pictures?—I prepared a list of those which I thought would be eligible.

6042. *Chairman.*] It appears, by reference to the Catalogue in the Appendix to the Report of the Committee of 1850, and by reference to the Return which was procured from the National Gallery, that no purchase whatever took place between the years 1847 and 1851; is that the case?—In March 1847, the exquisite picture, "The Vision of a Knight," was purchased.

6043. My question referred to the period between the years 1847 and 1851; the picture of "The Vision of a Knight," by Raphael, was purchased in March 1847; then there is a return of the pictures purchased subsequently, and the first purchase entered appears to have been in 1851; so that from 1847 to 1851 no purchase whatever was made?—It so happens that the 19th of July 1847 was the last meeting I attended as keeper; in November of that year I resigned.

6044. I merely speak as a matter of fact, which, you being a trustee, is probably within your knowledge, that from 1847 to 1851 no purchase was made?—It happens that that is precisely the period of which I have no knowledge, because I was then unconnected with the National Gallery.

6045. But your impression is, that from the indisposition shown by Parliament in 1847 to encourage the purchase of pictures, opportunities of making purchases at Mr. Solly's sale, and in other ways, were neglected?—I cannot venture to say when, or from what cause, the observation in Parliament was made; the gallery was beginning to be full, and at that time there was an idea that an enlarged place would be required; from time to time there was a feeling that it would be better to suspend operations in the National Gallery until more space could be procured.

6046. Can you, from memory, give us any further particulars of the discussion to which you have alluded?—No, there must have been some discussion, but it was an incidental observation; I remember the fact of the observation having been made, and I am pretty sure it was Mr. Hume who made it.

6047. Mr. *Charteris.*] Can you state whether that discussion, to which you have referred as having taken place in Parliament, arose on any specific motion in reference to the National Gallary, or whether it was in the course of the Estimates that the subject of the National Gallery came before The House?—I have no recollection; but I think you will find that I am correct in saying that such an observation was made.

6048. In 1847?—I do not know when.

6049. Mr. *Raikes Currie.*] Do you think it amounted to more than the observation

vation of some individual Member of Parliament?—Certainly, it amounted to no more; probably it was called for by some other observation.

6050. *Chairman.*] Do you think that the discussion to which you allude formed a sufficient ground for entirely suspending during four years the purchases of pictures for the National Gallery?—I am not by any means certain that the observation to which I allude coincided with the period when the purchases ceased.

6051. My question referred to the period between 1847 and 1851?—I am not sure that the observation which was made in Parliament, to which I have alluded, was made during that time.

6052. Did you not allude to that observation as the reason why the trustees did not attempt to make any purchases at Mr. Solly's sale in the year 1847?—No; I believe I said that at times, when there was an apparently causeless cessation of activity on the part of the trustees, that may have been owing to some such observation in the House of Commons; and that such observations were sometimes made I have endeavoured to show, by adverting to a particular expression which I remember to have been used; but when that expression was used, or whether it produced any immediate effect or not, I cannot tell. I think it is very probable that it did influence the trustees.

6053. When any observation of that kind was made, from your experience in the proceedings of the trustees during the time you were keeper, was it their habit generally to suspend their purchases, however eligible the works of art might be which were presented to them?—The trustees would naturally be influenced to a certain extent by the opinions expressed in Parliament.

6054. Were there not a number of pictures of very great value, as representing the earlier purer periods of Italian art, exposed for sale at Mr. Christie's in Mr. Solly's Collection, and which were either sold or might have been procured by the trustees at very reasonable prices?—I am not prepared to say that there were any very valuable pictures in the Solly Collection.

6055. Did you examine that collection carefully?—Yes, I knew the pictures at his house; among the most valuable were those of the imitators of Raphael, such as Bagnacavallo and Innocenzo da Imola.

6056. Did you not consider that there was any value attached to one or two pictures that bore the name of Luini in that collection?—I did not consider that they were first-rate specimens.

6057. Do you not consider that a genuine picture by Luini, although not a first-rate specimen, if it could be had at a very reasonable price, would be an acquisition to our National Gallery?—I have no hesitation in saying, that if I had been allowed to deal with the Solly Collection, I would have bought several pictures for the National Gallery; even pictures such as those to which I alluded by the followers of Raphael, might be added to the collection with advantage, for I consider that all those masters should be represented in the National Gallery.

6058. Will you mention to the Committee the pictures in that collection which you would have purchased, had you had a discretionary power to do so?—I do not remember them very distinctly; but I would have purchased a specimen of Bagnacavallo and Innocenzo da Imola, and the Luini to which you have referred; if my recollection served me, I have no doubt I could point out three or four more that I should have thought it desirable to purchase.

6059. Did you suggest to the trustees that those were pictures which it was desirable to purchase?—No, I did not consider them to be works of the highest degree of merit, and generally there is an indisposition to purchase works not of the highest merit; I should rather say there is from time to time a disposition of that kind; experience shows that that disposition is not very constantly maintained, but I have heard no principle more frequently repeated by the trustees, than that they should confine their purchases to works of the highest merit.

6060. Mr. *Vernon.*] You have said you considered that picture by Luini to have been a picture which might have been purchased, and which, in your opinion, was deserving a place in the National Gallery?—It is very possible that I may have considered it worthy a place in the National Gallery, but I have not a clear recollection of it at this moment.

6061. Are you aware of the price at which that picture was sold?—No.

6062. Do you know what became of it afterwards?—No.

6063. You are not aware that it was sold afterwards to the King of Holland, for, I think, 1,500*l.*, having fetched only 390*l.* at the sale?—No.

Sir *C. Eastlake*, P. R. A.

17 June 1853.

6064. Would you have considered that the fact of that picture being rather in a damaged condition, rendered it unfit to be purchased by the National Gallery?—One great objection to the Solly pictures was, that he had painted over them very much himself.

6065. But would you debar yourself from purchasing a fine picture like that, the value of which was tested afterwards by the high price at which it was sold, in consequence of its being partially damaged?—I do not attach much importance to the fact of its having fetched a high price afterwards; such cases sometimes occur, when the price has been quite unwarrantable.

6066. Lord *Seymour*.] You say the trustees confined their purchases usually to works of the highest merit?—That is a recognised principle, but experience shows that it has not been always acted on.

6067. Do you think that the fact of having to go to Parliament for the means to purchase every individual picture, there being no sum at the disposal of the trustees, naturally leads them to go to Parliament only when they have the offer of a picture of such a high degree of merit that the great majority of Parliament must approve of the purchase?—My opinion is, that it would be much wiser to give a certain sum to the trustees to lay out as occasions arise. I think the difficulty of bringing the matter before the Government, when perhaps there is not a day to be lost, is sometimes a fatal impediment, although it may appear to be a slight one.

6068. The question I asked you was rather with reference to the application to Parliament; do you, or do you not think that if the trustees have to go to Parliament for the means to purchase each picture, they will naturally only go to Parliament when they have before them a picture of such undoubted merit, that the sanction of Parliament is sure to be given to the purchase?—You have an answer to that question in what has actually taken place; the trustees have always hitherto gone to Parliament for sanction to purchase pictures; have they always bought the finest?

6069. Mr. *Labouchere*.] When you say the trustees acted upon the general principle of buying only the finest pictures, do you mean the best specimens of the masters who have painted those pictures, or pictures of the first-rate masters?—The best specimens of well-known masters.

6070. A good specimen of a master who is not well known may be very valuable, may it not, as a link in the history of art?—Yes; I should always have felt it my duty to seize every opportunity of purchasing fine pictures, which are not likely to be in the market again; I consider that now, when public galleries are formed all over the continent, and even in small towns, the possibility of obtaining fine pictures is annually becoming more difficult, and I think that no opportunity should be lost of obtaining fine specimens of any given master whose works are worthy of being placed in the National Gallery.

6071. May it not be the case, that a picture may be of great importance to a National Gallery, in connexion with the history of art, from the rarity of the works of the master who painted it; and yet it may not be a picture, taken by itself, of such excellence that it would be easy to satisfy the House of Commons, or the general public, of the propriety of purchasing it?—That shows the importance of having a previously arranged plan; such a plan as his Royal Highness Prince Albert conceived, and which is exemplified in a list of the masters of all the schools which it would be desirable to represent. I am not prepared to say whether that list is exactly the list which might be presented to Government, with the view that all those masters should be represented; but with reference to a certain number of masters, whose works should sooner or later be in the National Gallery, I would buy fine specimens of those masters at any time, without reference to their importance, having first established that such masters must sometime or other, be represented.

6072. Does not that go to show the propriety of confiding a sum of money to the discretion of those who it must be supposed are the most competent to form a judgment on questions relating to the purchase of pictures, as they may come into the market, rather than that they should be obliged to go to Parliament, or even to the Government, for their sanction to make the purchase of each particular picture, which may be very important as being illustrative of the history of art, but which may yet not recommend itself to those who have not previously studied the subject?—Certainly.

6073. *Chairman*.] You have stated generally, that at this period the trustees were

were not guided by any principle of purchase whatever; consequently, it never occurred to them to purchase pictures on the principle to which you have just referred, of making up different schools, or showing a historical or chronological series of schools at that time?—No. And yet if there had been such a list as that to which I have alluded, the trustees might have bought precisely the pictures they have bought, because there is scarcely a picture which has been purchased which will not fill some important place in the series.

6074. Do you think there would be danger in having some fixed principle laid down other than purchasing each picture as an opportunity occurred?—If you confined yourself to a certain list of masters, or to certain periods of time, and abstained from every other purchase whatever, you might lose opportunities which would never again occur. There must be a certain latitude and discretion in such purchases.

6075. With regard to the principle of purchasing pictures of great value, when there appeared to be an opportunity of making such purchases, if the trustees never had any report made to them of such collections as Mr. Solly's, or others that might come into the market, from you, as their keeper, you saying you think some of them were valuable pictures, how were they to know when and where pictures of value were to be got?—There is, in the minutes and in the evidence before you, very little to show the exertions made by the trustees; but I believe that there never was an occasion on which a fine picture was offered for sale when it was not known to the trustees, and by one or more of them investigations were made which tended to give the body sufficient information on the subject.

6076. Then they knew of the sale of Mr. Solly's pictures, and of what the collection consisted, but they did not consider that any of those pictures were of sufficient value to make it worth their while to endeavour to purchase them?—That is the inference, certainly.

6077. The remark which you have made with reference to Mr. Solly's Collection, that the trustees, having had it under their consideration, did not think it contained any pictures of sufficient value to be worthy of a place in the National Gallery, applies also, I presume, to Mr. Coningham's sale?—Certainly.

6078. What was your opinion with regard to the value of the pictures in Mr. Coningham's sale; did you not consider that there were pictures there which it was desirable for the National Gallery to possess?—Yes, several.

6079. And did you represent that to the trustees?—I do not recollect the date; it may have been at a time when I had nothing to do with the gallery.

6080. That sale took place in the year 1849?—I had then nothing to do with the National Gallery.

6081. At that time you no longer held the office of keeper?—No.

6082. And you were not yet a trustee?—No; I have one of those pictures sold at Mr. Coningham's sale myself.

6083. It is stated in the minute of the 4th August 1845, that the Susanna, by Guido, was bought, among other reasons, "on account of its peculiar value to the Gallery;" what is the meaning of that expression?—I suppose that expression was used because the companion picture had been previously purchased.

6084. Then, in that case, the trustees did go on a certain principle of purchase?—Yes.

6085. Is it quite understood that those two pictures were originally intended as companions the one of the other?—They were together in the Penrice Collection, and in an Italian collection, the name of which I forget now.

6086. But there was no historical ground to suppose that they were painted originally by the master as twin pictures, the one illustrative of the other?—No.

6087. The other picture which you speak of as a companion to the Susanna, is Lot and his Daughters?—Yes.

6088. On the 5th February 1844, the Chevalier Bunsen, according to the minutes, offered for consideration to the trustees Prince Wallenstein's collection, with catalogue, and the answer is, "Resolved, that the trustees are not in the "habit of recommending to Parliament the purchase of collections;" was that an invariable rule on the part of the trustees?—I am not aware that it was.

6089. It was only an occasional objection?—The expression implies that it was a standing rule, but I am not aware that such a rule exists.

6090. Do you yourself see any serious objection to purchasing collections as a general rule?—On the contrary, I think that some good opportunities have been lost:

Sir *C. Eastlake*, P. R. A.

17 June 1853.

lost: the Lucca Collection, for instance, might have been purchased entire; that, I think, was an opportunity that might have been seized with advantage.

6091. Did you examine the catalogue of the collection of Prince Wallenstein?—Yes, but the pictures were not in this country at the time.

6092. It would have been necessary to have sent over to have them examined?—Yes. They are in this country now, but they were not at that time.

6093. What would be your own principle of purchasing with regard to collections?—Since the principle has been established of sending inferior pictures to provincial museums, I think that offers an easy mode of collecting the best pictures, and disposing of the rest; but I do not see that there need be any objection to buying whole collections, and selling out of them the inferior pictures.

6094. Mr. *Charteris.*] Do you think it desirable to send inferior pictures to provincial museums?—"Inferior pictures" is a relative term. When the Dusseldorf Gallery was purchased for Munich, the refuse of that collection formed the Augsburg Gallery, and that is a very good collection.

6095. *Chairman.*] If a collection were submitted to the directors of the gallery, which contained fine pictures, what mode would you pursue with regard to the disposal of those pictures of the collection which it might not be desirable to retain in the gallery?—There are those two modes which I have pointed out.

6096. Will you point them out more precisely, if you please?—One mode is to send the inferior pictures to provincial museums, and the other is to sell them.

6097. Lord *Seymour.*] Supposing such a collection as the Lucca Collection were bought, would you have the trustees themselves consider first which they would keep and which they would part with; that would be the first step?—Yes, that would be the first step; they might call in advice.

6098. Having then thoroughly ascertained which portion they would keep and which portion they would part with, how should they next proceed; should they cast lots, and so determine to which provincial museum those pictures should be sent which they did not desire to retain in the National Gallery?—That would require a little consideration; I am not prepared to say how that could be carried out in detail.

6099. Would it not involve very considerable difficulty in this country to buy an entire collection, and then to settle which pictures you would keep; then to which museums of the different parts of the country you would send the remainder of the pictures; would not Edinburgh, Dublin, Liverpool, Manchester, Birmingham, and other towns be all asking for pictures?—You must first of all settle which towns should be considered eligible to present pictures to, and next you might determine the order; or, having a certain number of pictures to distribute, give an equal portion, as to number, to each town. I do not see any great difficulty in it.

6100. Do you not see another difficulty, on the score of expense; do you not see, that instead of proposing to form one National Gallery, you are, in point of fact, proposing that a great many should be formed?—And why not?

6101. That would lead to a very large additional expense?—It is a necessary consequence of purchasing a whole collection; but you might take the other course.

6102. The other course is to select those you wish to keep, and sell the rest?—In any case there would be some that would not be worth presenting to country museums; those, at all events, might be sold.

6103. For that purpose, do you think it would be better that there should be one annual sale, or frequent sales, whenever a collection was bought; have you considered that at all?—The sale must take place when required; many years might elapse between the purchase of one collection and the purchase of another; you would have nothing to sell from year to year perhaps.

6104. You would wait until you had got a sufficient number, and then you would have a great sale of inferior pictures?—That would be one mode.

6105. Do you think that would be the best mode, or do you think the best mode would be to send the inferior pictures to the provincial museums?—I think that both the modes might be adopted; they asked, I think, 40,000*l.* for the Manfrini Collection, and Mr. Woodburn valued it at 22,000*l.*

6106. Mr. *Charteris.*] That was a certain number, was it not?—The inferior pictures were supposed to be thrown in; I saw the collection last autumn, and I should value it at 20,000*l.* roughly. I think that if that collection could be bought

for

for this country for 20,000*l.*, it would be a good purchase; you would then have to dispose of some hundred pictures that are very inferior, and which, I think, might be sold.

6107. *Chairman.*] I think the sum asked for the Manfrini Collection was originally supposed to be 48,000*l.*, and in Mr. Uwins' and Mr. Woodburn's report a sum of 22,000*l.* was put down as the value of 120 pictures of that collection by those two gentlemen; was not that the case?—Yes; I have heard Mr. Woodburn say that the collection might be valued at 22,000*l.* or 23,000*l.*, speaking, as I understood him, of the entire collection.

6108. You had yourself a catalogue, had you not, originally of that collection?—Yes.

6109. Was it your opinion, comparing that collection as reported by those gentlemen with your own catalogue, that it was the same collection as that of which you had the catalogue?—I saw the collection last autumn; I did not compare it accurately with the catalogue.

6110. What did you consider the value of the collection of which you yourself had the original catalogue?—At that time I had not recently seen the pictures; it is many years since I saw the collection first; I had no means of judging, except perhaps as to a dozen pictures, which I well remembered.

6111. I think it is stated in the minutes, that the proposal for considering the question as to the purchase of the Manfrini Collection was partly in consequence of your having a catalogue of that collection, and having given some opinion to the trustees upon the subject?—That is quite possible; I could speak of a certain number of pictures in the collection.

6112. But you had not formed any distinct estimate of the value of the collection?—No; and any opinion I may express as to the value of pictures is worth but little, because I have very little knowledge of their market value; but I venture to say, that any speculator buying the Manfrini Collection for 20,000*l.* might make a very good affair of it.

6113. If you have so little knowledge of the value of pictures generally, upon what is it that you found your belief that the Manfrini Collection would be worth 20,000*l.*?—I do not pretend to have such an accurate knowledge of the market value of pictures as a keeper of the National Gallery ought to possess; but any Member of this Committee, I presume, would be able to form a pretty correct judgment of the value of pictures from knowing what takes place at sales constantly; I can pretend to such knowledge as that, and no more.

6114. Do you not consider that the country having been put to an expense of 400*l.* or 500*l.* in sending out two gentlemen to examine that collection, and their having reported that there might be 120 pictures obtained for 22,000*l.*, it would have been worth while to have followed up the negotiation by a more distinct investigation and decision, whether it was not desirable that the purchase should be made?—The trustees considered that Mr. Woodburn's report was not full enough; they complained that it was not a very satisfactory report; it was nothing more than a statement of the bare fact that, in his opinion, the collection was worth so much; it was not a detailed report.

6115. Was not his report accompanied by a catalogue?—Yes; but not a catalogue *raisonné*.

6116. A priced catalogue?—Yes.

6117. Mr. Woodburn remained at Venice, did he not?—Yes.

6118. If the trustees had so much confidence in him that they sent him all the way to Venice to examine pictures, and he gave them a catalogue of the pictures, with prices put against them, do you not think that Mr. Woodburn may reasonably have thought that his judgment was considered so good, that the trustees would be satisfied with his prices, and with his report as to the masters by whom the pictures were painted?—It is very possible that Mr. Woodburn may have found that he could not deal with the proprietors for any such sum as that at which he had valued the pictures.

6119. Did he make any statement to that effect in his report?—I do not remember it, but I think he remained in Venice afterwards; it is very possible that he may have sent such a report; he may in correspondence have stated that the collection was not to be had for less than the sum asked for it.

6120. But if he made no such statement to the trustees, do you think the trustees were authorised to assume that he held that opinion?—The price which

Sir *C. Eastlake*, P. R. A.

17 June 1853.

he named, about 22,000*l.*, I think would hardly warrant any further steps, because it was so far below the sum that was asked.

6121. They asked for the whole collection, which consisted of from 400 to 500 pictures, a higher price; but was any offer made with regard to the more restricted number and the lower price?—I am not aware that there was.

6122. Is it your opinion, considering the expense and trouble that was incurred in sending to examine that collection, that all the measures were taken by the trustees that might have been expected of them, for ascertaining whether they could not get at an ordinary price the choicer portion of that collection?—The general feeling of the trustees was that the collection was not a very desirable one.

6123. Are there not a certain number of extremely valuable pictures in that collection?—There are some very fine pictures, but not very many.

6124. Do you consider that the number of pictures specified by Mr. Woodburn would not have been worth the price that he himself suggested should be paid for them?—I should be very glad if the Manfrini Collection could be obtained for 20,000*l.*

6125. Mr. Woodburn, you say, remained at Venice after the report was sent in?—Yes.

6126. Would it not have been desirable to have written to him to say, that although he had given a catalogue with the prices at which he valued the pictures, the trustees desired some closer specifications as to the merits of the pictures, which induced him to place those prices upon them?—Such additional information was furnished by Mr. Woodburn; at all events he was requested to furnish it at my suggestion. I think you will find it in the minutes.

6127. By the minutes Mr. Woodburn is requested "to consider whether he "can furnish, on his return, any more detailed information on the eligibility "of particular pictures in the collection than is furnished by his valuation, and "particularly with regard to some of those by the Venetian and Paduan masters;" was that further information communicated to the trustees?—I think Mr. Woodburn attended a meeting of the trustees on his return. I do not remember that he wrote upon the subject, but it is possible he may have done so.

6128. (To Colonel *Thwaites.*) Was there any explanatory letter from Mr. Woodburn accompanying the inventory of that collection, beyond what is entered at the close of the list?—I am not aware whether there was or not.

6129. (To Sir *Charles Eastlake.*) Is that the report that was laid before the trustees (*showing Mr. Woodburn's original report*)?—Yes; it is dated the 6th of June 1851.

6130. Will you read Mr. Woodburn's statement at the close of the catalogue?—"Having carefully examined the pictures in this inventory, as admissible in "the British National Gallery, 120 pictures, amounting together, at a fair valuation, "to the sum of 22,340*l.*"

6131. The trustees not being satisfied with that catalogue sent a message to Mr. Woodburn, calling upon him to give them further information?—Yes.

6132. Has that further information ever reached the trustees?—That I am in doubt about; I am not aware that he did make any further communication to the trustees.

6133. Mr. *Vernon.*] You have stated that you believe the impression of the trustees to have been, that the collection was not a desirable one; nothing appears in the minutes or in the letters that have been published to show that there were any grounds for that impression on their minds?—But still I state it from my own recollection.

6134. Do you believe that that feeling on their part arose from the fact of their not liking to ask Parliament for a grant of 22,000*l.*, or from their real doubt as to the merit of the pictures?—The collection has not so high a reputation as many others have; it is a recently-formed collection, and I may mention, that Dr. Waagen, who was here at the time, did not give a very favourable opinion of that celebrated picture of the Entombment of Christ, which is one of the ornaments of the Manfrini Collection; some critics prefer it to the duplicate in the Louvre, but Dr. Waagen said that there were other *repliche* in Venice, and I think that had some effect on the trustees; but still it is a very fine picture.

6135. *Chairman.*] Do you not think it would have been advisable for the trustees to have taken those matters into consideration before they authorised the expenditure of so large a sum as 400*l.* or 500*l.* in sending over Mr. Uwins and

Mr.

Mr. Woodburn to examine the collection?—That opinion of Dr. Waagen's was not known till long afterwards.

6136. Mr. *Vernon.*] With regard to the question which I put to you as a trustee, whose opinion must necessarily have considerable weight, you have stated that in your belief the pictures in the Manfrini Collection were worth a good deal more than the sum for which it was suggested they might be got?—No; I said 20,000 *l.*; Mr. Woodburn's valuation of them was more than 22,000 *l.*

6137. But you think they were worth much more than the 22,000 *l.* at which they were valued?—No; I say that if they were purchased for 20,000 *l.* by speculators who knew how to dispose of them, the speculation would, I think, turn to account.

6138. Mr. *Charteris.*] Out of the collection, how many pictures are there that you think would have been worthy of a place in the gallery?—I did not enumerate them when I saw the collection last autumn.

6139. *Chairman.*] Had the trustees that confidence in Mr. Uwins and Mr. Woodburn, that they considered their opinion of any value in the matter?—The impression of the trustees was, that the report was not sufficiently satisfactory.

6140. As Mr. Woodburn remained in Venice, having been sent out there at an expense of several hundred pounds, was it not considered desirable that he should get further information, the information which he sent the trustees not being considered complete?—It appears that there was an attempt to get further information.

6141. I observe it is stated in the minutes, "Resolved, that in the present "state of the information in possession of the trustees, they do not find themselves in a condition to recommend to Her Majesty's Government any negotiation for the purchase of the Manfrini Collection; and that it is desirable that "Mr. Uwins should apprise Mr. Woodburn of the conclusion to which the "trustees have come, and inform him that it is not necessary to call on him to "remain at Venice, with a view to any probable negotiation;" that disposes of the purchase of the 120 pictures, does it not; they do not wish any further negotiation to be made with reference to the valuation and list of pictures?—Yes.

6142. Then they go on to say, that before he leaves Venice it may be desirable for him to procure and furnish, on his return, some more detailed information on the eligibility of particular pictures in the collection than is furnished by his valuation?—Yes.

6143. But no information has since been got with reference to the original proposal of purchasing the number of pictures that Mr. Woodburn and Mr. Uwins recommended?—Not that I am aware of.

6144. In short, their valuation has not been considered worthy any further negotiation on the part of the trustees?—That is the conclusion to which you are warranted to come.

6145. Are you cognisant of the circumstances under which Sir Thomas Lawrence's drawings were offered to the nation, and declined?—I am not sure that they were offered to the trustees of the National Gallery at all; they were offered to the Government, with a view to placing them in the British Museum.

6146. You yourself were consulted, I believe, with regard to that collection?—Yes, but long after the collection had been broken up. I was requested, together with the Rev. Dr. Wellesley and Mr. Josi, late of the British Museum, to make an estimate of the value of drawings by Raphael and Michael Angelo only. Mr. Woodburn asked 20,000 *l.* for those drawings, and we estimated them at nearly 30,000 *l.*, and yet his offer was declined; 20,000 *l.* would have bought the whole collection originally; I believe the Government felt that the drawings were like the sybil's books, always increasing in value as they diminished in number.

6147. The trustees felt, did they not, that they had no authority in the matter?—Perhaps so. The Royal Academy proposed to subscribe 1,000 *l.* towards the purchase for the nation; and I myself, as an individual, offered to subscribe 100 *l.* The Royal Academy made their offer in 1831, and my offer was made not long after that time. They were purchased of Mr. Keightley, the executor of Sir Thomas Lawrence, in 1835, by Mr. Woodburn, and they were exhibited in 1836.

6148. The entire collection was originally offered by the executors of Sir Thomas Lawrence to the country for 20,000 *l.*, was it not?—I believe so.—(Mr. *Evans.*) £. 18,000.—(The *Witness.*) I believe they were offered to his Majesty George the Fourth for 18,000 *l.*, and to the nation for 20,000 *l.*

Sir *C. Eastlake*, P. R. A.

17 June 1853.

6149. That offer was declined, and they were purchased by Mr. Woodburn for the sum which the nation had declined to give; namely, 20,000 *l.*?—What Mr. Woodburn gave I do not know, but they were purchased in March 1835 of Mr. Keightley; Mr. Woodburn, I believe, bought up various claims on the Lawrence estate, he therefore represented most of the creditors at last, and the actual additional sum he had to pay for those drawings was not considerable.

6150. After having got the drawings into his possession in the way you have mentioned, he offered the collection again, did he not, to the nation, for 25,000 *l.*, and that offer also was declined?—I do not remember at what price he then offered them to the nation.

6151. Are you aware of the price that the whole collection subsequently brought, when it was split up and sold in parts?—More than 60,000 *l.*

6152. Lord *W. Graham.*] Mr. Woodburn re-purchased a great many, did he not?—Yes.

6153. Are they now in the possession of the executors?—Some of them are still to be sold, which were bought at the King of Holland's sale.

6154. Mr. *Charteris.*] What proportion of the drawings that you valued at 30,000 *l.* was purchased by the trustees of the Taylor Museum, at Oxford?—All the portion that remained after the King of Holland had made a selection.

6155. Those might have been purchased by the nation equally?—Certainly.

6156. Are you aware of the sum that was given for those drawings?—I think 7,000 *l.* or 8,000 *l.*

6157. Do you know how many drawings were purchased for that sum?—I do not know; I saw them a short time ago, but I do not know the number. There is one circumstance which I should wish to mention with reference to the drawings; before Mr. Woodburn's purchase, when they were in Mr. Keightley's hands, I requested permission to take some of them to Lord Brougham, then Lord Chancellor; Lord Lansdowne and Talleyrand were present; the drawings were examined by them; and I remember Talleyrand saying, "If you do not buy those things "you are barbarians;" his expression was, "Si vous n'achetez pas ces choses là "vous êtes des barbares;" thereupon Lord Brougham communicated with Lord Grey, but Lord Grey was averse to the purchase.

6158. Lord *Seymour.*] As President of the Royal Academy, and therefore acquainted with the progress of art in this country as regards painting, do you think that 20,000 *l.* given for the Lawrence Collection of drawings would have been better spent than the same sum given for the purchase of pictures?—Certainly; because that collection can never be formed again; it is quite hopeless to meet with such a collection again under any circumstances whatever.

6159. Then the Committee may conclude that in your opinion, if a very fine collection of drawings were offered for sale, you would think it desirable, with a view to the promotion of art, to apply the money which might be at the disposal of the trustees, to the purchase of those drawings rather than keep it for the purchase of pictures?—It would depend on the case. The Lawrence Collection was a most extraordinary case. If the nation had given 50,000 *l.* for the drawings, it would have been a very wise purchase.

6160. Mr. *Vernon.*] I suppose, in your view, a complete collection of drawings like that, illustrating the early processes in art of some of the most celebrated painters, would be infinitely more valuable in proportion than a few individual drawings of the same painters taken separately?—Certainly; but if you aim at forming a collection of drawings like a collection of pictures, you must pick up fine things when they are to be met with.

6161. With reference to a remark which you made a short time ago, as to the Lucca Collection, is it within your knowledge that there was an opportunity of obtaining those beautiful Francias which are in our gallery for 800 *l.*, three years before we gave two or three thousand pounds for them?—I never heard of that.

6162. Mr. *Charteris.*] There was a Raphael in the Lucca Collection, was there not, or a picture attributable to Raphael?—Yes.

6163. Do you believe that to have been a genuine Raphael?—It is one of the pictures painted in the later time of Raphael, in which his scholars did much.

6164. Do you think it a picture worthy a place in the National Gallery?—Undoubtedly.

6165. What did it fetch at that sale?—I think it fetched 1,500 *l*, by a mistake; you are probably aware that a person had a commission authorising him to go as far

far as 3,000 *l.* for the picture, but he happened to be absent at the time it was sold.

6166. Was that a commission to purchase for the nation?—No; I have heard Mr. Munro say that he obtained it for a much less sum than he otherwise would, in consequence of that accident.

6167. Had the nation been bidding, they might have been in Mr. Munro's position?—Possibly.

6168. *Chairman.*] It was stated by Dr. Waagen, before the Committee of 1850, that a very fine collection of ancient tapestries after Raphael's Cartoons was offered for sale in England in 1840, but found no purchaser, and that those tapestries were afterwards purchased through the instrumentality of the Chevalier Bunsen for the Berlin Gallery, where they now are, for 4,500 *l.*; are you cognisant at all of that transaction?—I do not remember their being in London at all; I did not see them.

6169. Was that during the period of your keepership?—I do not remember the date.

6170. Mr. Waagen says, "We obtained about 10 years ago, through the "Chevalier Bunsen, in England, a very fine set of tapestries after those cartoons, "and those are put up in the Museum, to give an idea of the greatest grandeur "of the epoch of Raphael;" that was prior to your connexion with the gallery as keeper?—Yes.

6171. You are not cognisant of that transaction?—I am not.

6172. With respect to the picture said to be by Holbein, under what circumstances was that picture brought under the notice of the trustees?—It was brought under the notice of the trustees by one of the trustees, Lord Lansdowne.

6173. Do you know by whom it was recommended to Lord Lansdowne's consideration?—I do not.

6174. Did Lord Lansdowne himself recommend it to the trustees as a desirable purchase?—He expressed his favourable opinion of the picture, but did not pronounce as to the painter; he assumed that it was by Holbein, but left that point to be decided by others.

6175. The picture was examined at a meeting of the trustees, was it not?—I rather think it was purchased first.

6176. Were you present at any meeting of the trustees when that picture was taken into consideration by them?—Yes. I wish to state, as plainly as possible, that, with due care, I might have prevented the purchase of that picture, and my not having done so implied a want of knowledge of the master.

6177. Will you state to the Committee the circumstances of that transaction?—When the picture was recommended in the way I have stated, I went to see it, and I asked a gentleman, who I knew to be well acquainted with Holbein's drawings, to look at it. I asked his opinion in confidence, and he gave it in the same way; therefore I must request not to be asked to give his name, but I am willing to give his name to the Chairman, in order that my testimony may be verified if necessary. He pronounced it to be a Holbein, but said that the inscription was spurious, of which the trustees were already aware, at least some had expressed that opinion; I therefore did not suggest any doubts to the trustees. There was also a circumstance which may have influenced them and may have hurried their decision. They had to meet on Monday; on Sunday evening a gentleman came to me from a very distinguished person,—whose name I will also give if required, but I beg not to be called upon to mention it openly,—and asked whether he was still in time for the Holbein; I said that a meeting was to take place the next day to decide the question. When I mentioned this to the trustees, they thought they were bound in honour not to suffer the picture to go, and it had the effect of rather hurrying the transaction. These are accidents which sometimes happen, and which occasionally precipitate decisions.

6178. Is it not the fact that there was another picture, or that there were several other pictures offered for sale at the same time?—I have mentioned a circumstance as an excuse for the precipitation of the trustees, and, in justice to myself, I may mention a circumstance which somewhat excuses me: there was a picture respecting which I was very anxious, and which, I believe, is now in the possession of Mr. Labouchere; it was attributed to Michael Angelo, but was probably painted by Domenico Ghirlandajo; that picture was offered in 1844. I entreated the trustees to buy it, and even named so low a price as 250 *l.* The lady to whom it belonged had left it much to me to manage the transaction. I named

Sir *C. Eastlake*, P. R. A.

27 June 1853.

so low a price as 250 *l.*; and that sum was offered, but was immediately declined, and nothing more could be done.

6179. Is that transaction of 1844 entered on the minutes?—I think so. I think there is a minute of the sum offered, and of its being declined. The picture was then removed; it was in the board-room to be seen. I brought the subject forward at the next meeting of the trustees in the following year; it was the first meeting. Mr. Rogers assisted me; he was very anxious also that the picture should be purchased. The trustees declined to make any further offer; and in justice to them, I must state that Sir Martin Shee was decidedly against the purchase of that picture; and the trustees could not but be influenced by his judgment.

6180. Mr. *Charteris.*] Was Sir Martin Shee a trustee?—He was a trustee *ex officio*, as I have the honour to be now; it was under those circumstances that the Holbein was offered; and I confess I was greatly disappointed that the Ghirlandajo had been ultimately declined. I was indifferent at that moment, under a feeling of disappointment, as to what the trustees might do, and especially when it was a question respecting a picture which was not of the school which I was always recommending; that threw me off my guard.

6181. *Chairman.*] You were commissioned to go to the extent of 800 guineas for the "Holbein," and procured it for 200 *l.* less, did you not?—Yes; when I saw the picture again I was determined not to recommend the trustees to give more than 600 *l.* for it; I thought that even rather a high price, and I therefore told M. Rochard that I was sure the trustees would give no more. When it came out that it was not a Holbein at all, I proposed to purchase it of M. Rochard. I would not have taken that picture, but I selected several pictures equivalent in price, and arranged with him to pay him the money; but it was necessary to communicate what I had done to Sir Robert Peel, and he insisted on my doing nothing. The trustees then, I believe, subscribed 100 *l.*, and offered it to M. Rochard to induce him to annul the bargain, but he declined, and that was the end of it; I should state, that when Sir Robert Peel insisted on my not interfering, or taking the responsibility on myself, which I considered I ought to have done, I said, if that be the case I should wish it to be clearly understood that the keeper is not responsible, and that his advice is not to be taken in any case; and thereupon came that letter from the Treasury, directing the trustees to appoint two persons, whoever the keeper might recommend, to give an opinion.

6182. That letter has been interpreted as a sort of censure or rebuke to the trustees on the part of the Treasury, with respect to the mode of exercising their judgment, has it not?—It may be so; but it was written at my express request.

6183. It was written by the First Lord of the Treasury to the Board of Trustees, of which he was a member, he having been present when the purchase of the picture was decided on?—Quite so.

6184. Do you not consider that there is a certain anomaly in the First Lord of the Treasury, in his capacity of First Lord, being under the necessity of administering a rebuke to himself in his capacity of trustee?—It may seem extraordinary.

6185. In consequence of that transaction, I believe another step was taken, that of appointing the First Lord of the Treasury and the Chancellor of the Exchequer *ex officio* trustees?—Yes; but I am not sure that those *ex officio* appointments followed so close upon that transaction.

6186. Were there no means taken at that time to ascertain the genuine character, or what the Italians call the provenienza of that Holbein?—None; it would have been my duty to do that; and, as I have explained, from my disappointment in having failed to induce the trustees to buy the Ghirlandajo, I was not sufficiently attentive in taking further steps in the matter.

6187. Has it been the custom for the trustees to institute any rigid inquiries to obtain, if possible, something like a guarantee from a dealer or other person who offers a picture for sale?—Since that letter from the Treasury, opinions have, I think, generally been taken.

6188. Irrespective of opinions, do you not think, that if proper investigations had been made as to the circumstances under which that Holbein was brought into this country, and offered for sale, it might have been traced, and there might have been some light thrown on the previous history of the picture?—Yes, that might have been possible; but it is sometimes very difficult for a keeper of the National Gallery to get at the truth in those matters.

6189. It

6189. It is stated in the minute of the 6th of April 1846, that Mr. Nicholay offered for sale two cartoons by Raphael which the trustees declined; do you recollect that circumstance?—I have no recollection of it; I am not at all acquainted with the name or with the works.

6190. You have no recollection of these two cartoons having been offered for sale?—I have no recollection of it.

6191. Do you understand that the statement in the minute, that they were cartoons by Raphael, implied that the trustees believed them to be by Raphael?—It is possible that these works may have been what they are called, but in general it would be very unsafe to judge of the merit or originality of works from the titles given to pictures by the parties offering them.

6192. It may mean that they were offered as cartoons of Raphael, and that the thing has been so entered in the minutes without its being believed by the trustees that they were the works of Raphael?—I should conclude so.

6193. Mr. *Charteris.*] With reference to purchases, I will ask you generally, whether you consider that in this printed list of pictures, purchased between the year 1843, when you held the office of keeper, and the year 1847, the finest specimens of art have been purchased by the nation?—Certainly not all that were offered.

6194. Do you think that many offers of advantageous purchases have been missed?—Yes.

6195. Do you think that if the present system were to continue opportunities would still be missed?—I am afraid they would.

6196. Do you think that the missing of great opportunities of acquiring fine specimens of works of art necessarily follows from the incompleteness of the present system?—Yes, and from the trustees not having a sum at their command to enable them to take advantage of opportunities that occur.

6197. Do you think that if a better and more judicious system were adopted, and if competent persons were entrusted with the purchase of pictures, we should have been by this time, for a comparatively small sum of money, in possession of a fine collection, if we had taken the opportunities which within the last 15 years have occurred, of adding to our collection pictures bought at public sales, or by private purchase?—Certainly; if you include whole galleries, such as the Lucca Gallery, which would have been a great and valuable addition to the National Collection; but every year there are fine pictures to be had.

6198. Mr. *Ewart.*] You propose leaving a certain sum disposable by the trustees?—I would propose that a certain sum should be placed in the hands of the trustees.

6199. That would be a moderate sum, I presume?—I have said that I think 10,000*l.* would be sufficient to be in the hands of the trustees.

6200. How would that meet the case of purchasing a large collection?—I think that, with respect to purchases of large collections, there would always be time to apply to Parliament.

6201. You must wait for the sanction of Parliament, must you not?—Yes.

6202. Lord *Seymour.*] You have spoken of periods of inaction, during which no pictures were bought for the National Gallery; were there any occasions on which the trustees recommended to the Treasury the purchase of pictures, and the Treasury declined?—No; during the periods of inaction of which I have spoken, whatever influenced the Government influenced the trustees; there was a sort of general understanding that nothing was to be done for a time; why, I could not understand.

6203. Am I to understand from you, that the trustees never did recommend to the Treasury the purchase of any pictures which the Treasury declined to purchase?—I believe that sometimes the Treasury declined.

6204. Can you mention any particular instances in which the trustees recommended any purchase or purchases to be made, and the Treasury declined to make them?—Yes; I can remember one case of a picture attributed to Rubens which was in the possession of Mr. Nieuwenhuys, and a Luini in the possession of Mr. Buchanan.

6205. When was that?—In 1846; it is true that the trustees withdrew the recommendation afterwards, but that was in consequence of a private hint from Sir Robert Peel.

Sir C. Eastlake, P. R. A.

17 June 1853.

6206. Do you remember any other instance in which the trustees recommended the purchase of pictures, and the Treasury refused to make the purchase?—No.

6207. *Chairman.*] Why was the recommendation which was made by the trustees, in the case to which you have referred, withdrawn?—In consequence of a hint from Sir Robert Peel that it would be better not to press it. I think he had not a very high opinion of the Rubens; he was a very good judge of that master, and recommended that that picture should not be purchased. I rather regretted that the Luini, which was a drawing on cloth, was not purchased.

6208. Lord *W. Graham.*] Did not the negotiation for the purchase of Mr. Woodburn's collection of Italian pictures fail, in consequence of the Treasury refusing a sufficient sum of money?—No; that was during Lord John Russell's Ministry. Lord John Russell was very much disposed to purchase them, but Sir Robert Peel, as a trustee, was decidedly against it.

6209. Mr. *Charteris.*] Was not a commission entrusted to Mr. Woodburn to attend the sale of Marshal Soult's Collection, and to bid for certain pictures?—Yes.

6210. On whose recommendation were the pictures for which Mr. Woodburn was to bid selected?—The commission was given to him in consequence of a letter which he wrote, speaking highly of those pictures, and strongly recommending them.

6211. Mr. Woodburn was sent to Paris on a mission, for the purpose of examining the pictures in Marshal Soult's gallery, and to report upon them?—I do not distinctly remember, but the minutes will show. I think he was at Paris at the time, and was requested to report.

6212. You have stated, with reference to Mr. Woodburn's report on the Manfrini Collection, that you considered it unsatisfactory?—The trustees considered it unsatisfactory.

6213. His former mission to Venice having been unsatisfactory in its results, did you approve of his being sent again to Paris to report upon the Soult Collection?—His report upon the Manfrini Collection was considered unsatisfactory in consequence of its want of fullness of information, but no doubt was at that time entertained as to Mr. Woodburn's judgment.

6214. Are any doubts entertained now as to his judgment?—I venture to entertain doubts, because I consider that the result of the Paris purchase was not satisfactory.

6215. I see by the minutes that Mr. Woodburn was authorised to bid a sum of 1,500 *l.* for a picture by Palma Vecchio, and 3,000 *l.* for the Tribute Money, attributed to Titian; the picture by Titian has been bought, and is now in the gallery?—Yes.

6216. Was the picture by Palma Vecchio likewise purchased at that sale?—Yes, it was purchased for 168 *l.*

6217. The picture for which the trustees, with the sanction of the Treasury, authorised Mr. Woodburn to bid as high as 1,500 *l.*, was purchased at the sale for 168 *l.*?—Yes.

6218. Although that picture is not now in the gallery, it is national property, I presume; are you aware what has become of it?—It was purchased by Lord Lansdowne, with the consent of the Treasury.

6219. I presume it was purchased by Lord Lansdowne because it was not considered worthy of a place in the National Gallery?—Lord Lansdowne admired the picture very much, and it is not to be understood that he purchased it in order to relieve the gallery of the picture; I imagine that he would have purchased it at a sale for the price he paid, or perhaps for more; but if you ask me whether I think it worthy a place in the National Collection, I say decidedly not.

6220. Then are we to assume it was because it was generally considered by the trustees as unworthy of a place in the National Collection that they allowed one of their own body to purchase the picture?—That is the inference.

6221. Are you aware whether the picture, attributed to Titian, of the Tribute Money, was ever in this country before?—I heard so afterwards. I never saw it in this country, and I never knew that it was in this country at the time it was here.

6222. You cannot speak of your own knowledge, either as to the fact of its being

being in this country previously, or of the price that was asked for it?—No, I only heard it afterwards.

6223. *Chairman.*] Was it on the report of Mr. William Woodburn as to the value of the picture that he was commissioned to purchase the so-called Palma Vecchio?—Yes, certainly; the trustees had the highest confidence in his judgment, and so had I; I always heard that he was one of the best connoisseurs in this country; his brother, the late Mr. Samuel Woodburn, was an excellent connoisseur of drawings; but it was considered that, of all the family, the best connoisseur in pictures was Mr. William Woodburn.

6224. Then it must be considered as an error of judgment on the part of Mr. William Woodburn, and that there was no fault on the part of the trustees, except in attaching so much importance to the judgment of Mr. William Woodburn?—That is a very indulgent judgment to pass upon the trustees.

6225. Mr. *Charteris.*] Do you think it likely that Mr. William Woodburn will be employed by the trustees on a similar mission again?—I should suppose not. Still, my opinion relates merely to the case in question and to connoisseurship; my general respect for Mr. Woodburn remains unchanged.

6226. *Chairman.*] With reference to the general question of picture purchasing, I think we may understand it to be your opinion, that it has been hitherto carried on on a very imperfect and inefficient footing?—In its results certainly; and yet the trustees have taken very great trouble; I have often admired their zeal and their readiness to sacrifice their time, when they have had anything but thanks from the public for the trouble they have gone through.

6227. You think that the inefficiency of the institution does not arise from any want of zeal or spirit upon the part of the trustees, but from defects in the system under which they have acted?—That is my opinion.

6228. Shall you be prepared at our next meeting to give us your opinion as to any improvements that you think may be effected in that system?—Yes.

6229. Do you consider that the suggestions which you have made in the document you have handed in to the Committee, sufficiently represent your view, without the necessity for our going into further details upon the subject?—Yes; unless the Committee should desire any explanations with reference to them. I would beg to make one observation respecting the Saint Ursula, by Claude: I have been looking at that picture, and I think I can trace in it evidence of a former unequal cleaning; the discoloured varnish seems to have accumulated in the horizon, and the upper part of the picture appears to have been more cleaned at some former period than the rest; but the effect is generally very agreeable, except in the columns of the portico, which look a little cold, even now; but, if I am correct, it is a proof that time does bring pictures into harmony, even after they have been unequally cleaned. I think there may be a misunderstanding as to the effect of dirt on pictures; undoubtedly pictures may be injured in their effect by dirt; but so they may be by an undue accumulation of glazing; the colours that are used in the general toning of a picture are earths and pitch, substances which would not properly be called dirt.

6230. Mr. *Charteris.*] Are those colours invariably used in toning a picture?—No; brilliant colours are also employed, but they are generally used for draperies.

6231. But lakes and yellows may be used?—Not often, in giving a general tone to a picture: such vivid colours, not to mention their unequal durability, are fitter for tinting than for toning. The Italians, in common parlance, use the word *sporcare* (to dirt) as equivalent to general glazing. The Venetians preferred earths to artificial and costly pigments, using the latter for draperies only. The truth is, no colour is dirty if light be visible through it. Fine colouring and fine colours are therefore not always synonymous; and with regard to the inequalities of glazings, or of the patina produced by time, such accidental inequalities are generally preferable to varieties contrived by the will of the artist. The commonest earths and asphaltum are generally employed in toning, so that the distinction between dirt and that kind of glazing can scarcely be said to exist.

6232. Do you believe that the process of putting asphaltum or glazing over their pictures was resorted to generally by the old masters?—I have no doubt that Claude glazed his pictures; when I stated before that if Claude was not a glazer, he ought to have been, I meant, by adhering to facts, to prove, as far as I could, that he must have glazed his pictures; I also stated that the test of a

Sir *C. Eastlake*, P. R. A.

17 June 1853.

glazer, in my opinion, is that his pictures are imperfect without glazing, and I think that Claude's pictures are imperfect without glazings. I find that Passavant, when he was in England in 1831, spoke of the Claudes at Holkham as having been injured by over-cleaning; he says, "This shows the artist how "Claude prepared his pictures; they are very decided in form and even hard," so that I have unexpectedly a confirmation of my opinion as to the appearance of his pictures when I observed that his solid execution might be said to border on the wooden; which appearance is corrected by glazing. I may also state, while I am upon this subject, that Sandrart, the intimate friend of Claude, gives some very interesting particulars as to Claude's practice, and I beg to caution the Committee against relying on a later edition of his work, which is generally quoted, and which is dated 1774; the first edition is dated 1675; in that edition Sandrart speaks in the first person, whereas in the later edition there is merely such an account given as you would find in any dictionary respecting Claude. Sandrart says, in his own work, that Claude never painted from nature, until he saw him (Sandrart) painting in the open air at Tivoli, and from that moment Claude adopted the practice; he also says, that while he (Sandrart) selected large objects, such as trunks of trees, and ruins, which might be serviceable to an historical painter, Claude began with the middle distance, and chiefly studied that portion and the horizon. In the later edition this account is misunderstood; the editor, Volkmann, says, that while Sandrart chose rocks, waterfalls, and similar scenes, as objects of study, Claude loved a flat country. I merely mention this to show how incorrect the later edition is; in that later edition you read that Claude glazed his pictures much; there is not a word of the kind in the first edition. I quite believe the statement in the later edition to be true; but if any one were to affirm, as on the authority of Sandrart, that Claude glazed his pictures, that would not be correct. For the rest, Sandrart's statement that Claude, in painting from nature, began with the middle distance, is not unimportant, since the inference is that his foregrounds were always painted from drawings.

6233. Mr. *Vernon*.] What is the word which is used for glazing?—Glasirung. In the later edition it is said, "He passed over his body colours with a glazing, "so that you could not see the first preparation that was hidden under it;" that is very strong as to the practice of Claude; but there is not a word of it in the first edition; it is merely the opinion of the editor. That opinion is quite correct, no doubt, and the pictures of Claude afford sufficient evidence of it; but it would not be correct to quote it as Sandrart's statement, because he says nothing of the kind.

6234. Mr. *Charteris*.] I understand you to say, that since you stated in your former examination, that if Claude was not a glazer he ought to have been, you have made further inquiry and examination with reference to his pictures, and have come to the conclusion that he was a glazer?—I came to that conclusion originally, but I think that facts are better than opinions; my opinion is that his pictures are imperfect without glazing.

6235. Do you think, with reference to the pictures that have been cleaned, those glazings have or have not been removed?—They have been removed at some period or other; but whether the Saint Ursula is now in the state in which Claude left it is a very different question; it is in a sufficiently agreeable state, no doubt; and I should conclude, from the appearance of the Saint Ursula, that the pictures which have been recently over-cleaned will come to a similar state in time; I think there is no reason to despair of it.

Lunæ, 20° *die Junii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Mr. Hardinge.
Mr. Baring Wall.	Mr. Charteris.
Mr. Vernon.	Mr. Marshall.
Mr. Monckton Milnes.	Mr. Stirling.
Lord William Graham.	Mr. Raikes Currie.

COLONEL MURE, IN THE CHAIR.

Sir *Charles Eastlake*, P. R. A., called in; and further Examined.

Sir *C. Eastlake*, P. R. A.

20 June 1853.

6236. *Chairman.*] I THINK you proposed in the evidence which you gave on a previous day, when alluding to the improvements which you would recommend to be introduced into the system of management, that there should be three principal officers appointed?—Yes.

6237. The first you suggested should be a secretary, whose duty it should be to travel with a view to collect information relative to works of art in different parts of Europe, and to verify the specimens of the masters; and you proposed also that the information which he collected should be reduced to writing, so as to form ultimately a mass of materials for guidance with respect to purchases for the new institution?—Yes.

6238. You proposed also that there should be an officer to be called a director, who should recommend to the Treasury, which was still to retain authority over the establishment, what pictures should in his judgment be purchased; who should communicate from time to time with the gentleman who brought him information; and who should report as to cleaning, varnishing, and other matters of detail connected with the preservation of the pictures in the gallery; and I presume you would recommend also that he should be generally responsible for the condition of the pictures?—I proposed that he should recommend to the superintendent, that is, through him to the Treasury, what pictures should be purchased.

6239. Then you proposed that there should be a third officer called a superintendent, who was to be charged with the general details and economy of management, irrespective of those other points which were to be entrusted to the officers already mentioned?—Yes.

6240. Do you propose that any one of these three gentlemen should have a superior control and responsibility?—I do not see that that is necessary.

6241. Do you think that the gentleman who is to travel on the continent to acquire information and to collect materials, with a view to their being laid before another person who remains at home, should be left to his own discretion; or who would you say should instruct him where he is to travel, and what places particularly he is to visit, with regard to the branches of information specially required; or whose duty would it be to see that he does travel, and fulfils his duty; or would you have him left entirely to his own discretion in regard to those particulars?—That which I have suggested is merely the outline of a scheme, and I have not filled it up completely; the secretary might derive his information from many; he would be more immediately instructed by the director; if he obtained information from any source as to pictures on the continent, which might be considered desirable acquisitions, he would probably propose to be employed on that service. I do not imagine that he would have the power of travelling about on the continent whenever he liked without a specific object. The report I suppose the Board to make to the Treasury, or to a controlling authority, would embody not only their past transactions, but what was contemplated for the future.

6242. I think it has been generally admitted by the witnesses who have spoken as to improvements that might be suggested in the establishment, and by yourself among others, that one great and perhaps the fundamental defect of the present system is a want of concentrated responsibility; do you not think that by having

Sir *C. Eastlake*, P. R. A.

20 June 1853.

having three gentlemen, quite independent of each other, to perform the different duties you would assign to them, that evil would be rather aggravated than diminished?—No, I make a distinction between divided and separate responsibility. I think the evil now is that the responsibility is divided in the sense of "shared." I would make each person responsible, and I think that would be the most effectual way of having the duties well performed. It is the principle on which the different offices of Government are conducted.

6243. Is there not generally one chief officer?—Yes, and in this case the Treasury would still be the chief, but the Treasury could not look into the details of each person's duties, nor could any superintendent over these three.

6244. Is not the duty of the heads of departments in the Government offices to which you refer as analogous, precisely that of superintending and seeing that the subordinate officers do their duty?—And so would the Treasury be responsible still. I should consider them as officers under the Treasury.

6245. But there is this difference, is there not, that a gentleman at the head of a department of Government has nothing to do but to see that the department is well managed, and that the subordinate officers do their duty; whereas the First Lord or Officer of the Treasury, considering his numerous other avocations, could only look now and then into the gallery to see how things were going on, and could exercise no special superintending power over the proceedings of these three officers?—Nor do I conceive that any superintendent even specially appointed for the purpose could do more. I do not think that any superintendent could look into the details of picture-cleaning, for example. It must rest with the director to be responsible for such operations.

6246. Do you not consider that the director being the person who remains in the gallery, and who has the most general knowledge of all matters which relate to the preservation of the pictures; and as ultimately all the more important functions will centre in him, do you not think it would be desirable that both the superintendent and the person who travels to collect information should be under him and be responsible to him?—I have not the least objection to that; but I do not think much would be gained by it.

6247. Do you not think that the probability is that a secretary with such qualifications as you here describe, as to verifying the specimens of the different masters, and collecting information all over Europe, being required to be an excellent linguist, and, by means of his varied accomplishments, to perform duties which would seem to involve a very extraordinary degree of responsibility as well as talent, would be a superior person in all respects, as a judge and manager of pictures, to the director himself, who remains at home and has little to do but occasionally negotiate for a purchase?—I have supposed that the director would travel also occasionally, in consequence of the reports of the secretary; I have assumed that the director would make purchases abroad in consequence of such reports; I think it would be much more possible to find a fit person to fill the office of secretary than to find a person fit to fill the office of director.

6248. Alluding to the mode in which these persons would have to perform their functions, in your written scheme you say, "The abovenamed officers, the "superintendent, the director of the gallery, and the secretary in connexion with "such representatives of the Government as might be permanently appointed or "occasionally deputed for such purposes, would form a Board, and would meet for "the transaction of business periodically." What representatives of Government do you propose to associate with the three officers?—I have no distinct proposition to make on that subject, but something analogous exists in the School of Practical Art at Marlborough House; there are various officers there who have the management of the establishment, and those officers are under the Board of Trade; the Lords of the Privy Council for Trade are their superiors; to them they are, in the first instance, responsible, and ultimately, no doubt, to the Treasury.

6249. Do the Lords of the Privy Council meet as a Board and take into consideration periodically the business of the institution?—I believe so.

6250. Is there no special responsibility with any one of these gentlemen; either the immediate directors of the institution or the Members of the Government, who are appointed to take part with them?—I am not particularly acquainted with the arrangement, but I believe there is a separate responsibility; there is a general director and an art director, which is somewhat analogous to the scheme I propose, though it did not occur to me at the time.

6251. This Board, comprising the three managers you mention and the representatives

sentatives of Government who are to be conjoined with them, should communicate with the Treasury or some public department from time to time as to the course of their proceedings?—Yes.

6252. Mr. *Hardinge.*] Do you propose that the director should be an artist?—If an artist, he should not regularly practise as such. The first condition I have assumed is, that each of these persons should give his whole time to his occupations; the circumstance of the director having been an artist would not, I think, unfit him for the office; but I would propose that he should give his whole attention to the concerns of the gallery.

6253. Do you think that any person but an artist could have a thorough acquaintance with the works and styles of the different masters, which, in fact, would be the chief qualification for the director?—I think it probable that one who is not an artist would have a more complete acquaintance with such matters than an artist.

6254. Under your scheme, who would you suppose should superintend the cleaning of the pictures?—I assume that the director would superintend all such matters, of course calling in advice if required, and as he might think fit.

6255. You would propose that he should have discretionary power to call in any advice he pleased from any quarter?—From any quarter, including artists.

6256. Would you have the secretary a professional man?—I do not see a necessity for it.

6257. Mr. *B. Wall.*] Do you mean that the three officers should be all paid?—Certainly; well paid.

6258. And responsible to the Treasury?—And responsible to the Treasury. The duties of the secretary would be very great, because he, of the three, would be the only one who would be perpetually employed; he would have no rest; he would have a vast undertaking before him, and would be expected to be constantly at work.

6259. Mr. *Charteris.*] Who of the three officers would you propose should attend sales, and be on the look out during the season?—Certainly the director; everything relating to the purchase of pictures should be in his hands.

6260. Do you think that the superintendent should be a person with professional knowledge as to the state and condition of a picture, and capable of cleaning it himself, if necessary?—The superintendent need have no knowledge of the kind; he would have very ordinary duties to perform; but any knowledge of art he might possess would be an additional advantage, and I imagine that no such person could be long in such an establishment without acquiring considerable knowledge of art; still, I do not conceive that it would be essential in his case.

6261. Do you not think it would be desirable that the officer resident in the gallery should be a person possessing technical knowledge and experience with reference to the state of pictures, so as to be able to give advice as to when they require cleaning, and to be able himself to perform such trifling processes as dusting or rubbing with a silk handkerchief as may from time to time be necessary?—It would be quite possible for him to suggest such things to the director, but I would leave the conservation of the pictures entirely to the director, who I suppose to be always there, and if you please, to reside also on the establishment. I see no objection to that.

6262. So that the soul and principle of your system is individual responsibility?—Yes.

6263. Vested in the director?—No, my idea is that each should be severally responsible. I think if they could shift their responsibility from one to the other you might have the work ill done.

6264. Would you not make the director responsible for the good management of the whole establishment?—I would make him responsible for everything relating to the gallery, properly so called; if he were to find that the pictures suffered from dust, for example, he would require the superintendent to do his duty by keeping the rooms constantly in a clean state.

6265. Mr. *Vernon.*] Do you propose that the permanent secretary of the gallery should also be the travelling secretary?—Occasionally.

6266. That he should be a person employed to travel in foreign countries, and empowered to avail himself of opportunities of picking up pictures there?—I think he should report to the director; it would perhaps answer the end if the director alone were to travel, but the secretary would travel not only for the purpose of suggesting what pictures might be purchased, but more especially for the

Sir *C. Eastlake*, P. R. A.

20 June 1853.

purpose of completing his catalogues. I look to the formation of the mass of facts he would collect as very important, and that information could not be collected without his travelling; that is the only reason why I think the secretary should travel; while occupied in that way he might hear of pictures and see pictures which he might think desirable acquisitions, and in that case he would report to the director, but he would not be necessarily employed to purchase pictures.

6267. You do not propose, then, to have any roving commission (if I may use such an expression), or any permanent travelling officer?—No; there might be no occasion for travelling for a year or two. I repeat my idea, that the object of the secretary would be to collect a mass of information relating to the history of pictures, and I think he could not do that effectually without occasionally travelling.

6268. Do you consider that whenever there are opportunities of making desirable purchases on the continent, we have generally ample means of information here as to such opportunities, and that we could send out a person to examine and report as to whether it is desirable to avail ourselves of them?—I conceive that the circumstance of a remarkable sale being about to take place would be a sufficient reason for sending the director at once; that is not a case in which the services of the secretary would be required; I would in that case send the director at once to make such purchases as he might think fit.

6269. Do you consider that you would be able to obtain a person qualified to judge accurately with reference to all the different schools of art on the continent?—The director would have it in his power to complete his own information in the best way he could, which is all that can be done under any circumstances.

6270. You are aware, are you not, that there is very great difficulty in some countries in getting pictures out of the country; for instance, in parts of Italy and the whole of Spain, and consequently that purchases must be made very secretly?—Yes.

6271. Mr. *B. Wall.*] What do you mean by the secretary not being wanted to travel at once; I think you said he would not be wanted to travel for two years?—No; I was asked whether I proposed a roving commission, and I answered by no means; I observed that the secretary possibly might not be required to travel for one or two years; there might be an interval during which his services might not be so required, but I think the inquiries of the secretary could not be properly prosecuted without occasional visits to the continent.

6272. His duties would take up a great deal of his time, would they not?—His whole time; he would have more to do than his colleagues.

6273. Supposing him to have the conduct of the catalogue, and to travel for that purpose, he could be very little in England?—He could form volumes of his catalogue in England without travelling at all; it would be necessary for him to travel to complete his information, but how he would do that, and at what precise period, would depend on circumstances. There might be interesting pictures to be seen at a particular time, but which could not then be purchased, and he might be directed to collect notes respecting them.

6274. You do not propose in your scheme to make the holidays longer than they are at present?—No, I do not see the necessity for any holidays; I would have no more holidays than there are at the British Museum.

6275. Mr. *M. Milnes.*] Do you know whether the directors in the foreign galleries, M. Von Olfers, at Berlin, or M. Neukerque, at Paris, themselves travel to see foreign galleries, and report upon them?—I know that, in the years 1828 and 1829, additions were made to the Berlin Gallery through the recommendations of Von Rumohr, who travelled in Italy at that time. In the years 1841 and 1842, Dr. Waagen travelled for that purpose, and many additions were made to the Berlin Gallery in consequence. I do not know that it would interest the Committee to be informed that in both instances great dissatisfaction arose, and was expressed.

6276. Of what nature?—The dissatisfaction arose from the purchases that had been made.

6277. Mr. *Marshall.*] In what year was that?—Dr. Waagen travelled in 1841 and 1842; he was commissioned by the King to purchase pictures in Italy. He did make large additions to the Berlin Gallery by purchasing in that way; and he himself told me that some of the purchases he had made were very much criticised.

6278. Mr. *Charteris.*] Does it not strike you that there is something anomalous

malous in the secretary being employed abroad to look out for pictures which he thinks are worthy of a place in the national collection, when it is the director who is to do the same thing at home?—I think I have been misunderstood.

6279. Will you have the goodness to explain to the Committee how you think you have been misunderstood in this respect?—I assume that the duty of the secretary is to collect information with a view to the formation of the catalogues which I have considered so desirable; in the course of that duty he would sometimes have to travel, and, while so occupied, I see no reason why he should not collect information respecting pictures for sale; but that would be an extra occupation.

6280. But then he must be a person competent to judge of the value of a picture, and able to give an opinion as to whether the pictures which are for sale are worth making further inquiry about?—His object in travelling would be to collect information for his catalogues. I am only supposing that he should in the course of that occupation obtain intelligence as to valuable pictures that are intended for sale. Would it not be desirable that, in such a case, he should make known that information to the director, the director making use of it or not, as he might think proper?

6281. You say that, in your opinion, he might obtain valuable intelligence in that way; but should he not also be able to judge of the value of that intelligence, and competent to judge of the value of the pictures?—He should; I have not assumed that he is not to be a competent judge, but the director is to be the responsible person. I will put a case: suppose the secretary goes to Venice to collect information for his catalogues, perhaps he hears of a Bellini for sale, and he writes to the director, giving him such information as he has obtained for his own purposes; the director finds from that evidence that it is a desirable picture to be purchased; he may then, on his own responsibility, direct the secretary at once to purchase the picture, he himself being responsible. I can conceive such a case as that happening.

6282. If such a system were in operation, in order to its proper working it should be essential that the secretary should be a person thoroughly conversant with the value of pictures, and that he should be, in short, as good a judge of pictures as the director himself?—He could not fail to be a very good judge in course of time, from the constant occupation to which he would be devoted; I will suppose that any Member of this Committee may travel in Italy, and may hear of valuable pictures for sale; he might perhaps think it his duty on his return, or perhaps at the time, to give information of the fact, and if his information were accompanied by such documents as would satisfy those at home, a purchase might be made on such authority; but I am assuming, that from the habits of the secretary and from his means of acquiring intelligence, he could furnish information that would be of a still more valuable description. I wish it to be understood that I only put this scheme before the Committee for what it is worth. I do not assume that it is perfect, but I imagined that the Committee might take from that scheme, and from any other suggestions they may receive from other persons, any hints they may consider useful; or reject them altogether.

6283. *Chairman.*] You do not propose to give the secretary any independent power of purchasing pictures without first communicating with the director at home?—In no case.

6284. You have stated in your written explanation of your scheme, that a gentleman who had been in the habit of travelling in the way you have mentioned could hardly fail to be a good auxiliary connoisseur?—Yes.

6285. Would he not be vastly superior to the director himself, who stays at home, and who merely receives from time to time accounts of pictures, while the other is a first-rate linguist, highly accomplished, and has had an opportunity of judging of pictures for many years consecutively?—I have not assumed that the director is never to travel; I have stated that he should travel for the purpose of making purchases.

6286. But only when a report is made that there is an opportunity for making an eligible purchase?—It does not follow that that report should, in every case, be made by the secretary. Suppose the director were to hear of a sale of the Kind of Holland's pictures, for instance; he would go at once, and buy what he thought fit.

6287. But as the secretary would be travelling all over Europe all the year round, always examining different galleries, and always reporting, would not that

Sir *C. Eastlake*, P. R. A.

20 June 1853.

give him a greater degree of knowledge than the director would be likely to have, he being only now and then called on incidentally to take a journey to Brussels or Florence, or elsewhere, to look at a particular collection?—I can see great advantages in such a scheme; the training of such a connoisseur as the secretary would ultimately prove to be, would be in itself an advantage; he might succeed to the office of director.

6288. Do you understand the office of director to be a higher office than that of secretary?—Yes, certainly, but not so laborious.

6289. If it is a higher office, and the occupation of the secretary is entirely subservient to the ultimate objects of the director, what objection would there be to making the director the head officer, and placing the secretary under him?—I believe I said in reply to a former question, that I had no objection to such an arrangement; it is not so contemplated in the scheme I have submitted to the Committee, but I see no objection to it.

6290. Do you think the third officer, the superintendent, would have enough on his hands to give him occupation at all, if the whole care of providing information as to purchases, the whole duty of making purchases, and the whole preservation of and attention to the state of the pictures in the gallery were entirely in the hands of the two other persons; what amount of work do you calculate the superintendent would have; could you specify the details of his occupation?—You have to look forward to a much larger establishment than the present. I have said, "He would have the direction of the establishment, "manage its financial concerns, pay the attendants, be responsible for the clean- "liness, ventilation, warming, safety, and order of the building; regulate the "admission of students, not only to the picture galleries, but to the gallery of "drawings and prints, and to the library; his time should therefore be exclu- "sively devoted to such duties." I imagine that would be enough to take up the time of an officer such as you describe.

6291. Do you not think that a director who has the responsible charge of the galleries, the saloons, and the pictures, and everything connected with them, would rather object to be controlled by a superintendent, and unless that superintendent were a visiting and controlling officer, entirely above him, would he not object to be interfered with in regard to many of those details which would seem to fall more properly within his own province?—I think you would find analogous cases in various public institutions. My object is to relieve the secretary and director from all minor cares such as now fall upon the keeper.

6292. But that would seem to be more desirable in a case where the person to be relieved of the details is the higher officer, and the others charged with the details are placed under him?—The name superintendent implies something higher than the other officers, but that was not my object.

6293. You have no scheme, have you, by which these three officers might be placed under one concentrated responsibility, irrespective of the Treasury, which is to be above all?—I have supposed them to be subordinate to some public Board deputed for the purpose.

6294. Do you propose to have an annual sum placed at their disposal for the purchase of pictures?—Yes, I would recommend that about 10,000 *l.* should always be in the hands of the director.

6295. You have mentioned in your printed paper that you assume that not more than one-third of this sum would, on the average, be expended annually; is it your opinion that in the new institution not more than about 3,300 *l.* would be expended in the purchase of pictures?—I formed that estimate rather from the past than from what I hope the future will be, and with a view not to alarm the Treasury by any exorbitant demand.

6296. But as the object is now to make a much more extended building, and add greatly to the collection, would you not rather pursue the opposite plan, and begin at once to spend liberally, in order to form something like a collection worthy of the nation?—I have not the slightest objection to such a scheme; I believe that if you allowed 20,000 *l.* or 30,000 *l.* a year, it might be well expended.

6297. I only speak with reference to your assumption, that only 3,000 *l.* of the 10,000 *l.* you propose to be placed at the discretion of the trustees would be expended annually?—In that manner; but I have said that for larger purchases, there would be time to apply to the Treasury. I have assumed that 10,000 *l.* should be in the hands of the director, for urgent cases, when there is not time

to

to consult the Treasury. I have known many opportunities of making advantageous purchases slip by, because there has not been time, or because the time may have been inconvenient to apply to the Treasury.

6298. You assume that only 3,300 *l.* out of the 10,000 *l.* would on an average be expended annually, but there would be demands made from time to time for much larger sums, would there not?—Yes.

6299. Would that imply that the 10,000 *l.* a year would be exhausted annually, before you thought of going to the Treasury for further advances?—I have assumed that the 10,000 *l.* would be restricted to urgent cases. If, for example, a large purchase were contemplated, and there were time to go to the Treasury, and the money were granted, that would be wholly irrespective of the 10,000 *l.*

6300. Do you mean, supposing that the occasional purchases desired to be made by the director himself only amounted to 3,000 *l.*, leaving a balance of 7,000 *l.* in his hands, that you would empower him to go to the Treasury for the other larger sum for some special purpose, before he had exhausted his annual fund?—Yes.

6301. Then that would remain in his hands for a subsequent year?—For similar purposes, for urgent cases.

6302. Then next year he would have another sum of 10,000 *l.* placed in his hands, of which only 3,000 *l.* again, according to your hypothesis, would be required, so that this sum would be something enormous in a few years?—I am not aware that I have so expressed myself.

6303. What I wish to understand, is the ground on which, if this director had 10,000 *l.* placed freely at his disposal, to be expended annually on pictures, you assume that he would only expend 3,000 *l.* odd in that way annually, instead of availing himself of his power to spend 10,000 *l.*?—I say here, "It is assumed "that not more than a third of this sum would on the average be expended "annually, and if less should be expended, the call on the nation for replenishing "this fund would not be frequent."

6304. Will you have the kindness to explain on what ground, having placed 10,000 *l.* annually at the disposal of the director, to be expended in making up the collection, you assume that only 3,000 *l.*, or one-third of that sum, would be expended by him in the course of each year?—I assume that what I have called urgent cases would not be very frequent.

6305. Supposing your hypothesis were verified, and that only 3,000 *l.* a year for the first ten years were to be required for urgent cases, the grant of 10,000 *l.* yearly still being at the disposal of the director, the expenditure would amount in ten years to 30,000 *l.* only, out of the 100,000 *l.* that had been placed in his hands?—No, that is not my idea; I propose that what is expended should be made up, so that he should always have ten thousand pounds, and no more.

6306. Mr. *Charteris.*] You say that under the present system the want of this money has been very much felt, and that opportunities of making advantageous purchases have thus been missed?—Yes.

6307. Do you think that under the present system, if the sum of money you mention had been at the bankers of the trustees, and placed there to their credit, opportunities would or would not equally have been missed in consequence of the difficulty there is when sales occur, and pictures unexpectedly turn up, of having a meeting of the trustees and of deciding upon the purchase of a picture, and do you not think that that difficulty might possibly be avoided by having recourse to individual responsibility in one person who should be authorised to attend sales and select certain pictures for purchase?—I think that having one responsible person would be the wisest course, but if a certain sum were placed in the hands of the trustees even now, I think it would be an advantage. I should consider that the very fact of three trustees agreeing together, even without a meeting, would be sufficient for any such operation, because the trustees might meet afterwards and ratify their proceedings in sufficient form. On a late occasion, when the last sale of the Spanish pictures took place, I was very anxious that a portrait by Velasquez (a portrait of a child) should be purchased for the gallery. I had not time to consult the trustees or to call a meeting, I therefore went alone to the Chancellor of the Exchequer and requested permission to purchase the picture. I wanted to go as far as eight hundred guineas for it. Mr. Gladstone, being aware that it was then literally impossible to call a meeting, authorised me to go as far as six hundred guineas if I could find one other trustee to sanction the purchase; I being one, he being another, and a third being to be found; now it so happened

Sir *C. Eastlake*, P. R. A.

30 June 1853.

that I could not find a third; this was on the very day of the sale, but my conscience was at rest, because the picture sold for 1,600*l.*

6308. That shows that even without a regular authorised meeting summoned for the purpose of transacting certain business, the present system renders it difficult, and in some cases impossible, to avail oneself of these opportunities that sometimes suddenly occur?—That was a proceeding which took place quite at the eleventh hour; no doubt if I had had time to take measures earlier I should have been able to find a third trustee, or even to call a meeting, and might have been sufficiently armed.

6309. How long had it been known that that picture was for sale?—For several days, during which it was put up in the rooms.

6310. But why then did you not apply sooner?—Because I had not time to go and see it. I saw it at the end of the week, and it was on Monday, the very day of the sale, that I took this course.

6311. Supposing there had been a person whose duty it was to attend sales and to take the earliest opportunity of seeing pictures which are exposed for sale, do you not think that this evil would not have arisen, and that the picture might have been acquired, supposing it had been sold for the sum you have mentioned?—Undoubtedly.

6312. Mr. *Vernon.*] Did Mr. Uwins make any report to the trustees about those pictures?—I am not aware that he did.

6313. Was any report required by the trustees?—I think not.

6314. *Chairman.*] In the case to which the Honourable Member has just alluded, of a person being expected to attend the sale or sales for the purpose of ascertaining whether there were pictures of value in the market, that person according to your scheme would be the director, and not the secretary, as the secretary would be employed abroad, would he not?—Not always.

6315. He would be employed occasionally at home for the same purpose?—Sometimes a year or two might pass when it would not be necessary for him to travel.

6316. But supposing him to be in England, he would be the person who would be on the look out for purchases?—No, I think that with regard to pictures to be purchased here, the director alone would attend sales and would be on the look out.

6317. Do you think it would be desirable that there should be named by the controlling body, the Treasury, for the purpose of ensuring the director competent advice, and relieving him of a portion of that very severe responsibility which must always attach to a man buying a valuable work of art, ten or a dozen professional men or amateurs, to whom the director might appeal for the purpose of taking their opinions, and who should look at any picture with him, and give their judgment in support of his own as to its merits?—In a case where there might be time it would be for his interest, and I have supposed that he would do so.

6318. Irrespective of there being such a body, how would you propose he should make purchases?—On his own responsibility.

6319. Do you think that any person having those qualifications which have been mentioned would be disposed to trust his judgment to the extent of making purchases without having some additional advice besides his own individual judgment?—Yes, I can conceive many cases in which he would do so; there was a small picture by Van Eyck, sold at Christie's a year or two ago, and which is now in the National Gallery; I would have purchased that picture on my own responsibility for the National Gallery.

6320. He might have such documentary evidence as was proof of the genuine character of the picture, and then of course there would be no difficulty about it; but I am alluding now to his general operations; do you think that without having some competent advice, he would go on during the whole year making purchases of the works of all schools and masters according to his own judgment; do you think there is any one qualified to carry on such a system of purchasing?—In many cases, partly from his own knowledge, and partly through the researches of the secretary, he would have very safe grounds to go upon in making his purchases; and in any other case I assume he would ask for the assistance of competent judges.

6321. You would rather leave it to himself, than that there should be certain persons named to whose judgment he should refer?—Yes; by all means I would leave it to him alone.

6322. Mr.

Sir *C. Eastlake*, P. R. A.

20 June 1853.

6322. Mr. *Charteris.*] Do you think the director, if he alone were responsible, would, for his own satisfaction, consult persons whom from his knowledge of the subject he considered most competent to give him good advice?—Yes.

6323. For the sake of his own reputation?—Yes.

6324. Do you think a director, with the responsibility thrown entirely on himself, and who for his own sake will consult persons whom he thinks most competent, preferable to the system of having a director, assisted by a small council composed of amateurs, artists, and picture-dealers?—That approaches nearer to the present system, and divides the responsibility. I think you might sometimes find, under such a system, that a picture might be purchased and a mistake might be made, and that in the end the advising committee would be, one by one, saying, "This was not my affair; I did not advise this purchase; it was recommended by So-and-so." That is the danger of a committee.

6325. *Chairman.*] But if they were obliged to sign their names to their opinion, each saying, "I certify that I did approve of such and such a purchase, "in conjunction with the director," which of course would be essential in any appointment of the kind to which you allude, would not that meet the objection you have just made?—That is virtually the present system. I consider that any trustee, whether present or not, is responsible for the purchase of a picture under the present system.

6326. You said that the difficulty would be, that after pictures were purchased, a person who had given his opinion would back out of it by saying, "I was consulted, but I was not the person on whose opinion the picture was "bought;" and in answer to that I suggested that each should be required to state his opinion in writing; would not that, do you think, obviate the difficulty you suggest?—Yes; and that is attained now by obtaining certificates from professional men.

6327. Then you do not agree with Mr. Dennistoun, that it is impossible, or at all events difficult to find any person who with his own knowledge of art, fortified by the assistance he might call in, would undertake the onerous responsibility of purchasing pictures required for the gallery?—I think it might be difficult to find such a person, but I think it would be the most desirable course.

6328. Mr. *Charteris.*] Your experience under the present system leads you to prefer the undivided responsibility of a director to the divided responsibility of a director assisted by a council?—Yes.

6329. Lord *W. Graham.*] In this country, where every act done by a man holding a public appointment is subject to newspaper criticism, do you not think the position of a director of the sort you contemplate would be almost intolerable, considering the attacks which would be almost sure to be made upon him by picture-dealers, artists, and various partisans?—I have supposed various qualifications in the director, and among others, I ought to have enumerated the quality of courage.

6330. You think he will have to bear a great deal?—Possibly; but not more than others have to bear on the continent.

6331. Is public opinion expressed as openly on the continent, do you think, as it is in this country?—Quite so. I will read, with the permission of the Committee, an observation made by a German with reference to the gallery of the Louvre: "The unfavourable circumstances in which the Dresden Gallery is "placed, and which are so much deplored, are hardly to be mentioned in com- "parison with the systematic ruin of the pictures in the long gallery of the "Louvre. For further information on this head, we refer our readers to the per- "petual complaints of certain French Journals, and to Waagen, 'Paris,' p. 679."

6332. Mr. *Stirling.*] What is the date of that?—Eighteen hundred and forty-seven; it certainly relates to a time when the modern exhibition took place in the gallery of the Louvre, and which, within the last two or three years, has been done away with. "The pictures which survive the daily dust during the exhibi- "tion, and the damp exhalations of the neighbouring Seine, are sure to be "destroyed by the periodical 'restorations.' Whoever wishes to see those "pictures must lose no time."

6333. Mr. *Vernon.*] The whole of that relates to past time?—To 1847.

6334. The modern pictures are not exhibited in the same way now?—No, but I have read this as evidence that public opinion was expressed.

6335. Mr. *Charteris.*] At that time was there one responsible head of the gallery?—I believe that was the case; I am not quite sure.

Sir *C. Eastlake*, P. R. A.

20 June 1853.

6336. Mr. *B. Wall.*] From what paper have you been reading?—From a note in Kugler's Hand-book; he quotes Waagen, and I have also Waagen's opinion here. Similar opinions respecting the injudicious cleaning and restoration of pictures in the Berlin Gallery, were published in Berlin in 1846.

6337. In your scheme you contemplate the director and secretary both being absent at one and the same time, do you not?—I have not assumed that; it does not follow.

6338. I think you said the director might go abroad and join the secretary?—No, not join him; he might act on his information occasionally; still I see no reason why they might not be both abroad together.

6339. Would there not be an inconvenience in allowing the superintendent to remain at home alone?—There would be an assistant secretary for the routine business, and the circumstance of there being so many officers would render it possible for both the director and the secretary to be absent together; but I have not assumed that they should be absent together.

6340. The superintendent would rank below the secretary, of course?—I have not decided as to their order.

6341. You have decided that the order shall be first the director and then the secretary, because you have stated so in a former answer?—Yes, but I have not decided it in this paper. It has been proposed at this meeting that the director should be superior to all, and I see no objection to it; but these are points which have been suggested, and in which I have acquiesced at the present meeting.

6342. You have stated that the director is to be the chief officer, and that the secretary is to be under him; then, supposing them both to be absent at the same time, the whole control of the management would be in the hands of the superintendent, who would be the inferior officer of the three?—Yes; but it would be for a time only.

6343. Mr. *Vernon.*] Who, according to your plan, is to be the actual organ of communication with the Chancellor of the Exchequer; is it to be the director or the secretary, or both?—I have supposed that it would be the superintendent; I suppose that as he is the official organ, and as he manages the financial concerns of the establishment, even suggestions respecting the purchase of pictures should, for form's sake, be made to him by the director; and that he should communicate with the Treasury.

6344. Is the director to decide upon the purchase of a picture, or the secretary?—The director.

6345. Then supposing the secretary, being abroad, comes to the conclusion that a picture should be bought, he must communicate with the director, and the director must communicate with the Chancellor of the Exchequer?—If you please; but, for form's sake, I have supposed that the communication should pass through the superintendent.

6346. I understood you to say just now that the director was to communicate with the Chancellor of the Exchequer?—No, I said the communication should be made though the superintendent.

6347. *Chairman.*] You said, in answer to a question at the last meeting, when I suggested the difficulty of divided responsibility, that you would have no objection to the superintendent being the chief person of the three?—These are all suggestions which do not come from myself, and the sketch which I have had the honour to submit to the Committee may undergo any changes the Committee may think advisable; with regard to the relative superiority of these officers, I see no objection, if it is considered desirable to have one head, to have either the superintendent or the director as the head; but I rather incline to the director being the head, because he is the most responsible officer.

6348. There being a general impression that the great evil of the old system is the want of distinct and definite responsibility, do you not think it essential that the first and most important element of any plan that may be suggested, should be where that distinct and definite responsibility is to lie?—It has been on that account that I have always wished the three officers to be as far as possible independent of each other.

6349. Mr. *Charteris.*] Do you think the system would work better if the director were at the head, and the others were subordinate to him, he being more or less responsible for their acts?—That would involve the necessity of the director communicating directly with the Treasury, instead of through the superintendent.

6350. Do you not think that would be the preferable system?—Perhaps it would.

6351. With reference to sales that occur in this country, are not sales of pictures of importance generally, if not always, between the months of February and August?—Yes.

6352. During the Session of Parliament?—Yes.

6353. So that the time when you propose these persons, whether the director or the secretary, should travel, would be after the end of the Parliamentary Session, and during the period when the trustees do not generally hold meetings?—That would be perhaps the most convenient time.

6354. Lord *Seymour*.] I understand you to say that supposing your system were adopted, the director would have the absolute disposal of 10,000*l*. a year?—Yes; in my original plan I supposed that the director would suggest to the superintendent, assuming that he would, for form's sake, be the person to communicate with the Treasury; but now that has been changed, and I would propose that the director should have the sole control of 10,000*l*., and that he should communicate directly with the Treasury.

6355. When you say "That has been changed," do you mean that you have modified your opinion?—I have been invited to reconsider it; it does not appear to me to be a matter of great importance, and I acquiesce in the views I have heard.

6356. Do you think the director who, as I understand, from your evidence, is to be responsible, should or should not have the absolute disposal of the 10,000 *l*. a year?—In any case he would have the absolute disposal of it, because his communicating, as I suggested, to the superintendent, would be a mere form.

6357. Then this one person, if I understand you rightly, would have the absolute disposal of that sum, and he is to be, I think you say, an artist?—No, I have not assumed that.

6358. Where do you propose to find a director possessing all these qualities?—I have defined his qualifications, and you must find him where you can. I admit there is great difficulty in it, but I do not think it impossible to find such a man in this country.

6359. One great subject of difference of opinion in regard to pictures is the question of price, I believe?—Yes.

6360. The director, according to your plan, will be not only the judge of the merits of a picture, but the judge of the price that he is prepared to give for it?—Yes.

6361. He will therefore be subject to any charge that may be made against him for having given too large a sum for a picture?—Yes.

6362. He will, as I understand, be able to appeal to no one in support of his conduct, and of the reasons that have induced him to give that sum?—I have assumed that in some cases he would consult other competent judges; and in other cases he might act solely on his own responsibility.

6363. When he consults other judges, would those other judges share the responsibility with him?—If he obtained certificates from them, they undoubtedly would share the responsibility with him.

6364. Do you not think, considering the strong way in which public opinion is expressed in this country with regard to any act, such as the purchase of a picture, or spending the public money, the director would, for his own protection, generally get certificates from others to support his opinion?—I can imagine many cases in which it would be quite superfluous to do so; but in all other cases it would be for his interest to get such support.

6365. In all those cases, therefore, there would be a divided responsibility?—To a certain extent.

6366. You would leave him, as I understand, quite unlimited as to whom he chose as the persons to give him a certificate?—Yes.

6367. They might be painters, they might be picture-dealers, or they might be amateurs?—The responsibility of the selection would rest with him.

6368. When he gets certificates in support of his opinion, may he get them from any persons he wishes, either artists, amateurs, or picture-dealers?—Undoubtedly.

6369. Do you propose that he should have the disposal of this sum of money every year, for the purchase not only of pictures, but of original drawings?—

Sir *C. Eastlake*, P. R. A.

20 June 1853.

I have not considered that point; I think that in that case I should have fixed a larger sum than 10,000 *l.*; I contemplated pictures only. I beg to observe, that hitherto the purchase of drawings has been confined to another department, the British Museum; the trustees of the National Gallery have had nothing to do with the purchase of drawings.

6369*. I thought from the evidence which you gave the other day, you seemed to consider it very desirable that power should be given to purchase original drawings more largely?—I quite agree to that; that would modify the statement I have submitted to the Committee, because it would enlarge the powers of the director; it would involve the necessity of his being provided with larger means, and it would also involve additional qualifications, because a very good judge of pictures may be a very indifferent judge of original drawings, and *vice versâ*.

6370. Then the director would require, in addition to his other qualifications, the qualification of judging of original drawings?—Yes, if it be decided that drawings shall be collected in the National Gallery.

6371. Does that appear to you a reason why original drawings should not be purchased in the same department as pictures, and therefore that the director would not require to be a competent judge of drawings, in addition to his numerous other qualifications?—No, I should be inclined to recommend that the director should also have power to purchase drawings; I think it is quite anomalous to allow drawings to be purchased by the British Museum instead of by the directors of the National Gallery, whoever they may be, seeing that drawings are works directly belonging to the history of art and pictures.

6372. Are not opportunities as often missed with regard to original drawings as with regard to pictures?—No doubt.

6373. Quite as often, I suppose?—Perhaps oftener.

6374. Do you think that opportunities that have been missed of purchasing pictures have resulted from the number of the trustees according to the present system, or from the trustees having no money at their disposal?—From both causes.

6375. For instance, in the case to which you have lately referred, in which you went yourself to the Chancellor of the Exchequer, if there had been at the disposal of the trustees a sum of 10,000*l.*, you might, by seeing one or two of your colleagues, have at once come to an arrangement as to the sum to be offered, might you not?—Certainly.

6376. Therefore, in that case, the appointment of a director would have had no great advantage over the present system of trustees, would it?—I think it would save time in any view of the case, because it would be requisite to call a meeting of the trustees, or it would involve the necessity of seeing two or three, so that they might agree together on the subject.

6377. But if they had the money at their disposal, that is all that would be required, is it not?—Undoubtedly it would very much facilitate the acquisition of fine works of art.

6378. If the director under your system, having a sum of 10,000 *l.* at his disposal, wished to buy a very fine work, he would, as you have told us, usually get certificates from other persons regarding its value?—He would if it were necessary.

6379. But regarding a fine work and a work of considerable importance, do you not believe that, practically, he would arm himself against attack by getting such certificates?—I can hardly allow that his motive in getting a certificate would be to defend himself against attack, for I think that an unworthy motive. I think that if a man is not prepared to brave the opinions of the public when he knows he has acted conscientiously, and when he has experience to guide him, he is unworthy to fill such a situation. I have supposed that he would fortify himself with certificates in cases where he was himself in doubt, but not from a feeling of timidity.

6380. But he may feel perfectly satisfied that it is a good picture, although he may be in doubt as to the exact sum it is worth, may he not?—There might be such cases; but I think a very short acquaintance with sales and with the priced catalogues that exist relating to many past sales would be sufficient to guide him.

6381. Do pictures sell for such uniform prices that there can be no doubt as to their value?—They are always increasing in price, and the director or purchaser would be prepared accordingly.

6382. They

6382. They are always increasing in price, are they?—The works of certain masters.

6383. If they have been cleaned, for instance?—Perhaps they would sell for much more in consequence of having been judiciously cleaned.

6384. Mr. *Charteris.*] Are you aware whether it is the case that pictures which have been cleaned do generally sell for more?—I am not now prepared with instances, but I think it very likely.

6385. Are you aware that Mr. Christie in his evidence has stated that pictures known to have been cleaned fetch less in his auction rooms than pictures that have not been subjected to that operation?—I should not consider that opinion, however respectable, to be conclusive.

6386. Is it not the opinion of a practical man?—The opinion no doubt is valuable as coming from such a source, but I am not prepared to acquiesce in it as a universal rule.

6387. Do you not think that Mr. Christie must be able to give an opinion, founded on his experience of sales, with respect to the question of cleaning, as to how far that operation affects the commercial value of pictures?—I wish you by all means to adopt Mr. Christie's opinion, if you think it right to do so.

6388. Lord *Seymour.*] As regards the picture that was supposed to be a Holbein, if a director had bought such a picture as that, would it not have been of great advantage to him, as far as his responsibility was concerned, if he had obtained certificates of other persons as to the authenticity of the picture?—In the first place I can hardly assume that such a director as I think fit for the National Gallery would make such a mistake; and in the next place I would say, as some excuse for my share of the mistake, that I was fortified by the opinion of a person whom I considered a competent judge.

6389. Therefore, the director being fortified by the opinion of a competent judge, would be relieved from part of his responsibility?—I think the responsibility would still rest with the director for selecting his advisers.

6390. *Chairman.*] Do you think the selection of one individual would in any such case be sufficient either to insure a good opinion on a picture, or to shield or assist the director in regard to his responsibility?—Certainly not; I ought in the case to which I have referred, to have had half a dozen opinions, or at all events two; although, at that time, the Treasury regulation requiring two opinions did not exist.

6391. Did you consider that the opinion of the gentleman you consulted, whose name you said, when you were last examined, you did not wish to make public, as the expression of his opinion was confidential, was that of a thorough judge of a Holbein picture?—I thought so; I have no objection to give the Chairman his name, in order that my testimony may be verified; but I would rather not mention the name publicly.

6392. Mr. *B. Wall.*] When you talk about consulting the director or superintendent in some cases, and not in all, what distinction would you draw?—I said the director would consult others.

6393. What line of distinction would you draw?—There are some cases in which it would be altogether superfluous. I take such a case as the Garvagh Raphael. There was a hope some time ago that that picture could be obtained for a fair price; would anybody hesitate, knowing the history of that picture, to buy it at once; its reputation, its history, and pedigree being all perfectly well known.

6394. There would be in some cases a divided responsibility, and in other cases a sole responsibility?—I think that where the director considered it advisable to call in the advice of others, he would be responsible for the selection of his advisers; and I do not think that would save him from much responsibility.

6395. Mr. *Charteris.*] Do you think there would be any difficulty, as a difficulty has been suggested by a question which was asked you a short time ago, in finding a director competent to value pictures?—No; that I think is the least difficulty. I would beg to observe that, when I was last examined, I stated that I considered myself but little competent to give an opinion as to the value of pictures, and I stated as much at first; I would rather exaggerate such disqualifications than the contrary, but such statements are relative. I might judge perhaps as well as most persons who are conversant with pictures, as to the value of pictures, but I do not pretend to any very accurate knowledge of the kind; that is all I meant.

6396. *Chairman.*] When you talk of the director being competent to value a picture,

Sir *C. Eastlake*, P. R. A.

20 June 1853.

picture, do you not think that a person competent to form an opinion as to the market value of a picture, might often be little competent to judge of its value with regard to its desirableness for the National Gallery?—I assume that the director would have both qualifications.

6397. Mr. *Charteris.*] Among other qualifications, he should be competent, when pictures are exposed for sale, to form an opinion as to the sum of money it is desirable the nation should give?—Yes.

6398. *Chairman.*] Is it not the peculiar province of picture-dealers to give opinions as to the market value of pictures, and do you think it likely that a person with those high qualifications which it would be necessary to possess, in order to make up a fine collection of pictures, and arrange them chronologically, would possess that degree of technical knowledge which you on a former occasion separated from the higher attributes of connoisseurship?—In the first place, according to the scheme I have submitted to the Committee, the proposed director would always have the advantage of referring to the secretary's reports; and that would be one of the uses of those reports. Even now, in the National Gallery, there are volumes containing catalogues of sales that have taken place at Christie's and elsewhere, perhaps for the last 15 or 20 years, and in those catalogues all the pictures are priced; so that any person devoting his time exclusively to such details might arrive at a sufficient knowledge of the market value of pictures; such a knowledge as picture-dealers have, from keeping such records accurately.

6399. Mr. *Charteris.*] Do you think that supposing the director wished to fortify his own opinion as to the value of certain pictures, he would find any difficulty in getting persons to give him written certificates confirming his own opinion?—No, I think not; but even if they were paid certificates, he might be authorised to have them.

6400. Do you think it would be necessary that he should get such certificates?—I have, in my ideal of a director, contemplated such a person as would be generally superior to all such advice, and I think that in time he would be so.

6401. Am I right in supposing that your idea of the way in which the director would set to work for the purpose of purchasing pictures for the nation, would be very much what any gentleman amateur, who desired to form a collection, would do in his own case; that is to say, attend at sales and fix on a picture which, whether from its historical value or its intrinsic merit, he thinks would be worthy of a place in his collection, and then if he has any doubt as to the value of the picture or its merits, that he would consult those persons whom, from his knowledge or experience on the subject, he thinks most competent to give him a valuable opinion?—Yes; if such opinion were needed.

6402. Lord *W. Graham.*] Having partially formed a collection, a picture might be more valuable to the National Gallery than to anybody else, might it not?—Yes.

6403. And therefore it would be worth while to give a larger sum for it than the mere market value?—Yes, I can conceive such cases.

6404. Mr. *Charteris.*] Am I right in supposing, that in an answer which you gave to me some time ago with reference to the purchase of the small Velasquez which you were anxious the nation should purchase, it would have been in a great measure, if not entirely, in consequence of the present system of the trustees, that that picture, supposing it had been sold for the sum of 600 *l.*, was not purchased for the nation; and that if there had been one director that picture might have been acquired?—Certainly; the case is quite in point.

6405. Mr. *Marshall.*] Does not the great difference between the value that you placed on the Velasquez and the price for which it was actually sold, show the great difficulty there would be in the director fixing the price he would give for any picture?—His power would be unlimited; but he need not give extravagant prices.

6406. Mr. *Charteris.*] With reference to the Velasquez to which you have referred, am I to understand that it was a picture which was not of such historical importance, or of such artistic excellence and value, that the nation ought to acquire it as a link in their collection at any price, but that if the nation could acquire it for six or eight hundred guineas, it was a purchase worth making?—Undoubtedly. I wish it could have been secured for eight hundred guineas; I thought that a very liberal price; it went, however, for double that sum.

6407. In your opinion, would the director be able to form a sound judgment as

as to the price within which the nation ought to restrict itself with a view to acquiring any picture that might present itself at sales?—Yes.

6408. Lord *Seymour*.] As you are acquainted with foreign galleries, I may ask whether you think that any of those foreign galleries enjoy the advantage of having such a director as you would recommend for the National Gallery in this country?—I suppose you will never find a perfect connoisseur.

6409. Do you know any person in any foreign gallery who is thoroughly acquainted with all the schools of painting?—Not to the last degree of accuracy, certainly.

6410. You would require accuracy, would you not, to know the style of each master?—Yes; I have given a list of the qualifications of a director in the suggestions which I have laid before the Committee.

6411. You know nobody, as I understand you, in any foreign gallery at present, who comes up to your ideal of what a director should be?—No, I do not think you could ever find a perfect connoisseur; the knowledge that is required is too vast and various; but still you may have a near approach to it; you may have the best judge that is to be found, by carefully inquiring for him; and when in office, and devoting his time exclusively to his occupation, he would be always gaining knowledge.

6412. And then he must not have an unreasonable leaning towards any particular school, for that would be injurious to the collection, would it not?—I think so.

6413. Have not most connoisseurs a leaning towards one school or another?—Many connoisseurs have, and most artists have.

6414. Therefore there would be a difficulty in that respect in finding either an artist or a connoisseur qualified for the directorship?—Connoisseurs are freer from such leanings than artists; I think an artist would be apt to have a leaning towards the works of certain schools and masters, but a connoisseur's views are generally more extended.

6415. Should we easily find an artist in this country who would have sufficient moral courage to disregard attacks which might be made upon his judgment in the newspapers?—I have not assumed that an artist would be the fittest person to appoint.

6416. Should we find a connoisseur easily who would, do you think?—I think so; as to the question of independence, I can judge from my own feelings when I was keeper of the National Gallery; if at that time Sir Robert Peel had entrusted me with 20,000 *l.* to lay out in pictures, I would gladly have accepted the responsibility; I think I should have given satisfaction, and I would not have purchased the "Holbein."

6417. Should you (as you have now put your own case) have obtained certificates from certain persons regarding the value of pictures?—I think that perhaps I could have purchased a dozen pictures without consulting any person, on their known reputation.

6418. Should you in the case to which you have referred, have asked for a power of paying persons to give you their certificates?—Certainly, if they were not to be otherwise obtained.

6419. Mr. *Vernon*.] Do not you see any danger of the treatment in this gallery, under the system of management you propose, becoming somewhat similar to the treatment resorted to in foreign galleries with reference to the entire restoration of pictures?—No; I think the system I have proposed would be the most advisable.

6420. Do you not think that the presence of some sort of board or small council would operate as a check upon the functionaries of the gallery in reference to the point to which I have alluded?—I think it would be an unwholesome check.

6421. Assuming that you have a clever director, and an able secretary, who have each their own views as to the proper state in which the pictures should be preserved, and that you put responsibility upon them with a good salary, and they consider themselves bound to act under that responsibility, would you see no danger of their dealing with our pictures in the same way as the pictures at Berlin, at Madrid, at Munich, and at Dresden are dealt with in reference at times to their complete restoration?—I admit that there is always danger of that; but I do not think that the present system guards against it; the effect of this very inquiry, perhaps, will be to prevent any cleaning whatever. I do not think the pictures will suffer in consequence. I have already said I do not think pictures suffer from

Sir *C. Eastlake*, P. R. A.

30 June 1853.

dirt; but the effect will be to fetter the powers of those who have the direction unnecessarily; for example, Mr. Seguier has examined the "Velasquez" which was lately purchased, and he has declared that he will not undertake even to varnish that picture unless it be first lined; the picture has never been lined, and when you look at it against the light, you find there are innumerable small holes in it; it is not safe even to varnish that picture without lining it, and the trustees will probably be very reluctant to have anything done to it.

6422. Do you recommend that there should be any greater restriction than there is at present as to the admission of the public to the gallery?—I should be very unwilling to put any restriction on the numbers visiting the gallery; although at the same time I think the crowds visiting the gallery are the chief cause of the state to which the pictures are reduced.

6423. Do you consider that some modification of the system might be adopted which might enable amateurs and persons who wish to visit the gallery more quietly, to do so by writing down their names at the doors on certain days of the week?—You are probably aware that two days in the week (Friday and Saturday) are appropriated to students for the purpose of copying pictures.

6424. I am alluding to the other four days of the week?—The other four days, I think, are not too many for the public.

6425. Would you see any harm in a regulation by which during the forenoon persons might be admitted upon writing down their names, while there should be free and unrestricted admission of the public in the afternoon?—That is a scheme I have never thought of; it would be desirable in some respects, but it would have this inconvenience, that the crowds would be greater in the afternoon.

6426. Do you not think you might avoid by that means the presence of persons in the morning, who do not come to the gallery so much to look at the pictures, as to make it a lounge?—If such persons are more likely to visit the gallery in the morning than in the afternoon, that evil would be got rid of by the adoption of such a regulation as that which has been suggested; but the crowd in the afternoon would be considerable.

6427. Do you not think that if such a regulation existed, there might be something gained to those who wished to see the pictures more quietly, and with less confusion, than they can at present?—Yes.

6428. Supposing an artist is occupied in copying a picture, are two days in a week sufficient to enable him to carry on his work properly or satisfactorily?—It is a very short time.

6429. You are aware that in many foreign galleries the public are admitted under certain restrictions while the students are copying; do you see any objection to that being done here?—It is done to a great extent now; people coming from the country, and respectable foreigners, desiring to see the pictures, and sending up their cards to the sub keeper, are admitted without difficulty.

6430. Would you recommend that any better precautions should be taken, such as the door-keeper being required to make visitors to the gallery dust their feet and so on, there being at present no mats or anything of that kind?—Certainly; I was not aware that such common precautions did not exist.

6431. Would you recommend generally that pictures should be covered as far as possible with glass?—That is the most effectual mode of preserving pictures; there cannot be a doubt about it; but the inconveniences resulting from it are well known, and I need not dwell upon them here; the enjoyment of the pictures is greatly impeded.

6432. You would recommend perhaps, at all events, that in the case of large and important works, glass should be put over them with a door, so that an attendant who should be constantly present, should be enabled to open it for any amateur who wished to see the picture in its undisguised state?—Yes, I even once thought of a plan by which the largest pictures might be covered in that way, the whole frame moving away from the pictures; when a large picture is covered with glass, it becomes hazardous to remove the glass if it be attached by means of hinges to the frame itself, but I think a mode might adopted by which a frame with a glass might be placed before a picture and removed; a few years since I submitted a scheme of that sort to Lord Seymour.

6433. You are aware, are you not, that at Dresden The Madonna di San Sisto is covered with a sort of glass door, which is opened when any person wishes to see it?—Yes, but I think it is a dangerous operation with a picture of such a size.

6434. It is constantly done there, is it not?—Occasionally; not very frequently; I know the director does not like to do it often.

6435. *Chairman.*] Do you not think, assuming the gallery to remain in its present state, that by requiring of each person not to write his name, as that would exclude persons who cannot write, and who still want to see pictures as well as other people, but to go to some corner of the building and take a ticket which he should show at the door, that would, while freely admitting the public, prevent the sudden rush of crowds which is complained of as filling the place with idle people who have no other object than to amuse themselves?—Yes, some slight impediment of that kind would be sufficient to deter mere idlers.

6436. No mere idler probably would take the trouble to go a hundred yards for the purpose of getting a ticket, but if a person really wanted to see the pictures, he would be quite willing to take that trouble?—Yes, I think it would be a very judicious arrangement.

6437. Mr. *Charteris.*] Do you feel disposed to concur in opinion with the writer of this paragraph, contained in a letter from Mr. George Richmond to the Chairman of this Committee: he says, "It is to be earnestly hoped that the next "move will be to put the whole collection under glass; and it will be some "compensation to us for the inconvenience of such an arrangement, to think "that if we cannot see our pictures with as much comfort as we would, that "future generations may do so, which I fully believe they never will, unless they "shall in future be more effectually guarded from injury than they have been"?—You are probably aware that I assisted in preparing a report, in conjunction with Mr. Faraday and Mr. Russell, on that subject, and that we had numerous communications from foreign galleries on the subject.

6438. Will you have the kindness to answer my question, giving us your own opinion?—I was trying to refresh my memory by the report which we submitted, some notes of which I have here; I believe the only objections to glass which we entertained were that the pictures could not be well seen when so covered, and I think that is a very great objection.

6439. Do you think that that objection is modified by the consolatory fact that our descendants will thereby be able to see the pictures, which in process of time, from the accumulation of dirt, and the cleaning, may otherwise be obliterated?—I cannot understand such reasoning; I would rather that we should enjoy the pictures ourselves.

6440. Am I to understand you to say that taking the pros and cons you are now opposed to covering the pictures with glass?—No; I think there are many cases in which glass might be used with good effect; and I should recommend covering as many pictures with glass as possible, if the pictures are to remain where they now are. I think it is a great evil, but still it would be desirable to resort to that course if the pictures remain in their present position.

6441. Objectionable as you think it to be in consequence of the reflection, and in consequence of the difficulty of seeing some pictures, still you think if they remain on their present site it would be desirable to cover them with glass, as the lesser evil of the two?—I think so.

6442. Are there not pictures that are somewhat injured; sketches, and pictures of that description, which are rather improved in appearance by having a glass over them?—If they are very light in colour; but the darker the colour the more the glass acts as a mirror.

6443. In the National Gallery now, there are two Correggios, one Annibale Caracci, and some other pictures, which were covered with glass I think during the time you held office?—Most of them.

6444. Did you hear any objections made on the part of the public to those pictures being covered with glass, or did they complain that they could not see them?—I have heard that objection made, not by the public in the ordinary meaning of the word, but by artists.

6445. Artists copying the pictures?—Artists visiting the gallery.

6446. Artists engaged in copying those pictures might have had the glass removed, might they not, or in the event of there being no regulations on the subject, such regulations might be established?—I believe it is not unusual for artists copying pictures to have the glass removed.

6447. At present?—At present.

6448. So that the objection with regard to artists copying pictures is thereby obviated?—Yes; the objection which I have heard made is, not that the glass pre-

Sir *C. Eastlake*, P. R. A.

20 June 1853.

vented the artists copying, but that it prevented artists and amateurs visiting the gallery from seeing the pictures properly.

6449. Is it or not the case that the Correggios which are covered with glass are at present in a good state, and that they do not require cleaning or varnishing?—The two large Correggios are by no means in a good state; the small one is in a perfect state.

6450. But do they require cleaning and varnishing?—They have had so much cleaning, though I do not know when, that perhaps it would be better never to touch them again.

6451. Is it or not the case that the pictures which are under glass are at present in a much better condition as regards dirt on their surface than those which are uncovered?—Yes; I have no doubt that glass over pictures is a most effectual means of preserving them; I know from experience that the varnish does not even chill for years when pictures are under glass; I have some of my own under glass.

6452. In the evidence you gave before the former Committee, over which Lord Seymour presided, you stated that you had two pictures, both of which had been varnished at the same time, the one under glass and the other without glass, and that the surface of the one without glass had become chilled and obscured, whilst that of the one which was under glass remained bright and transparent?—I did not remember that I had then stated it, but I can confirm the statement now.

6453. My question is whether that is still the case, and whether the surfaces of the pictures under glass still remain bright and transparent?—Quite so; there cannot be a question that glass preserves pictures altogether.

6454. You have, in consequence of your experience in dealing with your own pictures in the London atmosphere, placed more of them under glass?—Yes, I have placed one under glass since I gave that evidence.

6455. Lord *Seymour*.] Does it often happen that students are refused leave to copy pictures from want of space in the gallery?—Yes, I believe that to be the case.

6456. Has the daily attendance of students during the two days of the week when they may attend increased?—I am not prepared to say; I have no knowledge of the number of students who have been studying lately; Colonel Thwaites would be able to answer that question.

6457. Have you considered whether it would be advisable in any new arrangement of the present gallery, or in any new gallery, to have a separate room on the same floor for copying pictures, into which room they might be wheeled, so that they might be copied without interfering with the public?—That is worth consideration, but the obvious objection to it is that persons wishing to see a particular picture might be deprived of that advantage for a considerable time; I know it was the practice in the Louvre, because many years ago I copied a picture myself in a private room there.

6458. Did you not find it a great convenience to have that accommodation afforded you, instead of being obliged to copy the picture in the gallery into which the public came?—Yes, I was not alone there; there were perhaps half a dozen others copying; the superior advantage to the artist is unquestionable.

6459. You have recommended a large annual expenditure for the maintenance and increase of the gallery; has the National Gallery in your opinion, since its establishment, produced any effect in improving the style of painting in this country?—That is a difficult question to answer; I should rather say that the style of painting in this country is not so much influenced by the National Gallery as by the fashion and connoisseurship of the day. I think I can trace the influence of the great admiration which has obtained of late years for the earlier works of art.

6460. Is it your opinion that we must improve our own schools before we improve our artists?—That must always be the case.

6461. Can you trace anything that makes you think the existence of the National Gallery has had any effect in improving the public taste?—I am unwilling to express a vague opinion; if I had any facts on which to found an opinion I would not hesitate to express my views distinctly; but I am not prepared to say that I am convinced of any such effects having been produced by the National Gallery exclusively.

6462. Then we are called on to recommend the expenditure of 10,000 *l.* a year for the purpose of increasing our collection of pictures, though you cannot offer any opinion to us that the pictures which we already possess have had any effect during

during the last 20 years in elevating the public taste?—It is necessary to consider that question in all its bearings; it should be remembered that before the National Gallery was established, and since, there have been magnificent galleries of pictures open to artists and lovers of art in other parts of London, and they have produced an effect upon the public taste, together with the National Gallery, and even before it was established; so that it is hardly to be expected that any sudden effect should have been produced on the taste of this country, as far as artists are concerned, by the establishment of the National Gallery; but if you ask me whether the public at large have been instructed by it, I say undoubtedly they have.

6463. Mr. *Charteris.*] Do you think that a love of art generally is much more widely spread now than it was some few years ago?—Certainly.

6464. The price of pictures has risen lately, has it not?—Yes, that is one indication of it.

6465. Do you think that that greater spread of the love of art, and appreciation of the beautiful, is, to a certain degree, owing to the National Gallery, and to the other open exhibitions of pictures to the public?—Undoubtedly; but the improvement of the public taste, I think, is mainly owing to the National Gallery.

6466. *Chairman.*] Do you not think that the fact of the National Gallery containing principally specimens of the inferior schools of art, might, in one sense, be more likely to deteriorate the public taste than to advance it?—I think there may be some misapprehension on that subject; there is at present what may be called a rage for very early works of art; there are persons in this country, but more particularly on the continent (I know there are exceptions, and I honour them), who have a predilection for very early works of art, because the study is connected with a certain sort of erudition, and is addressed to the understanding rather than to the imagination; and I should say of such persons, that they may cultivate that predilection without having any taste whatever.

6467. Has it not been said generally, as one of the main defects of the English school of painting, that they have adopted a meretricious style of colouring, and paid attention to the petty mechanisms of art, rather than to those higher qualities of art which are exemplified in the earlier and purer schools of painting; do you not acquiesce in that opinion?—Not entirely; and with regard to the qualities which the English school may aim at, I would say, generally, that the art of painting is raised by raising its characteristic qualities.

6468. Do you consider that a gallery chiefly composed of the works of Rubens, Rembrandt, Guido, and other painters of that period or class, is as well adapted to elevate the public taste as a gallery composed of the works of the early Florentine painters contemporaneous with Raphael, of the early Lombard painters contemporaneous with Leonardo Da Vinci, and the early Venetian painters contemporaneous with Giorgione and Titian?—I think that, to artists, the pictures of the two masters you first named are invaluable.

6469. But not with a view to improving public taste?—No; at all events not alone.

6470. Mr. *Vernon.*] Do you not think that the great facility of access to foreign collections, by which we have attained a greater knowledge of works of art generally, has influenced our feelings with reference to our home collections?—If you understand by facility of access, the facility of travelling and visiting foreign galleries, I quite agree; but otherwise the facilities which are afforded in foreign galleries are not so great as in our own.

6471. We have now acquired a much more accurate knowledge of the works, say of the early Italian masters in Italy, and know their beauties more accurately than we did before, and consequently we feel more the want of them in our own gallery, do we not?—Yes; but there was no lack of opportunities of obtaining such knowledge, if English travellers had been disposed, to look for it, any time within the last 40 years.

6472. Was not the number of travellers 20 years ago to foreign countries greatly less than it is now?—I am not prepared to say; but there were always fine works by the early Florentine masters not only in galleries, but in churches and in public buildings in Italy, which were passed over; the taste is a modern one; how it has arisen would be, perhaps, a difficult inquiry; but I venture to predict that, as it at present exists, it will not endure. I think there is a great deal of fashion in it; a large proportion of those early pictures are full of affectation and grimace; and many persons who have, or fancy they have, a taste for those pictures are insen-

Sir *C. Eastlake*, P. R. A.

20 June 1853.

sible to the essential elements of painting, such as beauty of arrangement, harmony of colouring, and natural action and expression.

6473. Do you not consider that each school and each country furnishes its own peculiar qualities and characteristics of art, and that it is most desirable that in the national collection you should combine all those characteristics of art and all those various qualities?—Certainly.

6474. Consequently, that we should not depreciate the German or the Flemish school because it does not rise to the highest point to which, perhaps, Italian art rises; though, on the other hand, it possesses peculiar characteristics and excellences of its own?—That is my opinion.

6475. And so with the Spanish and so with other schools?—I confess I have very little admiration for the Spanish school generally.

6476. *Chairman.*] In forming a collection would you, while it was in its infancy, still continue to select your purchases promiscuously from the Spanish, Flemish, Dutch, Bolognese, or Neapolitan schools as much as from the Florentine, Lombard, or other early Italian schools?—I feel it difficult to offer anything like advice on such a subject, because I have my own predilections. I should omit the Spanish and the Bolognese schools with very few exceptions; and I should collect as many Venetian and Flemish pictures as I could, and a great many both of the early and of the best Italian pictures generally.

6477. We ask your opinion as to what you think should be done, with a view to form or improve public taste in this country?—I have so expressed myself as to show that I am not a good judge as to that object; I cannot help being influenced by my own predilections.

6478. Mr. *Charteris.*] Do you think that the director to be appointed should direct his attention in the first place to the purchase of the finest works of the finest period of art, if they are to be got, and that at the same time he should direct his attention to the completion of a historical gallery of art?—Certainly.

6479. And therefore as the gallery is at present constituted, having reference to that period of art in the works of which it is most deficient, namely, the early Italian painters, do you think he should direct his attention to the acquisition of works of art of that time?—Certainly; but with discrimination.

6480. Mr. *R. Currie.*] I understood you, in answer to a question from the Chairman, to give an opinion, that however much we might all admire the early Italian painters as expressing in their pictures religious sentiment, and as appealing to religious feelings, you do not consider them so valuable with a view to artistic education and for improvement in art itself, as the Venetian and some of the later schools; I mean that however we may admire Francia and the early painters of religious subjects, and however admirably they may address our religious sentiments, you would not look upon them as so valuable with reference to artistic improvement as the works of some later painters?—I think it is most desirable to collect works of the early Italian masters, but I think it should be done with discretion and discrimination. I have said that I have seen many works of those painters full of affectation and grimace, such as would not be tolerated in a modern artist, nor should they be admired in any artist; therefore, to form a collection blindly and indiscriminately, without taste, and even an artist's taste, would not, I think, be judicious.

6481. Lord *Seymour.*] You have stated that the higher price given for pictures, as compared with the prices formerly given, proved that there was an increased love of art in this country?—Yes.

6482. Do you not think that it shows an increase of wealth in the country rather than an increased love of art?—That wealth might be expended in horses and dogs, and a hundred other things.

6483. Mr. *Charteris.*] Do you think that, supposing there is an abundance of space in the gallery, it would be desirable to sanction deposits of works of art by private individuals?—I think that would be very desirable; the only difficulty that occurs to me is, that you would have a number of applicants, and that the trustees, or whoever might have the direction, would be placed in difficulty from the necessity of refusing to accept many such pictures.

6484. Would you have them refuse a picture of undoubted merit?—It is the question of merit that would be the difficulty. I have no doubt that many pictures would be offered that would be wholly unworthy of even a temporary place in the gallery.

6485. Would you, supposing you were the director, be afraid of taking upon yourself

yourself the responsibility of declining to receive a picture which you thought neither ornamental or instructive?—I would not hesitate to decline such a picture.

6486. I understand you to say, that if the persons entrusted with the management of the gallery exercised a wise discretion, you would not object to the admission of pictures belonging to private individuals, for temporary deposit in the gallery?—If those pictures were possessed of merit.

6487. I will call your attention to a meeting of the trustees, held on the 4th of August 1845, during the period that you were keeper; in the minutes of that meeting it is said, "Read, a letter from Mr. Seguier, communicating an offer from the Honourable Francis Charteris, to deposit for a time in the National Gallery his fresco, by Pelegrino Tibaldi. Resolved, That the trustees are not desirous of sanctioning deposits in this gallery, by private individuals, of works of art; and that Mr. Seguier be requested, in making this decision known to Mr. Charteris, to return him the best thanks of the trustees for his obliging offer:" do you consider that that was a wise decision under the circumstances of the case?—I think, on the whole, it was, because of the limited space in the gallery; and I think that if the trustees had accepted the liberal offer to have the fresco in question placed there, to be seen and admired as it would have been, many other offers would have followed, of pictures perhaps of sufficient merit; and then the limited space would be at once an object of consideration; therefore it was better to make the objection at first.

6488. You are acquainted with that picture?—Yes.

6489. It had previously been lent to the Royal Academy, had it not?—I believe it had; I saw it in Mr. Seguier's room.

6490. At the time when that picture was offered to the trustees of the National Gallery the question had recently arisen, had it not, of covering the walls of the Houses of Parliament with frescoes?—Yes.

6491. Do you not think therefore that it might have been wise to have admitted that picture at that time as a specimen of fresco painting, and that it might have been very instructive to artists engaged in painting or designing frescoes for the walls of the Houses of Parliament?—That might have influenced the trustees, undoubtedly.

6492. Lord *Seymour*.] I understood you to say that if there were more space you think it would be desirable for the trustees of the gallery to receive pictures on deposit?—I think so, if they are of sufficient merit, but that would be a constant difficulty.

6493. Would it not be a new and a very difficult duty to impose on your director, if he were required to consider whether he should receive or reject a picture offered to be deposited?—It would add to his difficulties, might excite offence, and create discontent and dissatisfaction.

6494. Mr. *Charteris*.] Would the director have any greater difficulty in exercising his discretion as to the admission of pictures for temporary deposit than he would have in exercising his discretion with reference to pictures offered for sale by private individuals?—He would certainly run the risk of offending people by not buying pictures offered; and by rejecting pictures offered as deposits he would, in fact, depreciate the pictures.

6495. Do you think that in all bequests to the National Gallery it is desirable that a certain discretionary power should be exercised by those persons who are intrusted with the management as to the pictures which should or should not be received?—Undoubtedly.

6496. Would the director be liable to any greater odium from exercising a discretion as to the pictures he should or should not admit as temporary deposits, than he would in exercising the same discretion with reference to pictures which were or were not to be accepted as gifts or bequests to the nation?—I have not considered that the director would have the charge of accepting or rejecting pictures offered in that way; but since you propose the case, it appears to me that he would be the proper person to do so; and undoubtedly he would run the risk of offending people by rejecting pictures under those circumstances; therefore the cases are, as you say, pretty nearly parallel.

6497. I understood you to say that you think it essential that such a discretionary power should not be exercised with reference to gifts and bequests?—I said that such a discretionary power should be exercised.

6498. Mr. *Vernon*.] Do you not see great reason for believing that such a

Sir *C. Eastlake*, P. R. A.

20 June 1853.

system might be abused, and that the National Gallery might be made a place for advertising pictures that people might desire to sell?—I have stated that objection; you have put it still more strongly than I did; I said that the trustees, or whoever had the direction of affairs, would be in constant difficulty, because they would have so many applications from people to have pictures placed in the National Gallery.

6499. Do you think there should be any restriction as to the time during which such pictures should remain in the gallery?—Yes, there might be a restriction.

6500. If you did admit the pictures, would you make it a condition that they should remain there at least a certain number of years?—Probably that would be a protection.

6501. *Chairman.*] Do you not think that in a case such as was put to another witness on a previous day, of a gentleman purchasing a picture of great value abroad, and not knowing where to deposit it temporarily until he had it put up in his own gallery, it might be an advantage to have that picture exhibited for a few months in the National Gallery?—I think it would lead to difficulties.

6502. Mr. *Charteris.*] Do you think that, generally speaking, it would be desirable that the director should be authorised to admit pictures into the National Gallery as temporary deposits?—Yes, under certain restrictions.

6503. Mr. *Marshall.*] With reference to the dust and dirt created by the great number of visitors, will you allow me to ask you whether, when you were keeper, you took any methods for diminishing the injury arising to the pictures from that cause?—The rooms were swept, when I was keeper, every morning.

6504. Do you think that if matting were put on the stairs, and if the door were kept shut, there would be less dust brought into the gallery?—Perhaps so.

6505. Was not that precaution proposed by one of the trustees?—I do not remember that it was.

6506. At all events, it was never adopted?—I believe I submitted to a former Committee on the National Gallery a plan which had been proposed by Dr. Reid for keeping dust out of the National Gallery. He thought it possible to keep the apartments quite clear from dust.

6507. In the present state of the National Gallery, could the ventilation be improved in the roof?—I think it possible that it might, but when the windows are open the dust and the smoke from the neighbouring chimnies come into the rooms and injure the pictures.

6508. *Chairman.*] You stated in answer to a noble Lord's question that you did not know of any foreign director who combined the qualifications you considered desirable in the director of a gallery; do you know any English gentleman in this country who you think likely to combine those qualifications?—I have no doubt such a person could be found; but I would certainly recommend that an Englishman rather than a foreigner should be the person appointed.

6509. Mr. *Stirling.*] Among your own acquaintance do you think if you had the choice of a director who was to undertake such an amount of responsibility as you think he should undertake, you could lay your hand on any person competent to fill the office?—I cannot at this moment say.

6510. I do not ask you to mention any name, but can you now even think of one?—No; I should find less difficulty in the case of the secretary, because I think many persons are fit for that office; and as to the office of superintendent, there would be no difficulty.

6511. The secretary might be learning his business while he was fulfilling his duties, whereas the director ought to come completely prepared to discharge his duties in a creditable manner?—Yes; but he, too, would be always learning.

6512. *Chairman.*] With respect to a chronological arrangement of the paintings, would you propose to have one great gallery, giving a chronological arrangement of certain specimens, say characteristic specimens, without perhaps selecting the best, of all the schools of painting, to show the progress of art throughout Europe, placing side by side the pictures of the Italian, Flemish, Dutch, and German schools; would you think it desirable to have an arrangement of that very extended and comprehensive description?—Do you mean a selection from the whole collection, such as that in the great room in the Louvre, and such as there is in Florence?

6513. Such selections as exist in Munich and elsewhere, offer complete series of the works of Italian painters, a complete series of the works of painters of the Flemish school, and so on, those being subdivided into special schools. Do you not

Sir *C. Eastlake*, P. R. A.

20 June 1853.

not think it possible to have one gallery with a selection of certain specimens, perhaps not the best, from all the schools, which should illustrate the progress of art from the earliest period, on the same walls or series of walls?—I do not see that such an illustrative gallery need be distinct from the general arrangement. I think the arrangement of the gallery at Berlin is the best; the lighting is a different question, and the specimens exhibited, but the arrangement I think cannot be better; there is no selection of the finest works; if the arrangement is chronological without reference to the finest works, the finest works must be somewhere else. I would recommend that the finest works should be in their order, and that the chronological order should comprehend them.

6514. Do you not think it important to see, by a series of that kind, the general progress of art, and the influence which certain schools have had on certain other schools; and if you saw different schools arranged in that way, so that you could see the painters of all the schools in Europe arranged, comparatively, with each other, do you not think that would be a very instructive species of arrangement for a portion of the collection?—I think you would come to the same result by arranging the whole collection on that very principle; there is a danger, when works are selected in the way you propose, of misleading the students of art as a history, by connecting works that are not connected chronologically, and by having to deal with greater and less intervals of time.

6515. Would you then propose to arrange the Italian school in a chronological series as a whole, or would you subdivide it into separate schools?—I would certainly not separate the schools needlessly; but I would not take out the finest works, and put them apart.

6516. In what way would you distribute those schools; would you put the smaller schools quite separate, or would you connect them with other schools, and consider them as a series?—I would place the Italian schools quite distinct from the northern schools; and I would place each Italian school by itself, but so connected as to show its relation to neighbouring schools.

6517. Would you place all the small schools in separate compartments, such as the schools of Genoa, Mantua, and others, which can hardly be said to form schools atall, but which in your own classification are put down separately, or would you connect them in one mass?—The smaller schools need not be subdivided, and it does not follow that there would be a separate room for each of such schools; they might be exhibited in connexion with larger schools.

6518. You are aware that the system to which I alluded has been adopted in other places with regard to certain schools; for instance, in the Academy at Florence they have a collection of a series of painters in the Tuscan school, not selecting the best works, but characteristic specimens; do you not think that that principle could be advantageously adopted on a more extensive scale, by applying it to European art at large?—The arrangement of the collection in the Academy at Florence arose from the accident of their having such pictures at their disposal; but I think that if those very pictures were placed in their order in the larger gallery, the interest would be increased.

6519. Then you do not approve of having separate apartments for paintings of the Venetian, Florentine, and other schools. I see no objection to a due separation, but I do not see that there would be anything gained by having a mere historical series independent of merit.

Veneris, 24° *die Junii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Mr. Labouchere.
Mr. Charteris.	Mr. Marshall.
Mr. Baring Wall.	Lord William Graham.
Mr. Vernon.	Lord Seymour.
Mr. Ewart.	Mr. Raikes Currie.
Mr. Stirling.	Mr. Monckton Milnes.

COLONEL MURE, IN THE CHAIR.

Sir *Charles Eastlake*, P. R. A., called in; and further Examined.

Sir *C. Eastlake*, P. R. A.

24 June 1853.

6520. *Chairman.*] I SUPPOSE you have had your attention directed to the subject of combining the art collections belonging to the nation in one great repository?—Yes.

6521. Have you ever considered in your own mind what class of objects you would include under the head of collections of antiquity and fine art?—I am not aware that I can offer any suggestions which have not occurred to the Committee; it appears to me to be obvious that the contents of the British Museum divide themselves into books, works of art, and objects of natural history; and I think the department of art may be again subdivided into fine art and mechanical, or at most, ornamental art. With regard to objects of mechanical art, I think the new institution at Marlborough House, with its museum, offers at once a mode of disposing of a great part of the collection. Under the head of mechanical art I should even comprehend the Ethnographical collection in the British Museum, which there almost forms a separate department. I consider that all objects, of any age or place, which are the work of man, if not ranging under the class of fine art, may come under the class of mechanical art, and therefore belong to an Ethnographical Museum.

6522. Do you propose to make what is called ornamental or practical art a constituent part of the combined collections of antiquity and fine art, or do you merely propose to bring them, in their separate capacity, into a certain connexion with those combined collections?—I have said that art may be divided into fine art and mechanical or ornamental art; I have no knowledge of the ultimate intentions of Government with regard to the institution at Marlborough House; but whatever those intentions may be, I think that all objects of mechanical art should be placed in the museum belonging to that establishment.

6523. Would you propose under those circumstances to take a portion of the British Museum collection and bring it into connexion with the combined repository of works of fine art, and take another portion and allot it to the collection of practical art, as it is called, at Marlborough House?—Yes.

6524. You do not propose to bring the Marlborough House collections of practical or ornamental art into actual combination with objects of fine art or antiquity in the proper sense?—No, I see no necessity for that; but if one immense building were constructed which would hold all, I see no objection to their being near each other; as regards objects of antiquity, they would not all be disposed of, even when so divided, because there are many that belong strictly to literature; for instance, inscriptions might remain in the British Museum, or wherever books would be.

6525. How would you distinguish in the case of monuments, which, although representing very remarkable phases of art, such, for example, as the monuments at Nineveh, are almost entirely covered with inscriptions?—Whatever arrangement may be ultimately proposed, you will find that the departments are unavoidably dovetailed (if I may use such an expression), and it would be a matter of taste and judgment to subdivide them. I can imagine such a case as this; a philologist, looking at inscriptions with a view to ascertain the date from the form of the letters, and desiring to compare examples of a given form, might, in so doing, consult inscriptions on the bases of statues; if, for instance, it were a question

of

of date from the form of the omega like our "W," he would find the name "Glycon" on the plinth of the Farnese Hercules, written with an omega of that form; and that is, perhaps, an early example. I mention that as one of a hundred instances that might be given to show the impossibility of arranging either art or inscriptions in strict subdivision; they must be mingled together, more or less.

6526. Considering how very much inscriptions are connected in the way you mention with works of fine art, and considering the number of inscriptions which would necessarily be embodied in a combined collection of fine art, would it not be more desirable, do you think, to keep the whole together than to separate the two, the different classes of inscriptions being essentially necessary to illustrate each other?—I do not think you could avoid that inconvenience; take another case, that of the department of mechanical art. I have assumed that there may be a museum devoted to that branch exclusively; supposing any manufacturer were turning his attention to the ceramic art, and the practice of the ancients in regard to earthenware, he could not complete his researches without consulting vases which would be in a department of fine art, and not in a department of practical art; when he came to the question of glazing terra cotta, he would consult the works of Luca della Robbia, which would not be in a department of practical art, but in a department of fine art. I do not see that by any arrangement you could entirely subdivide collections of the kind.

6527. What objection would you have to bringing all inscriptions into connexion with the fine art department, as is done in the Vatican, where you have a gallery of great length devoted entirely to the exhibition of inscriptions, many of which are engraved on very interesting works of art?—In the case of the Vatican, assuming that those inscriptions are most interesting to men of letters, the library is at hand, and that we may suppose would be the case here. Supposing the library to be in a different building, I think inscriptions should go with books rather than with works of art, when they can be separated.

6528. Would you have, in immediate connexion with the gallery of pictures, a library illustrative of art?—Yes, I have supposed that in the paper which I have had the honour to submit to the Committee; I think it essentially necessary, and that implies a further separation, and a departure, to a certain extent, from the general principle of subdivision.

6529. Would you have a library specially devoted to the picture gallery, or would you have books that are peculiarly interesting, as bearing on painting and its history, in connexion with those on other works of art?—I would have it for the whole combined establishment relating to art.

6530. Would you have a room for copies of paintings of interest, which do not form part of the national collection?—I think that is well worthy of consideration.

6531. As to engravings, how would you dispose of them; would you have them in connexion with the pictures?—Yes, I have also assumed that.

6532. Mr. *Stirling*.] Do you mean that you would have a separate collection of engravings as connected with the National Gallery, or that you would have the entire national collection which is now at the British Museum transferred to the neighbourhood of the pictures?—I would have the entire collection transferred to the neighbourhood of the pictures; I think that is their natural place.

6533. Do you not think a good deal of inconvenience would arise from that, in consequence of people who are making researches in the library desiring to consult certain engravings?—It may be so. I confess I can see no other mode of getting over all the difficulties that present themselves; unless, indeed, you place everything that could be placed in a museum under one roof. In that case, instead of moving works of art now in the British Museum to a future national gallery, I should say, transfer the National Gallery to the British Museum; if you separate them at all, you must separate them on a principle.

6534. Mr. *Ewart*.] The objection suggested would go the length, would it not, of preventing the removal of bas reliefs, and other works illustrative of history, inasmuch as a reader in the museum would require to have access to them, in order to elucidate what he read?—No doubt; to a certain extent.

6535. *Chairman*.] How would you proceed in the case of important engravings immediately connected, and in the same volumes, with equally important letter-press?—Those are cases that would be difficult to decide; it would be necessary to decide whether the work belonged to art or literature; if the claims of literature

Sir *C. Eastlake*, P. R. A.

24 June 1853.

preponderated, it would involve a certain inconvenience; but I do not imagine that you could escape from such inconvenience by any arrangement.

6536. Mr. *Ewart.*] Would not the case of gems and medals involve the necessity of some discrimination?—I think they should go with the works of art.

6537. Mr. *Stirling.*] I would give, as an instance, a book containing an account of Brussels, printed about the year 1640, with a number of plates; the value of the book is owing principally to the plates; what would you do with a work like that, evidently a topographical work, relating to the history of the Low Countries?—It is scarcely possible to establish any uniform principle, with reference to such details; if the letter-press were worthless, I should then decide the question by putting the book among the works of art.

6538. *Chairman.*] Would you consider it desirable to have a collection of casts?—Yes; I suggested that in a printed letter which I addressed some years since to Sir Robert Peel.

6539. Would you have them attached to the Gallery of Sculpture?—Certainly.

6540. In many museums abroad, there is a collection of casts in connexion with the Academy of Art: you would not propose in that way to form any immediate connexion between the Royal Academy of Design and the Museum of Art, by means of a collection of casts?—By no means; because the collection of the academy, which it must always have for the purposes of study, is a private collection, and the public would not have easy access to it; it is very desirable that there should be casts of the finest antiques of every time, the originals of which we do not possess, in a public gallery. When the Elgin marbles were first exhibited in this country, comparisons were made between them and such statues as the Apollo and Laocoon; and it was felt at the time to be desirable that such works should be in the immediate neighbourhood of the Elgin marbles.

6541. Has no proposal been made to have such a collection in the British Museum?—I am not aware that there has; I have often suggetsed it privately, and I also proposed it in the letter to which I have referred.

6542. In what way would your proposed organisation of the National Gallery management, as explained in your former evidence, be affected by its being combined with the general system to which we have alluded; that is, a repository of works of antiquity and fine art, of all classes?—I have not considered the details.

6543. Would you still wish to have those three officers you have specified placed under the direction of the general director, or Board of Directors, under which the combined institutions would be?—Perhaps it might be so arranged with advantage.

6544. How would you propose to arrange the chief management of the combined institutions; would you place it under the direction of a single person, or would you place it under a Board?—I think a Board in that case would be more desirable; perhaps it might be a Board in immediate connexion with the Government.

6545. Without any single director being responsible for the whole?—Without any single director being responsible for the whole.

6546. You are aware that in Berlin and Paris, and some other of the great galleries of Europe, the plan of having a single chief has been adopted, and that it has been found to be efficacious?—Yes; and I believe he is the immediate head, such as I propose. I propose that there should be a head of the National Gallery, and that he alone should be responsible; but I imagine that in all institutions of the kind on the Continent there is a superior authority, to which the director, to whom you allude, is responsible.

6547. He is responsible to a department of the Government, but in his own capacity, as head of the combined institutions, he is the autocrat and superior of the whole?—There might be no objection to that; generally speaking, the directors on the Continent have a very extensive authority; for example, they preside over the theatres; there is such a director now in London from Parma; he presides over all institutions of art, including music and theatricals.

6548. That may be the case in those small states, but are you under an impression that at Berlin the chief director of the National Museum has any charge of the theatres?—I am not aware. I think it very questionable whether such a general direction would be desirable here.

6549. Mr. *Vernon.*] Take Paris, for instance; is not the general director responsible immediately to the Minister of Public Works?—I believe so.

6550. Lord

6550. Lord *Seymour.*] Have you any doubt upon the question whether it would be desirable that a person in this country should, in addition to galleries and collections of art, have superintendence over the theatres?—I have no doubt whatever; I think it would be quite absurd.

6551. *Chairman.*] When you say you think it would be very inexpedient that the director should have the direction of the theatres, you do not extend that remark to any special inexpediency, whatever your own opinion may be, in his having charge of the combined collections of art and antiquity?—I do not see any objection to it; my only fear would be that in such a case the directors of the National Gallery, for instance, would be needlessly fettered. I think that would not be desirable.

6552. Mr. *B. Wall.*] I do not quite understand why, in the case of pictures, you should recommend individual responsibility, and why, in the case of a combined collection, you should be in favour of a Board?—I suppose that even in the case of the National Gallery the superintendents, or directors, or whatever they may be called, would be responsible to a Board; and I believe that a system somewhat analogous does exist in the British Museum now; there is a chief over the medal department, and a superintendent of the natural history department, and they are all responsible to a Board; but it is a separate responsibility in each of those cases.

6553. You do not recommend that in regard to the pictures?—Yes; I do recommend that there should be a separate responsibility; that the director should be alone responsible.

6554. Mr. *Charteris.*] What Board do you suppose the director would be responsible to?—I have been asked that question before, and have answered it; I have not named the Board, but I suppose either the Board of Trade or the Treasury.

6555. He should only be responsible to Government, you mean?—Responsible directly to Government.

6556. Lord *Seymour.*] You do not mean that it should be anything similar to the British Museum, where they are responsible to the trustees?—That I do not think desirable.

6556*. *Chairman.*] You propose that three officers, with one or two representatives of the Government, should form a Board?—Yes.

6557. And that that Board should report to the head office of Government, and be responsible to it?—Yes.

6558. Mr. *Charteris.*] Are we to understand that, in this combination of art collections, you propose that there should be a constitution, such as you describe, for the pictures; and that there should be a somewhat similar constitution for the collections of objects of antiquity and fine art in sculpture in the British Museum, with individual responsibility as attached to those separate collections, the whole being responsible to some department of the Government?—That is precisely my idea.

6559. Mr. *Labouchere.*] Do you think that, either at the Board of Trade or at the Treasury, there is likely to be the means of really exercising a practical control over establishments of this kind?—There is another authority that would exercise a control, and that is the House of Commons; the House of Commons exercises its control at this moment by such a Committee as this; and I very much wish that a Committee of the House of Commons would sit periodically on such matters. I think the House of Commons itself would be instructed by it; I think that if there were a Committee appointed to look into the affairs of the National Gallery once in every two or three years, the public, the House of Commons, and the National Gallery itself would benefit by it.

6560. Would not a Committee be better adapted to the purpose of occasional inquiries into how the system was working, rather than be the means of exercising a regular and systematic control over the whole thing?—I have made the suggestion in answer to your doubt as to whether the Treasury would be competent to take cognisance of all these matters; and my answer is that the best way would be for the Government to give occasionally special attention to such matters, and that the most effectual way of doing that would be by appointing a Committee of the House of Commons. I think such a Committee would be very well employed from time to time in investigating such matters; and I cannot imagine a more effectual way of spreading a knowledge of art in this country.

6561. *Chairman.*] Do you consider it also a legitimate means of giving vent

Sir *C. Eastlake*, P. R. A.

24 June 1853.

to that expression of public opinion, which at present is apt, in questions of fine art, to assume a keenness and virulence which may defeat its own object?—Yes; opinions would be more rational, because more deliberate and more responsible.

6562. Mr. *B. Wall.*] Would not that Committee generally be appointed, consequent on some complaint on the part of the public with regard to the management of the very body itself?—No, I assume that such a Committee would meet periodically.

6563. Mr. *Vernon.*] Would you propose that here, as in France, a given sum of money should annually be placed at the disposal of your combined Board, and that the different departments should divide the money among them, according to their several requirements?—No; it may or may not be a good scheme, but I will take the single instance of the National Gallery; I suppose that the Board would report its wants from time to time, and that those requirements might vary; sometimes there would be a proposal to purchase an entire collection of pictures, and according to the scheme you suggest there would not be funds for that purpose; a limited sum, no matter to what extent, placed in the hands of the superintending board or department of Government, might or might not be sufficient for the purposes of all these separate establishments.

6564. I understand you rather to approve of the system which is adopted there of having one general head, with various superientendents of the several departments under him, and the whole responsible to a Government office?—Yes.

6565. I suppose you would have them meet and hold consultations regularly?—Yes; there might be such meetings.

6566. Would you keep the money applicable to each department entirely distinct, so that one should not encroach upon the other?—I do not see that they need interfere with each other at all.

6567. Are you aware that, under the French system, if they find that one department wants more money than another, they take it from that other?—Then there is a limited sum; I do not approve of that; I think there might be cases in which you would want to go beyond the usual sum.

6568. Mr. *Ewart.*] Do you not think it is better that the power of giving a sum for the purchase of pictures, whether great or small, should reside in the Government?—Yes.

6569. That Government being responsible to the House of Commons?—Yes.

6570. Would it not be the case, sometimes, that the sum confided to the hands of the Board would be too small to enable them to purchase a large collection, and would it not be unsafe to entrust them with a very great sum?—Probably.

6571. Do you not think it desirable that the cartoons should be moved from Hampton Court?—If they could be secured from smoke; they would be liable to be very much injured by smoke, more so than pictures; but they might be put under glass.

6572. Was it not recommended by the Committee of 1846, that they should be removed to a place sufficiently secure from smoke?—If they were protected from smoke I should think they might be nearer London with advantage to the public.

6573. With reference to monuments and other objects of art, which the comprehensive scheme you suggest would imply, do you not think it desirable that to each of them there should be attached a descriptive title, so that people need not be put to the necessity of purchasing a catalogue, but should at once be able to understand what they are looking at?—Certainly.

6574. Are you aware that that was recommended by the Committee of 1836?—I did not remember that it was recommended.

6575. Do you agree with this statement in the report of the Committee: "It "appears to the Committee that the most ready and compendious information "would be given to the public by fixing its name over every separate school, and "under every picture, the name, with the time of the birth and death of the "painter; the name also of the master, or the most celebrated pupil of the artist, "might in certain cases be added. This ready (though limited) information is "important to those whose time is much absorbed by mental or bodily labour"?—Yes; I think it is very judicious. Your putting questions to me respecting a former Committee, reminds me that when I was examined on a former day I stated my impression that Mr. Hume had objected to means being furnished for the purchase of pictures in the National Gallery. I think it right to say I have searched in vain for anything of the kind in the papers; it is a very laborious undertaking to hunt even through Hansard, and his reports are not always full; but

Sir *C. Eastlake*, P. R. A.

24 June 1853.

but I have not found it. I cannot help retaining the conviction that I once saw something of the kind; but I would rather that my accuracy should be impeached than Mr. Hume's generosity, and I must say that in my late search I found numerous instances tending to show that Mr. Hume is always liberal when the public improvement is concerned. I understand from a member of the present Government, that the Treasury was a little straitened in 1848, which was one of the years in which no purchases were made in the National Gallery; and that may perhaps account for the inactivity that then took place.

6576. Lord *Seymour.*] You said that the director of the gallery was to be under a responsible minister of the Crown?—Yes, that is one mode; I am not very competent to give opinions as to the details of such a scheme, with regard to its connexion with the Government, and the mode in which the authority of Government should be exercised; but in any scheme of the kind, I think it would be desirable that sufficient independence should be preserved to the director. I do not want him to be under the control of a subordinate body.

6577. Did you, when you contemplated his being under a responsible minister, contemplate placing him under any department at present existing, or did you contemplate creating a new department under which you would place him?—I assumed that he might be either under the Board of Trade, or any other authority constituted by the Government.

6578. Mr. *Charteris.*] Then are we to understand that you would propose to place the different collections, and the different officers who are to be individually responsible for the good management of them, under some Government officer, not with a view to his directing purchases, and so forth, but merely as a man of business, to see that the whole system worked well, and who should, if anything went wrong, inquire into it, and thus be responsible to Parliament?—That is my idea.

6579. In short you would look to the Government control, as a sort of fly wheel, the effect of which would be to make the rest of the machinery work harmoniously together?—Yes; that is my general idea. I have said here, "The "Board, consisting of a superintendent, the director of the gallery, and the secre- "tary, in connexion with such representatives of the Government as might be "permanently appointed, or occasionally deputed for such purposes, would form "a Board, and would meet for the transaction of business periodically throughout "the year, extraordinary meetings being held when necessary. The Board "would, as a matter of course, be in communication either directly with the "Treasury or with some public department, and the superintendent, with the "assistance of his colleagues, should make an annual report; such report being "always published." There I have alluded to the connexion of this Board, either with the Treasury or some public department. I have said that something analogous exists in the school of practical art, where there is a general director, an art superintendent, and no doubt a secretary; and they are under the direction of the Board of Trade; that is, in some respects, an analogous case.

6580. Lord *Seymour.*] Suppose there were a fine collection of pictures for sale, and which it was thought ought to be purchased for the nation, under your system it would be necessary, would it not, that the director should apply to the head of the Board of Trade, to move some estimate for the purchase of the pictures?—That would be the natural course, assuming the machinery to be in that form.

6581. That will give immediately to the head of the Board of Trade the responsibility of recommending to Parliament that purchase, will it not?—I should say the responsibility would rest with the director.

6582. You say, as I understand you, that the minister who is responsible to Parliament is not to be responsible for proposing to Parliament a grant of money?—If you consider him responsible, you assume that he is an excellent connoisseur, which need not follow.

6583. If a Minister of the Crown is at all to be responsible, he must be responsible for the money expended, must he not?—Just as the Treasury is responsible to Parliament now for anything of the kind that is proposed.

6584. Each department is responsible for what is under it?—Then do away with this department, and let the responsibility be in the Treasury at once.

6585. Then you would make the First Lord of the Treasury, or the Chancellor of the Exchequer, responsible; is not that very much like coming back to what is done now?—Yes; but the chief objection to the present system is the divided responsibility.

Sir *C. Eastlake*, P. R. A.

24 June 1853.

6585. Has it practically occurred, that the refusal or acceptance of pictures depends very much on the feeling of the Chancellor of the Exchequer for the time?—There may be cases in which the Treasury would not feel justified in proposing to Parliament the payment of 50,000 *l.*, for instance, for a collection of pictures.

6587. *Chairman.*] That would not apply to an annual sum placed at the discretion of the director as purchaser; in that case he would exercise his own discretion, and would buy a picture he thought it desirable to purchase at once, without appeal to the Treasury?—Yes.

6588. Do you not think that the preferable mode?—It would be the only mode; except in extraordinary cases, such as the purchase of an entire collection, in which cases the director would apply to the Treasury.

6589. In those extraordinary cases, the Treasury Board would share a portion of the responsibility, would they not?—As it does in all cases where it deals with the public money.

6590. But these would be rare occasions, on which they might reasonably be expected to incur some responsibility, such as that of consulting proper people, directors and others, qualified to give advice?—Yes; and I suppose that in such a case the Treasury would be cautious; they would not take merely the director's recommendation, but would be very careful in the matter.

6591. In that respect, perhaps, the head of the Treasury might perform his duty better if he were not a judge of pictures, because if he were he might be an imperfect one, and yet trust to his own judgment; whereas, in the other case, he would be guided by the judgment of the more competent person?—Perhaps so.

6592. Lord *Seymour.*] I understand you to say, that supposing there to be a combined collection of art and antiquity, you do not recommend that any precise sum should be allotted to the whole?—I was asked previously whether I thought it desirable that a sum should be placed in the hands of a Board, as is the case in France; I think it was a question to that effect; my answer was that that would be a limited sum, and that there might be cases in which it might be desirable to purchase a collection of pictures, for which that sum would not suffice, and therefore I do not approve of that system.

6593. You do not approve of a specific sum being allotted as a sole sum?—Not to be doled out to each of these departments.

6594. Then you do not approve of the system in force in the British Museum, where specific sums are allotted to different departments?—In the case of pictures, to which you invite me to confine my attention, I should say that 10,000 *l.* always in the hands of the director might suffice for urgent cases, and that it would be very unwise to make a limit as to any larger sum to be placed at his disposal; because there might be cases in which such larger sum would not suffice, such as the purchase of entire collections.

6595. Supposing other collections are wanted to be purchased for a sum exceeding 10,000 *l.*, you look forward to a supplementary grant being made?—I should consider that not to be a supplementary grant, but a grant irrespective of the 10,000 *l.* I would not meddle with the 10,000 *l.*, which sum should always be at the disposal of the director for special cases.

6596. But you would take an additional sum for additional purposes?—Yes.

6597. Under the responsibility of the Treasury, as now?—Yes.

6598. Mr. *Ewart.*] Would you leave the 10,000 *l.* to the credit of the director, or to the credit of the Treasury, under whose sanction the director might make purchases?—I would rather leave it entirely to the director, but I have no knowledge of the usual arrangements in such matters. I do not myself feel that the difference is of great importance.

6599. Mr. *Vernon.*] Supposing there to be a valuable collection which it was desirable to purchase, it would not interfere with the ordinary annual grant of public money if the director were to come to the minister and ask him for a supplementary grant for that specific purpose?—No.

6600. Therefore, assuming there to be sufficient necessity for it, it would be always possible to get a further grant of money?—Yes.

6601. Mr. *Ewart.*] Are you aware that at Paris there is an establishment connected with the arts, under the Government, for the supply of casts?—Yes.

6602. Do you think it desirable to have an authorised system for the supply of genuine casts in this country also?—Perhaps so, but I have not inquired into the details of the system in France.

6603. Might not a system be established which would enable the best casts to be supplied to the provincial schools of art?—I think it would be very desirable.

6604. Are you aware that that was recommended in the Report of the Committee of 1836?—I did not remember it.

6605. Mr. *Labouchere.*] Is not that done to a certain extent by the schools of design now?—With regard to such objects as suit their purpose.

6606. Mr. *Ewart.*] In the report it is said, "If the recommendation of the "Committee were adopted, that the opening of public galleries for the people "should, as much as possible, be encouraged, casts of the best specimens of "sculpture might be advantageously transmitted from the metropolis to the "different towns. Casts are cheaply supplied in Paris, under the superintendence "of an artist; and a *tarif*, indicating their several prices, is issued for the benefit "of the public. This example is worthy of imitation." You are aware that, connected with the Louvre at Paris, is an establishment called the Calcographie, which is, in fact, an establishment for giving the most exact copies of the original designs of the greatest masters taken from the stores existing at Paris?—Yes.

6607. You are aware that they are sold at an exceedingly cheap rate to artists and others?—Yes.

6608. Do you not think that that is a very good means of circulating specimens of the drawings of great masters among the public?—Yes, I have often thought it very desirable. I have the report on that French Calcographie, and I could not help wishing, when I read it, that we had such an institution. It is different, however, from the habits of our Government, because that plan supposes that the Government itself deals in such objects, and I am not aware how such a system could be introduced with effect in this country.

6609. Still, it might be considered?—It is well worth consideration.

6610. Mr. *Labouchere.*] Are you able to state to the Committee how long you consider an oil picture painted on canvas may be expected to last, under ordinary circumstances?—You first assume that it must be painted on canvas; if it be painted on board, my answer perhaps might be different; even if painted on canvas, I think that, by means of careful lining, which may be renewed when necessary, the durability of a picture painted on cloth is perhaps as great, or very nearly as great, as a picture painted on wood. When you consider the material itself, the cloth on which the picture is painted, it is reasonable to suppose that that material must, in the course of time, be literally destroyed, especially as it is more or less saturated with oil, and from that cause, it is said, undergoes a slow combustion. But it is the substance of the picture which is the durable portion; wood maintains that, because it is impervious to air; but when cloth is so protected, by lining or by other means, I consider that it is almost as durable as wood. In any case, however, the real question of durability is greatly restricted to the substance of the pigment itself. The chief difference between cloth and wood as a ground or surface, or, as the French call it, "subjectile," for painting is, that a thinner execution is possible, consistently with safety, on wood than on cloth. Rubens, in one of his letters, states, that he preferred wood to cloth for pictures of moderate dimensions; and I can quite understand, with his thin execution in the half-tints and in the shadows, that a firm and impervious ground would be a very important condition in such a practice of painting.

6611. Do you not conceive that there must be a limit to the durability of the actual materials with which a painting is made; the colours, and especially the glazings?—I could hardly assign a limit; I cannot imagine a limit, supposing proper care.

6612. In short, you are of opinion that, with proper care, there is no reason to apprehend that paintings may not be preserved to an almost indefinite period?—I think so.

6613. Mr. *B. Wall.*] By the expression, "with proper care," do you mean a picture being placed under good medical treatment, and receiving a good deal of feeding and restoration?—I should only admit feeding, by which I understand varnish, when necessary. If a picture were not needlessly exposed to the effects of dust and smoke, and damp, which causes dust to adhere to a picture, then I should say it would rarely be necessary even to remove the old varnish. But it is evident that if a coat of dirt has accumulated over the varnish on a picture, in a long series of years, it would in time be necessary to remove the old coat of varnish before putting on another; with regard, however, to "medical treatment" and restoration, I do not conceive that such treatment would ever be necessary;

Sir *C. Eastlake*, P.R.A.

24 June 1853.

I admit only the necessity of varnish. Take for example the Van Eyck, in the National Gallery: that is an instance of a picture being in an excellent state of preservation after some centuries: there is no reason to suppose that that picture will not be in as good a state four or five centuries hence as it is now; and that picture does not require any medical treatment.

6614. Do you not consider medical treatment to be varnishing or feeding?—I have no objection to your definition of the term feeding; I only mean that restorations are not necessary, except in the case of accidents: if a hole is accidentally made through a picture you must restore it.

6615. Would you not consider feeding to a certain extent medical treatment?—If you choose to call it so.

6616. Having been questioned as to the probable duration of the life of a picture, have you formed any opinion how often during that life it would be necessary to call the doctor in?—To varnish it?

6617. To varnish or feed the picture?—In the case of the Van Eyck, which is under glass, never; as long as you keep glass over it the picture will never require varnishing.

6618. Are we to consider it as your opinion that all pictures covered with glass are not only safer from infection than those that are exposed, but that they are positively safe?—I have no doubt of it; but at the same time I have never dissembled the objection arising from the difficulty of seeing the pictures well when they are so covered.

6619. Mr. *Labouchere.*] Do you believe that the process of transferring a picture from panel to canvas has a tendency to accelerate its destruction?—Perhaps it has.

6620. You think that it should be avoided except in extreme cases?—Yes.

6621. Mr. *Charteris.*] But that is a remedy only had recourse to in extreme cases, is it not?—I remember instances at this moment, though I would rather not indicate them more particularly, of persons who think it always essential, when they get a picture on panel, to transfer it to cloth; they imagine it is improved by it; I differ from them altogether. I should say that, provided the panel is not very much warped and destroyed by worms, or otherwise, it is much better to leave it on the panel.

6622. Mr. *Vernon.*] Are there any persons now to be found who are competent to perform the operation successfully of transferring a painting from panel to canvas or from canvas to panel?—There is an excellent workman in that way who is, I believe, unrivalled.

6623. It is a most hazardous and difficult operation, is it not?—Yes; the care and attention he gives to it, and the results he produces, are quite extraordinary.

6624. Are there instances in which you would ever recommend such an operation to be performed as transferring a painting from panel to canvas, or from canvas to panel?—I do not think of any instances now in which I could recommend it. While I am on this subject, I beg to make an observation to the Committee with reference to what I said in my former examination; I was asked whether I thought a picture was more or less valuable after it had been cleaned and put in order, and I said that, in my opinion, after a judicious restoration it would be more valuable... I was informed by a Member of the Committee, I believe on Friday last, of a fact of which I was before ignorant, that a picture by Luini, which was known to have been injured and painted upon, sold at Christie's for a very low sum, and that after it had been restored it sold for more than three times the amount; I put it therefore to the candour of the Honourable Member who asked me that question, whether that is not an instance of a picture having increased in value in consequence of judicious restoration.

6625. *Chairman.*] I think you say that, in the first instance, it had been injured and restored?—Injured and painted upon.

6626. Then the picture in both instances was a restored picture, but in the second case it had been better restored than in the first?—In the first instance it was injured and imperfectly restored, and in the second instance it was well restored, and it gained value in consequence; it may have been perhaps irregular in me to make the observation, in the form in which I before made it, by putting it to the candour of the Honourable Member who asked me the question; but I beg to say that I consider the case to which I have referred to be an instance in which a picture was increased in value in consequence of judicious restoration.

6627. Does not your illustration refer to the question whether a well-restored picture

picture would not sell better than an ill-restored picture, rather than to the question whether a picture which has not been restored at all would not sell better than a picture that had been restored?—Quite so; I am quite content with the example in that form; I only mean to say that a picture may become more valuable in consequence of being judiciously restored.

6628. In your printed letter to Sir Robert Peel in 1845, in page 18, you state: "In connexion with the necessary labours of cleaning and restoring pictures, I "would beg leave to suggest the expediency of allowing those who may undertake "or superintend such operations, to put themselves in communication with some "experienced chemists, who might be directed to render assistance when required"?—Yes.

6629. Do you still entertain the opinion that it would be desirable to have the assistance or advice of chemists, with reference to the restoration of pictures in the national collection?—I think it is very desirable.

6630. I presume you were at that time alive to the danger of the present system of cleaning, owing to the want of science, or owing to the empiricism, if I may use such an expression, of the present profession of picture-cleaners?—Yes.

6631. You have stated that you had such entire confidence in Mr. Seguier that you did not feel any apprehension in placing a picture, unconditionally, in his hands to be cleaned?—He was the person who had always been consulted by the trustees; he was well acquainted with all the pictures in the National Gallery, and I had never heard a complaint against him.

6632. But he possesses no chemical knowledge, as he has stated to the Committee; did you believe that he possessed chemical knowledge?—When I made the observation, to which you have called my attention, I suggested improvements in the actual system; but that does not at all interfere with my opinion that Mr. Seguier, under all the circumstances, was the best person who could be selected.

6633. You were alive to the dangers of picture-cleaning, or you would not have made this allusion to an improvement in the system?—It was not altogether with reference to picture-cleaning; I thought that artists might derive information from such inquiries, and that occasional analyses by chemists might throw light on the practice of the art.

6634. Do you agree with Mr. Faraday, who states that, in his opinion, it would be desirable that the whole question of the composition of pictures, and the most advisable modes of treating them, should be referred to some commission, or to persons possessed of scientific knowledge and experience, in order that we might see our way more clearly as to the best mode of cleaning, or as to the propriety of cleaning pictures, than has hitherto been the case?—I think it would be desirable.

6635. Lord *Seymour*.] You have said that judicious cleaning adds considerably to the commercial value of pictures?—Judicious cleaning and restoration.

6636. Then it is the interest of picture-dealers to employ the best possible cleaners?—Certainly.

6637. And you consider that it is the interest of picture-cleaners to acquire such an amount of chemical knowledge as is necessary for their purpose?—Undoubtedly.

6638. Do you think that any Government interference is required to teach picture-cleaners how to manage their own business?—No; not to teach them their business, but as a wholesome exercise of authority to induce them to be careful.

6639. Do you think that Government ought to appoint chemists to consider how solvents and chemical applications act upon pictures, in order that the picture-cleaners may profit by it?—No; I think that would complicate the machinery very much. I think the director, according to the scheme I have proposed, would, for his own interest, consult the best authorities; but assuming such a system to be organised, there might be general directions, or an intimation that the director would be expected to put himself in communication with experienced chemists with that view.

6640. Then you would have something in the nature of a consulting chemist for the gallery, is that so?—As I said before, I see no necessity for complicating the machinery; the director might apply to one or more chemists as might be desirable, or as he might think fit.

6641. Lord *W. Graham*.] Do you mean that he should be authorised to pay them?—Yes, if necessary.

Sir *C. Eastlake*, P. R. A.

24 June 1853.

6642. Lord *Seymour*.] Then it amounts to this; that the greater amount of chemical knowledge the director and the picture-cleaners possess the better it will be?—Certainly; if combined with a knowledge of the practice of the various masters, and with taste.

Frederick Hurlstone, Esq., called in; and Examined.

F. Hurlstone, Esq.

6643. *Chairman*.] I BELIEVE you are the President of the Incorporate Society of British Artists?—I am; I was appointed to that office by Her Majesty in 1846; but I should wish it to be understood that I do not represent the opinions of that body, with whom I have not communicated upon the subject at present under the consideration of the Committee.

6644. I believe you were examined before the Committee of 1836; Mr. Ewart's Committee?—I was.

6645. And you also made an application to be examined by the Committee of 1850?—I did.

6646. Which application, for reasons into which I believe it is unnecessary here to enter, could not at the time be entertained?—Yes.

6647. And accordingly you were not examined?—I was not examined before that Committee, but a letter I had the honour of addressing to Lord Seymour was printed in the Appendix.

6648. Have you devoted a good deal of attention to the National Gallery, more especially in connexion with the site of the building?—I have.

6649. Have you also directed your attention to the general management of the gallery?—I have.

6650. And have you become alive to any defects in the present system?—I believe that the defects of the present system have been sufficiently pointed out by previous witnesses, so as to render it scarcely necessary for me to enlarge upon them. The principal defects have been that there are no definite duties for any of the officers of the institution, and that there is an equally undefined responsibility. But there have been irregularities in the conduct of the institution, even independently of those two objections to it; and I could allude to some in particular where powers have been exercised by the Board of Trustees, I believe inconsiderately, which could scarcely be considered within the scope of any of the officers of the institution.

6651. Will you specify what those irregularities are to which you allude?—There are several. One is the arbitrary disposal of the copyright of pictures in the National Gallery to some persons applying, and to others refusing the copyright.

6652. Do you mean the right of copying?—No, I mean the right of engraving and publishing for private profit. I should state that the copyright of a picture is a very valuable property, and when once separated from the picture it materially alters the value of that picture, I consider that this irregularity is the more objectionable in the present instance, because, should the nation eventually propose to publish a work of the National Gallery, the same as has been done in France, it would interfere very materially with the carrying out of that object.

6653. When you say "irregularity," do you mean the general irregularity of allowing such copyrights to be disposed of at all, or do you mean that partiality or unfairness has been shown in the mode in which the privilege has been accorded?—I not only allude to the mode in which it has been exercised, but to its being exercised at all; it seems to me that it is a power which no officer of such an institution should exercise.

6654. You consider that in a national collection the right of having engravings taken from the collection should be reserved to the trustees themselves, and that it should not be communicated in any degree to the public?—It becomes a matter of commercial speculation, when the trustees give it to one individual and refuse it to another. That is not giving it to the public.

6655. Will you mention the special cases in which you allude to such copyright having been accorded to one individual or class of individuals and not to others?—In page 17 of Mr. Hume's last return, No. 104, Session 1853, I find this among the Minutes of the trustees: "Read a letter from Mr. Edward Gilkes, asking "leave to copy on wood some of the pictures in this gallery. Resolved, that Mr. "Gilkes be informed that it does not consist with the views of the trustees, in "respect

"respect to the admission of students in this gallery, to comply with his "request."

6656. Lord *Seymour*.] There the trustees, instead of granting the permission, refused it?—Yes; I wish to allude to the arbitrary power they exercise of granting or refusing the copyright of works in the National Gallery.

6657. *Chairman*.] Read the other instances?—In page 21 there is, "Read a "letter from Mr. George I. Doo, requesting the trustees to permit him to make a "drawing in water-colours, from the picture by Francia (No. 180 of the Cata-"logue), with a view to his engraving a plate from it in a manner and upon a scale "suited to the importance of the work, Resolved, that Mr. Doo's request be "complied with."

6658. Lord *Seymour*.] As I understand that minute, it is that the trustees allowed Mr. Doo to copy a picture, whereas in the former instance they had refused Mr. Gilkes leave to copy the picture on wood?—To publish engravings on wood.

6659. They were both equally for engraving, were they?—Both for engraving and publishing.

6660. It does not appear, from the first, that Mr. Gilkes asked it for the purpose of engraving; it says, "asks leave to copy on wood some of the pictures "in this gallery"?—It certainly is not specified in that instance, but the intention is evidently to publish it, and there are other instances to show it.

6661. In that instance neither the intention is stated, nor is it stated what pictures are referred to, but it is merely stated, "some of the pictures in the "gallery"?—Yes.

6662. In the other case, the request is specific; Mr. Doo points to the picture he wishes to copy, and points to the purpose for which he wishes to copy it?—Yes.

6663. Are not those very different circumstances?—They are; but the other is not declined upon the ground that the pictures are not pointed out.

6664. Perhaps you will find some cases that are more specific?—In the same page, 21, immediately following, this occurs, "Read a letter from Mr. Branston, asking leave to make drawings from the pictures of the Vernon Gallery for the purpose of illustrating newspapers."

6665. What is the reply to that?—At the end of that you will see "the "trustees declined complying with Mr. Branston's request."

6666. With regard to their declining to comply with Mr. Branston's request, does not the minute state a particular reason?—I see it does.

6667. Does it not allude to this condition, that when Mr. Vernon gave the collection of pictures to the nation, he had previously given permission to Mr. Hall to publish engravings from the pictures in the "Art Journal"?—That is perfectly true; but in a subsequent part you will see the trustees still reserved the right of giving permission to copy from the Vernon collection to any one.

6668. But as far as that goes, they state that permission had been given to one individual, and that they did not think it right to interfere with that privilege?—Yes, in this instance they state so, in another the reverse.

6669. Now go on to the next?—"Mr. Uwins brought forward an application "from Messrs. Graves, in which they request permission of the trustees to have "a drawing made from the picture by Edwin Landseer, 'The Hunted Stag,' for "the purpose of an engraving being made from it, with which request the "trustees complied."

6670. Are you aware who had the copyright of that picture of Mr. Landseer's?—It does not state here.

6671. Are you aware who had it?—No, I am not.

6672. Are you aware whether or not Mr. Landseer, in selling his picture, kept the copyright?—I am not certain whether that was the case or not.

6673. Is it not the case often with painters that in selling a picture they keep the copyright?—Yes.

6674. And if Mr. Landseer had kept the copyright of the Hunted Stag, the trustees could not act otherwise than they did in that case?—They could not.

6675. Now will you go to the next case?—In page 41, there is, "Read a "letter of the 21st January last from Messrs. Harry Graves & Co., requesting the "permission of the trustees to have a drawing made from the late Mr. Turner's "picture of the Golden Bough, in the Vernon collection, for the purpose of "engraving a large line plate from it. Also a letter of the 7th ultimo, from Mr.

F. Hurlstone, Esq.

24 June 1853.

" Robert Stothard, asking to be permitted to make copies from his late father's " pictures in the Vernon collection, to illustrate a life of the deceased which he is " preparing. Also, a letter from Mr. S. C. Hall, editor of the 'Art Journal,' " entreating the trustees to decline acceding to the request of Messrs. Graves & Co. " Resolved, that the requests both of Messrs. Graves & Co. and Mr. Stothard be " granted; and that a letter be addressed to Mr. Hall, informing him that, whilst " the trustees will take every step in their power to prevent the issue of inferior " engravings taken from the pictures in the Vernon collection, they do not con- " sider themselves precluded by their arrangements with him from permitting the " engraving of any of those pictures by good artists, and in a style calculated " to promote the knowledge of the arts."

6676. Then it appears that the trustees acted differently at that time in regard to the Vernon collection from what they had acted previously?—Yes; but I am not making special objection to cases of their giving the copyright to one person and denying it to another. I am objecting to the principle of their exercising the right of giving the national property, which the copyright of the national pictures is, to anybody they please, as it may ultimately be found to lead to very considerable inconvenience.

6677. I understand you to mean that you would not allow any person to make a drawing for the purpose of making an engraving of a picture in the national collection?—I would not as a matter of favour.

6678. Then you would have no engravings whatever made of those pictures?—If there be any intention of the nation publishing them, it would certainly be desirable that they should not be copied by individuals for the purpose of their being engraved and published for private emolument.

6679. Whether the nation intend to publish them or not, according to your opinion the trustees ought not to allow any one to make drawings for the purpose of engraving?—I think the power should not be given to particular individuals for the purpose of private commercial speculation.

6680. You would not give it to an individual?—No, I would not.

6681. Would not that be a great hinderance to such a spread of the knowledge of the fine arts as the country may be desirous to see?—That would be remedied by publishing them by authority.

6682. I understand, then, that you would refuse permission to private individuals to publish them, and your remedy would be that they should be published by the trustees of the National Gallery?—Or that they should be published by authority; what I object to is, the privilege being given to individuals as a favour for their private emolument.

6683. Is your objection founded on the exercise of favouritism in giving the privilege to one and withholding it from another, or do you object altogether to its being given to any one?—I think, unless it were given to every one, it should not be given at all.

6684. Why should it not be given to every one?—Perhaps it would not be objectionable in that case.

6685. *Chairman.*] Then you do object to the privilege being given in one case and not in another?—Yes.

6686. Lord *Seymour.*] Do you think from the minutes that these trustees appear to show a preference in some cases?—From the minutes, they certainly have done so.

6687. Lord *W. Graham.*] Do you think that it would be desirable to have bad engravings circulated?—Certainly not. I see the ground of their preference in one instance; it is, that they would wish the engravings to be line engravings of the first quality. But such engravings only circulate among a few people comparatively; and if the object be to diffuse a taste for art extensively, I do not see why it could be denied to that line of circulation in which wood cuts are more generally used, which circulate among the people generally.

6688. *Chairman.*] Do you not think that the badness or goodness of an engraving might be left to the public, inasmuch as if it be a bad engraving the public would not buy it?—Certainly; and the talent of an engraving is independent of the medium. It was a plan of Lord Brougham's, a few years ago, to establish a publication for the purpose of diffusing wood-cuts from the finest masters, in order that they might reach the people generally throughout the kingdom.

6689. With regard to this proposition, would it not be desirable either that the managers

managers of the gallery should keep copyrights in their own hands, for the purpose of securing that none but the best copies should be issued to the public; or that, if leave were given to anybody at all, it should be given to any respectable person who would commit no mischief in the gallery, and who wished to take a copy for the purpose of making engravings?—I think so.

6690. Lord *Seymour*.] Are there any other cases to which you would refer?—The objectionable exercise of power by the trustees, in another case, is granting permission, on an application from the Royal Academy, to 20 students of the Royal Academy to have privileges in the national building. The Minutes of the 2d June 1845 state, "Resolved, that the keeper be authorised to permit 20 "students of the Royal Academy (in addition to the number of general students "already permitted to paint in oil-colours in the gallery) to be admitted for the "purpose of studying according to the prayer of the memorial, for such periods "and under such regulations as shall be determined upon by the keeper, after "communicating with the authorities of the Royal Academy and with the students "themselves." My objection to the exercise of that power on the part of the trustees is, that the space is so limited in the National Gallery at present for the study of the public generally, that it is necessary not only to restrict very much the number of people who study there, but to limit the time during which they are to be there.

6691. Mr. *Charteris*.] Are you aware how many students there are who are copying pictures at any one time in the National Gallery?—I am not aware at present; but it appears, I think, in the returns.

6692. Lord *Seymour*.] Do you mean that giving permission to the 20 students you mention, gives them an unfair advantage over artists who are not members of the Royal Academy?—Undoubtedly; since this is a national institution, and it is intended for the public generally, I think it an unfair advantage; and as the numbers are restricted, it is virtually making it a portion of the Royal Academy, a private institution.

6693. Mr. *Charteris*.] If there are 70 students admitted who copy pictures, and of those 70, 20 only are students of the Royal Academy, do you think that an undue proportion?—I would wish it to be understood that students of the Royal Academy have already with the public the advantage of studying there, and on the same conditions of entering their names, coming in their turn, and painting there during the period; they have those advantages equally with the public; but, besides that, a special privilege is given to 20 more in addition.

6694. What is that special privilege?—That they may study there always, at any time, and not come in in succession; and their privilege does not terminate at the same period as that of others.

6695. *Chairman*.] Is the number of students of the Royal Academy limited to 20?—By no means.

6696. Is the number allowed tickets by special permission limited to 20?—I believe it is, as regards special permission.

6697. So that no more than 20 Royal Academy students can be admitted?—Any number may be admitted besides the 20 with special permission.

6698. Lord *Seymour*.] Do you know how persons become students of the Royal Academy?—Perfectly.

6699. How is that?—By sending in drawings; and if they are sufficiently well done they allow them to draw there on probation for six months, to make other drawings in the rooms.

6700. Is there any favouritism in admitting a person to become a student of the Royal Academy?—That I would not pretend to say.

6701. You are not aware that there is?—No.

6702. Then some at least of these 20 students have been chosen as having sent in drawings which qualify them to become students of the Royal Academy?—They all of them are students who have sent in drawings.

6703. They are of course persons who have attained such a degree of proficiency that their drawings have enabled them to become students of the Royal Academy?—Yes, but why should a private society grant privileges in a national gallery?

6704. Then so far they have attained a proficiency which is rather higher than the average of their age, I suppose?—I am not aware of that; there are many

F. Hurlstone, Esq.

24 June 1853.

artists who never have been students of the Royal Academy, and, indeed, even now the majority of the present Academicians were never students in that institution.

6705. What complaint have you to make against the admission of 20 students of the Royal Academy as students in the National Gallery?—My complaint is, that it is giving in a national and public institution special privileges to a private body.

6706. *Chairman.*] Is this your complaint, that there is a reservation of 20 places for students who are recommended by the members of the Royal Academy, which reservation is not granted to any other art establishment or academy?—It is.

6707. The injustice, you think, consists in a privilege being granted to the Royal Academy at all times and under any circumstances to have 20 of their students in the National Gallery, when no such exclusive privilege is granted to any other art establishment?—I object to the special privilege being granted to any art establishment.

6708. But in this especial case, you object to its being granted to the Royal Academy alone?—I do in this especial case; but I object to its being granted to any establishment.

6709. Will you have the goodness to answer the question I put to you just now; I do not know whether it has been rightly understood; my question was, can there be more than 20 students of the Royal Academy admitted?—They may have any number, because all students are eligible to be admitted upon the same terms as the public at large.

6710. You mean that there are 20 places at all times reserved as of right for students of the Royal Academy exclusively, and that if other students of the Royal Academy apply, they take their chance equally with the public?—Yes.

6711. Mr. *Charteris.*] You have said that there is no favouritism in the selection of the students of the Royal Academy, but that they are admitted on showing specimens of their work?—I think I said that I could not determine about the favouritism.

6712. You have said that there is no favouritism, so far as you are aware, with regard to the admission of students to the Royal Academy, but that their admission depends on their talent and power of drawing?—I do not pretend by any means to say there is no favouritism; but I think I said I was not prepared to determine that.

6713. If there is no favouritism, any artist may, by going through the forms required by the Royal Academy, become one of the privileged twenty, may he not?—If there were no favouritism, it is open to everybody, unquestionably.

6714. Does the privilege continue after they have ceased to be students of the Royal Academy, or is it a privilege that they have through life?—I believe that, unless they have gained a medal there, it ceases with their connexion with the Academy.

6715. Are you aware whether it is the fact, that when a person has what is called a Royal Academy ticket of admission to the National Gallery to copy, that privilege of admission lasts during the period of his life, or as long as he chooses to retain it?—I imagine that it would, if he were a life student.

6716. What do you mean by a life student?—A student for life.

6717. What constitutes a student for life?—The gaining a medal.

6718. So that any student who has gained a medal at the Royal Academy has the privilege for the whole term of his life of entering the National Gallery?—He has.

6719. And therefore that privilege is open to competition, and it is open consequently to the whole body of artists in the United Kingdom?—It is only open to artists who study at the Royal Academy; but there are many who, from various circumstances, cannot avail themselves of that channel to pursue their profession.

6720. Mr. *Vernon.*] If a public institution, such as the Royal Academy, is to be of any service, and is to be made effective for the training of students in art, is it not desirable that the National Gallery should enable the students to complete their education by presenting to them models of the highest art?—In the first place, I beg to remark that the Royal Academy is a private institution, and not a public one.

6721. Lord *Seymour.*] You have mentioned two cases in which there is a certain arbitrary preference given by the trustees of the National Gallery; in your

your opinion, is there any other case analogous in which there is also a preference granted by the trustees of the National Gallery, besides the two you have mentioned; namely, the case of copyright in regard to the pictures in the National Gallery, and the admission of 20 students from the Royal Academy?—There does not occur to me any other case of arbitrary preference at the present moment; there is a trifling one which is really hardly worth mentioning, but which I think is beneath the dignity of the trustees: it is that they entertained a proposition for affixing an advertisement to the official catalogue for the purpose of advertising a private speculation.

6722. You do not complain of that, I suppose?—I think it is beneath the dignity of the trustees to do anything of the kind.

6723. I understand you to say there is no other case of arbitrary preference but the two you have mentioned?—There is no other case of arbitrary preference that occurs to me at the present moment.

6724. *Chairman.*] Are there any other defects in the present system of a more general nature than the special cases you have alluded to?—I think it a very great defect that an officer of any other establishment for the fine arts should be an officer of the National Gallery.

6725. Lord *Seymour.*] You think it objectionable that the president of the Royal Academy should be one of the trustees of the National Gallery?—I think it highly objectionable.

6726. Why do you think so?—The president of the Royal Academy was a trustee of the National Gallery at a time when, from the accumulation of pictures, the room became restricted, so that there was no possibility of properly exhibiting the pictures that were presented to the nation by Mr. Vernon and others. I consider that it was the duty of the trustees, and the president of the Royal Academy as one of them, to demand from the Royal Academy those rooms which the nation had built, and which Parliament had subscribed the funds for building for the purposes of the National Gallery; I think that the trustees, in the proper fulfilment of their duty, should have required them to be given up.

6727. I understand you to mean that the trustees of the National Gallery should have given to the Royal Academy notice to quit the building?—Yes; they should have given them notice to quit the building. But at the time when it was the imperative duty of the president of the Royal Academy, as a trustee of the National Gallery, to make that demand, he, in fulfilling what I believe he imagined to be his duty as president of the Royal Academy, was memorialising Her Majesty, not that that part should be given up to the National Gallery, but that the whole should be given to the Royal Academy, so that there were the two duties in conflict.

6728. Can you state when that memorial was presented?—No; I cannot state the date of it.

6729. But you are confident of the fact?—I am.

6730. *Chairman.*] Was that in consequence of its being understood that the National Gallery was to be removed to another place?—I am not aware of the grounds of the memorial, but it was at a period when the trustees of the National Gallery should have demanded of the Royal Academy the rooms occupied by them, which occupation on sufferance caused the want of room.

6731. Do you mean that the Royal Academy memorialised Government with a view to get possession of the whole building, without reference to any provision that was proposed to be made for the deposit of the pictures of the National Gallery?—No provision had been made.

6732. Mr. *Charteris.*] Do you think it likely that, without giving any reason, they asked for the remainder of the building; and that their proposition was that the pictures that were in the building were to take care of themselves, and were to be turned out into the street?—No; undoubtedly the memorial was presented in anticipation at a time when the question as to the removal of the gallery was in agitation, caused alone by their occupancy.

6733. *Chairman.*] On that ground you think that any gentleman who was a member of the Royal Academy, and at the same time a trustee of the National Gallery, would have a divided interest, and that the interests of the Royal Academy would interfere with the interests of the National Gallery?—Unquestionably.

6734. Irrespective of the Royal Academy, do you consider the present system of management of the National Gallery defective?—Very.

F. Hurlstone, Esq.

24 June 1853.

6735. What do you consider to be the general defects of the system?—I think I have before stated what appear to me to be the general defects, which are the duties of the officers, the trustees included, being undefined, and the responsibility of each being uncertain.

6736. Would you propose to abolish the system of unpaid trustees altogether?—I would not; I would retain the trustees, but I would make them strictly a supervising body, and not an acting body.

6737. Would you reduce their number?—I do not know that I would reduce the number.

6738. Would you keep the number of the trustees undefined, their present number happening to be 17?—I have not considered that point.

6739. You would have them act as a presiding or controlling body?—A controlling body strictly.

6740. How would you propose to modify the directorship under them?—The directorship I would place in the hands of three responsible persons. The duties which I allude to, as having to be performed by the directorship, would be principally purchasing pictures, valuing pictures, and exercising a judgment in regard to what pictures were proper for the National Gallery, and they would also exercise their judgment in regard to cleaning.

6741. You would have three officers to attend to that?—I would have three officers.

6742. How would you propose to subdivide their functions?—I would not subdivide their functions; I would propose that they should be a sort of board; and the reason why I have come to that conclusion is, that I wish to restrict the responsibility to as few persons as possible. If one person is appointed as a director, it can scarcely be done without appointing a sort of consulting committee, or authorising him to take advice from persons who may be considered competent judges; in that case the responsibility is weakened or destroyed.

6743. You would have three officers with co-ordinate powers in the gallery?—I would.

6744. You would not have any one of the three superior to the others?—I would not.

6745. And you would limit their powers entirely to the management of the institution and the purchase of pictures?—Yes, and to the cleaning; in fact, all the artistical arrangements.

6746. Do you not think that three chief officers merely for those purposes would be rather more than would be required?—I think not.

6747. It would be necessary, would it not, to have other subordinate officers to carry on the details of management under them?—No, I do not think it would for artistic business. The secretary I would have perfectly distinct; I do not know that it would be any disadvantage for the secretary to be in some degree connected with art, but I would keep the duties of that office perfectly distinct from the management of the artistic business of the institution.

6748. The secretary, then, would be a fourth officer?—A fourth officer.

6749. Would he be under the control of the three, or would he be independent, like each of them?—His duties would not be the same as those of the three; they would be perfectly distinct duties.

6750. Do you mean that the three officers who you propose should manage the whole details of the establishment, would not require a secretary to engross their minutes and the records of their management?—Undoubtedly they would.

6751. Would not the secretary then be under them in that respect?—Certainly he would assist them.

6752. You would propose that there should be three officers in chief intrusted with the general management, and that they should have a secretary under them?—Yes; three officers for questions of art, not for management.

6753. Then he would be a subordinate officer?—Yes.

6754. You said you proposed that there should be no subordinate officers?—I was alluding particularly to the artistic department when I said that.

6755. Mr. *Ewart.*] You mean that he should be simply a secretary?—Yes, simply a secretary; perfectly independent of questions of art.

6756. *Chairman.*] Do you mean that the three officers you first mentioned should form a board, their powers and duties being confined simply to the purchase and cleaning of pictures?—I propose that they should perform all the artistic business of the National Gallery.

6757. Mr.

6757. Mr. *Charteris.*] That is, that they should perform all that business that is now performed by the trustees?—All the artistic business.

6758. *Chairman.*] And by the keeper?—And by the keeper, as at present done.

6759. You would have these three officers forming a head board, with a secretary under them?—Yes.

6760. Would you have no officer under them except a secretary; would you have no assistant keeper?—Probably a keeper for domestic management only.

6761. Mr. *Charteris.*] Do you think it desirable that there should be some one officer resident at the establishment to look after the pictures?—I do.

6762. Which of the officers to whom you have alluded, the three directors, or whatever you call them, and the secretary, do you propose should reside in the establishment?—I think that is unimportant.

6763. Would you propose that one of them should?—It would be necessary, unless there were a keeper, for one of them to reside in the establishment.

6764. *Chairman.*] If an assistant keeper were to reside there, it would not be necessary for one of them to reside there also?—No.

6765. Mr. *Charteris.*] Do you think it would be desirable to have an assistant keeper, in addition to the three directors and the secretary?—I have no objection to a keeper; my object is to confine a distinct responsibility to certain persons; if the artistic responsibility could be confined to the three directors, I see no objection to a keeper for the household management only.

6766. *Chairman.*] To whom would you propose to make the three directors responsible?—To the trustees, and ultimately to Parliament by an annual report, which, I believe, has been proposed already.

6767. Do you think the trustees should, from time to time, visit the gallery and examine into the proceedings which have taken place since their former visit, and that if they find anything wrong, or if they have any suggestion to make, they should report to the Treasury or to Parliament?—To Parliament, not to the Treasury.

6768. Mr. *Charteris.*] What description of control do you think the trustees ought to exercise over the three directors?—The usual control that is exercised by an inspecting body.

6769. You propose that the directors should have the charge of cleaning and purchasing pictures; in the case of a picture which the directors think it desirable to clean, do you propose that they should order the cleaning of that picture without reference to the trustees?—I do; I consider that they should clean it upon their own responsibility.

6770. You would not require that they should refer that question of cleaning to the trustees for their sanction?—Certainly not; I think that if you have three persons of proper efficiency for such an office, they ought to be able to form a correct judgment on such matters, and I do not think that anything would be gained by referring the question to the trustees.

6771. Let us take now the case of purchasing; do you propose, that in the new constitution you suggest, the three directors should purchase pictures on their own responsibility, without referring in any manner to the trustees?—If you allow a reference to the trustees then you throw the responsibility of the purchase upon the trustees.

6772. I wish to know whether you propose that, in this new constitution of yours, purchases of pictures shall emanate entirely from the directors, who, upon their own responsibility, are to effect those purchases without referring in any way to the trustees?—I do; because if the question were referred to the trustees, and the trustees were to determine it, they and not the directors would be the responsible parties.

6773. You say that the directors are to manage the principal points in the establishment, which are cleaning and the effecting of purchases; you say that they are to do so entirely on their own responsibility, and without in any case referring to the trustees, and at the same time you say the trustees are to exercise a control over the directors; I wish to know what control the trustees are to exercise over the directors?—The trustees would make an annual report to Parliament, and would have the power of dismissing the directors upon proof of misconduct or incapacity.

6774-5. Then, if I understand your meaning rightly, it is that the trustees, although they are to exercise no control over the directors while they are doing anything either connected with cleaning or purchasing pictures, are yet, when

F. Hurlstone, Esq.

24 June 1853.

that has been done, to report to Parliament whether they approve or not of the acts of the directors?—Certainly; or otherwise you place the trustees in the situation of the directors, and make them the responsible parties. If they exercise a control over the purchases and over the cleaning, they then become the responsible parties, and not the directors.

6776. Then, according to your scheme, the functions of the body of trustees would be confined to drawing up an annual report to be laid before Parliament, stating what had been done during the year by the directors, and expressing their approval or disapproval of their acts?—And appointing and dismissing the directors.

6777. You would allow the appointment of the directors to vest in the trustees?—I would.

6778. Mr. *Ewart.*] Suppose, under the scheme you propose, the directors caused certain pictures to be cleaned, and the trustees afterwards disapproved of what the directors have done, would not the interposition of the trustees be too late?—It would certainly be too late; but the same objection would apply were the power of cleaning vested in the trustees.

6779. *Chairman.*] Is it not the usual course where there are visiting bodies, as there are in hospitals and other establishments, that there is a set of managers and directors who carry on the management on their own responsibility, and that from time to time the visitors inspect and report whether the thing has been rightly done or not?—I believe that is generally the case.

6780. Lord *Seymour.*] Do you propose that the three directors you recommend to manage all the executive of the National Gallery should be paid?—Certainly.

6781. From what class of persons would you have them selected; should they be artists, or what?—I do not think it essential that they should be artists: they may be or not.

6782. You do not think it desirable that they should be artists?—I do not think it indispensable that they should be artists.

6783. But they are to be three gentlemen who are intimately acquainted with art, I suppose?—Certainly.

6784. You have been for a long time president of the Society of Artists?—I have been.

6785. And, occupying that position, you have naturally taken an interest in the progress of art?—I have.

6786. Do you think that the National Gallery has improved the public taste, and has promoted the progress of art?—I have no doubt of it.

6787. You think it has been useful?—I think it has been useful.

6788. First, with regard to artists; do you, as president of the society of artists, think, as far as you can form an opinion upon the subject, that the National Gallery has tended to improve young painters in this country?—It has undoubtedly tended to improve them.

6789. Do you think you can trace any improvement in the public taste to the National Gallery?—I do; I think it has done its part in producing a more general diffusion of taste throughout the country.

6790. Then, with all the defects which you observe in the management of the National Gallery, you still think it has been beneficial in improving the public taste, and in promoting art in this country?—There is no doubt of that; but its effects have been far inferior to what they should have been.

6791. Under better management you think it would be more efficient?—There can be no doubt of it.

6792. Do you think the appointment of the directors you propose would be the completion and perfection of the system?—I do not know; there might be minor details to perfect the plan which do not occur to me at present. I give merely the general plan which has occurred to me. I do not know whether I have made my reason for it understood; my principal object is to intrust the power and the management to as few hands as is consistent with safety, so as to enforce strict responsibility.

6793. One great object of the National Gallery being to improve the public taste, and promote art in this country, how would the three directors you propose tend to advance those objects?—By remedying many of the evils which have hitherto arisen.

6794. To what evils do you particularly point?—I am referring to the recent purchases and cleaning of pictures, and to the whole management.

6795. Do

6795. Do you think three directors would be a better body than the trustees to entrust with the power to purchase pictures?—I think they would.

6796. In order to enable them to purchase pictures, it is necessary, in the first place, that they should have some money; would you place money absolutely at their disposal, or would you make them apply to the trustees when they wanted to purchase?—I would propose that there should be an estimate yearly, of the probable demands likely to arise, and that there should be a sum voted by Parliament accordingly in anticipation.

6797. Would you have that sum placed at the disposal of the trustees, or at the disposal of the directors?—The directors would have the power of choosing the pictures, as I have said.

6798. If they have the power of choosing the pictures, they must have the power of paying for them?—Yes.

6799. The money is to be at the disposal of these three directors, as I understand you?—Yes; it should be at the disposal of the directors.

6800. Then the trustees would have nothing to do but to visit the gallery occasionally, and report what they had seen there?—Yes, as a supervising body.

6801. Do you think it is necessary to have any trustees for that purpose?—I think it certainly is.

6802. Of what use will that be?—They will visit the gallery to inspect and report upon proceedings to Parliament.

6803. Why should not the directors make an annual report?—As I said before, I would put the power of dismissing the directors in the hands of the trustees. The inspecting body are the proper persons to return the report to Parliament.

6804. The trustees are to choose the directors, and are to have the power of dismissing them?—Yes.

6805. *Chairman.*] With respect to making purchases, would you put the power of the three directors under any restrictions whatever, or would you leave it entirely to themselves to use their own judgment?—I would leave them to exercise their own judgment.

6806. Would you render it necessary that they should be unanimous in favour of a purchase?—I would render it necessary that they should each state their opinions in writing.

6807. Might not that give rise to this difficulty, that if in the case of a very valuable picture being offered for sale, two of the trustees out of three were in favour of it, and another was against it, the picture might be lost to the nation owing to some peculiarity of taste on the part of the one director who dissented from the other two?—Unquestionably; but I should insist on their stating their reasons in writing, and then it would be at once ascertained upon whom the fault lay.

William Coningham, Esq., called in; and further Examined.

6808. *Chairman.*] I BELIEVE you have directed a good deal of attention to the management of the National Gallery?—Yes.

6809. Will you favour us with any observations upon the present system of management that have occurred to you?—It appears to me that the management of the National Gallery, as it is at present constituted, is very objectionable in this respect, that there is no one individual responsible; the responsibility appears to be shifted about from the keeper to the trustees, and from the trustees to the Treasury; in fact there is no real responsibility; and I believe you never will have the administration of the fine arts in this country placed on a sound or solid foundation, until some Minister is made politically responsible in his place in Parliament for it.

6810. What improvements or changes would you suggest as a means of correcting the defects to which you have adverted?—I suppose from the course the present investigation has taken, that the question under the consideration of the Committee is not confined to the National Gallery alone, but relates to the fine arts generally. It appears to me that the proposed combination of sculpture, painting, and archæology, as forming a portion of the fine arts, is inevitable; and I entirely agree with Mr. Hurlstone, in thinking that responsibility ought to be reduced within the smallest limits. I should conceive that a commission of three persons

W. Coningham, Esq.

24 June 1853.

might be issued in the event of such a combination being determined on; if the charge be restricted to the National Gallery alone, then one person might be sufficient for the purpose; but if the responsibility were carried further, and the commissioners were made responsible for the two great departments of art, the plastic, and graphic and pictorial art, I should think that a responsible commission of three persons might be appointed, who would be bound to report to the Commissioners of Woods and Forests, or to the Board of Works, and afterwards to Parliament; that would be the most efficient form of administration I can conceive.

6811. Even assuming that the National Gallery remains a separate establishment, you would think that a board of three individuals would be best for the gallery in its single state; and if the whole art collections were combined, you would also consider that a similar chief and superior board of three individuals would be better for the combined establishment?—Yes; I should say, upon the whole, that I should prefer a board of three persons, not merely for the combined administration, but for the administration of the affairs of the National Gallery; however, if it were restricted to the National Gallery, I think it would be a debateable point whether one or three persons would be the most eligible.

6812. With regard to the three persons you allude to, would you give them in either case, particularly in the case of a combination of the art collections, co-ordinate powers, or would you make one of the three persons to be the chief?—No; I would make their powers co-ordinate.

6813. Would there be no risk, do you think, of the same evil as that which is now complained of, resulting from a want of a concentrated and definite responsibility?—I do not think so; I should not apprehend it.

6814. To whom would you make them responsible?—To the Board of Works or to the Commissioners of Woods and Forests.

6815. Would you impart to each of them, irrespective of their co-ordinate jurisdiction as a board, special functions; or would you leave the whole management to be quite common to the three?—I think it must be arranged between themselves, to a certain extent, but I would consider them all as being jointly responsible; I would not allow one to act in one department and another in another, because that might lead to great confusion; I would require from them a joint action on every question that came under their consideration; matters of detail would, of course, be left to the responsibility of subordinates.

6816. Would you have each of the three officers at the head of a particular department, such as one for sculpture, another for painting, and a third for something else?—No; because that would deprive the country of the advantage of the joint co-operation of the three.

6817. You would have each department with its special director or directors, as might be considered advisable?—No; if the combination of the different departments of art were all centred in the hands of a commission of three gentlemen, of course it would rest entirely with them, and I would not allow a separate reponsibility; in fact, the administration of these galleries, or national repositories of sculpture and painting, is not so extremely intricate but that it might be reduced to very simple rules and very simple duties; that is, the acquisition or purchase and arrangement and preservation of the various galleries of sculpture, painting, and archæology, which necessarily forms part of the scheme.

6818. I presume you would have the three officers salaried?—Unquestionably.

6819. Then their functions, irrespective of their receiving salaries, would be very analogous to those of the trustees of the British Museum, with the exception only that they would be a very limited instead of a numerous body?—Yes, and there would be an absolute responsibility. I think that many of the strictures which have been made on the management of the National Gallery, have been equally applicable to the management of the British Museum.

6820. How would you proceed with regard to the funds to be placed at the disposal of the Board of three chief officers?—The funds must evidently be at their disposal, and must be available at any moment.

6821. Would you give them one general fund from which they should allot as much as they might think advisable for the purchase of pictures, for the purchase of statues, and for the purchase of other objects of art, or would you give to the National Gallery of pictures, and to each of the other branches of the institution, a certain sum?—I would leave it to the discretion of the Commission, giving them an annual grant of a certain sum; but in cases of emergency, where a very

a very considerable grant was required, an appeal to Parliament would be necessary.

6822. Would you advise that Parliament should allot a certain large sum to be at the disposal of the three Commissioners, and to be expended by them annually in such proportions and in such mode as they should consider advisable?—I would; but I would give them a discretionary power of expending as small a portion of it as they thought necessary; and if they spent less than the sum granted one year the surplus might be added on to another, so that an available fund might gradually accumulate.

6823. In extraordinary cases you would propose that a special application should be made to Parliament for funds beyond the annual allotment to which you have alluded?—I would.

6824. With regard to the purchase of pictures or other objects of art, would you place the responsibility of that upon the special departments to which the pictures, or sculpture, or other branches belonged, or would you place a general responsibility upon the Commission of three as to all purchases?—I would make them absolutely responsible for the whole administration. With regard to purchases, I would make it an absolute law that there should be an annual report to Parliament; I think that an annual discussion upon the subject would be a very desirable thing; the Commission would report to the chief of their department, the Commissioner of Woods and Forests, and he would lay that report before Parliament.

6825. With respect to the making of purchases abroad for any portion of the collection, how would you propose to regulate that; would you authorise members of the Commission to travel?—I should be very much inclined to give them a complete discretionary power on that subject. I think that, if it were known on the Continent that the British nation were disposed to purchase really first-rate works of art, there would be very little necessity for the directors to go abroad to purchase pictures; a magnificent National Gallery might have been formed in this country within the last 25 years, if there had been the same degree of activity and intelligence displayed in the management of the National Gallery as we see in some other departments of the Government.

6826. But supposing a case to occur of an interesting collection being to be sold abroad, the question would naturally arise as to whether the expenses of parties going over to inspect the collection and to make purchases should be paid, so that the subject of travelling or otherwise would necessarily form an element of their duty and of their expenditure?—Certainly.

6827. Would you propose that they should from time to time be sent abroad, and have their expenses paid?—If they went with any definite object; I would not allow them to be a vague roving commission; I think it is very well to collect catalogues, but for that purpose it would not be necessary to travel; a statistical fellow would do that without travelling.

6828. You would not allow them to travel without first making a special application to that department of the Government under which they were, or until permission was obtained for their going abroad?—Perhaps not; but one of the great difficulties in the administration of a department of that kind is the difficulty of making the appointments. Apparently, many things in the hands of the Government are converted into a job, particularly where money is concerned; and it seems to me that one of the great difficulties of the question is, how and by whom the appointments are to be made.

6829. You would give the three Commissioners an entire responsibility as to all matters of detail and management, and as to the picture-cleaning you would leave that also entirely in their hands?—Entirely.

6830. Lord *W. Graham.*] That is, supposing there to be a combined collection of objects of fine art?—Yes.

6831. That would require them to be equally good judges, would it not, of paintings, statues, medals, architecture, and other branches of art?—Architecture would hardly come under their department.

6832. Ornamental architecture would, would it not?—It might, within certain limits.

6833. *Chairman.*] Assuming that there were difficulties in the way of a combination, and assuming that the National Gallery still remained by itself, how would you regulate the matters that have been referred to in regard to a board of direction; you stated that you might still, in that case, retain a board of three

W. Coningham, Esq.

24 June 1853.

persons for that purpose alone?—Yes; I think it is a debateable question whether one or three would be most expedient; I think unity of action is a most important thing; and in a limited department, such as that of the National Gallery alone, one person, I should think, might be found sufficient for the purpose, making him in the same way responsible to one department of the Government.

6834. Mr. *Charteris.*] You would give him, I suppose, some assistant; a secretary, perhaps, for instance?—Of course he must have a secretary.

6835. And somebody to superintend the gallery itself?—Yes.

6836. Some competent superintendent?—Yes.

6837. *Chairman.*] Would you object to an artist being selected as one of the three Commissioners?—Certainly not; on the contrary, if artists occupied the position which I think they ought to hold, and if they treated the masterpieces of ancient art with that degree of reverence and respect with which I think they ought be treated, not as they have been treated hitherto by members of the Royal Academy, artists would be extremely fit people to act on a commission of the kind that has been suggested. But of course, men who profess to despise the works of the great masters, and who scarcely ever deem it worth their while to study the most important works in sculpture in the world (I allude to the Elgin Marbles contained in the British Museum), cannot be considered competent to carry out the administration of a branch of Government of that degree of importance.

6838. Do you approve of the restriction you heard mentioned by Mr. Hurlstone, as to excluding persons connected with any other art institution from a share in the direction?—I should expect from the three Commissioners who were appointed, their entire and undivided time and attention to the object upon which they were engaged; and as to their being official members of other art institutions, I think that would be probably objectionable.

6839. Would you make it a condition that a portion of the board should be artists, and a portion of them independent gentlemen, consisting of what are called amateurs, or would you make any regulation as to qualification, irrespective of general merit?—No; but I should like very much to see an artist forming one of a Commission of that kind.

6840. Mr. *Charteris.*] Supposing we were to confine our attention first to the picture gallery separate from other institutions, and that instead of having a body composed of three persons you were to have one individual solely responsible for the management, should you, in that case, think it desirable that that individual should be an artist?—I should think there would be no objection to his being an artist, but on the contrary, that it would be very desirable that a gentleman who had a technical knowledge of art should be appointed. I should see no objection to that at all; but then it would be necessary to define what we mean by an artist, and probably there would be some difficulty in arriving at a conclusion upon that subject.

6841. In answer to a question from the Chairman, you qualified your opinion, as to whether it was desirable that there should be an artist in the Commission, or that an artist should be a director of the gallery, by saying, that you thought it would be desirable, if artists were what they ought to be, admirers of the works of the ancient masters, and you also referred to the Elgin Marbles; do you mean to say, that the artists of the present day do not admire the works of the ancient masters?—I think that many artists do not admire the works of the ancient masters; I have seen members of the Royal Academy shrug their shoulders, and profess great ignorance of the works of the old masters.

6842. Do you mean that they professed ignorance, or a want of feeling and admiration for them?—A want of knowledge and a want of acquaintance with the old masters; one of the former presidents of the Royal Academy, before Sir Charles Eastlake, spoke of the National Gallery as a *hortus siccus*, while he spoke of the Royal Academy as a flower garden.

6843. Mr. *Ewart.*] You do not, according to your plan, propose to retain the trustees?—No.

6844. What do you consider to be the objections to which the present constitution is liable?—The trustees are not amenable to public opinion except through the press, and I suppose that this investigation would never have taken place if it had not been for the constant and energetic attacks made in the press by Mr. Morris Moore on the administration of the National Gallery.

6845. In the scheme to which you have alluded, you do not propose to have the

the chiefs of the different departments connected with a combined system for the officers as in the British Museum; you would concentrate, as it were, the whole superintendence in these three persons?—Yes.

6846. It is so in the Louvre, is it not?—I believe that in the Louvre the authority all centres in a single individual. After the Revolution in 1848 took place, M. Jeanron was appointed director, and he put a complete stop to the picture-cleaning; but since M. Nieukerke has been appointed, and they have returned to the system of imperialism, I understand it has been recommenced.

6847. Would it be necessary, in a more limited system like that, to have heads over different departments, as they have in the British Museum; all these different elements of art being combined together, for the purpose of the arts exclusively?—Of course there must be subordinate officers in carrying out in detail the administration of enormous galleries of that kind; but so far as regards the management, purchase, and preservation of pictures, I would place that entirely in the hands of the Commission; I would make them solely and absolutely responsible for everything that is done. It would be, of course, their business to see that the officers of the different institutions did their duty; and if they neglected it they should report it, and then they might be superseded.

6848. What is the general system of government adopted abroad in institutions of this kind, as far as your experience goes?—I am not aware of the precise details of the administration; but M. Nieukerke, at Paris, has a very despotic authority, and has almost unlimited power in the management and purchase of pictures.

6849. Are you aware of any other institution conducted by such a body as a body of trustees generally is in this country, who are appointed for various reasons, and who, from the circumstance of many of them being official trustees, seldom can give a very regular attendance to the duties confided to them?—I am not aware of any such.

6850. In fact, this constitution is rather peculiar to this country?—I think it is; I think it would be difficult to conceive a worse one.

6851. Lord *Seymour*.] You think it is difficult to conceive a worse system than that of the trustees of the National Gallery?—Yes.

6852. You think that it is generally a bad system to have trustees?—Yes.

6853. But do you not think that where the person who is appointed receives a salary, the appointment is very apt to become a job?—I think it is always liable to become so, unless it is very closely looked after, particularly where there is a probability of large sums of money being expended; because I know, for instance, with regard to the British Museum, that in the print department, before Mr. Carpenter's time (and I know nothing about it since his appointment), unless collections of prints got into particular hands they never found their way into the British Museum; they might be ever so good, but they were not received. I could quote, as an instance, Mr. Sheepshank's collection of prints, one of the finest collections of Dutch prints in this country; they were refused by the British Museum and were afterwards purchased by a print-seller; and after several thousand pounds' worth had been sold, the trustees came forward and purchased the remainder at the price at which they might have had the whole collection, if they had bought it in the first instance.

6854. Might there not be an idea that these paid directors would show favour towards one party or another?—That is one reason why I would suggest the appointment of three persons.

6855. You would have three persons with co-ordinate authority?—Yes.

6856. Therefore, whether it was a picture or a work of art in the way of sculpture, or a coin or an Etruscan vase, it would be necessary that the three should pronounce an opinion whether it should be purchased or not?—Yes.

6857. You say the fear is, that the director being highly paid, his appointment might become a job; by a job I imagine you to mean the Government appointing a person not properly qualified?—Yes; or that they would appoint by favouritism rather than by a fair comparison of the relative merits of the candidates.

6858. Would it not be very difficult to judge of the relative merits of the different candidates for those three important places, the parties holding which are to have the expenditure of a large sum of money for a united collection of objects of art?—It would be an extremely difficult thing.

6859. Therefore the Government, even if they acted with the best intentions,

W. Coningham, Esq.

24 June 1853.

might not make such fortunate appointments as to escape the imputation of having perpetrated a job?—No human institutions are perfect; but they might be sufficiently so to answer all practical purposes. I think the proper filling up of the appointment would be very difficult; the question of art itself is very difficult, in consequence of the great diversity of opinion existing with regard to it.

6860. Adding to sculpture and pictures, for the purposes of art, the whole class of antiquities very much increases the difficulty, does it not?—I should say that persons who are competent judges of sculpture, who, for instance, appreciate the Elgin Marbles, or competent judges of pictures, who appreciate the works of Titian and Raphael, would be competent judges of all the departments of art; the mere archæological portion of it is not very difficult of acquisition; it is a matter of experience, of ascertaining precise dates, and so on; but I think that people who are really competent judges of sculpture and painting would be the best judges you could find for all the inferior branches.

6861. Are there not many works of art that are only valuable from their historical associations?—Many certainly.

6862. Those you would not exclude from the collection?—Certainly not.

6863. You would not exclude ancient British antiquities, I suppose?—No, I should not; that would form part of the archæological department.

6864. The three directors you propose would have the expenditure of the money for all the various purposes?—They would.

6865. Would it not be very difficult to provide that each of these various classes of information should be fairly dealt with by the three directors, whose attention has been chiefly devoted to works of art?—I should imagine that there would not be much practical difficulty in it. I should imagine that one, for instance, would devote his attention more particularly to some one department, such as that of antiquities or archæology, and the other two members of the commission might probably be more or less influenced by his opinion on those particular points, but I would insist on a joint responsibility; that is, it would be their duty to see that the conclusion he had arrived at was the correct one, and they having taken counsel together should decide on the principle of action. The advantage of one over three would be this: that one would arrive at a, perhaps, more speedy decision, and might act more freely. You might lose some things, and perhaps the machinery might not work quite so smoothly with three; but still you would have a greater security against errors and mistakes to which all men are liable.

6866. Would not the gentleman attached to classic art frequently consider that the expenditure of money for Egyptian or Assyrian objects of antiquity might be postponed for the sake of some objects of classic art which he had in view?—Opinions might clash upon those points, no doubt.

6867. Do you not think there would be frequent danger of that?—I think there might be a difference of opinion.

6868. Mr. *B. Wall.*] Is there not sometimes now, in the British Museum, a clashing of opinions as to what money should be expended in different departments?—That seems to me to arise from the vicious system of administration in the British Museum, while the different officers are squabbling among themselves, the thing ought to be settled by a vigorous executive authority.

6869. Lord *Seymour.*] At the British Museum you are aware money is voted specially for books, specially for antiquities, and specially for prints and drawings?—Yes.

6870. Therefore any disagreement between the officers of different departments cannot affect the purchases made in the separate departments?—I spoke rather with reference to this, that within the last few years there have been pamphlets published indicating some great disorganisation in the interior of the British Museum; I referred rather to general reports of that kind, but I do not exactly know who decides what the sums of money shall be.

6871. You are not aware, then, that the sums of money are voted by Parliament to the Treasury for these different purposes?—Upon the request, I conclude, of the trustees. The trustees so far hold the office in the British Museum that the Commission would do; if it rests with them to decide.

6872. As I understand you, you would equally have the distribution of the money, allotting a certain portion to pictures, a certain portion to prints and drawings, and a certain portion to antiquities; and perhaps you would even subdivide the

the money allotted to antiquities to the different classes of antiquities; is that so?—I would leave the distribution or division to the discretion of the Commission.

6873. Would you vote the whole in one sum to these three gentlemen?—If the whole administration were centred in their hands, the grant might then become of such formidable proportions that I should think it would not be prudent to do so without a special reference to Parliament.

6874. What I wanted to ascertain was, whether when the sum was voted it should be a grant to the three directors for the purpose of the united collections of art, or whether it should be a grant of specific sums; so much for pictures, so much for antiquities, so much for sculpture, so much for coins and medals, so much for British antiquities, and so on?—That of course would be in reply to their application; they would apply for so much, and the money would be voted annually for each head.

6875. So that there would not arise that clashing between them, if there was money allocated for each particular purpose, whether the purchase of one object of art should be postponed for the sake of purchasing another?—No; of course the dispute would arise before the original application of the Commissioners; they would debate what was most necessary, and the liability to a split in the Commission would arise before the application was made to Parliament.

6876. *Chairman.*] That is the case in the British Museum now, is it not?—I believe so.

6877. Lord *Seymour.*] In the British Museum is it not the fact that pretty nearly the same amount has been voted for many years to the different departments?—Yes, I apprehend so.

6878. Mr. *Charteris.*] The constitution which you propose of these three directors for the combined artistic collections implies, does it not, not only co-ordinate power, but co-ordinate knowledge?—As much so as possible.

6879. That is to say, they should each be equally good judges of all the different and various articles and objects of art in the collections under their charge?—If possible.

6880. Sculpture, pictures, coins, vases, and so forth?—I should hope that the appointment of an effective Commission, and an improved administration of the art department, would also be accompanied by the establishment of public depositories of art in some of the principal manufacturing towns in the country.

6881. Do you think you would be able to find three men possessed of such a universal knowledge on matters of art as would be requisite to qualify them to be directors under your system?—I think it would be possible to find three men who would be able to carry out the system.

6882. You think you could find three such men?—Not absolutely to carry out the system perfectly.

6883. Mr. *Vernon.*] I presume your idea is, that you would obtain three men of general taste and general knowledge of art, and that each of those three men would have a peculiar bend or turn for some department of art on which he had more particular knowledge?—No; I should say, generally speaking, that they should be men of acknowledged ability and experience, who had devoted a great portion of their time to the study of art, and who should be expected to devote the whole of their time to the Commission after they were appointed.

6884. Is it not the fact, taking men as they are, that you find those who are most competent to judge of pictures, and who have turned their attention chiefly to them, are very apt rather to depreciate statues?—I cannot say my experience would lead me to that conclusion. I should say, on the contrary, that those who are capable of appreciating fine pictures would be in all probability likely to appreciate fine works of sculpture; Sir Joshua Reynolds, in his lectures, I remember, pointed out how closely connected historical painting is with sculpture.

6885. You think that those who look to form as one great quality in good pictures would naturally admire a fine statue?—Certainly.

6886. My question had reference to the practical working of the thing: is it not the fact that many persons who have applied themselves particularly to particular schools of art, and made themselves fully and entirely conversant with them, have so exclusively turned their attention to that one branch of art that they have not taken that wider range of art which you seem to expect?—If they have devoted themselves to particular schools, and have acquired a taste for mannerism, they may be said to be so far incompetent judges of art; but if it be difficult to find

W. Coningham, Esq.

24 June 1853.

three men qualified to carry on an administration of that kind, it must be more difficult to find a dozen; and the administration would, in that case, be infinitely worse.

6887. Then your idea would be this: that as to details, such as the condition of pictures or the condition of statues, although they should exercise a general superintendence and control, as far as their taste would enable them to exercise it, they would have to trust for those details to their subordinates?—Of course, where it was a matter of necessity, lining a picture, for instance; they cannot be expected to line pictures.

6888. I mean as to the purchase of pictures?—They must judge and act for themselves.

6889. *Chairman.*] You are aware that in some of the great art institutions of the Continent, at Berlin for instance, and at Paris, the whole institution is under a single director?—I was not aware that at Berlin it was under a single director.

6890. At Paris it is so, is it not?—At Paris it is, I know.

6891. Then your board of three would, in fact, be a substitute for the single one who is found in those other galleries?—I should say that Berlin could not be quoted as a specimen of good management. I went to Berlin, two or three years ago, for the special purpose of examining the state of the pictures, and the gallery generally; and I came away with a very unfavourable impression indeed with regard to the treatment of the pictures, and of the purchases which had been made, particularly those made by Dr. Waagen.

6892. But Dr. Waagen is only the head of a subordinate department?—Yes; and I made it my business to find out what pictures he had purchased, and I found that most of those were pictures that never ought to have been admitted within the walls of the gallery. Another thing was also very objectionable, namely, the catalogue; the defence set up by Dr. Waagen was this: he stated to M. de Rezé, one of the experts in the Louvre, that the king would have pictures by every master, and he begged of him not to judge of him by the catalogue. However, in Paris public confidence in Dr. Waagen's opinion was so much shaken, that in the last published catalogue his name has been erased in almost every instance where it had been inserted previously.

6893. Do you consider that the particular piece of mismanagement you allude to in the Berlin Gallery is connected with the circumstance of the supreme direction being in the hands of a single person, and that the evil would not have arisen under your system of a Board of three?—I attribute the mismanagement to the persons entrusted with the care of the gallery; the excess of cleaning for instance; the great quantity of varnish which was laid upon the pictures; the excessive incorrectness of the catalogues, pictures being attributed to masters erroneously, and things of that kind, which proved to me that the gallery at Berlin was not confided to proper or competent hands.

6894. Errors we know must arise in all human institutions; but I want to know whether, in reference to your own scheme, as compared with the system pursued at Berlin, where the institution is under one chief, you consider that the evils to which you allude are traceable to the circumstance of the establishmen being under one chief, and that they would not have arisen if the institution had been under a board consisting of a certain number of responsible persons?—I cannot say that it was traceable to that fact, but if there had been three persons responsible, I think it possible that some of those abuses might not have existed.

6895. In regard to the supposed partiality which has been referred to by an Honourable Member, of one of the three directors, for particular branches of art, and a consequent disparagement or neglect of others, if any abuse of that kind arose under three directors, you consider it as likely to arise under a single one?—Certainly.

6896. Lord *Seymour.*] Do you consider it desirable to create this one large united combination of art, or do you think it desirable to keep the pictures distinct, though under a separate management from the present?—My own opinion is not favourable to the centralisation, in one building, of these various departments, I think they might be classified better; the pictures might be collected in one building; the statues, and prints, and drawings left at the British Museum, and the books might be placed in a third adjoining department; but the centralisation of them in one single spot, and at some distance out of town, would practically cut them off from a very great number of people who now have an opportunity of benefiting

benefiting by them; the only possible ground that I can conceive to be urged in favour of the Kensington site for a National Gallery, would be that it should then be open on Sunday to the people, when they might take advantage of their holiday to go down and visit it.

6897. Without reference to the site, I was asking whether you consider it desirable that all collections of works of art should be united, or that the pictures should be kept separate, so that a person who desired to see the pictures should go to one building, and a person desirous to study coins or Etruscan vases should go to another?—I should prefer the separation of the collections to a certain extent.

6898. Should you think it desirable to have a set of casts of all the best statues connected with either one of these collections?—I should like to see a collection of the finest casts form part of the sculpture collection at the British Museum. I think it would be a most valuable addition. An important step was made in the cultivation of art during the last century, by the bringing together a collection of casts by the Duke of Richmond, from which, I believe, several of the founders of the Royal Academy studied; and it was considered a great advantage that this gallery was freely thrown open to the artists of the day, and thus they had an opportunity of studying casts of fine statues, which they had no other opportunity of seeing.

6899. The difficulty would be to find space for so large a collection as would soon grow, if all the finest casts were brought to one building?—Yes; but I apprehend there is space to be had in the neighbourhood of the Museum.

6900. If one united collection of art were made, would it not be necessary, in order to render it sufficient for the purpose of study, that a library should be connected with it?—I do not know that there would be any special advantage in placing a library in a collection of that kind.

6901. Do you not think that, when a person goes, for instance, to study coins and medals, which are often studied for historical purposes, it is of great importance that, when the collection does not contain a particular coin, there should be books of coins in the room, so that a volume could be taken down and the party could be shown the coin, which exists in some other collection?—That might certainly be an advantage.

6902. Is it not desirable to have many works connected with art, accessible at the place where collections of art are deposited?—Yes; it might be advantageous.

6903. Again, with regard to prints; you would connect the prints and drawings with the pictures, as I understand you?—Yes.

6904. But you are well aware that many most curious and valuable prints are contained in books, from which it would be a great pity to take them away, and that you could not obtain those prints except by obtaining the books which contain them?—Yes, I believe that that difficulty has been felt in the British Museum; the librarian and superintendent of the prints both wished to take possession of certain books, the librarian on the ground that they were books, and the superintendent of prints on the ground that they were prints; but that is a practical difficulty which very seldom occurs, and is of very trifling importance.

6905. But those difficulties and those advantages would make it desirable, would they not, not to exclude books from a united repository of art?—Yes; if they are to be united, I see no reason why books should be excluded.

6906. I mean books which are applicable to the purposes of the collection?—It would be simply a question whether it would be more expedient for students of books, or of sculpture, to walk into an adjoining wing of the building, or to an institution, perhaps, half a mile off.

6907. If it were a mile or two off, it would be inconvenient, because they could not compare the book with the work of art it described?—It might be.

6908. *Chairman.*] The library for an art institution would not be so very voluminous as to interpose any difficulty in the way of having such a collection as would be necessarily attached?—No; I should think not.

6909. With reference to the opinion you have given as to the non-necessity of combining the collections, you referred merely to the question of local combination or contiguity, irrespective of the combined superintendence, did you not?—Yes.; I do not think their being in separate buildings would in any way interfere with the arrangements of the Commissioners.

6910. Supposing you left the paintings in Trafalgar-square, and the sculpture in the British Museum, would you still propose to have your three chief Com-

W. Coningham, Esq.

24 June 1853

missioners superintending the whole of the art collections as one, though in different localities?—Certainly.

6911. Otherwise you would lose the advantage of having united a body of competent and experienced advisers as to purchases and otherwise, which are now divided into two departments, one at the Gallery, and one at the Museum?—You would concentrate that knowledge.

6912. You stated that you thought, if there were a number of officers, one perfectly well qualified in regard to sculpture, another as to painting, and the third with regard to gems, coins, and so forth, their united opinions would be exceedingly beneficial; if the collections were not to be combined you would forfeit that advantage?—I do not see that.

6913. Do you think that any advantage would result from co-operation between the managers of the Trafalgar-square Gallery and the managers of the British Museum, with regard to their respective purchases or otherwise?—I certainly do not; but I think the tendency of all my observations has been, to show that it would be desirable to concentrate the power in a very limited number of hands, and not to diffuse the responsibility.

6914. Then the Committee are to understand that, although you may object to the combination of institutions in one locality, according to the mode that has been proposed, you do not object to place the whole of the art institutions under one system of management, even though in separate localities?—No.

6915. Mr. *Charteris.*] Are we to understand that your objection to this combination is one of principle, or of locality and site?—The question of site, no doubt, weighs very much with me; I think it would be a very great injury to the cause of fine art in this country, and to the diffusion of taste among the people, to remove the National Gallery from the central position it occupies in Trafalgar-square to Kensington.

6916. Supposing there were no other objection as to site and locality, should you object on the principle of combining the National Gallery in the same building with these other collections?—Perhaps not.

6917. Should you think it desirable, if there were no other objections, that those collections should be so combined?—I think it might be desirable to combine them in one building if a central site could be obtained.

6918. Then your objection is one depending on site?—In a great measure; the question of expense would weigh with me very much also; people can hardly be aware of the enormous expense attendant on moving objects of sculpture in the British Museum; even moving them from one part of the building to another is a most costly affair.

6919. Mr. *Vernon.*] Do I understand you to mean this: that if you go to a picture gallery, or a statue gallery, for the purpose of instruction, the real interest of each of them ought to be sufficient, without there being any facilities necessary for going from one to the other?—I think that a picture gallery would be amply sufficient to occupy any one's attention, and the only advantage of bringing them close together would be the facility for comparison, and, perhaps, for study; it might somewhat facilitate that.

6920. Do you consider that there would be any special value for students in having such a combination?—No; I do not know that I should say so.

6921. *Chairman.*] Suppose, for example, the space in Trafalgar-square, or at the British Museum, could be found adapted for the purpose, you would be rather favourable to the combination, local as well as administrative?—Yes, I might.

6922. Are you not sensible yourself of any objections to the site of Trafalgar-square in reference to the preservation of the pictures?—No objections apply to Trafalgar-square that do not apply to Kensington, and I think it is questionable whether the dampness of Kensington might not make it a more objectionable site for the National Gallery than Trafalgar-square. I stated in my evidence, in 1850, that the amount of injury the pictures had suffered from time, or from the atmosphere, was inappreciable; and that the injury arose from other causes, from the cleaning.

6923. You are not of opinion that the situation in Trafalgar-square exposes the gallery to other influences besides that of smoke, to which you have said you do not consider much importance ought to be attached?—The number of people going into the building is urged as an objection; I do not consider that an objection; I wish the people to go into the National Gallery, but I wish them to do so under proper arrangements.

6924. If they go in in such crowds as to render it offensive to the upper classes, and to ladies particularly, who ought to have their share in the advantage derived from the contemplation of the pictures,—if large masses of the lower orders crowd in, many of them perhaps only from idle curiosity, do you not think that an objection?—I do not think that is found to be the case; for instance, during the Great Exhibition, I used to see ladies frequenting the building on the cheap days just as much as on the dear days.

6925. Lord *W. Graham.*] Have you ever been in the gallery on the holidays of Whitsuntide and Easter Monday?—Yes.

6926. Are there not very great crowds there then?—There are very great crowds.

6927. Lord *Seymour.*] You have said you think that the only injury which at present arises to the pictures in the gallery arises from the cleaning. Am I right in so understanding you?—The only appreciable injury.

6928. There are some pictures there that have been for a long time under glass, are there not?—There are several.

6929. Have you observed any alteration in those pictures, or that they have been better preserved than others not under glass?—They have been better preserved; at least they are cleaner. I do not know that there has been any greater process of decay going on in the pictures that have not been under glass, but the surfaces of the pictures that have been under glass remain clear and more transparent than the others.

6930. If the incrustations that come upon the pictures that are not covered by glass obscure the pictures more than those which are covered with glass are obscured, does it not seem to follow that the impurities of the atmosphere do collect very much upon the pictures?—To a certain extent they do; there are few precautions adopted to prevent their accumulation; the most ordinary precautions are not efficiently taken; there ought to be a frequent wiping and dusting, and there should also be a careful exclusion of the smoke and dust from the outside. Instead of that the front door is left open, and then of course all the smoke, dust, and impurities of all kinds stream in without anything whatever to check them, so that the pictures might almost as well be in Trafalgar-square itself.

6931. Considering the great number of persons who flock to the gallery at all times of the day, it is one consequence, is it not, that the door must be a great part of the day kept open?—Yes, but then you may have several doors; in the Louvre, at Paris, for instance, on a Sunday the door is open; enormous crowds of people go there, and I never heard of any inconvenience arising from it, or that there was any injury done to the pictures in consequence of the immense number of people going there.

6932. That is only open one day in the week?—Yes.

6933. Here it is open four days in the week; and I believe that, on holidays especially, the gallery is very much crowded?—Yes.

6934. You have said that you think the present site the most desirable, as I understand, for the pictures?—I think it is a most excellent site. I understand that, at Burlington House, there is an available site of three acres, and that, I should think, would be highly preferable to the proposed site at Kensington.

6935. According to your own evidence you would not move the gallery from the present site?—I should not.

6936. Do you consider that the present site of the National Gallery would afford all the conveniences that are required for a national gallery for this country?—I think a site might be obtained which would answer all the requirements of art, as a national gallery for pictures.

6937. At Trafalgar-square?—Yes.

6938. Do you mean that you would obtain more ground?—I would obtain more ground at the back; there was a plan published, I think, in the Report of 1850.

6939. Would the removal of the barracks be part of your plan?—I can hardly say I have matured the plan so far as to go into the details of it; but my conviction is that there is ground which could be obtained, and that would answer all the requirements of a national gallery.

6940. Mr. *Charteris.*] Do you know the ground?—Yes.

6941. Are you aware what is at the back of the National Gallery?—There are the barracks, and also the baths and wash-houses.

6942. Are you aware whether the present National Gallery can be extended

W. Coningham, Esq.

24 June 1853.

without encroaching on one or other of those buildings?—Without encroaching on the wash-houses; but I suppose the wash-houses might be removed.

6943. Lord *Seymour*.] For the purpose of the formation of a national gallery, do you think it desirable that pictures should be arranged in any chronological order?—To a certain extent; something might be done, no doubt; but my opinion is, that too much has been made of that chronological arrangement. I have seen it carried out at Berlin, and also at the Louvre, and I do not think that the effect of grouping a number of pictures by the same master is good. In the large tribune in the Louvre at Paris, where fine pictures of various schools are brought together, the effect produced is infinitely better than the effect in the long gallery, where there are a number of pictures by the same masters together. You would not place a Fra Angelico by the side of a Correggio; you would endeavour to harmonise them, and would exercise your judgment in bringing the pictures together; but still I think a certain degree of chronological arrangement might be very fairly and advantageously adopted in the gallery. At the same time, I am opinion that to convert a national gallery into a mere archæological museum for literary antiquarians would be quite misapprehending the real object of a gallery of ancient masters.

6944. Mr. *Charteris*.] Might it not possess both qualities?—It might, and ought.

6945. *Chairman*.] Do you not consider that the taking a certain number of pictures not of the first class, and arranging them, as is done in the Academy at Florence with respect to the Florentine schools, they not being the choicest specimens which are in the Uffizzi Palace, you might have an interesting history of art carried out on a larger scale in great galleries?—My impression of the Academy at Florence is, that it is a collection of the finest works, or at least of very fine works, of the early Florentine masters.

6946. You do not mean that they are the finest works; are not the finest works all in the Pitti Palace, or the Uffizzi?—There are many pictures in the Academy equal to any of the early works in the Uffizzi, or Pitti.

6947. Do you think it desirable to have such a collection?—I think it highly desirable that we should have a collection of the early works of the Italian school.

6948. I speak of the historical series in the Academy at Florence, which commences at the earliest beginning, and comes down to the latest period; is not that an interesting collection?—Most interesting.

6949. Do you not think that the same principle might be carried out, by which a great repository of art might be established on a scale which would be worthy of this nation?—I would not concentrate the early works so much together.

6950. Lord *Seymour*.] You have stated that you are anxious that every facility should be afforded to the public to come to the gallery?—Every facility.

6951. You are anxious also that every possible convenience should be afforded to students?—Certainly.

6952. Some difficulty arises in combining those two objects; would you propose that separate apartments should be set aside for students, and that a picture should occasionally be moved there for their studying it and copying it, so that it might not interfere with the general exhibition of the gallery; or would you prefer shutting up the gallery entirely, and then leaving it to students for some days in the week?—I should prefer the plan you suggest; they would have rooms then for their use. I would also allow them to work in the gallery, and I am not aware that in the Louvre that is found to be inconvenient, though I believe there is a restriction on the admission there. The use of private rooms would certainly be advantageous, but then there should be a limit to that; for instance, if a fine picture were to be always in the hands of copyists, the public would be deprived of the enjoyment of viewing it. I do not know that in reality there is any great good done by copying pictures; in Italy, where copying is carried on to a great extent, it has not tended to develope good artists.

6953. There is a considerable trade carried on in Italy, is there not, in selling copies of pictures?—It is quite a trade, a mere manufacture.

6954. That convenience which I have alluded to as being desirable to be afforded to students would require considerable additional space, would it not?—It would require some additional space.

6955. *Chairman*.] When you speak of the faults of the former system of purchase, both with regard to the inferior quality or inferior schools of the works purchased, and also with regard to the omissions to purchase from the higher departments

departments of art, do you think a mere alteration in the system of direction would ensure an improvement in that system?—I should say it might.

6956. You do not think it necessary for there to be any recommendation or injunction, on the part of Parliament or Government, to adopt a different system?—Of course success must depend entirely upon the competency of the Commissioners appointed.

6957. Among the present boards of trustees there are a number of gentlemen of considerable taste and knowledge, as amateurs, in reference to the value of pictures; and yet we find that under that system the object has not been accomplished, although Parliament has in several instances expressed an anxiety that certain improvements in the system should take place. Do you not think it would be requisite, under your own plan, that there should be some special injunction or recommendation as to how the plan under the old system was to be modified, or whether a new system was to be introduced in the purchasing of pictures?—I think that the purchases of pictures which have been made by the trustees demonstrate that they do not possess that taste which you imagine they do, or at all events that they have abstained from exercising it on these occasions; and the Commissioners, if they were competent persons, would be far more capable of judging what the requirements of the gallery were than the Government.

6958. Under your own system, the Commissioners would be persons having a general knowledge of pictures, and might fulfil their duties; but if they had certain likings or peculiarities of taste of their own, the result might be that at the end of a year or two we should find that we had a number of specimens which gave but little satisfaction to the nation, although they might be worth the money they cost in one sense; do you think that your system would provide any security as to that, unless there were some injunction by Parliament or Government as to the plan to be pursued?—A recommendation might be given them, that they should endeavour to form a complete historical collection, comprising works of the different great schools of art.

6959. You would not have any injunction as to purchasing pictures belonging to the earlier and purer schools of art, rather than (as has been the case of late when pictures have been purchased) from the more recent and less original schools?—I should say they were of far more importance than the works of the later period; but what I consider to be works of the greatest importance and models for the student, are the works of Titian for colour, and Raphael for design, composition, and so on.

6960. Those, and other works belonging to the higher and purer schools of art?—Yes.

6961. Would you leave the whole thing to the discretion of three Commissioners?—I think it must be left in a great measure, if not entirely, to them. I think if the subject is discussed, and public attention is constantly directed to what is going on, it would be perfectly impossible, with such a system of administration, that either the Holbein should have been purchased, or that the pictures should have been cleaned in the way they have been.

6962. Are you of opinion that more mistakes, such as the mistake in the purchase of the picture said to have been a Holbein, but which was a spurious picture, have been committed under the system of the trustees during the long period their administration has lasted, than probably have been committed under any other system of management elsewhere, or would you not rather think that the number of such mistakes as have been committed has been singularly small?—I should say that they were very large, if you look at the small number of pictures they have bought since the purchase of the Angerstein collection.

6963. Mr. *Charteris.*] Does your objection to the system of purchase confine itself to the purchases that have been made, or does it extend likewise to the purchases which have not been made by the trustees?—To both. I think that when you see the bad pictures which they have purchased at very high prices, and the very fine pictures which they might have purchased, and which have been sold at very moderate prices, it would be difficult to find any other system under which such mistakes could have been made.

6964. Lord *Seymour.*] Will you have the goodness to state the names of the pictures that have been purchased, and which you describe as being great mistakes and bad pictures?—I should hold the Holbein to be a very bad purchase.

6965. Now will you tell us some others?—I hold the Velasquez that was purchased the other day for the National Gallery, to be a very objectionable purchase.

W. Coningham, Esq.

24 June 1853.

6966. Mr. *Vernon.*] Do we understand you to say you consider that a bad picture?—I consider it to be very far from a good one; and I consider it to be the most unfortunate specimen of Velasquez that could have been selected.

6967. Lord *W. Graham.*] Do you consider it to be totally useless in any great and comprehensive collection?—Totally. Within a few days of the purchase of that picture a private gentleman, an acquaintance of mine, a well-known picture collector, purchased a magnificent portrait, by the same master, in a most perfect condition; I am not aware of the price he gave for it.

6968. Lord *Seymour.*] Will you mention some other picture?—On looking over the list I should point out as an objectionable purchase the Susanna and the Elders, by Guido.

6969. Do you mean that that is an inferior picture of the artist?—Yes; I think it is an inferior picture of the artist.

6970. Therefore on that account you think it ought not to have been purchased for the national collection?—I think it ought not to have been purchased; I think also, considering the fine Rembrandts we have, that the Head of Rembrandt, which was bought from Lord Myddleton's collection, ought not to have been purchased. There is a small picture also attributed to Guido, of two heads, Christ and St. John; that picture, I think, is a disgrace to the gallery.

6971. Lord *W. Graham.*] Do you consider that that picture is not by Guido?—I am sure it is not.

6972. Do you consider that if we had no trustees, but had three directors appointed, we should be saved from these errors?—I think that with three, or with one who was really responsible, it would have been impossible that such a thing could have been done.

6973. Are you so far acquainted with foreign galleries as to be able to tell us whether they have sometimes made mistakes in purchasing pictures?—Berlin is, I think, one I can speak to.

6974. Have they made no mistakes there?—Many.

6975. That is under one director?—One.

6976. And he has made some mistakes?—The purchases I alluded to were not made by him. The only purchases I was able to trace were those made by Dr. Waagen, and I found a person who was able to point out to me the pictures he had bought, some 15 or 20; and, with one single exception (a very fine picture by Sebastian del Piombo), the pictures were worthless.

6977. Then Dr. Waagen, although he had a great reputation, and had the responsibility, bought, as it seems, a worthless picture?—Yes.

6978. Should we not be liable to the danger here if we looked out for one director, that whatever care the Government might take in the appointment he also might not have that perfect judgment that would save him from buying some very inferior pictures?—I should prefer the appointment of three for that reason; and on that ground also I should object to sending a single individual on a sort of roving commission on the Continent to make purchases.

6979. It would be dangerous, would it not, to send one particular person abroad, because he might become enamoured of one particular picture, and recommend strongly its purchase?—He might.

6980. You have said there were not only numerous mistakes in making bad purchases, but that there were mistakes in omitting to purchase, did you not?—I did.

6981. They must, in omitting to purchase, depend, first of all, upon the money at the disposal of the trustees, must they not?—I suppose so; but, as far as I can judge, when there is any serious determination or wish on their part expressed to purchase pictures, the money is forthcoming.

6982. Do you think that in past years, looking back to 1847 for instance, and 1848, money would have been forthcoming at that time easily for the purchase of pictures?—There are times, such probably as the period you mention, when money may not have been forthcoming; but, consciously or unconsciously to themselves, I think it appears that when certain influences are set to work, pictures are purchased. The recent purchases have been made from the Orleans family, and I think may be attributed to their having come from the Orleans Gallery; and my own impression is, that if they had happened to belong to a private individual, and had not come with all the prestige attached to them, they would have been passed over without any great care or attention.

6983. Is buying from a celebrated collection so far a security that, at all events, the

the picture has attached to it a particular value?—The Spanish Gallery was celebrated in Paris as a particularly bad one, but there seems to have been a different impression amongst certain persons in this country; and when it was first opened there was great dissatisfaction expressed, not only among the amateurs, but among the artists; and I believe it was pretty well known at the time, that any artists who were willing to go and copy at the Spanish Gallery, immediately had a job given them at Versailles.

6984. Mr. *Vernon.*] When you say it was a very bad collection, you do not mean to say it was not always understood that there were good pictures in it?—There were some few; no first-rate pictures.

6985. Mr. *Charteris.*] With reference to those pictures which you say the trustees have purchased, and those that they have not purchased, are you aware that at the time they made those purchases which you consider to have been objectionable, they might have purchased at the same sales other pictures which you consider unobjectionable, and which would have been desirable acquisitions to the gallery?—Certainly; at the Harman and other sales there were pictures that would have been very desirable purchases for the National Gallery, but which were not bought.

6986. Are you satisfied with the purchase of the Titian that was made last year from the Soult collection?—I think it was a scandalous purchase.

6987. What is your objection to it?—I consider it not a genuine Titian; I consider it a Pasticcio; in the manner of Titian, and an imitation of the celebrated picture at Dresden; the other picture, which they have not ventured to hang up in the National Gallery, was, if possible, more objectionable than that. The reference to the Titian from the Soult collection reminds me that there were in that collection some most important pictures, as examples of the Spanish schools, and they were, many of them, sold at very moderate prices.

6988. Were they preferable specimens to those recently purchased from the Orleans collection?—Infinitely.

6989. Would you think it desirable that the gallery should contain specimens of the Dutch school?—Certainly.

6990. Should you think it desirable that it should contain specimens of foreign or native living painters?—I cannot say I should.

6991. Where would you draw the line beyond which you would purchase no pictures for the nation?—I would exclude the works of living painters.

6992. On what principle?—On the principle that I do not think they are models for imitation; I think that the living painters are very inferior to the old painters, and as the pictures in the National Gallery should be models for study, the works of living artists are not those I should place before the public.

6993. Do you confine that to the living artists of this country, or do you extend it to the living artists of other countries?—I should extend it to other countries.

6994. Lord *W. Graham.*] Do you object to the Turners now in the National Gallery?—I object to the Claudes being displaced from their old position in order to make room for the works of Turner, which are extremely inferior; in fact, a very imperfect imitation of the works of Claude.

6995. You would object to them when he was living as not constituting good models; do you object to them now, when he is dead?—They become historical, you may say, then.

6996. And you would put them in on that ground?—It is difficult to draw a precise line. If you were to ask me whether I should recommend the purchase of the Turner pictures for the National Gallery, I should say decidedly not.

6997. Mr. *Charteris.*] Would you object to the purchase of a fine specimen of Turner in his early years?—I should object to its being purchased, decidedly.

6998. Do you think it desirable that copies of fine works in churches, or in galleries in Italy, which it is impossible to acquire, should be made for the National Gallery?—As a general rule, I should think it objectionable. I can imagine particular circumstances in which it might be desirable to obtain a copy of one of those pictures.

6999. In what particular case?—I should not wish to define the precise circumstances, but I think circumstances might arise which would render it desirable to obtain a copy of some celebrated picture.

7000. Should you think it desirable, that those who have not the opportunity or means of travelling abroad should see brought before them, in the form of an accurate copy, the works of Michael Angelo in the Sistine chapel; the Transfiguration,

W. Coningham, Esq.

24 June 1853.

figuration, by Raphael, or his famous picture at Dresden, the Madonna di San Sisto?—Assuming the accuracy of the copies, I think it would be very desirable.

7001. By accuracy, I mean as accurate as they can be obtained?—The composition may be given; but if the exhibition of paintings at the Royal Academy is to be taken as an index of what British artists can do, I assert that they cannot give you an accurate copy of Titian, or of any of the great masters.

7002. Do you extend that observation to foreign artists, and do you mean to say there is at present no person living, either in this country or abroad, who could make such a copy of any of the great works as it would be desirable to place before the public of this country?—Not when they can place original works of the great masters before them, which I conceive to be one of the great objects of the National Gallery.

7003. But besides purchasing works of the masters, which it is in our power to acquire, do you not think it desirable that specimens of the great works which cannot be acquired, should be placed before those who have not the means or time to travel abroad to see them?—I think the tendency to copy on a great scale would act injuriously on artists; and you would be placing before the public, works which are altogether of an inferior character as models.

7004. Then I am to understand that you object to copies being made of the great works which cannot be acquired, in order that they may be hung up and shown to the public in our National Gallery?—I should; copying has been carried on in that way for the French Government, and I am not aware that it has ever done any good.

7005. You have stated that your main objection to the removal of the gallery is its present central position; I imagine by that, that you think the public would see the pictures less if it were removed to Kensington?—Certainly.

7006. What do you define the "public" to be; do you mean the working classes?—I cannot define the public in any other way than by saying that at Trafalgar-square there would be a great number of spectators going in with various objects in view, and at Kensington there would be comparatively very few.

7007. Do you think the upper classes would be prevented going to see the pictures, supposing the gallery were transferred to Kensington?—I should say not.

7008. Would the removal of the gallery to Kensington prevent the middle class from seeing the pictures?—I think it would be an impediment in the way of their seeing the pictures.

7009. By the middle class I mean shopkeepers, and persons actively engaged in business; have they time, do you imagine, to be frequently going into the National Gallery, and do you believe that they go frequently into the National Gallery now to look at the pictures?—To a certain extent; but I think one of the greatest boons you could give the public, and one of the greatest benefits you could confer on the country at large, as well as on the arts, would be to throw open public museums and galleries on Sundays, that being the only day on which the working classes, and a large portion of the middle classes, have an opportunity of studying the great works of the great masters.

7010. If the National Gallery were thrown open on Sunday, would your objection to the Kensington site be obviated?—No; it would be partially removed.

7011. Why would it not be obviated?—Because, on the other days it would be a very great obstacle; it would be an obstacle to the students for one thing, and it would cut off all the east-end of London; the very dense population in Finsbury, for instance, if they had to go all the way down to Kensington, it would become a matter of impossibility for them to visit the gallery. On selfish grounds, it would be a great obstacle to me. I should scarcely ever go into the gallery if it were at Kensington, whereas I frequently go in now.

7012. It would entail your taking a cab?—Yes, it might.

7013. Do the working classes, or such of them as are actively engaged in their occupation, go into the gallery much on week days?—In the holidays they do, and I often see some of the fustian jackets looking round.

7014. You say they go on the holidays?—Yes.

7015. May we not generally assume that the working classes from that district to which you have referred, Finsbury, have not time to go to the National Gallery, even with its present site?—They can only, of course, partially attend, and rarely.

7016. You say they go on holidays?—In great numbers.

W. Coningham, Esq.

24 June 1853.

7017. If they went in great numbers on a holiday, they could go equally whether the National Gallery were in its present site or at Kensington, could they not?—It would be a very long journey for them.

7018. As a matter connected with their health, as well as their amusement and instruction, do you not think it might be even desirable that, when they have a holiday which they intend to devote to seeing these works of art, they should spend that holiday at Kensington, which is on the borders of Hyde Park, which is described as one of the lungs of London, in pure and fresh air, rather than spend it in Trafalgar-square?—I should doubt whether there would be any appreciable difference between the air in the gallery at Kensington and the air in the gallery at Trafalgar-square.

7019. But in order to reach that gallery, they would have to pass, would they not, through purer air, than if they went no farther than Trafalgar-square?—The neighbourhood of Knightsbridge barracks has always been considered especially pestilential.

7020. Is the air of Hyde Park so?—No.

7021. Are you aware that the proposed site for the gallery is on the confines of Hyde Park, with an open square behind it?—It is a pretty situation, and an airy one.

7022. Do you think, generally speaking, that the air there is more healthy, and likely to be beneficial to those visiting the gallery, than that which is to be found in Trafalgar-square?—It may be.

7023. *Chairman.*] Have you any special remarks of your own to make?—There is one point with regard to my former evidence that I should like to refer to. I made some statements with regard to having had my own pictures cleaned, and I heard there was considerable dissatisfaction expressed by Mr. Farrer, with reference to the manner in which I spoke of him in his capacity as a restorer. I have no modification to make of my evidence with regard to the question of cleaning; but I would simply state that several pannelled pictures which I have had backed passed through Mr. Farrer's hands, and were restored; that is, the cracks were stopped and covered. On my Crivelli, the Gabrielli Raffael, and I think one other picture, that operation was satisfactorily performed by him; but then I did not consider that a cleaning operation. I placed the pictures in his hands with the special proviso that they were not to be cleaned; they were merely to be stopped, and the portions that were stopped restored; and the rest of the pictures, which were in a very good state of preservation, were not to be cleaned. That was the reason why I said I had never had any pictures cleaned.

7024. Lord *W. Graham.*] Nor revarnished?—Varnished.

7025. Mr. *Charteris.*] Was the old varnish to be taken off?—No.

7026. *Chairman.*] Were you dissatisfied with the operations Mr. Farrer performed on any of those pictures?—I was satisfied with the manner in which he had treated those pictures; but I found in the case of a picture which I purchased, a Mantegna, now in Mr. Thomas Baring's collection, which had recently passed through his hands before I purchased it, that when I applied a little turpentine to it a quantity of the varnish and colour came away; and I found that the sky had been smeared all over with coloured varnish to conceal cracks underneath which were of no consequence, and which, in fact, ought not to have been touched; and one or two other cases came under my observation, which certainly shook my confidence in Mr. Farrer as a restorer, and I did not feel certain that in placing a picture in his hands he would simply confine himself to repairing the picture so far only as was absolutely necessary, without adding anything more; but I must say, with regard to these pictures which he restored for me, that he did them perfectly well, and that I had no reason to be dissatisfied with him.

Sir *Charles Eastlake*, P.R.A., called in; and further Examined.

Sir *C. Eastlake*, P.R.A.

7027. *Chairman.*] I BELIEVE you wish to communicate some information to the Committee with regard to a transaction which you think illustrates the history and principle of picture purchasing on which you were questioned previously by the Committee?—A picture has been purchased this day at Christie's; a detail of the mode in which it was recommended, and the shortness of time in which the recommendation could be made, may perhaps assist the Committee in their present investigation.

Sir *C. Eastlake*, P. R. A.

24 June 1853

7028. Will you give the Committee your account of what has taken place?—The picture was in Mr. Samuel Woodburn's gallery, and had been there for some time; it is called a Giorgione. The surviving Mr. Woodburn invited the trustees of the National Gallery to see the pictures which he intended to sell, in order that the trustees might, if they thought proper, select any which they might think fit for the National Gallery, and purchase them, or recommend their purchase, by private contract. The trustees met and went to Mr. Woodburn's gallery in consequence. I was particularly desirous that they should see this picture, called Giorgione; the price which Mr. Woodburn asked for it (for he was desired to name a price) was 2,000 guineas. I told him I believed his brother, Mr. Samuel Woodburn, would have taken less, and thereupon Mr. William Woodburn said that whatever his brother had given me to understand he would take, he was ready to take. My impression was that the sum was either 1,800 or 1,500 guineas; but the trustees did not entertain the question, because they thought, as the pictures were shortly to be sold, there would be a chance of their getting that picture, if it were thought desirable to obtain it all, at a less price; and therefore nothing further was done. When the pictures were to be sold they were sent to Christie's, and were seen there. I, of course, recognised this picture, and looked over the collection to see if there was anything else to which I thought it would be advisable to call the attention of the trustees. I wrote to the Chancellor of the Exchequer, saying that I thought there was a picture which it was very desirable that the nation should possess, naming this so-called Giorgione. I had only seen one other trustee, Mr. Russell; he agreed with me in recommending it, and allowed me to quote him accordingly. Mr. Gladstone's reply was to the effect that he thought a meeting of the trustees should take place, as there was, in this case, just time, before he could sanction the purchase. I had his answer yesterday morning. I was very much occupied, and had not time to go down to the National Gallery to see the secretary, and was also not sure of finding him; I therefore wrote a few circulars to the trustees, and sent my own servant with them. I went in the afternoon to the National Gallery, and apprised the secretary of the meeting that was to take place that same afternoon, yesterday afternoon. The meeting took place accordingly, and the result was a recommendation that the picture should be purchased for a certain sum; the Chancellor of the Exchequer sanctioned the application this morning, and the picture has been purchased very much below the sum which was recommended to be given. It was purchased for 500 guineas. I have entered into these details, as they show the difficulty of acting on the pressure of the moment; and if I have entered into particulars respecting the active part I have myself taken, it is by no means in order to show I have been more active on this occasion than the trustees generally are, but it so happened to fall more particularly to my lot to take this trouble. It shows how much pressed the trustees may be at a certain moment, and how difficult it is to secure a picture from want of time, and from not having a sum of money at their disposal.

7029. In reference to this picture you had no difficulty in regard to ascertaining the merit and genuine character of it. You knew of the picture a considerable time before, and had seen it in Mr. Woodburn's collection?—I had seen it there, but I did not know all the particulars about it. I learnt them before I made the recommendation to the Chancellor of the Exchequer, and those particulars were very much against the picture in regard to its state. The excellence of the picture is admitted, I believe, universally; the qualities of merit and rarity are admitted, although the master is not certainly known; but the state of the picture is bad; yet knowing those facts, I recommended it earnestly to the Chancellor of the Exchequer.

7030. Mr. *Charteris.*] You say the master is not known?—The master is not universally recognised. My own impression is that it is by Giorgione, the name which is given to it.

7031. Does any one dispute it?—I am not aware of the opinions entertained on the subject in England; I have not inquired. Some may perhaps attribute it to Bellini; but if by Bellini, the alternative is quite satisfactory. That is also an important point to be brought before the Committee; because I think there may be occasions when, although the name of the master is entirely doubtful, yet the excellence and other recommendations of the picture may be such, that there ought to be no hesitation in recommending its purchase.

7032. *Chairman.*] This picture was purchased, then, on the ground of its great merit,

merit, and on the ground of its being evidently a genuine specimen of a fine school, but without any historical or other evidence of its genuine character or "provenienza"?—The history of the picture is even against it. I wish to draw the attention of the Committee to the facts that were apparently strong against the purchase of the picture, and to show that, notwithstanding those facts, I warmly recommended its purchase. It belonged originally to Mr. Standish, and was thrown aside from his collection as a picture of inferior merit. It remained in a lumber room at Florence, and, for some time, though called a Bellini, was estimated at a low price,—some hundred scudi. It was seen in Florence by some persons, now in London, in a very fine state; a Roman dealer, named Baldeschi, bought it some 10 or 15 years ago for a small sum, or what would be called a small sum, but the exact sum is not known. Then an artist, named Cochetti, in Rome, in attempting to clean it much injured it. That being done, it was brought to London by Baldeschi, and Mr. Samuel Woodburn bought it, partly by means of an exchange of other pictures. Whether anything further was done, either to injure it more, or to repair the previous injury, while in his hands, I do not know. I am anxious that the Committee should know that all these facts were before me, and I took care to inform the trustees of them, that they might have their eyes open before recommending the purchase of this picture.

Sir *C. Eastlake*, P. R. A.

24 June 1853.

7033. Was the picture then purchased on your own judgment, and that of the one or two trustees you alluded to, or did you call in other advice with regard to the picture?—There was rather a large meeting of the trustees, and they decided on the purchase, after these facts had been placed openly before them. The person from whom I obtained this information, a foreigner, was the only connoisseur who expressed any opinion upon it, and he was decidedly of opinion it was a Giorgione.

7034. Mr. *Charteris.*] Have you any objection to mention the name of that connoisseur?—His name is Cavalcasella.

7035. Do you consider him a good judge of pictures?—I think him a very good judge. I met him at Berlin, and found his knowledge of the history of pictures very great; I believe he has been in Spain, and has travelled much; he knows a good deal of what you call the provenienza of pictures.

7036. Do you consider him a good judge of the state and condition of pictures?—Certainly, and especially in this case; for he made a sketch of the picture when it was untouched, and has that sketch still; I have not yet seen it.

7037. Generally speaking, from your knowledge of him, do you consider him a good judge of the state of a picture?—I think he is a good judge; but I should distinctly say that I mentioned his name in answer to your question, whether I had heard any opinions at all; if I had heard none I should have recommended the purchase of this picture, and taken the responsibility on myself; and I wish it to be understood that I do take the responsibility on myself. No trustee moved before I did; and it is one of those cases in which, if I had had the sole management, I would not have hesitated to give 1,000 guineas for that picture.

7038. *Chairman.*] Was not the letter of the Treasury, written after the purchase of the Holbein, to the effect that hereafter the trustees should not buy without the opinion being taken of two persons, valuators or appraisers, or qualified persons not members of their own body?—Quite so; and it is important that you should take that point also into consideration, because there are cases in which it is impossible, or would be extremely injudicious, to obtain such opinions immediately before a sale; because it is scarcely possible to get such opinions without making it known that the trustees contemplate a purchase.

7039. Then you consider that letter not to have been intended as a positive regulation, but only as a recommendation in cases where it could be complied with?—It shows it is practically impossible; but the letter of the recommendation has always been fulfilled, and will be fulfilled now: the opinions of two judges will be taken on that picture; that has been done before; for example, when the Van Eyck was purchased, and the Head by Rembrandt; the guarantee was received afterwards.

7040. Suppose those opinions were adverse, what would happen then?—In the former case to which I allude the opinions were promised beforehand, in fact, in the sale-room; the instruction was so far literally complied with, but the opinions were not actually written till afterwards. With regard to the possibility of an adverse judgment, that risk must be run, and it is incurred in this instance. As I said

Sir *C. Eastlake*, P. R. A.

24 June 1853.

I said before, I am willing to take the responsibility; in some cases it is impossible that a purchase should be made otherwise.

7041. There may be reason to believe you will prove to be right; but as regards the principle of purchasing, supposing that the two gentlemen, who were originally intended to be consulted before the purchase, are not consulted till afterwards, and supposing them to give an adverse opinion that the picture is not worth 500 guineas, what advantage arises from that process being gone through?—I imagine there never would be any difficulty in getting opinions, unless it were a decided mistake, to fulfil the letter of that condition; but I state the case as it exists; the risk must be run.

7042. But you would not look out for opinions merely to confirm the purchase; you would take two men of high qualifications, and allow them to judge impartially as to the merit or demerit of the picture?—It is always to be supposed that they would judge impartially.

7043. What is the advantage of laying down a regulation that opinions shall be taken before purchases are made, if those opinions are not taken till after purchases are completed?—It is a difficulty which exists, and which may tend to show you the anomalies of the present system.

7044. Do you not understand that that letter from the Treasury was a peremptory injunction from the trustees to follow a certain course?—It is followed in the way I say; there is no injunction to take these opinions at any particular moment; it is, in short, to satisfy the Treasury that the picture is worthy of being so purchased.

7045. Do you think it quite indifferent whether the opinion of these gentlemen is taken before or after the purchase?—It is impossible, in all cases, to get them before.

7046. If the Treasury injunction was that a certain thing was to be done, the natural course would be, in cases in which it was impossible to do it, not to purchase that particular picture, because you have not the guarantee which the Treasury require for the purchase?—I merely state the case as it exists; I have no hesitation in saying that I should take precisely the same course again, and in this case the Treasury sanctioned the purchase without exacting any such condition; therefore that, perhaps, is an answer.

7047. Lord *Seymour*.] Was the former Minute of the Treasury peremptory that the opinion of two persons was to be taken before the purchase?—I admit that the Minute would be useless unless that were understood, but I do not remember whether the mere wording may be considered to imply that condition.

7048. *Chairman*.] As you say you knew this picture long ago in Mr. Woodburn's possession, and as it has been under your eyes a long time, had you not plenty of time to enable you to get two opinions of competent valuators, according to the terms of the Treasury letter?—Yes; I confess it did not occur to me to get those opinions; I considered that my own judgment was sufficient, and I was not desirous to have the picture talked of.

7049. Lord *W. Graham*.] But you could not have got those opinions without suspicion arising that they were wanted with a view to a purchase for the National Gallery?—Quite so: at any time it would not have been possible to get those opinions without the danger of letting out the fact that the trustees contemplated the purchase.

7050. Mr. *Vernon*.] The inference you draw is, that the regulation, to which reference has been made, was, in fact, one that could not always be acted on?—Yes.

7051. Practically, therefore, the plan of purchase has not been the best?—Such is the obvious inference; my only object is to put these facts before the Committee, in order that they may draw their own conclusions; if the result be the censure of the trustees, or of myself, I still wish the Committee to know how the regulation in question works, and what are the objections to the present system.

7052. Mr. *Charteris*.] Is it your opinion, confirmed by what has taken place to-day, that the present system is one which is not likely to lead to the acquisition of a fine National Gallery?—I have no doubt of it; I was anxious to put you in possession of these facts, as they confirm what I have said on that subject before.

Lunæ, 27° *die Junii*, 1853.

MEMBERS PRESENT.

Lord Seymour.	Mr. Vernon.
Mr. Baring Wall.	Mr. Raikes Currie.
Lord William Graham.	Sir William Molesworth.
Colonel Mure.	Mr. Stirling.
Mr. Ewart.	Mr. Monckton Milnes.

COLONEL MURE, IN THE CHAIR.

Frederick Hurlstone, Esq., called in; and further Examined.

F. Hurlstone, Esq.

27 June 1853.

7053. *Chairman.*] YOU stated that in 1850 you offered yourself as a witness to Lord Seymour's Committee on the subject of the site of the National Gallery?—I did so.

7054. But, from circumstances which it is unnecessary to specify, your evidence at that time could not be received?—Yes.

7055. I think you stated in a letter at that time that you had objections to the removal of the site?—I did.

7056. Which letter was printed at the close of the Report?—Yes.

7057. Were there any other persons who were desirous of being heard upon that subject, who held the same views as yourself?—I remember that Mr. Foggo was desirous of giving evidence at the same time.

7058. What are the objections you have to the removal of the site?—I think the present site is the most desirable that could have been chosen for a National Gallery; on the Continent, all foreign nations have chosen the most central position, and I think, comparing the National Gallery with the galleries on the Continent, there is hardly any site which presents so many advantages, and to which so few objections can be made as the present site; it is situated on an elevation, it is perfectly dry, and above all it is easy of access from all parts of London, from the east, west, north and south.

7059. Are you not sensible of any disadvantages resulting to the pictures from the effects of smoke, owing to the gallery being situated in a central part of the town?—I have heard that there have been objections made to the site of the gallery on the ground that the London smoke is prejudicial to the pictures. I do not believe that the London smoke injures the pictures, and I think I should be supported in that opinion by most of the noblemen and gentlemen who have fine collections of pictures in London; in the generality of instances, their choicest pictures have been retained in London. I would instance the collection of the Marquis of Westminster, the Bridgewater, and the Stafford collections; and there are also the Rubens pictures, above 200 years at Whitehall; and the fine collection of the late Sir Robert Peel, which are in the immediate neighbourhood. These last are subject to all those influences that the National Gallery is subject to, but in a greater degree than the gallery, owing to their being on lower ground, and liable to the smoke from the steamers on the river. The Committee are aware that, the other day, Mr. Russell produced a letter from Lady Peel, which stated that the pictures were in "a most perfect and pure condition," and that I believe to be the case. Besides the collections I have mentioned, there is the collection at Northumberland House, where there is a fine picture by Titian, of the Canaro Family, which has been there, I believe, for more than a century, and which is in very fine condition.

7060. Mr. *B. Wall.*] That picture is not in the best possible condition, is it?—It has only been injured by touching sixty years since.

7061. *Chairman.*] Have you had opportunities of examining all these collections of pictures to which you allude?—I have seen all of them.

7062. Are you not aware of any peculiar increase of dirt upon the pictures in the National Gallery, which is not observable on other pictures in the centre of London?—No, I observe no effect upon the National Gallery pictures from the smoke. With reference to what I have said as to the collections that are in London,

F. Hurlstone, Esq.

27 June 1853.

and as to the tacit opinion of the owners of those galleries, from their keeping their finest works in London, I would add the opinion of the Royal Academy.

7063. When you say you would add the opinion of the Royal Academy, do you mean that the Royal Academy has given any opinion that the pictures in the National Gallery are not exposed to damage from smoke?—I mean from their own acts. I allude to the wish of the Royal Academy to retain their pictures in that very position and building. I am perfectly aware that it may be said, in regard to those pictures that are in the annual exhibition, they are only retained for a short period; but I would venture to say that the injurious influences that have been referred to, if they do exist, act with much more rapidity on freshly painted pictures than they do on pictures which have been long painted, and which have been repeatedly varnished, as the pictures in the National Gallery have been.

7064. You are of opinion that the modern collection receives no injury during the few months it is exhibited?—If pictures are liable toinjury from London smoke and the position of the gallery, newly painted pictures would be peculiarly liable to it, they being for the most part unvarnished.

7065. What are the other pictures of the Royal Academy to which you allude?—There are three classes; the freshly painted pictures, the pictures the Royal Academy borrow from noblemen, and which they retain for the purpose of study by the students, and some pictures that are brought from Dulwich, of which gallery they are trustees; those are retained during the remainder of the year for the study of the students, which I can hardly imagine would be done were the situation considered injurious to the pictures, as has been surmised, for it would be a breach of trust, and not altogether honourable conduct towards those noblemen and gentlemen of whom the works are borrowed. But there is another collection of pictures which the Royal Academy possesses, the diploma pictures, as they are called, a valuable collection of the works of Sir Joshua Reynolds, Gainsborough, Wilson, and others; those pictures are of considerable value, and the Royal Academy are anxious to retain them there permanently.

7066. Are you sure that the Royal Academy have expressed an opinion that they wish to retain those pictures permanently in that situation?—There is tacit proof of it, from the fact that they desire not to remove them.

7067. Do you know whether they have ever made any proposal that they should continue in that position, and that there should be an extension of their establishment, supposing the National Gallery pictures to be removed elsewhere?—There was a memorial presented by them to the Queen, to which I alluded in the evidence I gave the other day.

7068. That would imply that they wished to keep the diploma collection, and the other pictures they have, on the present site?—Unquestionably.

7069. And consequently that they cannot be under an impression that they are exposed to danger from smoke?—Certainly, there cannot be stronger proof of their conviction; and I would observe, generally, that those pictures that have been either on that site, or in the immediate neighbourhood, for a longer period than the other pictures in the National Gallery, I allude to the pictures which were in the Angerstein Collection, which have been there, or in the immediate neighbourhood, for above 60 years, putting out of question the injuries which have been committed by cleaning, upon some of them, are in the finest state of preservation.

7070. You have stated that you do not think pictures are liable to injury from smoke in that situation; do you think that they are liable to more dirt or disfigurement there from any other causes than they would be liable to, supposing them to be removed to a more airy and open situation?—If there be any ground for the objection made on the score of the injurious effects of the London atmosphere, it would be necessary to remove them eight miles from London, inasmuch as moving them a shorter distance would not remedy the evil. I may add, that the question of the London smoke being injurious to pictures is one of serious import; for if such a rumour, though unfounded, takes hold of the public, it is a virtual expulsion of all fine works of art from London.

7071. You say that you do not think that smoke does any mischief; I ask you whether you are not aware of any other sources of discoloration or injury to which the pictures are exposed from the present situation, independently of smoke?—I am not aware that there are any that arise from the situation; if there are other influences to which they would be subject, such as the breaths of persons visiting the gallery, the pictures would be liable to that, of course, in whatever situation

situation they were placed; that is perfectly apart from the effect of the London atmosphere upon the pictures.

7072. You are aware that the Committee of 1850 embodied in their Report the substance of a Report made by the Royal Commission of the same year, stating that the persons frequenting the National Gallery did not consist entirely of persons going to see the pictures, but that crowds of idle people were in the habit of running in, from one cause or another, particularly at the guard mounting, or to avoid a shower of rain, and that a great accumulation of breaths and effluvia was injurious to the pictures; and it has been also said that that prevents persons who wish to go for the purpose of seeing the pictures from availing themselves of the use of the gallery?—That is an objection which I think may be remedied with great ease, by the adoption of proper regulations in the gallery.

7073. What regulation or what plan would you propose for obviating that objection?—I do not myself think there would be any objection to the plan which I believe has been suggested, of people obtaining tickets for entering the gallery.

7074. That was a plan alluded to in answer to a question which suggested that in another part of the building, or in some neighbouring street, there should be an office where any person who wished to see the gallery, and was of decent appearance, should, without being asked any questions, be allowed a ticket to enter the building; are you of opinion that those persons who really desired to see the pictures would avail themselves of that privilege, and that idle persons would not take the trouble to go even a short distance merely for the purpose of getting access to the gallery?—I think so; but for the purpose of excluding people not decently dressed, I should think that a policeman stationed at the door would be sufficient.

7075. Lord *Seymour*.] Your opinion, that the present gallery and the present site of it is the best for the national pictures, is founded, I suppose, on the assumption that there is plenty of room there at present?—I believe that if the whole of the gallery had been applied to the purposes for which it was built by the nation, there would certainly have been up to this time, and for many years to come, abundance of room.

7076. As you have for some years considered this subject, you are probably aware how many lineal feet there would be for the purpose of exhibiting pictures, supposing the Royal Academy were removed?—I do not remember at present how many lineal feet there would be, but it would be more than double the present space.

7077. It was stated before the Committee of 1850, that if the Royal Academy were removed, and if the whole of the central hall were floored over, there would then be 1,620 lineal feet for the exhibition of pictures; are you aware at all what space there is for the exhibition of pictures in the gallery at Berlin, for example?—I am not.

7078. Are you aware what space of wall applicable to the exhibition of pictures there is in any gallery abroad?—I am not; but the gallery of the Louvre is 1,400 feet long, and very narrow.

7079. In order that we should form a correct opinion as to the space which should be available in our own gallery, is it not necessary that we should consider what is the space that is available in foreign galleries?—It certainly would be advantageous; but the subject upon which I spoke was the desirableness of the situation, and its not being liable to do injury to the pictures.

7080. You told me just now that the removal of the Royal Academy would give ample space; I now state to you what space there would be if the Royal Academy were removed, and the central hall floored over; and I asked you whether you have considered that, even supposing that were done, there would be sufficient space for the exhibition of such a collection of pictures as this country ought to possess?—There might not be sufficient space ultimately if the rooms are retained of the same size that they are at present, but would be for years to come.

7081. Do I understand that you would alter the size of the rooms?—I would make alterations. But should it not ultimately be sufficient for the demands of the National pictures, I understand that there are facilities for enlarging it behind.

7082. You having attended to this subject since the year 1850, and having been anxious then to give evidence upon the question, have probably more matured opinions than you had then; and I wish to ask you whether you have considered what available space there is there for the purpose of making addi-

F. Hurlstone, Esq.

27 June 1853.

tions to the gallery?—There is the workhouse. I beg to refer to the plan which was offered by Mr. Barry. This is a subject on which architects would give a better opinion than any I could form; but from what I have seen in the evidence of Mr. Barry and Mr. Pennithorne, I am perfectly convinced that sufficient space can be obtained for all the future wants of the National Gallery.

7083. That would involve the necessity of buying fresh ground?—Ultimately; but at present I do not think it would be necessary to purchase fresh ground. Mr. Barry gives a plan, by which he shows there would be 14 times the present space furnished by the National Gallery.

7084. *Chairman.*] Mr. Barry, in his evidence, in the year 1848, in answer to question No. 204, stated that by his plan there would be 14 times the amount of the present accommodation procured for the National Gallery?—He stated that.

7085. Lord *Seymour.*] Do you know how Mr. Barry proposed to get that space?—Mr. Barry proposed to get additional ground behind.

7086. Then he was not to get that additional space upon the present site of the gallery, but was to add to the site by the purchase of additional land?—Yes; but a very considerably larger gallery might be obtained upon the present site. I believe Mr. Barry proposed to enclose the ground in front of the National Gallery.

7087. By advancing the gallery even with the portico?—Yes.

7088. There is no doubt, is there, that a considerable addition might be obtained in that way?—A considerable addition.

7089. You contemplate, in the first instance, as I understand you, adding to the gallery by enclosing that space?—I do, and removing the Royal Academy.

7090. And by removing the Royal Academy, and eventually making preparations for the purchase of land behind the gallery?—I do.

7091. As land usually rises in price when it is known that the public must have it, it would be expedient, would it not, at once to secure the ground behind, in order that it may be obtained before the absolute necessity for acquiring it arises?—That is very possible; but I understand the parish are very anxious to quit the St. Martin's Workhouse.

7092. Therefore the prudent course would be at once to acquire that ground, which, according to you, would eventually be necessary?—Undoubtedly it would be prudent to acquire it as early as possible.

7093. Are you aware what the average number of visitors is stated to have been in 1850?—I have a statement of it at home, but I am sorry to say I am not provided with it here.

7094. The average number was stated to be about 3,000 daily, whereas it appeared that in the Gallery at Berlin, which contains more space than our gallery, the daily number of visitors amounted only to 200?—That is very possible.

7095. To persons who come with an anxiety to study the pictures, and to make themselves acquainted with the progress of art, must not such an immense crowd passing through the gallery be very inconvenient?—I am not aware that any inconvenience has been felt in the National Gallery from the immense crowds visiting it. The representation that was made by Mr. Uwins was rather with reference to the class of persons that came there. He stated that children were constantly seen playing in the rooms, and that parents brought their children, and taught them to walk from one to the other, which is hardly consistent with the idea of there being an immense crowd there.

7096. If 3,000 persons come there daily, do you or do you not think, that to a person who is anxious to study the style and character of a painter, and to stand before a picture for some time, such a crowd coming by must be inconvenient?—I can only reply to that question by saying that I have been constantly in the habit of going down to the National Gallery myself, and that I have not found any inconvenience in studying the pictures from the presence of any crowd.

7097. Then you do not think that even with the present limited space, such a number of persons as 3,000 passing through the gallery would interfere with any one who wished to study the pictures?—I speak from my own personal experience, from going repeatedly to the gallery to look at the pictures. When you say "study," I presume you mean not to paint from the pictures, but to go there for observation. I constantly go the gallery with advantage, and without being prevented from studying the pictures, or being interfered with by the crowd.

7098. *Chairman.*]

7098. *Chairman.*] You have stated, that by adopting certain precautions, you think the persons visiting the gallery might be reduced in number?—No doubt, but I do not wish to reduce the number.

7099. Is there any other mode by which you would reduce the number of visitors besides that of taking tickets; do you think that the number of public days might be limited, and that certain days might be set apart for the more enlightened classes and better judges of pictures to visit the gallery, still leaving sufficient scope for the general public to see them?—I should be sorry to limit the number of days on which the gallery should be open to the public. It is already closed two days in the week.

7100. Would the precaution of making each person take a ticket, which would afford some security that he would not idle his time in the gallery, be the only precaution you would think of taking?—I think so; I think it would not be desirable to restrict, beyond what is absolutely necessary, the accommodation of the public; for I imagine that the object of a National Gallery is to improve the public taste, and to afford a more refined description of enjoyment to the mass of the people.

7101. Lord *Seymour.*] Would you give every facility to persons desirous of copying pictures in the National Gallery?—I would consider what was for the public advantage first, and, consistently with that, I would afford parties every facility for copying the pictures.

7102. Do you think that even two days in the week are too much to be given to artists for the purpose of copying pictures?—I do not think them too much.

7103. Do you think it would be desirable to have rooms in connexion with the gallery where artists and students might copy the pictures, while the public might still visit the gallery?—The difficulty in the way of such an arrangement would be, that a picture might be so constantly absent from the walls of the gallery that the public might be deprived of the benefit of it; it is done at Florence to a certain extent; I have seen it done there repeatedly, but I rather object to it; I think it is better to allow the copying upon the present plan, and not to allow the pictures to be removed from the walls of the gallery.

7104. Mr. *Ewart.*] Do you know how many persons frequent the gallery for the purpose of copying pictures now?—I am not certain; I have not got the number.

7105. Are there about 70?—I fancy that is about the number.

7106. If it is anything approaching to that number, would not such an arrangement as has been suggested deprive the public of a great number of pictures at a time, in order that artists might have an opportunity of copying them?—It would.

7107. You spoke of the site of our National Gallery resembling that of galleries on the Continent, from the fact of its being in the centre of the town; are not continental towns very different from London, on account of the enormous size of London, and consequently the much greater crowds that frequent our National Gallery?—London is unquestionably of much larger size than any of the continental cities, but the crowds which attend the Louvre in Paris are infinitely greater than any that attend our National Gallery.

7108. Are you quite sure that 3,000 people go to the Louvre in a day?—I am sure I have seen many more than that in the Louvre at one time.

7109. Lord *W. Graham.*] That is on Sundays only, is it not?—On Sundays and on fête days occasionally the Louvre is infinitely more crowded than our gallery; I have been to the National Gallery on the most crowded days, and I never saw it crowded to the extent the Louvre is occasionally.

7110. Mr. *Ewart.*] Are you aware that the director of the Berlin Gallery, Mr. Waagen, has stated that he has found a great deterioration in the paintings of our National Gallery since his last visit to this country, which was 15 years ago?—I am aware that he says so; but I am not of opinion that they are deteriorated, except from the cleanings and bad varnish.

7111. Is not there some danger of injury occurring to the pictures from the dust created by the vast crowds who visit the gallery, combined with ammoniacal exhalations, as was stated in the evidence which was given before the Committee in 1850?—To a certain extent there is that inconvenience, which is an inconvenience to which every gallery is subject that is frequented by the public, in whatever situation it may be.

7112. Do you think that the greater the crowd, the greater the quantity of dust, and the greater the amount of exhalation?—No doubt.

F. Hurlstone, Esq.

27 June 1853.

7113. Is there sufficient ventilation in the present National Gallery, considering the crowds that frequent it sometimes?—I am not aware that the crowd is too great in the National Gallery; I have never seen it so myself; but ventilation always good.

7114. Can you compare such a gallery with private collections, like Sir Robert Peel's, the Duke of Northumberland's or the Royal Academy, to which much smaller numbers of persons are admitted?—Certainly not, except the Royal Academy; but when I spoke of the pictures in those collections, I was speaking strictly with reference to the atmosphere of London, and not with reference to those inconveniences to which every gallery is subject where large numbers of people are admitted.

7115. Lord *W. Graham.*] Have not the pictures in those collections been periodically cleaned?—Of that I am not aware; I dare say they have been kept in order by the ordinary dusting.

7116. You think that is all they have been subject to?—Yes; I have no information with regard to anything further.

7117. *Chairman.*] If the state of the atmosphere is such as to involve frequent cleaning, is not that an objection?—If it involve frequent cleaning it is certainly objectionable; but it depends upon the extent of the cleaning required; I do not imagine that it would involve the necessity of cleaning of pictures in the ordinary sense of picture-cleaning, because it would not involve taking the varnish off.

7118. Mr. *B. Wall.*] Which should you say was most detrimental to a picture, the influence of smoke or the influence of dirt?—It would be the same; the dirt in London principally arises from the smoke. Sir C. Eastlake has said he does not apprehend any mischief to a picture from dirt.

7119. I apprehend there are two elements of mischief going on in the London galleries, one from the immense influx of visitors, and the other from the state of the atmosphere; I wish to know which you think most detrimental to a picture; the number of people who frequent the gallery, and the effluvia arising from them, or the smoke of London?—I think the number of people frequenting the gallery, and the effluvia arising from them, would unquestionably be the most likely to be injurious.

7120. You have mentioned the Dulwich Gallery; have you had any means of comparing the state of the pictures at Dulwich with the state of the pictures in the National Gallery?—I have not particularly directed my attention to them, but I know generally the state of the pictures in the Dulwich Gallery; they certainly are not in better condition than the pictures in the National Gallery.

7121. Do you not think, that if glass were adopted more generally the danger would be less from smoke, dirt and dust?—There is no doubt that it is a protection against dirt and the exhalations arising from the presence of a great number of people.

7122. Do you not think that one of the great objects of National Galleries, and of schools of art of every description, is to make them as public as possible, and to throw them as open as possible to the masses of the people?—Unquestionably; if they are not so, the object for which they were intended is defeated.

7123. Do you think that if the gallery were removed to any suburb of London it would be possible there should be 3,000 visitors daily in that gallery?—I think it would be impossible.

7124. Do you not think it of immense importance that there should be 3,000 people, or even 6,000 were it possible, visiting the gallery every day?—Undoubtedly; as the object of having a gallery at all is to exhibit it to the people.

7125. Would you not say that the more visitors there were the more likely it would be that art would be more fully developed, and that it would take hold more of the imagination and enter into the education of the people?—Certainly.

7126. You do not think it would be desirable that, because a man had a smock-frock on, and had not a very decent appearance or a very proper dress, he should therefore not be admitted to see that which he wished to see, and which was purchased with the public money, and placed there for public gratification?—I think, to a certain extent, public decorum should be observed. I have in Paris seen the lower classes admitted dressed in blouses.

7127. Are

7127. Are not the police and the attendants upon the gallery, who are paid officers, put there expressly to preserve order and for the security of the property in the gallery?—Undoubtedly.

7128. And if they were found not to be sufficient, would it not be very easy to have an increased staff?—Undoubtedly.

7129. Would not that answer every purpose of preventing people from eating unseasonable luncheons or being dressed in improper dresses?—No doubt it would.

7130. Mr. *Ewart.*] Whatever be the dress, or whatever be the quantity of the people who go there, do you think it desirable to have so many visitors that they would prevent each other from seeing the pictures?—No, and I think there is no likelihood of its happening.

7131. You suggested a system of tickets, by way of somewhat limiting the numbers; is not a ticket itself an impediment, and is not a small impediment frequently a great obstacle?—It is, undoubtedly; but I think it a less impediment than the plan originally adopted at the British Museum, which is now discontinued, of obliging all persons visiting the Museum to write down their names.

7132. You also suggested the plan of having policemen; would it be advisable, do you think, to give a discretionary power to policemen as to admitting proper persons, and might they not possibly exclude an artist, who might not be so well dressed, though perhaps as eminent as another?—I do not think that is likely to occur.

7133. Might it not be preferable to limit the numbers by taking the gallery a little further off, rather than by adopting restrictive measures at the door, such as requiring tickets, or giving policemen a discretionary power with regard to admission?—I think to remove the gallery from its present site, to a site further off, would defeat the object for which the National Gallery was founded, and I think it would be altogether a serious evil, both to the public and to the institution itself; for I feel perfectly convinced that if it had been removed from under the eyes of the public, where it is now, notwithstanding there may have been extensive damage done to the pictures, and very considerable mismanagement, we should never have had the advantage of an inquiry such as that which is under the consideration of the Committee at the present moment.

7134. Mr. *B. Wall.*] You mentioned in your examination some pictures that you distinguished by the name of "diploma pictures," and which you say belong to the Academy; do you know whether those pictures are ever exhibited to the public?—I am not aware that they have been exhibited to the public since the removal of the gallery to Trafalgar-square; they were exhibited to the public in Somerset House.

7135. Do you know on what grounds they have been since withdrawn from the public view?—Not at all; I am not aware of any motives that the Royal Academy may have had on the subject.

7136. Lord *W. Graham.*] You state that in your opinion the present site of the gallery is the most convenient that could be selected; for what class of persons do you consider it most convenient, the wealthy, the middle, or the lower classes?—For all classes.

7137. With regard to the more wealthy classes, they could easily go a short distance, I suppose?—They could, but with less convenience.

7138. With regard to the working classes, they could only visit the gallery in great numbers on holidays or on Sundays?—Of course.

7139. Then, in fact, it would be their day's amusement?—Certainly; and I think one object of the institution of the National Gallery is to endeavour to afford a more refined description of amusement than the mere sensual amusements of the people in general, to which, were they denied this, of course they would be compelled to resort.

7140. Do you not think it would be more conducive to the people's health, and to their amusement also, if the approach to the National Gallery happened to be through the parks, and if when they arrived there, they were able to diversify their amusement by perambulating in extensive and ornamental gardens?—I do not, indeed; I think the distance would counterbalance the advantages.

7141. They would naturally take a walk on a holiday, would they not?—But the holidays are only a small portion of the time the National Gallery is open.

7142. I am alluding now to the working classes; they would only visit the National Gallery in any considerable numbers on holidays?—Then there are

F. Huristone, Esq. 27 June 1853.

ample opportunities for others; but of course if the gallery were at a distance, they could not get there so easily.

7143. Mr. *Ewart.*] Do not the working classes go in vast numbers to Hampton Court?—I believe the numbers who go to Hampton Court are not a quarter so large as those who go to the National Gallery, though it is open on Sundays.

7144. Mr. *M. Milnes.*] Have you ever been at Hampton Court on a Sunday?—Not recently.

7145. Are you not aware that the crowds that go there are very great?—I believe they are.

7146. *Chairman.*] Are many of them of the lower classes?—The working classes.

7147. Mr. *M. Milnes.*] Is not the communication between Hampton Court and London a very different thing from what the communication would be between the centre of London and one of the suburbs, such as Kensington, for example?—Undoubtedly there is a difference in the distance.

7148. Is not the difference so great as to make one rather like an expedition, while the other might be taken in the natural course of a few hours' relaxation?—I believe that these expeditions to Hampton Court are things that only occur at certain intervals, and at certain times of the year. I believe that a great number of the lower classes would be deprived of the benefit of the National Gallery if it were to be removed from its present site to the suburbs even.

7149. Do you imagine that any large portion of the working classes go into the National Gallery for amusement or relaxation on any other day except on those days which they can devote to those purposes?—They cannot visit the gallery on other days than those on which they have the opportunity of doing so.

7150. You do not quite understand the question; do you think, that of the lower classes who at present visit the National Gallery, there is any considerable portion who go there except on such occasions as would allow them to go a little out of their way for the purpose of visiting it?—Undoubtedly a considerable number frequently visit the gallery on other days besides holidays; on holidays they take excursions to the country.

7151. Must you not subtract from the number who visit the gallery all mere loungers who, happening to be in the vicinity of the gallery, go in to fill up time; there are large numbers, are there not, who go in to escape bad weather, and there are others who go for other purposes, such as to meet particular people, and so on; excluding all such persons, do you think there is any considerable portion of the working classes who go to the gallery for the purpose of visiting and looking at works of art at any other than such times as would give them an opportunity of taking a little excursion out of London?—I believe that all those persons of the lower classes who have any taste for art go at other times; I believe also that a large number of the persons who go down to Hampton Court go there for the purpose of strolling about the gardens, and do not see the gallery at all, although included in the returns.

7152. Do you think, supposing the National Gallery were removed to some situation a short distance from town, the difference between the penny omnibus and a walk would really interfere with a man who was desirous to see a great exhibition of art, whatever his class of life might be?—I think it would interfere with it very much; it would generally require two omnibuses where the present site, from its central situation, requires one.

7153. Do you not think that by placing the National Gallery some little distance out of London people would be inclined to attach a little more importance to a visit to it than they do now, and would direct their attention more especially to the objects of it than when they go into it as an ordinary lounge?—I do not think that anything would be gained in that respect; its removal would be a great inconvenience to myself, and I believe artists generally would find it so; we often go down to the National Gallery for the purpose of reference, and we find it exceedingly convenient where it is; if it were removed to the outskirts of London I should not be able, in a great number of cases, to visit it when I wished.

7154. With regard to artists themselves, do you think that the difference of a quarter of an hour's drive in an omnibus would be of any considerable importance —I think it would.

7155. Do you know the state of the gallery at Hampton Court?—I have not seen it recently.

7156. Are

7156. Are you aware of the condition of the cartoons there?—I have not seen them recently.

7157. Do you think it would be practicable to remove those cartoons to the National Gallery, provided it remained in the same place, with security to those great works of art?—I believe that, with the protection of glass before them, they would be quite secure; as they are of the same description as water-colour drawings, being in distemper, I think it would be desirable to protect them by covering them with glass.

7158. Mr. *Vernon.*] You have said truly, that the main object of the National Gallery is for the public benefit; is it not the interest of the public, in reference to the formation of public taste, that the power of making studies from the highest works of art should be available to young artists and students?—Unquestionably; but that is a secondary consideration; I believe I have already acknowledged the importance of that, but I placed it as the second object.

7159. Do you consider that two days consecutively in a week is sufficient time for a student who is occupied in copying a picture in the National Gallery?—I do.

7160. Taking into consideration the drying of the paint, and the various processes which are necessary, do you consider, on reflection, that two days in each week are sufficient for the purpose?—I think they are; the course of a student is not entirely confined to copying pictures.

7161. As an argument to show that there is nothing deleterious in the atmosphere of the National Gallery, you have alluded to private galleries, and you have mentioned the Grosvenor, the Stafford, and Sir Robert Peel's collections; are you aware whether the same process of cleaning which has been used in the National Gallery has also been used in those galleries?—I am not aware that it has.

7162. You have alluded also to the willing selection by the Royal Academicians of the site in Trafalgar-square for the exhibition of their works; do you not suppose that painters, one of whose great objects must be to sell their works at an advantage, are naturally glad to exhibit them in so advantageous a situation?—Undoubtedly they are; that I stated as a proof that the situation is not considered injurious by them.

7163. Is it not of great importance to painters who desire to sell their works, that their works should be exhibited in a place in which there are the greatest facilities for the reception of a large concourse of purchasers?—Undoubtedly. This is a proof of the advantageous site of the National Gallery.

7164. Do you think that any such amount of dirt could accrue to those pictures, during their temporary exhibition, as would counterbalance the great advantage of their being so readily accessible to purchasers?—I deny that the situation is a bad one, or that there are the injurious influences which are said to exist there; but if they exist at all, they would more likely be found to affect freshly painted pictures, which, for the most part, it would be dangerous to varnish during the first year. Mr. Faraday has stated, that in his experiments he has found that the mastic varnish is a sufficient protection even from the effects of a very powerful and injurious gas, such as sulphuretted hydrogen gas, and that mastic varnish effectually protects the the pictures. Now, I say, that if those injurious influences exist at all in the National Gallery, they certainly would be most active on freshly painted pictures unprotected by varnish.

7165. Are you in the habit of applying mastic varnish to a freshly painted picture?—A picture cannot be varnished until a certain period has elapsed after it has been painted.

7166. Then what you say as to the protection of pictures by the application of mastic varnish, does not apply to pictures that have been recently painted?—Certainly not; they are unprotected.

7167. *Chairman.*] Are you of opinion that any portion of the injury which has been specially attributed to the smoke, has occurred to the pictures in the National Gallery from the varnish with which they have been covered?—There has been, unquestionably, a great deal of injury done to many of the pictures in the National Gallery by the mixture of oil with the varnish.

7168. Have you examined the pictures carefully, so as to distinguish whether those pictures which have been varnished with mixed varnish are in a fouller state than those that have been varnished with pure mastic varnish?—I have given particular attention to that; but I could name many pictures that have been varnished with oil varnish to their injury.

7169. Can you name any picture as being in a peculiarly dirty state owing to

F. Hurlstone, Esq.

27 June 1853.

that cause?—I have directed my attention particularly to those pictures which have been varnished with oil varnish, and I could name several from memory. The list which I have brought is a list of pictures that have been the longest in the gallery, and which are in very good condition; also some that have had oil varnish put upon them to some extent, but not to so great an extent as others which are in a worse state.

7170. The pictures to which you refer are in a good condition, in spite of the oil varnish?—Yes; where the oil varnish has been applied all over the surface, and where there is no very great amount of oil mixed with the varnish, it has given a general tone to the pictures, without doing any very great degree of mischief. The substance of the pictures is not injured by the oil varnish; it has simply given a tone to them.

7171. The question I asked you was, whether you considered that any of that discoloration and disfigurement observable in some of the pictures in the National Gallery, and which has been attributed by some witnesses to the effect of smoke, is due to the peculiar varnish called the gallery varnish which has been used, rather than to the effect of smoke?—The only discolorations which I have seen on the pictures in the National Gallery are those which are really owing to the oil varnish that had been applied to them.

7172. Then you consider that the oil varnish is the great cause of the dirt and discoloration which is observable on the pictures?—That is the great cause of the discoloration of the pictures, unquestionably.

7173. Do you consider that the discoloration arises from the effect of the oil varnish, and that it has been improperly though publicly and generally attributed to the effect of smoke?—I have no doubt of it.

7174. Mr. *Ewart.*] I understood you to say, you thought that if the National Gallery had been situated further off than it is, there would have been no such inquiry as the present before a Committee of the House of Commons?—I think so.

7175. Have there not been Parliamentary inquiries, and are such inquiries constantly occurring respecting places much further off than the National Gallery is proposed to be?—That may have been the case, undoubtedly; but I think, that had the National Gallery not been so immediately under the public eye as it has been in its present situation, it would not have excited so much attention, either in regard to the mischief resulting from the cleaning of the pictures or from the mismanagement, as to have rendered a public inquiry unavoidable.

7176. Are you aware that we have had Parliamentary inquiries connected with art in Dublin and other places; and that, in fact, distance has formed no impediment to such inquiries?—I feel convinced of what I have stated.

7177. Do you not think that, in a splendid gallery such as ought to exist in a country like this, there should be not only a building, but that all the adjacent and circumjacent parts of that building should be so constructed as to have a regard to the arts, and do you not think that it would be better for the labouring classes of this country if such a building were situated where there was ample space for it, with fountains, statues, and other objects of interest calculated to prepare their minds before entering the building, and to lead them the better to appreciate the works of art which they would afterwards see?—I cannot see any particular advantage that would be derivable from that.

7178. Do you not think there may be a harmonious combination of the external decorations of a National Gallery, and the works of art within it, and that the people might combine health and recreation out of doors, with the admiration and study of pictures within?—I do not think that Hampton Court is a good example of that.

7179. Do you, or not, think that such a combination as that to which I have referred, near a great metropolis like this, would be desirable?—I do not.

7180. My question referred particularly to the surrounding grounds?—I do not think it important.

7181. *Chairman.*] Are you aware of the distance that the proposed Crystal Palace is from London?—I am not aware of the distance.

7182. It is considerably further from London, is it not, than any site that has been ever proposed for the National Gallery?—I believe it is.

7183. Is it not expected that a very large concourse of people will go there for the purpose of seeing the objects of interest and amusement that will be there exhibited?—I believe that a railroad is to be laid down for that very purpose.

7184. Do you consider that the working population will take the trouble of going

going some miles out of town, a greater distance than any proposed new National Gallery, to see the objects which will be exhibited in the Crystal Palace?—I am not aware of the extent to which the undertaking may succeed, unless open on Sundays.

7185. Do you not think that the circumstance of very large sums of money being invested in that undertaking is an earnest that at least, in the opinion of those who have embarked their money in it, there will be a great concourse of people who will avail themselves of that means of entertainment?—It is calculated that there will; but the description of objects to be there exhibited is far more likely to attract people generally than the higher objects of art would be.

7186. You do not think that people would be attracted to a combined collection of fine paintings, statues, and other objects of art, a short distance out of London, although they would be attracted to the Crystal Palace?—That is my opinion.

7187. Would there be more difficulty in getting to Kensington, supposing the new National Collection of Fine Arts were to be there, than in getting to Sydenham, to see the Crystal Palace?—From most parts of the town there would, when the facilities of conveyance to Norwood are completed.

7188. Would you not think that the fact of enterprising gentlemen, who are anxious to amuse and instruct the population, having gone to a great expense in taking the Crystal Palace a considerable number of miles from London, is in some degree practical proof that there would be no great difficulty in inducing those who are anxious to see pictures to go a couple of miles to Kensington for the purpose of seeing them?—I think they are scarcely parallel cases.

7189. Does not a great portion of the objects of interest to be collected in the Crystal Palace consist of statues, and copies of fine works of art, procured from distant parts of the world?—That is only a small portion of what is to be exhibited, compared with the whole.

7190. Do you not think that if the art collection were to be combined at Kensington, and they were to have statues, drawings and antiquities, and objects of art of all kinds, that would form nearly as great an attraction as the objects which are to be collected in the Crystal Palace?—I think not.

7191. Mr. *B. Wall.*] Should you not rather say, as an artist, that people would be puzzled and wearied by such a multiplicity of objects?—I think they would.

7192. Have you been yourself to Gore House since the exhibition has been opened there of articles of furniture?—I have not.

7193. You are not aware whether many or few persons have visited that establishment?—I am not; I have not been there.

7194. Mr. *M. Milnes.*] Is not there an entrance fee of 6*d.* required there?—I believe there is.

7195. Mr. *B. Wall.*] Are you not aware that that is the place to which it is proposed to remove the National Gallery?—It is; and I would wish to remark, that there is one element infinitely more destructive to works of art than the smoke of London, and that is damp.

7196. *Chairman.*] Do you consider, that supposing the plan of having a combined collection were carried into effect, the Commission, or whoever were the parties to select the site, would necessarily select a damp one, or would they not take great care to avoid damp?—They ought to.

7197. Mr. *Vernon.*] Are you aware that it is on a gravelly soil, and particularly free from damp?—I do not know the soil, but it is not nearly so free from damp as the present site of the National Gallery.

7198. Mr. *B. Wall.*] Are you not aware that the question of its being damp or dry at Kensington is a question on which there is a vast variety of opinion?—It is so, I believe; but I speak of it as compared with the present site of the National Gallery, which is on more elevated ground, and not near stagnant water.

7199. *Chairman.*] You are aware that no site has been positively selected, although there may have been various proposals and speculations on the subject; but do you not think, that whoever is charged with erecting a new National Gallery, would take proper precautions against any evil arising from damp or any other cause?—I trust that they would do so.

7200. Mr. *B. Wall.*] You are aware that the ground has been purchased, are you

F. Hurlstone, Esq.

27 June 1853.

you not?—I have heard reports to that effect, but I have not any special information upon the subject, and the question is still undetermined.

7201. Mr. *Stirling*.] You say you are aware that the site at Kensington is much more damp than that of the National Gallery; how did you come to be aware of that?—From general report, and its situation as regards stagnant water near.

7202. Have you ever lived in that neighbourhood?—I live not far from it.

7203. Do you know it of your own knowledge?—I have not lived on the very spot.

7204. Then it is only from report?—From general report and frequent observation.

7205. Mr. *B. Wall*.] Do you not speak from a knowledge of the nature of the soil also?—I do not know the nature of the soil at Gore House, but that at Trafalgar-square is the most unexceptionable.

7206. *Chairman*.] Are we to understand, from the tenor of the observations which you have made incidentally in one or two of your previous answers, that you are not favourable to the proposal which has been made of a combination of the art collections in one locality?—I am not.

7207. Even irrespective of the question of site?—Quite irrespective of that.

7208. What are your reasons for objecting to such a project?—I think that the concentration of so many different departments of art is not at all desirable; it would cause great confusion in visiting an institution of that sort; and I felt the inconvenience of it myself repeatedly, even during the last winter, in the Vatican, where the time is limited for seeing the choicest works of art. I have gone down there, and had to run through the long galleries which are devoted to the ancient public inscriptions and vases, and a variety of works of art, and have felt exceedingly annoyed at the length I have had to go; and then on reaching at last the particular work of art I have gone purposely to see, the time has been so limited that it has been extremely vexatious.

7209. Supposing you had wished to examine the vases after the sculpture, and you had only a limited time at Rome, would not the inconvenience have been greater if you had had to go two or three miles to the other side of Rome instead of into another gallery in the same building?—I see no adequate advantage in uniting those different departments of art.

7210. You said that the disadvantage was, that one department might be so far from another, that after looking over one it would be inconvenient to go to the other, and I ask whether that inconvenience would not be less if you had only to walk to another room in the same building, than if you had to walk to a different part of the town?—I am afraid I did not make myself understood; it was not that the inconvenience arose from having to go from one to the other, but from being impeded by the multiplicity of intervening objects in going to study that which it was my object to see.

7211. Suppose you were told that the sculpture and pictures were both to be seen in the Vatican, could you not take one day for the pictures, and another for the sculpture?—I am speaking of the inconvenience I experienced; for instance, in visiting the frescos of Raphael, you have to go through the whole range of the Vatican, and your mind is confused with the variety of heterogeneous objects, and unfitted for study.

7212. Mr. *Vernon*.] But that objection would be obviated, would it not, by having separate entrances to the separate departments?—Yes; then you may as well keep them apart.

7213. *Chairman*.] Is not that an objection that arises in consequence of the somewhat old-fashioned and confused arrangement, of which everybody is well aware, in the Vatican, and which would not apply to a new building expressly constructed for containing a large number of art collections?—It applies to all buildings which I have seen, where there are miscellaneous collections.

7214. Mr. *Ewart*.] Do you not think that the combination of works of art, not miscellaneously mingled, but arranged in different departments, the paintings in one part, the sculpture in another, and antiquities in a third, would be desirable?—I see no object to be gained by it; it would be a museum of antiquities, not a national gallery of masterpieces alone.

7215. Would not a person attached to the arts derive advantage from being able to consult paintings and drawings of the great masters, together with statues, antiquities,

antiquities, and other objects of art, and in illustration of each other?—I see no object to be gained by it; I look on the object of a National Gallery as perfectly distinct from a mere archæological museum of art; I think it is a perfectly distinct thing; the purpose of a National Gallery is to place before the public, for the study of artists, the finest works of human talent; but if you come to take it in the lower view of a mere historical memorial of art, you will have to combine a variety of inferior specimens, and the system of the whole thing will be perfectly different. *F. Hurlstone*, Esq. 27 June 1853.

7216. Might you not have the superior specimens in one room, and a historical series of works of art arranged in a separate gallery, as they are now in the Louvre?—In a National Gallery, in the view I take of it, you may have a tribune like that in the Louvre, or the room at Florence, where the choicest specimens of each school are selected for comparison; but I am not aware that the Louvre is arranged in chronological order. I beg to suggest that there is a great difference between arranging the pictures in chronological order, and arranging them according to schools, and I believe they are arranged according to the schools there.

7217. Might you not attain your object by having a selection of the best paintings for the instruction of the public generally, and might you not also have either an arrangement of schools, or a chronological arrangement of paintings for those who may wish to study the history of art?—I do not think it is important to have them under the same roof, and they are not so in most cities on the Continent.

7218. Lord *W. Graham.*] Do you consider that student-artists are capable of profiting all at once by the highest works of art, or that they would derive more improvement by studying, in the first instance, works of rather inferior merit, thus gradually educating their taste, so as to be able afterwards to appreciate works of the highest order?—Certainly not; they should have always the finest specimens before their eyes.

7219. Just as you would put "Homer" before a school-boy?—Yes.

George Foggo, Esq., called in; and Examined.

7220. *Chairman.*] YOU were examined, I believe, before the Committee of 1836; Mr. Ewart's Committee?—I was. *G. Foggo*, Esq.

7221. And you have since that time, I think, devoted a good deal of attention to questions of fine-art collections and exhibitions, in conjunction with Mr. Hume, particularly at the period when he had his inquiry, in 1841?—I have, constantly, as secretary to the National Monuments Society.

7222. Have you formed any opinion as to the present system of management in the National Gallery?—I have long had reason to suppose, from my observations, that nothing could be worse than the uncertain condition of the management of the National Gallery.

7223. What are the special defects that you find in the management?—The management involves an irregularity and uncertainty, and a want of responsibility under which no institution could answer its purpose.

7224. Do you wish to make any remarks upon those points, in addition to what has been stated by the other witnesses, I believe in your hearing?—I should wish to observe, that in my view a National Gallery should be for the instruction and improvement of the intellect and the moral condition of the people, and I do not perceive that either our National Gallery or others have generally tended to that purpose.

7225. In what respect do you think the particular system of management has interfered with that important object, beginning with the constitution of the gallery?—The National Gallery has evidently been between two influences, both of which have acted injuriously; the paramount influence of the Treasury, in not merely the control, but the management; and it is quite evident that the appointment of keepers connected with a private and secret society has since also been very injurious.

7226. What is the society to which you allude as a private and secret society?—The Royal Academy, which occupies one half of the building, and has therefore always had an interest in preventing that part of the building from being taken possession of for the exhibition of pictures belonging to the nation.

7227. Do you not think it was rather the duty of the trustees, as being responsible for the pictures of the National Gallery, if there was any undue occupation

G. Foggo, Esq.

27 June 1853.

of their premises by the Royal Academy, as has been imputed, to exert their influence and authority to secure for the national collection the full space that belonged to them, rather than allow it to be occupied by the Royal Academy?—Most decidedly, that was their duty. But when I perceive that they have not the power to have the premises they occupy cleaned, whilst they take to themselves authority, as appears by their own resolutions, of receiving pictures to send to other exhibitions all over the kingdom, which is an assumption of authority that I cannot consider constitutional, the anomalous position of the trusteeship is by that shown in a striking character.

7228. You would have considered it the duty of the trustees, when they found that they were straitened for room in the part of the building in which the collection now is, to have insisted, believing that they have the right, that the Royal Academy should give up the remainder of the building to them?—Certainly, particularly as the Chancellor of the Exchequer had declared in Parliament that the Royal Academy held those premises on the special understanding that they were to remove whenever the pictures of the nation required the space.

7229. Do you not think, that as the trustees did not insist on their removal, it was very natural for the Royal Academy, finding themselves very comfortable where they were, to remain there?—It is very natural for every private society, especially one neither chartered nor legalised, to try to get as much advantage to itself as possible; but in this instance it has not been for the good of the country.

7230. You think it was the duty of the trustees, before sending a portion of their collection to Marlborough House, and other portions to provincial or other galleries, to have insisted on having the whole room they were entitled to have?—Most decidedly, that was their duty. I am sorry to say that some pictures have been received, and shut up in the board-room of the National Gallery.

7231. That which you now allude to would seem to be rather an error of detail in the conduct of the trustees; but what are the particular defects you observe in the constitution of the trust; there is nothing, is there, in the constitution of the trust that immediately connects them with the Royal Academy?—It appears the trust has no constitution; that is the greatest of their faults. An establishment like that ought to have a constitution and rules and regulations for its own management and protection, and the management of all persons employed under it.

7232. Do you consider that an absence of some specific subdivision of duty among the managers, an absence of definite responsibility, and a want of specific regulations, are the principal defects of the present system?—Entirely so.

7233. Have you any suggestions to make as to any new system that might be adopted?—I should suggest that the present board of trustees, even if increased in number, would not be at all objectionable as an inspecting body, but it is exceedingly objectionable to have a numerous body acting in the management.

7234. You would consider, that if the immediate direction of the gallery were placed on a certain footing, it might be advisable to have a board of trustees to inspect occasionally, and to have reports made to them, in order that they might see that things were properly conducted?—Particularly if they acted by a standing committee of five persons, who might be elected for one year, and who should be required to remain in London and see that the business was properly carried out; such a body would be essentially serviceable.

7235. You would not empower that body to interfere with the actual details, but would empower them periodically to visit the institution, and see that the system upon its improved footing and its regulations were properly attended to?—I should have no objection to the inspection of the standing committee being frequent, the more frequent the better, but their reports should be made at stated times to the general body of the trustees, who should give their sanction to those reports.

7236. Would you make the trustees responsible to any higher authority?—I would make them especially responsible to Parliament, as was indicated by the Earl of Aberdeen.

7237. Not to the Treasury?—They must be in communication with the Treasury, because the funds, and many circumstances, must be in harmony with the revenue of the State; for, unfortunately, all persons who have the management of societies or institutions of this kind are exceedingly greedy, and wish to take a larger portion of the funds of the nation than the nation can well afford to give them.

7238. But

7238. But you would not give the Treasury any power of interfering further than as a medium through which the funds would be granted, by the authority of Parliament?—Yes, I would also give them the appointment of the trustees themselves.

7239. That you would give to the Treasury?—To the Treasury.

7240. What form of direction should you recommend for the immediate management of the gallery?—I should recommend that the daily ordinary business of the institution should be kept as distinct as possible from the question of art.

7241. Would you have the trustees to whom you allude salaried officers, or would you allow them to be an unpaid committee of noblemen and gentlemen?—I may differ from many persons with regard to salaried officers, but I agree with Adam Smith, that honour ought always to be, with most men, an ample reward, where they can attend to give their services to the country; and therefore I should prefer that the trustees should never be suspected of doing their duties for remuneration.

7242. That would apply to them as a visiting or controlling body, but not as trustees taking the responsible management of the institution?—If, from among the trustees, supposing there were 20, five were appointed for one year to act as a standing committee, I think those gentlemen would be willing and content to attend to those duties, and consider it especially honourable.

7243. What is the system of management or direction, under the trustees, the Treasury and Parliament, which you propose?—I should propose a director, I may say, of the household, a secretary and a treasurer; and I should be most specially inclined to look on auditors as essential to the well-being of the institution.

7244. Would you have the auditors separate from the visiting trustees?—Perhaps I have named them too early. It would be proper for the auditors to be appointed by a superior authority, and as distinct as possible from the trustees.

7245. Would you give any one of those three gentlemen a superiority over the others?—The director should have the superiority in all cases of management, and he should report to the standing committee and the trustees.

7246. You would make the director responsible both for the care and preservation of the pictures, and also for the purchase of the pictures?—He should have nothing to do with the purchase or the determination of what pictures should be varnished, or what is commonly understood as being cleaned. He should have the ordinary care of the pictures, and it should be his duty to see that the superintendents kept them cleaned with silk handkerchiefs, and that the dust was taken off the frames; and the inspecting body should be able to determine how far he was responsible for the ordinary care of those pictures.

7247. To whom would you assign the power of purchasing pictures, or cleaning them, in the wider sense, if it should be found necessary?—To a committee of taste, composed of three individuals, elected by the trustees, with the concurrence of the Treasury.

7248. Lord *W. Graham.*] Would you have them paid?—They would be paid, but moderately.

7249. *Chairman.*] Would they be paid for the duty they performed, or would you give them an annual salary?—An annual salary. I should expect them to be gentlemen of great experience, and great judgment and candour; I think they should be obliged to meet weekly, or at least once a fortnight, in order to receive notice of any pictures that were proposed to be given or sold to the gallery; and that whenever these gentlemen had to report to the standing committee their opinion on such pictures, it should not be a report of the three combined, but each individual should write his own opinion, and he should be responsible for that opinion. The standing committee would, of course, listen to the three opinions; they would put what questions they thought proper, and determine as they thought proper, and make a report to the general board of trustees, so as to make every individual, as far as possible, responsible for his own thoughts and his own doings.

7250. You would assign to this committee of taste both the duty of purchasing, and also the duty of causing pictures to be cleaned when they required it?—Everything of an important nature connected either with the selection of pictures for purchase, or the restoration or cleaning of pictures, should be, upon their recommendation, determined by the trustees.

7251. Mr. *Ewart.*] Would you elect the committee of taste for life, or for a time only?—They ought to be elected periodically.

7252. *Chairman.*] You would not make them responsible to the director?—No, they would consult the director; but he should be by no means superior to the committee of taste, which would be responsible to a higher authority.

7253. Under the term "consult," you comprise the whole arrangement of the gallery, and the preservation and the occasional cleaning of the pictures?—The whole establishment, as regards the pictures only.

7254. Might there not be some collision between the committee of taste and the director, they not being responsible to him, if a picture was cleaned and re-varnished by their instructions, and if, when it was given back to him, he was dissatisfied with it, and thought they had damaged the picture, and restored it to him in a bad condition?—We are always placed between two difficulties, the one that of collusion, and the other that of collision. I hold that collision is not by any means unwholesome, provided there be a third party to appeal to, and if there were a well-chosen standing committee of the trustees, there would be of course an opportunity of appeal.

7255. Would you have the committee of taste go through the gallery from time to time, and pronounce which pictures they considered required to be cleaned?—Yes, that would be of course open to them at all times.

7256. It would entirely depend upon them, and not on the director or conservator of the gallery?—Entirely.

7257. Lord *W. Graham.*] How would the committee of taste act in urgent cases with regard to the purchase of pictures?—I think the subject of urgent cases is really not worth one moment's consideration. I think I could undertake to make the National Gallery of London one of the finest galleries in the world within three years. The opportunities of purchase which have occurred on different occasions have been such that no one who looks back to them can doubt that during any three years, for 15 years past, we might have collected quite enough pictures to have rendered our present collection one of the finest in the world.

7258. *Chairman.*] Do you propose that the committee of taste should be artists and amateurs, or that they should be selected from both classes, or would you impose any limitation at all upon the selection?—I should wish for no limitation at all. Experience shows that artists and professed connoisseurs are fallible. If the trustees and the Treasury could find gentlemen of enlarged mind, understanding the real welfare of the State and the Nation, and possessed of candour enough to listen to the opinions of others to whom they might refer, I should trust them as soon as I would my own life before an English jury.

7259. When you talk of their being responsible to the committee or the Treasury, with reference to pictures that they might purchase, what precise signification do you attach to the term "responsibility"?—That of each individual giving his full reasons for the opinions he gives for or against the purchase, and that he should have his signature appended to it.

7260. Suppose it should appear to the nation, or the Treasury, or to Parliament, that it was an exceedingly bad purchase, for instance, that 1,000*l.* had been paid for a picture not worth 500*l.*, how would the responsibility you propose operate; would you impose penalties upon them?—I can hardly conceive that in such a case you could do better than deprive the individual of his office. I am not much inclined to punish, but I think that a feeling of honour ought to induce him to do his best, and if the trustees did their best in selecting a proper man and dismissing improper ones, we should stand as good a chance as possible.

7261. You consider it a moral or honourable responsibility?—Both; and I am rather surprised, that in a country like this, where we have the best institutions of jurisprudence, with courts of justice presided over by judges that are the admiration of all the world, we should ever look to other countries for examples of proper administration.

7262. How would you proceed with regard to the purchase of pictures in foreign countries?—If I wished to make a fine collection, I should in the first place ascertain what pictures belonged to the nation in different places. I should, with Mr. Hurlstone, strongly object to an immense range of galleries such as those at Versailles, where individuals are obliged to run through the galleries, and where it would not be allowed for persons to come back into another room to have a second look at a picture: where, nevertheless, the confusion and the fatigue are so great, that

that headache and fever are very often the results, and where no good recollection of a picture can be obtained. I should think that exceedingly bad.

7263. How would you have the committee of taste, who are to be the purchasers of pictures, proceed with respect to purchasing pictures abroad?—If I first got a fine collection at home, I should immediately go to the second question you have honoured me with, and show how little we had to do, and how easily it was to be managed. If I once obtained such pictures as we have at Whitehall and other places, some few at Hampton Court, and the like, so as to make a really fine collection, and we were then to establish an annual exhibition for one month of all pictures that might be proposed to the gallery, either for presentation or purchase, that would be a most interesting opportunity of seeing fine works, and of selecting from them such as might properly belong to our gallery. I think that if that were done with ample funds, persons abroad would send pictures to such an exhibition, with the hope of selling them to the nation.

7264. Would you confine your foreign purchasing entirely to pictures that might be sent to this country from abroad, and would you, in no instance, select some person to travel abroad to look out for pictures?—For occasional and special cases, I think one of the three advisers, with the concurrence of the acting committee, might very well travel abroad, and make a report to them upon the quality and price of any pictures that they supposed to be desirable.

7265. When you speak of pictures in Whitehall, to what pictures do you allude?—The Rubens pictures, which are so little appropriate to a chapel, but which would be exceedingly desirable in the National Gallery.

7266. Do you allude to the pictures on the ceiling?—The ceiling, with its compartments.

7267. Could they be with safety removed, do you think, and placed elsewhere?—With great safety.

7268. Would you have them placed on the ceiling in the new building?—I would not.

7269. Do you think that a picture painted on the ceiling in perspective, and intended to be looked at from the ground, would look well if suspended on a wall?—A remarkable instance of that is the Fall of the Giants by Paul Veronese, the appearance of which, when placed on a wall, was considerably superior to its appearance now on the ceiling at Versailles. The perspective effect hardly compensates for the pain inflicted on the spectator.

7270. Do you not think that a considerable part of the interest of those pictures in Whitehall is connected with the period and the circumstances under which they were painted in that locality, and with the sovereign by whom Whitehall was built?—I hardly think, now that the apartment is converted into a chapel, that they have at all a proper effect.

7271. What are they painted on?—On canvas, stretched.

7272. Then they could easily be transferred to another locality?—They could.

7273. Did you give a specific answer to my question, whether the committee were to be artists or amateurs, or how they were to be composed?—That should be perfectly unrestricted.

7274. Mr. *Ewart.*] Do you not think it would be rather inconsistent to require the judgment of the three directors *seriatim* in the case of pictures bought in this country, whereas in the case of a picture bought abroad you would require only the judgment of one single director?—That could be easily managed, I apprehend; if the report that that gentleman makes meets with the concurrence of the other two directors and the acting committee of trustees, we need not be suspicious or jealous about it; but if any doubt were to be entertained, the acting committee would have the power of requesting one or both the other directors to go and see the picture, and report thereon.

7275. While those other parties were deliberating or travelling, might not the opportunity escape of purchasing the picture for the nation?—I perfectly agree with the opinion expressed by the Earl of Aberdeen upon the subject, that these institutions are always a great deal more anxious to get than to avoid getting; I think they carry it a great deal too far, and that it is better to lose occasionally a fine picture than to be buying bad ones, or pictures that it is not desirable to obtain.

7276. *Chairman.*] Are you aware that in former times, under the present system, there have been proposals made by gentlemen of very high repute as

G. Foggo, Esq.

27 June 1853.

picture-dealers, that for a certain sum of money they would engage to exhibit and place before the managing body pictures, which they should not be bound to purchase unless they liked, but which the parties making the suggestion would engage, should be of great importance, and well worthy of consideration?—I think the funds of a nation should be very carefully guarded, and I do not see any better mode of doing so in this instance than by treating all persons who offer pictures for sale in exactly the same manner; and I think that if picture-dealers or others thought proper to have their pictures exhibited to the public for one month before the determination of the authorities was come to, we should be very well supplied.

7277. With respect to the secretary, the second officer you mentioned, what do you mean his duties and responsibilities to be?—The example of the British Museum has confirmed me in my view, that the secretary must be kept strictly to the duties of a secretary, viz., conducting the ordinary correspondence, and keeping the minutes; in fact, keeping the books of the institution.

7278. You would give him no other duties whatever?—No other duties whatever; he should be quite a man of business.

7279. What do you think should be the duties and responsibilities of the treasurer?—It is necessary that there should be a report of the expenditure of the funds made out, and therefore one of the trustees might take upon himself the duties of treasurer with that view; but I should always have the accounts audited by a different authority, and I think the auditors should have more than a power of putting their names or their assent to the documents for the audit; they should have the power of giving an opinion how far the management was conducive to the well-being of the institution, and with regard to the proper application of the funds, and the mode of keeping the accounts.

7280. With respect to the various officers to whom you have alluded, do you propose that they should be precluded from holding any other situation than such as you have mentioned, and would you require that they should devote their whole time to their duties in connexion with the institution?—In that I should differ from many other witnesses; I think it is of far more importance that they should have an undivided interest in the welfare of the institution than that their whole time should be undivided. It may naturally be supposed that a gentleman who has to attend once a week or once a fortnight as one of the committee of taste, might have many other things to attend to, either Parliamentary or otherwise, which would not at all interfere with the well-being of the institution, provided he were always ready to attend when summoned to give his opinion, and willing to take the trouble of examining before he made a report. I cannot see that his having other business would militate against the proper discharge of his duty, unless that other business clashed with the well-being of the institution. I conceive that a gentleman who applied but half his time to the affairs of the institution would be greatly preferable to any member of an institution to whose honour and interest he was pledged, as is the case with every member of the Royal Academy; divided time is not so bad as divided interest.

7281. Would you expect to find a gentleman, such as you allude to, who might be a Member of Parliament, or in an entirely independent capacity, who would be willing to devote his whole time to picture purchasing, as a member of the committee of taste?—I should neither expect it, nor wish it; I see no necessity for it.

7282. Might not a systematic course of purchases, such as the nation seems desirous should be instituted for the purpose of completing its collection of pictures, be sufficient to take up the whole time of the three gentlemen you propose to appoint?—If we had premises so vast as it has been suggested we should have, and if we determined to fill them in the course of 12 months, it might be very well to have a provisional board of that kind, who should be required to devote the whole of their time for 12 months or two years to the accomplishment of that one purpose of filling the rooms with fresh pictures; but under ordinary circumstances, supposing the establishment to be once formed, I should not expect that it would be required for any three gentlemen to be constantly employed in looking after pictures.

7283. Would you have the provisional board different from the three that you would in ordinary circumstances entrust with the duty of picture purchasing?—No; I think the body of three would be perfectly competent to report to the standing committee, and the standing committee, with the concurrence of the Treasury,

Treasury, would be able to make purchases to any extent; but that is a provisional arrangement that need not interfere with the other understanding.

7284. Do you think you would be able to find three individuals of the character to which you allude to form a committee of taste, who would be willing to devote their whole time to that object, and that, as I understand you, without any emolument?—I beg pardon; I assume that the standing committee is not to be remunerated, but I am not of opinion that the committee of taste should not be remunerated; I propose that they should be remunerated moderately; such a sum, perhaps, as 200 *l.* a year would be sufficient.

7285. Do you think you would get gentlemen of the class to which you allude to undertake to act as a provisional committee for a year or two until the collection had assumed a certain extent, and to devote their whole time to the performance of that duty for 200 *l.* a year?—Certainly not; what I mean is, that under ordinary circumstances 200 *l.* a year would be sufficient, but if the whole of their time were required, I should think that 600 *l.* a year would not be too much under the different circumstances.

7286. Do you not think the duty of picture purchasing, which requires a man to be constantly on the look out, would, even irrespective of the first year or two, occupy the whole time of these gentlemen?—I very much doubt the necessity for their being constantly on the look out. I think the annual exhibition for one month would take off nine-tenths of that necessity.

7287. An annual exhibition of pictures that were for purchase would form part of your system?—Most certainly.

7288. You would have an apartment in the new building for that purpose?—I would make such arrangements as the state of the building would allow.

7289. Do you not think that your plan of auditors could be combined with the plan of superintending trustees, in order not to complicate the number of officers?—The auditors would, of course, have only to look over the statement of the treasurer, and then for two or three days examine the circumstances that had led to that statement; two or three days employed every three months would be quite sufficient for the auditors, but I apprehend that the great thing to guard against in nominating auditors is, that they should have no interest in common with the parties whose accounts they are to audit. They should, if possible, be elected by a different body. I believe that where a majority of electors have to name the manager of a concern, the minority ought to appoint the auditors. That is the principle upon which I should act; I think that a totally distinct interest should appoint the auditors.

7290. You would have them professional men of business, appointed for the special occasion, to go through the accounts, as is done in some other departments?—I should like one of them to be an accountant; but I think more than one of them ought to be men of general views and very liberal minds, without, of necessity, being actually accountants. Members of Parliament would be quite as good as accountants.

7291. Would you place the committee of taste under any restrictions as to making up the collection in the first instance from particular schools or classes of pictures in which the gallery may at present be deficient, or would you leave it entirely to their discretion?—I think it would be desirable that the trustees should themselves discuss and draw out a plan, with the concurrence of those three gentlemen.

7292. Mr. *Vernon.*] When you say "trustees," do we understand you to mean the trustees generally, or the limited body of trustees who are to be selected as a council?—For a general opinion, I should take the body of trustees; but for the administration under them, and the constant inspection of the establishment, I should look to the standing committee.

7293. Who do you consider should be responsible to the Chancellor of the Exchequer, the general body of trustees or the committee of trustees?—The general body of trustees undoubtedly, acting upon the responsible reports of all the different parties acting under them, would be responsible by their report to Parliament.

7294. Are we to understand that you would have this long chain, the Chancellor of the Exchequer at the head, then the general board of trustees; within them you would have a limited body of trustees; then under them you propose to have a director, under whom again there would be a secretary, a treasurer, and, perhaps, an auditor?—I would have it like most of our societies, or as an army

G. Foggo, Esq.

27 June 1853.

under proper discipline, from the commander-in-chief down to the lowest officer in the service.

7295. You have said you propose to have a secretary and a treasurer; would you make them responsible to the director?—The secretary should be, not the treasurer.

7296. And would you make the director responsible to the general board of trustees or limited board of trustees?—The director would be the person to communicate with the standing committee of trustees.

7297. Do you think that the standing committee should have an authority delegated to them by the general board of trustees, and that they should be responsible to the general board of trustees?—For the very reason that their authority is delegated to them by the general board of trustees, they must be responsible to it.

7298. You would have full authority delegated to them?—Full authority should be delegated to them.

7299. And you think their report and decision should be final, subject to the authority of the Chancellor of the Exchequer?—To the veto and authority of the trustees; matters of expenditure only would go to the Chancellor of the Exchequer; he should have no authority with regard to the management and care of the pictures.

7300. The decisions of the standing council you would have subject to the veto and authority of the general board of trustees?—Yes.

7301. Then full authority would not be delegated to them?—In the first place, I apprehend the Chancellor of the Exchequer has been brought in in the latter part of this investigation rather more than we could have expected. The Chancellor of the Exchequer, as it appears to me, has the power of raising the funds; but I am not aware that the Chancellor of the Exchequer has anything to do with the expenditure of the funds; I should suppose the Treasury would keep the authority it now has.

7302. When I speak of the Chancellor of the Exchequer, I simply mean the Government department from which the money is to come; it appears to me that your answers are contradictory, to this extent: you say, full authority should be delegated by the general board of trustees to the standing council; but in answer to another question, you state that the decision of the standing council should be subject to the veto and authority of the board of trustees?—It appears to me to be perfectly consistent; if the board of trustees act by a standing committee, that standing committee must be amenable to the general board of trustees.

7303. Then they would not have a general authority to decide upon questions delegated to them?—I call it a full delegated authority.

7304. Mr. *Ewart.*] Would there not be some danger that the number of checks which you propose to establish might somewhat fetter the free action of your executive?—I do not see it; it might prevent hasty and rash proceedings; but I think we had better not have any of those rash proceedings, though we might occasionally lose a picture by it.

7305. Might there not be danger of going to the opposite extreme, that of interposing too many restrictions?—I do not think so; each official has only to look to the authority immediately over him, in the same way as a lieutenant looks to his captain.

7306. Mr. *B. Wall.*] Did you not say you thought that the auditor should have liberal views?—As far as I recollect, my answer to a question put to me by the Honourable Chairman was, that I should think it advisable for one of the three auditors to be an accountant, and that it would not be necessary for the other two auditors to be accountants, but that I should prefer to have men of liberal minds and general knowledge, such as Members of Parliament.

7307. You meant, by liberal minds, liberal education?—Mere education does not always carry with it that general view of subjects and of objects that is essentially necessary in forming a collection of works of art; it must have been observed that many of the witnesses who have been examined, have shown a predilection for particular schools of art, and that there are many artists and connoisseurs who merely understand one school of art. Now, I apprehend that that knowledge is founded on a totally false principle, and that every school is a good one that is founded on an admiration of nature and her works, and that every man who has studied

studied the beauties of nature will derive great pleasure from any school that has a resemblance to nature.

7308. *Chairman.*] Will you have the goodness to explain why the auditor, according to your scheme, should have anything to do with schools of art, the duty of an auditor usually being merely to examine accounts?—Although he is there to examine the accounts, he will have probably to report upon whether the expenditure of 2,000*l.* or 3,000*l.* for a picture has been judiciously applied or wastefully.

7309. Mr. *Vernon.*] Are we to understand that, in your opinion, that ought to be the peculiar province of the trustees and of the committee of taste?—A board of auditors appointed by a different authority, and allowed an opportunity of examining into the question, so as to come to a conclusion whether the money has been properly spent or not, would be in my opinion an exceedingly good check.

7310. Looking at this scheme of yours in a practical point of view, does it not involve a very great increase of paid officers, for whom you seem to admit there may be insufficient work?—I think not; I think the expenditure would be very small, and the number of paid officers would be but small.

7311. We understand, that in addition to any scheme that has been hitherto proposed, and certainly in addition to anything that at present exists, you propose to have three paid officers, with a salary of at least 200*l.* a year each, and to have three auditors and a treasurer, those being all additional officers; did I understand you rightly, when I supposed you, in answer to a previous question, to admit that you did not consider their time need be entirely occupied with the affairs of the gallery?—That answer referred to the committee of selection and taste; but as to the auditors and treasurer, I think that they, like other auditors and treasurers, should be unpaid.

7312. Do you consider that there should be a body of auditors attached to the gallery, whose only use would be once a quarter to audit the accounts?—Certainly; and I believe that that is a principle understood throughout the country; auditors are appointed not as a permanent body, but for an occasion.

7313. Mr. *Ewart.*] You would not have the auditors of an insurance company go into a question as to the policy of certain investments which might be made by the company?—I should prefer to have them more like the auditors appointed in some of our parishes, who are perfectly competent to determine whether certain sums paid for provisions, for instance, have been properly expended or not; they, of course, not only look over the vouchers, but examine the persons who have carried out the contracts.

7314. Mr. *Vernon.*] Do you not think that you would, by your plan, be creating a great number of authorities on questions which are generally admitted to be matters involved in great doubt, namely, matters of taste?—I have stated that I divide the two as far as possible; but having divided the two as far as possible, it is necessary to have some check the one on the other; I do not think that there is any unnecessary complexity in the matter; much less than in every nobleman's establishment. I have seen such things satisfactorily carried out in private societies.

7315. Are you not of opinion that public attention is brought to bear upon these questions very rapidly through the medium of the press and other channels, so that any mistakes that are made are very soon observed, and taken notice of, even without the check being required of accounts?—I am not aware of it; it appears to me that if the press had had such power, we should not have had such large and unnecessary expenses incurred in the purchase of things that are not valuable.

7316. Do I understand you to say, that in your opinion unnecessary or injudicious purchases for the National Gallery have been made to a great extent?—Undoubtedly.

7317. Can you specify the various instances of bad purchases which have been made for the National Gallery, or purchases that have been made of bad pictures?—I should instance, as being totally unfit and unnecessary for the collection, the two Guidos, Lot and his Daughters, and Susanna and the Elders, which are objectionable, both on the score of their being indelicate subjects, and therefore unfit for general observation, and also as being coarse specimens of the master's talent.

7318. You do not consider those to be good specimens of Guido's works?—

G. Foggo, Esq.

27 June 1853.

I do not consider them to be good specimens of the talent of Guido. I think there are better specimens available than those.

7319. Do you consider that there have been many opportunities of procuring better specimens of Guido's works?—Undoubtedly; but I also consider that we did not require any Guidos, Guido being more than represented in the collection, in proportion to other masters.

7320. Can you name any other of the various bad pictures which you say have been purchased for the National Gallery?—There is another picture by Guido, of two heads, which was purchased, I believe, at Mr. Harmar's sale; a very inferior work indeed. Nor is the Soult Titian to be commended as a specimen.

7321. Lord *W. Graham.*] You stated that you proposed having a gallery, in which pictures for sale should be annually deposited; do you think that possessors of good pictures and picture-dealers would send their pictures to that gallery?—I think that if any individual felt quite confident that a picture which he had to propose would stand the scrutiny, he would not hesitate to submit it to the ordeal; but I have no doubt that a great number of persons would not run the risk of it, if they entertained a doubt of their merit.

7322. If the committee of taste were known to be good judges, and did not purchase any of the pictures, that would cast a slur upon the pictures, and they would be immediately damaged in the market, would they not?—Generally it would be a proper slur.

7323. But then the possessors of those pictures would not sell them?—So much the better for the nation.

7324. Do you not think that the fear of rejection would deter people from sending their pictures at all?—No; I apprehend that an enormous number of pictures would be presented on such an occasion, with full confidence.

7325. *Chairman.*] Do you not think there would be danger of a vast number of bad pictures being sent to take their chance in the scramble?—Yes; but there might be a mode of checking that.

7326. Mr. *Stirling.*] Would you take in all pictures that were sent for exhibition, without reference to their merit?—That would be an easy matter to settle; the mode of preventing even the suspicion of partiality in the judges would require more consideration.

7327. Have you considered the question, whether there should be any judges at all?—I should wait till I saw the number of pictures that were sent; it would be very easy to make those persons who intended to send pictures give notice a month beforehand.

7328. Have you considered whether it would be advisable to receive all works that might be sent in, or only such as were considered good enough for exhibition by competent judges?—That is a subject that would, of course, require to be considered, but in certain cases it would be absolutely necessary to know beforehand how far you should exercise any such authority, for there are evils both ways.

7329. You said, in another part of your evidence, that within the last three years, if proper means had been taken by the existing authorities of the gallery, there have been opportunities of making the English National Gallery one of the finest in the world?—Yes.

7330. Within the last three years?—Within the last three years.

7331. Will you be so good as to mention what those opportunities were which have been thus lost by the trustees?—There have been several collections sold in London that contained a considerable number of very fine pictures. There have been several collections sold in Paris containing fine pictures, and if there had been for three years such an exhibition as I have suggested, I have no doubt that a still larger proportion of fine pictures would have been sent from different countries to that exhibition, so as to supply all that could have been wished.

7332. Will you name one or two of the collections in London, and one or two of those in Paris, to which you allude, that have been sold in the course of the last three years?—I believe Mr. Solly's collection has been sold within that time.

7333. Will you name any remarkable collection that has been sold either in Paris or in London within the last three years?—I have not a catalogue of the sales; I know I have occasionally seen such things; but I should more rely on the annual exhibition than on anything.

7334. But you cannot name any great collections that have been sold within the last three years?—Last Saturday there was a picture bought in for 70 *l.*

or

or 70 guineas, which was a very fine specimen of a master who is not properly represented in our National Gallery.

7335. What picture was that?—A Dead Christ and the Virgin Mary.

7336. By whom was that picture painted?—By Guercino.

7337. Is that the most remarkable picture you can mention that has been omitted within the last three years to be purchased by the trustees?—At the present moment I cannot say that I am prepared to name particular pictures.

7338. Do you know of any case in which an authenticated Raphael has been sold either in London or in Paris within the last three years?—I should have to look over my catalogues to remind me of them.

7339. You are not able from your present memory to mention any one of those opportunities which you think would have enabled the trustees, if they had been diligent, to have made our National Gallery the finest in the world?—I am not in the habit of following sales; but by looking over a few catalogues, I could give you a list. Mr. Labouchere's Ghirlandaio has been mentioned.

7340. Mr. *Vernon.*] You have stated generally that the present trustees have missed great opportunities of making advantageous purchases, but you are not prepared to name what those great opportunities were?—I think what I said was, that in three years I would be bound to make our National Gallery one of the finest in the world; but with greater powers than the trustees possess.

7341. Mr. *Stirling.*] Do you know at this moment a single first-rate picture by Raphael that you could purchase?—I do not know of any at this moment, but I have reason to believe that, besides the Aldrobrandini and Sir Robert Gordon's, one of the finest Raphaels in this country, and perhaps in any (Lord Bute's), might have been purchased for the National Gallery.

7342. What has become of that picture?—It is Lord Bute's still.

7343. Mr. *Vernon.*] Do you propose that your committee of taste should be competent to make, and should be employed not only in making selections of such pictures as they think it desirable to be purchased by the nation, but that they should also be competent to put a price upon them, and to value them?—As the advisers of the trustees, I have no objection to their giving in an estimate of the value of pictures.

7344. If your plan is not to be a mere theory, but is to be reduced to practice, how would you purpose to strengthen the decision of the trustees; through the medium of the committee of taste; would you have a recommendation from the committee of taste brought under the notice of the trustees, not only as to the merit of a picture to be purchased, but also as to the price they ought to give for it?—Both.

7345. You propose that the trustees should consider themselves bound, under a sense of responsibility, by the recommendation of two out of three of the committee of taste?—Certainly not; there must be a discretionary authority vested in the standing committee of the trustees.

7346. Each of the three persons, you say, should have to give his opinion in writing; suppose each of the three gave a totally different opinion as to the quality of a picture, and the price that ought to be given for it, how in that case would you propose that the trustees should act?—There must be a discretionary power vested in the standing committee of trustees.

7347. Then, after all, you do make two committees of taste; you make the council and the trustees a committee of taste, as well as the committee of taste itself?—No doubt, as a court of judicature and a court of appeal.

7348. Therefore you divide your authority into two parts, as it were; is not that so?—But not the responsibility; every person is responsible for his own opinion.

7349. The committee of taste are each to be responsible, you say, for their individual opinions, the body of trustees are to be responsible for theirs; and then you propose that the auditors for accounts shall be responsible also?—Yes.

7350. All on matters of taste?—No doubt; they act as inspectors over others; they are responsible for the opinions they give; those who act directly are responsible for their acts.

7351. *Chairman.*] I thought you meant that the committee, or body of trustees, were to be a mere visiting and controlling body, for the purpose of seeing that nothing was done wrong; according to your present view, I understand they are to be a tribunal of last resort in regard to the purchase of pictures; and they must be upon the spot constantly to give their opinion to the committee of taste, whether a purchase is a good or a bad one?—That is only in case the com-

C. Foggo, Esq.

27 June 1853.

mittee of taste cannot agree among themselves; it is a board of appeal, acting efficiently through the standing committee.

7352. Then in every case in which the committee of taste could not agree about a picture, they would have to consult the committee of trustees as to what they were to do?—Or to suspend the purchase.

7353. Do you consider that two out of three giving an opinion should suffice, or would you require them to be unanimous?—If the concurrence of the superior board, the standing committee, could be obtained, they of course would determine the question, but if it could not be obtained, I should say the committee of taste ought not to be allowed to make the purchase, unless they were unanimous.

7354. Would not these very stages of responsibility act as a great obstruction to the making of purchases at all?—I think the Earl of Aberdeen was perfectly right in wishing to put a check on hasty purchases. I think it is a great deal better not to buy pictures at all than to buy bad ones.

7355. You have heard Mr. Hurlstone's evidence with respect to the site of the gallery?—I have.

7356. Do you concur generally in his views upon that subject?—Very much so.

7357. Have you any particular suggestions of your own to add to what he has already stated to the Committee?—I think I have seen several galleries in which the crowds have been much worse than in our own National Gallery. I know of no place in this country in which the number of visitors is so great as the gallery containing pictures at the Pantheon, in Oxford-street. I have seen no crowds in London greater than those which I saw at Northumberland House in 1851; and the crowds at the Louvre, especially at the opening of the annual exhibition, are beyond anything I have ever witnessed.

7358. Mr. *Vernon.*] You are aware that one day is devoted to the cleaning, the Monday after that crowd?—All that might be easily managed here; at the Pantheon, which is one of the best kept places of all, the number of persons, taking the whole year through, visiting that place would be about double the number who visit the National Gallery; and the place is all swept in ten minutes every evening.

7359. Are you not sensible of any inconvenience that has accrued to the appearance of the pictures from those crowds?—I am not sensible of any inconvenience that has accrued to the pictures from the number of persons who have availed themselves of the opportunity of seeing them.

7360. Lord *W. Graham.*] Are there not many pictures at the Pantheon as to which it does not much signify whether they are injured or not?—Whether a picture be a good or a bad one, the effect of the atmosphere upon it would be the same.

7361. *Chairman.*] With regard to the question of smoke; you were present, were you not, when the result of Mr. Faraday's experiments was communicated to the Committee?—Yes.

7362. Did it not appear to you that the effect pointed out by Mr. Faraday of smoke upon the paint, where the varnish was imperfect, and where it did reach the paint of the picture, was some evidence that pictures were liable to damage from smoke?—I can only regret that a man of the talent and experience of Mr. Faraday should not have been carried further into the inquiry; one or two experiments on a subject of this kind are by no means satisfactory; Mr. Faraday stopped in his experiments merely at the effect of mastic varnish in protecting the paint on the pictures, and the inadequacy of the original mode of applying mastic varnish in cases of cracks; the extreme case of shutting up a picture in a box filled with sulphuretted hydrogen gas is one that bears scarcely any analogy to the state of the atmosphere in any gallery in which there is ventilation enough for human beings to exist; the various modes of varnishing pictures is a matter of the utmost importance to any person who has the management of a picture gallery; most of the witnesses have informed the Committee that certain varnishes only can be used with propriety, and that certain others ought never to be used; any varnish may be used with comparative safety on a picture, unless it is what is called a spirit of wine varnish, which will tear the picture to pieces; but copal varnish, which is said to be irremovable, may with safety be put on a picture, provided you use something between the varnish and the surface of the picture that will prevent the copal varnish from adhering to the surface of the picture; I

have

have myself an instance of several coats of copal varnish being entirely taken off a picture, which has appeared then as pure as it could be.

7363. What is the substance that you allude to as being placed between the copal varnish and the surface of the picture?—A good coat of isinglass, or any gelatinous substance that is not affected by the composition of which the copal varnish is formed; if you take an oil copal varnish, which is considered the most terrible and irremovable of all, it will not sink through isinglass, and you may take the copal varnish clean off the picture, the varnish never having adhered to the surface of the paint.

7364. I understand you to say, that as a protection against any injury that might arise to the pictures from the penetration of smoke or effluvia, you would adopt the plan of varnishing with copal, as the firmest and most impenetrable varnish, using the precaution of putting isinglass between it and the surface of the picture?—I would advise that the isinglass should fill up the cracks, so that the mastic varnish would prevent the smoke or sulphuretted hydrogen gas from penetrating those cracks, and so getting down to the paint, because Mr. Faraday's experiments generally proved that mastic varnish was a perfect protection to the paint if it covered the surface, but if there are cracks the varnish does not penetrate those cracks, and therefore does not protect the small interstices, though it would do so if some gelatinous substance were used preparatory to the varnish.

7365. Provided you kept the cracks which are apt to arise in the mastic varnish constantly filled up by the innocent application of isinglass?—Yes; sufficient to cover the picture which you wish to protect from the sulphuretted hydrogen.

7366. What was your object in bringing before the Committee the copal varnish?—I wished to select the most terrible of all varnishes that could be applied to a picture, and show that by a careful preparation it would be removable.

7367. Then I understand your object is to show the Committee that you consider the objection to the site of the gallery, as shown in the experiments of Mr. Faraday, by the penetrating of the smoke through the cracks of the varnish, might be completely obviated by carefully filling up such cracks as arose in the mastic varnish by means of isinglass?—Yes, besides which I should observe, that the good ventilation of the gallery would preserve such pictures, under ordinary circumstances, from any effect like that which Mr. Faraday showed upon that occasion.

7368. Lord *Seymour*.] Do you propose that the whole surface of the picture should be covered with isinglass?—I do.

7369. The surface of all the pictures in the gallery?—Before the varnish is put on.

7370. Whenever a picture is to be re-varnished, you would have the whole of the surface covered over with isinglass?—Yes.

7371. And over that you would apply pure mastic varnish?—Yes.

7372. With no oil?—No oil.

7373. You object to the admixture of oil?—Decidedly.

7374. Do you think that if isinglass were put over a picture there would be no danger of injury from the mixture of oil with mastic varnish?—I could remove the varnish, but I could not prevent it from becoming dingy from the absorption of oxygen by the oil.

7375. As I understand you, you would cover the surface of each picture with isinglass, and then over that you would spread the mastic varnish?—Yes.

7376. *Chairman*.] Would the mastic varnish, when it became aged, not crack at all in consequence of the isinglass being below it?—Mastic varnish is not liable to crack if properly applied.

7377. If mastic varnish is not liable to crack, what is the use of putting isinglass on the surface of the picture to obviate the danger arising from cracks?—I am supposing you wish to remove the varnish, which appears to be one of the most desirable things, and I said, with reference to certain varnishes which are supposed to be dangerous, that by putting that gelatinous substance underneath, you could more easily remove the varnish, and also to overcome the difficulty suggested by Mr. Faraday, when cracks already exist.

7378. I was asking you with respect to the danger arising from smoke penetrating into the cracks of the mastic varnish, assuming that mastic varnish, like other varnishes, was liable to crack; Mr. Faraday showed, or fancied he showed,

that danger resulted from the penetrating of smoke through the cracks of the varnish; you say that mastic varnish is not liable to crack; then in that case there would be no such danger, in your opinion, as that which he supposes?—My object is to show, that if isinglass were used, you would in general remove the varnish more easily, and you could also by the same means put something into the cracks, and fill them up so as to enable the picture to receive the mastic varnish.

7379. Suppose that mastic varnish does crack after it has been a long time on a picture, and that that picture is exposed to the influences which have been pointed out by Mr. Faraday, do you mean to say, that the isinglass below the mastic varnish would preserve the picture from those influences?—You must, from time to time, partially renew the mastic varnish; and when you do so you will not get the mastic varnish into the cracks, but you would get the isinglass into the cracks, and over that isinglass the mastic varnish would be a perfect protection to the picture.

7380. But if the mastic varnish were cracked, you are of opinion that the smoke that Mr. Faraday alluded to might penetrate through the cracks and settle on the surface of the picture?—Certainly, unless there was something to protect it; but I should fill up those cracks first with isinglass, and then over that I should put mastic varnish.

7381. You think that would be a sufficient protection?—Yes.

7382. Do you consider that the experiment made by Mr. Faraday of concentrating those noxious influences into one dense mass, with a smaller amount of natural air than there usually is, was a fair experiment?—I should think it a very extreme experiment, and I should think that no pictures ought to be exhibited in a room so ill ventilated as not to be healthy to those who visit it.

7383. Do you think that the effect of such a powerful concentration of noxious influences for a particular time on the surface of pictures is a fair test of the influences to which pictures are exposed, where those noxious influences are diluted with a larger proportion of atmospheric air?—I think it very far from being a fair test; I should say it is as bad as testing the atmosphere of a fever hospital with that of any other kind of hospital.

7384. Or concentrating one of those gases which we breathe daily, and putting a man into it, the consequence of which would probably be that he would not live?—Certainly; neither could he live if it were forced into his lungs by means of an air-pump.

7385. If that gas were not thus concentrated, but blended with the usual amount of atmospheric air, no evil would be produced?—No.

7386. And on that account you do not think it a fair test?—Certainly; it was an insufficient test, though very conclusive on one point; the protection afforded by mastic.

7387. You have alluded to the effect of crowds upon the pictures?—I have thought much of the effect of crowds; it appears that such a number of persons visiting the National Gallery as amounts to an inconvenient crowd, does not occur 20 days in the year; I learn that from the attendants. It appears from the evidence that there is room generally in those apartments for children to be at play. We cannot then suppose that the crowds are generally very dense. Positive information tells me that it is not 20 days in the year that crowds occur; that is, in Easter and Whitsun week, and on occasions when there are large parties coming by railway to visit London from the provinces; now, ladies and others, who complain that they cannot visit the National Gallery on account of the crowds, have therefore a very large portion of the time pretty well to themselves; and that will account for the statement of witnesses, artists and others, that they are never inconvenienced by the crowd. Although the average may be 3,000 a day, I apprehend that on most days in the year the number does not amount to 1,000, or anything like it.

7388. Do you consider that the unpleasant effluvia or atmosphere of the National Gallery, of which most persons visiting it are sensible, arises from defective ventilation?—Yes, decidedly. It has been complained of in several reports, and Mr. Hume individually has complained of it; and although it was partially remedied in the two small rooms, yet it has never been done to the satisfaction of the attendants. As a proof, however, that the pictures do not very greatly suffer from that cause alone, unless placed there newly varnished before it is dry, I may mention that the Hogarths, the Wilsons, and even the Reynolds, that were removed previous to 1851 to Marlborough House, are still in as good condition as ever, although

although it is said that there the ventilation is very bad, and at times the crowds are very great.

7389. Have those pictures been varnished with pure mastic varnish, or with oil and mastic?—I should say that the Hogarths appear as perfectly fresh as if they never had any oil on them.

7390. You have heard Mr. Hurlstone's objections to the removal of the gallery to another site; do you concur in his objections?—Perhaps more strongly do I entertain those objections than Mr. Hurlstone does. The interest I have taken for many years in the improvement of the working classes by exhibitions has led me to consider the circumstances of those classes more than it is likely Mr. Hurlstone has done, and I perfectly agree with that beautiful opinion expressed by Sir Robert Peel, when the National Gallery was first proposed, that placed in the centre, and in the full stream of London industry, persons of various classes would all meet in mutual good will; and I do think that to remove it from the centre, through which everybody at times has to pass, and where many men who cannot afford to spend a whole day in going after a picture, can for a single half hour just go and see what the nation has done for the enjoyment of the people, would be exceedingly injurious and imprudent.

7391. Have you heard of any great expression of opinion among the classes to which you allude, or are you aware that they have ever expressed a dislike to the idea of the gallery being removed so far, or entertain any feeling that it would be a loss to them if it were transferred to the suburbs or neighbourhood of London?—In consequence of the subject being discussed at the Royal Institute of British Architects, and an almost unanimous opinion being expressed unfavourable to the removal, I did consult working men in different parts of the town upon the subject.

7392. At what period was that meeting held to which you refer?—About six months ago; I found that generally there was a very positive dislike to the removal. A large number of the working classes live principally eastward and south; for them to come to the centre of London might not always be a serious inconvenience to them; I mean not merely on Sunday, but on Monday, which is a half holiday with many of them; but for them to take vehicles first to Charing Cross, and then onward to a great distance, would be not only shortening their time and opportunities, but adding to their fatigue and expense, thereby making it impossible for them to take their families; they would also be deprived of the enjoyment they would otherwise have in seeing the pictures, from the listlessness and feverishness that would ensue after so much exertion.

7393. Under what circumstances did the society of architects, to which you allude, bring this subject under consideration at one of their meetings?—It was in consequence of a paper that was read by Mr. Charles Harriott Smith, relative to the possible enlargement of the National Gallery.

7394. Was that paper read as an architectural problem, or had it special reference to the question whether the National Gallery should remain where it was or go elsewhere?—It was without any reference to the removal of the gallery; it was an architectural suggestion.

7395. How came the question of the removal of the gallery to be mooted in connexion with another subject?—The chairman, Mr. Mocata, one of the vice-presidents of the institution, stated that it would be unnecessary to enter into certain discussions that were taking place, if it were proved that the atmosphere of the present site of the National Gallery was injurious to pictures, inasmuch as to go to the expense of enlarging the gallery when the gallery would have to be removed, would be, of course, absurd. The enlargement which was suggested was the alteration of the present premises, and converting the workhouse into rooms, by which means there would have been about 10 rooms gained, most of them about 100 feet by 45.

7396. Was it the intention of the institute to make any communication to the committee, or to instruct anybody to give evidence upon that subject?—Not at all. There was no expectation of this Committee then.

7397. Did the proposition to which you allude take into consideration the question of the removal of the barracks, which are also in the neighbourhood of the gallery?—I think not; the additional space, which it was suggested might be obtained, was very considerable indeed. There was another plan, which would make a covered way over one-third of the barracks, and if that were done I think it would be very beneficial.

G. Foggo, Esq.

27 June 1853.

7398. Mr. *Vernon.*] If your suggestion were to be carried out of bringing the cartoons of Raphael from Hampton Court, and the large painting on the ceiling, by Rubens, from Whitehall, into the National Gallery, you must be prepared to have a very large building, must you not?—I am so.

7399. Do you consider it more important to bring those pictures from their present positions, where they are still objects of great interest to the public, than to look to increasing our National Gallery by the addition of a great variety of smaller pictures?—I do not think the National Gallery should have a great variety of small pictures; I think the trustees should have a higher object than that of collecting small pictures.

7400. You do not seem to see any great advantage in persons being employed in foreign countries to look for pictures; do I understand you to say so?—I should make it a secondary consideration, for I think the opportunities of purchasing good pictures would be sufficient without that.

7401. Are you aware that with regard to various pictures which are considered to be the most valuable and most authentic in foreign countries, there is great difficulty in their leaving the country at all?—I apprehend that they would leave the country much more easily if we had such an annual exhibition for purchase as that which I have suggested, as a good and sure market for fine pictures.

7402. Do you think that persons would, as a matter of mere speculation, send their pictures to this country to be so exhibited when they knew that they would incur a liability to penalties for so doing in their own country?—Very fine pictures have always found their way here. There was a collection belonging to Mr. Day, who had been consul at Lucca, or somewhere in that neighbourhood, and he could get away very large pictures from Italy.

7403. How long ago was that?—Twenty-five years ago.

7404. Are you not aware, that within the last few years much greater restrictions have been imposed in foreign countries in consequence of an endeavour which they have been making to form galleries in provincial towns?—Yet there have been proposals made to the National Gallery trustees for the sale of whole collections of pictures.

7405. *Chairman.*] Are you unfavourable to the combination of our art collections?—I think that some of the exhibitions abroad fully prove the bad effects of immense collections. The head always gets confused when you are trying to see such a collection as that at Versailles; there you see some individuals running about, and others are impatient at not being allowed to turn back to that which they have but half considered.

7406. Do you think there is any greater inconvenience in going twice or thrice to see different branches of a collection in the same building, than in going to three or four different buildings in different parts of the town to see them separately?—I think it may be compared to a good dinner any day of the week, or a surfeit once a week.

7407. You think that sculpture, paintings, drawings, and so forth, being in contiguous buildings, and in separate apartments, is objectionable?—I think so. I think it would be more convenient to go to one part of the town on one day, and to another part on another.

7408. Lord *Seymour.*] I thought you said you would bring the cartoons from Hampton Court to the gallery?—I did not positively say that; but I mentioned especially the pictures now at Whitehall. The question of cartoons would involve another consideration.

7409. But you would bring the Rubenses from Whitehall?—Certainly.

7410. Why should not people go to Whitehall to see the Rubenses?—I stated that it appeared to me that there was as much disadvantage in having a great number of very small collections as in having one large ungovernable collection, and that the pictures at Whitehall at present are most improperly placed there, as they cannot be appreciated in such a situation. I said that such pictures in a chapel were not in their proper position, and that they would be much better in the National Gallery.

7411. *Chairman.*] Mr. Hurlstone exemplified his objection by the case of the Vatican, which is well known to be a very confused collection; do you think that the same objections would apply to a building specially constructed for the purpose; where each person would select that branch of art which he wished to examine, and might return another day, and visit another branch; do you think there would be any greater objection to that than there would be to going to one part of the town

town one day to see one branch of art, and to another part of the town on another day?—I am perfectly aware that method will remedy many evils, but I am also fully acquainted with the desire we have for quantity and multiplicity, and that that creates a national vanity rather than a taste.

7412. Mr. *Vernon.*] In the Louvre there are several departments, each having a separate entrance, are there not?—But you never see persons enjoying those things with moderation.

7413. *Chairman.*] Do you not think that the advantage of forming a comparative judgment would, to persons who have a real taste for art in all its branches, tend to compensate them for the objection you allude to in regard to the contiguity of the collections?—No persons connected with the profession ever like the appearance of sculpture with paintings.

7414. Not even in a separate building?—They may go at different times, but the appearance of a statue after looking at pictures is not the same thing as it otherwise would be. You have to prepare your mind to get over the absence of colour, and the deficiency of imagination, the human eye, when seen with all its liquidity, motion and transparency, is very different from what we see in the Venus de Medicis.

7415. Is it not the fact, that in the lives of great masters, and looking at the progress of art, we can distinctly see where the higher models of Grecian sculpture began to exercise a power over the genius of those men, and is it not desirable that a man looking at the pictures of Raphael, Michael Angelo, or other great masters of that period, should be able to convince himself of the truth of such influences being exercised, by a visit to the higher specimens of Grecian sculpture exhibited in a neighbouring apartment?—I should think the contrary; I think it would prove that a man of genius did not require those vast collections; by seeing a few fine specimens besides those produced either at his own period, or at periods just introductory to his own, and then referring to nature, he would be much more likely to turn out a fine artist than a man who has merely studied the archæology of his profession. The example of Michael Angelo and Raphael fully proves it.

7416. Might not a person who wished to satisfy himself as to the influence of the antique models on the genius of Raphael, or any great master, be enabled by a visit to the neighbouring Sculpture Gallery to test the truth of that influence having been exercised?—He might, but I do not apprehend that an exhibition of works of art should be made precisely a historical gallery. If I had to be questioned upon that subject, of course a very different explanation would be required.

7417. Lord *Seymour.*] You object to large collections, and you object to small collections?—To either extreme.

7418. Would you reunite the English school, which is now at Marlborough House, with the National Gallery?—They might be readily kept distinct. There was a regulation formerly in Paris, which I thought very judicious, and that was, never to admit amongst old pictures any modern work, until the artist had been dead at least 10 years.

7419. Then you would not have allowed the Turners to come into the gallery under that rule of yours?—To refuse a bequest is of course a thing no man can be expected to do; but I think the presence of those pictures in the gallery is objectionable in many points of view.

7420. As you object to large collections, you would not bring prints and drawings into the same building, I suppose?—I would not.

7421. Then, in short, a much smaller gallery would answer the purpose, if you do not combine in the same building any of those other collections?—Certainly.

7422. Before former Committees of this House you have given evidence, and stated that, with a view to the progress of the working classes in art, you think pictures very desirable?—If well selected, but I think the general tendency of the opinion I expressed was against Government interference in anything that either individuals or combinations of individuals might do for themselves; and I I am extremely sorry to say, that what Government has done during the last few years has pretty well extinguished all the mechanics' institutions.

7423. Then you think that schools of design are bad things?—I am afraid they have done a great deal of mischief. It is pretty clear they have not yet given us that superiority over our foreign rivals that many anticipated; in fact, it is generally supposed that we are greatly inferior to them. But on questions of taste I entertain a different opinion from some others. It appears to me that that

G. Foggo, Esq.

27 June 1853.

is the best taste that is founded upon nature; and I do hold that what is commonly called taste by artists is a conventional regulation altogether, and not a taste founded on nature.

7424. Do you think that pictures bought by the nation, and presented to the view of the public, is a good mode of advancing the people in art?—If they were well selected as representations of intelligence and of beautiful nature, they would certainly do a great deal of good; but when we take pictures in the decadence of art, we are going back to those very periods when corruption and oppression had taken the place of a better system.

7425. According to that view, by which you object to all pictures painted during the decadence of art, there are many now in the National Gallery which you would exclude?—Many.

7426. You would still further reduce the collection, by removing many of the pictures that are now in the gallery?—I would; but at the same time I beg to observe, that though I would exclude many pictures of a corrupting influence, I might find it necessary to have a variety of pictures of some of the finest periods and some of inferior periods, by way of showing what should be avoided, as well as that which should be followed; but I would carry with it information, either by catalogue or other means: that would be instruction to the people.

7427. Do you think it would be any advantage, with a view to the instruction of the people, to present them with museums of antiquities?—There are various individuals, in every class of society, who will turn their minds to objects of antiquity, and although their number may not appear great, they frequently have a great influence on others.

7428. Do you think that the Nineveh sculptures are of any use as tending to improve the taste of the mass of the people?—Information rather than taste; but I think it egregious folly to fill rooms with such masses of works that are in such a condition and such repetitions of the same style.

7429. You think we have too many of them?—A great deal too many; some things selected I think would be far preferable.

7430. *Chairman.*] Have you any further remarks to make of your own?—With regard to the subject of smoke, I would state that there is an Act for preventing or causing the consumption of smoke in the large chimneys of the City of London, which I think might be very judiciously applied not only to Westminster, but to the river. Some years ago I took an interest in the same subject at Manchester, and until they found a loop-hole to creep through, we reduced the smoke there a full third, and a like reduction of the condition of the smoke of London would remove one of the objections of many persons to the present atmosphere of Trafalgar-square. The warm London smoke may be more dense, but the effects of damp and the effluvia of open drains, of ponds and brick fields at the outskirts, are much more dangerous. I should wish also to repeat, that in the administration of a National Gallery, or any other public institution, it is most essential to keep from the administration all persons who have a divided allegiance, or one adverse to the interests of the establishment.

7431. Mr. *Ewart.*] You have recommended the removal of the Rubenses from Whitehall, and the Cartoons from Hampton Court; would you also recommend the removal of the famous paintings of Andrea Mantegna at Hampton Court, which have been so much overlooked in this country?—I have not looked so much into the question with reference to those pictures which, not being oil paintings, might be more easily dinged in their appearance.

7432. *Chairman.*] You objected to Mr. Faraday's experiments as not conclusive; have you heard any professional chemists make any observations upon those experiments?—I should not say professional chemists, but gentlemen well acquainted with chemistry speak of them as perfectly insufficient; and Mr. Faraday, with his usual candour, regretted that artists and men of science had not pursued the subject further.

Jovis, 30° *die Junii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Mr. Hardinge.
Mr. Marshall.	Mr. Ewart.
Lord Seymour.	Lord Brooke.
Mr. Baring Wall.	Mr. Raikes Currie.
Lord William Graham.	Mr. Labouchere.
Mr. Vernon.	Mr. Stirling.
Mr. Monckton Milnes.	

COLONEL MURE, IN THE CHAIR.

William Dyce, Esq., R.A., called in; and further Examined.

W. Dyce, Esq., R. A.

30 June 1853.

7433. *Chairman.*] I BELIEVE you have paid a good deal of attention to the state of the National Gallery, and its management?—I have.

7434. You are the author of a pamphlet on the subject, in which you expressed opinions as to defects in the existing system; do you still retain the opinions you there expressed?—Yes; I have not seen any reason to change my mind with regard to the views advanced on the particular points adverted to in that pamphlet.

7435. What do you consider to be the principal defects of the present system?—There has been from the beginning the want of a proper definition of the duties and responsibilities of the committee of management, and the officers employed under them; but I conceive that there are radical defects in the constitution of the management. The apparatus is too cumbersome for its purpose, and is not sufficiently capable of adapting itself easily and readily to circumstances.

7436. Do you object to an unpaid board or committee of management?—Yes; that I think is another objection that may be made against the Board of Trustees, which has been liable to all, or at least most of the defects which seem always to attach to unpaid committees of management consisting of large numbers.

7437. You speak of the present system as being cumbersome; do you allude to the number of trustees, or to the constitution of the trust?—To the constitution of the trust; but the largeness of the numbers is an element that must not be forgotten on account of its tendency to render the transaction of business more difficult.

7438. Would you propose to do away with the system of trustees altogether?—Yes, most distinctly.

7439. What would you substitute in its place?—I should be inclined to substitute an individual responsibility.

7440. Do you mean you would place the principal management of the gallery, subject to the control of Parliament, in the hands of a single person, instead of in the hands of a committee or Board of Trustees?—Precisely.

7441. To whom would you make that sole director responsible?—According to my view he would come in the place of the trustees, and also to a certain extent in the place of the Treasury; he would be the *locum tenens* of the Treasury, if I may use the expression.

7442. Would you not allow the Treasury any control in the matter?—Undoubtedly I should; I conceive this director to be the organ of the Treasury in the management of the institution, but at the same time responsible to the Treasury; there may seem to be something incongruous in that idea, but I believe it is not an inconsistent state of things, that a man should at once be the organ of the Government and responsible to it.

7443. What special functions would you assign to this chief director acting under the Treasury?—His duties would be co-extensive with the purposes of the institution; more particularly, I should say these would be his duties: to draw up, for the sanction of the Government, a scheme for the proper contents of the various collections which the establishment is to contain; secondly, to prepare a scheme for a subordinate management of departments, and to define the specific duties of the officers employed.

W. Dyce, Esq., R. A.

30 June 1853.

7444. When you speak of the various collections which are to be combined under his charge, do you allude to the National Gallery as it stands, or do you assume that there is to be a combination of other art collections?—I assume that the National Gallery is to be more than a mere collection of pictures; I assume that there would be drawings, engravings, and other objects of art.

7445. Your remarks at present do not apply to reforms or improvements in the existing gallery, or to the management of the existing collection, and its extension and improvement as a collection of paintings only, but to a more enlarged scheme?—I think the system I propose would be applicable, whether the collection be confined to pictures and drawings, or extended to works of sculpture and other objects of art.

7446. Will you continue the statement you have to make as to what this gentleman should do?—I propose, thirdly, that he should have the general superintendence of the officers in the discharge of the duties assigned to them, of course with the sanction of the Government.

7447. Would you leave it entirely to him, he being appointed the principal director, to arrange all the subordinate conduct of the establishment, and the number of officers that were to be appointed?—I think so; he would be acting on the part of the Government, in preparing a scheme for the management of the institution.

7448. In short, you are not prepared to suggest a scheme yourself, but you would appoint some person of experience and ability, and let him arrange a new system for the gallery?—I suggest a general idea of the management, and at the same time I would leave the completion of the details to the person who may be appointed according to that scheme.

7449. In the first instance, you would make the chief director responsible for the whole establishment; you would make him responsible for the care of the pictures, for picture purchasing, and for the conduct of his own subordinates?—I will refer to the former of these points presently; I have not included them hitherto.

7450. What other officers would you propose to be associated with him?—Perhaps you will allow me, before answering that question, to finish my answer to the question put to me with regard to the duties of the director; I would say, in the fourth place, that he should prepare from time to time reports on the means and probable expense of obtaining additions to the collections, and with this view have it in his power to employ or recommend the employment of competent persons to procure the necessary information by travelling or otherwise; fifthly, that he should prepare the annual estimate of expenditure for the approval of the Treasury, and accompany it with a full report of proceedings for the past year; sixthly, that he should select works of art for purchase, his own opinion on which that selection is made being fortified, if necessary, by the opinions of competent persons on the merits and market value of such works. Seventhly, that he should decide on, and cause to be carried into effect from time to time, the proper means to be used for the conservation of the works of art contained in the collection; and, eighthly, that he should make regulations, with the assistance of the heads of departments (supposing such heads to exist), for the general purposes of the establishment; such as the times and days for the public opening of the galleries, the accommodation for students, cleaning and ventilation of the apartments, and the like.

7451. You mention that he should select proper persons to travel; do you propose that the persons who are to travel for the purpose of examining and discovering what opportunities of purchase there may be, should be permanent and regular officers; or do you think they should be selected occasionally by him?—I think that may be a question. I should be inclined to divide the staff into permanent officers, and officers who may be occasionally employed. Whether the appointment of these occasional officers should be a permanent one, and the payment made to them only occasional, or whether the parties should be appointed occasionally, and paid when they are employed, I think is a matter of very little importance.

7452. You have alluded to the duties that were to be performed by this gentleman at the outset in recommending and arranging a system for the gallery, and you stated in answer to my question that you would suggest in the sequel what you thought would be the proper class of officers for him to recommend?—If the collection is to embrace objects of art classified under the three great heads of painting,

painting, sculpture, and architecture, there ought to be, I should think, a head of each department; there would, of course, be a secretary, and I should conceive the director would require a clerk or private secretary; and there would also be some necessity, I think, for a librarian; those would be the chief officers of the institution according to the plan I suggest.

7453. Would you require from the chief director that he should furnish any periodical report of the whole state and management of the establishment?—Yes, I think that is highly important; I should say that entire publicity ought to be given to all the proceedings, in order that the public should be acquainted with every step that had been taken.

7454. How often would you propose that he should report?—Perhaps it might be done annually with the estimate.

7455. Should he make his report to Parliament, or to the Treasury?—To the Treasury, and through the Treasury to Parliament.

7456. Do you propose to give him the entire responsibility in regard to purchases of pictures?—Yes.

7457. Would you place him under any positive obligation to take advice from any one?—No; I think it very desirable that he should take advice in all cases, and that that advice should be recorded in an authenticated form, so that those persons who give advice should be bound by it; they would not however be responsible for any proceeding taken upon it. I should consider the director responsible for making a purchase, although the persons he consulted would be responsible for the advice they had given.

7458. What would be the nature of that responsibility as attaching to them?—If a complaint were made of an unfortunate purchase, it would be in the power of the director to say, "This step was not taken entirely on my own judgment, although I believe it to be a right one; here are the opinions of men competent to form a judgment on such matters." I would have these opinions, of course, recorded formally, so that they might be referred to.

7459. That would be a relief to his responsibility, would it not, rather than imposing any responsibility on them, further than their responsibility to him as having been consulted by him?—It would thus be shown for the satisfaction of the public that competent persons agreed with him in opinion.

7460. How would you manage with regard to the measures to be taken for making foreign purchases; would you leave the travelling agent of the chief director full power to make purchases on his own responsibility in the same way that the director would make purchases at home?—I think it would be difficult to lay down beforehand a fixed rule to meet all the different cases that might occur. I conceive that if the director had full power to take the proper steps no great difficulty would arise; I should think he must travel himself at times.

7461. Would you place a fixed annual sum at the disposal of the director, to be applied to the purchase of pictures?—Not a fixed annual sum; but I conceive that an estimate ought to be prepared in the usual way, to be laid before Parliament.

7462. Would it be easy, with reference to the transactions of the coming year, and when it was unknown what opportunities of making advantageous purchases might occur, to fix any estimate as to the sum that would be required?—A pretty large margin might be left, but the average amount could only be determined by experience. Perhaps the experience of the past would be sufficient in the first instance.

7463. When a sum of money was voted by Parliament, would you place it entirely at the disposal of the director, or would you subject him to restrictions?—I presume it would be voted to the department under which the National Gallery was placed, and there would be no difficulty in laying down such regulations as the case required.

7464. It would be voted to the Treasury, to be given to the director on his application from time to time?—I presume so.

7465. But you would not place any funds in the power of the director, so that if some sudden opportunity of purchasing a valuable work occurred, he might, without the necessity of appealing to the Treasury, avail himself of his own judgment and discretion in taking advantage of that opportunity?—I suppose him to be an officer of the Treasury, and to have constant opportunities of taking advice when he considered it desirable to do so; in ordinary cases he would act on his own judgment.

W. Dyce, Esq., R. A.

30 June 1853.

7466. In what sense would you say he was an officer of the Treasury?—He would be an officer appointed by the Treasury to manage the National Gallery, which is an institution placed under the superintendence of the Treasury, very much in the same way as the secretary to the new department of art is an officer of the Board of Trade.

7467. Would you propose that he should be under any restrictions or injunctions as to the class of works of art that he should purchase either generally or from time to time?—I am supposing that a scheme has been agreed upon. One of the first steps on the part of the Government would be to agree on a plan for the formation of the gallery, and to decide of what it is to consist; that being agreed upon, it would be the business of the director to carry out the scheme.

7468. Assuming that the director, as a man of taste and knowledge of art, is to have the chief power and responsibility; and as the Lords of the Treasury might not themselves be very good judges of art, would you leave it entirely to the discretion of the director as to the class of works he should recommend to be purchased, or the different schools of art to which a preference should be given?—I think so, it being understood that he was only to recommend works in accordance with the plan that had been laid down.

7469. It has been said, that one of the difficulties of a single individual being empowered to purchase might be, that he might have a predilection for certain schools or classes of works of art which might not perhaps be the most desirable?—I think that I obviate that difficulty by obliging him to proceed according to a predetermined scheme.

7470. Which scheme should embody suggestions as to the particular branches, or works, or schools of art which it was desirable should be procured as additions to the collection?—Yes; in considerable detail it should specify the probable contents of the various parts of the collection.

7471. You have also, in your published work, made suggestions as to the mode of carrying into effect the historical and chronological principle in the arrangement of the collection?—I have touched on the subject very slightly, though I have laid it down as a primary rule in the formation of the National Gallery that the historical arrangement of the works should be had regard to.

7472. You insisted that an endeavour should be made, as far as possible, to show the origin and progress of a school of art, independently of showing the excellence of its highest and most perfect works?—Yes.

7473. What is your opinion with regard to the question of combining the art collections in one great repository?—I am greatly in favour of such a combination; I have not heard any reasons urged against it that might not very easily be answered.

7474. What portion of the British Museum collection would you comprehend within your scheme; would you take the whole of the objects of art and antiquity, or would you make any distinction between what might be embodied in the repository to which you allude, and what might perhaps be left for other departments of the Museum?—I fear I am scarcely prepared to give a general reply to that question, which is one of some difficulty.

7475. Would you draw any distinction between objects of antiquity, in the stricter sense, and objects of fine art, in regard to ancient classical works?—I think that in the formation of a National Gallery, art ought primarily to be had regard to; ancient works of art, because they are ancient, necessarily belong to some department of archæology; one cannot avoid the archæological view, to a certain extent; but still I think the principle of an artistic arrangement of the collection might be kept in view.

7476. Assuming that the plan of having a combined collection were to be carried into effect, would you propose that the chief director should have an authority and influence over all the branches and works of art similar to that which you propose to give him over painting in the present state of the gallery?—I think so; I do not see any great difficulty in his undertaking such superintendence; I suppose he would receive able assistance from the heads of the departments; those officers would have functions corresponding in some degree to those of the present keeper of the National Gallery, or rather of the superintendents of departments in the British Museum.

7477. You would propose that he should be responsible for purchases of every description, not only pictures, but every class of ancient sculpture, Greek, Egyptian,

tian, or Syrian, or as it might be; you would have all those things purchased on his responsibility, but with the advice of his assistant officers?—Yes.

7478. Would you give any immediate and direct responsibility to the heads of those departments, further than their responsibility to him?—I would make them responsible for the fulfilment of their assigned duties, and for their opinions, those opinions being recorded in an authentic form.

7479. Would you have a library attached to the institution?—Yes.

7480. What class of works would you propose it should contain?—My general idea of the whole collection would be this: that it would be divided into three departments; the first, under the head of painting; the second, of sculpture; and the third, of architecture. The department of painting I think ought to consist of two sections; one the picture gallery, and the other the library. The picture gallery would contain pictures in oil, fresco, and tempera; those pictures being either originals or copies; and the library would consist, first, of engravings, copper-plate and wood-cut, including engravings of works in foreign galleries, histories of, and treatises on art, and on subjects related to it; in short, it should be a complete library for the use of students of art. The second part of the library would consist of original drawings and designs, and such illuminated manuscripts as were chiefly valuable as works of art.

7481. In the case of a work on general literature, or on historical subjects, or subjects not specially connected with art, but which contained very valuable and important engravings, would it not be rather a difficult question to determine whether that work should be placed in the collection of engravings, or should remain in the national library?—I think it would be very possible to decide that, and other questions that might arise in the management of the institution.

7482. You would decide those questions according to circumstances?—Yes.

7483. Would you have lectures delivered in the establishment?—Yes, I think there might be lectures. In the department of the sculpture I should place, first, marbles, including statues, bassi relievi, and generally sculpture in stone; secondly, bronzes, including statues, bassi relievi, vases, cups, and generally sculpture in metal, and also medals and coins; thirdly, ceramic and partly painted sculpture, including terra cottas, and Raffaelle ware, glazed sculpture of the school of Luca della Robbia, Etruscan vases, &c.; fourthly, sculptures in wood, ivory, and the precious stones and metals; fifthly, casts in plaster of sculptures in all materials, the originals of which cannot be obtained. Then in the department of architecture I would place first, fragmentary architectural remains, such as capitals and bases of columns, details of ornament, mouldings and the like; secondly, models of celebrated buildings, and models and drawings illustrative of the history of architectural construction and decoration, accompanied by plaster casts of details from existing specimens; thirdly, original designs and models of buildings.

7484. Would you propose to have in the pictorial department any copies of first-class paintings not in the possession of the nation?—I am not sure that I should be prepared to encourage the systematic purchase of copies for the collection; but certainly some copies are highly desirable, and even possess the value of originals.

7485. Lord *W. Graham.*] Do you mean copies by old masters?—I refer to both ancient and modern copies. In a case, for instance, in which the original has perished, even a modern copy may acquire great value; but there are also ancient copies which are highly interesting on that and other accounts. For example, the Royal Academy possesses a copy of the "Last Supper" of Leonardo da Vinci, painted by his pupil, Marco d'Oggione, which probably presents to us the effect which the original work would have had, if it had been better preserved.

7486. *Chairman.*] Does it not appear to you to be desirable that that portion of the public who never may have an opportunity of seeing a picture like the Madonna di San Sisto, the Transfiguration, and other more celebrated works of art, should, by means of good copies, have an opportunity of forming a judgment upon them, by seeing them represented in copies in our National Gallery?—It may be desirable; but the idea seems to open a new view of the matter which one rather shrinks from.

7487. Has not that question been discussed a good deal among people who are interested in the future arrangement of our art collections?—I am not aware that it has been much discussed.

7488. Mr. *Vernon.*] Which would you prefer, a first-rate engraving from such

W. Dyce, Esq., R. A.

30 June 1853.

a picture, or as good a copy as you could obtain?—A good copy is always better than an engraving; engravings and copies of pictures, and casts of statues, seem to me to stand in the same category; a cast in plaster is, however, a more adequate representation of the original work than the copy of a picture is, and the copy of a picture more accurately represents the original picture than an engraving does.

7489. With reference to the picture that has been alluded to by the Chairman, of the Madonna di San Sisto, do you consider that as good a copy as could be obtained of that picture would be more valuable than the engraving by Müller?—I think a copy, supposing it to be in its way as meritorious a performance as Müller's, would be preferable.

7490. *Chairman.*] What is your opinion with regard to the present site of the gallery?—I think it is not well adapted to the purposes of the National Gallery.

7491. What are the objections which you entertain to it?—There are many objections; but that which naturally occurs to me first is, that there is not space enough in that locality for such a building as this nation ought to erect for a national collection of works of art.

7492. You are not of opinion that sufficient space could be procured on that site?—I have read over the evidence given by Sir Charles Barry and others on that subject on a former occasion, and it seems to me they have solved very ingeniously the problem which was submitted to them; but, probably, if it were put to them whether they would prefer erecting an entirely new building, they would entertain very little doubt on the propriety of doing so in some more eligible locality.

7493. Assuming that question to be disposed of by professional gentlemen, architects and others, what further objection would you entertain to the present site of the National Gallery?—There is a great objection arising from the bad air and the quantity of smoke by which the pictures are surrounded, circumstances which render the necessity of cleaning much more frequent than would be the case if they were in a better situation; then the building, I believe, cannot be properly ventilated. It has been stated to the Committee, I understand, that the smoke comes in in such quantity, that the windows cannot be opened with a view to the proper ventilation of the rooms.

7494. Mr. *Vernon.*] Is not the present building much lower than the adjacent houses?—It is lower than the Union Clubhouse, and lower, if I mistake not, than St. Martin's Church; I think it is lower than most of the buildings surrounding it.

7495. *Chairman.*] Do you think that the objection to smoke, as being injurious to pictures, applies more peculiarly to the pictures of the National Gallery than to the collection at Northumberland House or Sir Robert Peel's mansion in Whitehall Gardens?—The collection in the National Gallery is more exposed to the influence of smoke than those galleries are; they are placed generally in the same circumstances, but are not opened to the public so frequently as the National Gallery. I think it is possible to regulate the economy of a private house, so as to prevent many of the bad effects to which a public building is liable.

7496. Mr. *B. Wall.*] Then it is not smoke that you complain of?—Smoke is one of the elements of complaint.

7497. In answer to the last question put to you, you say that these private galleries are not so subject to the influences of smoke as the National Gallery is, because they are not so often opened. I apprehend, therefore, that it is not the smoke that you complain of, but the concourse of people?—If it were necessary to ventilate the gallery at Northumberland House, the servants could choose their own time for doing it; they would not open the windows when they saw smoke coming from the steamboats on the river, or if they were open they would shut them to prevent its entering; but, in the case of the National Gallery, the rooms must or ought to be ventilated every day while the people are there; there is no choice on the part of the attendants; they must either keep the windows shut altogether, or open them at any time when fresh air is necessary.

7498. Lord *W. Graham.*] In the collections of private gentlemen it is not necessary to open the windows so often as it is in the National Gallery?—No; and the time for opening them can be chosen.

7499. Mr. *Ewart.*] Do you attach most value to the objection of the great crowd who frequent the National Gallery, the heat, the dust, and the exhalations which

which are stated to arise from them, and the adhesion of the dust to the paint?—I think there is no doubt that that is one great cause of the injurious effects produced upon the pictures.

7500. *Chairman.*] Do you observe any greater effect produced by smoke in the National Gallery collection than in other collections in London?—No; but I think that the effect of smoke generally is an objection to having the gallery at all in London.

7501. If you do not observe any greater effect in the National Gallery than you do in other collections, is not that rather practical evidence that the collection in the National Gallery is not exposed to more injury from smoke than those other collections are?—I have already said that those other collections are not so frequently opened to the public, and that, therefore, precautions can be more easily taken against the effects of smoke than is possible in the case of the National Gallery.

7502. If you are of opinion that the National Gallery pictures are not more injuriously affected than those pictures which are contained in other galleries, does not that rather neutralise the objection to the present site of the gallery?—I meant my observation to be very general; what I meant to say was, that in my opinion the centre of London is a bad locality for the preservation of works of art; it is difficult to trace the gradual effect of smoke in blackening works of art, but after a time one becomes sensible of it.

7503. Do you not think that the peculiar varnish which has been used for some years in the National Gallery, and is now on a large proportion of the pictures, may have had a tendency to produce the effect which is generally attributed to smoke alone?—I have already spoken of the effect of the varnish which has been used; I attribute the brown colour which one sees on many of the pictures in the gallery to the use of that varnish; but I have no doubt that much of the dirt deposited on the pictures is the effect of smoke.

7504. A member of the Committee asked you as to the great crowds who frequent the gallery; are you of opinion that those crowds consist of people who are desirous to see the pictures, or do you think they are composed in great part of mere idlers?—I am not able to say; I presume they are all more or less desirous of seeing pictures.

7505. Do you not think that the principle of allowing general access to our great collections of art, which is now adopted very universally, is a beneficial principle, and that it would not be desirable to restrict the number of persons who go into the gallery for the purpose of seeing the pictures?—I should be very sorry to appear to doubt the advantage which the generality of people derive from seeing works of art; but I think an extreme view of it is taken in this country which is not warranted by the example of other countries, where they admit the common people less frequently to galleries than we do; and if it be found that the admission of great crowds of people is really injurious to works of art, it becomes a question whether some restriction ought not to be imposed.

7506. That would apply to the restriction of not admitting great crowds at the same time; but you would not interpose serious difficulties in the way of certain classes visiting the gallery, to which difficulties other classes were not exposed?—That is a question upon which I am not prepared to offer any suggestion.

7507. Do you consider that the crowds who frequent the gallery, and which are naturally larger on that site than they would be on another further removed from the centre of London, form a serious objection to the site of the gallery?—No, I should not consider that as an objection, because I apprehend that if it were determined that the gallery should remain in its present site, some means would be adopted to obviate the bad effects arising from the reception of large crowds.

7508. You heard a question put to some of the previous witnesses as to the expediency of having some office in the neighbourhood, where persons who were desirous of seeing the gallery might obtain a ticket, which should be freely granted, merely as a check upon idlers running in, not to see the pictures, but for other purposes?—I think that such an arrangement would be very advisable; at all events, I see no objection to it; it is adopted in the case of the Dulwich Gallery, and some others that are publicly shown.

7509. What is the principle of admission to the Dulwich Gallery?—I think that tickets are to be obtained at the shops of different printsellers, and in certain other places in London, and at Dulwich; no one is admitted, I believe, without a ticket.

W. Dyce, Esq., R. A.

30 June 1853.

7510. Do you see any objection to the removal of the gallery, assuming it to be advisable that it should be removed, on the ground of air and locality, to any distance from London, or from the centre of London, on the ground that it would render the gallery less accessible to the people at large?—I confess, I do not see any objection arising on that ground; it is very difficult to say what is the centre of London. I think that, generally speaking, if you asked a man what was the centre of London, he would say the centre of London was that part of it in which he lived; supposing the National Gallery to be removed to Kensington, if a line were drawn north and south from Waterloo-bridge, I am inclined to believe that that part of London which was cut off to the west, would include the vast majority of those persons who are very likely to frequent the National Gallery.

7511. Do you think that people living at the east end of London are even now not much in the habit of visiting the gallery?—I think they are not.

7512. But you think it should be an object, do you not, to encourage them to visit our art collections?—Yes.

7513. And you would rather hold out motives to them to go there, than to stay away?—Yes.

7514. Would not the removal of the gallery further off tend to confirm their habitual absence rather than promote their presence in the gallery?—I am not sure that it would; it may appear very paradoxical, but when a thing is near us, and can be seen at any time, we are very apt to neglect it, whereas, when it is a little distance off, we make an effort to see it.

7515. Do you not think that removing it to any distance would be attended with inconvenience to copyists and artists?—No; there are already many artists who live at Kensington, and in that neighbourhood; and, if the gallery were removed to that quarter, the number would probably increase.

7516. Are you favourable to glass as a protection to pictures?—For small pictures it seems to me to answer very well; the great objection to it is, that it prevents pictures from being seen perfectly.

7517. You are not favourable to adopting a general or universal plan of covering the pictures in the National Gallery with glass as a protection against smoke or noxious effluvia?—I do not see very well how it can be accomplished.

7518. Suppose it could be done?—Suppose it could be done, other conditions being complied with, I think it is desirable.

7519. Has it not been done in the Dresden Gallery?—I understand it has in one instance.

7520. I presume that if it has been done there with success, in the case of the largest pictures, it might be done to almost any picture in our own collection?—I am not aware of the state of the case at Dresden; I understood that it was only applied to one picture there, the picture of the Madonna di San Sisto by Raphael; that I imagine is not so large a work as the picture by Parmegiano in the National Gallery.

7521. You are not aware that the directors of the Dresden Gallery, in a return made to the Government, have stated the desirableness of using glass, and that the plan pursued in the gallery there, is as far as possible to cover the pictures with glass?—No, I have not heard of such a return.

7522. If the pictures could be wholly covered with glass, that I presume would be a complete remedy for the injuries resulting from the smoke and effluvia?—I imagine it would.

7523. Have you any objections on your own part, as an artist, to covering large pictures with glass, beyond the difficulty arising from not being able to see them perfectly when they are so covered?—No.

7524. Does that objection not apply to every picture, small as well as large?—Not so much to small pictures, because small pictures may be looked at from a nearer point of view, and in that case the effect of the picture is stronger than the effect of reflections on the glass.

7525. The same objection exists, although in a slighter degree?—Yes; I may take this opportunity of mentioning to the Committee that there is a mode of preserving pictures which has not yet been applied, but which I think is worth considering; an old writer, Armenini, describes a varnish which was used by Correggio and Parmegiano for the preservation of their works, which seems to me to present some qualities applicable to this case; it is a varnish which is extremely lustrous and soft, so that it may be applied to a picture over the surface of an old varnish, and be again removed by a solvent which will not affect the varnish underneath.

I have

I have thought that, supposing a picture to be in a sound condition, say the picture that was bought the other day by the trustees of the National Gallery, supposing it to be in a good condition, or to be in the condition in which it is wished to preserve it, if that picture were varnished with the varnish which is described by Armenini, it might be removed every year and renewed again, and by that means deposits of smoke or dirt might be removed with the varnish, and the picture remain always in the same state. This varnish would give a glossy surface to the picture every time it was renewed.

7526. You are assuming the picture to be already covered with a good coat of ordinary mastic varnish, are you not?—I assume it to be in the state in which you wish to preserve it; I am supposing it to be already varnished.

7527. Supposing the picture to have at this moment a good coat of varnish, and that you wish to preserve it in its present state, you would put the varnish, of which you speak, over the coat of mastic varnish?—Yes, and remove it and renew it from time to time.

7528. The upper varnish would preserve the lower, and might be removed from time to time, the lower varnish always remaining entire?—Yes.

7529. Would there be no danger from changes of temperature or otherwise of the two varnishes entering into conflict with one another, and so creating cracks?—I think not.

7530. Mr. *Ewart.*] Are you aware whether the varnish of which you speak has been tried?—I myself have tried it; and Sir Charles Eastlake states, in his work on oil painting, that it has been tried, and that it has answered extremely well.

7531. What is the passage to which you refer?—After describing the effect of varnish in enlivening and preserving the colours, Armenini proceeds to give an account of the various varnishes employed by the best painters: "Some," he says, "take a small quantity of oglio d'abezzo (liquid fir resin)," that is, resin in a semi-"liquid state, as it flows from the pine, and which is composed of the essential "oil of turpentine and resin, "and melt it at a slow fire; and when it is perfectly "liquefied they add to it as much petroleum, throwing it in immediately on taking "the vessel from the fire, mixing them, and, while it is still warm, spreading the "mixture equally on the picture, which is to be previously placed in the sun and "warmed a little. This varnish is considered to be the most delicate (sottile) and "most lustrous of any that can be employed; I have seen it so used through all "Lombardy by the most able artists, and I have been told that this varnish was "so employed by Correggio and Parmegiano, if one may believe those who were "their scholars."

7532. Have you the picture which you describe as having been varnished in that way in your possession now?—Yes, I have; but it has been varnished recently with another varnish. Not having the materials of Armenini's varnish by me, I varnished it with mastic varnish.

7533. Mr. *Hardinge.*] Was it an old picture?—Yes; I must state, also, the great advantage of Armenini's varnish is, that it does not chill.

7534. *Chairman.*] Why did you not think it worth while to use it again?—Perhaps I was not so careful of my picture as I ought to have been.

7535. Lord *W. Graham.*] What was the solvent by which you took it off?—Essential oil of turpentine.

7536. *Chairman.*] With respect to your own picture, which you varnished with Armenini's varnish over a good coat of mastic varnish, and which you say you subsequently re-varnished with mastic varnish, did you, on removing or on the failure of the upper coat of varnish, find the lower coat of varnish so bad, that you were obliged to put another coat of mastic varnish on?—The surface was dull; the picture had been unframed for a number of years, and was very dirty; I first cleaned off Armenini's varnish with turpentine, before I varnished the picture with mastic varnish.

7537. And then you came down to the original surface of the mastic varnish?—Yes.

7538. Was that in a bad condition?—It was not in a bad condition, but the surface of it was dull, and had no shine.

7539. Was the mastic varnish in a good condition when you tried the experiment?—Yes, I think so.

7540. That would imply, would it not, that the mastic varnish which was under Armenini's varnish did not preserve itself in its natural and bright condition?—The effect of washing with turpentine would be to dull the surface; indeed, if

W. Dyce, Esq., R. A.

30 June 1853.

any degree of force were used, it would soon dissolve a certain portion of the mastic varnish.

7541. Mr. *Ewart.*] Do you think it so safe a means as glass?—There is nothing about the process that can be considered unsafe; the naphtha, which is very volatile at an ordinary temperature, is rendered more so when the picture is warm, and flies off instantaneously, carrying with it all the essential oil of turpentine; nothing remains, after a few moments, but a thin coating of pure resin.

7542. Do you think there may be great improvements in the manufacture of glass, which may render it a better medium than it now is for seeing the pictures?—I am not able to say how that may be.

7543. Lord *Seymour.*] Have you such confidence in this new varnish that you would recommend it for all the pictures in the National Gallery?—Yes; I should have no hesitation in doing so.

7544. You would have no hesitation at once in recommending that all the pictures in the National Gallery should be covered with this new varnish?—The object of it would be to preserve pictures in the precise state in which it was wished they should remain.

7545. You would have no objection, as I understand you, to cover all the pictures that are now in the National Gallery with this new varnish?—I do not see any objection to it.

7546. Upon what experiments do you found the results that give you that confidence; you have referred to one picture?—Yes; but I place great confidence in the testimony of Armenini, to the effect that Correggio and Parmegiano used this varnish for varnishing their works when finished.

7547. Do you think that a sufficient ground to justify the recommendation that this varnish should be applied to all pictures in the gallery?—I have confidence also in the result of my own experiments; I find a fact stated by Armenini which I have verified by my own experiments.

7548. How did you remove the varnish?—By washing the surface with turpentine.

7549. Will that in any way endanger a picture?—Not in the least, provided a very moderate amount of care be taken.

7550. Mr. Faraday has told us that he tried the effect of oil of turpentine, and found that the oil and white lead were immediately removable; that the least touch took it up, and that the picture came away?—But I assume that the pictures have already a hard varnish protecting them, a varnish that is not easily soluble by turpentine.

7551. Then one process must be gone through before your new varnish is applied; you must first apply something that oil of turpentine will not injure?—I said I assumed the pictures to be in the condition in which you would wish to preserve them, having been previously varnished with a hard varnish.

7552. What varnish would do?—Mastic.

7553. You would first put upon them a coat of mastic varnish?—I should, supposing they required it.

7554. And then you would put upon them a coat of this new varnish?—Yes.

7555. Of what is the new varnish composed?—Fir resin and naphtha; the resin is, in fact, the turpentine of commerce; it is a balsam which flows from the pine, from which the essential oil of turpentine is extracted by distillation, the residuum being resin.

7556. And that resin and naphtha, you think, may be safely applied over a mastic varnish?—I think so; nothing, in fact, remains on the surface of the picture but pure resin: none of the essential oil of turpentine or of the naphtha remains; they evaporate, and leave merely a thin film of pure resin on the surface.

7557. In your picture, when you applied the oil of turpentine, it removed at once this new varnish, did it not?—It removed it very easily.

7558. Did it not in any way affect the mastic?—I imagine that if I had continued rubbing it it would have dissolved part of the mastic, but it is not necessary, in washing off this varnish, to use any force.

7559. Do you think there was no danger of touching the mastic by means of these solvents?—The solvent would affect the mastic, no doubt, if the action of it were allowed to continue long enough, but that is easily prevented.

7560. Then the solvent necessary to remove the varnish you propose to use must be applied with great care, so as not to injure the mastic underneath?—It must be applied with care; all such operations require care.

7561. Mr. *R. Currie.*] Did you not state that practically, in the case of your own picture, the mastic varnish was injured by the application of a solvent to the Armenini varnish?—Not injured; it merely ceased to act as a shining surface to the picture.

7562. It was brought to such a state, was it not, that you found it necessary to treat it in a different way afterwards?—That was accidental; if I had had the materials for Armenini's varnish by me I should have used that, but not having them, I applied a coat of another varnish to give a shining surface to the picture.

7563. Lord *Seymour.*] Does the Armenini varnish in any way affect the colour of the picture?—No, it is quite colourless; the resin itself is as clear as the Canada balsam, and the film which remains on the surface of the picture is almost impalpable.

7564. You have stated that you attribute the brown colour in the pictures in the gallery to the use of oil in the varnish?—Yes.

7565. Have you observed that brown colour long?—I cannot say I have.

7566. You wrote a pamphlet upon the National Gallery, did you not?—Yes.

7567. Did you mention it in that pamphlet?—No, I did not refer to that subject at all in the pamphlet.

7568. Were you aware of it before this Committee sat, or is it only from report that you speak of it?—My attention has been called to it more immediately since this inquiry has been going on.

7569. Mr. *Hardinge.*] Did you only try the experiment on one picture?—I dare say I tried it on more than one; it is a good many years ago since the experiment was made, but I remember the fact that the particular picture of which I speak had been varnished in that way.

7570. Lord *Seymour.*] Has this mode of protecting pictures been employed in any gallery abroad?—I never heard of it being so.

7571. I understand that, with reference to the proposed combined collection of works of art, you would recommend that it should all be placed under one director?—Yes.

7572. And under him you would have subordinate officers, as I understand?—Yes.

7573. But before the appointment of those subordinate officers, he was himself to prepare a scheme of management?—Yes, I assumed that a scheme of management was to be decided upon before the officers to carry it out were appointed.

7574. I understood you to state that the director was to prepare a scheme for the management of the collections placed under his charge?—Yes, I considered his duties would be the first to come into operation, and that one of his duties would be to prepare a scheme for the approval of Government for the subordinate management of the institution.

7575. You would make him also report on the means of adding to the collection, and prepare a scheme for his guidance in making purchases?—Yes, prepare a scheme for the approval of the Government.

7576. Who is to approve of this scheme?—The Government; I should imagine the Treasury, or whatever department the institution is placed under.

7577. This will be a very enlarged scheme, will it not, because it is to involve painting, sculpture, architecture, a library, and other things, and the Treasury is to consider the scheme; is that so?—Yes; I may mention, however, that in the pamphlet which has been referred to, I have proposed that there should be a commission appointed to decide those preliminary questions; and if a report were made by such a commission, the arrangements would be greatly facilitated.

7578. You would have a commission in the first instance appointed, composed of persons qualified to consider generally the scheme?—To decide what shall be done.

7579. You have said that when the director proceeds to make purchases, he is to have advice, and you propose that the persons who give that advice are to be responsible?—Responsible for the advice they give; not for the purchases.

7580. Are those persons to be paid for their advice?—Yes, and I think they should give their advice in a formal and open manner where it can be done; sometimes it may be necessary to obtain advice in the most private manner possible.

7581. But it is equally to be given in writing?—Yes.

7582. With their names?—With their names, their opinions being duly recorded.

7583. What sort of person is your director to be; an artist?—I should think he ought to be an artist.

W. Dyce, Esq., R.A.

30 June 1853.

7584. When he requires advice, I suppose according as it is an object in sculpture, in architecture, in painting, or in books, he will apply to such persons as are best qualified to give an opinion on those points?—If his own knowledge and judgment are not sufficient, he would have to take advice, but I imagine that the heads of the various departments would be the persons to afford him advice on ordinary occasions; I imagine that he would consult with them most frequently.

7585. They will be artists also, I suppose?—That would depend upon the character of the department or section they are to superintend.

7586. You said the director was to be under the Treasury, much as the secretary of the department of art is under the Board of Trade?—Yes, I think the relations would be very similar.

7587. The secretary of the department of art is a new creation, is it not?—The office has been recently created, and I am not sure that some changes have not taken place lately in the constitution of the department.

7588. Who is the secretary of the department of art?—Mr. Cole.

7589. How long ago was that department created?—About a year and half ago, I think, but I am not quite sure of the date.

7590. And since then you think some further alterations have been made in its constitution?—I think so; I am not sure that I am able to describe the present state of matters exactly; originally the chief officer was termed "superintendent of general management of the department of practical art;" and along with him, or under him, was a superintendent of artistic matters; now the name of "superintendent" has been changed into that of "secretary for the department of art;" but still, I believe that the secretary is responsible for the management of the whole department.

7591. When you said you expected the director to be under the Treasury, much as the secretary of the department of art is under the Board of Trade, you said so under the impression that the secretary of the department of art has all the general management of the department of art, did you not?—Yes.

7592. Has the secretary of the art department disposal of the money?—Yes, he has in all cases, but with the express sanction of the Board of Trade, when he thinks it necessary to obtain it.

7593. He goes to the President of the Board of Trade for advice; is that so?—Either to the president or some other officer of the department.

7594. Is the President of the Board of Trade to be considered always qualified to give opinions on questions of art?—At least on the question whether money shall be spent on artistic objects; I suppose he acts with the advice of the secretary; that the secretary places the case before him, and that he pronounces a judgment upon it.

7595. Whether money should or should not be spent would depend, would it not, upon the value of the acquisition for the purpose of instructing in art?—Yes.

7596. Then the President of the Board of Trade must be competent to form a good opinion upon that question?—I suppose that on a case being stated to him he would be able to form an opinion.

7597. And in the same way you expect that the Chancellor of the Exchequer will be a good judge of all these combined things that are under the directors?—I think on a particular case being stated to him he would be able to pronounce a judgment by which hewould abide.

7598. There being an annual estimate to be moved, the Chancellor of the Exchequer will have to move it, and to defend the detailed application of the money to all these various purposes in the combined collection?—I should imagine so.

7599. Then it would be of course very desirable, if not necessary, would it not, that the next Chancellor of the Exchequer should be a man possessing great knowledge of art?—I am not aware that that would be necessary.

7600. Mr. *Ewart.*] Must he not call in the advice of others, or rely very much upon the judgment of the director?—I should imagine he would act in that matter as in other matters; he is not supposed to be practically conversant beforehand with every question with which he has to deal, but he would in this, as in other cases, use the best means he could to obtain information for his guidance.

7601. Lord *Seymour.*] You say it is the same thing as the Chancellor of the Exchequer forming a judgment with reference to other departments?—I should imagine he must act in this case as in other cases.

7602. We will take the case of the navy estimates; do you imagine that the Chancellor of the Exchequer considers himself a judge upon those matters?—I presume that to a certain extent he forms his own judgment; I should imagine that if he thought the estimates were too high he would enter a little on the subject, and obtain such explanations as would enable him to form a judgment whether the sum put down should be proposed or not.

7603. Would you allow the Chancellor of the Exchequer in this case, as he does in other important cases, to take the advice of the Cabinet upon the question?—I imagine he would do so if he thought fit.

7604. Therefore those applications must be made upon the responsibility of the Government of the day?—Yes.

7605. Mr. *Hardinge.*] What subordinate officer would you have under these directors?—According to the view I take of the matter, there would be three chief officers, whom I should call sub-directors, and their office would be the immediate management of the departments confided to them; under them of course there would be subordinate officers, who would have the care of the apartments, and carry out the various regulations of the establishment.

7606. When you speak of subordinate officers, do you mean that one should take charge of the sculpture department, and another of the library, and so forth?—Yes.

7607. Will it not be very difficult, do you think, to find an artist combining all the necessary qualifications for this office?—Yes, I imagine it will be so; but it seems to me that the primary qualifications for such an office are artistic, and on that account I say an artist is the proper person to be appointed; it is no doubt a very difficult point.

7608. He would, in that case, be obliged to abandon his profession as a painter, would he not?—I imagine that such must be the case, at least for a time, and that complicates the difficulty.

7609. I do not think you have mentioned the subject of original drawings by the old masters; in what department of the gallery would you place them?—In the library of the pictorial department of the gallery.

7610. Would you have them exposed, or kept in portfolios?—I should have them framed, I think, and exposed.

7611. You are probably acquainted with the Taylor Gallery at Oxford?—No, I have not seen it since it has been finished.

7612. You are not aware what the arrangement is there?—No.

7613. But you would have them all framed and exposed?—I think so.

7614. For the inspection of students?—I think so; because of the risk of injury that drawings are liable to from being handled in portfolios; I think it would be unsafe to allow the frequent handling of drawings in a portfolio.

7615. Mr. *Ewart.*] If they could be seen in a frame on a table, as at Paris, and in the Taylor Museum at Oxford, should you think that arrangement would be desirable?—Yes.

7616. Would it be desirable to take such means as would allow every one to see them?—Yes.

7617. Mr. *Hardinge.*] With regard to the lectures, I presume that students would be admitted to them, after showing some test of proficiency in art, or would you have them open to any one?—I have not considered that question.

7618. Mr. *Vernon.*] You say that the opinion of the director, as to the purchase of pictures, is to be fortified by the advice of competent persons, and I understand you to say that those competent persons are to be paid officers, mostly, I think you said, as subordinates: do you propose to have any other salaried officers?—I think I said, or at all events I meant to say, I divided the staff into permanent officers and officers occasionally employed; those advisers would be taken either from the permanent officers, say heads of departments, or persons occasionally employed.

7619. Do I understand you to say that if there was some opportunity of purchasing pictures, you would, for the occasion, go to some person who would receive a sum of money for giving you his advice?—These are points which I have not much considered; I do not think that much difficulty will be found to occur in practice. I should merely insist on any person who might be called on to give advice, being paid for it, and being responsible for it.

7620. Do you not consider that a director, well qualified to pronounce an opinion on works of art, would be able, from his own resources, to obtain information,

W. Dyce, Esq., R. A.

30 June 1853.

formation, without that information being paid for?—I should imagine he would frequently be so; but I think it is desirable that he should record the opinions of others on the value and genuineness of the works of art he determined on purchasing; of course many cases would occur in which no assistance was required, and in which he would act on his own judgment.

7621. When you stated that, in your opinion, it was not of very great consequence whether the National Gallery was situated in a central situation, like Trafalgar-square, or in some more remote situation, are we to understand you to mean that, in your opinion, as the working classes are not able to avail themselves much of the benefits of the National Gallery, except on holidays, they may go to one place as well as to another?—Yes, that expresses pretty nearly my meaning.

7622. Do you think there would be as many loungers, or persons who do not go specially to see works of art, at Kensington as there are at Trafalgar-square?—I think it is very likely there would, especially on holidays.

7623. Do you think two days in the week is a sufficient time for students to have allowed them for copying works of art in the National Gallery?—No, I do not think it is; I should be inclined to give greater facilities to students than have been given hitherto.

7624. Would that involve any additional restrictions upon the admission of the public in point of time?—That would depend on the arrangements which might be made.

7625. Do you think that, for the safety of the pictures, on account of the dust and dirt which we hear so much of, it is desirable that the public should be restricted from entering the gallery for so many hours in the week?—I have suggested already, as a subject for consideration, whether, if it be found that the admission of a large number of persons to the gallery tended to the injury of the pictures, some restriction might not be imposed.

7626. Has the idea entered into your mind that a book might be kept, and that on some days in the week, or during certain hours in each day, persons might be admitted on writing their names down in that book?—Yes, I think that plan might be adopted with advantage; I beg here to say that I have suggested to the Chairman the desirableness of having a return from the National Gallery of the persons who are present during so many days, distinguishing those who live in town and in the country; I am very much inclined to believe that a large proportion of those who visit the National Gallery are from the country, or at least from the suburbs of London.

7627. Mr. *B. Wall.*] How could that return be obtained?—I presume it could be obtained by some person being stationed at the door, to ask the people their addresses as they entered.

7628. Mr. *Vernon.*] Would you approve of there being, either as forming part of the National Gallery, or attached to it, an institution something in the nature of the British Institution, where pictures from private collections might be largely exhibited, so adding temporarily to the number of pictures in the National Gallery?—I am not prepared to approve of that.

7629. Mr. *B. Wall.*] Would there not be a great objection to any plan of that sort, on account of its giving rise to the suspicion that they were sent there for the purpose of sale?—Yes, I think there would.

7630. Lord *W. Graham.*] You mentioned that you would have a travelling agent; I did not exactly understand whether he was only to inspect pictures, or whether he would have any power to complete a purchase himself?—I think I merely mentioned, among the officers to be occasionally employed, persons to procure information by travelling or otherwise.

7631. Simply to procure information?—Yes.

7632. How would the works be purchased after he had procured information with respect to them?—I imagine that it would be necessary for the director in most cases to travel and see the works before they were purchased.

7633. Mr. *Ewart.*] Do you think that in any new constitution of the National Gallery it would be desirable that there should be ground surrounding it which should be more or less artistically embellished by statues, fountains, and so on?—Yes, I think that would be highly desirable; and one objection to the present site is, that it affords no means of doing that.

7634. Have you ever turned your attention to an establishment which exists in Paris, and is connected with the Louvre, by which great facilities are given for procuring

procuring the best copies of the drawings of the old masters, made under the authority of the Government?—I have not heard of it.

7635. Do you think that such an institution would be attended with advantage to art generally, and to the public?—I am very much inclined to leave such matters to private enterprise.

7636. But that there should be such facilities given for that purpose, whether by private enterprise or by some public authority, you think would be very desirable?—I should think so.

7637. Could you combine the art collections satisfactorily on the present site of the National Gallery?—No, I think not.

7638. You have alluded to the admission of visitors by tickets to the National Gallery; assuming the crowds at present frequenting the gallery are too great, do you think it would be better to diminish that crowd, by removing the National Gallery to a greater distance, rather than imposing restrictions on the admission of the public, by requiring tickets, or offering other impediments of that sort?—I am not sure that the removal of the National Gallery to another locality would diminish the number of visitors.

7639. *Chairman.*] You said you would cover all the pictures in the National Gallery with the protective varnish to which you have alluded; you do not mean that you would apply that varnish to them in their present state?—I assumed that the pictures which were to be so varnished were to be in the condition in which one would wish to preserve them.

7640. That means having a good coat of mastic varnish on their surface?—It assumes them to be clean and in a proper state, and properly varnished.

7641. Would you cover pictures with that varnish, which are now covered with the Gallery varnish?—No; I think that something must be done to those pictures to improve their condition.

7642. Then you would require to change the present state of the greater part of the pictures in the gallery, or else you must leave them out altogether, it being the fact that the greater part of them are covered with the Gallery varnish?—I assume, that if the pictures were removed to a new gallery, their condition would be examined, and they would be brought into such a state as the case required, and that then they would be varnished in the way I have suggested.

7643. Is your opinion of the objectionableness of the Gallery varnish such, that you think, if the pictures were removed to another place, and put into proper order, it would be necessary to remove the Gallery varnish?—Yes, I think so.

7644. Mr. *Ewart.*] With reference to the question which I put to you just now as to the institution at Paris, it should be understood that the copies which are made of the drawings of the great masters are made by means of tracing; could you intrust so dangerous a power as that to any one, except to a person in the establishment itself?—I should doubt very much whether permission to trace them should exist at all.

7645. Mr. *B. Wall.*] Has the varnish you recommend been experimentally tried by any other person?—Sir Charles Eastlake, I have stated, has reported in his book on oil painting, the result of some experiments which were made by an Italian.

7646. *Chairman.*] Is he favourable to the use of it to the same extent as you are?—The Italian writer quoted by Sir C. Eastlake is very favourable to the use of it. He appears not to have been successful in the employment of it in the first instance, but afterwards to have succeeded perfectly.

7647. Are you aware that in Paris and Berlin, the whole of the art collections are under one head of management?—Yes.

7648. Do you know any instance in which an artist has ever been employed in that capacity?—I am not prepared with any instance of it at present; I think however that Baron Camuccini was the director of the Vatican Museum during his life; at all events he held a very high office in the direction of the art collections in Rome.

7649. In Paris and in Berlin is it not the usual course to select some private individual of high attainments in connexion with art, and place him over the whole rather than select a professional person?—I presume so.

7650. Lord *W. Graham.*] Could you lay your finger at this moment on a person who you think possesses all the qualifications you require; I do not want you to name anybody; or can you think of two or three who you think would be qualified?—I think that, if the office were created, it would be found not so difficult to fill it as may be supposed.

7651. *Chairman.*] Sir Charles Eastlake spoke of having three gentlemen as

W. Dyce, Esq., R.A.

30 June 1853.

directors with co-ordinate powers under some department of Government, and he illustrated his view by reference to what is called the School of Practical Art, supposing that there are there three gentlemen in an independent capacity, not responsible one to the other, but all responsible to Government; is that your opinion with regard to the School of Practical Art?—No; I think Sir Charles Eastlake must have expressed himself imperfectly; there is nothing more certain than that there is one absolute authority in the department of art.

7652. Mr. *B. Wall.*] Who is that?—The secretary or superintendent, Mr. Cole; Mr. Redgrave is the superintendent for artistic matters, and I presume that in ordinary cases Mr. Cole would always act by his advice; but the culminating point of responsibility is with Mr. Cole.

7653. Mr. *Ewart.*] You prefer a decision by one to a decision by a majority in the case of three, as has been suggested?—Yes, I do. I think that the business would be better transacted by one man who had the means of obtaining every information for his guidance, than by three men who, besides having to agree among themselves, would find it equally necessary to seek for information from others. The expediency of this view is illustrated by some of the great departments of the State; most of which were originally committees. Those committees still nominally exist, yet the presidents or chairmen of those committees carry on the whole business of the departments.

7654. You do not approve of boards of management?—No.

7655. Lord *Seymour.*] You said you would wish to give every facility for copying pictures, and as we have had some evidence upon that subject, to the effect that the copying of pictures is not favourable to the advancement of art, I wish to ask whether you consider the copying of pictures to be or not to be favourable to the advancement of art?—I think that at a certain stage of the exercises of a student of art, it may be desirable that he should copy pictures, but I am not favourable to the practice of copying generally, as a means of advancing art.

7656. I thought you said that in your opinion two days in the week were not sufficient for copying pictures, and that you wished to give further facilities?—I do not think that the object of allowing students to have access to the gallery on certain days in the week, is solely with a view to their copying the pictures, but for the general purposes of study.

7657. You said you desired to collect a great number of objects of painting, sculpture, architecture, prints, drawings, illuminated manuscripts, vases, and carvings, in wood and ivory, and so on; do you mean to take any of those things from the British Museum, or would you make a new collection?—I should imagine that such objects as were applicable to this great art collection, and which were already possessed by the nation, would be transferred from the British Museum or other locality in which they may happen to be.

7658. In fact you would pick out all the prettiest things from the British Museum, and bring them to this new building?—I should propose that this new collection should embrace certain objects, and that the materials for those objects should be given up by the British Museum.

7659. Who would you say should judge whether an object of art is of that sort, that it should go to the building or remain at the British Museum; would you leave that also to the director?—That must be determined by the specialties of the case.

7660. Supposing there were a valuable manuscript in the British Museum, would there not be any difficulty in selecting it from others, because it happened to have a pretty illumination in it?—I believe there are manuscripts in the British Museum, which are not valuable as literary productions, but which are valuable on account of their decorations.

7661. But are there not others which have a historical value connected with them as well?—Yes, and that difficulty of course will arise.

7662. Mr. *Vernon.*] You propose that the Commission should decide upon those matters?—Yes; I think that would be a question precisely for the Commission to decide in a general way.

7663. Mr. *Monckton Milnes.*] Do you agree with the view given by Lord Aberdeen, that the great distinction which would be necessary would be a distinction between what was purely artistic and what was archæological, and that what was archæological should remain in the British Museum?—Yes; and no doubt in general it would be comparatively easy to say that such and such an object belonged to the department of archæology, and that such another object belonged

belonged to the department of art; but there would be cases sometimes between those two, in which it might be difficult to say to which institution it ought to belong. *W. Dyce*, Esq., R. A.

30 June 1853.

7664. Lord *Seymour.*] Should you exclude, for instance, from your new building all specimens of Egyptian art?—No, certainly not.

7665. You would take some of them?—Yes.

7666. Those that were the best, as I understand?—Those that tended to illustrate the history of art.

7667. Should you take any of the Assyrian specimens?—I imagine so.

7668. Mr. *Ewart.*] With regard to copying, are you of the opinion expressed before a Committee of the House of Commons by Dr. Waagen, in Question 91 of the Evidence given before the Committee on Arts and Manufactures in 1835 "We find that in Dresden, where there is more copying than in any other "gallery, with good models before them, the art has very much declined, and we "find that the artists themselves are not so much improved by copying as by "attentively contemplating and studying the best masters. I feel a great objection to making art so completely imitative as that artists should be employed "in copying pictures, and I think that art would be more advanced if they were "made objects of general observation." Does that coincide with your view?—Yes; and, in fact, I have acted on that opinion, and have never copied a picture entirely.

Edward Hawkins, Esq., called; and Examined.

7669. YOU are one of the Officers of the British Museum, are you not?—I am Keeper of the Antiquities. *E. Hawkins*, Esq.

7670. What is the date of your appointment as keeper?—July 1826.

7671. From whom did you receive your appointment?—From the three principal trustees.

7672. They are, I believe, the Archbishop of Canterbury, the Lord Chancellor, and the Speaker of the House of Commons?—Yes.

7673. They have the entire power of appointing officers of the Museum, have they not?—Yes.

7674. I believe the trustees are very numerous?—Between 50 and 60.

7675. They consist of various classes?—Yes.

7676. There are family trustees who represent the donors, are there not?—Yes, and official trustees, and also elected trustees.

7677. What is the amount of your salary?—£.600 a year, and a residence in the Museum.

7678. Have you charge of the whole collection of antiquities and fine art in the Museum?—Entirely, with the exception of the painted portraits.

7679. Can you give a general idea of the branches included under the head of antiquities and fine arts?—There is the statuary, whether marble, terra cotta or bronze; also bronze vessels and miscellaneous objects, terra cotta figures and vases, coins, medals, and antiquities generally of any country; attached to which is a class called ethnographical.

7680. Is that also under your charge?—Yes.

7681. Have you assistant officers who are charged with different portions of the large collection under your care?—There are assistant officers generally for the use of the department; the part they take is chiefly determined according to their own tastes and abilities; but they are appointed generally to do any work that may be required of them in the department.

7682. In fact, Mr. Birch takes charge of the Egyptian and Assyrian department, does he not?—Chiefly of the Egyptian.

7683. What is Mr. Oldfield's department?—He is occupied chiefly in the classical department; he is at present arranging the statuary; and also employed on the coins.

7684. Are these gentlemen on a par with each other in point of rank?—There is merely the distinction of seniority.

7685. What are their salaries?—The salary of Mr. Vaux at present is 215*l.*; Mr. Oldfield 186*l.*; Mr. Franks 155*l.*; Mr. Poole 150*l.*; and Mr. Burgon 300*l.*

7686. Mr. Birch?—He has 400*l.* without a residence.

7687. Is Mr. Birch considered a superior officer to the others you have mentioned?—Yes; he is the assistant keeper.

E. Hawkins, Esq.

30 June 1853.

7688. What are the other gentlemen to whom you have alluded?—They are called assistants merely.

7689. Lord *W. Graham.*] Have they a residence?—No; there is no residence, except for the senior keeper.

7690. *Chairman.*] You say Mr. Birch has 400*l.* a year without a residence?—Yes.

7691. To what higher authority are you responsible?—To the trustees.

7692. Is not Sir Henry Ellis chief of the managing department?—He is chief of the whole Museum, and to him every thing is referred in the absence of the trustees.

7693. Are you responsible to him?—He has the care and custody of everything; and, as far as that is concerned, we are his assistants.

7694. Are your own assistants responsible to you alone and directly, or are they also responsible to the trustees?—To me, and through me to the trustees. They make reports every month, but their reports are addressed to me, except Mr. Birch's, which is addressed directly to the trustees.

7695. Mr. Birch comes, in fact, nearer in his capacity to the rank of a co-ordinate officer with you in some respects?—Yes.

7696. There are also officers, are there not, similar in rank to you, for the other departments; as, for example, Mr. Antonio Panizzi for the library, Sir Frederic Madden for the manuscript department, Dr. Gray for the scientific collections, and Mr. Carpenter for the drawings and engravings?—Yes; also Mr. Brown for botany, and Mr. Waterhouse for mineralogy.

7697. Those gentlemen are also responsible, like yourself, to the trustees?—Yes.

7698. You have, I believe, a complete system of regulations at the Museum for the management of all the departments?—There is a printed code of laws.

7699. That code of laws is revised from time to time, is it not, and carefully attended to as the guide, and for the regulation of your duties?—Yes.

7700. It comprises the nature of the responsibility under which you are to the trustees, your duties as officers, and all the details for the preservation of the monuments?—Yes; the whole principle of the management is included in those regulations.

7701. Lord *W. Graham.*] By whom were the regulations laid down?—By the trustees.

7702. *Chairman.*] I presume that, with the assistance of these regulations, and by your own experience, you have a clear line as to how far in the management of your department you ought to act upon your own discretion, and how far it may be necessary, from time to time, to take special instructions from the trustees at their meetings?—Yes.

7703. The trustees meet once a month, I believe?—Yes, that is the regular period of their meeting; but the trustees have frequent intermediate meetings.

7704. You give in a monthly report of your transactions, do you not?—Yes, there is regularly a monthly report given in; but if anything arises in the interval between the monthly reports it is sent in to the secretary's office, and then it is ready for the trustees to take notice of when they happen to meet.

7705. Are there any points upon which you do not feel authorised to act without special authority from the trustees, or do you act in all respects upon your own responsibility?—I take from them directions as to the general principle upon which a thing is to be done; and I undertake the detail of it without special reference to the trustees, unless I feel any difficulty as to what ought to be done.

7706. By whom are purchases of new objects of interest effected in your department?—The officer of the department has the power of expending money to the amount of 5*l.* without consulting the trustees respecting it; but if the amount is above 5*l.* it requires the sanction of the trustees.

7707. Is there an annual sum voted by Parliament for purchases connected with your department?—Yes.

7708. Is that annual sum a fixed sum?—It is settled every year, according to the estimates.

7709. You say that your discretion as to making purchases is limited to the sum of 5*l.*?—Yes.

7710. Do you consider that inconvenience results from that limitation?—Yes; inconvenience arises from the difficulty of giving a prompt answer to any person who

who has anything to dispose of; we lose the opportunity of purchasing things occasionally, because we have not a body to which we can immediately apply.

7711. Supposing you hear of something to be sold which is valued at a sum above 5*l.*, you have not, unless the trustees happen to be meeting at the time, and give their consent, the means of procuring it; and therefore you lose the opportunity?—Yes, or else we take upon ourselves the responsibility, in extreme cases, of making the purchase.

7712. Do you consider that so numerous a body as the trustees of the British Museum, exercising a general superintendence over the institution, and the other officers being so immediately responsible to them, tends to incumber the management of the institution?—I think it does tend to incumber the management of the institution in the way I have mentioned; we cannot have immediate access to a numerous body of trustees, and there is also a little uncertainty with regard to their decisions, as there will always be in the case of a committee.

7713. Do you find that inconvenience sometimes results from some members who have attended one meeting not being present at the next meeting, so that the question is left, in consequence, only half settled?—Perhaps it is so sometimes.

7714. Is it your opinion, from your long experience of the institution, that one chief director or governor, who should be an intelligent man of business, and otherwise qualified, would be a better head of the department than a numerous body of trustees, such as you now have?—I think it would be better from the circumstances I have mentioned; we should have prompt access to such a person, we could get an immediate decision from him, and there would be a sort of uniformity in his decisions which you cannot expect to find in a committee.

7715. What qualifications would you require for an officer of that kind, if there were an intention to constitute such an officer?—I should say that he ought to be a gentleman; thoroughly well educated; and of business-like habits.

7716. Do you think that he ought to be somewhat in the position of the gentlemen who officiate in that capacity at Paris, at Berlin, and at other establishments of a like nature on the Continent?—Yes; but I am not very well acquainted with what they do.

7717. Would you think it desirable that he should be in Parliament, either as a Peer or as an elected Member?—Certainly; as his duties would involve money questions, I should presume it would be almost necessary, or at all events, very desirable, that he should be in the House of Commons.

7718. To whom would you entrust the power of appointing that officer?—I am wholly incompetent to decide that; it would be an official appointment in the hands of Government, in some shape or other.

7719. You would not allow such an officer to be changeable with the Government?—It is very desirable that he should not be an official person, whose appointment should be vacated by a change of Ministry.

7720. Have you formed any idea of the probable amount of salary that such an office would require?—Not the least.

7721. Have you found serious inconvenience from want of space in the Museum of late?—Very great.

7722. Does that affect all departments of the Museum?—Every one of them.

7723. To what extent have you found that inconvenience to exist in your own particular department?—I should say there was hardly any branch of the department that has adequate space, but for some there is no provision at all made.

7724. You mean no provision for future extension?—None.

7725. And for some there is no provision at all?—No; there are certain portions of the collection at this moment down in the cellars, because we have no fit space in which to exhibit them.

7726. Do you mean that there are whole departments of antiquities and fine art that are excluded?—At the present moment the whole of our sepulchral monuments, Roman and Etruscan, and all our Indian and Mexican antiquities, and other things of that kind, are down-stairs on the basement.

7727. Have you any idea of the additional space that would be required in the whole Museum, as compared with that which it has at present?—No; if we were to build more, it should be so built as to be easily capable of large extension.

7728. With regard to the present time, what additional room would it require to make the accommodation adequate to the objects of art now in your possession?—I could not say that.

E. Hawkins, Esq.

30 June 1853.

7729. Would it require double the amount?—Not double the amount just immediately; but we want the power of arrangement as much as the power of extension.

7730. Have you had certain schemes lately in agitation, as remedies for the evil to which you allude?—Yes; I long ago proposed that, supposing the Museum to remain where it is, the trustees should purchase the whole of the ground round the Museum, putting themselves in the place of the Duke of Bedford, arrange the plan of a future Museum, and take down such houses as they might require from time to time for extension.

7731. Do you consider that if the property to which you allude were obtained, it would give you sufficient room for future addition, as well as for present accommodation?—I should think it would.

7732. There have been more limited schemes proposed, have there not, for your immediate relief, one by Mr. Panizzi, for erecting a new building in the central quadrangle?—That would afford adequate space at present for the library, but would give no relief to the other departments; but, on the contrary, rather cripple us by darkening some of the windows that we now have.

7733. Would it give full relief to the library?—Of that I am not capable of forming any opinion.

7734. Has any other scheme been lately under consideration?—Sir Charles Barry has been there surveying the premises, but the details of his plan I do not know.

7735. You have not been able to form any idea whether his plan is likely to produce results tending to afford you immediate relief or early relief?—As far as I know his scheme, it would be exceedingly inconvenient to the department of antiquities; I have merely had one or two conversations with Sir Charles Barry about it, but I have had no details.

7736. Has any estimate been made of the probable cost of taking in the large surrounding space to which you alluded?—I apprehend not.

7737. Do you find that any inconvenience in that central part of the town arises to the monuments under your charge from the effects of smoke?—Very great; all the monuments are affected by it, and rendered excessively dirty.

7738. Do you consider that inconvenience so serious as to render it desirable that a more airy site should be provided for your own collections?—If possible, it is desirable to get them at a distance from the smoke.

7739. Lord *W. Graham.*] Does the smoke injure them to such an extent that occasional cleaning cannot remedy it?—I think that every cleaning of a marble surface must injure it; even the most polished surfaces are injured by frequent cleaning, but the surfaces of antiquities, which have lost a certain quantity of their original polish are, of course, more liable to injury.

7740. *Chairman.*] Have you not the painted vases and works of that description under glass?—Yes.

7741. Is the glass that covers them put there for the purpose of preserving them from coming into contact with the public, or for the purpose of preserving them in a cleanly condition?—On both accounts.

7742. I suppose that part of the collection is not liable to any injury from the effects of smoke?—Not much.

7743. Have you found any inconvenience arise from crowds who visit the Museum on great public days?—No, nothing of any consequence; it is very crowded on such days as Easter Monday and Whit Monday, but not to such an extent as to produce inconvenience.

7744. Have you any regulations with regard to the restoration or cleaning of monuments in the sense in which that word has been so much used with reference to another department of art?—We do not admit the word "restoration."

7745. How do you proceed with regard to mutilated monuments?—We fill up the fracture so as to represent the mass, but do not give the entire substance; so that the eye is not offended, and will not be deceived by any attempt at representing the original.

7746. Are you favourable to the plan which has been in agitation of combining the art collections of the British Museum with the pictures in the National Gallery?—All collections of antiquities comprise objects of very high art, and it is certainly desirable, as far as art is concerned, that those things should be brought near together; so far the combination would be desirable.

7747. There are portions of the department in the British Museum which connect

nect themselves more closely with the National Gallery, such as original drawings, for example?—Certainly.

7748. If both establishments required some change involving the alteration of the site, would you be favourable to the plan to which I have alluded of combining those collections?—Yes.

7749. Do you think that any disadvantage would result to the collection under your charge from its being separated from any other portion of the Museum?—There is the library, which is a very important feature; one would be very repugnant to separate one's self from the library.

7750. Do you think that would form so great an objection as to alter your view in favour of combination?—No, except that it would involve the necessity of establishing a library in immediate connexion with the department of art and antiquities.

7751. Do you think that there would be any physical difficulty in removing the monuments?—None whatever.

7752. Remarks have been made as to the great expense that has been incurred in removing some of the larger Egyptian or Assyrian monuments, even from place to place in the Museum?—The great part of that expense is not the transit; it is removing it from its pedestal and removing it from the vehicle on which it has been placed with a view to its removal; both those expenses are incurred as much in removing it ten yards as in moving it ten miles.

7753. If you were to bring it down an inclined plane, and carry it a mile or two by horses, would not that involve a serious additional expense?—No.

7754. Are you aware of the feelings of the trustees as to legal difficulties?—No.

7755. Do you think that legal difficulties might arise in respect to your own department with regard to the original establishment and foundation of these collections?—None that I am aware of, that are insurmountable.

7756. What would you consider a preferable site in case of removal; would you go out of town altogether?—One site that has been suggested I consider by far the best I ever heard of, the middle of Hyde Park; because there you would be completely clear of all smoke, and free from a liability to intrusion.

7757. Would you consider it essential, in order to carry out the objects to be looked for in such a site, that the new building should be in the centre of a wide open space, so that the works of art contained in it should be permanently removed from the contiguity of any other masses of buildings which create smoke, vapour, and effluvia, such as those of which you spoke just now?—It would be a great object to get them out of the way of smoke, and yet accessible to the great mass of the people.

7758. Suppose your collection were removed to an airy situation in the suburbs, and yet that the property of the ground in the immediate neighbourhood was not in the possession of the establishment, the erection of a brewery, a distillery, or a mass of buildings, to the westward particularly, might frustrate the objects you have in view?—That would involve you in the same difficulties as those you are in at present.

7759. Then it would be necessary, in respect to any alteration, that you should be in the centre of a large open space, such as Hyde Park, with a wide space on every side between you and the sources of that smoke and effluvia?—Certainly.

7760. You would not be disposed to separate any one part of your collection from the rest?—I do not think it possible to separate them.

7761. You do not see anything under your charge under the head of archæology which does not connect itself so closely with the department of art, that it would be more or less interfering with the objects of such a combination to separate it from the other branches under your care?—It would destroy the whole object of the department to separate any part of it.

7762. You consider many of the inscriptions which have been mentioned occasionally as forming a separate class of objects, to be so closely connected with objects of fine art, that even in their case it would be impossible to separate the two classes?—You cannot separate them from the rest of the collection.

7763. With respect to the proposal for combining the collections under your charge in some airy part of the neighbourhood of London, with other establishments connected with science and industrial art, do you not think that even that combination might expose you to some of the evils from which you suffer, from smoke and otherwise?—I apprehend it would.

E. Hawkins, Esq.

30 June 1853.

7764. Do you think that, if a large number of those establishments which have been talked of were connected in one great mass of buildings with you, it would tend to be injurious to sculpture or paintings, in the same way as the influences of your present situation are now injurious?—As I understand their plan, it would.

7765. Would you consider it essential in carrying out your object with regard to removal, that you and the National Gallery forming one department should be kept quite separate from other departments?—Entirely so.

7766. Do you see no objection to removing your own class of objects to a distance, in respect to the more limited facility of access on the part of the public?—No, I do not think the public would be seriously affected by it.

7767. You think that the same class of people who come to you now, would enjoy the walk, or avail themselves of omnibuses and other conveyances on holidays?—Very much the same, I think.

7768. A considerable number of the pictures belonging to the Museum are now in the National Gallery, are they not?—I believe they are; but those are pictures that never came to the Museum.

7769. They were bequeathed to the Museum, but the Museum at once handed them over to the National Gallery?—I believe so; I never saw them in the Museum.

7770. You have still some pictures in the Museum?—We have a great number of portraits.

7771. Whose property are they?—The general property of the Museum; I suppose, under the management of Sir Henry Ellis.

7772. Do you consider them valuable?—There are some very fine portraits among them, some very bad and some very good; but all of them are portraits of persons whose likeness you are desirous to see.

7773. A historical series of genuine portraits, if complete and extensive, would be a valuable illustration of history, would they not, although the works of art themselves might not be of the highest order, and even in some instances might be of an inferior order?—Certainly.

7774. You would consider that such a collection of portraits would be valuable in a national gallery, would you not?—Yes.

7775. I believe the Dulwich collection was originally offered to the Museum, was it not?—I believe it was; but all that took place before I had any connexion with the Museum. It was rejected, I believe, in consequence of some of the conditions attached to the offer.

7776. Sir Thomas Lawrence's drawings were also intended to have formed part of your collection, were they not?—They were offered either to the Museum or to the Government, I do not know which.

7777. In combining the National Gallery with your own branch of art and antiquity, would any special modification of your views be necessary with reference to the management of the whole collection?—No.

7778. You would prefer having one general chief director in the mode you proposed, and then letting the gallery of pictures be a separate department, just as your own department is, or as Mr. Carpenter's or Mr. Birch's are, or the others you have specified before?—Yes.

7779. Mr. *Ewart.*] You mentioned that a certain sum was allocated every year, to be expended on works which it is considered desirable to possess?—Yes.

7780. How is that sum to be expended every year estimated?—It is estimated by the trustees, after a conference with the officers of the different departments. The officers state what they may require, and the trustees decide upon the propriety of their estimate.

7781. Taking into consideration the contemplated purchases you desire to make?—Yes, there is a certain sum appropriated for purchases.

7782. In the event of any opportunity of making a desirable purchase suddenly arising, that must form an exceptional case?—Yes, the sum estimated is for the ordinary expenditure of the year; if any sudden emergency arises, it is the subject of special application to the Treasury.

7783. Lord *W. Graham.*] In some urgent cases you say the trustees take the responsibility of purchasing on themselves?—Yes, they do so generally; I can hardly say that they do so without communication with the officers of the department.

7784. I mean as to the question of money; do they become responsible for money themselves?—Yes.

7785. Do you consider that in a public institution it is right for private individuals to be called on to assume such a responsibility?—They are a body of trustees appointed for that purpose. They apply to Government to grant them a sum of money to be expended, and the mode of expenditure is intrusted to them.

7786. Supposing they exceeded the estimate?—Then they would do it upon their own responsibility, and would have to make their own statement; the propriety of which of course the Government would decide upon.

7787. They might be responsible for all the money?—Yes, they might.

7788. Mr. *M. Milnes.*] When marbles arrive from abroad or otherwise, and require cleaning, how and by whom is the operation performed?—All the cleaning that is required goes on by the direction of the trustees, and especially under Sir Richard Westmacott.

7789. And Sir Richard Westmacott is answerable for that performance?—To the trustees.

7790. What is your opinion about the possibility of safely moving large masses of marble to some distance?—I do not apprehend that there is any difficulty at all in it; in the present state of engineering you can do anything.

7791. If you have only time enough?—Yes.

7792. Lord *Seymour.*] Do you know the cost of moving one large figure; for instance, now, in the department of antiquities?—No, I do not.

7793. Are you aware whether it has been above 50 *l.* or 60 *l.*?—No; I never saw the account.

7794. You can give no opinion upon it?—I can give no opinion upon it.

7795. You have said you find the inconvenience of having no authority to apply to when sudden opportunities of making purchases arise?—Yes.

7796. In case of sales of antiquities, do you ask for authority to spend such sum as you think may be advantageously used for the purpose of improving the collection?—Yes, in the case of public sales.

7797. The inconvenience of having no authority to apply to does not arise, does it, in the case of public sales?—Yes, because sometimes we do not know of a sale till after one meeting, and it takes place before another occurs.

7798. Have you in the course of the last year lost the opportunity of acquiring any objects of value from that cause?—Yes, we have; nothing very important, but we certainly have lost some objects.

7799. Did you spend all your money last year?—More; we spent the full amount of it, at all events.

7800. If you were deprived of purchasing other objects, by the inconvenience of having no one to apply to, have you spent the money on objects less worth obtaining?—No; we look out for objects, and do the best we can; but still we lose objects we should desire to buy, and very likely expend our money on less valuable objects.

7801. Do you think that practically you have spent your money on inferior objects?—No; I do not think that any instance of that kind has arisen in the course of the last year.

7802. I understand you consider it objectionable to separate any portion of your department from the rest?—Yes.

7803. There is no one part you could spare without injury to the rest?—No; except that we have no objection to part with the ethnographical collection.

7804. That is the most desultory of all your collections, is it not?—Yes, in fact it has no connexion with antiquities, except that there are some objects there which may illustrate what may be considered as our genuine collections.

7805. You would wish to substitute one director for the trustees as at present constituted, would you not?—On the ground I have mentioned; that it affords facility of access, and uniformity of decision.

7806. Do you think that one director, having the authority of all the trustees, would be a better system of management for the British Museum than the present?—I think it would, upon the grounds I have stated.

7807. He would not only have to look after objects of antiquity and art, but the whole range of natural history?—No, he would have nothing to do with that.

7808. I understood you to say, you wished even as the British Museum was constituted to have one director instead of trustees?—Yes, certainly.

7809. Then the director who is to be substituted for the trustees must, as I imagine,

E. Hawkins, Esq.

30 June 1853.

imagine, understand all questions of natural history, as well as those subjects which are more strictly within your department, namely, objects of art and antiquity?—No, I think not at all.

7810. Then how is the director to judge?—He must take the opinions of responsible persons.

7811. He will form no opinion of his own, then?—No, I should think not; I should think he would take the evidence of competent persons, and upon that he would decide and act.

7812. You think he would be qualified to decide upon all the departments now in the British Museum?—Yes, I think so.

7813. Mr. *Ewart.*] Are the trustees obliged to take the opinions of other persons?—No, it is quite optional with them.

7814. Are the circumstances such that they are frequently obliged to do so?—No, I do not know that they are, except when they take the opinions of their own officers; they receive the opinions of their own officers, and then they act upon those opinions at their own discretion.

7815. *Chairman.*] Do the trustees, as at present constituted, act as a visiting and controlling body, or do they act as a managing body?—To a certain degree they combine the two.

7816. When you report to them, do you report as to every detail of your office, or only as to special matters upon which you wish to have their advice?—Having taken their opinion with regard to the principle on which anything is to be done, I carry on the details unless I find a difficulty in doing so, and then I apply to them.

7817. From what sources are the objects which you purchase, and the purchases which are made in this country, usually obtained?—Very frequently from public sales; sometimes from the dealers; frequently from foreigners who bring things over for sale; and frequently from private collections or from persons wishing to dispose of any objects of art they may possess.

7818. Have you persons in your department on the look out for available purchases?—Certainly.

7819. Are you in the habit of moving about, and Mr. Birch also?—Yes.

7820. How are the purchases and objects procured from abroad managed; for instance, from Italy?—We are obliged to look out for somebody in whom we can confide, and through him negotiate for a purchase.

7821. Have you any agents or correspondents habitually employed abroad?—No.

7822. You have no person on the look out in Italy?—None.

7823. Would it not be advisable to have some confidential person there, who might make a report to you from time to time?—It would be a great means of procuring things that we much want.

7824. But you have no special opportunity of getting anything from Italy, the seat of a great part of the antiquities?—Not unless there are travellers who give us information.

7825. Are you not aware of important collections at Rome, that might be obtained by large advances of money?—Yes, there are some collections there that we should be very glad to have; I could mention one.

7826. Have there been any negotiations set on foot with a view to obtain that collection?—Never directly, because it was considered an exceedingly difficult matter to negotiate with the owner.

7827. Mr. *M. Milnes.*] Have any additions lately been made to the Museum, from the recent excavations in Greece?—No, not anything that I know of.

7828. Is it not much more difficult now, in consequence of the greater attention paid by the Governments to works of art, to procure valuable objects of antiquity from foreign countries?—We have not experienced that; I believe there are ways of getting things over, if you feel disposed to purchase them.

7829. *Chairman.*] When opportunities of purchasing objects of a value exceeding the amount of the sum at your annual disposal present themselves, how do you proceed?—The officer reports to the trustees, and they, if they think right, make an application to the Treasury for a special grant.

7830. Were the undertakings of Sir Charles Fellows set on foot partially in consequence of such suggestions?—At the instigation of the trustees, and a grant from Government.

7831. And Mr. Layard's in the same manner?—And Mr. Layard the same.

Antonio Panizzi, Esq., called in; and Examined.

7832. *Chairman.*] YOU stand, with respect to the library, in the same position as Mr. Hawkins does with respect to the department of antiquities, do you not?—Yes.

7833. You have heard what Mr. Hawkins has said with regard to the want of space in the British Museum?—Yes.

7834. You yourself have proposed, have you not, a plan for remedying the evil?—I have, because I have found that the inconvenience to the library for want of sufficient space is greater in its effects than to other departments in the British Museum; inasmuch as, if we fall into arrears, to supply those arrears when a library has got to the extent ours is now, and to keep it up, is a matter of impossibility. We have now 510,000 volumes. I had occasion to ascertain the exact numbers very recently. If we fall into arrear for five or six years, and have, say, 150,000 volumes to buy for those years, and if we are to go on purchasing afterwards such works as are being published then, and if we have, moreover, to obtain the arrears of old times, it would be a matter of impossibility to carry all this out properly. It is of great importance, to scientific men particularly, to know what is being done in science, and therefore to have at once those books that are last published. A book published now and purchased five years hence is of a totally different value from the same book purchased at this time. For these reasons it was suggested by me, after having suggested a larger scheme of building some years ago, that, as the matter was pressing, we ought to have a building erected in the quadrangle of the British Museum; and that not only space should be provided for books to the extent of 500,000 volumes, but that provision should be made for another branch of the service of the greatest importance; namely, accommodation for the readers. There is no doubt that now many people are deterred from coming to the British Museum, and from making use of the reading-rooms, on account of the want of room and want of accommodation; in fact, owing to the state either of the ventilation, or the heat, or other inconveniences, many persons do not attend; it prevents them from attending from fear of injury to their health; for all these reasons it was suggested that a building such as I have mentioned should be immediately erected, which would accommodate 300 or 340 readers, besides containing 500,000 volumes. That scheme was urged upon the trustees a year ago, in the hope that they would be persuaded to adopt it immediately, because the great object is to have it now. Anything that involves a loss of five or six years is a very serious matter. The proposition of transferring part of the collection to some other part of the town, where another building may be erected, and other propositions that have been made, are all schemes which may admit of discussion, but which do not relieve us now; and present relief is what we want.

7835. I believe the principal objection that is made to your scheme is, that however desirable it may be for the library to get increased accommodation rapidly, it does not make any provision for increased accommodation to any department except the library?—I never pretended to suggest a scheme for giving increased accommodation for the whole of the British Museum. I limited myself to my own department; I conceived, for the reasons I have stated, that that required immediate attention in preference to other departments.

7836. If some scheme could be suggested by which relief could be afforded not only to your department, but to the other departments, that would be a preferable scheme to yours, would it not?—Yes, it would, provided it was done as quickly. If the relief is to be given six years hence, I believe the injury to the library will be irreparable. I am certain that the library can never recover the injury to which it is subjected now, because we have come to this point, that this very year I asked the trustees only 2,500*l.* to keep up continuations, and to buy a few books of which we are in immediate and pressing want, but next year even that will be stopped.

7837. Is there not another scheme for turning the great central quadrangle to account in a different way, and which would provide in part for some other departments also, and enable you to occupy a larger space?—It was talked of, though it was never put in a tangible form; but that very scheme pre-supposes that time must be occupied in adapting the quadrangle to receive any other collection which might be put into it, the removal of that collection into the quad-

A. Panizzi, Esq.

30 June 1853.

rangle, and the adaptation of the place now filled by that collection for the purposes of a library.

7838. Have you no way of disposing of your books temporarily by hiring other buildings in the neighbourhood, and still continuing purchases, although you suspended the arrangement and classification of the books?—That would imply the readers being left in the reading-room in which they are; but, moreover, any space not at hand is unfit for the purchases which are intended; the readers in the reading room must have the books very near them. If you buy houses in the neighbourhood, even if you employed a great many hands, there would be a great loss of time in furnishing books to the readers.

7839. No doubt this expedient would not enable readers to have equally every day access to the new books you may have purchased, but would not that obviate the necessity of suspending purchases for the present?—Undoubtedly, if we had a place fitted up for a library, and if we had shelves placed in it, that would be a convenience, but it would be necessary whenever you built a library, that all those books should be removed and rearranged.

7840. Lord *Seymour*.] And you must have them re-catalogued?—We should have them re-entered in the catalogues, with a proper mark to show the places in which they were put.

7841. *Chairman*.] Then of course your proposal of availing yourself of the centre quadrangle would imply, that the arrangement should be a permanent one?—Yes; but all the presses were to be of one uniform size, and all the shelves were to be of the same width and of the same depth, so that if at any future distant time those presses had to be removed, they might be removed to a building built on purpose for them, and then it would be merely mechanical labour to remove 100 or 1,000 of them bodily from this quadrangle to another part of the house.

7842. What is your feeling with regard to the proposal of removing the art collections altogether, so as to deprive you of any advantage, if you have any, that they now afford you; have you any objection to that scheme?—Yes, I should like to keep them; what I should wish to be removed from the British Museum are objects of natural history, which have nothing to do with the rest of the collection. Objects of nature and objects of art are two totally different things; there is a great and broad distinction between the two; but I should strongly object to the removal of engravings, for instance, from the British Museum, they having so intimate a connexion with printed books; to take away inscriptions would, I think, be wrong. Among the antiquities you have mummies, for instance; those are pure antiquities; medals, also, seem to be much more fitting for a library than a collection of objects of natural history.

7843. Would you wish, if the art collections were taken to another place, to take your library with them?—I do not know; I have never thought of that.

7844. Do you think that the disconnexion of art from the library would be such an objection to the removal of the art collections elsewhere as to render it advisable not to carry into effect that scheme?—It seems to me so.

7845. If you still retain a collection of scientific objects, do you not think it is also greatly in *rapport* with the library?—I do not think the scientific collection is in great *rapport* with such a library as that of the British Museum. It is not necessary that there should be the first edition of Homer or of the classics, and so on, for zoology; it is only necessary to have good editions of Pliny or of Aristotle.

7846. If you had any alterations to propose, you would prefer having the scientific collections removed elsewhere, and you and the art collections remaining together in the Museum?—Exactly.

7847. Dividing between you the whole disposable space?—I think so.

7848. Mr. *M. Milnes*.] Might not scientific persons make the same objections with regard to the separation of natural history and the library, as you do to the separation of the library and works of art, that they wish to use one as illustrative of the other?—I would have scientific libraries for scientific purposes, such as those required by naturalists; they should have a very good library of their own, for their particular purposes; but I believe that antiquities are so much connected with history, for instance, that it would be difficult to know where to stop in separating them from our library. A library is more necessary for antiquities than it is for a collection of zoology, for instance; I mean a library like that of the British Museum.

7849. Do you think it practicable to separate æsthetic from antiquarian subjects?—I do not see where you can draw the line.

7850. Even

7850. Even without the necessity of which you have spoken, a temporary building in the middle of the quadrangle would, of itself, be very acceptable as a reading-room?—I think so, and that was considered to be one of the advantages of the suggestion; we considered especially the convenience of the readers, and we thought that that would make the best reading-room we could under the circumstances provide.

7851. Supposing, in consequence of these removals, you had plenty of space for good reading-rooms, would you still wish to retain the centre quadrangle for that purpose?—Yes, on account of the topographical arrangement; the Museum is a quadrangle; two sides of this quadrangle and part of a third are occupied by the libraries,—by manuscripts, and by printed books. There is the other side, and a part of the south side, occupied by antiquities; but if you keep the reading-rooms where they are now, at the north-east corner of the Museum, and if you were to fill with books all the west side, and occupy also the south side now filled with antiquities, the distance of the books from the readers would be so great, and the loss of time before you could get a book would be so great, that it would be desirable to have a centre place for the readers, accessible from all parts of the library; and the site for that centre place is offered by the quadrangle.

7852. So that, apart from all other considerations, you think a central reading-room is in itself very desirable?—Yes, indispensable.

7853. Are you aware whether any proposal was made to the Government on that subject?—Yes, and I believe Government have it under consideration now; I understand there is also another proposal on which Sir Charles Barry is to give an opinion; he has been several times at the Museum for the purpose of forming that opinion, and has examined the site, and asked information of us all how we felt as to room, what space we occupied now, and what space we might gain if certain arrangements which he has in view were to be carried out; but he has never made any statement in writing, nor have any estimates been given in.

7854. Would such central reading-room as you have mentioned considerably relieve the officers of the establishment?—Very much; it would be very convenient for us; the distances would be shorter; there would be less distance and less ground to go over to fetch books and carry them to the reading-room.

7855. Mr. *Stirling*.] And of course it would benefit readers also, not having so long to wait for books?—Yes.

7856. Mr. *M. Milne*.] And in that case, when persons were pursuing any special study, you might have other places in which they might pursue those studies?—Yes; for instance, there is not a room in the Museum in which you can carry on a collation, unless you go to rooms occupied by other persons for other purposes; they cannot collate together in the reading-rooms, and therefore are obliged to be put in other rooms which are more private than the reading-rooms, but they are not so quiet on account of the perpetual passing of the attendants. That interferes very much with those who study. Some time ago, two gentlemen who edited the Liturgy were obliged to come and collate in a room where every minute people were going through; if the plan I have suggested were adopted, there would be rooms for purposes like that.

7857. At present you have no place in which you could place persons who wish for more retirement than the reading-room affords for special study?—No, I believe that the quietest place in the building is the reading-room; they do not talk loudly in it, and they move there more quietly than in the general library, for they are more under restraint there.

7858. If any one of the trustees wishes to study in the library, has he any facility for so doing?—He may go anywhere he likes.

7859. Would a trustee, who wished to pursue any particular study, have any place in which he could read in retirement?—No; for instance, Mr. Macaulay comes and reads in the King's Library, which is one of those rooms in which there is more noise than in any other in the library, inasmuch as all manuscripts going to the reading-room are taken through it on wheelbarrows; but he has the advantage of a better atmosphere, and he has a table there to himself, on which he lays his books, and comes and goes whenever he likes, and, as he can leave his books there, he has not to wait for them being fetched when he comes again to continue his study.

7860. Have the trustees ever been in the habit of giving literary persons, of remarkable distinction, a right to enjoy those advantages equally with themselves?—No, certainly not.

A. Panizzi, Esq.
30 June 1853.

7861. They would have the power to do so, would they not?—They have power to do whatever they like; but if they were to use that power it would come to be a question how far the responsibility that attached to those who gave security, and had the custody of the books, would be impaired.

7862. Do you not suppose, from your experience of foreign libraries, that any person of known literary distinction, engaged in any work, would receive in a great public institution like the British Museum all the facilities that could possibly be afforded him?—Yes; and I know he would get those facilities nowhere more than in the British Museum. In foreign countries distinguished persons want no particular facilities in the public libraries themselves, inasmuch as they borrow what books they want, take them home, and keep them as long as they please in fact, and notwithstanding all regulations to prevent such a privilege being abused.

Lunæ, 4° die Julii, 1853.

MEMBERS PRESENT.

Colonel Mure.	Mr. Monckton Milnes.
Lord Seymour.	Mr. Hamilton.
Mr. Ewart.	Mr. Baring Wall.
Mr. Vernon.	Mr. Hardinge.
Lord William Graham.	Mr. Raikes Currie.

COLONEL MURE, IN THE CHAIR.

Mr. *George Lance*, called in; and further Examined.

Mr. *G. Lance*.
4 July 1853.

7863. *Chairman.*] IN a letter which you have addressed to me, alluding to your former evidence, there is this passage: "In the Velasquez picture there "are several parts in which I discover execution most assuredly not Velasquez's, "and I sincerely hope not my own. Whose it is, and what else has been done "since I saw the picture many years past at the British Institution, I will not "pretend to say, being totally ignorant as to whose hands it has passed through, "as also of the means made use of to restore a damaged picture;" to what repairs or retouches do you allude different from those you recognise as your own?—I saw portions of an animal, a dog, particularly indistinct and badly drawn, and the stump of a large tree at the left of the picture; one or two of the figures also appeared to have a poverty about them; and I fancy I should not have left them that way.

7864. Can you speak positively to there having been touches put in since you had to do with the picture?—I should not like to say so, because it is so long ago that I do not recollect the condition of the picture at the time.

7865. Then, in fact, you have no information to give as to any operations which, as you seem to imply in the passage of your letter to which I have referred, had been performed upon the picture since you had it in your hands?—Except that, as the picture stands now, I see other portions of it which are exceedingly pale, which are evidently not the work of Velasquez, and I feel satisfied they are not my own.

7866. Do you feel satisfied that they have been added since you had the picture in your hands?—It is too long ago for me to be able to say that.

7867. Mr. *Vernon.*] On looking at the picture you stated to me, did you not, that you do not think you put in a single figure?—Not a single figure; I could not see any figure in some portions of which I could not trace the work of Velasquez.

Mr. *Hamilton Smith Day*, called in; and Examined.

Mr. *H. S. Day.*

7868. *Chairman.*] YOU are a picture-cleaner?—I am a painter; but I have been the greater portion of my life very extensively engaged in picture restoration.

7869. Do

7869. Do you mean picture restoration, or picturec-leaning?—Cleaning implies the first process; and restoring the parts which are injured or obliterated, the second.

7870. You knew the picture, of which Mr. Lance has spoken, when it first came to England, and when it was in the possession of Sir Henry Wellesley, afterwards Lord Cowley?—Yes; the picture was unpacked in my presence and put on a stretching frame; it was then in its original dirty and dry condition.

7871. In what state was it; was any part of the original surface damaged or effaced?—Very little indeed; there were some fractures in the picture; it had a brown varnish over it, but when that was taken off it appeared to me to be in a sound state, and it excited some surprise in me when I found many years afterwards that it had been re-cleaned in the National Gallery, after Sir Henry had presented or sold it, I do not know which.

7872. When you took off the foul varnish, you did not find any parts of the picture in a bad state?—Certainly not; it appeared to me to be in a remarkably original and pure condition.

7873. Did you leave the surface quite untouched, further than re-varnishing it, or did you do anything towards toning it down?—Certainly not; it did not then require it; it had all the old glazing upon it, and the fractures were repaired, retouched, and varnished; I do not know what Sir Henry did with it when he was Ambassador in France; I lost sight of him during that time, and did not see him till he was Lord Cowley, and that was a very short time before his death.

7874. By what means did you remove the varnish from the picture?—I think, by reduced alcohol; there are a vast number of nostrums used.

7875. You removed it, not by dry rubbing but by solvents?—No, the size of the picture would not allow of its being done by the fingers; if we had as many hands as Briareus we could not do it; it was taken off by the proper diluted medium; the picture was in a fine and pure state.

7876. After removing the varnish, you merely re-varnished the picture?—Merely re-varnished it.

7877. And you never heard of it afterwards, until you saw it in the National Gallery?—Not at all.

7878. Did you ever hear of any injury happening to it in lining it?—No lining was necessary at that time. I suggested it to Sir Henry, but he was on the eve of leaving England, and objected to it; but it was lined subsequently.

7879. You did not observe any of the apparent re-painting or re-touching to which Mr. Lance has just alluded?—Certainly not.

7880. It appeared to you at that time to be entirely the original work of the Master?—I assure you there was no re-painting when the picture left my hands; I am certain of that, although it is now 35 years ago.

7881. You are not able to give any information to the Committee as to the subsequent vicissitudes of the picture?—I cannot tell what was done to it after my restoration.

7882. Have you looked at it lately?—I saw it this morning; having been favoured with an order to attend here, I went this morning to look at it. I went also three or four months ago to see the pictures which were reported to be so much rubbed and so raw.

7883. With respect to the Velasquez picture, do you observe, in its present state, any great difference in any of the figures, as if it had been damaged and subsequently repaired?—No; I was much pleased to find that the whole tone of the picture had become lower; the picture appeared to me, as is often the case after restoration, to be crude, but that appearance is now much diminished; I could detect modern colouring in an instant; after 46 years' experience, I am perfectly competent to do that.

7884. The result of your late observation upon the picture was, that you could not recognise any figures in it now, which had a different appearance from that which they had when you knew the picture formerly?—No, not upon the general survey I took of the picture this morning.

7885. Lord *Seymour.*] Having known the picture for many years, do you think it now in a good condition?—It appears to me to be, in point of harmony, in a very good condition; I cannot say I feel any uneasiness about it; I wish I could say so as to some of the other pictures, but I am not able to do so.

Richard Ford, Esq., called in; and Examined.

R. Ford, Esq.

4 July 1853.

7886. *Chairman.*] YOU have taken some interest in the management of the National Gallery?—Yes.

7887. Has your attention been called to any defects in the present system of management?—Yes, it has; I think it is altogether very faulty.

7888. What is it you chiefly object to in the present system?—I object to the want of a head, and to the want of power in a head; and also to the want of funds, and defined certain instructions.

7889. Are you adverse generally to the system which is occasionally adopted in this country of having unpaid and in some degree irresponsible committees?—I am entirely averse to it.

7890. What would you substitute for the present system?—I would substitute one chief director or president, and pay him very well. I would make it a post of honour, or else, I think, you would not get gentlemen to accept it. I would rank him with the president of the College of Physicians, or the president of the Society of Antiquaries. I think he ought to hold an equal literary or artistic rank.

7891. You would have him to be an amateur and not an artist?—I should prefer it very much.

7892. To whom would you propose that he should be responsible?—To Parliament, through the Home Secretary.

7893. You would prefer that he should be responsible to the Home Secretary rather than to the Treasury?—I do.

7894. Upon what grounds?—Because the Home Secretary would have less to do with money, and I think that business is more rapidly done with him on that account.

7895. You would let the money question, I presume, rest with the Treasury or with the Exchequer?—Ultimately, I suppose, it must.

7896. You would propose that they should have such money as Parliament and the Treasury should advise?—Yes.

7897. What amount of salary do you suppose would be requisite in order to procure the services of a gentleman in possession of the qualifications you would require?—£. 1,000 a year, or 1,500 *l.* a year; you must not be niggardly.

7898. You would make over to him the whole of the functions connected with the management of the gallery, and the whole of the responsibility?—I would, indeed.

7899. With regard to purchasing pictures, would you place him under any restrictions whatever?—I would leave it entirely to him.

7900. Do you consider that a well-educated person, with a competent knowledge of art, when he found that his own judgment was at fault, would have the good sense to select good advisers?—Yes; look at Mr. Holford, the late Lord Ashburton, Mr. Rogers, the late Lord Stafford, and others; you cannot expect always to avoid mistakes, that is impossible; but how few mistakes have been made by them.

7901. What other officers would you associate with him, as subordinate officers to himself?—I think I would have a good secretary, but I would not arm him with too much power, or he will become the over-secretary.

7902. What special duties would you assign to him?—He should have the correspondence to attend to; in fact, he should do whatever his chef told him.

7903. Would you expect him to travel in quest of information on the subject of pictures?—I would leave that entirely to the director; I would not fetter his power, or hamper his responsibility.

7904. Would you give the director power to employ agents abroad, and to remunerate them on his own responsibility, or would you require that he should make an application for that purpose to the Government?—I have not thought of that; but I should think it would be better that he should make application to the Government; it would be a special case.

7905. You would not allow him any officer specially to be employed to make purchases abroad?—No. I would let him select one person to go to Holland; another to Germany; another to Italy; and so on, according to the special occasion.

7906. Would

7906. Would you require him to make an annual, or a periodical report?—I would require an annual report to the House of Commons.

7907. Would you think it desirable that Parliament or the Government should make suggestions for the ensuing year as to the class of purchases it would be advisable to make?—I should think that would hardly be advisable; I am very much against fettering responsibility; you might throw out general hints.

7908. Do you not see the difficulty that has been alluded to by other witnesses arising from the possibility of a gentleman having a peculiar predilection for a certain school, and therefore limiting his purchases, to a great extent, to that peculiar school?—I should think that if, when he presented his report, it appeared that he had made too many purchases of pictures in any particular school, the Home Secretary would interfere; it would be in his power to give him a hint.

7909. You are aware, are you not, that Parliament has at times, through its Committees, reported that it is desirable that our collection should be made up more than it hitherto has been of pictures from particular schools?—No, I was not aware of that.

7910. You are not aware that a Committee, over which an Honourable Member now present (Mr. Ewart) presided, made a suggestion, that it was desirable that a greater number of pictures should be taken from the earlier schools of Italian art?—I should myself prefer an artistical to an archæological collection. In forming a library, for instance, you would not begin with black-letter books; hereafter, when you get very forward, you may, if you are rich enough, have curiosities; but you do not begin with them.

7911. Do you consider pictures by Raphael and Leonardo da Vinci mere curiosities?—They are so rare to get that I should be sorry to see any opportunity missed of securing them, but it will not occur very often.

7912. You say it is desirable to make up our collection with pictures of the highest standard of excellence in the first instance; as we happen to be deficient in many respects at present, do you not think that, on that very ground, it is desirable that we should make up our pictures from that higher standard, rather than go on purchasing bad pictures of Rembrandt's for instance, of which we have an abundance in the gallery?—Yes.

7913. Do you not think it desirable, that at the end of the year the director should state that he had made large additions of pictures to that class, and not of the other class, supposing that to be the fact?—He would give what he considered his good reason for it in his report.

7914. Do you not think it would be advisable for Parliament to put some restriction upon his own peculiar bias of taste?—Yes; but I do not contemplate that he would go so far out of his way as to require that; and on any great occasion he would probably go to the Home Secretary.

7915. Unless some intimation were given by the nation as to what their wishes were, neither he nor the Home Secretary would have any ground to go upon?—That assumes letting in a great many persons as managers; and where there are many persons, there is no responsibility.

7916. Do you not think it possible, at the end of each year, that there should be some kind of intimation given, in the same way as intimations have been given by Parliamentary Committees already, that the collection should be augmented in a proper manner, by making up important deficiencies, and not making additions which are not required?—This director would be the servant of Parliament, in the same way as anybody else in office, and he could not refuse to attend to the suggestions that might be made to him.

7917. Do you see any reason to apprehend, that if one single director only were appointed, there would be a danger of his having a peculiar bias to one particular school of art, say the Italian, Flemish, Spanish, or any other?—In a few years that might correct itself, because when one director went away, another would come who would probably have another bias. The gallery is not to be formed in a week, or in a year, or in 10 years. The same thing has occurred in the British Museum. Having been originally a print collector myself I have seen what has been going on for the last 30 years; each director of the Print Gallery has had his particular fancy, but it has worked well on the whole, and the ultimate effect has been, that every branch of the collection has become strong.

R. Ford, Esq.

4 July 1853.

7918. Has he entire and uncontrolled right to purchase?—I should think he has.

7919. Do you not suppose, that if the trustees, at their annual or monthly inspection of the establishment, thought that purchases were made unduly in one direction, they would give a hint on the subject?—I do not know how the trustees are influenced, but I should say they have not been influenced very well about prints, because I know, to my own certain knowledge, of great mistakes which they have made.

7920. In reality the trustees may be considered as the director?—I know certainly one case in which a particular collection, which I should have been very glad to see in the Museum, was rejected by the trustees; but I do not know the secrets of the Museum.

7921. Lord *Seymour*.] Will you give me the date of that, if you please?—I cannot tell you the date, but I can tell you what the prints were; it was a large collection of prints of the works of Parmigianino, which were offered by Mr. Smith.

7922. Was that within 10 years of the present time?—Certainly.

7923. Was it within three years?—No, I do not think it was; it must have been from four to five years.

7924. Are you aware whether it is since Mr. Carpenter has been at the head of the print department?—No; but Mr. Smith will know all the particulars.

7925. *Chairman*.] Do you think, as has been suggested by some persons who take an interest in this question, that the trustees of the gallery, although no longer exercising the sort of general management they do now, should be retained as a visiting or inspecting body under the Treasury, or under a department of the Government?—It is open to the same objection, that it is fettering the director, if they have any real power.

7926. Would you place an annual sum at the disposal of the director?—Yes, I would, certainly.

7927. At his uncontrolled discretion?—Yes, at his uncontrolled discretion.

7928. How much would you propose to give him in that way?—I would give him a large sum. I do not think you can economise a luxury; you cannot expect to make bargains; you want him to buy only very fine things, and very fine things are not to be got for a small sum.

7929. What would you consider to be an adequate sum?—I am afraid to say; 10,000 *l.*, or perhaps 5,000 *l.*

7930. Would you allow him to spend the whole of that sum at his own discretion?—Entirely; otherwise he would miss a great many good opportunities of making purchases, owing to not having the money at his own immediate command; in extraordinary cases he would of course have to apply to the Treasury, through the Home Secretary, saying, "Here is such an opportunity of making a purchase."

7931. Without being required to satisfy anybody as to the merits of the picture or pictures he proposed to purchase?—Entirely.

7932. Supposing the plan of combining the art collection was carried into effect, would that induce you to make any great modification in your scheme of management for the National Gallery alone?—No doubt it would; it is quite in its infancy, but I should not expect too much at first; you must feel your way.

7933. Supposing the sculpture and other art collections, and the archæological collections of the British Museum were to be combined with the national pictures in one great National Museum, in what way would you propose to blend or combine your system of gallery management with the general system that would be required for the whole establishment?—You must then have a person over each additional separate department; I do not know that I would have anything but prints and drawings in combination with pictures.

7934. Suppose there was one body of directors, or one body of trustees placed over the whole combined collection of sculpture, paintings and drawings, would you have the gentleman you propose at the head of the gallery to be the chief director?—I should like him to be supreme, but I suppose it could not be managed so.

7935. You would wish to have the person who manages the Picture Gallery supreme over all the others?—I should.

7936. Mr. *B. Wall*.] You say it could be done?—I am afraid it could not; I think

think there would be too many difficulties raised, but I should like to see it done.

7937. *Chairman.*] You object *in toto* to combining the collection of paintings with the other art collections, do you not?—Except the prints and drawings; you might indeed have a few books that illustrate the subjects of art.

7938. You would not have them to be part of a large collection at all?—No; the sort of chief that I should wish to see would be sufficiently taxed by having to attend to pictures alone.

7939. Suppose the country were to insist upon such a combination taking place, have you considered the mode in which you would propose your scheme for the gallery to be combined with that larger establishment?—No.

7940. Would you consider it desirable to have copies of first class paintings which are not in the possession of the country, to form part of the collection?—I think you might; I have not thought of that before.

7941. Even modern copies?—Very often fine modern copies of genuine recognised *chef d'œuvres* are better than indifferent so called originals, at which a great many cavils are made, while the others do not assume to be anything but what they are.

7942. Do you think it would be desirable to have a saloon which should contain really well-executed copies of such pictures as the Madonna di San Sisto, or the Transfiguration, or other great works, such as are to be found in foreign galleries in Europe?—I do; people of taste going to Italy constantly bring home beautiful modern copies of beautiful originals.

7943. With regard to the site of the gallery, would it be more agreeable to you if it could be retained where it now is?—No, I think it is now in the very worst place; in the worst possible position.

7944. What are your objections to it?—It is noisy and dirty, and it is in the heart of a crowded city, and the great tide of population flows by it; besides which you have a barrack on the one side and a playground on the other, and if it comes on to rain it becomes a refuge or rendezvous for idlers, who go there without any restriction.

7945. Might not that last difficulty be obviated by imposing some restriction or placing some small impediment in the way of people seeking admission?—Yes; I would make people go to some office and get tickets of admission, or let them buy a catalogue, even if the price of it were only a penny; and that would be attended with the additional advantage, that they would take something home to remind them of what they had seen. I certainly would not allow young children to come into the gallery as they do now.

7946. If the objection arising from the crowds of people frequenting the gallery, who do not go there really to see the pictures, were done away with, would you still retain your objection to the present site?—I think there is no pleasure in looking at those fine paintings in the midst of a crowded and noisy locality.

7947. What situation would you select in preference to the present site?—If it were near the Parks with a pretty walk to it that would be calculated to prepare the mind of people for the contemplation of such things.

7948. If people live in the centre of the town, or fancy strikes them to go and look at a particular picture, would it not be inconvenient to them to get into an omnibus, or a cab, and go some distance to see it?—With regard to those to whom that would be an inconvenience, I should consider their room better than their company; I am for a little test; if you want to have a mere gape-show it would be easy to make a gallery which should be exceedingly attractive on the present site.

7949. I allude to persons who take a great interest in art, and who might have an object in going in occasionally to look at a particular picture in the gallery with an artistic view; instead of being able to drop in from time to time they would be obliged to go perhaps a couple of miles, or a mile and a half, if they wanted to see a particular picture?—I think the Hansoms, especially as they are going to be made so much cheaper, will obviate that difficulty.

7950. Is there any site in or about Hyde Park, or its neighbourhood, that occurs to you as being preferable to the present site?—I have only just looked over the hedge, if I may so call it, of the ground at Kensington; it looks to me sloping, and low, and full of drains; I should have preferred the part between Hyde Park and Kensington Gardens.

R. Ford, Esq.

4 July 1853.

7951. You would prefer a more airy site?—Yes; I should have preferred that site.

7952. Do you consider it indispensable in order to obtain those advantages, of a suburban rather than a central site, that it should be in a wide open space, where there was a chance of such open space being preserved?—Yes; first you get light, and next, the smoke is diluted where there is a large space. In the great galleries abroad you seldom find them placed in the thickly populated part of the towns; the Louvre has a broad river running in front of it, and a great court behind; it is, in fact, not in the town; you must go some distance to get to it; it is not set down in a main highway like Charing Cross.

7953. Is there any part of Hyde Park, or Kensington Gardens, that has occurred to you as combining the qualities which you would desire to find in selecting a site for the National Gallery?—I have heard a suggestion made, that a good site would be obtained somewhere near where the sunk wall is.

7954. Do you mean the boundary between Kensington Gardens and the Park?—Yes.

7955. That is where the old gravel pits were?—Yes. It is very elevated, and is on gravel; very fine buildings might be raised there.

7956. Do you think that there would be any serious objection to that plan, on the ground of the publicity that would be infused into Hyde Park, in consequence of people visiting the gallery?—No, that seems to be courted; the roads have been widened lately, in order to increase the facilities afforded there. I am not afraid of the public coming in too great a throng there.

7957. You would have to admit omnibuses and cabs, which are at present excluded, would you not?—I would make them stop, as they stopped at the Exhibition, at some gate or entrance to the Park.

7958. You must bring them up close to the building, must you not, in order that persons may go into it at once, if they want to avoid the rain?—Is it proposed to admit the public on wet days?

7959. Would you not admit them on wet days?—No. At Madrid, where certainly it does not rain so often as in England, they are never admitted on wet days, because people come in with mud on their shoes, which first adheres to the floor and then rubbing off, becomes dust, and flies on the pictures.

7960. Mr. *Hardinge.*] Do you recollect how often they are admitted to the gallery at Madrid?—I do not think they are admitted more than two days in the week. Foreigners are always admitted, but the inhabitants are only admitted to the pictures on Sundays, and only for five hours.

7961. *Chairman.*] In any case, there would be no necessity for a thoroughfare through the Park beyond the gallery, supposing it to be placed on the site to which you have adverted?—I should be very sorry to see an omnibus let into the Park at all.

7962. How many omnibuses would be employed, do you think, if they were merely to be allowed to go to the gallery?—I do not think many would be employed; they would take the infirm.

7963. Do you not think, that if there were a restriction which prevented the public from visiting the gallery on rainy days, that restriction would operate more to prevent people from visiting the gallery in the climate of Britain, than it does in the climate of Spain?—Yes, it would; but I am one of those who do not want to have large crowds entering this fine gallery.

7964. Mr. *Ewart.*] Would not the rain tend to act as a restriction?—Where the gallery now stands the rain acts as an inducement to people to enter it; everybody runs in to get out of the rain.

7965. But would that be the case, do you think, if the National Gallery were placed in such a position as you think desirable?—I think that if it were put there we should not have to suffer from the presence of great crowds.

7966. Mr. *M. Milnes.*] Do you think, that with a view to improving the taste of the people, an impression on the popular mind is more likely to be permanent if access to the National Gallery is made somewhat more difficult; do you think that thereby an additional interest in the pictures would be created?—Most undoubtedly.

7967. Will you give your reason for so thinking?—I think that a vast number of the people who go into the present gallery do not go in with any particular desire to see the pictures at all; they merely go to walk about and talk to each other; a little difficulty whets desire.

7968. Mr. *B. Wall.*] Does not that observation apply equally to all exhibitions, and all sorts of gathering of people; we cannot expect the multitude to go in exactly for the object for which we would wish them to go in; all people do not go to church to hear the clergyman, and people who go to the theatre do not all go to hear the play; the mass of people who congregate are idlers and loungers who are led there by others?—Yes, æsthetical idlers; they come there to idle their time and to amuse themselves; very few of them come with a real desire to study the pictures.

7969. Mr. *Hardinge.*] Your proposal that they should go and purchase a ticket would obviate that objection, would it not?—Yes, I think it would.

7970. Mr. *B. Wall.*] You have said that the site which you believe has been chosen, in the event of the gallery being moved, is sloping, low and full of drains?—It appears to me to be a sort of nursery-ground; there is a drain which runs under a garden paling; there is another in the middle, and it seems to me to slope down towards Brompton, but I have only seen it travelling by, and have never examined it.

7971. The alternative site which you would propose is at the edge of Kensington Gardens, in Hyde Park?—Yes, I should like that better, because it is higher, and because it is on gravel, and cannot be built round.

7972. Is it not rather begging the question to suppose that it would be possible to obtain a site within the Parks?—I was merely asked where I should like to have it, and I answer I should like to have it there; but I did not know how it was to be got.

7973. Do you recollect the evidence that was given upon that point before the Committee of 1850?—I never read it, but I heard generally that there were great difficulties in the getting that site.

7974. It was stated, I think, that it would be impossible to get any situation within the Royal Parks?—I am not aware of that.

7975. Of course it would be most desirable, if it could be obtained, to have a site consisting of several acres unoccupied by buildings?—Yes; but as her Majesty and the Prince take such extreme interest in matters of art, perhaps the case is a little altered now; and if cogent arguments, showing the superiority of such a site as that in the Park would be, I think that so intelligent a man, and so great a lover and patron of art, might induce the Crown to give way.

7976. Do you think that if we could obtain Kensington Palace that would be a good site?—Yes, it would be a very good site, but I should prefer that the site should be more advanced, because you would have a greater security of the gallery not being built round.

7977. If you could get Kensington Palace, much money would be saved by moving the collection there, would it not?—It would have to be rebuilt.

7978. Do you think that it would be too far for masses of people to go?—Not very much; it is a good way, but not further than the Belvidere is at Vienna; it is not much further than the Prado is at Madrid, which is entirely at one end of the town. The poorer and middle class people live, I think, quite at the other side. Now that is a long walk there, and it is very troublesome to go such a distance in such a climate.

7979. If the new gallery is not put within a number of acres, would not the evil of which you now complain in Trafalgar-square be constantly urging itself upon you by the addition of new buildings and by the increase of population, which a great central exposition would be likely to bring about?—There would, however, be a chance of having a better informed population; the very fact of their desiring to be near a fine collection like that would show the æsthetical tendency.

7980. But still, in a few years, the question of smoke and dirt would force itself upon you?—I am not one of those who think that smoke does such very great mischief; I do not find that it has any very injurious effect on my own pictures.

7981. Mr. *Ewart.*] The injury arises from the dust brought in by crowds probably?—And perhaps from the effect of their breath.

7982. Do you think that smoke is the greater evil of the two?—No, but I am not a chemist; there is a peculiar odour in the National Gallery, as any one will discover who goes in late in the day; I think Carlyle said something about a Museum headache, which he attributed to some mephitic change in the air of the room, by the breath of the crowds in it.

R. Ford, Esq.

4 July 1853.

7983. It is described by Professor Faraday as an ammoniacal exhalation?—That may combine with the dust and smoke.

7984. Is it not the fact, that pictures in private galleries do not suffer to the same extent from smoke as the pictures in the National Gallery?—Yes; I can see no change in my pictures for the last 30 years.

7985. Mr. *Vernon.*] What would you say to the Green Park for a site, with Piccadilly on one side, and St. James's Park on the other?—That would be a very good site; but it would block up the lungs of Piccadilly.

7986. *Chairman.*] You are aware, are you not, that the original plan when this ground was purchased, was to combine a variety of public establishments of all kinds, geological, geographical, chemical, and so on, with the art collections?—Yes; but I can see very little in common between the fine arts and the exact sciences; one is poetry and imagination, the other is a matter of reason and demonstration; and I cannot see what affinity there is between a geological specimen and a picture by Raphael. I may mention that I was with a geologist when I was at Rome, and when he saw the Apollo Belvidere, he cared nothing about the sculpture, except that he wanted to know of what particular stone it was made.

7987. Do you not think, that on other grounds it might be objectionable to combine a collection of such delicate objects of art as painting and sculpture with the more material branches of science and industry, inasmuch as it would tend to place art in the middle of a crowd?—It would, certainly.

7988. Would you consider it desirable to have a gallery of pictures, and a gallery of sculpture, if they should be ultimately combined, separated from other establishments, such as those to which I have alluded?—I should.

7989. Mr. *Ewart.*] I understand you to say that you would do away altogether with the system of trustees?—I would.

7990. I suppose you would only appoint the director you have suggested, on the supposition that he would, if it were needful, call in other experienced persons to advise him?—I think he would do that for his own sake.

7991. On that supposition, you would make the appointment that of a single person?—Yes.

7992. You would have a supreme director over the different departments?—That was thrown out by the Honourable Chairman; but I had not contemplated other departments; the only thing you could do would be to allow him to choose a sort of assisting council, of an amateur, an artist, and a picture-dealer, to whom you might give, perhaps 200 *l.* a year; but I would rather prefer making him supreme.

7993. If there were a separate director for each of the different departments of antiquities, sculpture, paintings, drawings, engravings, and so on, you would give the supreme director a controlling power over all of them, I presume?—Yes.

7994. Would you make him also a judge of what paintings should be purchased, and would you make him enter into the details of purchases generally?—I would make him entirely responsible, and I would exact an annual report from him.

7995. Suppose any ancient marbles were to be purchased, would you make him responsible for that purchase?—That I have not contemplated.

7996. Do you think it desirable to have a large open space round the gallery, not only because it would preserve, to a certain extent, the purity of the air, but because it is desirable to prepare the minds of visitors to the gallery by the distribution in the surrounding grounds of statues, fountains, and other decorations of an artistic character?—I think that would be very appropriate and beautiful.

7997. Is it not desirable that there should be an open space, especially to the north-east and east, in order that particles of smoke which come principally from those quarters should have space to subside before reaching the gallery?—Yes; besides which a northern light is such a nice quiet light to see pictures by; I believe that most painters paint by it.

7998. Do you know that it was given in evidence before commissioners on this subject, that an opening to the east was particularly desirable?—No.

7999 Lord *W. Graham.*] I understood you to say, that you thought it would take 10 or 15 years, or more, to complete a National Gallery?—Yes; it will now, because the supply of good pictures is diminishing every day, while the competitors for them are increasing. A most excellent gallery might have been formed

formed 50 years ago at a very small cost, but now you must pay tremendously for good pictures; it is the old story of the Sybil's books.

8000. You do not agree with a former witness, who stated that in three years he could undertake to form a first-rate gallery?—No; I do not.

8001. *Chairman.*] Are not numerous offers to sell good pictures constantly made?—Yes; but I am looking to the formation of a real gallery, and such as England, the richest country in the world, ought to possess.

8002. You are aware, are you not, that a proposition was made for the purchase of the Manfrini collection; in your opinion would those pictures have formed an important and valuable addition to the pictures in the National Gallery?—That collection would have formed a very respectable item in the mass.

8003. That collection, however, was overlooked. Is it not the case that other collections have been overlooked also?—The collection in the Pitti Palace was overlooked also, I understand. Certainly Soult's pictures were overlooked, and also Sebastiani's pictures; they were all offered to the nation.

8004. Does not the same observation apply to Mr. Solly's pictures?—Yes, it does; but if you are going into an archæological collection, only conceive to what an extent it will spread.

8005. Are not other collections archæological collections?—Yes, but they began purchasing earlier than we did; they have had men like Dr. Waagen at the head of them, who have always been on the look-out.

8006. The Berlin collection is in its youth, if not in its infancy, is it not?—So much the worse for us, for they have swept, and are sweeping, the good things away.

8007. Do you not think that when Dr. Waagen began to form a collection his friends told him that the good things had been swept away, and that he was too late?—Did they not get at one swoop a great part of this very Solly's collection?

8008. Mr. *B. Wall.*] If Dr. Waagen had been the director of our National Gallery, would he not have been exposed to many difficulties which the trustees of this gallery have encountered?—I have no doubt he would; and whoever becomes the director of a National Gallery of pictures must be a brave man.

8009. Is there much analogy between the way in which foreign galleries are carried on, and galleries in this country, or is not the difference so great between our form of constitutional government and theirs, that in point of fact there is very little analogy between them?—The mere fact of the existence of a free press in this country would add very much to the difficulties of the director, because he would be certain to be attacked by anonymous correspondents.

8010. *Chairman.*] Have not the attacks which have been made upon the trustees, been attacks founded on their not having purchased pictures rather than on purchases which they have made?—Yes; from some quarters.

8011. Has there been ever any real difficulty in getting a grant of money from the Government where a serious intention was shown to add extensively and usefully to our national collection?—Certainly not; and I am quite sure that Mr. Cobden and others would be very glad to vote a large grant for the purpose of obtaining a really fine collection.

8012. Mr. *B. Wall.*] Is it not half the pleasure of an Englishman to urge the Government to buy things for the public, and then to turn round and abuse what they have bought?—In that case he has a double pleasure; he gets the pleasure of seeing what is bought, and he gets a grievance too.

8013. Mr. *Vernon.*] What is your opinion as to the desirabilities of admitting people to the gallery on a Sunday?—I suppose I shall be also excommunicated if I give you my opinion, but I am in favour of admitting the public after morning service; if they have attended their Church they are likely to conduct themselves better on that day than on any other.

8014. You think that, under certain limitations, Sunday is a day on which a large number of the working classes might, at all events, be allowed to avail themselves of the gallery with advantage?—It is almost their only day, besides which they would be nicely dressed, and the fear of dirt would be less.

8015. Lord *W. Graham.*] You would draw a distinction, would you not, between an institution to which the public are admitted free and one for admission to which money is taken?—I confess I should like to see the money taken for a catalogue, just for the purpose of establishing a test.

8016. Mr. *Vernon.*] You would allow of the admission of the public on a

R. Ford, Esq.
4 July 1853.

Sunday, on the ground that rational, innocent, and instructive amusements are extremely desirable for the great mass of the community of that day?—Yes; the old verse in the Latin Grammar naturally occurs to one, "emollit mores "nec sinit esse feros;" the tendency of fine art cultivation must be to humanise and civilise.

8017. Lord *Seymour*.] I think you said you wished to leave the entire discretion of the purchase of pictures in the hands of the director?—Yes.

8018. And that director was to be under the Home Secretary?—Yes, but I would rather qualify that; I would not have him go to the Home Secretary with reference to every picture he bought, but I would have him go to him on every great occasion; where it was desirable that he should lay out a large sum, such as 20,000 *l.*, or make a great purchase, like the Soult collection, for instance.

8019. Having a certain sum at his disposal, say 10,000 *l.* a year, if he wished to spend 6,000 *l.* or 7,000 *l.* in the purchase of a limited number of pictures, you would in such a case as that wish him to apply to the Home Secretary?—Hardly, as to the money that he had at his own disposal; he would, however, probably do so as a matter of courtesy; he would meet him, very likely, and say, "I think it would be well to do so-and-so;" but I should be sorry that the Home Secretary should fetter him much in that respect.

8020. On your system the Home Secretary would be the person who would have to come to a determination as to pictures it was considered desirable to purchase?—Hardly that, because I proposed that there should be an annual report made; he would call upon the director to give a report.

8021. Are you not aware that the practice of the House of Commons usually is, not to wait until the annual report comes out next year, but to ask questions when they hear of anything having occurred?—I am not able to speak to that point.

8022. You have never heard that questions in regard to matters of taste are often asked in the House of Commons?—Yes; but that bears reference to the present anomalous state in which we are.

8023. You think that under this system the House would be so satisfied that they would ask no more questions?—No, I do not think that anything would satisfy them; they would require, perhaps, an answer next day. The Home Secretary would tell the director what the question was, or the director would read it in the "Times," and would probably walk down to the Home Office, and give the Home Secretary the means of answering it.

8024. But with regard to the wisdom of the purchases, the Home Secretary would be responsible to the House of Commons, would he not?—No; he would state to the House the reasons which, he hears, operated upon the director in making the purchase. The director would be responsible. The secretary would be merely the mouthpiece. He would say, "I have seen the director, and this is the account he gives."

8025. Then the director would be responsible, and there would be nobody in the House to answer for him?—If the Home Secretary would not answer for him, he might always be able to get some friend to do so.

8026. He must always be under the Treasury, must he not, with regard to the expenditure of money?—No; there would be annual sums granted.

8027. You have said that there is always great pleasure to grant money for those purposes, and that the attacks which have been made upon the trustees have been attacks upon them for not purchasing pictures, rather than for having purchased them?—I should say, certainly. The moment a picture is knocked down at a large price at Christie's, there are cheers from all parts of the room, when it is known that it is bought for the National Gallery.

8028. Even the most economical Members of the House of Commons urge the spending of money on works of art, do not they?—Undoubtedly, on the utilitarian principle. Manchester wants to improve its patterns, and how can they do that without having great examples? You must educate people in art. You send boys to school for every other object of study; but you do not send them for the purpose of acquiring a knowledge of art, one of the most difficult.

8029. Have you not observed it to be very much the case in this country that people are very willing to vote for the spending of the public money at all, and are very unwilling to give the Exchequer the means of raising it?—I think better times are coming.

8030. When

8030. When you say you think better times are coming, do you think that the economical Members of the House of Commons, instead of urging the spending of money without being willing to furnish the Exchequer with the means, will now be inclined to vote for new taxes, in order to raise the money, and with the desire to be so applied?—I think that the really Liberal Members will be disposed to be much more liberal in educational matters.

8031. You say you think they will be disposed to be much more liberal; do you mean that they will be liberal by voting money away, a thing which is easily done for the imposition of taxes for the purpose of raising money?—I have not thought of that, or meddled with it. I presume we have funds for the purpose.

8032. That is the first difficulty, is it not?—But after all the same difficulty would exist as to any National Gallery at all; and I do not think that any such difficulty would be likely to arise; you will not have to put on any new taxes for the National Gallery.

8033. The purchases which have been made for the British Museum have taken a considerable time, have they not?—Yes; but I wish they were larger, and I think the country would be very glad if the expenditure on the British Museum were doubled.

8034. Of late years we have been making many other collections which it is most desirable to open, I suppose, and which are also expensive; such, for instance, as the establishment at Kew?—Yes; and how pleased everybody is; I should like to see a little tax proposed, such as that which I have already suggested, of a penny for a catalogue; it might be seen how that would answer, if funds were wanting, but I am rather for going to the country at once.

8035. Have not the Liberal Members of the House of Commons, who have been so anxious to spend the public money, not been equally anxious that people should be allowed to enter those exhibitions without any payment at all?—I suppose they have.

8036. Have they not equally urged perfect freedom of admission?—They have not perhaps considered the evils to which that leads; they would not mind a little test, or a little check, I think, if it were explained to them that the property we have got is being deteriorated from want of some restrictive precautions.

8037. You think they will take a wiser view in raising taxes, and that they will take a wiser view with regard to the proposition of a slight tax on people who enter the gallery?—I do not think they would; I do not think they would hear of that.

8038. Mr. *Ewart*.] Do you ever remember any substantial resistance being made to a vote for the British Museum?—No.

8039. Has it not been the object of many persons who take an interest in art, to abolish all little items of charge, such as the charge which is made for visiting Saint Paul's, Westminster Abbey, and so on, where interesting works are to be seen?—Yes; that is what makes me think that the plan of making people pay some small sum for admission could not be easily carried out; I do not much care what the test is; I would just as soon that people should be required to go into the next street to get a ticket.

8040. Are you aware that the Committee which sat in 1836, specially mentioned these little imposts levied on the public as obstructions in the way of a popular knowledge of the arts?—I always thought that the object was not to make a church a show place. The Abbey has become the great receptacle of monuments by accident, not intention.

8041. Mr. *Vernon*.] Do you consider that shouts of applause in an auction-room, after one of these paintings has been knocked down, is a better test of public opinion than a letter which appears the next morning in the "Times" or the "Morning Post"?—I do; because the shout is the voice of many, and the best judges, while the letter is the voice only of one, and it may be of a bad judge.

8042. Lord *Seymour*.] You would propose another mode of keeping out idlers who frequent the National Gallery, by making them take tickets before they go in?—Yes.

8043. Are you aware that formerly, at the British Museum, they used to make people write their names down?—Yes.

8044. And are you aware that that plan was obliged to be abandoned in consequence

R. Ford, Esq.

4 July 1853.

consequence of the complaints that were made of it?—I do not know that the objects in the British Museum suffer so much; stones and shells, for instance, are not so much liable to injury as pictures are; besides which they are in cases under glass.

8045. Was not the question of compelling visitors to the British Museum to write down their names before they went in discontinued because the public found it inconvenient, and in consequence of the delay that was occasioned at the door of the Museum?—All tests are inconvenient, and more of necessity than choice.

8046. Do you not think that the imposition of this test would cause an additional difficulty to the single director, who would have to bear the responsibility?—He would appoint subordinate officers, and give his directions, which should be printed, and those directions would be abided by.

8047. But the people who objected would make their attacks, not on the underlings, who merely obey his directions, but on him for making such directions, would they not?—I dare say they would; but recollect how small our present gallery is; you have in London the greatest population of any city in Europe; and the gallery is placed in the most crowded part of that population; you let the people into a series of band-box rooms. In other great countries there is a little test or some little impediment; and besides that, the pictures are placed in galleries so large that the multitudes are lost in them; but the little rooms in which our pictures are placed are filled in a minute. When you come to build a new gallery, you must build it with very spacious saloons, if you were to let in the public without a test.

8048. You think that a gallery fit for the nation ought to be on a much larger scale than the present gallery?—Yes.

8049. Do you contemplate the removal of the site, as essential to any well-constituted gallery?—Most decidedly.

8050. You have stated that you think individuals would make few mistakes in the purchase of pictures, and that therefore you would have confidence in one director?—Yes.

8051. Do you not think that it happens that where individuals make a mistake, they do not publish it abroad to the world; whereas, when the mistake is made by the trustees of the National Gallery, it is trumpeted by all the papers throughout all the country?—It is pretty well known when any baddish picture is bought at a very large price by a private gentleman in London.

8052. Do you not think that many picture collectors, in the first instance, have bought their experience at a considerable cost?—Yes, but when they began, they were comparatively uneducated; but you would now appoint a head, who you suppose has been educated, and he will have paid for his experience; but you must not set the standard too high at the beginning; if you are seeking for such a person as is really not to be found, you will revert to the system that has obtained heretofore. You must simply take a well-educated gentleman, and attach great responsibility to him, and you must give him a good salary, without which no real responsibility can exist; but I would not appoint him permanently.

8053. You would give him no advisers to assist him, I understand?—*Caveat emptor*; let him find it out himself; unless you attach to him an inferior council of three.

8054. But when you say, *caveat emptor*, it will be the public unfortunately?—Then you will go back to the present system. If the present system would only be liberal, and not be so much afraid, I think it would give more satisfaction. I think it is wonderful how few mistakes they have made. They are merely a set of gentlemen, with no president at their head, and yet how fine all their recently purchased pictures are.

8055. They have also laboured under that want of funds which you pointed out as one of the chief defects, have they not?—Yes; they have lost many things which they might have bought, from not being able to buy them at once. I think they ought to have a balance at their bankers of 10,000*l.*, so as to enable them to lay their hands upon a gem at a moment's notice. I do not wish to fix that particular sum; but if you want them to have the means of purchasing fine pictures, the sum at their disposal must be a large one.

8056. You think that, whether it is a single person, or several persons, appointed

pointed to buy pictures for the nation, they ought to have a sum at their disposal?—I think that is most expedient.

8057. You referred to the print collection in the British Museum, to which, you said, you had paid attention?—Yes, great attention.

8058. Have you done so of late years?—No, I think not; since Josi's time I have ceased to be a print collector.

8059. You have not seen the progress that has been made of late years in the collection, have you?—I have been down there once or twice, because Mr. Carpenter is a friend of mine.

8060. Mr. *Vernon.*] You say that you think it is desirable that the director should be appointed for a limited term of years, and that he should not be appointed permanently?—I should make him report annually, and if it did not satisfy, the supplies have only to be withheld, and there would be an end of him as the director.

8061. You would not suggest that he should be appointed only for a limited term of years?—No; because, recollect, you are quite in the beginning.

8062. You say that you think the want of an annual sum at the disposal of the trustees is a disadvantage; are you aware of an instance in which the Treasury, when they have been applied to for the advance of money for valuable pictures, which have been reported to them as advisable to be bought, have shown anything of a niggardly spirit?—No; I wish for more applications.

8063. Is the only inconvenience to which you allude, that there has not been an annual sum at the disposal of the trustees?—The Chancellor of the Exchequer is bound to close rather than to open the public purse.

8064. Have you not heard that the Government at once placed 500 *l.* at the disposal of the trustees, in order to enable them to send a gentleman over to Venice to see a collection of pictures, and that the fault was not with the Government, but with the trustees, if with anybody, that that collection was not purchased?—Yes.

8065. Have they showed any difficulty lately in authorising the advance of money for the pictures which have been recently bought?—No; I am not at all their accuser.

8066. The only difficulty as to money consists, does it not, in the want of an annual amount, placed at the disposal of those to whom is entrusted the duty of making purchases?—Yes. What would any of us do without a balance at our bankers, if we went into an auction-room and purchased a picture? Many pictures are bought instanter when it gets wind that the trustees want to purchase them. You may depend upon it that a person in the situation of director will have plenty of pictures offered to him, independent of sales.

8067. You seem to be very much alive to the danger of picture-cleaning; do you, or do you not think it advisable that any gentleman entrusted to deal with the pictures in the National Gallery should possess a certain amount of chemical knowledge?—I do not think that picture-cleaning ought to be done in the way it is; but I cannot conceive, the question of picture over-cleaning having been now so much discussed, that it would not be the first subject to which the director would give his attention. I think it can never happen again.

8068. I was asking you whether it would not be desirable to have some test of the qualifications of any gentleman into whose hands the national pictures are placed, if it were only to satisfy the public that every possible precaution was taken?—You would, of course, get the best man you can; but if you make the post so extremely difficult, the consequence will be that you will get nobody.

8069. Do you not think that calling the public attention to the want of scientific attainments on the part of picture-cleaners, and the danger to which the national pictures are exposed, would tend to improve their practice?—I do not think that what has happened will happen again, in our times at least.

8070. Lord *W. Graham.*] Do you think that no pictures will ever be cleaned again?—Yes, they will be cleaned again, but they will not be done quite so rashly.

8071. Mr. *Vernon.*] You made some reference to private collections; is it not the fact, that in every private collection the owner sends his pictures from time to time as he buys them, or at some time or other, to have something done to them, in the way of repairing, restoring, or re-varnishing?—I think that when he first buys them he does; but when once he has got them home, as far as my

R. Ford, Esq.

4 July 1853.

experience goes, he never touches them again except to wipe them with a wash-leather or a silk handkerchief.

8072. Do you expect that in a public collection there should be such an entire difference in the management from that which you find in a private collection, that when you get a picture out of order, you should not have it put in order by the best man you can get?—Certainly, it should be put in order at once.

8073. *Chairman.*] Is it not the fact, that throughout Europe the operation of picture-cleaning has been carried to such an extent as to spoil a great many fine pictures?—Yes; almost all the paintings at Madrid have been retouched and repainted, especially the "Murillos;" they began with them. The "Raphaels" have all been retouched, and they are now about the pictures of the Italian school.

8074. The practice of picture-cleaning has been pursued much more extensively abroad than it has been in this country, has it not?—I think so.

8075. Lord *W. Graham.*] Were the "Claudes" to which you alluded in your former examination repainted?—Not when I saw them, but how they are now I do not know; some of the fine "Titians," when they were first obtained from the Escurial, had never been varnished, but were as they came off the master's easel; but, now that they have got to Madrid, no doubt they have been sacrificed.

William Russell, Esq., called in; and further Examined.

W. Russell, Esq.

8076. *Chairman.*] I BELIEVE you wish to make some suggestions as to alterations and improvements in the management of the National Gallery?—I should be glad to offer some such suggestions as have presented themselves to me.

8077. What are the defects of the present system to which your attention has been called?—I think the defects of the present system are rather to be attributed to the entire want of definite objects in the trust itself than to the character of the system that has been pursued in administering it. It appears to me that it has never been distinctly pointed out what are the objects of the trust of the National Gallery, and what is the course that is to be taken by the trustees.

8078. Has there not been a general understanding that the functions of the trustees were to watch over the state of preservation of the present collection, and to make judicious additions to it?—I think that has been rather the general understanding; but I do not think the trustees have ever considered that they have any clear or peremptory duty imposed upon them, and I think the Committee will come to that conclusion from the evidence of Lord Aberdeen. I think that Lord Aberdeen, one of the most conscientious persons you could find as a public or private man, has been of opinion that his duty as a trustee has been passive rather than clearly marked out, either with reference to any great course of acquisition, or with regard to the formation of the National Gallery. I think, if he had been of opinion that he was expected to take an active part in forming a national gallery, he would have taken a very different course from that which he has taken; and I think that generally the trustees appear, during past years, to have been of that opinion; there has been at times more activity on the part of individuals than there has been at others; but I do not think there has been an understanding that the trustees were called on to form a great national collection such as this country ought to have.

8079. Are we to understand that you do not think there is anything objectionable in the present system of an unpaid committee taking, under the Government, the principal charge of the establishment, but that you would propose to continue that system?—I think that must depend on what is intended for the future. I think it is almost premature for me, or for anybody, distinctly to suggest what should be done. Possibly this Committee by its recommendation, and Parliament by acquiescing in it, may point out that at a future time a great national collection is to be formed. First define the nature of that collection, and then will be the time more properly than now to consider how this new system, and this new creation, is to be superintended and carried out; but at present, unless we know very distinctly what is to be done in future, and unless some directions are given to us, it would be exceedingly difficult to say

say how our trust had best be administered. I think that if the system is to be merely a system of chance acquisition and superintendence, there are no great evils in the present system, but if there is to be some great change, such as has been suggested, I think the present system would require many modifications and changes.

8080. Do you consider it desirable that some specific instruction, on the part of Parliament or Government, should be issued as to the precise kind of collection that ought to be formed?—I think that is most necessary.

8081. Have not Committees of the House of Commons given some kind of instructions or recommendations in their Reports as to what they thought was required from the trustees in regard to purchasing?—I do not understand that there has ever been a clear course marked out. I think that if 25 years ago you had said to such persons as Lord Aberdeen, Lord Lansdowne, the late Lord Ashburton, Sir Robert Peel, Mr. Wells, Mr. Rogers, the late Lord Northampton, and Lord Colborne, that the country expected from them that they should assist in forming a great national collection, and that from time to time Parliament would assist them with proper means, you would by this time have had a collection with which the country would have been perfectly satisfied.

8082. Has there not been a perfect understanding that the trustees were to make all the eligible purchases they had an opportunity of making, and that the Government would be ready to respond to their exertions by granting funds where such purchases were reported to be desirable?—Occasionally; but I think the trustees have not thought themselves bound to use any extra activity for the purpose of doing it; I do not know that Parliament has ever instructed them that they should be supplied with means.

8083. Do you not think that that is owing to the trustees being gentlemen who are not distinctly obliged to undertake this office, or to execute it with any activity; do you not think that when they happen to be in London, and find it agreeable and convenient, they attend sales and look out for pictures, but that no single trustee has considered himself under an obligation to adopt that course?—It is as you say; no trustee has considered himself under an obligation to be very active in the matter; and I should think that the want of attendance on the part of the trustees results a good deal from that cause.

8084. If the trustees, with the facilities they have hitherto had, with the absence of any difficulty as to funds, generally speaking, on the part of the Government, and with recommendations from Committees of Parliament as to the class and description of pictures they should purchase, have not shown any great activity in the matter, do you think that if they were to be continued on their present footing they would show any greater activity, on being told that a collection should be made of a particular kind?—If I had the leisure to continue (which I should not be able to do) in the character of trustee, on that understanding, and on those terms, I, for one, would gladly undertake it, and should consider myself bound to be constantly active. If the trust should assume such an active form as I think it ought, I, for one, in consequence of my other avocations, should be unable to be a useful member of it, and I should therefore decline to take part in it; but many persons could, no doubt, be found who would be both very fit and very willing.

8085. If the trustees were under an obligation to hold monthly meetings, which, I suppose, is the smallest degree of attention that the chief director of a national establishment can be expected to show, and if they were bound each to attend a certain number of such monthly meetings, do you think that the noblemen and gentlemen who now hold that office would be willing to subject themselves to such an obligation?—I believe that the trustees would hold their meetings much more frequently than they have done, and I think that many persons would be ready to attend once a fortnight during the greater part of the year. I think that another class of persons should be attached to them, who should hold their meetings more frequently; and these gentlemen ought, I think, to be paid for their services.

8086. You would leave the attendance of the trustees, they deriving no emolument from their office, to their own discretion, would you not?—I think there might be a code or a system of instructions pointing out that their meetings should be held once a fortnight during a certain period of the year.

8087. And would you recommend that they should be bound to find a quorum at each meeting?—Yes, I should recommend that.

W. Russell, Esq.

4 July 1853.

8088. You would recommend that there should not be a period of five or six months during the dull season of the year when no meetings should be held?—Yes.

8089. You think that there would be no difficulty in getting them to attend?—I should think not. Perhaps I may say that it appears to me that now a very different system is required for some little time to come; if we may assume that a great collection is decidedly to be formed, and that the authority of Parliament is to be given to the necessary expenditure that will be incurred; if that be the case, I think that a very different system ought to be pursued for some years to come, I should say for five years, from that which would be permanently required; and that the system would at first be larger and more expensive than it would be necessary for it to be afterwards; I think that for the next few years to come there ought to be a system which would facilitate great rapidity of collection, so as to make up for the time which has been lost, and to form, in the course of a few years, a fitting collection for the nation.

8090. Would you propose to keep up the trustees in their present number, or would you have their number limited?—I do not know that there is any great magic in any particular number, but I should say that there ought to be from eight to twelve trustees at the least. I think it would be better that there should be a number of some magnitude, in order that the trustees might, if they thought fit, subdivide themselves into sections or committees to take charge of different branches of the subject.

8091. Would you have the trustees appointed from time to time, at the discretion of the Treasury, and in such numbers as the Treasury thought fit, or would you have a limited number?—I see no objection to leaving it to the discretion of the Treasury to determine what the number should be. The number, of course, would depend upon the subject-matter they had to deal with. If it were a mere gallery of pictures, a smaller number would be required; but if it is to be a general collection of works of art, of course the Treasury or the Government would select a greater number of persons who had paid attention to those particular subjects.

8092. Do you not see any inconvenience in the trustees constantly buying and looking out for pictures, they themselves being some of them or most of them picture collectors; would it not interfere with their independency of action, that they are anxious to purchase pictures for their own collections, as well as for the National Gallery?—I think that the persons who would be selected by the Government would forego any considerations of that kind. I have known recent occasions on which members of the trust, who were themselves also possessors of very remarkable collections, who have most anxiously endeavoured to ascertain whether there was the slightest chance of a desire existing to buy a particular picture on behalf of the public. I do not believe that that objection would arise.

8093. But, under this system of renewed activity, they would be under a sort of obligation to secure every picture worth securing for the nation; and, therefore, they would have no opportunity of buying any very valuable pictures for themselves?—Europe is very large, and the number of pictures that may be bought from time to time is very great. I think there would be no difficulty whatever in forming a number of very excellent private collections, besides a National Gallery.

8094. I am quite aware that the practice of the present trustees, under the late system, has not been open to the slightest ground of objection on this account; but what I have alluded to was the greater degree of activity that would be required of them, and the greater number of purchases they would have to make; and I wished to ask you whether, under those circumstances, inconvenience might not arise?—It does not occur to me that it would.

8095. You mentioned that for the purpose of making considerable immediate additions to the collection, some system might be suggested which might tend to accelerate their progress; what was the system to which you alluded?—I would propose first that there should be a Board of Trustees from 8 to 12 in number, who should be selected, from time to time, from such persons as the Government might think most competent, and who should give, as the present trustees do, their services gratuitously. I should propose that there should be a keeper and an assistant keeper of the gallery. The keeper's attendance to be not occasional, but constant, although not necessarily daily. There should be

be an assistant keeper, who would be resident and in daily attendance; that is much the same as under the present system. I would propose that the keeper himself should be an artist, who should have given his attention to the practice of other periods in the history of art, and who should have a liberal salary; the amount would, of course, be a matter for consideration, but I should say, perhaps 500 *l.* a year. I would propose that the assistant keeper should also be in some measure conversant with art; that he should have apartments in the building, with a salary of from 200 *l.* to 300 *l.* a year. Then I should propose that there should be a Council of Art attached to the trust, consisting, perhaps, of five persons, artists by profession, or others versed in art, practically or theoretically. I would recommend that these should, from time to time, be selected by Government, and receive a salary, perhaps, of 300 *l.* a year each. I would propose that this council should hold weekly meetings for the greater part of the year, with a power to assemble themselves more frequently if they should think fit, or if the Board of Trustees should specially invite them to do so. I would propose that three should constitute a quorum. Then I would recommend that the keeper should be present at these meetings to take a part in them; yet without having any direct suffrage or right of voting in cases of dissent. I think he should communicate reports from the council to the Board of Trustees, whose meetings might be held once a fortnight, or more frequently, if they themselves should desire it, or if the Council of Art should at any time see reason to ask them to consider any report of urgent importance.

8096. What would be the subjects that this council would specially take into their consideration?—There again I feel a difficulty owing to the state of ignorance in which we are as to what possibly may be done, but if it is to be confined to a great national gallery of pictures, there is the whole field of purchase open to them, and the whole question of arrangement of the gallery, and possibly there may be a question as to the structure itself, and the arrangement of the parts of the structure, together with questions of lighting, and in fact all questions as to the arrangement of the National Gallery; for I assume that these new functionaries would have to deal with all that.

8097. Do you propose that those questions should originate with the council, or that they should be merely a body whom the trustees are to consult in regard to questions which have already suggested themselves to the trust?—I would propose that the Board of Trustees at their meetings should refer for inquiry, and report to the Council of Art all such matters of consideration as they themselves may think urgent, or as they may think worthy of reception, if suggested from other quarters. I would let them dispose at once of such other matters as might not seem to them to require reference. I would suggest that the members of the Council of Art would be expected to make personally, or by correspondence, either in this or in foreign countries, such inquiries, and to possess themselves of such information as would lead to the gradual increase and organisation of a great national collection. I would let them from time to time lay the results of their inquiries before the trustees; the costs of such correspondence and inquiry to be audited and defrayed by the Treasury. I would suggest that the keeper should be the organ of official communication between the Board of Trustees and the Council of Art.

8098. Would you propose that the Council of Art should also originate questions independently of those questions which are referred to them by the trustees?—Undoubtedly, whenever it occurred to them to be right to do so. I think they would be expected to be active in their inquiries; for example, if in the course of their researches they have heard of a foreign collection, or a foreign picture which it appeared to them it would be desirable to purchase, I think that they should communicate to the Board of Trustees what had occurred to them upon the subject. I think they should make a report, and ask for the authority of the trustees.

8099. Upon whose responsibility would purchases be ultimately effected, by the council, or by the Board of Trustees?—I should say that the accounts of the trustees, which would be finally audited by the Treasury, would be kept by the assistant keeper, he being allowed for the purpose the regular assistance of a scribe or secretary, who would perform all the duties of writing out and recording the proceedings of the trustees and of the Council of Art, and there

W. Russell, Esq.

4 July 1853.

should be a moderate salary allowed to him. Then I would suggest that the Board of Trustees should communicate to the Treasury such propositions for the acquisition of pictures, or other matters involving any considerable outlay of money, as might seem desirable, appending to any such statement their own signatures, and stating the name of such members of the Council of Art as might have reported to them in the particular matter, with so much of their reports as they might deem expedient.

8100. Would the trustees, before reporting in favour of any purchase, be under an obligation to have the assent of a majority of the Council of Art?—Certainly not, in every case. If, for example, the trustees should be aware that the Spanish Government were ready to part with certain well-known and valuable pictures, as "The Spasimo," or "The Perla," of Raphael, at a given price, it would not be necessary to convene a Council of Art with reference to them, but an application might at once be made to the Treasury, saying, "We "may have those pictures for 10,000 *l.*; is the Government willing to afford us "the means?"

8101. Assuming that a picture is to be sold in London, and that the Council of Art have come to the conclusion that it is not a desirable purchase, and have so reported to the trustees, and yet, notwithstanding that, the trustees should purchase that picture, upon whom would the responsibility rest then?—That would not be the course according to my view; the trustees having received this report from the Council of Art, would, if they decidedly disagreed, communicate to the Treasury both their own opinion and the contrary opinion which had been given by the Council of Art to whom the question had been referred, or by whom it had been considered, and if the Treasury, upon receiving those two statements, chose to say that the picture was a desirable picture to purchase, the money would be advanced; but if the Treasury said, "We do not regard the opinion of the trustees, and do regard the opinion of the Council of Art," the money would in that case be withheld, and the picture would not be bought. I apprehend that in all cases before the purchase of pictures the authority of the Treasury would be obtained.

8102. Then in that case, where there is so vast a variety of opinions, the trustees and the Council of Art would be always liable to act as antagonistic bodies, who would go to the Treasury as an umpire?—I do not know that this difference of opinion would necessarily occur.

8103. Do you think that unity of opinion is so great in the public generally in questions of art, that even among such a body of gentlemen no difference of opinion would arise?—I do not think that would necessarily follow, but I think that often the trustees themselves would be unwilling to refer it to the Treasury if they had a strong adverse opinion from the Council of Art; it would be only in cases in which they satisfied themselves that the Council of Art were wrong that they would take measures in opposition to it.

8104. Lord *W. Graham.*] Do you think that the trustees would be likely to be better judges on such subjects than the Council of Art?—No, I think they would be a sort of court of appeal, that they would have an opportunity of reconsidering the judgment that had been given by the lower Board, and that they then might say to the Treasury, assigning their grounds for coming to that opinion, "We think that the Council of Art have come to a wrong conclusion," and they might go on to state why they disagreed with them.

8105. Mr. *Ewart.*] Might not the council of five know more upon the subject than the Treasury, and yet the Treasury you would make the ultimate court of appeal?—That is quite true; but the Treasury would have the benefit of having the whole case laid before them; they might say, "We think this is "a doubtful case, and therefore we will not advance the money."

8106. *Chairman.*] To that extent the Council of Art would be independent of the trustees, because the trustees would have no control over them; and the Council of Art would be as much entitled to make known their opinion, by going to the Treasury, as the trustees themselves?—No; the communication with the Treasury would be through the trustees; I should not propose to give to the Council of Art power to go to the Treasury.

8107. I understood you to say that if the Council of Art were to report an opinion adverse to the trustees, and the trustees differed from that report, it would be obligatory upon the trustees to report that difference to the Treasury?—But it would not be always necessary that they should do so. It might be that

that they would agree with the Council of Art, or that if they differed from them, they would not think the error upon the part of the Council of Art clear enough to warrant them in going to the Treasury and saying, "These gentlemen "have so miscarried, that we ask you to come to a different conclusion from "that to which their report would seem to lead."

8108. And thus the trustees might decide one way or the other, without reference to the Treasury?—No; not in favour of a purchase, because they must always obtain from the Treasury authority to act.

8109. They must lay before the Treasury the adverse opinion of the Council of Art?—If their opinion is adverse.

8110. Then in every case, either of an adverse opinion of the Council of Art, or a favourable opinion, a report must be made to the Treasury?—Yes, if the Treasury is expected to act.

8111. Mr. *Vernon.*] How do you recommend that these Councils of Art should act; is there to be a quorum, or is the majority to decide: or would you have the opinion of each individual before given separately, to be separately considered on its own merits?—I do not think that it is necessary to prescribe the exact course; if you find five or six persons fit for the appointment, they may agree among themselves as to the best course to be pursued in that respect.

8112. Do you propose that one member of this council must be more perfectly acquainted with pictures of the Spanish school; that another should be acquainted with pictures of the Italian school, and another with the Flemish?—I think that their qualifications ought to be such, and that the selection of them ought to be such, as to provide, as nearly as possible, for every contingency, and for every subject with which they would have to deal. I do not think you should take one man who was able to deal with one subject only; but I should endeavour, if I were the person selecting the five, to leave no subject unprovided for; but I should do the best I could to select the five persons whom I considered to be able to meet all the exigencies of the case.

8113. In proposing so large a number as five, what effects do I understand you they are to be referred to; simply with reference to pictures, or is it with a view to some more extended works of art?—There, again, the same difficulty arises, that I do not know what is intended to be provided for; but I think that if there was a great collection of pictures, to which, in my opinion, ought to be be added a great collection of drawings by the old masters, which, I conceive, for all purposes of art, would be a most valuable adjunct, there ought to be five persons appointed. I think they would not be too many. It would probably sometimes happen that one of these persons would have occasion to go abroad to make purchases, which would at once reduce the number to four.

8114. Do you consider that the salary which you have spoken of, 300 *l.* a year, would be sufficient to secure the entire services of a well-qualified person, or do you only mean that that sum should be the settled payment for some occasional services?—In appointing these persons, I do not think any conditions of entire exclusion from any other occupation should be imposed upon them. I think they might be allowed to pursue other vocations.

8115. Would you expect them to travel, for instance, for the purpose of making inquiries, to pay their own expenses at such a salary?—Certainly not; I think I have already stated that the costs of inquiries and correspondence, and in which I included, of course, the costs of travelling, should be audited and defrayed by the Treasury.

8116. *Chairman.*] Did you say that you thought that the council should be appointed by the trustees or by the Government?—By the Government.

8117. Would you consider it necessary that a monthly, quarterly, or annual report should be given in by the trustees as to their proceedings?—I should prefer an annual report; I think that if the reports were to be very frequent, there would be more discussion than was necessary from time to time in Parliament; I think it would be very inconvenient. I think that many unnecessary questions would constantly be put in Parliament with respect to what had been done. I have no wish to prevent a wholesome control on the part of the public, and I should be very desirous for the public to know exactly what was going on; but, I think that an annual report, or at all events a report made every six months, would be far better than a report made at short intervals.

8118. Would you put a fixed sum at their disposal annually?—I think there might be great objections to that; but at present, having no idea of the scope

W. Russell, Esq.

4 July 1853.

or of the scale on which these operations are to be performed, I do not think it would be easy to say. I think it was put by Lord Aberdeen, that if there were a fixed sum, they would fancy that it should always be spent, and that sometimes it would be spent on objects which it is not very desirable to possess. I should prefer that there should be no fixed sum, and that the Treasury should signify their readiness to go to a great extent for some years to come in making a good collection.

8119. Mr. *Ewart.*] It should be rather under the control of the Government than be at the disposal of the trustees?—Yes.

8120. Still, you would have a fund available to the purchase of works of art?——

8121. Lord *W. Graham.*] Do you think that with five artists and twelve trustees there could be any great danger of this sum being hastily squandered?—No, I hope not; I trust that the Government would select persons in the first instance, who, feeling that they had a great public duty to discharge, would exercise great care in the selection of objects on which the public money would be expended.

8122. Mr. *Vernon.*] You think that with so many persons to choose, it would be very difficult to come to a wrong conclusion?—Yes.

8123. Lord *W. Graham.*] Would not that do away with the objection to a fixed sum?—To a certain degree it would; but I should like, if a fixed sum were made, that it should be a very large sum.

8124. Would you say 10,000 *l.*?—I apprehend that that would be by no means sufficient.

8125. *Chairman.*] Would you adopt the principle of placing a fixed sum at their disposal, with power to make application for a larger grant under special circumstances?—I think the Treasury can give its orders at any time, if they have the means. If they were to determine on a certain sum, they need not name it to the trustees, but they may hold themselves ready to meet the demands of the trustees.

8126. Are there not cases in which a purchase might require to be made on the spur of the moment, and where a valuable picture might be lost from the necessity of waiting until a reference was made to the Treasury?—I think that that difficulty very rarely arises. I have seen instances in which pictures have been bought with great rapidity; I have seen a picture, the Head of Rembrandt, by himself, hanging up at Christie's, and within two days afterwards it has been sold to the National Gallery. An instance has lately been cited of the attempt to purchase a Velasquez. Sir Charles Eastlake stated that he had experienced great difficulty in not being able to find another trustee; and he stated that on his own responsibility he went to the Treasury. But I do not consider that to have been any proof of the difficulty which he wished to show. That picture was one that was in the Standish Collection; it had been hanging up a great part of the week; all the trustees had seen it; it had not occurred generally to them, nor had it occurred to Sir Charles Eastlake himself, until the last moment, to purchase that picture.

8127. Mr. *B. Wall.*] Are you aware that that Velasquez had been in the market for a whole year, and that it was sold at the suggestion of Sir Robert Peel, who said that if the directors did not like to buy it, he would take it himself for his own gallery?—I was not aware of that fact.

8128. Mr. *Ewart.*] Do you not think that the existence of so large a body as a council consisting of five members would render the existence of the body of trustees almost superfluous?—No, I think it is exceedingly desirable that the public should have great confidence in them; and they would be satisfied that they were not influenced by private interest. I do not wish to reflect upon any particular class of persons, or upon any profession, but I think that the public would have an increased confidence in the purity of the management if there were persons who gave their gratuitous services to the public, and who superintended all that was done by those who were paid for their services.

8129. Do you not think that the members of a body so complete would somewhat impair the effect of their action?—I do not think that that necessarily follows.

8130. Do you object to *ex officio* trustees?—I do not know that they are of any particular value, except that they afford great facilities for communication.

8131. *Chairman.*]

8131. *Chairman.*] Do you think that the principle of having the First Lord of the Treasury the superior court of appeal to the trustees, he himself being an *ex officio* trustee, is not rather an anomaly?—I do not think there is any practical inconvenience in it; it rather increases the facility of communication with the Treasury.

8132. Has it not occurred that the First Lord of the Treasury has been, in his capacity of trustee, a party to the purchase of a picture which, as First Lord of the Treasury, he has afterwards been obliged to condemn?—It has not happened during my experience.

8133. Is there any advantage in exposing the First Lord of the Treasury to the accident of such an anomaly?—I do not see any great danger in it.

8134. Is there any advantage in the First Lord of the Treasury being a trustee, he being himself the person to judge of the conduct of the trustees?—I think it rather facilitates communication in some instances.

8135. Does it not neutralise and destroy the influence of the First Lord of the Treasury as a court of appeal, if he acts as a member of the inferior court?—Practically, I think it will be found that the First Lord of the Treasury very rarely attends meetings; he knows very little of that which has passed before the particular case comes to the Treasury; and I think that the First Lord of the Treasury will consider that he is fully at liberty to dissent from any proposition made by his brother trustees, if he shall think it an unfit one.

8136. I thought it was a part of your improvement of the system that the trustees should be under a distinct obligation to attend the meetings regularly?—I think so.

8137. Would the First Lord of the Treasury be also under that obligation?—Yes, to a certain extent.

8138. You said, I think, that one of the palliations of the anomaly was that he need not attend?—Upon consideration I admit that that might be a good reason for leaving out the First Lord of the Treasury.

8139. Do you think it probable that a Board composed of eight or ten trustees could attend during the whole year?—Probably not, but during a great part of the year they might do so; they would arrange with each other; there would be some who reside constantly, or nearly so, in London, and others who would be occasionally absent; they would, no doubt, arrange with each other.

8140. Would it not produce a want of uniformity, some being present at one time, and some at another?—I think not to such an extent as would work any great mischief.

8141. You would not make the members of the proposed council travelling officers, but you would have some persons to travel under their direction, would you not, to inquire into the merits of pictures which might be on sale?—I think that some of the Board of Art might occasionally travel, whenever it was thought desirable to do so.

8142. You spoke of the desirability of having some understanding on the part of Government or of Parliament as to the kind of collection that was to be made, the extent of it, and the mode of making it; to what extent would you consider such an injunction requisite; would it be desirable for Parliament, or for any department of the Government, to suggest or enjoin the managing body to complete their collection by making purchases from certain schools in specimens of which they were deficient, or to bring the collction into a historical and chronological form as far as might be desirable, or would you leave it to the discretion of the trustees or the managing body?—I think that if Parliament were to authorise, or Government were to sanction, the establishment of a certain body of paid persons, that of itself would be an indication that the future proceedings were to be more active than they had been before; but I think there should be a distinct recommendation either to those of the present trustees who might choose to continue in the discharge of the duty, or to the new trustees, and a distinct understanding as to their future course.

8143. You mean as to what class of pictures they should purchase?—What subjects they were to embrace, and the extent to which the expenditure should go.

8144. Are you aware that a Committee of the House of Commons, presided over by an Honourable Member now present, gave a distinct expression of opinion, in 1836, that paintings of the Raphael era formed the best nucleus for a gallery; would you consider that such an injunction should be given by

W. Russell, Esq.

4 July 1853.

Parliament or by Government, to guide the managing body until that deficiency had been made good, to exert unusual activity in getting pictures of that particular class?—The present trustees would think themselves bound to attend to any injunctions which might be given to them; but I think it desirable to give them directions, which would enable them to increase the collection by every species of legitimate art, and that they ought to be encouraged to form as large and as complete a collection as possible.

8145. You do not see the use of any such suggestion as that which I have read, in the terms in which it is made?—I do not mean to say that by any means. Those are exceedingly desirable pictures, but I am very averse to having anything like sectarianism in art. I should recommend that the collection should be formed on larger principles.

8146. If the nation were to declare that they did wish for sectarianism in art, would there not be some obligation in the trustees to follow the recommendation of Parliament?—I have no doubt that it would be the duty of the trustees, as long as they continued in the trust; but I for one should disagree with the nation and with Parliament, if they considered that sectarianism ought to guide the selection of pictures.

8147. They might be sectarians in their desire for certain particular classes of pictures to be admitted, without wishing other classes of pictures not to be admitted, might they not?—Such an injunction would be most valuable.

8148. You yourself said it would be desirable and essential, in order to a well-regulated system, that the body managing the system should have a clear understanding what the nation wished, and you mentioned that the nation should specify what they wished; do you think that, under those circumstances, it should be left to the discretion of the trustees to act or not, as they pleased, on such instructions?—If the trustees are under the direction of the Treasury, they would have no option but to obey the injunctions and directions given to them.

8149. Will you have the goodness to define more specifically what you alluded to when you said, that in order to improve the present system, it was desirable that the nation should distinctly lay down upon what system they wished the collection to be completed and continued?—I wish to have it defined what the scale of the collection is to be. I do not want the trustees to be directed as to whether they should prefer pictures from this or that school, but I think the whole complexion of the new institution ought to be defined to them in some way; I think they ought to be told that they are desired to make purchases to a certain extent from all schools; and from that they might be able to form a judgment as to the scale of the future operations they would have to conduct.

8150. You would lay them under no restrictions as to the class of pictures that it would be desirable for them to obtain?—I would not impose any restrictions upon them in the way of exclusion.

8151. Has not the prevailing taste in England been in favour of those schools which were specified by the Committee to which I have alluded, as the inferior schools, such as that of the Caracci?—Perhaps it has; but that has been partly from their not being sufficiently acquainted with some of the other masters, with whom I think it is very desirable that they should be fully acquainted; but I think there is great danger in excluding particular schools. I think, for example, that the Spanish school ought to receive favour as well as other schools; the Spanish schools have hitherto been very little known in this country; we find a great variety of opinions on these matters.

8152. Mr. *R. Currie.*] Is not that which you should chiefly desiderate in those who have to form a national collection, a truly catholic taste in art, a desire to recognise merit wherever it may be found?—Yes; I think the entire absence of strong predilections is a most necessary part of the new system, and that is one ground why I object to that to which many persons lean—a sole and single trustee, curator, or manager. I will take the recent instance of the Spanish collection; when that large collection came to be sold, there was a Velasquez, which many persons of great taste thought there would be a risk in purchasing; when we purchased it, it was thought by some that it was a representation of a sublime subject in an undignified manner, and that it tended to deteriorate the public taste, while others would have been inclined, not only to buy that picture, but all the best examples of Zurbaran and El Greco, and various

various other great masters. That, perhaps, would have led, on the other hand, to a great accumulation of Spanish pictures; but I think, it is exceedingly desirable, in order to give the public the opportunity of enjoying these different forms of talent and of art, that they should be allowed to see them. I would not buy bad pictures, nor would I buy merely for the purpose of showing defects, in order that by contrast they should show the excellence of others; but I would buy all those pictures in which great excellence in art may be found, and I think that from that would be obtained the happiest results.

8153. *Chairman.*] My question did not relate to a special purchase of an individual picture, but to the circumstance of Parliament having expressed an opinion, through its Committees, that it was desirable to make up deficiencies in our collection where those deficiencies were most observable, and I also alluded to the turn of our taste towards a totally different class of pictures from that to which the Committee of the House of Commons referred, and you said you thought it desirable to have the expression of an opinion on the part of the nation as to the class of pictures they wished to have; do you not think it desirable, that if the country considers the gallery deficient in certain schools, Parliament should say whether or not they think it desirable that certain classes of pictures should be more particularly attended to than others?—If the trust have neglected any particular school, I think they should be reminded of it.

8154. If Parliament by its Committees has given a distinct expression of opinion, which opinion has been authorised by the House, that it is desirable to purchase pictures, belonging to the school of Raphael for instance, would you not think it obligatory upon the trustees to exert unusual activity in making purchases of pictures of that school?—Possibly there might be such a recommendation, which the trustees ought to attend to.

8155. Mr. *Vernon.*] I presume your desire is to throw as far as possible a distinct responsibility upon some individual or upon some body, and here you propose to impose a responsibility on a Board of Trustees, do you not?—Yes.

8156. Do you consider that it would be the duty of the Government to select such persons as trustees as they think most calculated to advance the interests of art?—Certainly.

8157. Do you not consider that you would be more advancing the interests of art by leaving it to the discretion of those trustees, having got the best man you could select for the purpose, to exercise their own discretion as to the works of art they should choose?—I think, to a great degree, it would be the most safe plan to leave it to their discretion. I think responsibility is perhaps often talked of without much consideration being given to the value of it; the great object of responsibility of course is to secure absence of error; but I am not sure that the ordinary form of responsibility, such as the fear of censure, or the fear of the punishment or removal of the particular person who is to manage these matters, would at all insure his success. I think you should choose the men you consider most competent to judge of these matters, and that then they should be left to their discretion; they would be morally responsible, but I do not think it necessary to have the responsibility of a single officer, who should be liable to be removed because he miscarries occasionally in his judgment.

8158. Occasional mistakes must inevitably occur in the management of a system of this sort; do you not believe that public opinion would be so brought to bear on the operations of any such board as to be a sufficient check upon their proceedings?—I hope it might. I think it would be very well to try such a system, and I imagine that it would operate in the way you suggest; there would be a sufficient check upon them.

8159. Is it your opinion that, at the present day, or for some years past, there has been any undue leaning on the part of English collectors to a debased period of art?—No; I think that of late there has been rather a revival of a taste for that which many persons consider the highest period of art; the early periods of art have lately obtained more favour than they formerly did.

8160. Do you not believe that, within the last few years, from the greater facilities we have had for seeing collected together in the galleries of foreign countries, works of different epochs, a more catholic taste for art has been generally displayed in this country?—I think the probable result of having several persons would be, that there would be more free trade in art. I think that all classes and all schools of art would be done justice to, and that although there

W. Russell, Esq.

4 July 1853.

there may be occasionally fancies and fashions, those by degrees would correct themselves.

8161. Lord *Seymour*.] I understood you to say that you did not think it desirable to leave the purchase of pictures in the hands of one director?—I think not.

8162. I wish to ascertain the reasons why you think that one director would not be the best tribunal for judging of pictures, and for acquiring them for the country?—I think it would require the union and concentration of so many various qualities, that you could rarely, if ever, hope to unite them in one individual. I think he ought to be a person familiar with all schools of art, well versed in the history of art, acquainted with its technicalities, and a good judge of the condition and state of pictures; he should also be a man inaccessible to interest, of great industry, of large conceptions, and comprehensive views, and yet at the same time a man of very business-like habits. I think that he ought to be free from all predilections and all sectarianism; he should be possessed of great courage, fearless in his judgment, and quite indifferent to all attacks of either malignity or ignorance, and upon the whole he ought to be a man such as you would very rarely find.

8163. Do you observe among the trustees as at present constituted any predilection for particular schools or masters?—No, I have not observed that.

8164. Sir Charles Eastlake, for instance, stated to the Committee that he had very little admiration for pictures of the Spanish school?—Sir Charles Eastlake, of course, has put his own views in evidence before the Committee.

8165. But you have not observed, in your consultations with the trustees, that there is generally a predilection with each individual trustee for one school more than another?—Certainly not; my experience has been very short, only two or three years, but I have not observed anything of the kind as to the trustees generally.

8166. As far as it has gone, you have not observed any bias that has prevented the acquisition of good pictures of any school?—No.

8167. You propose that there should be a council of art attached to the trust; do I understand you to mean that they should meet separately from the trustees?—I think they should occupy a distinct board room.

8168. Why should not the five gentlemen, who you proposed to be selected from the artists of the country, be joined with the trustees and meet them as one body?—I think that would do away with the sort of court of appeal which I wish to institute; I think that many things might occur to the trustees with regard to the grounds upon which the different members of the board of art had come to their conclusion, which they could much more freely discuss in the absence of those who had suggested them; I think that could be more conveniently done if they held their meetings apart, and I think also that the meetings of the council of art ought to be more frequent than the meetings of the trustees.

8169. Would you expect the council of art to be the persons who should be active in finding out pictures to be purchased for the gallery?—I think that the board of trustees and the council of art should be active in the matter, but more particularly the council of art; I do not think, however, that the trustees themselves should be exonerated from a liability to make inquiry and research wherever they found it desirable to do so.

8170. When a picture was found, and recommended by any one, the first suggestion would naturally be, for the keeper of the pictures to go and see it, would it not?—Yes; he would be the organ of communication between the two bodies.

8171. Then, the keeper of the gallery having seen it, if he considered it worth further inquiry, would recommend the council of art to see it?—Yes.

8172. And they would make a short written report to the trustees?—Yes.

8173. The trustees would then consider the report; they would themselves then see the picture, and, if necessary, make a recommendation to the Treasury?—Yes.

8174. So that you would have all those checks to guarantee to the public that the money was well spent?—Yes; that is exactly the course that has occurred to me.

8175. Have you read the evidence of Mr. Hurlstone respecting the copyright of prints?—Yes.

8176. Will

W. Russell, Esq.

4 July 1853.

8176. Will you state to the Committee whether there is any system, and, if any, what that system is with regard to permitting persons to take engravings from pictures in the National Gallery?—Very little has passed upon that subject since I have been a trustee; the circumstance to which Mr. Hurlstone referred in his evidence had reference to something which took place at a rather distant period; I think in the year 1848; an application to grant leave to Mr. Gilkes to copy on wood some of the pictures in the gallery; I cannot state what actually took place with respect to that, for I was not a trustee at the time, but I have referred to the minutes of the trustees, and I have also endeavoured to ascertain from Colonel Thwaites what passed in respect of this transaction; I cannot, however, find anything that throws a distinct light upon it, but I apprehend that an application for leave to copy the pictures on wood was something new to the trustees; they seem to be to have been alarmed by the novelty of it, and probably that was their ground for rejecting the proposition, but I am sure that that would not be the case now, nor would it have been the case at any period within the last few years, for the great number of publications in which these works are represented by means of wood engravings, now demands that every facility should be given to the public for having them so represented. I have seen cases in which there have been copied in the "Illustrated London News," and various other publications, pictures recently acquired, and I have no doubt that if Mr. Gilkes were now to make the application and were to conform to the usual requisitions as to the admission of students engaged in copying pictures in the gallery, he would have no difficulty in obtaining the permission he desired. I think it is exceedingly material that that facility should be afforded, and if the matter required any new regulation the trustees would be bound to sanction it, for, although wood engraving is not the highest class of art, it is a process which has been resorted to in former times to perpetuate some of the best works of Parmegiano, Titian, and Raphael, and it is well known that Rubens himself superintended a course of engravings on wood of some of his important works.

8177. You believe that every facility is now afforded to the public for copying the pictures in the gallery?—Yes; I think it is very proper that there should be every facility given for that purpose; with respect to the pictures in the Vernon Gallery, the cases were rather peculiar; I think the refusing to allow permission to copy those pictures arose out of an understanding that there was between Mr. Vernon and Mr. Hall, as to restricting, in some degree, the right of engraving the pictures in his gallery; with respect to all other matters, I think the trustees may very safely have the conduct of that as they have of the regulation and admission of persons to copy; they would take care to give leave to those who would do them tolerably well. I see that shortly after this, leave was given to Mr. Doo, to engrave a picture by Francia; he is well known to be an engraver of the highest merit in this country, and therefore there could be no difficulty in giving him the leave he asked.

8178. Reference has been made to the purchase, by the trustees, of pictures which have been very ill-selected; for instance, a picture by Titian, from the Soult collection?—I was rather anxious to address myself to that point, as strictures have been passed upon that picture. I feel sure that the persons who have criticised it have no object but that of taking care that the public should have good works bought for them, and they would not suggest that that picture was a mere pasticcio, if it could be shown to them, with tolerable clearness, that it was evidently Titian's own design; that particular picture was bought upon the recommendation of Mr. Woodburn, out of the Soult collection, and that picture having been recommended to the trustees as likely to be so valuable an acquisition that no other Titian in the gallery would be able to stand by it, I confess, that I, for one, was somewhat disappointed when it arrived in this country; but the longer I know that picture, the more I admire it. And I would observe that upon trying to trace the picture shortly after its purchase, I was fortunate enough to obtain a fine impression of an engraving, which must have been probably executed in Titian's lifetime (*producing the engraving*), and with the exception of the glory round the head of the Saviour, it is an exact copy of the picture in the gallery; it is an engraving by Martin Rota, a well known engraver, who was born in Dalmatia, I think in the year 1540; Titian was born in the year 1477, and it is well known that he lived one year less than a cen-

W. Russell, Esq.

4 July 1853.

tury, and the latest date on any engraving of Martin Rota is 1577, and therefore, this engraving was probably published in Titian's lifetime. I have brought it here in order that the Committee may see it, as it exactly resembles the picture in the gallery, except, as I have said, as to the glory round the Saviour's head, which is rather a disadvantage than an ornament to the picture, and in order that the Committee may not suppose that it is a pasticcio after the famous picture at Dresden. Lord Grosvenor has a replication of that picture, and I have brought an engraving of that also, in order that the Committee may judge of the complete difference there is between the two.

8179. Mr. *M. Milnes.*] Would you say that this picture can compare with the Dresden one as a work of art?—That is a different thing. I do not advocate this as a very fine Titian, but I have no doubt that it is a Titian, and not a pasticcio, after Titian; in short, there is no detail of the picture, except the glory, which is not precisely the same as the engraving which bears Titian's name. I think it was suggested in the evidence before the Committee, that it was a pasticcio, and I believe it has been said to be by Teniers; now, Teniers was not born until 1610. I would wish to make this further observation to the Committee; I see, on looking through the evidence, that the Committee have occasionally touched upon the question of the danger of lining pictures, and also upon the danger of transferring them. I happen to be cognisant of a very remarkable instance which shows the possibility of effecting those most dangerous operations with perfect safety, and with the most fortunate results. I have a very fine picture here, which the Duke of Bedford has given me leave to produce to the Committee (*the picture is produced and shown to the Committee*); this picture was painted on canvas, and was laid down on panel, which is always of itself rather a dangerous predicament for a picture to be in; it is, as you observe, a very brilliant and beautiful Paul Potter; there was a large blister in the sky, which had become so baggy that there was no possibility of flattening it, and the question arose whether it would be safe to detach the canvas from the panel; on examining the picture this increased difficulty appeared, that about an inch, or an inch and a half on one side of the picture was painted neither on canvas nor on panel, but was painted on a sort of priming, or ground, which was laid down upon the panel, in order to extend and eke out the picture, and then of course arose the question as to the safety of removing that compound surface from the panel. I took the advice of Mr. Farrer, by whose recommendation Mr. Leedham, an eminent liner, was employed, and by him the picture was with skill and safety transferred. I have now brought it here for the purpose of showing it to the Committee, and of satisfying them that the public need not be alarmed when occasionally it becomes necessary that a picture should be newly lined, for recently there has been a great unwillingness on the part of the trustees to sanction the lining of pictures; and I am more anxious about this because, with reference to the recent purchase of the Velasquez, it will be absolutely necessary that that picture should be lined before anything can be done with it.

8180. Mr. *B. Wall.*] Are the trustees in the habit of employing Mr. Leedham when they re-line?—They have never done so hitherto; there has been no picture lined for many years, and probably the former course would have been that Mr. Seguier would have been employed to select whatever liner he thought it safe to resort to. Mr. Leedham is a man of great note as a liner. I was anxious that the Committee should see this picture in its present state, because I think it affords ample proof of the safety with which such operations may be performed by skilful men. The whole of the picture, for an inch and a half from the margin, was never either on canvas or on panel; the whole of the rest of the picture was, as I have already stated, on canvas, but was laid down on panel; the panel has now been entirely removed, and there is nothing but canvas. There was in the blue of the sky, though it is not very easy to detect the place now, a very large bag, about three-quarters of an inch wide, which stood up; the picture was in the greatest jeopardy whenever it was rubbed, and might have been irreparably injured; you now see that the texture of the picture is quite perfect; it was a picture of the greatest value, and of most remarkable purity and beauty.

8181. Lord *W. Graham.*] Was that picture cleaned and re-varnished?—I presume that that was necessary, after it was lined.

8182. Who

8182. Who do you say was the painter of that picture?—Paul Potter.

8183. Is that ascertained?—Yes, it is a signed picture.

8184. *Chairman.*] What is your opinion as to the question of site?—My opinion is, that the great objection to the present site arises mainly from its being a place of such very great thoroughfare, and that the great number of persons who now frequent the gallery tends to the disadvantageous condition of the pictures, and I think it would be very desirable, if the question be entertained of removing the gallery, that it should be placed in a situation where the thoroughfare is not so great; and I hold that opinion, not having any desire to exclude any portion of the public from the right and opportunity of seeing the pictures; on the contrary, I think that the more facilities are given to the public generally to see the pictures, the greater will be the benefits that will follow; but I think it very desirable that the gallery should not be in a place where persons go to it for other objects than that of seeing the pictures.

8185. You are aware it has been suggested that a check might be put upon it by some general, one cannot call it restriction, but temporary obstruction, by obliging people to take tickets at the distance of 100 or 200 yards from the door?—I think that might be of some use; but it would be imposing a considerable restriction and impediment on those who clearly ought to be admitted, and who might go there for legitimate purposes. Some of the Members of the Committee being themselves attached to the trust of the British Museum, are aware that a somewhat similar regulation did exist there, and that it has now been discontinued. Formerly, persons were obliged, on entering the Museum, to write their names; but now there is no such regulation, and a person goes in without doing so; therefore, I should rather suppose that that regulation had been found inconvenient, and that it had been objected to by the public, and consequently discontinued.

8186. Does not the being required to sign one's name involve another condition, viz., that a man must be able to write, and a person might be annoyed at such a test being required, while there is no such objection in the case of a ticket merely being required; it is only a walk of a minute or two, and shows that it is not the intention on the part of those going there merely to idle away their time, or take shelter from the rain, but actually to view the pictures in the gallery?—There may be such a distinction; I think that the real point is very well expressed in a letter which I received from Sir Robert Peel, shortly after the commission on glass had made its inquiry, and before making the report. I wrote to him to inform him of the course the commissioners had taken, and in writing to thank me for that information, he says, "I have my misgivings as "to the fitness of the present site for a collection of very valuable pictures, com- "bined with unrestricted access, and the unlimited right to enter the National "Gallery, not merely for the purpose of seeing the pictures, but of lounging and "taking shelter from the weather; to attempt to draw distinctions between the "objects for which admission was sought, or to limit the right of admission on "certain days, might be impossible; but the impossibility is rather an argument "against placing the pictures in the greatest thoroughfare of London, the "greatest confluence of the idle and unwashed."

8187. Lord *W. Graham.*] What is the date of that letter?—The 28th of May 1850. Now, Sir Robert Peel was exceedingly anxious to give every possible access to the public, but he felt very strongly the pressure of the point to which I refer. I may also mention to the Committee that I have spoken with Mr. Seguier, who states, that in attempting to polish up the pictures in the National Gallery lately, when he has had recourse, in consequence of our directions, to using a silk handkerchief for the purpose, he frequently finds a difficulty which he experiences nowhere else; he finds deposited on the pictures that which he terms a greasy deposit which he does not find in any private collections, and on account of that deposit, he finds great difficulty in polishing the pictures. That deposit seems to proceed very much from the class of persons, and the number of persons who visit the National Gallery. I think you will find that on wet days many persons go in there with no other object than to obtain shelter from the rain; and much more copious emanations and exhalations would arise from their clothing than from that of other persons who went decently dressed, and for the real purpose of seeing the pictures.

8188. Do you think that, if the public were obliged to get the tickets which

W. Russell, Esq.

4 July 1853.

have been referred to, the same inconvenience would be felt, or would it not, rather, restrict from visiting the gallery those who really wished to see the pictures?—It might have the latter result.

8189. Mr. *Ewart.*] Is not the best restriction the natural restriction of distance, and do you not think that a person would not voluntarily go far unless he really wanted to see them?—That seems an obvious restriction; but it also generates an obvious inconvenience. For there are many persons to whom distance, of course, is some inconvenience; but at the same time, in considering the various classes of persons who do go for the purpose of seeing the pictures, I think that in the first place it would be a very little inconvenience to wealthy persons to go a little further, or to give a little more time. Then with respect to persons engaged in business, they probably only go on certain days and at certain times, and if they go for the purpose of seeing the pictures, the facilities of transit are so much greater and cheaper now than they were formerly, that they might very well go to a distance, if they went there for a sort of holiday. I think that the only persons who would materially suffer by removing the National Gallery, would be persons engaged in public offices who may now go to visit the gallery as they go to or come from their employment, and perhaps it might be inconvenient to some artists who reside in the more central parts of the town; but many artists prefer a suburban residence, for the sake of a purer atmosphere, and they would have greater facility of access if the gallery were removed to one of the outskirts of the town.

8190. Do you not think that, for the working classes, it is desirable to combine with the National Gallery external decorations of an artistic character in the grounds surrounding it, in order to give them recreation out of doors; I mean such external decorations as one sees in the gardens abroad?—Yes, I think that would be a wholesome recreation to afford them.

8191. Mr. *Vernon.*] Did you understand from Mr. Seguier that he found the greasy substance to which you have alluded, upon all the pictures which he so rubbed up, or was it confined to those pictures to which the gallery varnish had been applied?—I should think not, because the pictures which would most require his polishing would be those which have been recently varnished with the other varnish; pictures varnished with mastic varnish will naturally chill a good deal, though in the early part of their time they chill more than they do afterwards, when the varnish has become firmer; therefore, I have no doubt he would have operated on those pictures more particularly.

8192. But you are not prepared to say whether he applied it equally to all the pictures, or whether he made any distinction between those pictures which had been varnished with mastic varnish alone, and those which had been varnished with old gallery varnish?—What he meant to say was this: he found that the mastic varnish did not polish up so readily, and had not the same advantage over other varnishes as regards the pictures in the National Gallery as it has in regard to pictures in other collections, because the difficulty of polishing it up is greater there. I do not think he meant to go into a comparison whether the deposit to which he alluded was greater on one class of varnish than on another. He did not refer to the absorbent qualities of one varnish rather than another.

8193. Lord *W. Graham.*] If the site were removed a little farther from town, or in a purer atmosphere, should you consider it necessary to continue covering the pictures with glass?—I think that probably would be very desirable if the number of persons who went to see the pictures were very great indeed; but we should judge better after a short time.

8194. It would be desirable to avoid it if you could, would it not?—It would be exceedingly desirable.

8195. Mr. *Hardinge.*] Would you propose that all the pictures should be covered with glass, both the large and small pictures?—I consider that it would be exceedingly objectionable to cover large pictures with glass; it would be almost impossible to see them if they were so covered; but at the same time I have observed that the Madonna di San Sisto is covered with glass, and those who have looked at that picture may judge what degree of difficulty there might be in using glass for large pictures in our own gallery. We have a large cartoon, the Massacre of the Innocents, lent to the gallery by the trustees of the

the Foundling Hospital, which it is exceedingly difficult to see, owing to the size of the glass.

8196. *Chairman.*] Being of opinion that a more airy site would be preferable, have you formed any opinion as to what situation you would prefer?—I myself have always wished that the National Gallery should be placed in a situation, which I presume is not within the reach of the public, and there are many grounds for objecting to it; my wish would be that the pictures should be placed somewhere in Hyde Park, but I look upon that as hopeless, and therefore I should say I desire to see it placed as near to it as possible.

8197. Do you not think it very desirable that the gallery should be placed in a situation in which it would have a permanent security for having a large open space all round it?—Certainly.

8198. Say a quarter of a mile, or some hundred yards at least, and that there should be no risk of a brewery or distillery springing up in its immediate neighbourhood, and also that the air should be diluted in some degree in its passage from the more infected atmosphere before it gets to the gallery?—Yes.

8199. Mr. *B. Wall.*] Is it possible that any such position can be found?—I am afraid that the difficulty is so great that it is impossible to obtain it.

8200. *Chairman.*] Have you examined the Kensington Gore ground?—No, I have not.

8201. What objection is there to giving the open space between Hyde Park and Kensington Gardens, near where the boundary line of the brick wall is, by the Gravel Pits; do you see any insuperable objection to such a site as that?—The public is in the habit of using the Park for other purposes, and they would complain if they lost it; but I have not considered it closely.

8202. Do you consider that, if the nation were anxious to get a very fine site for the gallery, and waived all objection to the Park being used for that purpose, it would be desirable to have it constructed on that spot?—Yes.

8203. Mr. *Vernon.*] Do you think the public would complain equally if the Green Park were selected, with one opening to Piccadilly?—I have not thought of that before; but I should be very sorry to see the Green Park lost. There is another point I might mention to the Committee: Mr. Seguier suggested to me that he had great doubts as to the safety of the present system of ventilation of the National Gallery. He thinks that possibly all systems of ventilation by means of pipes may introduce something into the gallery which is noxious to the pictures; he thinks that pictures in galleries in which there are fire-places, and which are not ventilated by means of pipes, are in a better condition; but perhaps that is a matter which the Committee may take other modes of ascertaining. It bears upon the condition of the pictures in the present National Gallery.

8204. Lord *Seymour.*] Does Mr. Seguier mean, that the present mode of ventilation tends rather to add to the dirt that collects upon the pictures?—Yes, and I think Colonel Thwaites is also of the same opinion; he has shown me some passages in the building where there appears to come out from the pipes in places where there is nothing to prevent it, a strong black stain, which leads him to think there may be some noxious influence from the pipes, which alters the appearance of the pictures.

8205. *Chairman.*] I believe it is generally admitted and understood, that the system of ventilation in the gallery is imperfect?—Yes.

8206. Do you think it would be advisable to remove the National Gallery to the suburbs of London, to an open airy space, and do you think it would be convenient to combine that structure with a number of others, for other societies and establishments?—Yes, I think that possible. I have not considered it sufficiently to give much evidence upon the subject, but I should be most anxious, in forming a new National Gallery of pictures, that provision should be made for forming a great collection of framed drawings by the ancient masters; that there should be some room, or set of rooms, for cartoons and drawings. I think they should be upon the very threshold of the collection, and that, after going through them, the public should pass into the other part of the collection; and I would not arrange that other part of the collection strictly in chronological order; but considering that many persons who go there have only limited opportunities as to time, I think they ought to be permitted to see

things that would give them pleasure, and should not be bound to go through a long chronological series, which might seem to them to savour rather more of the pedantry of art than would probably be agreeable.

8207. My question was rather this, Assuming there to be such a collection of works of art as you allude to, do you think it desirable that a building containing such objects should be connected with other buildings, devoted to chemistry, geology, industrial art, and other matters not connected with monumental antiquity, or with art?—I am not prepared to give an opinion as to that point, but I think it might endanger the purity of the atmosphere if a number of buildings were conglomerated in that way; the smoke and crowds would accumulate there as much as they do on the present site. It would depend, of course, on the extent.

8208. Were there to grow up a sort of town there, by buildings erected for persons connected with the institution, would not that be likely to defeat the object of obtaining a greater purity of atmosphere?—If they came too near, undoubtedly; it would depend on how much space was left between the gallery and the establishments to which you refer.

8209. Lord *Seymour*.] You have probably considered the site a good deal, since the subject was brought under public notice in the year 1850, by the Committee?—I have.

8210. From your experience, do you think that if the Royal Academy were removed, there would be on the present site sufficient space for all the purposes that you think necessary to be connected with the National Gallery?—I do not apprehend that there would.

8211. Then you think that one objection to the site, besides that which you have mentioned, viz., the inconvenience arising from its being in so great a thoroughfare of persons, is that the site now occupied by the gallery, even if the Royal Academy were removed, would not be sufficient for the purposes of the gallery?—Not for such a gallery as I myself should wish to see.

8212. *Chairman*.] Has your attention been called to the question of the possibility of taking in the workhouse behind the present National Gallery, or of procuring the barracks?—No, it has not. I presume that that could only be done at a great cost; but I do not know what the cost would be.

8213. Mr. *B. Wall*.] The expense would be enormous, in whatever way it may be done?—Very great in any case, of course.

8214. *Chairman*.] I presume that if those establishments could be placed at the disposal of the gallery, there would be sufficient room for every purpose?—As far as room is concerned, probably there would.

8215. Mr. *Hardinge*.] How would you insure the attendance of the trustees at the different meetings?—I should not propose to do it by any obligation beyond that which they would impose on themselves. If they had clearly marked out to them that upon them depended the carrying out the Great National Gallery, they would themselves arrange, if they accepted the office, to give such attention to it, and to be as regular as was necessary for the purpose, in their attendance at the different meetings.

8216. Do you think you could find gentlemen properly qualified to perform the duties of trustees, who were not engaged in other ways?—Yes.

8217. Are you aware that in the British Museum there is a regulation to the effect, that if the trustees do not attend for a certain period they are held to have resigned?—I do not know the details of the management there.

8218. Do you think it desirable that any such regulations as regards the trustees should be introduced into the system of management of the National Gallery?—I do not think there could be any objection to it.

Veneris, 8° *die Julii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Lord William Graham.
Lord Seymour.	Mr. Baring Wall.
Mr. Monckton Milnes.	Mr. Raikes Currie.
Mr. Hardinge.	Mr. Labouchere.
Mr. Sterling.	Mr. Vernon.
Mr. Ewart.	

COLONEL MURE, IN THE CHAIR.

Major-General *James Freeth*, called in; and Examined.

Major-General *James Freeth*.

8 July 1853.

8219. *Chairman.*] YOU hold the situation of Quartermaster-general?—Yes.

8219*. You appear here in consequence of instructions from the General Commanding-in-chief, to give his opinion as to the possibility of removing the barrack and barrack-yard behind the National Gallery?—Yes.

8220. Is the opinion of his Lordship adverse or favourable to the removal?—Decidedly adverse to it, for a reason which he has given in a letter he has addressed to the Chairman of this Committee.

8221. He considers that the present barrack is more conveniently situated, both for the troops it will contain and for the assembly of others in case of necessity, than a barrack in any other situation?—Yes, than any other locality that could be named.

8222. He thinks the advantage it possesses in having free egress through the National Gallery to the open space of Trafalgar-square, the Park, the Horse Guards, and the Houses of Parliament, are special advantages which apply to that site, and not to any other?—Precisely.

8223. His Lordship sums up his opinion by saying, that under all circumstances, he cannot assent to the loss of a barrack of such importance unless another is constructed on nearly the same site, having entrance and egress under the National Gallery, as now existing, with a sufficient parade, and all the necessary appurtenances?—Yes.

8224. And also with a free carriage communication in the rear for the reception of supplies and the passage of baggage-waggons?—That is decidedly his Lordship's opinion on the subject.

8225. It is probable, is it not, that any barrack or barrack-yard that would combine all these advantages in a military point of view would be an equal obstruction to the enlargement of the National Gallery on such an extended scale as has been proposed?—No situation for a barrack near there can be mentioned, except it were immediately behind the present barrack, and having a private parade to it in front, that would so well answer the purpose as the one now existing.

8226. Which would be virtually the same barrack and barrack-yard, the situation only being a little altered?—The situation might be slightly altered, but it should have the same advantages.

8227. That would still require a free egress and ingress under and through the National Gallery?—Yes, if the gallery continues there.

8228. Before the old building of the Mews was removed, the troops actually occupied that building, did they not?—We had always troops there as long as I can recollect; I have been in the Horse Guards for nearly 40 years, and I never knew it without troops. I know it was the opinion of the Duke of Wellington that it was a most eligible spot for posting a large force, and for assembling others, if required.

8229. The advantage you had in possessing the building on the site on which the National Gallery was built was only partly compensated by having the free ingress and egress through the present building?—Yes; we should be very glad if we had a larger barrack there.

8230. Lord *Seymour.*] What is the size of the present barrack-yard?—It is

Major-General *James Freeth.*

8 July 1853.

is constructed for 554 men, and commonly holds one of the small battalions of the Guards. We should much prefer having, if you have the room to give us, another barrack of the same dimensions built; say one large barrack, to hold a thousand men.

8231. When you say you want more barrack-room, you mean, generally, that for London you want more barrack-room for the troops?—We do, and we must have it, by some means or other.

8232. You do not mean that it is essential to you to have more barrack-room exactly in that position?—Certainly not.

8233. You only want the opportunity of placing a certain number of men there at different times, when occasion may require?—Yes, in addition to a barrack for one battalion of 554 men.

8234. Is it an old barrack?—It is a new barrack.

8235. Does it contain the modern improvements?—It is a new barrack altogether; it has been built within the last 10 or 15 years.

8236. Lord *W. Graham.*] If you had an additional barrack built there, would there be sufficient room on the present parade?—I doubt that.

8237. It would require the parade to be enlarged, would it not?—Yes, I think it would; but that is a matter on which an engineer would be a better judge than I am, and it must depend much on the available space. A convenient parade should allow of the battalion being drawn up in file, with an additional space at each flank.

8238. There was a plan proposed by Sir Charles Barry of covering over a large portion of the present parade ground, for the troops to be able to be formed underneath it; should you consider that objectionable or advantageous?—If there is plenty of ventilation, I do not see any objection to it. But would he build over that?

8239. That was his proposed plan?—Could he obtain a sufficient space without interfering with the parade below?

8240. The parade below was to be covered over partially, so that the troops could go underneath?—I doubt whether it could be managed so as to allow of the exercise of the troops, without supports on arches, or something of that sort; and if it were to be by pillars they would interfere with the movements of the troops.

8241. Lord *Seymour.*] Could you give up any part of the present parade ground for the purposes of the National Gallery?—No; it is too small already.

8242. Is that barrack considered a healthy barrack for troops?—I never heard any complaints of it; we had always our due share of sickness in the Guards, but not more so in that than in any other regiment.

Edmund Oldfield, Esq., called in; and Examined.

E. Oldfield, Esq.

8243. YOU are an officer of the British Museum?—An assistant in the department of Antiquities.

8244. Under Mr. Hawkins?—Under Mr. Hawkins.

8245. What is the date of your appointment?—The 13th of September 1848.

8246. Had you a position in the establishment before that?—No, I had not.

8247. Lord *Seymour.*] Will you state what occupation you had previously to that?—I was a barrister, practising at the Chancery Bar.

8248. *Chairman.*] By whom were you appointed?—By the three principal trustees.

8249. All the officers of the Museum, even those that are under the head keeper, derive their appointments, do they not, directly from the three principal trustees?—Yes.

8250. What is the precise nature of your office; are you responsible to Mr. Hawkins?—To the trustees through Mr. Hawkins.

8251. But you are not directly responsible to the trustees; all your affairs pass through Mr. Hawkins to the trustees, do they not?—Yes.

8252. What is the amount of your salary?—At present I receive 186*l.* a year, which in the course of two months will be raised about 30*l.*

8253. Have you any special branches of Mr. Hawkins's department under you, or do you exercise a general superintendence, in conjunction with the other assistant

assistant keepers?—It is in the discretion of Mr. Hawkins to apply the services of his assistants to whatever branches he thinks proper; my occupation has been chiefly the registration, classification and description of the coins, but within the last year and a half I have been also much employed in the arrangement of the sculptures.

8254. Any particular class of sculptures?—Only those we have lately been re-arranging; the Assyrian and Egyptian collections.

8255. Have you a precise set of printed regulations for your guidance?—No, not a very precise set of regulations; you are speaking, of course, with reference to the assistants only?

8256. Are there any printed regulations which apply to the special case of the assistants in the book of regulations which I have seen in Mr. Hawkins's hand?—Not as to their employment; that is chiefly left to the head of the department.

8257. Lord *Seymour*.] Is there not a printed book of regulations for the officers of the Museum?—Yes; but in that book the express occupation and duties of the assistants are not specified; they are intended to be left under the general superintendence of the head of the department.

8258. *Chairman*.] I suppose the specification is sufficient generally for your guidance, and that you would expect to receive more special directions from the upper keeper?—I think it is principally left to what experience has defined to be our duties.

8259. Lord *Seymour*.] Do you think that in so wide a department as the department of Antiquities, embracing so many different and desultory objects, it would be desirable that each assistant should be limited to some particular class, or do you think it is desirable that each should be placed under the general direction of the head of the department?—My observation was not intended to to be addressed to what was desirable, but to what was the fact. I think the regulations of the trustees do not expressly define the duties of assistants; but I am far from supposing it would be desirable that they should do so.

8260. *Chairman*.] If Mr. Hawkins considered your services particularly useful in some particular department, the arrangement of the Nineveh sculptures, for instance, he might after that was done instruct you to take charge of some other part of the collection, painted vases, bronzes, or otherwise where he thought your services would be peculiarly valuable?—Yes.

8261. Have you anything to do with the purchases that are made by the Museum?—In the same way that my colleagues have, according to our particular knowledge and tastes; particular objects are referred to particular individuals; but Mr. Hawkins is responsible for all purchases to the trustees.

8262. If you hear incidentally of any object that it appears to be desirable to possess, you would give your opinion to Mr. Hawkins?—Yes.

8263. Is he in the habit of consulting you and the other assistant keepers in cases in which he thinks your opinion may be valuable?—Yes.

8264. Although the proposal to purchase may not have initiated with you?—Yes.

8265. Has your attention been called to the existence of any inconvenience arising from the want of sufficient space in the Museum?—Yes.

8266. I believe it affects all departments of the Museum, does it not?—I believe it does.

8267. Have you turned your attention to any of the schemes that have been proposed for remedying that imperfection?—Yes.

8268. Does it appear to you that any of the schemes that have been produced are likely ever to be brought to a tangible issue?—It is difficult for me to offer an opinion upon that question; I certainly have formed an opinion on the merits of particular plans that have been proposed.

8269. Is the want of room peculiarly felt in your own department?—Yes, it is.

8270. Unless some remedy is procured, you will soon find yourself so crowded as greatly to hamper any arrangements that may be required to be made for either adding to or properly arranging the collection you have at present?—Certainly; the want of space not only limits the extension of the collection, but very much interferes with the arrangement in any scientific classification.

8271. Do you see any objection to the present site, with reference to your own branch, except that arising from the confined nature of the ground?—I think

E. Oldfield, Esq.

8 July 1853.

I think that that is the most serious objection, but it is an objection that would apply to any situation in the centre of London; moreover, the objects exhibited are of course more liable to injury from dust and smoke *there* than they would be in a more open situation.

8272. Have you observed the effect of discoloration upon any of the marbles, particularly the Elgin Marbles?—Yes, it is very great.

8273. There is an exemplification of that, is there not, in a fragment of marble lately brought from another locality to the Museum, to fill up a gap in the figure to which it belonged?—Yes; there was a small fragment of the frieze of the Parthenon, which was presented about two years ago by Mr Smith Barry, and which had been many years at his seat in Cheshire, that, at the time of its arrival at the Museum, appeared white, and totally distinct in colour from that which we previously had; but it has now considerably lost that freshness which it had when it first arrived.

8274. Are any precautions taken to remove the dark colour which the monuments acquire from their exposure to smoke?—They are occasionally washed.

8275. Does that reproduce their fine colour, or do they still retain a certain portion of yellowness?—It rather palliates the evil, but it is impossible to remove it.

8276. Lord *Seymour*.] Have not various schemes been proposed with a view of protecting the Nineveh and other sculptures from the effects of dirt and of the atmosphere?—Yes. I suppose you allude to a proposal for glazing the bas-reliefs, which no doubt would be a great protection to them; and I rather think the trustees looked favourably upon that proposal, but it would not be expedient to do so until the damp at present in them is entirely dried out.

8277. *Chairman*.] When you speak of glazing, you mean putting glass in front of them?—Yes.

8278. And the Elgin Marbles also?—I never heard it proposed as to them. The bas-reliefs in the Nineveh Collection are exceedingly flat, and might easily be brought under a frame like a picture; they are also more liable to injury than the Elgin Frieze, because the material they are composed of is alabaster.

8279. Those works not being of the higher class of art, any inconvenience arising from the glitter and dazzle of the glass would not be so seriously felt, as in the case of sculptures of the finer Greek era?—No, the inconvenience would not be so great; and I also think that the effect of smoke and dirt accumulating on those works would more impede the clear view of the highly elaborated portion of some of the sculptures than the glass would.

8280. The material of which those sculptures are composed is more susceptible of injury than marble, is it not?—Yes; alabaster is very soft, and suffers from the mere friction of persons brushing against it as they pass.

8281. Glass is used, is it not, for the purpose of preserving works from dirt and dust in departments containing smaller antiques, vases, and busts?—Yes.

8282. Your attention has been called to proposals which have lately been rife in respect of combining the art collections of the British Museum with those of the National Gallery?—Yes; I have heard of such suggestions having been made.

8283. What is your opinion as to the policy of so combining the art collection?—In my opinion it is incorrect to view the British Museum as a collection of works of art; it is, in its primary character, a collection of antiquities of the highest value as illustrative of history.

8284. I meant to include in my question the whole of the ancient sculpture collections; did you understand me as meaning to draw a distinction between those works which may be called objects of high art, and those works which may be called objects of barbaric art or archæology?—I have heard of such a distinction being drawn, which I think is, practically, very objectionable.

8285. Supposing that objection not to exist, what do you think would be the effect of combining the whole of those collections with which you are connected with the fine art collection in the National Gallery?—Taking the question by itself, I see no objection to that, provided care be taken that the building is sufficiently large, and sufficiently distinct in its two compartments to secure all the accommodation and means of arrangement we desire; there is always a little danger in the uniting of heterogeneous objects, lest one should a little interfere with the other.

8286. You would wish that collections of sculpture and bronzes, and those collections

collections with which you are yourself connected, should not be mixed up with the collection of pictures?—Certainly; I should consider it indispensable that the collection should be kept distinct.

8287. Do drawings and engravings form part of the collection with which you are immediately concerned?—No; they are under a distinct superintendence.

8288. Do you think there would be any difficulty in removing the monuments, if such a plan should be entertained?—I think it is merely a question of expense and time.

8289. If a monument has been removed from Thebes or Nineveh to the British Museum, it would not be impossible, I suppose, to remove it from the British Museum to a situation a mile or two off?—I believe that engineers do not admit the word "impossible" in their vocabulary.

8290. Assuming that on various grounds, whether from the narrowness of the present locality of the British Museum, or from the disadvantages to which you have alluded on account of the atmosphere, a plan was entertained for a new site, what sort of site would you desire, to combine all the advantages?—I think it would be most desirable that it should be an entirely open site, so as to admit of an unlimited extension, as circumstances may require, and that there should be no danger of injury from smoke and dust in the neighbourhood.

8291. There should be no risk of buildings springing up in the immediate neighbourhood of the gallery and creating smoke?—I think that is a very important element of consideration.

8292. It would be requisite to have, if possible, a free open space of ground all round the building, would it not?—I think so.

8293. Is there any particular site to which you have had your attention called?—I should certainly prefer the site of Hyde Park, if the collection of antiquities is to be removed at all.

8294. Do you mean Hyde Park itself, or do you include also Kensington Gardens?—I should prefer Hyde Park itself to Kensington Gardens, simply because it is more accessible.

8295. Do you mean a site in a portion of that large open pleasure ground which comprises Kensington Gardens and Hyde Park, and which would possess the advantage of a free open airy space on all sides of the building?—Yes; and probably removed half a mile from any building.

8296. You would not propose to have a site in Hyde Park alongside of the road, where you would be liable to have a brewery or a distillery opposite to it, or in its immediate neighbourhood?—No; I think that would be very objectionable.

8297. Lord *Seymour*.] Do you seriously propose to put such a collection, with the power of unlimited extension, in Hyde Park?—I can hardly say I propose it; but when the neighbourhood of Hyde Park is suggested to me, I cannot but say I think it would have great recommendations. The principal recommendation would be, that it would give facilities for extending the Museum in any direction, and would furnish an opportunity for constructing a Museum better arranged for the purposes of classification than the present.

8298. Having been for some time acquainted with the public feeling in London, do you think that a proposal to take the middle of Hyde Park as the site for a collection of objects of art and antiquity would be listened to for a moment?—I have no doubt there would be great difficulty in it; but I can offer no opinion that would be of any special value on such a point.

8299. *Chairman*.] You mentioned Hyde Park to illustrate your view that it would be desirable to have an open space?—Yes, without reference to any social or political difficulties, of which the Committee can judge for themselves.

8300. The Regent's Park, assuming there to be no other objection to it, would also meet your view of the case, would it not?—I think Hyde Park would be better, because the soil is drier.

8301. Mr. *B. Wall*.] Have you any notion how many acres of ground you would require?—I should be unwilling to specify the number of acres; I should not wish there to be any limit.

8302. What acreage does the present British Museum cover?—I do not exactly recollect; but I have a plan before me from which you could easily form an idea.

8303. Supposing this great Museum to be built in the middle of the Park, as you

E. Oldfield, Esq.

8 July 1853.

you propose, with the whole of the collections centering there, how many acres of ground do you think would be required for the purpose?—I am not prepared to specify the quantity of acreage that would be required.

8304. Lord *Seymour*.] Can you tell us what amount of space the antiquities at present occupy in the British Museum?—Taking the galleries as if they were all extended in a right line, they would amount, probably, to about a third of a mile.

8305. The great lower gallery, for instance, is about 300 feet, is it not?—I should say, roughly speaking, that it is rather more than 300 feet.

8306. Above that you have another length, also of 300 feet, have you not?—Yes.

8307. Have you, parallel with that, the galleries for the Nineveh sculptures, which, with the central portion added to them, makes pretty nearly the same length?—Yes, rather more.

8308. That makes it above 900 feet?—Yes.

8309. You have then the Roman gallery, the Lycian gallery, and the Greek antiquities, the Elgin gallery?—Yes.

8310. What do you put that at?—The Elgin gallery 140 feet, the Lycian gallery 70, and the Roman gallery, I think, about 140.

8311. Then you have the length of the gallery up to about 1,200 feet?—Yes. There are besides that two new rooms, as yet incomplete, and two or three rooms in the basement which the trustees propose to use for the exhibition of a certain class of antiquities; and when these are added, I think that will bring it to nearly a third of a mile.

8312. And yet you feel that to be totally inadequate for the purpose of such a collection of antiquities as you consider desirable?—Yes.

8313. *Chairman*.] Do you consider it necessary on the new site to erect a building with one front, amounting in length to a third of a mile?—No, I do not.

8314. What is the greatest length of that part of the British Museum which is occupied by any of your collections?—Taken in the way in which the space was just now calculated, I think it would be about a third of a mile.

8315. Do you mean that there is about a third of a mile in any place, from the end of one range of galleries to another, in the British Museum?—No, but that all these galleries added together would amount to that.

8316. If those galleries were erected as part of a large public building, you would not consider it necessary that that part of the building should spread a third of a mile along the locality?—No, I think that would be a most undesirable arrangement; my view is that it should consist of a series of parallel galleries, each appropriated to one particular class of objects, and each of those galleries capable of extension to any length that might be required at any future time.

8317. In point of fact, the space occupied by the collections of the British Museum with which you are connected, does not form a very unreasonable portion of the present building, and therefore would not require a very exorbitant amount of space if it were placed elsewhere?—No.

8318. Mr. *M. Milnes*.] You have a good deal to do with the department of Medals, have you not?—Yes, as a branch of the department of Antiquities.

8319. Supposing a division were to be made between works of art and works of archæology, to which class would you attribute the collection of medals?—I think the collection of medals would be more useful in the department of archæology, but I should object to such a division.

8320. You may perhaps have heard that it has come before us in evidence in this Committee, that certain persons have recommended that the works that would be called purely works of art, that is, works of an æsthetical character, might be transferred to some new edifice which would be combined with the Great National Gallery, at the same time retaining at the British Museum works of an archæological character, and works connected with literature; do you think it would be possible to draw that distinction?—I think not in any way which would be consistent with the rules of science, nor which would practically be instructive to the people.

8321. Where would you see the difficulty of such a line being drawn?—Chiefly on this ground, that almost all even of the æsthetic productions of mankind in the earlier periods of the world are so inseparably connected with the history and modes of life of the people, that taken by themselves they tell only a part of a story,

story, which is unintelligible without the remainder of it; the one is indispensable to the other; and as a matter of fact, many of them are physically so united that you cannot separate them. For instance, the inscriptions (which obviously belong to the department of Literature and Archæology) are found, in the case of Egyptian and Assyrian remains, upon the sculptures themselves; and even in the Greek remains they are frequently so united as practically to be inseparable, and could they be separated, their separation would destroy the greatest part of their instructiveness.

8322. Do you happen to be aware whether in the great collections on the Continent, medals are combined with works of art or with the establishment devoted to literature?—I think the practice differs in different institutions. At Paris they belong to what I suppose you would consider the department of Literature, though even there they are united with other antiquities, not with books, or MSS.

8323. Where?—At the Bibliothèque, in Paris.

8324. Can you give another instance?—At Florence they are united with the remains of antiquity in the Uffizii collection; but I am not able to state what is the case in the various German collections.

8325. To which department do you think they would more appropriately belong?—I should feel unable to attach them to either department satisfactorily. Medals unite the two characters inseparably. A medal is at certain periods the very best specimen of the fine art of the time, but at the same time it bears upon it an inscription which is historically immediately connected with the department of archæology.

8326. It is because the question is a difficult one that I put it to you; and therefore I should like to know if it suggests itself to you whether, supposing the division to be necessary, you would in your own mind prefer these collections being placed in one building rather than in the other?—It would depend on what the other objects were in the two departments. I should consider any such division objectionable; but if made, I should ask what objects were included in one and what in the other, and assign the medals and coins accordingly.

8327. *Chairman.*] Is it not the case that when a man wants to consult medals, he generally in the first instance goes to some book in which he will find them all arranged to his eye, and then if he has any difficulty he may go as a numismatic question to the medals in the collection?—Yes; but it is more usual for a person, having referred to the books, and having seen the copins published, to come to the British Museum to see if we have any others still unpublished which may throw a light upon the subject.

8328. Does he do so in cases in which there is no doubt existing with regard to the correctness of the drawing?—Generally, I should think not.

8329. Lord *Seymour.*] You were occupied for some time in registering and classifying the coins, were you not?—Yes, and I am still.

8330. Practically, do people come to you occasionally for information?—Yes; they continually come.

8331. For purposes connected with literature?—Yes.

8332. And for that purpose, is it, or is it not an advantage that the coins should be in the neighbourhood of the library?—I think it is an advantage; but at the same time I think a first rate archæological library night supply most of the purposes for which medals are consulted.

8333. A first rate archæological library, if attached to the department of Antiquities, would go far to supersede the necessity of having the present library attached?—Yes.

8334. *Chairman.*] Upon the whole, do the greater number of persons who come to consult the coins in the way you mention, come for the purpose of illustrating numismatical researches in the archæological sense, or for the purpose of illustrating general historical questions?—I think they come for both purposes.

8335. Do you think they are about equal in number?—No; I should say the archæologists and numismatists come more frequently than the mere literary men.

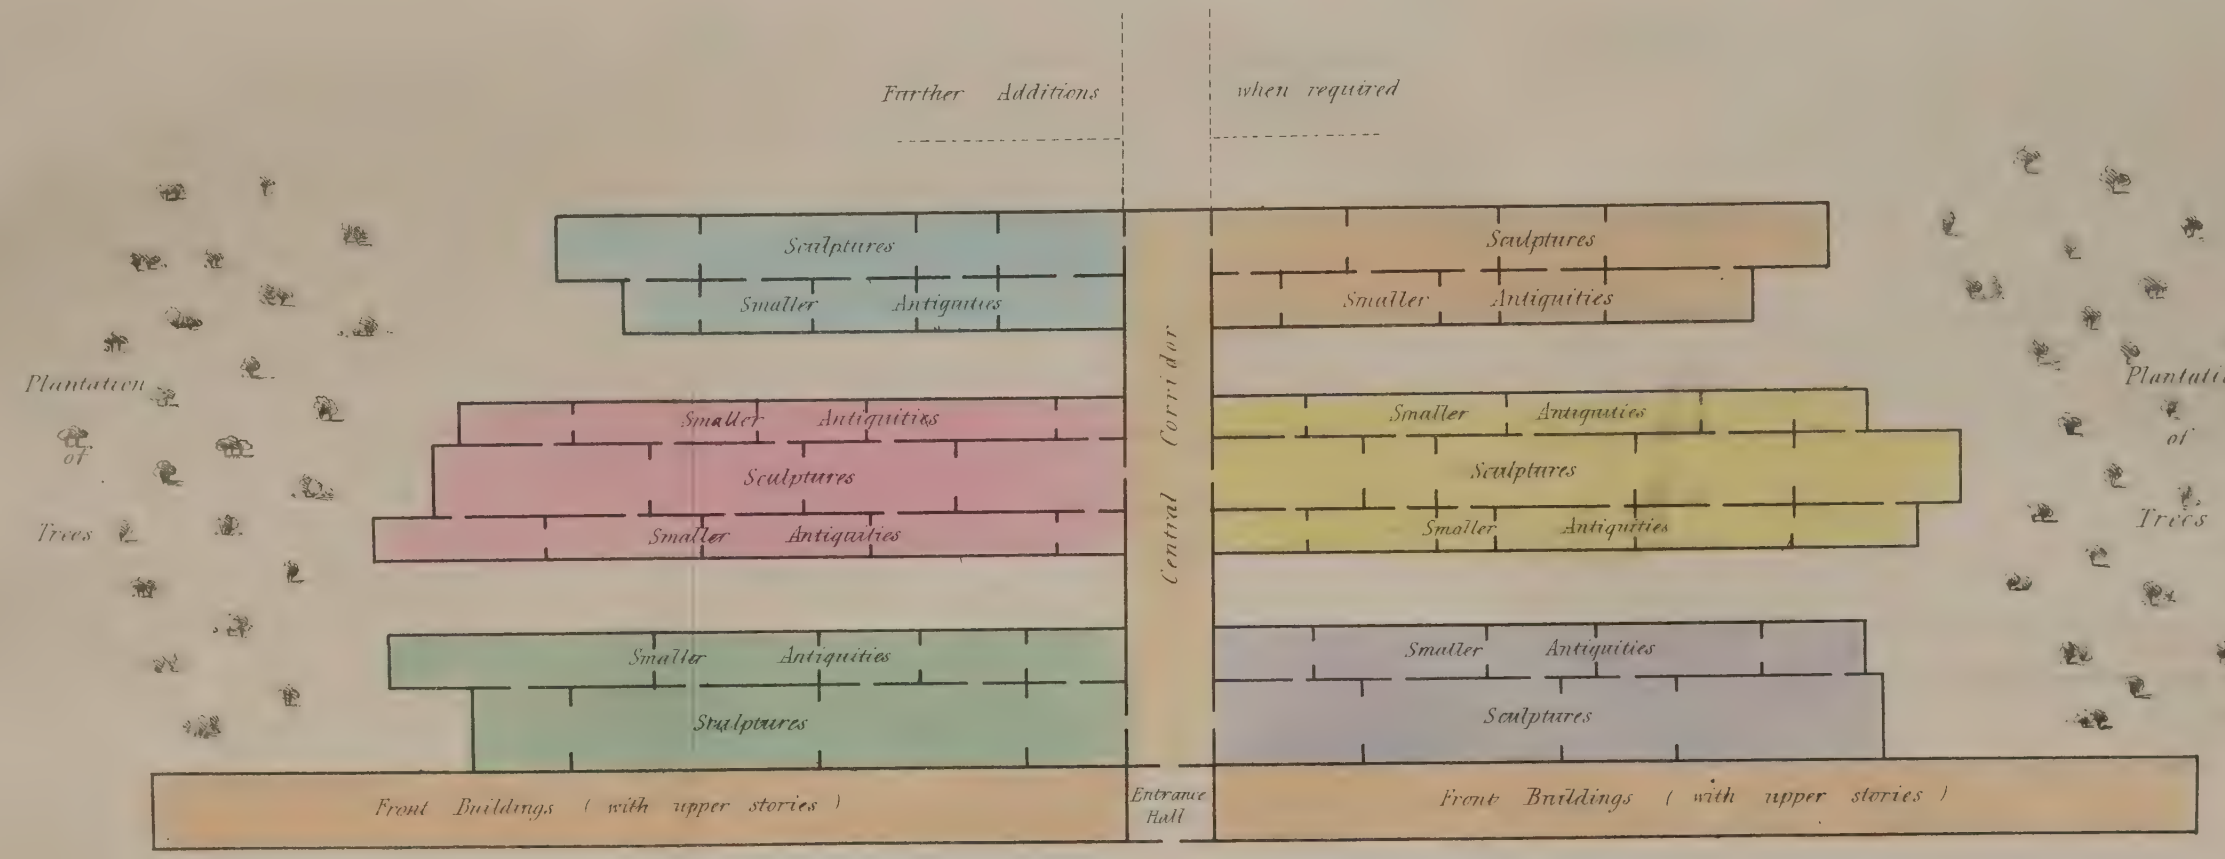
8336. Lord *W. Graham.*] You have stated that some of the sculptures from Nineveh are of a very delicate nature?—Most of them.

8337. Should you not think it a subject of just animadversion if sculptures, which have been almost miraculously preserved for 3,000 years, should be allowed

(To face page 595)

PLAN FOR A MUSEUM OF ANTIQUITIES

IN AN OPEN SITUATION.



Scale of Feet.

1 10 20 30 40 50 100

The Central Corridor could at any time be prolonged either for the enlargement of the collections, or to connect them with the National Gallery. The Galleries for Antiquities could likewise be extended, by removing the trees which screen their ends.

The Front Buildings, having side-windows, could be carried to any height, and constructed in any ornamental style that might be desired. They would serve for offices, residences, lecture-rooms, archæological library, &c.

The colours indicate the different classes of Antiquities as Egyptian, Assyrian, Greek, Roman, Mediæval, &c.

Edm^d Oldfield,
July 1853

(N° 867.) Ordered, by The House of Commons, to be Printed 4th August, 1853

E. Oldfield, Esq.

8 July 1853.

to perish in a few years after being brought to the British Museum?—Yes, if it were in our power to prevent it.

8338. Therefore you would be in favour of their removal to a place where there is a better atmosphere?—I think that would be a great recommendation.

8339. Mr. *B. Wall.*] Does not damp affect them more than smoke?—Damp does more injury to the substance, but smoke disfigures it more; so soft a material as alabaster is also liable to suffer from friction, if frequently cleaned.

8340. Therefore you consider that whenever such objects are removed they should be taken to a place where the soil is dry and unexceptionable?—I do.

8341. *Chairman.*] Do you suffer from damp in the Museum?—No, the situation, upon the whole, is a very dry one. We do sometimes suffer from damp as we should in any situation in England. I have certainly seen in the months of November and December some of our monuments literally streaming with wet, especially such materials as granite and the colder marbles, on which there is a great deposit from the damp in the atmosphere.

8342. Mr. *B. Wall.*] Do you not think that stove heat, which is so disagreeable in the passages in which many of the monuments are, has a great tendency to bring out the damp, and make the condition of the marbles and stones worse than it otherwise would be?—I do not think that the mode of warming by hot air, if that is what you refer to, is so good as that by means of open stoves, which are now generally adopted in the sculpture galleries at the British Museum.

8343. *Chairman.*] Do you know what the soil is on the site of the British Museum?—I believe it is a gravel soil.

8344. You see no objection to the removal of the site to the suburbs of London to the distance to which you have alluded, on the ground of its interfering with the convenience of the public having to go so far?—Yes, I think that would be an evil; but we must choose between conflicting considerations.

8345. Do you find any disadvantage in your present site from crowds of people, idlers, congregating there, as they are said to do in the National Gallery?—I think we do to a certain extent, but not so much so as at the National Gallery, because the building is much larger, and the different nature of our monuments prevents the same injury from taking place.

8346. I suppose few people go to the Museum who do not go for the mere purpose of seeing the collections?—But few, I think; undoubtedly, however, the great crowds we sometimes have are very injurious.

8347. What do you observe the effect of the crowd to be upon the monuments?—To deposit dirt on the surface.

8348. That is, by the dust they occasion?—Yes, and from the animal heat and moisture arising from great crowds; we perceive it much more after Easter Monday and Whit Monday.

8349. Mr. *B. Wall.*] From what data do you speak when you say you have observed that those who go to the British Museum go only for the purpose of admiring works of art and antiquities?—We have no data that enable us to speak positively; but judging generally, from observation, and from the apparent interest manifested, and the questions which we have been asked, I should say that the majority go to the Museum to see the monuments, and not for the purpose of making it a place of rendezvous or lounging.

8350. Should you say generally that the majority of people were likely to admire the works in the British Museum more than the pictures in the National Gallery?—I rather doubt that; it is a question rather difficult to determine.

8351. I understood you to say that the great majority who went to the British Museum went there to see the objects in the Museum?—Yes, as compared with the National Gallery, which stands in the greatest thoroughfare of London.

8352. Are not the numbers who frequent the British Museum much greater than the numbers who frequent the National Gallery?—Generally they are, because the objects of interest are much more numerous; but I should think the proportion of loungers and persons who merely go to it as a covered building for the purpose of a rendezvous is not so great in the British Museum as it is in the National Gallery, because Bloomsbury is not so convenient a place to rendezvous at as Trafalgar-square.

8353. Even if you thought they were not attracted there from motives of curiosity rather than from a desire for instruction and information, you would not be inclined to recommend any restriction being imposed upon their free admission?—I do not think it would be practicable to make any restriction in admission;

admission; after the public have once been admitted, and have availed themselves of the privilege to the extent of millions, I think it practically impossible to restrain their access to it.

8354. *Chairman.*] Practically, there is no real inconvenience felt from the number of persons visiting the British Museum?—No other inconvenience than the amount of dust and heat they occasion.

8355. A great number of persons who go to see the natural history collections afterwards go and take a walk in the art collections, do they not, without having gone for that purpose, and *vice versâ*?—Yes; but most of the objects of natural history are contained in glass cases, and therefore suffer less than the sculptures do.

8356. Mr. *B. Wall.*] When you say the only inconveniences experienced are dust and heat, those are inconveniences which are generally complained of, are they not, in places where masses of people are admitted?—Exactly.

8357. *Chairman.*] Have you any further observations of your own to make?—With reference to the question you put to me just now, as to whether in a new edifice, the whole of the galleries, to the extent of a third of a mile, would necessarily spread over such a distance, I have drawn a rough plan here (*producing it*) of the manner in which I think a museum of antiquities might be most advantageously arranged, supposing the situation to be entirely open and unconfined. I think the principle should be, that all the collections should run in parallel lines, any one of which might be extended indefinitely. I think the means of access to these should be by a distinct corridor, so that persons might enter one department without having to pass through others, and that the corridor itself might be extended in the event of further acquisitions; the same corridor would also furnish the means of uniting such a building with the National Gallery or any other similar institution.

8358. What is the proposed length of the front?—As I have there drawn it, it is about 1,000 feet; but it is a peculiarity of the plan that it may be made of any dimensions or on any scale whatever; and it is there drawn on a very large scale.

8359. What is the proportion of the length to the breadth?—The breadth, as drawn, is about 300 feet; but either way, it might run out indefinitely. I should think the frontage might have rooms lighted by side windows, and therefore the building might be carried to any height that was thought desirable with a view to architectural effect; I consider it indispensable that all the collections of antiquities should be on one floor, and that that floor should be the ground floor, so that the sculpture should have sky-lights, which after many experiments, and much observation, I should say are indispensable to a well arranged gallery of sculpture.

8360. Then you would make use of the lower floors for the economy of the household?—Yes.

8361. Mr. *B. Wall.*] In the event of the erection of such a building as you propose, what would you do with the existing British Museum?—I believe that that part which is now occupied by antiquities would be exceedingly valuable for the extension of the library or other collections which would remain there.

8362. *Chairman.*] One of the circumstances, in fact, which led to the proposal being brought out of combining the collections was, that the removal of the antiquities from the Museum, would give great additional space to the other branches contained in the Museum?—Certainly.

8363. Lord *Seymour.*] I understand you to say you wish the whole of the antiquities to be upon the ground floor, and to be lit by means of skylights?—Yes.

8364. That would preclude the possibility of building over the antiquities, would it not?—Yes; I look upon it as indispensable, that a building constructed as a museum of antiquities should be devoted to that one purpose only.

8365. You also prefer that antiquities should be disposed in galleries, that is, in long narrow rooms, as I understand you?—Not necessarily narrow; long rooms, of a suitable breadth; but what I consider as most desirable is, that the different classes of antiquities should be so arranged as to illustrate each other, which would be done if central galleries, like naves, were erected for sculpture, with side galleries, like aisles, for bronzes, gems, vases, &c., of the same class.

8366. If a scheme, which has been proposed, to inclose the whole central court of the Museum with a great glass dome, covering the whole quadrangle,

E. Oldfield, Esq.

8 July 1853.

were carried out, do you think that that would be a convenient place for putting antiquities?—No; it would confine us in every direction.

8367. You think it would be objectionable?—I do.

8368. That would not allow the scheme of arrangement which you think desirable?—No; nor would it admit of much extension.

8369. You require, I think you say, an almost unlimited extension for antiquities?—Yes; I think it would be most desirable.

8370. Observing the progress that antiquities have made at the British Museum during the last 25 years, do you think that if a museum for the purpose of antiquities is to be built, it would require to be on a much larger scale than anything we now have at the British Museum?—I think it ought to be.

8371. Mr. *B. Wall.*] How would you get the proper architectural effect?—I have drawn it in such a mode as to leave that question open; a frontage like that might be ornamented either like the present Houses of Parliament, the British Museum, or in any other style.

8372. *Chairman.*] You would not think it necessary, in the first instance, to build it of that size; about half that size would do, would it not, with the power of extending it if necessary?—Certainly; the galleries might be of any length, and I have drawn trees planted round the sides and back of the building, in order that the irregular ends of the galleries might not be a disfigurement externally.

8373. So that you might restrict the length, and add to the breadth if you wished it?—Yes.

8374. Lord *Seymour.*] As you have considered this subject so far as to have brought a scheme to the Committee, can you tell me in what way antiquities are to be restricted and limited, because I see you provide for Egyptian, Greek, Assyrian, Roman, and Mediæval; do you take in architectural antiquities of all times as well as other antiquities?—If they are on a sufficiently small scale to admit of going into a museum, they are very valuable; we have many architectural antiquities in the Elgin collection.

8375. Is it not difficult to know where to begin to exclude and to restrict?—It often is a difficulty. I think the most catholic principle is the best.

8376. I do not know what you call the most catholic principle in this case, except that of adopting and taking in everything?—I think anything that tends to illustrate the state of civilisation, and modes of life, amongst ancient races, is desirable in a museum of antiquities.

8377. Then, if we should find, as we have found, the palaces of some other ancient dynasties, we must build for them again?—Provided it be a new class of remains, and likely to instruct the public, I think we should.

8378. For instance, Mexican antiquities?—I do not find any sound principle laid down on which they should be excluded, unless the Museum of Antiquities were devoted to the remains of that ancient civilisation which perished with the Roman empire, which would exclude all Mexican and American remains, and likewise all mediæval.

8379. As to those which they call ethnographical, belonging to all semi-civilised races, should you admit them also?—No; I think it undesirable to annex them to a museum of antiquities, and I even think that in the present institution they are a great incumbrance.

8380. As regards mediæval antiquities, I understand you to be of opinion that they ought to be annexed?—I think there should be a national collection of mediæval antiquities, but it might admit of doubt whether that collection should be united with the collection of classical remains.

8381. It would grow to a very large size before long, would it not, if it were once to be commenced?—No doubt.

8382. *Chairman.*] Has anything been done in the Museum towards multiplying the drawings or books of coins, both for the purpose of promoting literature and numismatic science, by means of the electrotype process?—Yes, a few coins have been repeated by the electrotype; not much has been done in that way, but it is intended to carry it further.

8383. A good deal might be done in that way, might it not, to obviate the difficulty of separating the coins from the antiquities on the one hand, or the library on the other?—Yes. I think electrotypes are very valuable, as giving facilities for arranging the coins they represent under several classes; as one class

E. Oldfield, Esq.

8 July 1853.

class of fine art, another of inscriptions, another of objects introduced into the types, another of portraits, and so forth.

8384. Would you consider it desirable to have the whole collection of the British Museum, excluding, perhaps, the actual duplicates, done in that way?—No; only those which are most important and instructive.

8385. Lord *Seymour*.] But for the purpose of showing them to the persons who came there, it would be a great advantage, would it not, to have a good collection of electrotypes, which, if you had space, might be put in cases, so that the public might see them?—I think it would.

8385.* *Chairman*.] Have you any other remarks to offer to the Committee?—I do not know whether I may with propriety refer to an observation which was made to the Committee the other day, which, I think, was founded on error. I am told it was stated that at the British Museum it is usual to clean bronzes, and that much injury has been done to them in that way. I wish to state that that is erroneous; it is not the custom at the British Museum to clean the bronzes, and no bronzes, so far as I am aware, have ever been cleaned, except a few objects brought home by Mr. Layard, and the reason for cleaning them was, that they were covered with exceedingly minute and curious engraving and inscriptions, which were altogether undistinguishable when they were covered with the incrustation with which they were found; and therefore, at Mr. Layard's request, and by the authority of the trustees, they were cleaned. And that no material injury has been done to them is, I think, shown on the authority of Mr. Layard himself, who, in a work recently published, has highly commended the person who cleaned them for the skill and success with which he performed the operation; and I may say that by means of that cleaning some inscriptions of great importance were brought to light, as, for example, certain bilingual inscriptions in the Phœnician and Assyrian tongues, the very existence of which was unknown to Mr. Layard himself before they were cleaned.

8386. Was there not also another reason for cleaning them; that an experienced chemist had given his opinion that if the outer incrustation of which you speak was not removed, it would eat into the metal, so as to destroy it altogether?—Yes.

8387. That was an exceptional case?—Yes; I know no other bronze monument that has been cleaned in the British Museum for many years.

8388. That was a case which involved the actual existence and preservation of the object?—Certainly.

James Fergusson, Esq., called in; and Examined.

J. Fergusson, Esq.

8389. *Chairman*.] YOU are a professional Architect?—I am.

8390. You have taken from time to time some interest in the proposed extension, both of the British Museum and the National Gallery, have you not?—I have for several years past.

8391. And you are the author of a pamphlet upon that subject published in 1849?—I am.

8392. In that pamphlet you suggested a plan for the extension or reconstruction of the National Gallery?—I did.

8393. On its present site?—On its present site.

8394. By that plan was it intended to accommodate the pictures alone?—No; the pictures, sculptures, and in short, the whole art collection of the nation.

8395. Was your plan so arranged that it could adapt itself either to the pictures or to the British Museum collections?—It was designed especially with a view of accommodating the whole on one site.

8396. What part of the British Museum collections did you propose to accommodate?—All that refers to art, sculptures, and antiquities, if they can be distinguished; the medals, and what is contained in the print room.

8397. And the inscriptions?—The inscriptions of course.

8398. The whole collection in fact that Mr. Oldfield has referred to in his evidence?—Yes.

8399. Would it be necessary to take in any considerable amount of additional space besides the present site of the gallery, for the purpose of carrying your plan into effect?—I proposed ultimately to take in the workhouse, the barracks, and ultimately the ground between the barracks and the next street on the west side,

J. Fergusson, Esq.

8 July 1853.

side, but that would not be necessary to be done at once; the proposal is by degrees to extend it as the collection increases.

8400. Lord *W. Graham.*] Does your plan include the washhouses?—No; not across the street.

8401. *Chairman.*] In fact, it was proposed to take in the whole space between the narrow streets which bound those buildings and the present front of the National Gallery?—Quite so.

8402. It would be absolutely necessary to have the barracks and the barrack-yard to carry that plan into effect, would it not?—Yes, to carry out the whole plan it would; if the object were only to provide for the pictures it would not be necessary.

8403. Do you consider that the space to which you allude would give sufficient area for the erection of a building to contain the whole of the collections to which you have alluded?—Quite so.

8404. Lord *Seymour.*] Will you have the goodness to state to what space you allude?—The space between Trafalgar-square on the south, Orange-street and Hemming-row on the north, Dorset-place on the west, and St. Martin's-place on the east.

8405. For that purpose you would remove what buildings?—The workhouse, the barracks, and a number of small tenements between the barracks and Dorset-place.

8406. And some public thoroughfares also, would you not?—No public thoroughfare; there is an elbowed street, which does not amount to a thoroughfore, that runs behind the barracks.

8407. Is not that street open to the public?—It is a sort of *cul de sac*; you cannot go down the street from the north.

8408. But you can now pass through it?—Yes.

8409. Although you call it a *cul de sac*, it is in fact a thoroughfare, only it turns a corner?—There is a street parallel to it which is as short and convenient as that is.

8410. You propose to take this thoroughfare and several buildings for the purpose of the gallery?—Yes.

8411. *Chairman.*] Would that give room for the future extension of the collections beyond their present amount?—Certainly; as far as I can calculate it, the art galleries in the British Museum occupy about 60,000 square feet of flooring, and the proportion that I propose ultimately to allot to them in this spot would amount to 200,000 square feet, which would admit of the collection being quadrupled; this is wholly on the ground floor, or nearly so; it will afford altogether 180,000 feet of accommodation on the ground floor alone.

8412. Lord *W. Graham.*] How are they to be lighted?—By skylights.

8413. *Chairman.*] And how much accommodation would the pictures require?—I have taken the Pinacothek at Munich as the basis of the accommodation required; and I would recommend that double that amount of accommodation should be given to the National Gallery.

8414. Where are the pictures to be placed?—In front; the sculpture is proposed to come behind the present gallery.

8415. Mr. *B. Wall.*] Do you advance the present gallery?—I propose to advance it a few feet, but it is not material that it should be done.

8416. Mr. *Vernon.*] Do you propose to advance it up to the railings?—It is optional to do so or not; you may do it if you think it necessary to have additional space, but it is not an integral part of the plan.

8417. Lord *Seymour.*] Do you mean both the pictures and the antiquities to be placed on the ground floor?—No, I propose that the pictures should be on the upper floor.

8418. What is to be under the pictures?—The medal room, the print room, and the library, which I think indispensable to a collection of this sort, above which would be pictures on the front floor, and behind them the sculptures.

8419. *Chairman.*] Where do you propose to accommodate the officers of the institution; do you give them any space?—Yes, the whole front; I would carry up four storeys, and that would give abundance of room.

8420. Then the pictures would not be lighted from the top?—Yes, they would; the pictures would be in this part (*pointing it out on the drawing*), which would be lighted from the roof; the library and print-room would be placed below that;

that; the sculptures would be placed in the rear, and it would be all lighted from the roof in any such manner as may be thought expedient.

8421. Lord *W. Graham.*] Then where would be the accommodation for the people belonging to the gallery?—Here and here there could be apartments to any extent that might be thought requisite.

8422. Mr. *Vernon.*] The height will be nearly double that of the present gallery, will it not?—Yes, very nearly; in the plan, what is coloured black is appropriated to sculpture; what is coloured red is appropriated to pictures; and as to the sculptures, that can be arranged exactly as may be thought best, either in small or large galleries.

8423. Mr. *Hardinge.*] Do you assume that the Royal Academy will occupy the same space that it does now?—No, I should recommend that it should not be allowed to do so. I think a national institution of this kind ought not to be mixed up with any private institution, which the Royal Academy is.

8424. Lord *Seymour.*] You suppose the Royal Academy to be removed?—Yes.

8425. Mr. *Labouchere.*] But you have not provided any rooms to which they could go?—No.

8426. Mr. *B. Wall.*] Would not the magnitude of the building make all the buildings about it look very diminutive?—The other buildings are not of any grea importance; this would be the principal building in that part of the town.

8427. Does it not make St. Martin's Church look like a chapel of ease?—I think the same remark would apply to the Palace of Westminster destroying the effect of St. Margaret's Church and Westminster Abbey.

8428. *Chairman.*] I presume that having the same amount of space placed at your disposal on another site would give you ample room for what you are doing on this site?—If the same class of building were carried out; but there is one great advantage in a site of this sort, that it only requires one architectural façade, and the rest you may arrange and build according to your exigencies; if you are to build in an open space, in any park or anywhere, you must have four architectural façades; your building must be seen all round, and if you once get up four façades, you have tied your hands so that you cannot suit your building to the exigencies of the time.

8429. Mr. *Labouchere.*] Suppose you did not find on this site a building already existing, is that which is shown on your plan exactly the edifice that you would propose to erect?—Yes.

8430. Even if you had a clear space?—Yes, even if I had a clear space, this is the design I would carry out.

8431. Mr. *Vernon.*] You would have it that height?—I think a great element of architectural magnificence must be height.

8432. Mr. *Labouchere.*] You do not propose to remove the existing building, but to alter it, and make it such an edifice as that which you have represented in your drawing?—I propose to pull it down entirely; I believe that would be much the cheapest plan.

8433. *Chairman.*] What is the whole length of that structure?—About 600 feet in front.

8434. And the width or depth?—About 400; the greatest width is 500 feet, and the average depth about 400 feet.

8435. Mr. *Vernon.*] Supposing you had abundance of space, would you still consider it desirable to have a building as lofty as that?—Yes.

8436. *Chairman.*] Would not such a building on that site be objectionable, on the ground of want of surrounding space to secure free air and ventilation?—I think that on the south there is abundance of open space; galleries which are open from the roof do not require surrounding space to any great extent.

8437. It would be hemmed in on many sides by narrow streets, from the houses of which people might almost throw their slops into the windows of the gallery, might they not?—There would be no opening to the north; it would be a dead wall.

8438. But they might throw mud almost out of their windows against the gallery windows, might they not?—No; because the gallery would be higher than the houses, and there would be a blank wall there.

8439. Do you not think that the smoke from the great masses of neighbouring chimneys in those narrow streets would collect in the central part of the building, and affect the objects of art and antiquity to a great degree?—I do not think that,

J. Fergusson, Esq.

8 July 1853.

that, in the capital, you can get entirely free from that, but by a proper system of ventilation, I believe it may be to a great extent remedied; the site of the National Gallery is not so confined as the British Museum is.

8440. It has not an interior quadrangle, as the British Museum has, for promoting ventilation?—But I object to that quadrangle on account of the ventilation; I think it is a place in which stagnant air collects and deposits its soot; I think that if you had no quadrangle there, you would be much more free from soot.

8441. Do you see no objection to having the entrance to your building flush with the public thoroughfare?—No, I have no real objection to that.

8442. Lord *W. Graham.*] Your plan blocks up the present thoroughfare that there is through the National Gallery, does it not?—Yes.

8443. *Chairman.*] Suppose it were considered desirable, from the impossibility of procuring those buildings, which you say are requisite to carry your plan into effect, to remove the pictures to a more airy locality; have you ever turned your attention to that question?—I think this the best locality. I think the next best is the Regent's Park, and the third best such a one as is proposed. I look upon Hyde Park as very undesirable.

8444. Do you consider the Kensington Gore site a desirable site?—I consider that it is too great a distance from the town; it is two miles further from the town than the present site.

8445. Mr. *Labouchere.*] When you say "from town," what part of the town do you particularly refer to?—Charing Cross; it is two miles from Charing Cross to the site at Kensington Gore, and, of course, it would be further from the centre of London.

8446. Lord *W. Graham.*] How far is it from the middle of the Regent's Park?—That is much more in the centre of the town; it is about a mile and a half from the Regent's Park, but that is much more in the town than Kensington Gore; the part I propose would be at the end of Portland-place, opposite the Colosseum.

8447. Mr. *Labouchere.*] As far as mere architecture is concerned, would it not be an advantage to have more space round the building than you would have according to the plan you propose at Charing Cross?—I think not. I think it is highly desirable that there should be at least one side of the building wholly without architectural effect.

8448. That is a question of convenience, but merely regarding the question as one of architecture, if it could be so managed as not to interfere with convenience, is it not desirable for the building to have space all round it?—It adds enormously to the expense; it would double the expense of building, to have four façades to ornament instead of one, and you would thereby tie your hands very much.

8449. *Chairman.*] Do you see no disadvantage in the extreme narrowness of the streets opposite to the back part of the building?—No, I think not; if they are treated as I propose to treat them, with dead walls towards them.

8450. Assuming that the advantages derived from such a situation as Trafalgar-square, were necessarily sacrificed for the advantages of free air and a better atmosphere, would you not consider that in taking the building to a more airy locality it would be desirable to have a large space round the building in order to secure those advantages in the place of others which you may have lost?—Yes, I think that would be desirable, certainly; but it is a question of degree; the convenience of a central site, I consider, counterbalances the advantage of having more space about the building.

8451. But suppose you have not power to erect a building such as you propose, in that case, if the buildings are removed elsewhere in order to obtain the advantages of better air and a larger space, you would consider it necessary that it should be an isolated building with plenty of free space about it?—I think you would require a very large free space round it to insure those advantages; but I conceive that by raising a very high tower and getting ventilation from above, you might be as free from the inconveniences that have been talked of at the present site, as you could be elsewhere.

8452. Mr. *Labouchere.*] Would not the close proximity of other buildings increase the danger of fire?—That would be guarded against perfectly; I look at that as a contingency not to be feared in the least.

8453. *Chairman.*] Have you examined the sites proposed by the Commission

of

of which Lord Seymour and Mr. Ewart were members?—Yes; I think the one at the end of the broad walk at Kensington Gardens is a good site, except with reference to its distance from town.

8454. Do you not think there is any objection to that site from the liability or probability of a town rising up to the westward of Kensington?—I think there is a great liability to inconvenience of that sort. You must have a façade towards the road and towards the Gardens; and if you tie your hands in that way, you cannot afterwards extend the Museum, as a Museum of this sort must inevitably be extended in directions you cannot foresee.

8455. Has your attention been called to Mr. Oldfield's evidence as to a building which he suggested, with a power of extension?—I heard his evidence.

8456. What is your opinion with regard to the suggestion he has made?—He could not have two façades; he must have a building the rear of which could not be seen. He proposes to have a façade with transverse galleries, and to go backwards to an unlimited extent.

8457. In case of necessity?—It is inevitable that the collection should be extended.

8458. Lord *W. Graham.*] He proposed hiding the sides with trees?—I think that would be a very clumsy arrangement.

8459. Is it not the case in almost every house in the country that the offices are concealed by trees?—If it was in Kensington Gardens, on the site proposed, you would put the façade in Kensington Gardens towards the road.

8460. *Chairman.*] You would consider, if Hyde Park or a similar locality were adopted, that it would be necessary to place the building in a central position, with a free open space all round it?—Yes.

8461. Have you examined the Kensington Gore ground particularly?—I had been over it several times before; but I went there last week, and examined it with considerable care, with the plans in my hand.

8462. Is there any portion of that ground which you, as an architect, could recommend as adapted to carry out the object to which I have alluded, isolating the building so as to protect it against the noxious influences that have been referred to?—I am afraid not; a town would certainly rise all around there. The ground is extremely flat. This part would be 12 feet above the high-water mark by the Trinity datum, and within a short distance of the road it rises to about 14 feet.

8463. What is the highest portion of the ground that has been acquired?—About 50 feet. The levels in this plan are only the levels of the road accessible to the public. It is about 50 feet above the Liverpool datum, and about 38 feet above the Trinity high-water mark.

8464. Mr. *Labouchere.*] What is the height of the ground at Charing Cross?—The Charing Cross ground is 42 feet in front and 55 feet in the rear.

8465. Above what?—Above the Liverpool datum.

8466. Mr. *Ewart.*] That would be 40 feet above Trinity?—Behind, and 26 in front. The distance from the river is small from Trafalgar-square, and the slope is rapid. At Kensington Gore it is very flat, and the drainage must be difficult.

8467. Mr. *Labouchere.*] Are you sure the ground is flat at Kensington Gore?—Yes; the house stands on the edge of a slope, which falls to the bottom of the garden, and from the bottom of the garden to Brompton, is so nearly flat, that to the eye it appears perfectly so; it is only by a theodolite that a man can detect the difference. I do not know so flat a piece of ground anywhere about London as that from the foot of the Kensington Gore Garden to the south front of the property bought by the Commission.

8468. A portion of the ground is on a slope, and a portion on a flat?—A very small portion is on a slope, only about 600 feet square.

8469. Mr. *Vernon.*] Would the levels be very difficult there for the foundation of a great building?—That would depend on the subsoil; it is so flat, that if the subsoil is good, the foundations are extremely easy.

8470. *Chairman.*] Are you aware what the subsoil is?—I could not ascertain; the gardener had dug a small pit, and found six feet of clay, and below that a sort of coarse sandy gravel.

8471. Mr. *Ewart.*] You are probably aware that at Pimlico they took off the clay, and found a bed of gravel below, which enabled them to make the place perfectly

J. Fergusson, Esq.

8 July 1853.

perfectly dry?—Here the man had only gone a foot and a half into the gravel, and could not tell what the subsoil was.

8472. Lord *Seymour.*] You say the ground is flat at Kensington Gore; would there be a difficulty, do you think, in draining it?—It would be expensive, but it could be done; and if it is a gravelly soil, the surface moisture would percolate through.

8473. Do you, as an architect, believe there would be any practical difficulty in draining that ground?—No; it might be done, but at a very considerable expense.

8474. Mr. *Labouchere.*] Have you had any practical experience as an architect in building on, or in excavating the Kensington Gore ground?—No, and I do not know of any houses that have been built there yet.

8475. Have you had any practical experience in any building or excavation in the immediate vicinity of that ground, as for instance, the new houses at Prince's Gate?—They are at the top of a slope, and there the subsoil is gravel; but I understand that the gravel stops just behind the road; I have heard it said that the gravel which is in Hyde Park stops with the road, and that beyond that you get to a clay subsoil.

8476. Have you made any accurate inquiries of any persons who have had occasion to examine the soil in that vicinity?—I went to the ground and made inquiry of every person I could find there; but I found that no excavation had been made to ascertain the fact; and I conceive it can only be ascertained by digging a pit.

8477. Mr. *Ewart.*] Is there reason to believe that more difficulty was experienced in draining the ground at Pimlico, on which Belgrave-square and all that neighbourhood was built, than there would be in draining the ground at Kensington Gore?—That is nearer the Thames, and of course the fall must be less.

8478. Are you aware that that locality has been rendered perfectly dry by removing the covering of clay, and getting to the gravel below?—I have understood so.

8479. Mr. *Hardinge.*] How are the houses in Brompton drained?—The old houses in Brompton are damp, but the new houses in connexion with the Victoria-street sewer are quite dry.

8480. *Chairman.*] Do you think there is any site on the flat part of the ground at Kensington Gore, which, assuming the drainage to be well managed, would afford a good space for the National Gallery?—There is abundance of space for the National Gallery there.

8481. If the National Gallery were combined with other edifices, as has been proposed, do you think that that combination would interfere with the advisability of any site?—I think that if the ground were covered with other edifices that would do away with the advantages proposed to be gained by going so far out of town.

8482. If you were asked to put a National Gallery there, would you put it on the flat, or on the slope where the present mansion-house is?—I should be inclined to put it on the slope.

8483. How far back from the road?—A hundred feet from the road.

8484. Then it would be in the vicinity of Kensington Gore, and other hamlets to the westward?—You will of course have streets all round the ground you purchase, as soon as the roads are laid out, and parties would build towards this open space.

8485. You think a small suburban city would spring up there?—Most certainly.

8486. Are you aware what is the frontage of the ground, at the slope where you propose to build?—Six hundred feet.

8487. And how much of that do you think the gallery would occupy?—I should say about 500 feet, or 450 feet.

8488. So that there would be only 50 feet on each side to protect it from any other mass of buildings that would be likely to spring up in the neighbourhood?—That is inconvenient certainly, but unless you go down to the flat part you cannot help yourself. The advantage of having it in the neighbourhood of the road, on the slope, and on gravel, is very great; besides which, the display of the front of the building towards the Park, and its accessibility, are great points. If people had to go half a mile to the gallery, after they got out of the omnibuses, they would find it to be extremely inconvenient.

8489. The

8489. The front of the road is the narrowest part of the ground, is it not?—Yes.

8490. Lord *Seymour*.] How far do you propose to put your building back from the road?—A hundred feet. You could easily have covered passages at either end, so as to enable people to walk under cover without interfering with the façade.

8491. As you propose this scheme for building the National Gallery, will you state what public buildings you have ever constructed?—None.

8492. You have never built any?—Not a public building; there are very few architects who have.

8493. What considerable buildings have you built?—Several houses; and I am engaged in several works at present; at the Crystal Palace, for instance.

8494. Some private houses?—Yes.

8495. Have you ever built any large country houses?—Not large ones.

8496. Mr. *Labouchere*.] If the National Gallery were constructed at Kensington Gore, it would have a tendency to raise the value of the adjoining land considerably, would it not?—Very much.

8497. What description of buildings do you think would arise in the vicinity?—I think such terraces as those at Prince's Gate, and that neighbourhood.

8498. Houses of a superior description?—Yes.

8499. Do you think it likely that, on ground so valuable as that, distilleries, breweries, and works of that sort would be erected there?—No, I do not think they would be built in immediate proximity to the ground; I think all round the space appropriated to this purpose, houses of a superior class would arise.

8500. Mr. *Vernon*.] I asked you just now whether there would be any difficulty from the levels in fixing the foundations of such a building, and you said that there would be no difficulty, because the ground is perfectly flat; you now state that you propose to erect your building upon the slope, as I understand you, and I wish to know whether that slope presents any difficulty with regard to the foundation of the building?—Not such a slope as that at Kensington Gore.

8501. You referred us to another site, which you said you preferred, namely, a site at the end of Regent-street?—At the end of Portland-place.

8502. You propose to occupy what are now public gardens, or gardens attached to those houses, do you not?—No; the park beyond the gardens.

8503. Are you aware of the terms upon which the houses in the park are let?—No, I am not.

8504. You are not aware that there is a positive engagement that no building shall be erected in the park?—There are private houses erected in the park.

8505. Are you aware that there is a restriction as to the amount of building that can be put in the park?—There is no restriction that an Act of Parliament, or the consent of the parties, could not get over.

8506. Are you aware that there is an obligation entered into by lease with all the persons who have houses in the Regent's Park, limiting the amount of building in that park?—I am aware that there is a stipulation of that sort.

8507. Therefore, if there were to be such a building as the National Gallery erected in that locality, there must either be an arrangement made with each proprietor of property there, or there must be an Act of Parliament to do away with the covenant which now exists?—Of course that must be the case.

8508. Do you think that either of those courses are feasible?—I think that the consent of the parties having property in that part of the park could easily be obtained.

8509. But it does not depend on the consent of the parties holding property in that part of the park, inasmuch as I have already told you there is an agreement with every person who has property belonging to the Crown all round the park; do you propose that an arrangement should be entered into with each of those persons, or do you expect they would give up that covenant and allow buildings to be erected in the park?—I think that if other parts of the park were thrown open to them, which might be done, you could give a *quid pro quo* which would get over the difficulty.

8510. You have not considered that subject perhaps?—Not as an insuperable objection; if it be an insuperable objection, the project, of course, falls to the ground.

J. Fergusson, Esq.

8 July 1853.

8511. Mr. *Labouchere.*] What is the nature of the soil there?—It is a clay soil.

8512. Rather damp, is it not?—Drainage has improved it, and I believe that, with a large bed of concrete, the drainage of the ground and of the building would be perfectly effected.

8513. You think there would be no dampness that would form any substantial objection to such a site?—Not with proper precautions.

8514. Mr. *B. Wall.*] Has it not been found to be very difficult in the case of birds, and beasts, and flowers, in the Regent's Park, to bring them to maturity on account of the soil?—I believe not; but there have been no proper precautions taken to obviate the difficulty; it would be expensive, of course, to take such precautions, but not so great an expense as to form an insuperable objection.

8515. Has not drainage been going on at an enormous cost in the Zoological Gardens for a number of years?—The only effectual drainage of the Park has been within the last two years.

8516. That has been undertaken by the Government; I speak of the inclosure, which has been let off to parties or individuals; I apprehend that the expense has been very heavy?—Yes; but if you erected a building such as the National Gallery in the Regent's Park, you would lay a uniform bed of concrete under the whole, which would cut off all connexion with the clay.

8517. Mr. *Ewart.*] Would there not be a damp atmosphere all round it owing to the tenacious character of the clay in the Regent's Park; is it not a peculiar clay?—Yes.

8518. Mr. *B. Wall.*] Having to deal with the soil in the way you propose would add greatly to the expense of the building, would it not?—No; from 10,000*l.* to 20,000*l.* would be sufficient to lay a bed of concrete under the whole of the building; but that in such an immense building would not form a very serious item.

8519. Lord *W. Graham.*] A bed of concrete would also be applicable to the Kensington Gore site, would it not?—Certainly.

8520. Mr. *B. Wall.*] That makes you give an opinion decidedly in favour of your own plan?—I propose this as the best and most central site, and I do not think that the objections that have been made to it are such as should induce the removal of the Gallery to so great a distance as is proposed. I think that the great difficulty of want of ventilation might be got over by obtaining the air from a high level, and I think that the conveniences of the present site are such as to counterbalance any other difficulty that may come in the way.

8521. Mr. *Vernon.*] Do you propose by your scheme to make use of side lights in any part of the building?—Only in such rooms as would be appropriated for the purposes of the officers, or for copying or studying; all the galleries, with the exception of the library and basement floor, would be lit from the roof.

8522. Do you think it absolutely essential that, for pictures of all sorts, large and small, the lighting should be from the roof?—No; for all large pictures it is indispensable, but small cabinet pictures may be lighted as well from the sides.

8523. Are you aware of the plan of lighting which is adopted at Munich?—Yes.

8524. There small pictures of a class which you can only see and appreciate by going close up to them, are lighted by side lights, which proves to be an advantage?—Yes; and it is proposed in this design so to light the two ranges of smaller galleries appropriated to small pictures.

8525. You would propose, then, to light some pictures by side lights?—Yes.

8526. As an economy of space and of expense?—Yes, and as an advantage in seeing the pictures; I think small pictures are as well or better seen on the wall, with a light from the left or right hand, as with a light from above.

8527. *Chairman.*] Have you ever thought of any plan for accommodating the gallery pictures, if combination should not be decided on, and it should be found impossible to obtain the barracks and workhouse?—I think that if the present site were brought a little forward, in the mode Sir Charles Barry proposes, that would give us a larger site than that of the gallery at Munich itself.

8528. Without the power of extension?—Without the power of extension.

8529. Do you think, unless you had the command of the whole space of the barrack

barrack yard behind, you, as an architect, could, to use a familiar expression, make a good job of it on the present site?—I think you could make it as good as the Pinacothek at Munich, which is considered as good as any, if not the best in Europe. *J. Fergusson*, Esq. 8 July 1853.

8530. Is it not a great objection if there are not the means of increasing it?—You never can have a perfect collection of pictures; and after you have got 1,200 or 1,500 pictures, it would be as well to weed the collection, leaving only the best.

8531. The Pinacothek has full means of extension, has it not?—It could not be added to without deformity.

8532. But in that locality there is plenty of room for extension, is there not? Yes.

8533. Mr. *Hardinge.*] You would not be able to accommodate the statuary, assuming that you could not get the barracks?—No.

8534. That would be, would it not, a serious objection?—I think you must then keep the two collections distinct.

8535. Mr. *Ewart.*] Do you not think it is desirable to have any new gallery that may be erected for the purpose of preserving and exhibiting works of art capable of very great expansion?—I think the site behind the present gallery will afford ample means of expansion, if you can get it.

8536. *Chairman.*] What calculation have you made as to the expense of the building you propose?—It would depend of course on the mode of building, and the extent to which the plan was carried out; but as near as I can calculate, half a million of money would cover the whole ultimate expense of the extension, as far as the building of it was concerned.

8537. Mr. *B. Wall.*] Not including the purchase of land?—No.

8538. Have you calculated at all what the amount of purchase-money would be that would be required?—The cost of the purchase of the barracks it is of course impossible to calculate; that is a Government question. The expense of building a barrack, as given in the evidence before the Ordnance Committee, is stated to be about 100 *l.* per man, including accommodation for officers, and the purchase of site, and about 75 *l.* per man without that. For the workhouse, you must of course find other accommodation, but I believe that 30,000 *l.* or 40,000 *l.*, or at the outside 50,000 *l.* paid to the parish would accommodate them much better than they are accommodated at present.

8539. Mr. *R. Currie.*] Were you your own architect in building the beautiful gallery you have at your own house?—Yes.

8540. *Chairman.*] Your pamphlet was reviewed, was it not, in the Quarterly Review?—Yes; but it was more with reference to the British Museum than with reference to the pictures.

Edgar A. Bowring, Esq., called in; and Examined.

8541. *Chairman.*] I BELIEVE you are the Secretary to the Commissioners for the Great Exhibition?—I am. *E. A. Bowring*, Esq.

8542. And one of the Under Secretaries of the Board of Trade?—I am Registrar of the Board of Trade.

8543. You are quite cognisant of the scheme which was entertained or suggested by the Commissioners, to place the buildings of a number of public institutions in one group?—I am.

8544. Comprising various establishments, literary, scientific, artistic, and industrial?—Yes.

8545. What was the whole number of such institutions that were proposed to be so combined?—The Commissioners have scarcely attempted to define any precise number; they have provided space in the ground which they have purchased at Kensington Gore to accommodate all that may wish to come. Those to which special reference is made in their Report, are the National Gallery, the Sculpture Galleries of the British Museum, in case they should be removed, a great Trade or Commercial Museum, the formation of which is now under consideration, and the nucleus of which is already possessed by the Commissioners, museums of patented inventions, of mediæval art, &c., as well as the Government department of Science and Art, for which it is absolutely necessary to find permanent accommodation.

8546. Was not an invitation held out to other public institutions to join, if they

E. A. Bowring, Esq.

8 July 1853.

they were disposed, that same group to which you have alluded?—Yes; the learned societies and different scientific bodies.

8547. What number of such institutions do you consider the Kensington Gore ground which has been purchased could accommodate?—It would depend entirely upon the size of the buildings and the nature of the general arrangements adopted.

8548. You are, I presume, well acquainted with that piece of ground?—Yes, I am.

8549. Can you mention the exact acreage which has been purchased?—It is, as nearly as possible, 86 acres altogether.

8550. What proportion of that was purchased with money the surplus of the Great Exhibition?—It was a joint contribution of 150,000*l.* pounds each, by the Government and the Royal Commission.

8551. Has that sum been all expended?—A certain portion of it is at this moment unexpended.

8552. Do you know how much?—I think about 15,000*l.* remains; there are certain negotiations now in progress to which that will be applicable.

8553. Is their object to extend the ground further. There is a wedge that comes in from the road, with buildings upon it?—It will, perhaps, be scarcely advisable to enter into particulars with reference to those points at present.

8554. It is considered a good purchase, is it not?—The best test is the value of the surrounding property; since the purchase property in the neighbourhood has been sold at a much higher rate.

8555. Do you think that that property would at any time fetch as much or more than was actually given for it?—Yes, I do.

8556. What is the nature of the soil?—Mr. Mylne, a gentleman of very considerable geological attainments, who has published a geological map of London, and who lives in the immediate neighbourhood, has taken a great deal of trouble in investigating the nature of the soil; and he has just prepared the map I now produce, which exhibits completely what the soil is. The dark colour represents the London clay; the red lines show the proposed lines of road. The whole estate is on gravel, with the single exception of the little strip to which I am now pointing, where the London clay comes to the surface.

8557. Lord *Seymour*.] That is near the road?—Yes: about 50 or 60 yards from the road.

8558. And that is on high ground, which could be easily drained?—There would not be the slightest difficulty with regard to the drainage of that land; there are some ponds in this part (*pointing them out on the plan*), into which the drainage runs.

8559. And those ponds could be themselves drained, could they not?—There would not be the slightest difficulty in draining the whole property. These (*pointing them out*) are very first-class houses; this to which I am now pointing is a narrow public lane; and these are some very small tenements which we of course do not expect will remain there.

8560. *Chairman*.] You have mentioned that the lower part of the ground is London gravel?—Yes, as is also the higher part, with the exception of the small intervening strip of clay.

8561. Lord *W. Graham*.] Do you know what is under the clay?—The small piece to which I have referred you may consider as a clay soil; the rest is entirely gravel.

8562. *Chairman*.] With the exception of the part near the road, which is clay, the whole remainder of the soil is gravel?—Yes.

8563. What amount of acreage of clay is there to be deducted?—It is a very small piece; I do not think it has been exactly calculated.

8564. Is there an intermediate space or stratum of clay between the Kensington gravel and the gravel which commences on the lower part of the Kensington Gore ground?—It is gravel at Gore House; it begins at the back of Gore House.

8565. There it begins to be clay?—Yes; it is a very narrow strip.

8566. And then the gravel begins to appear again in the lower part; is not that so?—Yes.

8567. What are the elevations of the different portions of the ground?—I have another map here (*producing it*), on which the elevations are all laid down; they are stated with reference to the Liverpool datum, which is about 12½ feet below

below Trinity high-water mark; of course, if the object be to see the relative elevations, it makes very little difference which datum is given.

8568. The ground at Kensington Gore is not like that at Pimlico, which was overlaid with a surface of clay?—At Kensington Gore it is overlaid with a slight portion of brick earth to a very small extent.

8569. Will you have the goodness to specify the elevation?—At Gore House the elevation is from 58 to 64 feet above the Liverpool datum.

8570. Lord *Seymour*.] What is that above the Trinity?—About 46 to 52 feet; that is on the road opposite to Gore House.

8571. To what level does the lower portion of the ground sink?—To 26 feet above the Liverpool datum, which represents rather less than 14 feet above Trinity high-water mark.

8572. What difference does that give between the highest point on the edge of the road and the lowest point?—It is a slope on the first half of the estate, and the second half is flat, therefore to ascertain the gradient you would only take the part on which it slopes.

8573. I allude to the gross difference between the lower part and the upper ground?—Thirty-eight feet over a length of 2,500 feet.

8574. Are you competent to give any information as to what the level is on which the present National Gallery stands?—Twenty-eight feet above Trinity datum.

8575. That is the ground upon which or where the National Gallery stands, is it?—Yes; but at Charing Cross, where the statue stands, it is only 24 feet above the Liverpool datum, or 10 feet above the Trinity datum.

8576. How much above Trinity datum is the ground just in front of the National Gallery?—About 28 feet.

8577. Mr. *Labouchere*.] What is the elevation of Buckingham Palace?—Nineteen feet above the Liverpool datum, and less than seven above the Trinity House datum.

8578. What is the elevation at Stafford House?—Twenty-three feet above the Liverpool and 11 feet above the Trinity datum.

8579. Lord *Seymour*.] In order to convey a notion to the Committee of the height of the Trinity datum, we may take the floor of Westminster Hall as about the same level, may we not?—The Trinity datum is the mean high-water mark on the London Docks, and is 12 ½ feet above the Liverpool datum.

8580. Is it not the fact that the floor of Westminster Hall is practically nearly about the same level as the Trinity high-water mark?—I should think it must be very nearly the same.

8581. *Chairman*.] What is the difference between the level of the highest part of the Kensington Gore ground, near the road, and the level of the gravel-pits, or what is called the Deer Park, behind the sunk fence of Kensington Gardens, where the bastions are?—At the highest point of the Gore House estate there is only a difference of a very few feet.

8582. That is at the point near the road?—Yes, where it adjoins Eden Lodge.

8583. What is the greatest breadth of the ground purchased by the Commissioners?—The average breadth is above 1,200 feet.

8584. One part is two or three times as broad as another, is it not. The lower part is much broader than the other. I may mention that the slope continues from Kensington Gore and the road down to a little brook which occurs about half way across the property; therefore there is a distance of about 1,200 feet of slope, on which the inclination is between 1 in 30 and 1 in 40, which is something like the inclination of Waterloo-place or St. James's-street.

8585. The narrowest part of the property is the frontage towards the road, is it not?—Yes.

8586. And that part is separated from another little strip by a range of buildings?—Yes, consisting chiefly of first-class houses.

8587. What is the whole extent of frontage towards the road, including in your measurement the little strip of unpurchased ground that intervenes?—It is very nearly 1,100 feet, of which the unpurchased part is rather more than 300.

8588. What is the width respectively of the two purchased parts fronting to the road?—Six hundred feet on the Gore House side, and very nearly 200 on the other, of which 100 feet are to be devoted to a road.

E. A. Bowring, Esq.

8 July 1853.

8589. What is the greatest width of the ground in the lower part, where the widest portion of the ground is?—Two thousand feet, as nearly as possible.

8590. You mentioned that the National Gallery and the British Museum art collections were proposed to be combined in one edifice; what part of the ground was it that was destined for that purpose?—There has been no distinct recommendation made; the Commissioners merely suggested that it was desirable to have it on the north side of the property, with a frontage towards the road, and with the trade museum on the south, and the Government departments of science and art on the two sides.

8591. What space was it proposed there should be between each of the buildings, with a view to the circulation of air?—The Commissioners have made no proposal as to that.

8592. If there were a proposal to collect a great number of other edifices on the remainder of the ground, they would begin by putting pretty close to each other the three or four buildings they have already destined to occupy the site, in order to give room for the addition of others, would they not?—The Commission are not in a position to decide such questions independently of the Government, because, by an arrangement with the Government, they and the Commissioners have a joint control over the property.

8593. Mr. *B. Wall.*] The department of science and art includes the Schools of Design, does it not?—Yes.

8594. So that it is the intention of the Commission, if the scheme is carried out, to remove the Schools of Design to Kensington?—The department of art, which has been hitherto known by the name of the School of Design, has no permanent location at present; it is merely temporarily lodged in Marlborough House.

8595. But it is the intention of the founders of the scheme to which you have referred to remove the Schools of Design to Kensington, is it not?—That is what the Commissioners point to; the decision on the point rests however with the Government.

8596. *Chairman.*] Considering how much has been said as to the evil of smoke and other noxious effluvia both at the National Gallery and at the British Museum, and the mischief that arises from the discoloration and other damage to the monuments, do you not think that if the National Gallery were placed in connexion with other buildings the different objects of art would run the risk of still being exposed to those evil influences?—The only building from which you would expect to have smoke would be the laboratory in connexion with the department of science, but I have ascertained that the smoke generated there would not be more than from a common kitchen fire; smoke is as great a nuisance to the department as it would be to the National Gallery, and I have ascertained moreover that they would use smokeless fuel.

8597. Do you not think that the erection of numerous important public buildings on one site would raise a sort of suburban city around them, inhabited both by gentlemen and tradespeople?—You would very possibly have the same effect as that which is observable at Sydenham, where all the frontages near the Crystal Palace are being bought for building purposes. You would attract population there, but it would be a population inhabiting houses of the first class, from which the amount of smoke would be very trifling; it would not be more than that of a provincial town.

8598. Do they burn a less quantity of coal than other houses?—There would be much fewer of them.

8599. If people of the first class go to reside there, they must have tradespeople and others living near them, must they not?—It would naturally bring a population round, no doubt.

8600. Mr. *Labouchere.*] Would not ground in the immediate vicinity of this property become so valuable that there is but little probability of its being occupied by any class of building except first-class houses; it would never answer for a brewery or distillery?—No; when people can get 3,000*l.* or 4,000*l.* an acre for land, as they do at present in that neighbourhood, I conceive it is not very likely there would be a brewery or distillery there.

8601. The tradesmen also would be at a certain distance from the proposed site, would they not?—I apprehend so; the immediate vicinity would be occupied entirely by first-class houses.

8602. *Chairman.*] Do you not consider that if the Gallery occupied the whole frontage

frontage to the road, and houses, even of a superior class, were to spring up on each side of it, and also a certain number of other houses connected with them, the ultimate effect would be that there would be a town extending on each side within not many yards of the building; and do you not think that the building would ultimately be exposed to those noxious influences which it is considered so desirable now to avoid?—That must be the case to a certain extent anywhere where you attract the population, but there is no place in London or its immediate vicinity in which you could have such security against that intrusion as you would have on the Commissioners' ground.

8603. Do you not think a preferable site for such delicate objects as there are in the National Gallery, would be the centre of some wide open space, with a sufficient interval between it and the population, and the smoke, to allow the air to circulate freely, and to be diluted before it reached the building?—I can conceive a spot in the centre of Hyde Park which would be a very desirable situation; but from the practical difficulty which the Commissioners experienced in obtaining a site in Hyde Park for a few months, for the purposes of a national object like the Great Exhibition, I think the difficulty of carrying out such a project would be insuperable.

8604. Have you examined the sites proposed by the Commission, of which Lord Seymour and Mr. Ewart were members?—I am cognisant of their Report, and of the sites they proposed.

8605. Do you not think that if the National Gallery, though not on such a site as that to which I have alluded, stood by itself, it would be spared from those injurious influences to which allusion has been made, more effectually than if combined with another great group of buildings which would be likely to increase the population about it?—Two sites were suggested by the Commission to which you refer, in the event of Government not being willing to incur the expense of purchasing another site.

8606. My question is, whether a more insulated site, though not in the centre of a great park, would not be better calculated to shield the National Gallery from the influences to which I have alluded, than other sites in the neighbourhood of which a suburban town would be likely to spring up?—A suburban town already exists at the back of, and immediately surrounding, the site to the north of Kensington Gardens, to which I understand the National Gallery Commission to have referred. The far larger tract of ground purchased by the Royal Commission on the south of Kensington Gardens affords a much more insulated site.

8607. Mr. *Labouchere.*] Do you believe it possible to find a space such as the Chairman describes, in which such a building could be erected, except in one of the parks in the immediate vicinity of London?—I am not aware of any spot presenting anything like the advantages that the Commissioners' ground does.

8608. Was not that question considered by the Commissioners before the ground was purchased?—Very much. It is entirely owing to accidental and family matters that this property has not been built over long ago.

8609. Every open space near London has been rapidly built upon lately, has it not?—Yes.

8610. Was not this the only ground applicable and available for the purpose?—Yes, it was.

8611. This property abuts on one side on the Park?—Yes; that gives an area of 677 acres (which is, I find, the joint area of Hyde Park and Kensington Gardens), which is of course absolutely secured against being built over; so that on the north you have an absolute security against intrusion.

8612. Mr. *Ewart.*] Do you not consider it most important to have an open space to the north?—Yes.

8613. Is it not the fact that the principal mischief comes from the north?—Certainly; and that was considered by the Commissioners in fixing on a south-west part of London

8614. You have alluded to the report of the Commission of which Lord Seymour and myself were members; are you aware that the Commissioners had before them at that time any proposition with regard to the purchase of this property at Kensington Gore?—I believe that property is not the one to which they especially referred.

8615. The Royal Commissioner's proposition was not then fully developed?—No.

E. A. Bowring, Esq.

8 July 1853.

8616. Mr. *B. Wall.*] The ground in favour of which the Commissioners reported is still to be had, is it not?—I am not able to say with certainty; that was a very small piece, consisting of from 15 to 20 acres; and the Royal Commission felt that for their purposes it was useless to attempt to get so small a space.

8617. Do you know the distance from Spitalfields to Kensington?—I am not prepared to say; I should think between five and six miles; I have not any exact knowledge of the distance.

8618. There are a great many young artists and pupils who live in that part of the metropolis, are there not?—A considerable number, I believe.

8619. And if the collections were removed to Gore House, they would be pupils at that institution?—I did not apply the remarks I previously made to the School of Design at Spitalfields, but rather to what is now called the Department of Art at Marlborough House; I contemplated the removal of that, but I should consider the Spitalfields School of Design much in the same light as the provincial schools of design; there can be no objection to having those local schools of design in communication with the central body.

8620. In point of fact we should have a very expensive staff, without scholars?—I contemplate the removal of the whole of the Department now at Marlborough House, entirely distinct from Spitalfields.

8621. Mr. *Ewart.*] Spitalfields is a local school?—Yes; it is not at all necessary, I apprehend, to remove that any more than it would be necessary to remove the Birmingham or Manchester schools to London.

8622. Mr. *B. Wall.*] Are not the patterns which we see at Marlborough House, and some of which we see at Gore House, intended for the instruction of scholars in design?—I apprehend so.

8623. Therefore it is of the last importance that those scholars should see the specimens at Gore House?—It is certainly very useful for them to see them.

8624. And the majority of those who are likely to benefit from those drawings and patterns live in the heart of the metropolis?—The Spitalfields school, to which you probably refer, possesses its own examples and patterns, like any other local school of design; that school is already between three and four miles from the central department at Marlborough House.

8625. But there is a great difference between six miles and three?—It is much less than three miles from Marlborough House to the Commissioners' estate; it is not two miles.

8626. Mr. *Labouchere.*] Great doubt has been expressed by some witnesses as to the propriety of removing the National Gallery to the neighbourhood of Gore House on account of the want of accessibility, especially to persons in the humbler classes of life who might desire to visit the National Gallery; have you turned your attention to that subject, and have you any statement with reference to it that you are able to make to the Committee?—Do you mean actual accessibility to the site, or only as affected by its supposed remoteness?

8627. I should be glad to have your opinion on both points, beginning with the first?—With regard to the accessibility of the site, and as to the means of communication, the property itself would be surrounded by excellent roads, varying from 80 to 100 feet wide; those roads are all laid down in the map I have here; and as to the possibility of people going, if they wish it, such a distance, I would instance the Great Exhibition itself, on a site just opposite the Commissioners' estate, which during a period of between five and six months, was visited by upwards of 6,000,000 persons, showing, that if you give sufficient inducement to people to go, neither the distance from the heart of London, nor the difficulty of getting there, will deter them from going.

8628. Mr. *Hardinge.*] Are there any students who attend lectures at Marlborough House?—Yes; there are classes and lectures there for technical instruction in various departments, which are numerously attended by students (besides the regular School of Design at Somerset House, which is about to be transferred there).

8629. What part of London do they come from?—I do not know.

8630. Mr. *B. Wall.*] A great number of persons who came to the Exhibition, consisting of schools, labourers, and a vast variety of other people sent up from the country and from the metropolis, had their expenses paid by private subscriptions, had they not?—That was the case to some extent; but they formed a very small proportion indeed of the gross number of 6,000,000.

8631. Have

8631. Have many persons visited the exhibition which is now open at Gore House?—Yes; about 8,000 since its opening, at the end of May.

8632. Has not the fee for admission been reduced from sixpence to threepence?—Yes, on Mondays.

8633. Has not that reduction been made in consequence of the small number of persons who visited the place?—I always contemplated that after the exhibition had been opened for some time, the charge for admission would be reduced. The number of visitors since it has been opened has been at the rate of 70,000 a year. People go in great numbers to Windsor Castle, Hampton Court, and Kew Gardens, notwithstanding their distance from London.

8634. For what reason was the fee for admission to the exhibition at Gore House reduced?—I cannot state; it is very usual in the second part of a season to demand a lower rate of admission; I have not had any personal acquaintance with the reasons for the reduction.

8635. Is it not your opinion that it had reference to the small number of visitors?—I am really scarcely in a position to say.

8636. You are not in a position to give a negative to my question?—No, because I cannot state the reasons which have induced the reduction. I can only say that I always expected that the charge for admission would be ultimately reduced.

8637. Lord *Seymour*.] All those buildings you have mentioned are buildings to which persons have access without payment?—Yes, without payment.

8638. And you compare the exhibition at Gore House, which has been open but for a short time, and for entrance to which payment has been demanded, with them?—I have a statement here (*producing it*) of the number of persons visiting different places, both in and out of London, and I find that the number of visitors last year at the Zoological Gardens, where a charge is made for admission, was 305,203, or very nearly as many as at the National Gallery, where they amounted to 352,220, and where no charge is made. I take those gardens as a well known popular place of amusement; it is half a mile further from the Palace of Westminster than the Commissioners' site, and about the same distance from Charing Cross as that site.

8639. Mr. *Vernon*.] Do you include children among the number of visitors to the Zoological Gardens?—It is called the number of visitors. In Kew Gardens last year the number was 231,010; that is many miles from London; that shows that if you give people a sufficient inducement, they do not find distance an objection. The number visiting Hampton Court was 173,391 last year; while the visitors to the British Museum were 507,973, and to the Vernon Gallery 155,013. I have also here a statement of the number of the visitors at the Duke of Northumberland's two houses, and also at the Bridgwater Gallery and Windsor Castle, in the six summer months of 1851.

8640. Have you the numbers?—Yes; to Northumberland House (which is in town) the numbers were, 240,000; to Sion House (out of town), 110,000; to the Bridgwater Gallery (in town), 80,000; and to Windsor Castle, 129,400. I venture to submit that all these figures prove conclusively that the mere distance of a place of exhibition or public amusement from the heart of London, or even from London itself, forms no bar whatever to its being resorted to freely by the great masses of the population, whose interests it is so important to bear in mind when considering the question of the site of the National Gallery.

8641. Lord *Seymour*.] Are there not certain restrictions put on the admission into those galleries, although they are in town, inasmuch as the people have to go elsewhere to obtain tickets before they can be admitted?—Yes.

8642. And that always is a considerable restriction upon the admission of the public?—Yes, it probably tends in that direction.

8643. Mr. *Vernon*.] With reference to the places of resort out of town which you have mentioned, both Kew and Hampton Court are open on Sunday, are they not?—They are; but I believe that Kew Gardens have been so opened for the first time this summer. The number of visitors there in 1850 was 179,627, and in 1851, 327,900. In these years, as well as in 1852, those gardens were closed on Sunday.

8644. And Sunday is a day on which the working classes would naturally avail themselves very largely as a matter of course of the opportunity to take a holiday to any agreeable place out of town?—Yes, that may be the case.

8645. Mr. *B. Wall*.] Have you ever heard of any evil resulting to the pic-

E. A. Bowring, Esq.

8 July 1853.

tures from the number of people who visit them, either at Bridgwater House, Northumberland House, or Windsor Castle?—No; the reports given by the Duke of Northumberland and Lord Ellesmere, and also that from Windsor, are, that the conduct of the visitors was perfectly exemplary; it was certainly so at the period of the Exhibition.

8646. Of course any injury that might occur to the pictures in the National Gallery would equally occur, and rather more strongly, to the pictures in Northumberland House, that being in rather a lower position, nearer the river and the smoke of the Metropolis?—Yes; it is on lower ground.

8647. Lord *W. Graham.*] The rooms in Northumberland House are all covered with carpet, are they not, so that there would not be so much dust?—I am not able to speak upon that point.

8648. *Chairman.*] Would you propose to have the National Gallery open on Sundays?—That question has not been considered by the Commission; nor do I conceive that it comes in any way within their province to consider it.

8649. Do you think there is more objection to it than there is to Hampton Court being open on that day?—I am scarcely prepared to discuss that point.

8650. Lord *Seymour.*] Have you taken any means to ascertain whether or not the class of artists in the Metropolis would object or would approve of the removal of the National Gallery to such a site as that at Gore House, assuming that that site afforded the means for constructing a finer gallery than now exists at Trafalgar-square?—So far as I can judge, I should say the general opinion is favourable to the removal; but I am aware that there is not a unanimity of opinion on that subject.

8651. Upon what grounds do you form that judgment?—In the reports which I have seen occasionally in the papers of the evidence given before this Committee, I have observed that there is conflicting evidence on the advisability of removing the site. I have also heard the matter discussed on various occasions.

8652. Are the Committee to understand, that, as connected with the Commission, you have not instituted any inquiry so as to be able to give the Committee any opinion on the subject?—I have made no official inquiry on behalf of the Commission directed to the especial question of the feeling of the collective body of artists on the point; nor do I see how that could have been done, consistently with the necessity of secrecy during the conduct of the negotiations for the purchase of the land.

8653. You propose to remove a great many institutions to this distant site, as I understand, do you not?—Yes.

8654. For the purpose of instructing various classes of persons in this Metropolis in works of art?—Making it the great central educational point in science and in art.

8655. In order to make it the great central place for education, is not one important element for consideration its accessibility to the public?—Certainly.

8656. What means did you take to ascertain whether or not the classes to be educated there would object to or would approve of going there?—The first question for the Commission to decide was the question as to the practicability of obtaining a site; and the moment they found there was no such a thing as a perfectly central site to be obtained, they had no alternative but to take one further removed. It was not a question of the Commission choosing whether a site in the centre of London or one farther off would be most accessible, it was a question of possibility; that was the immediate cause of a comparatively suburban site being chosen.

8657. Do you propose to have lectures upon art?—I presume they would be included in any general arrangement.

8658. Did you endeavour to ascertain from the class of persons who would attend those lectures, whether there would be a great inconvenience in having lectures at such a distance from London as Kensington Gore?—Those lectures are already given at Marlborough House and at the Museum of Economic Geology. In the case of the latter, I am able to state that the number of persons, especially of the working classes, applying for admission is infinitely greater than could possibly be accommodated.

8659. Did you endeavour to ascertain where the people come from who attend these lectures at the Museum of Practical Geology?—No, I have not been informed.

8660. Nor do you know where the people come from who come to Marlborough House, and attend the lectures?—No, I do not.

8661. One of the objects you had in view was to have a museum of architectural design?—One of the objects was to render such a thing possible; at present there is no such thing in existence, as far as I am aware.

8662. Is there not a small concern of the kind in Cannon-row at present, got up by some gentlemen, in connexion with workmen?—I am aware that there is a large collection at Thames Bank, belonging to the Government, of mediæval casts, and so forth.

8663. Is there not an architectural museum of some kind in Cannon-row?—I am not aware of it.

8664. You cannot give the Committee any information, founded on inquiry, as to whether or not people would object to go out to Kensington Gore for the purpose of receiving instruction in art?—We can only judge from past experience; our experience derived from the Exhibition is, most decidedly, that people would go there.

8665. The experience you have had, as far as it applies to the societies to whom you have applied, is, I believe, unfavourable to going there?—The Commission have made no application of any kind to any society; they have merely stated, "If you like to come to our site, here is a site to which you may come;" but they have never entertained the idea of forcing it upon them.

8666. It has been intimated to the various societies that there might be a site available for them on this spot, because it was intimated directly in the Report of the Commissioners; are you aware whether they have viewed it favourably or not?—As respects the Chartered Societies who compose the body your Lordship probably specially refers to, their opinion, I believe, is adverse to removal at the present moment.

8667. Those societies may be considered to consist rather of the upper classes, may they not?—Yes.

8668. They are unfavourable to the removal?—They are unfavourable to the removal.

8669. And as to the class of artists, you cannot give us any opinion?—No, I am not in a position to give an opinion as to them beyond what I have already stated.

8670. Mr. *Hardinge.*] Do not a large proportion of artists live at Kensington, and in that neighbourhood?—Yes; the Commissioners made inquiry on that subject, and found that a great number lived to the west of Charing Cross.

8671. Mr. *Ewart.*] On what grounds do the societies object to the proposed removal?—Simply and solely on the ground of the proposed site being so far removed from the centre of London; but the same objection was made to the site of Somerset House originally; it was stated to be impossible to remove westward of Gresham-street; and if I am correctly informed, the site which the learned societies are at this moment anxious to obtain is one in the direct line to Kensington Gore, and more than half way thither from Somerset House.

8672. Mr. *Labouchere.*] There were several distinguished artists, were there not, on the Royal Commission?—Yes, who were parties to their report.

8673. Sir Charles Eastlake?—Yes.

8674. Sir Richard Westmacott?—Yes.

8675. And Sir Charles Barry?—Yes; Sir Charles Eastlake and Sir Richard Westmacott were both members of the Commission to decide on a site for the National Gallery.

8676. Mr. *B. Wall.*] Those gentlemen are connected with the Royal Academy?—Yes; and Sir Charles Eastlake is also connected with the National Gallery.

8677. Mr. *Vernon.*] In the statement made just now of the number of persons attending various galleries, you took the year 1852 as an instance, did you not?—The statement from which I read applies to three years; 1851 was an exceptional year.

8678. Are you aware that in the year 1852 the numbers who visited the National Gallery were much fewer, and that only about half the number attended in that year that usually have attended it in former years?—There was considerably less than half the number that attended in 1851.

8679. Are you aware that the number generally was less in that year than in 1850?—

E. A. Bowring, Esq.

8 July 1853.

1850?—Yes; in 1850 there were 575,000; and in 1852, 352,000; that is, exclusive of the Vernon Gallery.

8680. Mr. *Labouchere.*] Can you speak generally as to the objects of the Royal Commissioners in purchasing this site?—It was to afford the means of education in art and science, and to concentrate it as much as possible, by bringing together all the different departments and bodies representing art and science, so as to be mutually beneficial to them all alike; it was considered desirable to concentrate their libraries for instance; at present they are all scattered; each body has its own separate collection, and the funds of most of them being very limited, there are not many means of improving their libraries; but on this site it has been proposed that one general library should be made, available for all.

8681. Would there not be a considerable convenience to the public in the juxtaposition of several of these great objects of attraction?—Certainly; and even the societies which are at present unwilling to come to Kensington, have expressed a decided opinion in favour of the juxtaposition; the Royal Society and the Astronomical Society, for instance.

8682. Lord *Seymour.*] You think that it would be a great advantage to have one general library for all these purposes?—Yes.

8683. A library which must embrace all subjects of art, and all subjects of practical science?—Precisely.

8684. Do you think that separate libraries for separate departments would also be necessary?—If you have those departments all there, I scarcely see the necessity for having a distinct library for each department.

8685. You are aware that at the British Museum there is a very large library?—Yes.

8686. And are there many departments which require frequent reference to books?—Yes.

8687. Are you aware that for their own convenience they are obliged to have small departmental libraries, besides the one general library?—That is to a certain extent the case.

8688. Does not that seem to show that, instead of having one general library answering the purpose of all, the subdivisions of knowledge makes it desirable to have separate libraries for the different departments in art?—I should not propose to remove from the British Museum the books they have there now; my feeling would rather be to let the suggested library include duplicates of such scientific works as are now in the Museum, and a large number of which duplicates are already possessed by isolated societies.

8689. You would begin by making another vast library, applicable to all purposes of art and all purposes of science?—Yes, but of course it would be very restricted in its extent as compared with a vast national general library, such as that at the British Museum.

8690. Would it not be necessary, besides, that each of these departments should have smaller libraries for ready reference, without going to the central library?—I do not apprehend that that would be necessary.

8691. Is it not the case that at the British Museum the different departments are obliged to have libraries for the purpose of ready reference, besides the one large general library?—It is to a certain extent, I believe.

8692. Why then do you think that your establishments at Kensington Gore would be exempt from that condition which is found necessary at the British Museum?—It may be a matter of convenience, for those societies who can afford it (which few can), to have good libraries of their own; but I apprehend that the convenience of having a comprehensive library for general reference on all such subjects as those in question would far outweigh any inconvenience there might be in people having to go a few additional yards for their books.

8693. This library would be open to the public for study?—I apprehend so.

8694. In the case of any book in frequent use, you must have many copies of it, so that it may be referred to in the particular departments, and may not be taken from the library where the students would be able to see it?—It is invariably necessary, in any library, to have several copies of works of a very popular nature.

8695. You would require in the library a great many copies of all the best works on art and all the best works on science?—To a certain extent that might be convenient, but I do not know that it would be necessary to have such duplicates to any great extent.

8696. Mr. *Ewart.*] Though your library would be devoted to science and art, it would exclude a vast number of other subjects, and would be a limited library?—No doubt.

8697. *Chairman.*] Do you not think that if a student of painting or sculpture wished to consult a book connected with his own pursuit, it would be rather inconvenient for him to go, perhaps, some distance to a general library in order to get that book, instead of having it to his hand?—By having a general library, he would have it to his hand.

8698. Would you let all the buildings have access to the library?—That is a point which has not yet been considered; though I presume every possible facility would be given for consulting the library. I may here observe, with reference both to this and to the other questions that have been raised before the Committee respecting the occupation of the Kensington Gore site, that the Royal Commission has not attempted to do more than submit for public consideration and discussion the outline of a general system, bearing in mind, to use the words of their report, "that the filling up of the plan that may be adopted "must be left to the wants expressed, to the interest felt by the public at large, "and to the voluntary efforts of institutions, societies, and individuals aided by "the efforts of Government, to develop more fully the institutions already founded "by it, and which are so much appreciated by the public."

8699. Would not a student of sculpture or painting, unless there were a library in his own department, or in his own range of hall or gallery, be obliged to go to a distance to get any book he might wish to consult?—It might so happen; but that would seem to be a question of the greater or less extent of the library proposed to be formed there; not a question of the desirableness of having or not having it.

8700. He would have to leave the building in which he was studying sculpture or painting, and go to another building, where there was a library, and thus separate himself from one object to get to another?—On the supposition that the library was apart from the other buildings, it would be so; but the question seems to be whether it is desirable to have a library there for the convenience of students.

8701. Lord *Seymour.*] Would this combined collection of institutions be available for the purposes of study and the promotion of art, unless it had a library connected with it?—I apprehend that a library must always be a useful accessory to other means of study.

8702. Mr. *Labouchere.*] Would there be any difficulty, in point of space, in finding ample room for collections of works of art, and for any library that it might be thought desirable to connect with those collections?—None whatever, the space is so ample.

8703. With regard to the question of accessibility, have you heard any suggestion of any fresh means of communication across Hyde Park to the proposed site?—Of course that is a matter for the public and the Government to decide. I have heard an ingenious suggestion, that you might make a road accessible to omnibuses, for instance, where the sunk fence runs now which separates Hyde Park from Kensington Gardens, by which they would approach below the level of the Park and cross Rotten Row by means of a tunnel, without in any way interfering with the park.

8704. Mr. *B. Wall.*] To connect Tyburnia with Kensington?—Yes.

8705. Mr. *Labouchere.*] Have you any reason to believe that that proposal has been seriously entertained or considered by persons whose opinions would be of weight?—The only persons I have heard discuss it have been favourable to it as a very ingenious suggestion. I am not prepared to say that it has been entertained seriously or sufficiently as a distinct proposition.

8706. Mr. *B. Wall.*] Has it been at all examined by the Government department?—Not that I am aware of; but it would give a fresh means of access from that part of London to this site.

8707. Lord *W. Graham.*] Do you consider it necessary that all those departments of education to which you have alluded, should be connected with the picture gallery?—I think it is very desirable that they should be so connected.

8708. Do you think it is important to all of them?—Not equally so to all.

8709. To which?—To the art department; to all students in the department of art, it is very desirable that they should have access to a National Gallery in which they could get instruction in the principles of art.

E. A. Bowring, Esq.

8 July 1853.

8710. Is it very desirable, in your opinion, to have schools of design in connexion with the National Gallery?—My own opinion, as I have stated, is that the students in the department of art would be much benefited, had they access to a properly-arranged and extensive national collection of works of art.

8711. Mr. *Ewart.*] When you speak of schools of design, to what school or schools do you particularly allude?—I allude to the School of Design at Marlborough House, without interfering with local schools, of which Spitalfields must be considered one.

8712. Lord *W. Graham.*] Do scholars come now to Marlborough House to draw?—There are many classes for scholars and students now held at Marlborough House. Among them may be mentioned those for teaching painting on porcelain, the process of lithography, the principles of ornamental art applied to woven fabrics, &c.; the same to furniture, metals, &c.; artistic anatomy, architectural details, wood-engraving, &c. &c. The classes of the Somerset House school are also about to be moved to Marlborough House.

8713. And do you think those scholars would wish to come so far as Kensington Gore?—I think so. I may mention with reference to Marlborough House, as showing its want of accommodation, that the Queen has been pleased to lend it temporarily till the Prince of Wales comes of age, or say one year before that event. It contains upwards of forty rooms, all of which are occupied, and they find it impossible to get on satisfactorily in consequence of want of space. It is owing to that circumstance that the exhibition of cabinet work is taking place at Gore House. They are obliged to put several classes in the same room. The class of training masters is now suspended, there being no accommodation for them to practise. The casts are hung up, some in the staircase, others in the passages, and others in the basement, all owing to the same want of accommodation. The stores for provincial schools are all kept in the cellars now; there are no means of preparing and packing them, and they are getting much damaged. The class rooms are too small, and the museum rooms are much too small. The Somerset House school is shortly to be transferred thither, and although some additional rooms have been built, the transfer will add to the want of room. To exhibit the works of the students in the school, it has been necessary to send them to Gore House. With respect to the management, the arrangements are necessarily very inconvenient; the officers being scattered all over the house. In the present year the correspondence of the department is three times what it was before, 1,750 letters having been written in the course of three months.

8714. Lord *W. Graham.*] If the School of Design were erected at Kensington Gore, and the National Gallery remained on its present site, that you would consider to be an additional inconvenience to the students?—Yes; inasmuch as it would place them farther from the National Gallery, to which it is very desirable they should have access. One portion of the National Gallery is at present at Marlborough House, I mean the Vernon Gallery, an arrangement which, however useful to the students there, is very inconvenient to the public.

8715. Mr. *Vernon.*] Will you explain to the Committee what practical advantage you suppose will be gained by the students in the School of Design from their close vicinity to the gallery of ancient art?—Do you mean if the present National Gallery is to remain where it is?

8716. No. I want to know what practical advantage you consider such students will gain by being placed in the close vicinity of the National Gallery of ancient sculpture and ancient art generally?—They would not gain so much advantage as they might if those collections merely remained as they are at present, without any arrangement according to schools, or the progress of art; but if they are arranged so as show the onward progress of art, then I apprehend they would be a most valuable adjunct for the students.

8717. Do you think that the advantage which would be gained, would be gained by the instructors or by the students, or by both?—I apprehend it would be gained by all equally, and by the public too.

8718. You assume that at stated periods they would have a portion of time devoted to studying in the gallery; do you intend that they shall take certain courses of lectures in the gallery, or do you simply mean that occasionally they will be able to walk in and out, and test matters of art and education?—I apprehend that it should be made really educational, and that you should give them the means of attending and hearing those lectures, so that they should derive the greatest

greatest benefit from having the things under their eyes, and lectured upon on the spot.

8719. Then you propose that facilities should be given to those students similar to those which are now given to students in the National Gallery?—Precisely, speaking for myself personally.

8720. Do you consider that that will improve greatly industrial art in this country?—I certainly have a strong opinion to that effect.

8721. Mr. *Ewart.*] Do you not think that the mere contemplation of the best works of art must improve the taste of the people?—Yes.

8722. Do you not think it desirable, if we get an eligible site for the National Gallery, that the Cartoons of Raphael might be brought to that site?—I am not prepared to answer that question. I may take this opportunity of saying, that with regard to all questions connected with the department of art, such as those that have been put by the Committee, the head of that department is much better qualified than I personally can be to express an opinion.

8723. Mr. *Labouchere.*] Have any applications been yet made by any body or bodies for the grant of a site on this estate?—Within the last few days we have received an application for the grant of a site on which to erect a building for the Royal Academy of Music; and I believe other applications are likely to be made at no distant time. I have the memorial of that academy with me, in which they represent the importance to them of having a site; they consider themselves as forming part of the educational element, and as having a claim to be included in any general scheme; they have an income of 5,000 *l.* a year; they propose to erect a building there, if a site were given them. I may perhaps mention, that the Commissioners who made the report, to which allusion has been made, and in which two sites in Kensington Gardens were suggested, went on the supposition that they could not get another site, on the ground of the outlay being deemed inexpedient; they do not appear to have gone into the question of the eligibility of the two sites, as compared with the other site. They say, "If the outlay necessary for such purpose be deemed inexpedient, it "appears to us that no eligible site can be obtained, except by appropriating for "this purpose a portion of Kensington Gardens;" and they state, as reasons for choosing the neighbourhood of Hyde Park and Kensington, that it is "an insu- "lated position, where the gallery may be secured from the obstructions to light "and air occasioned by neighbouring buildings, and where additional space may "hereafter be provided for the increase of the collections, or for other depart- "ments of art which it may be deemed desirable to unite with a National Gal- "lery." The space they mention is only from 15 to 20 acres of land; they did not contemplate the possibility of obtaining the very extensive property that the Royal Commissioners have since purchased at Kensington Gore.

8724. Are there not rows of buildings along that side of the road on which the Kensington Gore ground is?—So there are on the site to the north of Kensington Gardens, that the National Gallery Commission referred to.

8725. Lord *Seymour.*] You do not contemplate that more than 15 or 20 acres would be required for the site of the National Gallery?—No; I merely say you secure space and air to a greater extent than you could on a space of 15 or 20 acres.

8726. Of the 86 acres you have bought, supposing the National Gallery were to be removed there, what number of acres, or what space do you think should be devoted to the purposes of the National Gallery alone?—It would depend very much upon the nature of the building.

8727. You have not considered that question?—No.

8728. Mr. *Labouchere.*] But there would be no difficulty in giving to the National Gallery any amount of space they could possibly require?—None whatever.

8729. Mr. *Ewart.*] The great desideratum was to get space enough?—That was the object of the Commissioners; there is a space between the roads of about 1,100 feet; and, supposing the National Gallery to occupy 1,000 feet frontage, you would have space for an enormous extension backwards; you are not necessarily limited to the depth taken for the building in the first instance.

8730. Lord *W. Graham.*] Do you think the Commissioners would object to place the National Gallery there by itself, without other buildings?—I apprehend that the public would not be satisfied with such an arrangement, considering the very great extent of ground purchased by the Commission. Their

E. A. Bowring, Esq.

8 July 1853.

wish must naturally be to make their institutions as useful as possible, and this end would be promoted by placing them in juxtaposition as suggested.

8731. Do you think the public desire the other departments to be connected with the National Gallery?—That is my opinion.

8732. Mr. *Ewart.*] Would there be space for ornamental gardens, and, if so, would not their formation be a great advantage to the public?—Certainly; the Commissioners have contemplated that.

8733. Making them of an artistical character?—Yes, they always contemplated that; but the Committee can scarcely form an adequate idea of the extent and capabilities of this site from a mere view of the map; an inspection of the place itself would give a much better notion of the extent of the ground, and the great means it affords of providing for anything that may be required. I may mention, that its extreme length is half a mile, and its average breadth nearly a quarter of mile; that may give the Committee a general idea of its extent.

8734. Have you any further remarks that you wish to make?—I understand that an objection has been raised to the site, on the ground of its dampness and unhealthiness; I think that that objection is sufficiently answered by the fact that, for the purpose of building the Consumption Hospital, which requires pure air, they pitched on the ground at the back of the Commissioners' property, considerably lower than our estate.

8735. The site at Kensington Gore is not lower or damper than Brompton or Pimlico?—It is higher.

8736. Mr. *Vernon.*] That being all on gravel?—Yes.

8737. And the site of the Consumption Hospital is also on gravel?—Also on gravel.

8738. *Chairman.*] Is it not the case that English consumptive patients are frequently recommended to go to a warm and moist climate?—They require, I believe, a very pure, fine air; such a damp site as this is represented to be would be very injurious to them.

8739. Lord *Seymour.*] Is there any right of way through these 86 acres, or is the ground which has been purchased completely within the power of the Commissioners?—At the present moment there is a right of way across the property.

8740. The question how that right of way is to be dealt with, is now under consideration, is it not?—It is now under the consideration of the Commissioners. I apprehend it will be necessary for them to obtain an Act of Parliament with the ordinary powers; but in return for a narrow footpath and dirty lane they propose to give very broad and handsome roads, 80 to 100 feet wide.

8740*. Mr. *Ewart.*] Have the whole 170 acres been secured?—No, only 86 acres; the Commissioners pointed out that it was desirable to secure the rest of the property, but Parliament has not yet done it, and unless it is secured at once, the whole space will be taken by builders at very high prices for the formation of great streets. I may mention before I conclude that the Patent Commissioners are making a large collection of models of inventions, for which they have provided temporary accommodation in Southampton Buildings, but the space they have is nearly overflowing, and the Royal Commissioners have offered to give them such accommodation as they can.

Thomas Cubitt, Esq., called in; and Examined.

T. Cubitt, Esq.

8741. *Chairman.*] YOU are an Architect and Land Surveyor?—A Builder.

8742. You have heard the evidence of Mr. Bowring, have you not?—Yes.

8743. Have you any information which you think it would be desirable for the Committee to receive in addition to that which Mr. Bowring has already given us?—I think Mr. Bowring has left very little, if anything, to be said upon the subject, but I would make this observation: I have heard the site called to-day a suburban site. I think that term does not quite apply; I think it is positively and essentially a piece of London. There is Hyde Park on one side, but on the other side of Hyde Park there is a solid mass of buildings of a considerable width; to the south side of this ground the space is all filled up with buildings, and on the east side I consider that London has extended itself up to it.

8744. Mr. *Ewart.*] Do you think that London, if I may so say, travels further towards the west, or to what quarter is the tendency of the population to move?—

move?—It is difficult to say, for there is but little ground unbuilt on anywhere; this happens to be a large site, but London has extended beyond it; this is in fact a clear space within London. London is carried on westward of this, and although there is some more uncovered ground, perhaps 50 acres might be now got of empty ground, yet in a short time it will be a solid mass of buildings.

8745. *Chairman.*] That is an advantage, is it not, as far as regards centrality, but not as regards the purity of the air?—I do not consider it possible to get any place where you can ensure pure air; I think the greatest probability is, that Hyde Park will be the great opening, and will separate this site in a certain degree from the mass of buildings; the question was, as I understand, where a site could be found, and this seemed to be the only unoccupied site that could be found in what may be called London.

8746. The prevailing winds are from the south-west, are they not?—Yes, it is considered so.

8747. Is it not the result of atmospheric observation, that that is found to be the prevailing wind?—So I understand.

8748. Then if a large town were to spring up in a lower direction, towards the river to the south-west of this ground, that would tend to expose it very much, would it not?—I consider that it has already sprung up; there is no spare space to the south of it.

8749. Mr. *Ewart.*] Is not the south-west at present likely to continue to be the quarter from which the purest air can come, having regard to this site?—There is less interruption between it and the sea than there is from any other quarter.

8750. Mr. *Labouchere.*] Are you aware of any other vacant and available space of any description that is at all accessible from the metropolis, except the public parks?—There is no other.

8751. You have a pretty good acquaintance with the whole metropolis, have you not?—Yes, and I made it my business to look out very much for a site; I know every part all round London.

8752. *Chairman.*] Supposing a large town were to spring up around the National Gallery, assuming it to be removed to that site, would it not come to be much in the same state as that in which the present National Gallery now is?—No; because the present National Gallery is more thickly built round than it would be according to the present mode of building; the streets are narrower, the houses are closer together, and it is mixed up with a good many factories; there is no part of old London that does not contain many factories; but I consider that a town has sprung up behind Kensington Gore, and if the National Gallery is put there, it will not be a detached piece, but a town will be built round it; and I have no doubt but that before the National Gallery is built many hundred houses will be built to the westward of it.

8753. You do not mean it is a town in the sense in which London is a town, the whole ground being covered with houses; there are intermediate fields, are there not?—There is scarcely anything of the kind.

8754. Mr. *Labouchere.*] What do you think would be the character of the buildings that would be erected in the immediate vicinity of this Kensington Gore property?—I think the probability is that they will be generally large houses.

8755. Do you think it likely that there will be distilleries or breweries, or that even any dense population will be gathered in the immediate vicinity of this property?—I should think it not at all probable that any factories would be erected there; and with regard to the question as to a dense population, I consider that although the ground will be all filled up, it will not be thickly occupied; I think the houses will be large, and the streets will be wide.

8756. Why do you think that?—Because it will answer people's purpose better to lay out the ground in that way.

8757. The ground will be very valuable, will it not?—It is so now.

8758. Was it constantly rising in price, even before the purchase of the estate by the Commissioners?—Yes, for several years it has been rising.

8759. Mr. *Vernon.*] You consider that instead of an inferior you would be likely to have a superior class of houses built in the neighbourhood of the National Gallery, if it should be placed there?—I think there would be a tendency to improve the houses, and that the character of the houses would be

T. Cubitt, Esq.

8 July 1853.

better in consequence of this establishment being there; but whether it be there or not, there is no doubt that in a few years the whole ground will be covered with houses, and that, if this ground had not been purchased by the Commissioners, there would have been a great many houses built upon it this spring.

8760. *Chairman.*] Do you think the population of Hammersmith, Brompton, Chelsea, and the contiguous villages in the neighbourhood of that ground, are of a superior class, and that they inhabit also houses of a superior class?—No; but I think that the houses in this part of Kensington and in the immediate vicinity of Hyde Park will be a large class of houses.

8761. What reason have you for supposing that, the population who have already gone out to that airy situation being of the middle class, there will be a special exception in favour of the upper class, for this new ground?—Because of its accessibility to Hyde Park, and the certainty the public feel of that park being kept open.

8762. Mr. *Labouchere.*] Are not the houses which have been recently built in the neighbourhood of Prince's Gate of a superior description?—Yes; they extend to a considerable depth, and on the ground immediately to the north of that purchased by the Commissioners in Brompton there are several squares which have been erected within the last few years.

8763. Do you mean Onslow-square?—Yes, and Thurlow-square.

8764. Mr. *Vernon.*] At Prince's Gate, is there not a new square with a new church?—Yes, on the south of the high road.

8765. Are they buildings of a very superior class?—Many of them are of a very superior class.

8766. *Chairman.*] Does not a large increase of buildings and of population of the upper and middle classes necessarily involve a proportional increase of the lower classes, who supply them with the necessaries of life?—To a certain extent the shopkeepers must be provided for; and the shopkeepers would pay a price that would make it answer the purpose of the proprietor of the ground to admit them; but the working classes are not located there; there is no preparation for them.

8767. Are they not generally located in Hammersmith and Knightsbridge?—In Hammersmith there are more than in Knightsbridge.

8768. And Kensington?—Yes, and some parts of Kensington; but I think the lower class of houses in that neighbourhood is diminishing, or at all events not increasing.

8769. Can a large population of the miscellaneous classes get on at all without a proportional amount both of tradespeople and the working classes?—With regard to the working classes, I think people never consider it necessary for their comfort to have them near them; and as to shopkeepers, they will pay a price to get near where their customers live.

8770. Lord *Seymour.*] In Belgravia, Eaton-square, and that direction, where there are a good class of houses, is there any provision made for the working classes?—No.

8771. When required they come from some distance, do they not?—Yes.

8772. Mr. *Hardinge.*] Do people who live at Prince's Gate feel any inconvenience in getting the necessaries of life from the shopkeepers?—I do not think any classes, either in town or country, experience any difficulty from want of accommodation of that kind; whenever there is a demand there are always persons willing to go and supply it.

8773. *Chairman.*] Is there not a great mass of buildings inhabited by the lower orders at Pimlico, down towards the Horseferry-road and Vauxhall, who have shops for the purpose of supplying their customers with provisions?—There are many shopkeepers round the neighbourhood.

8774. Do you not think that a population such as you allude to would require a large number of shops?—Where there are good houses, shops generally spring up near. Houses for the working population are generally built where ground can be obtained at a low price, and they remain there probably because it is too expensive to buy them out.

8775. Where do you suppose the working classes, whose services will be necessary for the large new town you allude to, some miles from Hyde Park Corner, are to come from?—I am not supposing that there is to be an entirely new population growing up; it has already grown up to some extent.

8776. Are

8776. Are there no working classes among the population there now?—Yes, there are some mixed up with the rest.

8777. They will continue there, will they not?—Some may, others will have to go further off.

8778. That will increase the amount of building to the westward, will it not?—I have no doubt at all that it will be a fully occupied part of London; the whole of Kensington will soon be occupied.

8779. With the usual proportion of buildings for all classes of the population? No, I do not think so. I think there will be fewer small houses; the small houses are the pioneers of others.

8780. Do you think that even when this ground is covered to the extent you anticipate it soon will be, the National Gallery, supposing it were removed to this site, would have great advantages in point of atmosphere over the site of Trafalgar-square?—I think very considerably so; it is nearer to the open country, and it has Hyde Park, though all vacant ground will be occupied.

8781. Mr. *Ewart.*] Does your experience and observation lead you to the conclusion come to by a former witness, that the great mass of the smoke of London comes from the eastward and the north-east?—I think the greater number of manufactories are east of London.

8782. Therefore in selecting a site for the National Gallery, is it not desirable to choose one that is open towards the north and east, so that the particles of smoke may subside and fall before they reach the building?—I think it is a very great advantage having the space on the north side occupied by Hyde Park open.

8783. Lord *W. Graham.*] You built the drains in Belgrave-square, did you not?—A great part of them.

8784. Do you consider Belgrave-square thoroughly drained?—Thoroughly.

8785. And do you consider it more difficult to drain the ground at Kensington Gore?—No; it may be drained perfectly.

8786. Mr. *Ewart.*] At Belgrave-sqnare you found a slight covering of clay, did you not?—Yes.

8787. And under that, when it was removed, you found gravel?—Yes.

8788. Is the ground at Kensington Gore of the same character as that at Belgrave-square, or even more gravelly?—I am not fully acquainted with it, but I suppose it nearly the same. Under Belgrave-square there is a depth of from 20 to 30 feet of gravel. I think that in parts of this ground it is likely to be as deep. The whole of London is on a bed of clay, but in most parts there is a stratum of sand and gravel at the top of it.

8789. *Chairman.*] Is the gravel that is described by Mr. Bowring as being spread over a considerable part of this site, gravel of the same kind as that called "Kensington gravel"?—I do not think it is so good, but it is more sandy.

8790. Is not the Kensington gravel on the surface, and do you not come to it at once?—Generally so.

8791. Is there not a considerable stratum of clay in the lower part of the Kensington Gore ground over the gravel?—I am not aware that there is; I think that in some parts there is a clay at the top, but probably there is sand below it; in Hyde Park there are parts where there is no gravel or sand, and the clay comes up to the surface.

8792. Are you not of opinion that the chimneys in stables and offices attached to large houses being below the usual level of other chimneys, cause a considerable amount of smoke?—I think it is a disadvantage; no doubt that smoke is likely to be prejudicial to a certain extent under such conditions.

8793. Mr. *Labouchere.*] Have you formed any opinion as to the comparative convenience of the two sites of Trafalgar-square, and the newly purchased estate near Kensington Gore, for the site of the National Gallery?—I fancy that with regard to the upper classes, the proposed site is a better one than that of Trafalgar-square. With regard to the working people, I think it is a vast advantage, its being near Hyde Park. I think very few people leave their work to go to the Museum, or to go to any sight, such as the National Gallery, and then return to their work again; I think they would rather prefer taking Hyde Park as a part of their amusement, making out their day, or part of a day, with a walk through Hyde Park.

8794. You think that the cheerfulness of the situation, its vicinity to the Park, and its having gardens about it, would altogether make it more attractive to the

T. Cubitt, Esq.

8 July 1853.

working classes, than a building situated in the middle of the town?—I think so.

8795. Mr. *Ewart.*] You are very conversant with the working classes, having a great number in your employ, and therefore you speak from experience on the subject?—Yes.

8796. *Chairman.*] Is it not the case that when the working classes go out for the special object of seeing some interesting collection, such as that at Hampton Court or the National Gallery, they are more likely to profit by it when they have to go a little distance, and make a day of it, than when they have it near at hand, and it seems a common-place object to them?—I think men do not like to go from their work immediately to see these sights; they usually clean themselves, and make a little preparation, and I think that going a mile or two to a place where there is a more cheerful look-out for them, and which is in a better vicinity, is more likely to be attractive, and that they would be likely to go oftener than they do to the National Gallery in its present site.

8797. Lord *Seymour.*] You employ a great number of men?—Yes.

8798. Do you know whether your men attend at all at the Museum of Practical Geology?—Many of them have done so; I think they find great pleasure in getting admission to the lectures, and many of them attend.

8799. Mr. *Labouchere.*] Is there an increasing disposition among the working classes, in your opinion, to visit collections of art?—I think the tendency is generally towards their improvement.

8800. Lord *Seymour.*] Do you think that those persons who attend lectures, at the Museum of Practical Geology, for instance, would be inconvenienced by going for such lectures to Kensington Gore?—With regard to lectures, I could hardly say to what extent they would attend them.

8801. Do you think that for the purpose of sight-seeing (that is, going for a morning's pleasure to see a museum or a collection of pictures) there would be any objection, as regards the working classes, to their going to Kensington Gore instead of Trafalgar-square, or do you think it would rather be an advantage to them?—I think it would. A question was asked of Mr. Bowring, I think, as to whether the building would be likely to be well attended if it were open on Sundays. I think it would be a vast accommodation to many people, and not only would not tend to demoralise them, but, on the contrary, it would tend to improve them.

8802. Mr. *Vernon.*] I presume your opinion, that they would be equally willing to go out there as to go to a gallery in a more central position, supposes that there shall be some surrounding open ground, an agreeable garden, or some object of that sort, which should make the building more airy and more pleasing to them mentally as well as physically?—I am supposing that on this large site the buildings in which collections are to be formed will be detached, and that there will be considerable space for ornamental grounds; but I consider that Kensington Gardens and Hyde Park, if there were nothing else, would be a great attraction; but more ornamental ground in addition would be of great advantage.

8803. Mr. *Ewart.*] You say you think it would be rather beneficial than otherwise to the working classes to be admitted on Sundays to see these collections?—I think it would.

8804. Do you know what the feeling of the working classes themselves is upon the subject?—I think the general feeling would be in favour of it; but there are different opinions entertained by them; the workmen are as diversified in their opinions as the upper classes are.

8805. Have you any further remarks to make to the Committee?—There was a question asked about the levels; my idea would be that the ground at Kensington Gore should be nearly laid out in one straight line from the road, by the side of Hyde Park. I would make one slope of it; the fall of that would not exceed one uniform fall of one-and-a-half or two per cent., whereas Regent-street and St. James's-street are perhaps three per cent.

8806. Lord *W. Graham.*] Would you raise the surface of the earth?—I should fill in the centre part so as not to make it a level, but what we should call a hanging level; so as to make it uniform

James Pennethorne, Esq., called in; and Examined.

8807. *Chairman.*] YOU are the Architect of the Board of Woods and Forests, are you not?—I am Architect to the Board of Works and the Board of Woods.

8808. Have you, on various occasions, been consulted as to the project for removing or enlarging the National Gallery?—Yes.

8809. You appeared before the former Committee, I think?—Yes.

8810. Were you not before the Committee of 1836?—I do not remember. I have been before three or four Committees and Commissions.

8811. Have you ever prepared plans for the enlargement of the present building?—Yes.

8812. Was that with a view to leaving or doing away with the present structure?—Always with a view to preserving the present structure.

8813. Was your plan limited to the accommodation of pictures, or did you contemplate taking in other objects of art?—I have made plans on several occasions; I made one at the time the Vernon Gallery was proposed to be added to the collection, and that was only with a view to the addition of those pictures. At another time I made plans for building over the entire site of the barrack yard, and that plan was to include sculpture also.

8814. When you speak of the barrack-yard, do you mean that alone, or that and the workhouse?—Not the workhouse; the entire space occupied by the barracks.

8815. You have never prepared a plan occupying the whole space of the barrack-yard, workhouse, and National Gallery?—I have never done so officially.

8816. Have you for your own amusement, or from curiosity?—Not a detailed plan, but lately I have prepared a block plan (*producing it*), to enable me to form some opinion upon the subject.

8817. Do you consider that any suitable edifice could be erected in that situation without getting possession of the whole space occupied by those two other establishments?—I do not think you would be able to erect a gallery so large as it ought to be without both the barracks and the workhouse.

8818. This plan contemplates taking both?—Yes.

8819. Have you buildings extending from the back of the present gallery, with quadrangles or courts?—Yes.

8820. How many storeys high do you propose this structure should be?—Two storeys.

8821. Lord *W. Graham.*] This does not include the washhouses?—No.

8822. *Chairman.*] Was your intention to put the sculpture on one floor, and the painting on another?—I considered that the ground floor should be appropriated to the sculpture, and the upper floor to the pictures.

8823. Supposing you had the whole of the ground, would the edifice you propose to erect be in a situation or of a description to do justice to a great national institution of fine art?—Speaking of it architecturally, there would be great difficulty in erecting a suitable building there, on account of the levels. If the ground floor of all the back buildings were to be appropriated to sculpture, you ought to enter upon the level of that ground floor, which would involve the alteration of the present portico; the entire front, in fact, would have to be changed: you would also be obliged to make that ground floor only 15 feet, which is the height of the present ground floor, or very little more, and such a pitch is much too low for the purpose.

8824. Every plan you have attempted contemplates getting possession of the barrack-yard, does it not?—Yes; but when it was a mere question of providing temporary accommodation for the Vernon Gallery, that would have only involved building over a part of the barrack-yard.

8825. Have you ever taken any measurement of the acreage comprised in the site of the present gallery, barrack-yard, and workhouse?—The barrack-yard and the workhouse, with the other ground it would be necessary to take, exclusive of the present building, is about three acres.

8826. Were you present when Mr. Fergusson explained his plan of a great building?—No; I came into the room after he had explained it.

8827. You are not prepared to say you could erect a building of a proper description for a combined collection of works of art without getting possession

J. Pennethorne, Esq.

8 July 1853.

of the barrack-yard?—It would not, in my opinion, be possible to do it in a fitting manner.

8828. Could you make for the picture gallery alone such a building as would be worthy of such an institution, by getting possession of the workhouse, without the barrack-yard?—I do not think you could make such a building as would be worthy of the country.

8829. Have you ever considered in your own mind what other site would be preferable, either in or out of London?—I have thought of two or three sites; but before leaving this site, it may be as well to state that the result of a rough estimate which I have made is, that the mere obtaining possession of the site of the workhouse with the houses and the barracks, would in all probability cost 160,000*l.*, and that the cost of erecting the gallery at the back would be probably another 160,000*l.*; then there would be alterations necessary to be made in the present building, perhaps also compensation to the Royal Academy if they were removed, and possibly the buying up the baths and washhouses and steam-engine of waterworks. I think, on the whole, you would not erect a building of the size shown on that block plan for less than 400,000*l.*

8830. Including the price of the structure and other expenses?—Everything; obtaining the site and erecting the building; altogether there would, I think, be at least 400,000*l.* expended.

8831. Lord *Seymour.*] Could you so far divide that as to tell us what portion would be applicable to obtaining the ground, and what portion for building?—Obtaining the ground would probably be 160,000*l.*; that would be without compensation to the Royal Academy, if they were turned away, and without the cost of removing the nuisances.

8832. *Chairman.*] As an architect, you would not be prepared to say you could engage to put up a building that you think would be worthy of the nation on the present site, with these various obstacles?—I think that after spending that sum of money, it would be a building unworthy of such an institution, because the ground floor must of necessity be low, or the levels of the picture galleries be very unequal.

8833. Lord *W. Graham.*] Is that a valuation which you have made this year?—About a week ago I was informed that I should be examined before this Committee, and therefore for the purposes of this Committee I turned my attention to the subject.

8834. In 1848, you seem to have made some valuation?—Yes. I have not looked at the evidence I then gave.

8835. You stated on that occasion that the expense would be enormous?—I believe I did, and so I now consider it.

8836. Do you consider that the value of the ground and buildings there has increased since that time, or not?—Only in proportion to the increase in the value of property generally since that time. No doubt property would cost more now than it did in 1848.

8837. *Chairman.*] Have you considered any other site or sites, in or out of London, which you would consider desirable for a gallery of fine art?—There have been several sites considered. First of all there were the sites reported upon by the Committee of 1851.

8838. What was your opinion with regard to those sites?—There are two sites shown on the plan, both of which I think objectionable; or at least that there are other sites preferable.

8839. Have you yourself ever suggested any other site?—Yes; I was desired to make, not detailed plans, but a general plan, and to consider the subject of a site partly in Kensington Gardens and partly adjoining to the turnpike at Kensington Gore; that is, upon the site of the small barracks, and where Rotten-row enters the Kensington-road.

8840. Lord *Seymour.*] You mean the small barracks adjoining Kensington Gardens at the corner?—Yes.

8841. Have you got the plan of that site?—No; but I have a very rough tracing (*producing it*) which will explain it.

8842. *Chairman.*] Do you consider that that which you have mentioned last is a desirable site?—I thought that site was preferable to either of the other two because it was upon the better line of traffic.

8843. More accessible?—Yes, from most parts of London; and also because the principal front would have faced the south, and the plan generally would assimilate

assimilate better with the laying out of Kensington Gardens, and anything that may be done at any future time with Kensington Palace.

8844. Was the plan that you designed at that time intended to comprise all the collections which have been under discussion, of sculpture, paintings, and other things?—It was supposed to include sculpture and everything that a National Gallery should include; but the details of it were not gone into; it was considered more as a question of principle than of detail.

8845. Did you not at one time take into consideration another part of Hyde Park; the part near the old sunk fence?—Yes; there is another site that, speaking architecturally, is perhaps finer than any of them; it would be very near to the Gravel Pits, placing the gallery exactly central with the great avenue of the Palace.

8846. Were you instructed to examine that site; or did you do so for your own satisfaction and amusement?—I do not recollect whether I was instructed to do so or not; but I did look at that site and consider it, about the time I was examined before the Commission of 1851.

8847. You are probably under the impression that there would be considerable difficulty on other grounds, irrespective of its advantages as to site, in that central position, from its interfering with the privacy of the parks?—The great objection to such a plan would be, that it would be absolutely necessary to provide means of access from the Knightsbridge-road and from the Oxford-road, for which it would be necessary to form a road across the Park.

8848. I presume that persons going in omnibuses or cabs to the gallery, might be allowed to go there from either side, and might be prohibited from going beyond?—Those are questions upon which the guardians and superintendents of the Park could give more information than I can; but I am afraid it would be found extremely difficult, if not altogether impracticable.

8849. Do you think there would be so great an influx of people coming in omnibuses or cabs to the gallery as to create inconvenience?—There might be days on which immense numbers of people would go; on holidays, for instance.

8850. Giving full weight to those difficulties, that, perhaps, in other respects would be the finest situation that could be selected for a gallery?—It would be a very fine situation, and perhaps the finest, speaking architecturally; but I am not sure that it would really be a finer site than has been lately proposed on the south side of the Knightsbridge-road.

8851. You are favourable to the site proposed on the Kensington Gore ground towards the road?—Yes; the site of Gore House, taking all the circumstances together, appears to me much the most eligible.

8852. Do you not consider that the centre of a great open space of park or forest, with the advantage of a constant free circulation of air, and the distance of the houses a quarter or a third of a mile on all sides, would be almost indispensable conditions of obtaining all the advantages you wish in the removal of the Gallery?—Yes; but if the new site is properly managed, you will have all those advantages sufficiently for every purpose; the galleries would be entirely open to the north and south, and on all sides would rise considerably above other buildings.

8853. Will you state the grounds on which you hold that opinion?—I know nothing whatever respecting the intentions of the Exhibition Commissioners, and I have not communicated with any person upon the subject; all I could do was to prepare myself for this Committee in regard to quantities. This (*producing it*) is a plan of the ground, and that (*producing another plan*) is a plan of a square portion of the ground as it is proposed to be laid out by the printed plan. There is a small wedge of property which has not been purchased; on the other hand, there are several parts of outlying ground that would not be necessary. If the new site were to be adopted, it would be absolutely necessary, I should say, to buy up the greater part of that wedge of buildings; perhaps not all at first, but it would be very desirable that at some future time all should be purchased; it would not be a good national work without buying all.

8854. Would not this plan occupy by far the greater part of the Kensington Gore site exclusively for the accommodation of the gallery?—No. That (*pointing it out on the plan*) shows the gallery; the white shows a space of about 10 acres of ground, with a gallery in the centre of it 600 feet long and 300 feet wide, which would give on the picture floor nearly 10 times the accommodation there is in the present gallery.

J. Pennethorne, Esq.

8 July 1853.

8855. When you speak of the picture floor, do you propose putting the sculptures on the basement, and the pictures above them?—Yes; I have thought a great deal about that; there are several subjects to be considered when you are erecting such a building. Architectural effect is of great importance; and I do not think, according to the feeling in this country, that a building could be produced which would be satisfactory without making it two storeys high.

8856. You were not present when evidence was given this morning by a gentleman from the Museum, that it was indispensable, in order to give full effect to sculptures, that they should be in a position (with a few exceptions) where they could have a sky-light?—I have designed a plan for a two storey building which would afford every possible light for sculpture.

8857. Light from what?—Both window-light and sky-light.

8858. What would be under the pictures?—Sculpture, pictures, and libraries on schools.

8859. Then you cannot have a sky-light?—Yes, for the parts that would not be under the pictures there would be sky-lights.

8860. Mr. *Vernon.*] Do you intend that, in these courts, the building shall be one storey high, and covered over with glass?—Yes; these courts or galleries, which are very large, might be 60 feet high.

8861. So that the picture gallery will rise one storey above, and have open quadrangles?—If the sculpture galleries were lofty, the picture galleries would rise but little above them.

8862. Mr. *Labouchere.*] What is the entire height of this building?—About 80 feet.

8863. *Chairman.*] You would be prepared to adapt your building to the requirements of the sculptures?—Yes; quite sufficient space could be obtained for sculpture lighted from above, and also by side lights.

8864. Lord *W. Graham.*] That plan does not give room for future expansion?—It is very large. To erect a building of that size, including all the approaches, would cost half a million of money; or, supposing it were erected progressively, 100,000*l.* a year for five years, beginning with the centre, and then erecting first one wing and then another.

8865. *Chairman.*] What are the two side buildings to be?—I have merely placed them to show the extent of building that may be erected on the ground purchased, without interfering with the National Gallery; I merely showed the buildings, because I was aware there had been a proposition of having other buildings on the ground.

8866. Do you not see any objection arising from the likelihood of rows of houses springing up in the vicinity of the National Gallery?—No. First of all I should say, with respect to the gallery, that, to look well, the platform on which it is built ought to be raised above the level of Hyde Park; that is, eight feet above the level of the Knightsbridge Road; then the platform level of the building would be 68 feet above Trinity datum; and as the level at the south end of the ground is only 25 feet above the Trinity datum, nothing could be more imposing than the effect would be of a lofty and rich architectural façade 600 feet long, facing the south, rising from a platform nearly 40 feet above the level of the entrance gates, and approached by a succession of terraces; the distance also is so great that the ascent for carriages would be only 1 in 50.

8867. Lord *W. Graham.*] You have placed the building just about where the clay comes, have you not?—I do not think that would be of the least consequence, if the building were raised upon vaults eight feet above the road, or 12 feet above the present surface.

8868. Mr. *Labouchere.*] You have provided no approaches from either of the sides to this building; would not that be inconvenient?—There is no difficulty in making side approaches, but I do not think they would be required; in fact, such a building would be better with only one entrance.

8869. Mr. *Vernon.*] Does the rough estimate you have given include the cost of artificially raising the ground?—Yes.

8870. Is the height of 68 feet here a height gained artificially?—No, the road at this point is now 60 feet. I propose to raise it eight feet, so as to make it 68 feet.

8871. You gain that additional height of eight feet artificially?—Yes.

8872. Lord *W. Graham.*] That is above the Liverpool datum?—No; above the Trinity datum. The levels I give are the levels upon the Ordnance plan.

8873. *Chairman.*]

J. Pennethorne, Esq.

8 July 1853.

8873. *Chairman.*] With regard to the question of extending the building, there would be no difficulty in extending it if a necessity arose for so doing?—No; but I suppose a building of such dimensions would be sufficient for a century at least.

8874. Lord *Seymour.*] But additions could be made to it if required?—Yes; there would be no difficulty in building extra wings.

8875. *Chairman.*] Does this plan suppose getting any other property besides this small slip?—Yes, it supposes Eden Lodge to be purchased.

8876. Have you included any room for a library?—Yes.

8877. Have you provided accommodation for the officers of the establishment?—Yes.

8878. They would all be enabled to reside in the building?—Yes; it is impossible to go into the details of a plan without proper instructions. It is easy for me to imagine what will be necessary, but the details must be considered and determined by competent authorities. There would be six towers, each of which would be applicable to dwellings.

8879. Mr. *Labouchere.*] You have made a rough estimate of half a million?—Yes.

8880. Of what materials do you propose to construct the building?—Half a million would not build it of the materials I should like to use. It would build it of good Portland or Anston stone.

8881. What would you like to build it with?—I should like to introduce marble in parts.

8882. *Chairman.*] Have you any further observations to make?—None at present occur to me.

Veneris, 15° *die Julii*, 1853.

MEMBERS PRESENT.

Lord Seymour.	Mr. Ewart.
Mr. Baring Wall.	Mr. Hardinge.
Lord William Graham.	Mr. Monckton Milnes.
Lord Elcho.	

LORD SEYMOUR, IN THE CHAIR.

William Richard Hamilton, Esq., called in; and Examined.

W. R. Hamilton, Esq.

15 July 1853.

8883. *Chairman.*] YOU have been a Trustee of the British Museum for a long time, have you not?—For about 15 years; I became a trustee in 1838.

8884. You have always, I believe, paid particular attention to the collection of antiquities in the British Museum?—I have been more familiar with them, perhaps, than with any other objects contained in the Museum.

8885. It has been stated by Mr. Hawkins that he thinks it would be desirable, instead of having a body like the trustees, to have one director to whom all questions should be referred, which are now referred to the trustees; do you think that that would answer in such a collection as that in the British Museum?—I do not see the advantage of such arrangement. It is now the usual practice of the trustees to refer such questions to the director of each department for their own information.

8886. When you say they are now referred to the director, you mean to the head of the department?—Yes.

8887. If instead of a body of trustees there were one director placed over all the heads of the departments, do you think that that director could properly execute the duties which are now discharged by the trustees?—He must be a very extraordinary man if he could, and of very unusual talent, and very extensive knowledge. You have now the advantage of having a certain number of gentlemen who put their heads together, and decide what they consider for the best; but if you had one director of very uncommon and universal knowledge, perhaps it might be better; it might save a little time.

W. R. Hamilton, Esq.

15 July 1853.

8888. If we had such a person as Humboldt, for instance?—Perhaps; except that I do not know that Humboldt is very conversant with works of art.

8889. Do you think it is desirable for the purpose of maintaining and increasing the collection, that there should be such a body as the trustees?—Certainly.

8890. There is a deficiency of space, I believe, at the British Museum, is there not at present, for the antiquities, as well as for other departments?—Not for the antiquities that exist at present in the Museum; I am not aware of any real deficiency of space.

8891. But there would be great difficulty with the present space in increasing the collection, would there not?—There might be, as there is in every collection. Every space must be limited; and if you increase the collection beyond what you have calculated on, of course you will want more room.

8892. Do you think that the site of the British Museum is a convenient site for the preservation of the antiquities which are now deposited there?—I see no inconvenience in the site; the only objection that I should have to the Museum as a depository of antiquities, would have reference to the Elgin Marbles, which, being perfectly unique of their kind, and superior to anything existing in any part of Europe, ought to be preserved for future times; and not to be allowed to be deteriorated by the dust and soot of a London atmosphere, as they are now.

8893. Then you think, with a view of preserving the Elgin Marbles, it would be desirable that they should be removed to some site more favourable for their preservation?—I am decidedly of opinion that they ought; I do not say that, with reference to the state in which they may be 10 years hence; we must look forward to 100 or 150 years. But they do get blacker and blacker every year.

8894. Lord *Elcho.*] Have they changed colour very much since they were first brought to the Museum?—There is almost as much difference in them as there is between black and white; some parts of the frieze which have lately been brought from the country, belonging to Mr. Smith Barry, and which have been added to the collection that was there before, look like white spots.

8895. Have they ever been cleaned at all?—They are cleaned occasionally with water.

8896. Washed?—Washed.

8897. Mr. *B. Wall.*]. How often does "occasionally" mean?—I believe the time has varied; it has been regulated by circumstances and by the judgment of the head of the department; sometimes it has been done once a year, and sometimes not for two or three years; at least, so I understand.

8898. Lord *Elcho.*] Is that done by the head of the department, with the sanction of the trustees, or does he do it on his own responsibility?—I understand that the washing with *water only* is done with the sanction of the trustees.

8899. That is to say, when the head of the department thinks it requisite that the statues and sculptures should be washed, he brings that under consideration at a meeting of the trustees?—Not exactly; he is generally intrusted with authority to clean them occasionally; periodically, perhaps.

8900. He has general instructions to do what he thinks requisite?—To do what he thinks requisite; but the general impression is, that nothing but water should be used.

8901. Mr. *B. Wall.*] Is there any difference of opinion among those conversant with marbles, as to the best means of cleaning the Elgin Marbles?—The Italians will clean their marbles with soap lees occasionally, after a lapse perhaps of some years, and afterwards deluge them well with water, so that no part of the soda may remain to injure the surface; they consider that absolutely necessary.

8902. Mr. *Ewart.*] Do you consider that a good system of cleaning them?—I believe it is the only good way of cleaning marbles.

8903. Have the surfaces been at all worn by frequent cleaning?—No, I do not see that they are worn, but they are very spotty; the water itself will not take away grease.

8904. Grease accumulates upon them?—Grease in the soot.

8905. Are there many particles of grease upon them?—I cannot say there are any visible particles of grease, but there is the grease in the soot which is deposited upon the marbles, and which cannot be removed by water, and therefore must be there.

8906. Lord *Elcho.*] You have described the difference between the appearance of marbles that have been at the Museum for some time, and some fragments that

that came from the country, as being almost as great, in point of colour, as the difference between black and white; and yet you say that the marbles have been washed occasionally; are we then to understand that the soot, or dirt, or whatever it may be, is so ingrained that water does not take it off?—Exactly.

8907. Then do you believe that the colour of these marbles is permanently destroyed?—That I cannot pretend to say; but I believe not; I apprehend that a really scientific treatment of them, by experienced persons, would nearly restore the brilliancy of the white marble.

8908. Mr. *B. Wall.*] Do you know how many years it was after they first arrived in this country before they were subjected to any cleaning?—No, I cannot say.

8909. Mr. *Ewart.*] If I understand you rightly, the degree of deterioration is unequal, some parts of them being darker than others?—Yes; some of them are darker; some, that have been more exposed to soot and smoke, are darker than others which have not been so exposed.

8910. Have you ever had any chemical examination made of the dirt upon them, and its effect upon the marble?—No; I am not aware of any such examination.

8911. *Chairman.*] If you were to remove them for the sake of preserving them, you would, as I understand, in the first place, detach them from the rest of the collection in the British Museum?—I would remove them at least to the distance of Hampton Court, where a suitable and fire-proof building should be prepared for them, and I would leave in their places casts of every part of them; the greater part are already moulded, and the casts would, for several years, have a much better and more striking appearance than the original marbles have in their present state; they might also be painted from time to time, and renewed.

8912. You think, assuming it to be right to remove them at all, it would be advisable to remove them to such a distance as Hampton Court Palace, for instance?—At least.

8913. Mr. *B. Wall.*] Even if a new gallery were built for their reception near to London?—Yes; Kensington would be a very little better than where they are at present. I lived at Chelsea for several years, which is a very little further, and we had plenty of London soot there.

8914. Mr. *Ewart.*] Might not means be adopted for excluding particles of soot from coming into the gallery?—I believe not.

8915. Might you not combine ventilation with the exclusion of the external soot?—I should think not.

8916. Has it been tried?—I am not conversant with any such contrivances.

8917. Has it not been tried?—I do not think that any experiment to that effect has been tried. Yesterday I saw a large portion of marble in the Elgin Room, with fresh soot upon it, which had come down from the skylight.

8918. Lord *Elcho.*] Are they dusted daily, do you know?—They are not dusted daily.

8919. Mr. *Ewart.*] You do not know how long that soot had been accumulating?—No.

8920. Mr. *B. Wall.*] Is not the quantity of work going on at the British Museum very destructive of the objects of art that are there?—It must add very much to the dust and dirt that are collected, but perhaps not more than what is produced from the thousands of people that are admitted to the Museum.

8921. Mr. *Vernon.*] Have you observed any difference in the appearance of the marbles, since the new buildings have been in the course of erection?—No; none at all. Some little dust may have accumulated, such as the dust of the day, but not to so great an extent as to interfere at all with the colour of the marble.

8922. The great bulk of the additional building is just in their immediate vicinity, is it not?—One large room has been lately built, close to the Elgin Room, and a door opens into it.

8923. You have not found the dust proceeding from the work that has been going on in the building of that new room materially affect the marbles?—No, it has not had time.

8924. Mr. *Ewart.*] If I understand you right, the principal mischief results from the soot?—Yes, and from the moisture.

8925. Not from dust?—Not from dust.

8926. Do you mean the common moisture of the English climate?—Yes.

W. R. Hamilton, Esq.

15 July 1853.

8927. That would have the same effect upon them anywhere, would it not?—Yes; but it would not be accompanied by soot.

8928. Lord *Elcho.*] Do you consider that the room in which the Elgin Marbles are now exhibited is of such a character that full justice is done to the beauty of those sculptures, having regard to the disposition of the light and the shape of the room?—I am not in a condition to answer that question; they are very well arranged; but I think they might, perhaps, be in a better light.

8929. *Chairman.*] Do you think it desirable, for the promotion of art in this country, that the collections of sculpture should be in the same building, or closely contiguous to the pictures?—May I ask for what special purpose?

8930. For the purpose of students, or for the purpose of general study by the public of those works of art?—I should think that for the purpose of students in art, there is no ground whatever for uniting the sculpture with the paintings.

8931. You think there is no such intimate connexion between them?—There is scarcely any for the students, that is, for young persons studying art; in short, I do not consider that museums are of any use, or, at all events, they are of very little use to young students in art; they puzzle them and distract their attention much more than any advantage they give them.

8932. Mr. *Ewart.*] Did not many of the ancient painters derive great advantage from studying the antique?—They had no museums.

8933. But did they not study what was then visible of the antique statues?—Some of them did. There were very few objects of antiquity at that time for them to study. The objection that I have to museums as a means of study is, that they create distraction in the young mind. I think that putting before them some half dozen of the very best works of art, either in casts or originals, and letting them study them at home with their master, is a better mode of bringing out their talent and genius than throwing them into a great museum, where their minds are diverted by an endless variety of style and merit.

8934. Mr. *B. Wall.*] That opinion would rather lead you to prefer there being separate museums and separate schools in different parts of the metropolis than make you favourable to a system of centralisation which would bring all works of art together?—When I mentioned private or small schools, I referred to the school of the artist who is teaching his pupils.

8935. Mr. *Ewart.*] Are there not specimens of art which could not very easily be studied in the studio of the master?—Casts may be had; they are possessed by them all.

8936. Are not the originals preferable for study?—I believe not; with regard to broken fragments and others, likewise, I should presume that casts are preferable to originals, because they cast a purer and a more direct shadow, whereas in a fragment of ancient sculpture you can hardly distinguish the dirt, as it were, from the shadow.

8937. Mr. *Vernon.*] But I suppose you admit that it is desirable for a student to study the best models in every variety of attitude?—Yes; for the advanced student.

8938. Would you confine the education of a student to one single form, or one single attitude?—Certainly not.

8939. Then is it not desirable to have the best models of figures in every possible attitude, so that if the artist wished to obtain an accurate knowledge of form, he might be able to make his selection from the best models?—I should make a distinction between an artist and a student; I should think that the fewer objects the student's mind is directed to at one time the better; let him have a great variety one after the other; but I think his attention should only be directed to one, or at all events to very few objects at the same time, so that he may master them perfectly. With respect to the archæologist and the chronologist the more objects he looks at and the more comparisons he is able to make, the more correct judgment will he be able to form.

8940. Is it not your belief that it is rather a reproach to our English school of painting and drawing that our knowledge of form is not so perfect, and that our study of form in drawing is not as perfect as it is in some foreign countries?—Certainly it is; but that may be the result, and I believe it is the result, of their attention being directed to too many objects and to too many styles at once.

8941. Do you not believe that the fault may exist in a want of arrangement of the statues for the purpose of study, and that by a better arrangement of them

greater facilities might be given for students and artists to profit by them?—There would still be the same diversity, and the same variety of objects, to which his attention would be directed.

8942. Lord *W. Graham.*] If you prefer students studying in the studios of private artists, do you object to the Royal Academy?—With regard to the Royal Academy, I have no observations to make; students go to the Royal Academy to study anatomy, to draw figures from casts, and to draw from the living model; but the best information and experience are obtained by the student working under the direction of his master, and trying to make the most of his time from a small number of good and perfect objects.

8943. Lord *Elcho.*] You have said, you think it would not be desirable that too great a variety of works of art should be placed before a student at one time, but that he should study them singly in the atelier of his master; you have also said, you would not apply that remark to what you call grown artists; but would you think it desirable that for grown artists these various collections of sculptures, antiques, and paintings, should be under the same roof?—I think there is no advantage whatever in that; with respect to the purchase of pictures, and the preservation and cleaning of pictures, it is a totally different thing, and requires experience of a very different kind.

8944. Then we are to gather from your evidence that your opinion is contrary to the system which has been adopted in some foreign countries of combining these various collections in the same building?—At Munich they are in separate buildings.

8945. At Berlin they are in the same buildings?—I am not acquainted with them. At Paris they must, of course, be all in the Louvre; but that can hardly be considered as one building.

8946. With reference to the sculptures and antiquities, are you in favour of keeping the Elgin Marbles, the Lycian Marbles, the Roman, the Assyrian, and the various collections of sculptures in the same building with other antiquities, vases, coins, and bronzes?—Decidedly; they are so intimately connected with each other, that the study of one promotes a knowledge of the others; there is a complete concatenation, it may be said, amongst all the works of ancient art and manufacture.

8947. You consider that they must be viewed as an archæological, quite as much as a fine art collection?—Quite so.

8948. And you consider that if you were to separate the one from the other, the effect would be to break up a chain that you consider now to be more or less complete?—Yes; it would be very injurious, I think, to separate them.

8949. Mr. *B. Wall.*] Has the attention of the trustees been turned at all to the possibility of covering the Elgin Marbles with glass; what would be the effect of that, do you think?—The subject has been mentioned, but never seriously entertained.

8950. Do you think there would be insuperable difficulties in it?—It has never been entertained; that is, it has never been seriously considered.

8951. You have entertained the question of covering some remains with glass, have you not?—Yes. With regard to some of the Egyptian remains that were represented to us as likely to be degraded, that is, where it was likely that the stone would wear away, or where there had been ancient colouring that you would wish to preserve; the ancient Egyptian paintings from Abydos are also covered with glass.

8952. That has always been the case where there has been painting on the stone, has it not?—I think so; there may have been some tombstones from Egypt, which have been covered with glass; it was said that the stone was in a state of degradation, and was wearing out, and it was thought that they would be preserved, some by glass and some by varnish; but with respect to marbles, I do not know any instance in which they have been covered with glass.

8953. Mr. *Vernon.*] Is there at present in the British Museum any arrangement in historical sequence of the various marbles and works of sculpture, commencing with the Egyptian and coming down to the Roman and debased periods?—There is as good a chronological arrangement as circumstances and localities will admit; but it would be difficult to conduct a person through them all, strictly beginning with the most ancient and ending with the latest; that would be difficult under the present arrangement, I think; at the same time, that must be the case more or less everywhere.

W. R. Hamilton, Esq.

15 July 1853.

8954. The present circumstances of the British Museum do not admit of an arrangement by which you would be able to commence with the earliest periods of statuary of which we possess specimens, and come down in chronological order to the latest?—With very little difficulty, and with the loss of only a very few minutes, in walking from one place to another, that object is already attained.

8955. Then to a certain extent, and as far as circumstances will admit, that order has been preserved?—Yes.

8956. Lord *Elcho.*] You said, in answer to a question put to you by the Chairman in the early part of your evidence, that you did not consider any one single director could perform all the duties, or possess that general knowledge, which is possessed by the trustees as a body. Will you have the kindness to state to the Committee what is the control which the trustees, as a body, exerci s over the heads of the different departments?—I hardly feel myself capable now to give a full and precise answer to your question.

8957. Perhaps my question is too general; I will ask you, therefore, with regard to one department; I will take the department over which Mr. Hawkins presides; what is the control exercised by the trustees over that department; do they control as well as recommend the purchases, and is it the trustees that arrange the order in which the different antiquities are to be exhibited, or what is the control they exercise over Mr. Hawkins in his own department?—When any new collection of antiquities is brought into the Museum they direct the head of the department to report his opinion as to the best mode of arranging it, and if they see no objection to the proposed arrangement they agree to it.

8958. Is there, in that department, a certain sum allotted to Mr. Hawkins annually for purchases?—Yes, there is.

8959. Has Mr. Hawkins a complete discretionary power over that sum of money?—No.

8960. What is the form in which purchases are effected; how is that money disposed of?—When he wishes to make a purchase of any description, he mentions the objects and the prices, and the persons to whom they belong, and at the same time he informs the trustees of the sum of money which remains out of the credit allowed him from the beginning of the year; so that they may form an opinion as to the propriety of going to such an extent in expending that residue.

8961. Mr. Hawkins informs the trustees that such and such an object of art, either of sculpture or of bronze, or whatever it may be, has been offered to him for sale, and that he has such and such a sum remaining from the funds placed at his disposal at the commencement of the year?—Yes.

8962. Do the trustees then inspect that object themselves?—As frequently as they can; and they almost always require to see it, if it is portable, or easily producible.

8963. Is it shown to the trustees as a body, or are certain trustees, who from their tastes and habits possess a peculiar knowledge of certain departments, selected to examine the different objects according to the department to which they belong?—They are brought into the room where the trustees meet, and there they are inspected.

8964. Are they inspected generally by the trustees?—By all who are present.

8965. But there is no one trustee who is the authority in sculpture, and who sanctions the purchase of such and such an article in that department, which may be tendered, and which is recommended by Mr. Hawkins?—No more than there would be in the case of any other set of gentlemen meeting together, who would ask each other's opinion, and who, perhaps, would abide by the opinion of him whose judgment they considered the best; but there is no formal proceeding of the kind alluded to.

8966. But practically it results in the trustees abiding, in a certain measure, by the opinion of Mr. Hawkins; for I think you said you looked on him as your guide in making purchases, and in the management of his own peculiar department?—Wherever the trustees do not object.

8967. And they would likewise abide by the judgment of the trustee in whom they had the most confidence in that department?—That probably would be the result; but there is no formal understanding upon the subject.

8968. So that, practically, it is the head of the department, with the consent and concurrence of the trustees, who are guided by one or two of their body, who are most conversant with that subject?—It may be so occasionally; but, as I said before,

before, there is no formal understanding; that is, there is no formal reference to A or B. "Shall we take this, or shall we not?" His opinion may be asked, or another person's opinion may be asked.

8969. You look upon the trustees generally as the controlling body?—Certainly.

8970. Would you see any objection to a system of management in which there were, as now at the Museum, different heads of the different departments, who would be responsible for the purchases and for the arrangement, having assistants if requisite, and having over them one individual who was a sort of controlling power, who need not necessarily possess accurate knowledge of each of those departments, but who should be a man of business, and whose duty it should be to regulate the expenditure of the money; would you see any objection to such a system of control as that?—It would depend very much on the character and abilities of the individual charged with such power of control and superintendence.

8971. I am assuming that the heads of the department are men thoroughly competent, with a thorough knowledge of the department over which they preside, and that they are likewise men of judgment and of taste?—Then there would be no necessity for a general director over them, if you are to suppose that they are *perfect* masters of their own business.

8972. But supposing that the director were to be some one of the Ministers, say the Chief Commissioner of Works, who should be responsible to Parliament for the well working of the institution, whether combined with pictures or in separate institutions of sculpture and pictures; would that, in your opinion, be a good system?—I should say rather the contrary. If you had a single director, who was a Cabinet Minister, it does not necessarily follow that he would be able to form a judgment which would duly and on all points control the judgments of what might be termed the experts.

8973. Supposing any complaint were made by the public of a wrong purchase having been made in any one of the departments, that complaint might be brought before Parliament, and a question might be asked of the Minister, who then being responsible for the good management of the whole concern, and its well working, might inquire into it, might he not, and report to Parliament?—I have no knowledge of the extent of parliamentary responsibility; I do not know what it amounts to.

8974. Do you think it desirable that there should be any parliamentary responsibility in connexion with these matters of art?—I think it would be very inconvenient, as far as I have heard and read upon the subject of painting, and other things. I should say that parliamentary responsibility in matters of art would be very inconvenient.

8975. Your experience leads you to prefer the existing system at the British Museum to any other that could be devised?—To any other that has been devised.

8976. Lord *W. Graham.*] Mr. Hawkins stated that he thought opportunities of purchase had been lost owing to the difficulty, occasionally, of obtaining meetings of trustees in urgent cases?—That is very possible.

8977. If there were one head with a sum of money at his disposal there would be more power of immediate action in urgent cases?—Yes; but you would have no control over that head; or he might be absent, or ill.

8978. You would throw a great deal of responsibility on him no doubt?—But when the purchases had been made, you have no certainty that they might not be generally disapproved of.

8979. Lord *Seymour.*] Is it not the fact that when there is any opportunity of acquiring objects of antiquity, and a report is made of a sale likely to take place where such objects can be obtained, the trustees put at the disposal of Mr. Hawkins as much money as he requires for the purpose of attending the sale?—That has been very frequently the case.

8980. Therefore in those cases, by noticing beforehand that a sale is about to take place, he obtains the power of spending the money according to his own view?—According to the statement he has made to the trustees; and I believe that very few occasions have occurred in which purchases which would have been very desirable have actually been missed.

8981. Whenever he proposes to make any purchases he writes a detailed report to the trustees, giving an account of the object that he desires to acquire, and

W. R. Hamilton, Esq.

15 July 1853.

and the reason why he thinks it a desirable acquisition, does he not?—Yes; that is to say, in more or less detail.

8982. So that the trustees have before them every element for forming a good opinion?—They have every element that the head of the department has given them.

8983. You have been asked, with respect to a Cabinet Minister, or some Minister, being made responsible for the purchases in the Museum; do you think that any Minister could be expected to superintend the acquisition of the small objects that are being continually purchased for the natural history collection, for instance?—It would be quite impossible; and I might add, large or small.

8984. Is it not an advantage to the trustees, when fossils, or other objects of antiquity or curiosity are offered, to have men, such as they have at present, to whom reference can at once be made, as to whether those objects are desirable for the collection?—That has been felt very useful and essential; the trustees have often profited by the advice and information of those they have been able at once to consult.

8985. If there were not such a body as that, to whom reference could be made, it would be necessary to leave the discretion of making purchases entirely to the head of the department?—Undoubtedly. There is one instance in which a discretion is given, almost without limit, to the head of the department; that of Mr. Panizzi, who is at the head of the printed book department; but still he would not make any very large purchase without coming to the trustees.

8986. Do you mean that he would buy a whole library without coming to the trustees?—No, certainly not without consulting the trustees.

8987. The power he has you conceive it desirable he should possess, otherwise valuable works might every now and then escape?—Certainly.

Sir *Richard Westmacott*, called in; and Examined.

Sir *R. Westmacott.*

8988. *Chairman.*] YOU have been employed, have you not, by the trustees of the British Museum, in the arrangement of the marbles, for several years?—For nearly 40 years.

8989. And you have naturally looked with interest at their state and condition in the Museum?—Yes.

8990. Do you think that the Elgin Marbles, for instance, are deteriorated by the smoke of London?—I think their colour is certainly deeper than it was; we clean them twice a year, but simply with water.

8991. You consider that there is no danger in cleaning them with water?—Not the least; I should be afraid of acids.

8992. Even when they are cleaned with water that does not restore them to their former state of whiteness?—No, it will not.

8993. Therefore, as I understand, in spite of this cleaning with water twice a year, they are still growing more dark?—I would not say they are growing more dark, but they are certainly much darker than I remember them to have been when they arrived in this country.

8994. Do you think that with a view of preserving them, it would be desirable or objectionable to cover them with glass?—I think it would be very objectionable, certainly.

8995. It would prevent persons from seeing the contour?—Quite.

8996. Lord *W. Graham.*] In consequence of the reflection?—Yes; if you put any object under glass, the angles of light will always depend on the position of the earth with reference to the sun.

8997. Mr. *B. Wall.*] Would not that answer apply equally to pictures as to sculpture?—Not so much to pictures.

8998. Why less so?—Because you place the glass close to a picture.

8999. That is supposing the marble you cover to be greatly in relief?—Of course.

9000. *Chairman.*] You have always taken an interest in the progress of art in this country; do you think it desirable that the art collections in the British Museum should be removed and combined in one building with the pictures?—Undoubtedly, if it were possible, and for this reason: a painter is taught in the same way that a sculptor is; he begins upon the plaster cast, because it is more easy to draw from than the marble, the marble being of different colours from its antiquity,

antiquity, and he is taught form from the plaster cast; he then goes to the statue. Now a painter has the same education that a sculptor has in being taught form; but when he comes to be a painter, he must forget the statue; but that is not so with the sculptor.

9001. Do I understand you to say you consider it desirable that students, whether of painting or of sculpture, should equally commence to study from casts?—From casts, certainly.

9002. I understand you to say it is in your opinion desirable that a student, who is a painter, should also study from the marble as well as from the cast?—Certainly.

9003. But do you think it of so much importance that he should have frequent access to the marbles as to make it desirable to put them in the same building with the pictures?—Certainly; because it is the duty of the painter, as well as of the sculptor, to preserve form; it is very true that we have not in this country advanced so much in painting as they have on the Continent, and for this reason, that there artists have been employed, for it is employment that makes artists: you will find that we are very great in landscapes, and for the best reason in the world; there is a stronger inducement to the painter to become a landscape painter than to become a historical painter, because he will find employment in the one case when he will not in the other; it is from that cause that our deficiency in form in painting arises.

9004. Mr. *Hardinge.*] Is it not the case that a man who intends to be a figure painter must show his proficiency as a master of drawing from casts before he is allowed to paint in the Royal Academy?—Certainly; we do not allow them to paint till they have received either a silver medal, or shown that they are fully conversant with form; we never allow them to take a brush till they are fully conversant with form.

9005. Consequently it would be a great advantage to have the two branches of art combined under one roof?—Certainly. I have always considered that it would be a very desirable thing if the National Gallery of pictures and the sculpture were together.

9006. *Chairman.*] Supposing it were determined to remove the sculpture to the National Gallery of pictures, would you propose that with the sculpture the whole of the antiquity department should be removed also?—I certainly think that the bronzes belong to the sculpture.

9007. You would remove the sculpture and the bronzes?—Certainly.

9008. When you say the sculpture, does that include all the Egyptian sculpture?—Certainly.

9009. And the Nineveh sculptures?—And the Nineveh sculptures; because, supposing they were removed I then would propose (and I think the question was put to Mr. Hamilton) that there should be a regular history as it were of the art; that you should begin with the Egyptian, go on to the Assyrian, and come down to the Grecian, Roman, and the lower ages; but you cannot do that in the British Museum.

9010. You would require a much larger space?—Yes, very much larger; before I came out I made a little sketch of the interior of the ground, which I will hand in to the Committee (*producing it*).

9011. You have given us a little sketch, supposing the central quadrangle of the British Museum to be covered over for the purpose of being devoted to antiquities?—Yes.

9012. Supposing that that expense were incurred, do you think that having so covered over the central quadrangle of the Museum, that would, independently of other considerations, afford a good means for exhibiting antiquities chronologically?—No, there would not be sufficient space; you will see if you look at the plan I have produced, how small a space there is left, and the marbles from Ephesus have not yet been thought of in the Museum; they are on the ground at this moment; we have no place in which we can put them; that is the only space that is left; I have taken that from a scale; the rooms in which the antiquities are at present occupy so much of that ground, that a space of only eight feet is left from the walls of the building, and that is really too small.

9013. Are the Committee right in understanding you to say, that if the present antiquities were removed into a building occupying the whole central quadrangle of the Museum, they would nearly fill that quadrangle?—They would nearly occupy the whole space; there is another reason why I think such a thing should not

Sir *R. Westmacott.*

15 July 1853.

be adopted, which is this: you might say we will take the cellarage, but I should say, that I should think it would be very impolitic if a gentleman were to make a present to the British Museum of any antiquities, and there were not sufficient room within that space to exhibit them properly, to place those antiquities in the cellarage; I think no gentleman would be very well pleased to find his work placed in the cellars.

9014. You think it would not be an encouragement to the generosity of persons who might be disposed to give you presents?—Certainly not.

9015. Lord *W. Graham.*] The light in the cellars would be very defective, would it not?—Yes; you might judge for yourself if you were to go into the cellars of the Museum.

9016. Mr. *M. Milnes.*] Is it not the fact that large donations have been made to the Museum which, owing to the want of space, have been obliged to be deposited in the cellars and excluded from the public?—It is very true.

9017. *Chairman.*] You wish to combine together in the same building pictures, sculptures and bronzes?—Yes.

9018. Would you take the medals to the same building?—I cannot exactly say that; there are, no doubt, very historical and beautiful works among the medals, but I do not know that they are such works of art as should be combined with the others. I should say that everything, even the Egyptian antiquities, the mummies, and all the monuments of Egypt, should be brought together, with the marbles, if possible; but still that is not a thing that I should insist upon. I certainly think that sculpture and pictures should go together.

9019. Do you not see an objection to breaking up the collection, leaving the medals, vases, and other things in one building, and taking the sculpture and bronzes to another?—There is an objection to it, I confess. I think it would be desirable that everything belonging to archæology should be kept together.

9020. Mr. *M. Milnes.*] Are there not specimens of medals of the very finest order which may be regarded especially as works of art, and of which any duplicates that may exist in the British Museum might be very appropriately transferred to another building?—The Macedonian medals, and the Sicilian medals are works of art of the highest character, undoubtedly.

9021. *Chairman.*] But you would not break up the collection of medals and coins, sending part to one place, and leaving part in the Museum?—No; they must all go or none.

9022. Lord *W. Graham.*] Would you remove the Etruscan vases as well?—Certainly, because they are works of art, and very fine works too.

9023. *Chairman.*] Have you considered at all the expediency of removing the National Gallery from its present site to some other situation where room might be afforded for a combination of the collections?—Certainly.

9024. Have you considered it?—I have, and I think that not only with regard to the pictures, but even with reference to the sculpture, what with the smoke of London and the dirt from the flues, (for that is a thing that must be seriously looked into in any gallery that is built, because you may have as much dust from the flues as you have soot from smoke,) if the pictures are removed to a place, say a mile or half a mile, where you could be insured that they would not suffer from the influence of any smoke, it would be a vast advantage to them and a great advantage to sculpture.

9025. You think it would be an advantage to the pictures if they were removed to a place some distance from their present site?—Yes, some distance from their present site.

9026. Do you think that the effect of removing them would be to create an inconvenience to the persons who now go to the gallery for the purpose of study?—That is a very difficult question, for I believe that large a number of the young men who now go to the gallery for the purpose of study, live on the other side of the river, and some at Hampstead; they come to the gallery for perhaps six hours. I do not think that the walk to and from the Museum does them any harm, and I think whether they go to the Museum or to Kensington, it would make very little difference.

9027. You think that the inconvenience to persons who frequent the gallery for the purpose of study, would not be great if the gallery were removed?—Certainly not.

9028. Have you talked the matter over with any persons, so as to be able to form anything like a confident opinion on that subject?—I believe there is a general opinion that the pictures should be removed; I think that is a pretty general opinion. I have not talked with them upon the subject of the removal of the sculptures.

9029. Do you consider that a gallery, for the purpose of the arrangement of the collection of pictures, requires a much larger space, in the same manner as you have said the sculptures require a larger space?—Certainly; whatever building is adopted should be upon the principle of a telescope, so that as you required more room you should be able to extend the building without injuring the effect of it; that will be the case with respect to sculpture, I have no doubt, because we must recollect that in Asia Minor very few cities have been examined, and those few which have been examined have been very beautifully given in the work of the Dilettante Society. I do not suppose there have been half-a-dozen cities examined in Asia Minor, and I have very little doubt that if you were to examine the mounds you would find a great deal of sculpture, and so in the Grecian Islands; there you would have a chance probably of getting a higher class of art than you have in Asia Minor, because it would be most probably the Roman art that you would get in Asia Minor; but I have no doubt, from what I have seen in the British Museum (and I speak from the last 20 years), that there must be, at least, between 400 and 500 feet more added to the capacity for the collection than there was, and that will go on I hope.

9030. Lord *W. Graham.*] Do you mean square feet or in length?—In length; an impetus has scarcely been given until within the last 20 years; it is not more than 40 years, I think, since Mr. Townley's collection was purchased by the country, and you see what has been done in those 40 years; our taste has improved, our manufactures have advanced; everything has shown, as clearly as possible, the connexion of the arts with everything that is civilised.

9031. *Chairman.*] You think it has had a good effect, generally, upon the education of the people in works of art?—Certainly; just see how well the people behave who go to the British Museum; we never hear of any accident; yes, by the bye, there was one accident, but that was caused by a madman. I am very much at the British Museum, and I see there the strongest manifestation of a desire for information, and a great deal of good behaviour, from a very low class of people too.

9032. Mr. *Vernon.*] Have you ever made it an object to ascertain whereabouts many of these students reside?—I have; and I find that many of them reside at Hampstead and Highgate; some reside in the Borough, or the other side of Waterloo-bridge; perhaps their families live where it is more convenient to get house-room at a cheaper rate.

9033. Do you not believe that many of them come from a distance to live in the neighbourhood of the Museum?—No; I do not believe that.

9034. With regard to those who come as students to the British Museum, have you at all followed them up to see what the subsequent career of a great number of them is?—Several of them became students of the Academy, and then there is no knowing what they do; they are put neck and neck with other young men, and strive for premiums, and very often obtain them.

9035. You are not aware whether many students come there who desire afterwards to be employed in furnishing designs for manufacturers?—Those persons who have talent enough to become artists, pursue their ways; the others that fail are often very useful to the manufacturers.

9036. You consider that those who fail, although they may not have genius enough to reach the higher walks of art, may yet attain such an accurate knowledge of form, as to be of great use for humbler purposes?—Yes; and they are employed for many purposes. We have now about 200 students in the Academy, and if 10 out of those 200 students turn out good artists, it is as much as we can expect; but the rest would be very useful.

9037. Is it much the practice for painters to study from the ancient classic models, or is it within your knowledge that they confine themselves more to living models?—As soon as they acquire a tolerable knowledge of form, we put them to the life.

9038. Do you believe that it is the practice now with painters to commence the education of their pupils by teaching them an accurate knowledge of form, through the medium of ancient sculpture?—Certainly; they first give them a

Sir *R. Westmacott.*

15 July 1853.

knowledge of form by means of plaster casts, which is a much more easy thing to do, because there is a defined line which there is not in marble.

9039. You say they study from plaster casts; there is not the facility for doing that in the British Museum, is there?—No.

9040. Then you do not believe that the students, in their early stage, come to the British Museum at all?—I am afraid that a great many go there too early. I have thought that many a young man would have done much better if he had taken a plaster cast and worked from that.

9041. Then you would consider it highly advantageous, I presume, to have some place for the education of artists, where casts, in preference to originals, should be exhibited?—It would be a very desirable thing if there were casts taken from all the fine works of art, and if they were kept in a separate collection. I think that would be a very advantageous thing to young students.

9042. You think that, for the purpose of instruction in plastic art and in painting, that would be, practically, even more serviceable than having the statues themselves?—I think so.

9043. Mr. *B. Wall.*] You concur in opinion with the last witness, Mr. Hamilton, that casts are better for study than the original statues?—For a beginner, they are better. I should give any pupil I had a plaster cast in preference to the original. I should not allow him to go to the marbles until he had produced me a good drawing from plaster casts; he would see the shadows better in that.

9044. Is that owing to the surface of the cast being deader, and not reflecting light so much?—In marble it is dark and light, and difficult to see a form; it is like looking at nature; if you do not know where to look for the form you do not see it.

9045. Mr. *Hardinge.*] You would recommend that he should study the marble before he studied the living model, would you not?—I do not think so at all; that is not at all necessary, because I should put the plaster cast and the marble together; when he can do from the still figure, then let him go to the life.

9046. He would go at once from the plaster cast to the living model?—Yes.

9047. Mr. *Vernon.*] In the British Museum is there not very defective accommodation, at present, for students in every way?—No, I see none; the only inconvenience I see is when there are public days.

9048. With regard to women who desire to study, is there not great inconvenience on the score of delicacy?—Upon my word it is a question I have often put to myself, but never to the officers of the British Museum, where women can accommodate themselves.

9049. Is it not the case that in the British Museum there is very defective accommodation for persons who have to spend the whole of the day in the study of works of art and whose residences are a great distance off?—There must be conveniences of the kind to which you allude, but I cannot answer the question. I know myself, being at the British Museum so often, that there are conveniences, but I cannot tell how the public are accommodated.

9050. Mr. *M. Milnes.*] Have you observed any change of feeling among the visitors at the British Museum with regard to the Elgin Marbles during the time you have been there?—No.

9051. Are the Elgin marbles as much the subject of interest and admiration now as they were in former years?—With all persons conversant with art they must be and will be always, because they are the finest things in the world; we shall never see anything like them again.

9052. Do you think the liberal introduction into the British Museum of works of earlier and oriental art, has had any effect upon the interest felt by the public with regard to the Elgin Marbles?—None whatever, I should say.

9053. Do you think there is no fear that by introducing freely into the institution objects of more occasional and peculiar interest, such for instance as the sculptures from Nineveh, may deteriorate the public taste, and less incline them than they otherwise would be to study works of great antiquity and great art?—I think it impossible that any artist can look at the Nineveh Marbles as works for study, for such they certainly are not; they are works of prescriptive art, like works of Egyptian art. No man would think of studying Egyptian art. The Nineveh Marbles are very curious, and it is very desirable to possess them, but I look upon it that the value of the Nineveh Marbles will be the history that their

their inscriptions, if ever they are translated, will produce; because, if we had one-tenth part of what we have of Nineveh art, it would be quite enough as specimens of the arts of the Chaldeans, for it is very bad art. In fact it is as I have said with respect to Egyptian art, an art which the hierarchy insisted on, and no man dare depart from; that is clear; but as monuments of a period eight hundred years before Christ, they are very curious things.

9054. Do you think that the great interest works of that kind excite, those works being much more objects of curiosity than of art, exercises an injurious effect upon the public mind in matters of art?—I do not think they influence the public mind at all with respect to art.

9055. Do you think that as many persons attend and take an interest in the Elgin Marbles, when they are side by side with the Nineveh sculptures, as would take an interest in them if the Elgin Marbles were alone?—No; persons would look at the Nineveh Marbles and be thinking of their Bible at the time they were looking at them; they would consider them as very curious monuments of an age they feel highly interested in; but the interest in the Elgin Marbles arises from a distinct cause; from their excellence as works of art.

9056. Have not cases occurred in the intellectual history of many nations, in which the very free introduction of more barbarous specimens, such, for instance, as the Chinese, have had a very injurious effect upon taste in general?—I certainly think that the less people, as artists, look at objects of that kind the better.

9057. Do you not think that giving so very prominent a place, and drawing public attention so much to works of that character, will to a certain extent draw them away from models of pure beauty?—I have said I think we have quite sufficient specimens of Nineveh art.

9058. In the removal of such specimens to a building devoted to the purposes of art, would you think it quite sufficient if a few of the finer specimens were placed in such a building, and that others, which are merely of an archæological interest, were reserved for a building devoted to archæological purposes?—No; I think as they run, we should hope chronologically, from the plans which Mr. Layard took of the building, they should not be disturbed. What they are it is impossible to say, because we know nothing of the inscriptions yet; what has been done amounts to very little indeed. I think it would be dangerous to break the connexion; I should not think of doing that. We have them from one palace nearly perfect; and if ever men of eastern literature should be able to accomplish their object, we may probably find that they present something very interesting to us.

9059. You would therefore not fear that any corruption of the public taste would ensue from the juxtaposition of such works as the Elgin Marbles and such works as the sculptures from Nineveh?—No, I think not; I do not think that any consideration of the sculptures of Nineveh would affect a man who looked at the Elgin Marbles.

9060. Mr. *Hardinge.*] Do you think, assuming that a school of design could be combined with a National Gallery of painting and sculpture, that students of that school of design would derive great benefit from the contemplation of works of the old masters, or otherwise?—That is so large a question that I do not feel capable of considering it; because, whether the principle which is adopted in the school of design is right or wrong, I do not offer an opinion; it is in the hands of other people. My notion is, that there is but one way to acquire excellence, and that is by studying the antique; whether the student is to be an ornamental carver, or whatever part of art or manufacture he is to take to, he should be well grounded in the first principles of art; then let him go to what he pleases, he will always do it better.

9061. Have you usually found that those students who have studied from the casts in the British Museum have turned out well when they have been transferred to the schools of design?—Always better; they will always make more effective artists.

9062. *Chairman.*] You have stated that, in your opinion, it is desirable to combine with the National Gallery the collection of sculpture and antiquities: do you think it desirable to combine a collection of prints in the same building?—I think prints and pictures should be together, undoubtedly.

9063. I do not speak of original drawings, but of prints?—I think that prints

Sir *R. Westmacott.*

15 July 1853.

belong to the painter; he is always referring to prints, and so does a sculptor, very often.

9064. You think, then, that the collection of prints should also be removed?—I think the print-room ought to go with it; I think they belong to art.

9065. With it also there must go a considerable library, for the purposes of study; all books connected with art must also be combined in such a building, for the purpose of reference on the part of students, must they not?—It would be a very desirable thing if there were a small library; I should think that 300 *l.* or 400 *l.* or 500 *l.* would be quite sufficient for the purpose; that would obtain all the works that artists could require.

9066. If you remove, for instance, all the coins, would it not be necessary to have there also such books as persons coming to study those coins would wish to refer to?—Certainly, the books belonging to the coins.

9067. That would add also to the library considerably, would it not?—Yes; but I conceive that very few books are necessary for the artist.

9068. You think a library, for the purposes of art, need not be very large;—No; I should say 500 or 600 volumes is as much as they can require.

9069. Mr. *Vernon.*] Do I understand you to say, that in your opinion, for students in art, it is not very material whether the collection of sculpture is in one part of London, or in another?—My object is to get it out of London.

9070. I wish to confine you strictly to this one point: taking into consideration the places of abode, as far as you are cognizant of them, of the younger students in art, do you consider that it is not very material to them, whether the sculptures are in Trafalgar-square, the British Museum, Hyde Park, or Kensington Gardens?—I think it is a very material thing that they should be removed to Kensington Gardens, or to a distance, in fact.

9071. I merely wish to know as to the convenience of younger students in art?—I have said, I think, in answer to a question from the Chairman, that I cannot conceive that an artist can complain much of having to go as far as Kensington.

9072. Do you believe that, practically taking into consideration, as I have said before, their places of abode, as far as you are cognisant of them, they will, as a body, have to go farther, or be put to greater inconvenience by going to Kensington, than they would by going to the British Museum?—No, I think not; and if they do, I take this into consideration, you may consider the convenience of artists, but you must consider also whether you will have any pictures, or any statues fit to look at; if you do not remove them you will not have a picture worth looking at shortly.

9073. *Chairman.*] You think the pictures are so injured by the smoke and dirt, in their present site, that they must be removed?—They must be removed; because in addition to the common soot of London there are two very powerful engines for wash-houses, or some other purpose, in the neighbourhood, pouring volumes of smoke down upon them.

9074. Mr. *B. Wall.*] Mr. Hamilton stated in his evidence that he thought it would be of no use to remove the Elgin Marbles, if they are removed to any distance short of Hampton Court; is that your opinion?—No; Hampton Court would be a long way off.

9075. How far would you think it necessary to remove them, in order to secure them from the smoke and dirt of London 50 years hence?—That is a question I can hardly answer. I do not know what they may do round London 50 years hence. If you can secure a place removed from houses, and with a sufficient area to keep off the smoke of London, you will do well.

9076. Should you be satisfied with the sculpture and pictures being removed to Kensington Gore?—Indeed I should; it is so much better than the places they are now in, that I think it is a very desirable thing. I could desire that they were farther off still; but there are considerations with regard to the young men who are to study these things; you must not take them too far from them.

William Hookham Carpenter, Esq., called in; and Examined.

W. H. Carpenter, Esq.

9077. HOW long have you been at the British Museum?—I have been there eight years.

9078. During that time have you been always in one department?—Entirely so.

9079. The department of prints and drawings?—Yes.

9080. There

9080. There have been great additions made to the department of prints and drawings, have there not, since you have been at the Museum?—Very considerable indeed.

9081. Are you acquainted with the collections of prints and drawings in any other country?—I have seen those of Vienna, Munich, Berlin, Dresden, Amsterdam, and a portion of those in Paris.

9082. Having seen those in other great capitals of Europe, what do you think of the collection at the British Museum as compared with foreign collections?—In point of extent it is very much below that of other collections, but as regards rarities and the more desirable prints, I think we have them in the British Museum; our Rembrandts are the finest in Europe, on the whole, I think; and our Albert Durers, and Lucas Van Leydens also.

9083. You are much inconvenienced, are you not, by want of space in which to exhibit your prints?—We have no opportunity of exhibiting them except in a very small room, which is about 18 feet long.

9084. Therefore the public do not derive the advantage they ought to derive from that collection of prints?—Certainly not; there was a room built for the purpose of exhibiting the Drawings, but its proximity to the Egyptian Gallery was such, as it ran laterally with it, the trustees thought it would be far more applicable for the purpose of exhibiting the Nineveh sculptures, and therefore it was given up for that purpose.

9085. Therefore the gallery that was intended for the exhibition of prints was devoted to the Nineveh sculptures?—Exactly.

9086. And no other gallery has been substituted as yet?—Not as yet; Mr. Smirke proposed building a room beyond the room now occupied.

9087. What sort of space do you think you would require to exhibit, advantageously for the public, a large collection of prints such as you possess?—I think a room of the same proportions as the one now occupied as the print-room would answer every purpose.

9088. Can you state to the Committee what the size of that room would be?—This (*producing a sketch*) is a tracing of Mr. Smirke's proposed room; the present Print room is 51 feet 8 inches by 30 feet, and the room proposed to be built by Mr. Smirke, to be erected between the present room and the Elgin Gallery, is 47 feet by 37, which is four feet eight shorter, but seven feet wider.

9089. Are the Committee to understand that a room 50 feet long by 30 feet wide, or thereabouts, would be sufficient, in your belief, for the proper exhibition of the prints?—I think there is no question about it, because we could exhibit drawings on desks or tables in the area of the room, and the prints on the walls or on screens coming from the windows.

9090. Do many persons come to your department anxious to see certain prints?—There are a great many; I think we have from 4,000 to 5,000 in the course of the year.

9091. When you spoke of screens for exhibiting the prints, did you mean screens covered with glass, so that the prints would be under glass?—We should have them all framed; that must be done in order to preserve them.

9092. Do you mean that they would be framed, each print being in a separate frame, or that they would be put, for a time, into frames, and then those prints would be removed and others put in?—I think that a collection of frames should be made of a particular size; and in regard to the earlier masters, the prints being small, five or six could be put on a mount and into one frame.

9093. Having once put a print into a frame, it would remain in it for ever?—No; the prints would be changed every three or four years, as they are in Paris.

9094. Have you seen any place abroad where the prints are exhibited to the public in a manner which you think it would be desirable to copy?—I think the room at Berlin is convenient, and very well adapted to the purpose; at the same time there are very few persons admitted into that room, and, therefore, they are able to have screens coming forward between the windows; and the prints are hung on each side of the windows against those screens, and are exhibited to great advantage, the light being so fine,

9095. What sized room is it at Berlin; is it more than 50 feet by 30 feet?—Certainly.

9096. Considerably larger than your room?—Yes.

9097. Lord *W. Graham.*] And how often do they change the engravings there?—That I do not know.

W. H. Carpenter, Esq.

15 July 1853.

9098. Mr. *B. Wall.*] If the prints were suspended from the wall, you would not be able to have them high up?—No; it would be a very bad thing to have them much above the eye. I think the top of the frame should not be higher than 10 feet from the ground.

9099. Have you made any calculation as to the number you could exhibit at once in a room of that size, exhibiting none above 10 feet high?—I think we might exhibit 500; it is not desirable to have too many. The plan would be to arrange them in chronological order, placing the Italian and German schools in juxtaposition, one row above the other, so that you might judge of the progress of each school.

9100. What is the number of prints altogether?—We have about 130,000 prints.

9101. And how many drawings?—We have not more than from 6,000 to 6,500; and many of these are not of much importance.

9102. Mr. *M. Milnes.*] Are there not large drawings and cartoons, which might be placed above the eye-line?—We do not possess anything of that character; I think that as to some of the larger mezzo-tints, where there is great breadth of effect, they might be exhibited perhaps higher.

9103. Has your collection been largely augmented of late?—Very considerably indeed; since my appointment in 1845, we have increased the collection upwards of 33,000.

9104. Have those generally been single prints or drawings; or have you bought them in large collections?—We have bought them in masses occasionally, from 300 to 400 or 500.

9105. Mr. *B. Wall.*] More prints than drawings?—Yes; the fact is we have a sufficient number of drawings of a particular character; all we want now is to obtain some of the very choicest specimens; we have nothing by Raphael, for instance, which shows his power of composition. I think on one sheet there are studies of half a dozen children, but they are evidently from the same model; and we have studies of two figures from his Parnassus, but they are not of a character to give you an idea of his power of composition.

9106. In the comparison you made between foreign galleries and the British Museum your observations applied, did they not, to prints exclusively, and not to drawings?—Entirely.

9107. Mr. *Vernon.*] What are the class of prints which are chiefly inquired for?—We have them of all characters, and all descriptions.

9108. You do not see a greater tendency to search in the departments of portraits and history?—No, I think not. When artists are painting historical subjects, they will come to look for the best portraits of individuals.

9109. They come to get the likenesses of particular persons, and also their costumes, I suppose?—Yes.

9110. You do not see a greater tendency to inquire for prints of that description than for engravings from pictures of various degrees of excellence in other branches of art?—No, I should say not, because the volumes containing the works of the Italian masters are in constant requisition.

9111. Do you think that the greater number of visitors come from curiosity, and strictly as amateurs, or do the majority of them come with some artistic object?—The great mass of them, I should say, are students.

9112. Do you observe that each student confines himself to some particular department, or does he look at the collection generally as a mere amateur would?—That would depend entirely on whether he had one sole object; all those who come to study a school would like, perhaps, to look through the whole of the prints of Raphael and the Roman school; then there are others who come for the special purpose of collecting materials for a picture that they are painting.

9113. Lord *W. Graham.*] Are they allowed to make sketches from the prints?—Yes.

9114. Mr. *M. Milnes.*] What means do you use to enlarge or increase your collections?—I go to the different printsellers, and look over their portfolios, and whenever they have anything very curious, it is brought to the Museum.

9115. Do you, then, submit those works to the trustees?—I then report them to the trustees.

9116. And are they submitted to the inspection of the trustees?—In some instances they are.

9117. Have

9117. Have you found the trustees willing to increase the collection generally?—They are most willing, and anxious, I should say.

9118. Are you aware that there was a remarkable collection of the works of Parmegiano, which belonged to Mr. Smith, and which the trustees refused to purchase?—Yes, I am perfectly aware of that.

9119. Was that since you have been there?—It was offered, in the first instance, when it was in the possession of Mr. Ford, which was prior to my appointment, and it was afterwards offered by the Messrs. Smiths, of Lisle-street.

9120. Was that acquisition made?—No; because we had a great number of those prints in the collection already; and as duplicates are not disposed of, it would have been an injudicious thing to have purchased the whole.

9121. The proprietors would not break up the collection, but wished to sell it all together?—Yes, all together.

9122. Mr. *B. Wall.*] Did it ultimately go out of the country?—No, it was broken up.

9123. Mr. *M. Milnes.*] When it was broken up did you acquire any part of it in your own collection?—We acquired several of them; as much as we could afford to buy at the time.

9124. You do not think it would have been a discreet purchase to have bought the whole?—No; having already, as I have before mentioned, a great portion of them; we had many of the rarer prints.

9125. And by not purchasing the whole, but by waiting, you were enabled afterwards to procure several prints that you wanted?—Yes.

9126. Mr. *Vernon.*] Would you not, as a general rule, approve of the principle of purchasing valuable collections of prints, even although you had some of them before, with a view of selling or disposing of those of which you had duplicates?—We cannot do it.

9127. Do you think that the prints suffer much from being looked over in portfolios?—They must inevitably suffer to a certain extent; but considering that many of them have been in use some 40 or 50 years, I think they are in a very good state.

9128. Do you or not consider, that with regard to valuable specimens of engravings of different epochs, they would be less liable to injury, as well as more available to the public, by being in frames rather than in portfolios?—There is no doubt that the accommodation to the public would be considerable, but the expenditure of money, and the space required, would be enormous.

9129. I speak also with reference to the safety of the prints?—No doubt of it.

9130. Lord *W. Graham.*] Have you ever had any engravings cleaned?—We have them cleaned occasionally.

9131. What process do you use?—I have cleaned several myself; I pour hot water over them, and leave them in soak for a certain time.

9132. Mr. *B. Wall.*] Using no acid?—Using no acid.

9133. Do you not sometimes clean them by means of acid, when you find yellow spots upon them from mildew?—The yellow spots will come out.

9134. With acid?—No, with hot water; I have found that the case with many.

9135. Do not the spots return after the lapse of a certain time?—I have not found that the case hitherto; my experience is only that of about seven years, and therefore I do not know exactly what may be the result eventually; but I should say from the lapse of that time that it is not likely.

9136. Lord *W. Graham.*] How do you dry them again after they have been put in boiling water?—We lay them between sheets of blotting paper; we lay two prints on a sheet of a blotting paper, and then another sheet of blotting paper upon that.

9137. Without applying any artificial heat?—Yes; and then they are put into presses.

9138. Mr. *Hardinge.*] I presume that you would think it desirable to have the drawings of the old masters framed so as to make them more available to the students?—Yes; not only for that purpose, but it is a great preservation to the drawings themselves; at the same time I should say that all drawings that have colour upon them, even sepia or bistre, will suffer from exposure to light.

9139. You probably have seen the Taylor Gallery at Oxford?—Yes.

W. H. Carpenter, Esq.

15 July 1853.

9140. Are you aware whether the prints have suffered from being exposed there?—I am not aware; Dr. Wellesley is in town, and might be asked the question.

9141. Do students refer frequently to those drawings?—Constantly; they are looked over every day almost.

9142. And you think it would be a great advantage if they were made still more available than they are at present?—No doubt of it.

9143. *Chairman.*] Do you think it would be desirable that the collection of prints and drawings should be combined with the national collection of pictures?—It certainly would be important to place all these things, if possible, in juxtaposition; but at the same time the library is so indispensable to the visitors to the print room, that the loss of it would be felt immensely; because, where I cannot assist the student in what he is seeking, from what is contained in the room, I can generally direct him to certain books in the library, from my knowledge of books connected with prints and costume.

9144. Then there is a large portion of books that ought not to be separated from the collection of prints, as I understand you?—It would be very desirable that the prints should go, if possible, with the library; that would be particularly desirable to the student in art, because when he comes for costume or portraiture, he can be referred to certain books, and the books are almost as useful to him as the prints, as he finds frequently in the chronicles descriptions of dresses.

9145. Do you think it is more desirable to keep the prints in connexion with the library, than to combine the prints with the collection of pictures?—I do, as far as my experience goes.

9146. Judging from the persons who come to study in your department?—Quite so; and the central position of the British Museum is particularly desirable to the student; if you look to its position on the map of London, you will find that it takes in all the thicker inhabited portions of London at nearly equal distances, for it is the same distance from the British Museum in one direction to Bishopsgate-street, as it is in another to the Obelisk, and in another direction towards the Penitentiary at Millbank, and the division of the roads from Brompton to Kensington, and away up to St. John's Wood Chapel; it is as near the centre of those points as possible.

9147. Do you know practically, from those who come to your department, whether the majority of them live more in one part of the town than another, or whether they come equally from all the different quarters you have indicated?—I should say the majority of them live within the radius of that circle.

9148. Do you know whether they are more to one side of it than another; is there any particular part of the town to which you would say the persons who come to your department chiefly belong?—I should say, that the line extending from the British Museum towards Fitzroy-square, and up to Saint John's Wood, is the part where the larger mass of the parties live.

9149. Mr. *B. Wall.*] Do you find that the prints suffer from dirt and dust very much?—I think not; they are kept in books, and those books are not standing up, but are placed horizontally on the shelves, so that the dust does not find its way between the leaves.

9150. Mr. *M. Milnes.*] And all those that would be exhibited would be under glass?—Yes.

9151. Mr. *B. Wall.*] Will you have the kindness to state to the Committee a little more fully, the plan you would propose adopting with the prints, supposing you had space enough?—I think that if we had slight common frames, varying from three to four or five feet in length, and about three feet in height, that would be sufficient to answer the purpose, because you will observe that the more important specimens are small prints; those by Rembrandt, and the early German masters, and also the earlier Italian masters, are small.

9152. Those would be put under glass?—Yes.

9153. Shiftable at pleasure?—Shiftable at pleasure.

9154. One day one school would be exhibited, and another day another?—No; I think if they were changed every 18 months or two years, that would be quite often enough.

9155. Then the choice would rest with you, and you would choose those you thought the public would most appreciate?—Those that would best illustrate the history of art; it would be a chronological series of the German, Italian, and other

other schools placed in juxtaposition, beginning with the earliest, and coming down to the latest.

9156. Mr. *Hardinge.*] Have you at all calculated how many frames you would require?—Not a great many.

9157. Lord *W. Graham.*] You have stated that those engravings ought to go with the library rather than with the pictures?—As I mentioned, I think it would be more convenient to the student in art.

9158. Because he would be able to refer to the costumes in the library?—He would be able to consult other authorities connected with his picture.

9159. But the costumes would only form a very small portion of what an artist would come to study; he would come to study the engravings for the purpose of seeing the arrangement, composition, expression of faces, and so on?—Yes, no doubt; I have not the engravings of works in foreign galleries in my department, and they make a very important feature in a collection of engravings, because there are no prints engraved from many important pictures, except those found in Galleries, or what are termed Cabinets, and those are not kept in the print-room, but are preserved in their integrity in the library; I think it would be very well to have them likewise in the print-room, cutting them up and arranging them in schools.

9160. They are kept bound up in the library?—They are kept bound up in the library, so that if an artist wishes to find the works of Titian or Raphael, he would have to look through these different galleries; whereas, if they were taken to pieces, and the works of each master were put together, he would see at once, with very little trouble, the representations of the pictures.

9161. Mr. *M. Milnes.*] In the foreign collections you have visited, have the prints been usually attached to libraries, or to establishments devoted to the purposes of art?—In Paris they are attached to the library.

9162. *Chairman.*] At Berlin they are attached to the Museum?—Yes.

9163. Do you know how they are placed at Munich?—There they are attached to the Museum likewise.

9164. Mr. *M. Milnes.*] How are they at Vienna?—At Vienna they are attached to the library; in fact, when you look at the prints in the library at Vienna, you are in the same room with the readers.

9165. Lord *W. Graham.*] At Munich the gallery for engravings is under the gallery for pictures, is it not?—Yes.

9166. Mr. *M. Milnes.*] Supposing there were a very large reading-room established in the British Museum, do you think it would be advisable that it should be hung round wholly, or partially, with prints?—I think not, because the parties who went there to read would be annoyed and disturbed by individuals moving about to look at the prints.

9167. Supposing the sculpture were removed from the British Museum, you would then have plenty of room, would you not, for exhibiting any amount of prints you might require?—Quite so.

9168. Mr. *B. Wall.*] With a view to the preservation of the prints, do you think it is best for them to be kept in portfolios, or placed in frames?—I confess that if I had a collection myself I should keep the prints in portfolios; I think they are always liable in a degree, however carefully they are placed in the frames, to have the spaces open, the paste may give way, or something of that kind, and unless they are looked after they may suffer in a degree.

9169. Referring to an answer which you gave just now, with regard to washing prints, an experienced eye can always tell, can it not, whether a print has been washed or not?—Certainly not, where only water has been used. I think that where acid has been used it affects the colour of the ink in a degree; it is unsafe even to put the earlier Italian prints in water, for I understand in some instances portions of the ink have been dislodged from the surface of the paper, in impressions of the prints of Marc Antonio, which has given a poverty to the character of the print afterwards.

9170. *Chairman.*] with regard to making purchases of prints, are you informed at all of any prints that are to be obtained on the Continent?—I have catalogues sent me.

9171. Of all the sales?—Of a great many.

9172. So that you are on the watch for prints that are desirable for your collection, and that are likely to come into the market?—Quite so; we purchased at the beginning of last year some very curious prints at Leipsic.

W. H. Carpenter, Esq.

15 July 1853.

9173. Have you found practically any inconvenience in referring to the trustees a report before you make purchases?—Never.

9174. If you hear of prints does it ever occur that you buy them on your own responsibility, not having time to refer to the trustees?—That has not been my practice; but I think I could so entirely calculate upon the trustees taking my recommendation in a matter of that kind, that I should venture to do it if we were likely to lose the object.

9175. But practically, I understand you to say you have not lost any opportunity of purchasing prints by waiting to refer to the trustees?—No, I should say not within my recollection.

9176. Mr. *M. Milnes.*] Have you been in the habit of buying any prints from abroad?—Occasionally. When I was at Frankfort I put down the name of the trustees; that is an instance in which I did venture to put down the name of the British Museum without the sanction of the trustees; it was for a proof of Schäffer's engraving of the Madonna della Seddia.

9177. Do you ever purchase prints from foreign catalogues that you have not seen yourself?—I should not like to do that, because these things are often most skilfully repaired; in fact a few years ago Mr. Colnaghi mentioned a print to me which I told him I would take, provided it was really the print represented; when it was sent to this country it turned out to be a fictitious proof; the back ground had been stopped out.

9178. Is there much deception in prints?—Most serious deception.

9179. Lord *W. Graham.*] Have you been yourself abroad to inspect engravings before they have been purchased?—No; in the instance of the Otto collection, I was at Leipsic, fortunately, in the autumn of the year before they came to sale, therefore I had seen them.

9180. Those are the only purchases that have been made abroad since you have been connected with the British Museum?—I had seen some of the Baron Verstolk's drawings before I purchased them, because I happened to be in Holland at the time; but I never went on purpose to see those things.

9181. Mr. *M. Milnes.*] Have you ever bought on commission?—I have sent commissions to parties I could depend upon; for instance, Mr. Smith was a person I could fully rely upon, and had I not been satisfied with any purchase he made, he would have taken it himself; I could rely also on the knowledge and judgment of Mr. Tiffin.

9182. *Chairman.*] Have prints of the works of the old masters risen in price of late years?—Most considerably; I think that the collection of Mr. Sheepshanks, purchased for 5,000 *l.* in 1836, if they were brought to sale now, the etchings and drawings would fetch 10,000 *l.*

9183. Lord *W. Graham.*] To what do you attribute that rise in price?—People feel much more interest in these things now than they did formerly, they are better understood, and there are more purchasers for them.

9184. More people are making collections; is that so?—Yes.

Mr. *Francis Samuel Hayes*, called in; and Examined.

Mr. *F. S. Hayes.*

9185. *Chairman.*] HAVE you been in the habit of visiting the National Gallery for the purpose of studying?—Yes, for many years.

9186. In the two days of the week on which the gallery is devoted to the purposes of study?—Yes.

9187. Do you find its situation convenient for that purpose?—I am living at Brompton at present.

9188. Then as far as you are concerned, if the gallery were removed to Kensington Gore it would be about the same distance from you?—Yes; but I have no doubt I shall not always remain where I am living now.

9189. Are you aware generally, what the feeling of the students in the gallery is as to the situation of the gallery with reference to their convenience?—I think the general opinion is that they would rather it should remain where it is.

9190. Have you considered at all whether, if the gallery had more room, and if one large room were set apart and always kept for students, so that they might go every day in the week, and have a certain number of pictures put for them to copy, that would be more convenient than the present arrangement of two days in the week, with the whole gallery to copy from?—Much more so; and it is not only

only that we are limited to two days in the week, but we can only come from quarter to quarter; we must miss a quarter.

9191. Will you explain to the Committee how that is?—For instance, we are in for a quarter; then in the next quarter another 50 come in, and then we come in again, so that we have not sufficient time for study; we lose six months in the year.

9192. That arrangement, you think, is very unfavourable to the progress of students?—Very much so.

9193. If there were sufficient space, and if a good room were set apart for students, to which they could go constantly, and to which the public would not be generally admitted, that, you think, would be more convenient than the present system?—Much more convenient; but I think that if the rooms were large it would not matter about the public being admitted as they are in Paris. At the Louvre the public are admitted, and the students go there nearly every day in the week.

6194. You think that if the rooms were large enough the public might be much more freely admitted even while students were copying the pictures?—Exactly.

9195. For the purposes of study, have you considered at all whether it would be desirable that the sculpture should be placed in the same building with the pictures?—I think that it would be very desirable.

9196. Did you at all, yourself, study from the casts of statues for the sake of learning form?—Yes; and I studied at the British Museum for two years before I got into the Royal Academy.

9197. There students are admitted three days in the week, are they not?—You can go there every day in the week, except Saturday.

9198. Did you find that more convenient for the purposes of study than the system adopted at the National Gallery?—Yes, it is much more convenient; but at the time I studied there, the Museum was very small; it was before the rebuilding; it was dreadfully crowded, and we were much inconvenienced on public days, but I believe now that it is not so.

9199. I understand you to say, you think it desirable that the sculptures and the pictures should be combined in one building?—I think so.

9200. Do you think, you having studied both at the British Museum and in the National Gallery, that you would have derived any advantage from their being placed in one building?—I think so.

9201. You think that would be preferable to your having to go from one to the other?—Yes.

9202. Mr. *Vernon.*] Is it not an entirely different course of study where you are learning form from statues, and where you are learning colouring and harmony and perspective from pictures?—But you would always like to get form with it.

9203. Is not the study of form, generally speaking, a necessary preliminary in art?—Yes; it is the ground-work, one may say.

9204. Practically speaking, would you not necessarily, in order to become a good artist, go through, in the first place, a study of form and form alone?—Yes; before you touch colour.

9205. Would there be any practical convenience, then, in being able to go from one room to another to look at a picture first, and then to go back and look at a statue?—I think so, especially for an artist who is painting figure subjects.

9206. I do not quite understand the present system in the National Gallery; you say you are forced to go away for a quarter, do you not?—Yes.

9207. Why are you forced to go away for a quarter?—They say it is on account of the want of room; they cannot admit more than 50 at a time; but supposing in the quarter you are out, there are only 25 attending, still they will not let you in.

9208. They keep to a routine regulation, and do not let you in even though there is room?—Even though there is room.

9209. You say that 50 is the number admitted?—Yes; I believe there are 50 from the National Gallery, and 25 from the Royal Academy; that is 75 students altogether.

9210. Do you consider that, in the present National Gallery, there is convenient room for a greater number than 75 students to be copying at the same time?—

Mr. F. S. Hayes.

15 July 1853.

time?—Though they are admitted, they do not all come, and that throws others out.

9211. Practically speaking, is there any inconvenient crowding at present from students copying?—I have never witnessed it.

9212. Does the difficulty arise from there being a particular preference given to certain pictures which students are more fond of copying?—Certainly, some pictures are more copied than others.

9213. Is it not the case that at present English students have a preference to certain pictures, and are not in the habit of copying generally from the pictures in the National Gallery?—Yes, that is so.

9214. Assuming that all the pictures were considered by the students worth copying, would there not be ample room for a much larger number than 75 students to copy in the National Gallery?—I think there would be; because out of the 75 students they do not all come; therefore there is space for more students, and it is only keeping other students out.

9215. But supposing they all come, would there still be room for a greater number?—I should think there would.

9216. Without inconvenient crowding?—Without inconvenience.

9217. Do you find you are thrown back in your course of study by being absent for three months in the year from the National Gallery, although you are admitted there as a student?—Yes.

9218. Mr. *B. Wall.*] Is there any favour shown to particular students?—None whatever.

9219. Mr. *Hardinge.*] They are obliged to produce some test of proficiency, are they not?—Yes.

9220. And that test is a drawing from the cast, is it not, if they propose to copy historical pictures or portraits?—No; they are required to send in a landscape or a figure subject, or a portrait painted in oil.

9221. Lord *W. Graham.*] Could you copy any picture in the National Gallery within three months?—Yes; I could copy some pictures in three months, and others I could not copy within nine months.

9222. Must it necessarily be a painting in oil that is sent in?—It must be a painting in oil; you may send in a drawing if you only want to draw.

9223. Do the greater proportion of students who go there to study make studies from the pictures, or do they copy pictures for sale?—A great many copy them from orders, and a great many make sketches of pictures.

9224. Mr. *Vernon.*] Do I understand you to say that if a student has obtained admission to work in the National Gallery, by exhibiting a finished drawing, he is not allowed in the National Gallery to paint in oils?—No, not unless he has sent a picture in.

9225. He must exhibit, in the first place, a test of qualification in the particular department of art which he proposes to exercise in the National Gallery?—Yes.

9226. But supposing he produces a specimen of oil painting, I presume he is allowed to draw in the National Gallery?—Yes.

9227. Mr. *M. Milnes.*] Are the 25 additional students of the Royal Academy obliged to leave at the end of the quarter in the same way as the others?—No; they go from six months to six months.

9228. Is that considered much of a privilege?—It is a privilege for the Royal Academy students, because they can come in for nine consecutive months in the year; they come in for the three months, and then for the six months.

9229. Mr. *Hardinge.*] Would there be any inconvenience in the public being admitted while the students are painting or drawing even if the rooms were spacious?—I do not think there would if the rooms were very large.

9230. You do not think there would be any complaint on that head on the part of the students?—It is so in Paris, but the pictures must be arranged very differently from what they are now, for they touch each other

9231. Mr. *M. Milnes.*] Is the present close arrangement of the pictures inconvenient to the students?—Very much so, for there may be three or four copying one picture, and three or four copying another picture close by.

9232. Have you great difficulty in arranging your easels, and so on?—Yes.

9233. Lord *W. Graham.*] If a particular picture were hung up by itself in a separate room more people might copy from it?—Yes.

9234. Mr. *Vernon.*] The admission of intelligent persons would be rather agreeable

Mr. *F. S. Hayes.*

15 July 1853.

greeable to the students than otherwise, perhaps, as they might be inclined to encourage a rising artist?—I do not know about that.

9235. Mr. *Hardinge.*] Do you think that the proposal of covering the pictures with glass would interfere prejudicially or otherwise with the convenience of the students?—I think it would be a great objection.

9236. *Chairman.*] There are some covered with glass at present?—Several.

9237. Are they ever copied?—Yes.

9238. Their being covered with glass, then, does not prevent their being opied?—No.

9239. But you think it is a great inconvenience?—It is a great inconenience; you see the reflection in the glass of whatever is on the other side of he room.

9240. Mr. *Vernon.*] Are the keepers of the National Gallery ever requested o take off the glass for the purpose of enabling copies to be taken?—I believe it s not allowed for the students.

9241. Mr. *M. Milnes.*] Is the inconvenience so great as almost to prevent udies being made from pictures?—The inconvenience is very great indeed; ou get false lights thrown on the pictures.

9242. Lord *W. Graham.*] Have you found any difficulty in copying the pictures om their being dirty and obscure?—Those that I have copied have not been ery dirty.

9243. Will you state what pictures you have copied?—I have copied the laudes.

9244. Mr. *B. Wall.*] Since they have been cleaned?—No.

9245. Mr. *Hardinge.*] Which Claude did you copy?—Both the St. Ursula nd the Queen of Sheba.

9246. Mr. *M. Milnes.*] Did you copy the Queen of Sheba before it was eaned?—Yes.

9247. And did it strike you that it was dirty at that time?—It looked to me be of a very nice tone; it looked in good harmony, I thought.

Mr. *Augustus Frederick Plass*, called in; and Examined.

Mr. *A. F. Plass.*

9248. *Chairman.*] YOU have visited the National Gallery for the purpose of pying pictures, have you not?—I have for the last 15 or 16 years.

9249. Have you ever visited the British Museum, for the purpose of copying ere?—Yes; I was a student there for years before that.

9250. Have you found any inconvenience, in the arrangement that was stated us by the last witness, from the interval of three months being introduced tween the two admissions?—Being a student of the Royal Academy I get in nerally for nine months during the year; I get in six months from the academy, d three from the gallery; therefore I do not find the inconvenience so much others do.

9251. Then, as far as you are individually concerned, the arrangement is a nvenient one?—Yes.

9252. Probably if you were restricted to three months you would find it convenient?—Very much so indeed.

9253. Do you find any inconvenience arise from the number of persons who copying there at the same time?—Occasionally I have, when several persons ve been wanting to copy a particular picture; but otherwise I have not found inconvenient.

9254. Do you think it would be desirable to have more space even for the esent number of pictures?—I do, indeed; the small rooms, in particular, are ry bad.

9255. Should you be willing even to go further, if you had suitable accomdation, and much larger rooms?—I should.

9256. Where do you live at present?—In Westminster.

9257. Supposing the gallery were removed to Kensington Gore, which has en suggested, and which would be a considerable distance, but that there were en great additional accommodation in point of space, do you think that would ke up to the students, generally, for the inconvenience of the further distance y would have to go?—I should think the increased distance would be no jection, generally speaking.

Mr. *A. F. Plass.*

15 July 1853.

9258. Mr. *M. Milnes.*] Do they generally go by an omnibus?—Yes; I think from the crowded state of the rooms in the gallery, and one thing and another, there is great injury done to the pictures; pictures which I have known for years I have noticed are going very fast.

9259. Getting worse and worse?—Yes; the two Wilkies particularly, I think they have been repaired several times.

9260. *Chairman.*] You, having seen those pictures for fifteen or sixteen years, think it desirable, for the security of the pictures themselves, that they should be removed?—Most decidedly.

9261. What do you think of the suggestion that has been made, of covering many of the pictures with glass?—No doubt that would preserve the pictures, but I think it would not be so well to copy from them when they were under glass, the reflection of the people passing by would make it difficult; I have copied pictures, however, with glass before them.

9262. But you have found it inconvenient?—Very much so indeed.

9263. Mr. *Hardinge.*] Might not the glass be taken off temporarily while the student was copying a picture?—Yes; Colonel Thwaites has occasionally taken off the glass when I have been copying, but it is a great favour.

9264. Mr. *Vernon.*] It would be very desirable for the sake of study, would it not, that there should be a power of having the glass removed for the purpose of enabling you to copy?—Yes.

9265. Mr. *Hardinge.*] There would be no objection to taking the glass off for a few hours, while the student was in the gallery, would there?—No; it is very seldom taken off; it is sometimes.

9266. Mr. *Vernon.*] May I ask what class of pictures you have been chiefly in the habit of copying?—Historical paintings, chiefly.

9267. Will you have the goodness to explain what you mean by historical paintings?—The present picture I am painting, is the Holy Family, by Murillo.

9268. Among historical pictures you include sacred subjects?—Yes; various subjects.

9269. Lord *W. Graham.*] Have you ever copied the Paul Veronese since it has been cleaned?—No; but I have made a sketch of the picture.

9270. Mr. *Vernon.*] Are you aware of the general tendency of students who copy in the National Gallery, as to the selection of pictures for the purpose of copying?—It is various; I do not think it is more one description of pictures than another.

9271. You think the taste and practice of students is pretty equally distributed?—I think so.

9272. Mr. *Hardinge.*] Do you think that there is the same proportion of students who study the Dutch and Italian schools?—Yes.

9273. Have you been in the habit of making accurate copies of the pictures, or merely studies from them?—I have made finished copies from them.

9274. Do most of the students make finished copies?—No; a great many merely make sketches, to show the effect of colour.

9275. And many copy portions of pictures only, I presume?—Yes.

9276. Mr. *Vernon.*] Is your knowledge of ancient art limited to your knowledge of the pictures in the National Gallery?—I have copied at the Museum for about four or five years.

9277. I am speaking of pictures?—No; I know more of paintings than I do of sculptures.

9278. You are not acquainted with pictures in other galleries?—I am not.

9279. Have you felt the want, with your particular feeling for art, of any particular class of pictures in the National Gallery?—No.

9280. There is no particular school which you would like to see more fully represented there?—No; the chief things that I paint are portraits.

9281. Mr. *M. Milnes.*] Have you suffered at all from the ventilation of the gallery when you have been painting?—Yes; it has been very bad from heat and dust; and on public days it is very bad indeed.

9282. *Chairman.*] Do you often go there on public days?—Very often.

9283. Mr. *M. Milnes.*] Is the smell of the oil and pigments so disagreeable as to be almost hurtful to the students?—No; I do not think there is a sufficient number of students for that to be the case; on the average, the attendance of students does not exceed 50 altogether; that is, water-colour painters, oil-painters, and all.

Mr. *A. F. Plass.*

15 July 1853.

9284. *Chairman.*] Having studied at the British Museum and also at the National Gallery, what is your opinion with respect to the combination of the two collections; that is, that the sculpture and the pictures should be together in one building?— I think that would be a great advantage to the students.

9285. Mr. *Hardinge.*] Do you think it would compensate for the disadvantage and inconvenience of some having to go a longer distance?—Yes; I think it is much better the two being together.

9286. Do you happen to know what part of the town the greater proportion of the students come from, or have you any means of ascertaining that?—No; I believe they come from different parts; some come from Hampstead, and all round.

9287. Mr. *M. Milnes.*] Do they generally spend the day in the gallery, or only a few hours?—Generally the day.

9288. Mr. *Hardinge.*] What are the hours?—From 10 o'clock to six during the summer months, and from 10 till five in the winter.

9289. Mr. *M. Milnes.*] Do they go out to their dinner and come back again?—Yes, or their lunch; for my own part, I generally take my lunch, and get my dinner after six o'clock.

Mr. *James Davies*, called in; and Examined.

Mr. *J. Davies.*

9290. *Chairman.*] HOW long have you been in the habit of visiting the gallery for the purposes of study?—About 12 months.

9291. Have you ever been at the British Museum for that purpose?—I have.

9292. For what length of time have you visited the gallery?—Twelve months.

9293. Do you go for an interval of three months at a time, or do you go as a student of the Royal Academy?—I go for three months at a time.

9294. Do you concur in the evidence given to us, that that is an inconvenient arrangement for students?—I do.

9295. You think that a longer period together is desirable for the purposes of study?—It is.

9296. Have you found the room much crowded since you have been there?—Sometimes it is.

9297. Sometimes it is inconveniently crowded?—Yes.

9298. Do you ever copy pictures in the smaller rooms?—No, I do not.

9299. You find that the crowd is inconvenient sometimes even in the larger rooms?—Yes.

9300. I suppose you think that larger rooms for the gallery would be an advantage?—They would.

9301. Should you be willing to go to such a place as Kensington Gore if on that site a commodious gallery were to be erected, where you would have the space that you have not in the present gallery?—I should.

9302. Where do you reside?—At Islington.

9303. Do you think it would be an advantage that the art collections from the British Museum should be combined in the same building with the collection of pictures?—I think it would be an advantage.

9304. From having studied at both, do you think it would be an advantage to yourself?—Yes, it would.

9305. Did you draw from the statues at the British Museum when you attended there?—I did.

9306. Do you think, that for the purpose of drawing, a collection of casts would or would not answer every purpose; that is to say, if a complete collection of casts were combined in the same building with the pictures?—I think it would.

9307. In that case it would not be necessary to remove the sculptures, but only to have good casts made of all those works of art which are desirable for students?—Yes.

9308. That would go a great way towards meeting the requirements of the students?—Yes.

9309. Mr. *Vernon.*] Although you live at Islington, do you think that if the gallery were at Kensington Gore such a combination of works of art, from which you could study, would compensate you for having to go double the distance?—It would.

Mr. *J. Davies.*

15 July 1853.

9310. What class of pictures do you chiefly study or copy from?—I have painted landscapes and also figures.

9311. Indifferently?—Indifferently.

9312. When you say there is an inconvenient crowding in the gallery, do you mean that there is an inconvenient pressure upon certain pictures, or that the gallery generally is inconveniently crowded?—There is an inconvenient pressure on certain pictures.

9313. Supposing the tastes of the different students to be more equally distributed among the different pictures in the gallery, there would not be that inconvenient crowding?—I think there would if the whole number were admitted.

9314. Is there any regulation as to the number of students who are permitted to copy a given picture at a certain time, or is it a mere matter of convenience among themselves?—It is a mere matter of convenience among themselves.

9315. Have you studied from the Claudes in the National Gallery?—I have not.

9316. What landscapes have you painted?—The last I painted was after the Poussin.

9317. Do you mean Gaspar Poussin?—Yes.

9318. Is not that picture extremely obscured?—No; it is not very much so.

9319. Is it the Poussin near the Queen of Sheba?—No; it is the Poussin with the waterfall.

9320. You say you have also studied figures?—I have.

9321. Do you study figures for the purpose of illustrating your landscapes, or do you study them with a view to painting portraits and historical pictures?—Painting portraits.

9322. Lord *W. Graham.*] Have you been to the British Museum for the purpose of consulting the engravings there?—I have not.

9323. Mr. *Hardinge.*] Are there any other inconveniences in the present gallery which you can specify?—I have been painting there when the rain has fallen through the roof on my picture; and I have found also great inconvenience from the draughts.

9324. Mr. *Vernon.*] Do you ever find the dust rise up through the ventilators below inconveniently?—No; I have not found that.

9325. *Chairman.*] Have you anything you wish to add to your evidence?—No.

Mr. *James Loft*, called in; and Examined.

Mr. *J. Loft.*

9326. *Chairman.*] HAVE you been a student of the National Gallery?—Yes, at Somerset House; and also I have been in the habit of associating a great deal with students, in consequence of being proprietor of an establishment in Dean-street for many years.

9327. Lord *W. Graham.*] For what purpose?—For the sale of plaster casts.

9328. *Chairman.*] You have been in the habit of visiting the National Gallery frequently?—Yes; I have not been a student of the National Gallery, as a painter, because I am professionally a sculptor.

9329. Have you been at the British Museum much?—A great deal; I was engaged at the British Museum for some time. I had the contract for moulding the things there prior to the present person having it. When Sarti left the country I succeeded him, and the establishment he had in Dean-street, which brought me in contact, in addition to my being a student at Somerset House, with students also at the British Museum, with respect to the sale of casts to them; and I could learn, very extensively, what their wants were, what complaints they had to make, and what accommodations they had at different places.

9330. Are casts much sought after by students?—Very much.

9331. Is there an increasing desire, on their part, to obtain them?—Yes, there is an increasing desire to obtain them, to the extent of their means.

9332. Among the public, is the desire for casts increasing, as compared to what it was in former years?—Yes.

9333. As you have considered the subject of casts, perhaps you will say whether you think it desirable that in the event of the gallery being removed to another site, it would be desirable that a collection of casts should be connected with the pictures in the same building?—Yes, I think it would be an advantage, particularly for painters.

9334. Should you think that, supposing casts of all the best statues in the world were brought together in that building, that would be as useful, or even more useful for painters, as bringing the collection of old marbles now in the British Museum?—Decidedly more advantageous.

9335. What do you think, as you have been in the habit of associating with persons of that class, would be the general feeling, if the gallery were removed to Kensington Gore, and if at that place greater accommodation were given, by larger rooms, and by a combined collection, in which casts would be placed also at the disposal of the students?—I am afraid that the locality will not be generally so favourable as the present one.

9336. In what way would it be unfavourable?—In consequence of the distance, the present one being more central; I think the distance there would be more inconvenient to artists, to students in particular who have not the means of having a conveyance, and who depend more on walking than the ordinary conveyances, however cheap they may be.

9337. Do you think that the present low prices of omnibuses would not suit their finances?—I think another objection would be the time it would occupy going backwards and forwards; many students have to economise their time very much, and time would be a great consideration with them.

9338. If they are in London for the purpose of study, would it not be easy for them to obtain a residence at Kensington, Brompton, or other parts of the town, in the neighbourhood of the gallery?—That would apply to those who come to London for the purpose, but those who are residents in London generally have certain occupations, and have to select their residences, and to avail themselves of the advantage of study as time and opportunities occur.

9339. Mr. *Hardinge.*] What do you mean by "other occupations"?—Many of them are portrait painters, and there are others who are occupied in various ways during the day in making a livelihood, and who devote what time they can spare to study; to such persons I think the distance would be a great consideration.

9340. Would the fact of their being portrait painters be a bar to their removing their residences to the vicinity of Kensington Gore, or any other place?—Yes; a great many of them seem to have connexions in certain localities.

9341. Do not a large proportion of them live in and about Kensington?—There are a great many who live there and about Pimlico, and perhaps as great a number about Fitzroy-square and Islington, and that direction.

9342. Are there many in the east end of London; in the city?—A great many, but not so many as in the north and the west.

9343. And you think that the inconvenience of having to go that distance would not be compensated for by the advantage they would derive from being able to go to a gallery, in which sculpture and paintings were combined?—They would be very glad to avail themselves of it if time and opportunity offered, but time is such a great consideration with them that I think it would interfere very much in prohibiting them from attending there.

9344. Are there many whose time is taken up daily with other business, and who yet find leisure to go for days together, to paint at the National Gallery?—Yes; they do that as much as possible.

9345. Persons actually engaged in some trade or some other business at other times?—No; as artists; not engaged in any other business.

9346. Mr. *Hardinge.*] Do they go the National Gallery principally to study colour and form in the old masters, or do they go for the purpose of copying pictures for sale?—Principally for studying colour; not so much for studying form, for they may acquire that in the British Museum and from plaster casts; the great object of painters in going to copy from the old masters is colour, and their style of painting.

9347. Lord *W. Graham.*] Do you think they can have a satisfactory study, going only for two or three hours a day?—Yes; but they must follow it up and complete their pictures.

9348. A person would make a much more complete picture, would he not, if he could paint for a much longer time at one sitting?—No doubt, if he could devote his whole time to it.

9349. Mr. *Hardinge.*] Do many of them make accurate copies of the pictures?—Yes; very clever copies indeed.

9350. And those copies are principally made for sale, are they not?—I am not

Mr. *J. Loft.*

15 July 1853.

not aware; I dare say they do sell them when they have an opportunity; I have known one or two cases of the kind, but I think the majority of them are studies for their own improvement in colour; that is the principal object.

9351. Are you aware whether the keeper of the National Gallery has been in the habit, in any way, of superintending them or giving them advice?—No, I am not.

9352. *Chairman.*] Do you think that if the gallery were removed to some locality where much larger space would be afforded for the exhibition of the pictures, where a room might be given for students to copy in, and if they were allowed, instead of coming twice in the week, to be there every day, that would compensate for the additional distance they would have to go to get there?—That would be a very great advantage to them, I have no doubt.

9353. Do you not see the possibility, if the space were much larger, of having one large room set apart into which students might be admitted daily for the purpose of copying pictures, and in which a certain number of pictures might be placed for them to copy?—That would be an advantage, certainly; and it probably would induce many more to go, because, if they are confined to two days in the week, it might happen that on those days they were not able to go, whereas if they had the choice of six days, they might have a chance of going on two days out of the six.

9354. Mr. *Hardinge.*] Under the present regulations a student cannot well copy a picture that hangs high up?—No, not so well, but in some cases they will remove a picture, I believe, where it is wished. I have understood so, but I do not know precisely whether it is the case or not.

9355. Have you anything that you would wish to add to the evidence you have already given?—No, except that with reference to a question which has been put to me as to plaster casts being as eligible as fragments of marbles, I should desire to add that I would not wish it to be understood that I at all depreciate the great value of the marbles; but for the purpose of general study by students, I think plaster casts are the best, as they may be obtained generally more perfect than fragments; for the purpose of reference the fragments are invaluable, because they are often more perfect than some parts of the plaster casts can be, but taking the plaster casts generally, they would be more useful to students than the original.

9356. Mr. *Hardinge.*] You get a better light and shade?—Yes; the marble is often stained and irregular, which gives a false appearance of form, and often misleads a stranger to form.

9357. *Chairman.*] If we had a collection of casts we might in that collection combine all the finest works that are dispersed over Europe, whereas if we limit ourselves to the marbles of the British Museum, we shall take in only a small portion of the works of ancient art in sculpture?—Yes; the original sculptures are extremely valuable, in consequence of being marbles of a choice description, but their use is very limited for the purpose of study. I believe that at Edinburgh they have a much superior class of plaster casts for study than we have in London.

9358. Lord *W. Graham.*] Are those casts, which are carried about by Italian boys, fit for the purpose of study?—No, they are very imperfect; some of them are good works mutilated.

Jovis, 21° die Julii, 1853.

MEMBERS PRESENT.

Colonel Mure.	Lord Elcho.
Mr. Baring Wall.	Lord William Graham.
Lord Seymour.	

COLONEL MURE, IN THE CHAIR.

Baron *De Klenze*, called in; and Examined.

Baron *De Klenze*.

21 July 1853.

9359. *Chairman.*] YOU are Privy Councillor and Chamberlain of His Majesty the King of Bavaria?—Yes.

9360. Before proceeding to ask you any questions, it is my duty on the part of the Committee to offer you our best thanks for the benefit you confer upon us by appearing in this place, and for the very handsome and disinterested manner in which you have undertaken a journey from Germany to England for the sole purpose of affording us your assistance in our labours. Your well-known zeal and love for art would probably have induced you to take that step, even without special reference to our wishes; but that does not relieve us, who profit by your kindness, from the duty of testifying our sense of it. As you have, in a paper printed in the Appendix, fully stated your opinions, in your answers to a series of questions which I addressed to you in writing, our present inquiries will be limited to points on which we may derive further explanation. In No. 3 of those answers, you mention a preference for a separate edifice for the different departments of works of art; I presume you mean that sculpture and painting should not be in the same edifice mixed with each other, but you do not disapprove of having sculpture and painting in edifices contiguous to each other, with a view to the comparative study of the different branches of art?—I think that in general if it is possible it ought to be avoided, because for painting and sculpture, though they are nearly allied to each other, yet it would be very difficult to combine in the same building the proper arrangement and lighting of the different branches.

9361. But you think, do you not, that for the purpose of comparative study, and considering the congeniality of works of elégant art in sculpture and painting, it would be desirable to have them in contiguous edifices?—I think it would be perfectly right that they should be in the same group of buildings, but not under the same roof.

9362. Lord *Elcho.*] By being contiguous, though not under the same roof, do you mean so contiguous and so joined that a person could go from one to the other without going out of doors?—I think that the communication might be made from one building to the other by some secondary passages, so that people would not be exposed to the rain in crossing from one to the other; and it is also my idea that there might be a fine group of buildings in which these dif ferent parts should be so well connected that they would be no eyesore to the building itself. I would also suggest that the passage through which you passed from the sculpture to the paintings should be adorned by a collection of vases, which form the intermediate step between painting and sculpture.

9363. *Chairman.*] The collections are under the same roof at St. Petersburgh, are they not?—At St. Petersburgh the collections are under the same roof, but from the space allotted to the architect for building these galleries it was much easier to manage the matter; because, for instance, the collection of sculpture was in itself rather insignificant, and they could easily find room for it; but here, where the collections of sculpture are very considerable, it could not be so easily arranged.

9364. Would you be favourable to having a combined direction of the two establishments?—I think it would be preferable if a system of that kind could be easily adapted to the departmental arrangements in this country.

Baron *De Klenze.*

21 July 1853.

9365. There is a difference in that respect, I understand, between the Paris and Berlin and some other European museums, and those at Munich?—At Berlin there is a general director of the museums; but at Munich the authority is vested in the Minister of the Interior.

9366. Lord *Elcho.*] Is the Minister of the Interior at Munich, who has the direction of the gallery, a person remarkable for his knowledge of art, or is he merely selected as being a man of business?—He is selected as being a man of business.

9367. Who is there under the Minister of the Interior?—The person who is responsible to the minister is the director of the gallery; the director is perfectly authorised to make any arrangements he thinks proper, and it is only in some extraordinary cases as regards expenses, and so forth, that he applies to the Minister of the Interior.

9368. *Chairman.*] The difference between Paris and Berlin and Munich is, that at Paris and Berlin there is a director-in-chief of the whole of the establishments, who is responsible to the minister, whilst at Munich there are several special directors, who are each responsible directly to the minister?—Yes.

9369. Which of these two systems do you prefer?—The Berlin system, on account of the principle, which is that one person should have the entire management of the whole, if you can find a person who is qualified to fill the office.

9370. You state that at present you do not buy much in the Munich Gallery; but during the period of the French revolutionary war you bought a considerable number of pictures, did you not?—Yes.

9371. During the French revolutionary war did the government of Bavaria employ persons in different parts of Europe to purchase pictures?—Yes; it extended over a period of about 20 years; the last great purchase being made in 1816, from the Albani collection, which was on sale at Paris.

9372. What class of persons did you employ?—On some occasions we sent persons connected with the establishment at Munich, in whom the government had confidence. On one occasion I was employed myself; on another occasion the secretary of the Academy was employed. At Venice, we employed our consul.

9373. Mr. *B. Wall.*] The choice of the person to be employed always rested with the government?—Yes, always.

9374. *Chairman.*] You found it necessary and desirable that the commission should be confidential, and that it should be kept secret?—Certainly.

9375. In order that the object of the persons engaged should not transpire?—Certainly.

9376. What is the nature and composition of the Damar varnish, to which you allude in your paper of suggestions?—It is a resinous substance, derived from a plant, as the mastic resin is derived from the mastic plant.

9377. This Damar varnish is now employed preferably to mastic varnish in the German galleries, is it not?—Yes; in regard to modern paintings no other varnish is ever used, and in re-varnishing old paintings in the gallery it is preferred to mastic.

9378. Is it mixed with any other substance, in the composition of it into a varnish?—It is mixed with spirits of turpentine, and with other volatile oils, as is also the case with the mastic varnish.

9379. Mr. *B. Wall.*] Is it only used at Munich, or is it used elsewhere in Germany?—It is used elsewhere in Germany, in several of the galleries, and at Florence. They have only recently introduced it at Florence.

9380. *Chairman.*] In what respect is it preferable?—It is preferable because it is of a lighter nature, and less liable to cause cracks in the paint. I also think it is less liable to change colour, from the fact that I have placed pictures that were varnished with this varnish in dark places, and in six months I have found the varnish not in the slightest degree changed, which is the great test; still I do not consider that they have had at Munich sufficient experience to be perfectly sure of all the results.

9381. Lord *W. Graham.*] Have you exposed it to the influence of coal smoke?—No, I have not, because at Munich there is no coal employed.

9382. Lord *Elcho.*] Is it less liable to chill than mastic varnish?—I cannot speak positively to that; but I should think there is no difference between them in that respect.

9383. *Chairman.*]

9383. *Chairman.*] You mention that you have had no experience as to the effect of chill on the pictures at Munich?—No; it is only in London and Dresden that I observed that effect.

9384. Lord *W. Graham.*] Have they employed the varnish of which you speak at Dresden?—I have no doubt that they have.

9385. *Chairman.*] You have not observed any effect of this chill at Munich?—No.

9386. You have only observed the effect of chill in London and at Dresden?—In London and Dresden alone.

9387. Have you ever observed the effect of chill on pictures at St. Petersburgh?—Never.

9388. Mr. *B. Wall.*] The climate of St. Petersburgh is the worst possible climate for pictures, is it not?—Without any doubt.

9389. *Chairman.*] Do they burn coals at St. Petersburgh?—No, they do not; but I have observed that the public monuments, both of marble and bronze, are affected by the smoke in the same way as they are in London; and although in St. Petersburgh they burn nothing but wood, this wood, being of a very resinous nature, emits a great quantity of smoke; but I have never observed that it has had any effect on pictures, because it does not contain sulphur; this is a remark that I have made to carry out my idea that it is the smoke from coal only which has a deleterious effect on pictures.

9390. Do they at Munich apply any chemical test to the varnish applied to pictures, in order to ascertain its purity?—I am not aware that they are in the habit of employing any chemical test, but they generally employ tradesmen of character, who they feel sure will supply them with varnish of a proper description, and who have no interest in adulterating it.

9391. Would not the director or the persons intrusted with the care of the pictures have the requisite knowledge to discover any adulteration of the varnish without the application of a chemical test?—They would; they are also in the habit of preparing their own varnish; one good test of the purity of varnish is its clearness; if varnish is thick or muddled, then it may be understood not to be pure.

9392. In what year did you build the Pinacothek at Munich?—In the year 1836.

9393. And in what year did you build the Museum of Art and Antiquity, at St. Petersburgh?—In 1839.

9394. Did you, as the result of your experience after the construction of the Pinacothek, find it desirable to make any alteration in your system of construction in building the edifice at St. Petersburgh?—No, no alteration of system whatever; the only changes which I thought it necessary to make were those which were required by the difference of locality and by the general plan of the establishment; the principal change was the admission of screens in placing the pictures, which mode of arrangement required a side light, and occasionally lighting from both sides.

9395. After completing the building of the Pinacothek, did you find it necessary to make any changes in regard to the lighting or otherwise?—No changes whatever; but in consequence of their having used Bohemian glass for the windows instead of glass from Alsace, the Bohemian glass has darkened so much that the room has lost a great part of its light.

9396. Mr. *B. Wall.*] If you had to rebuild the gallery, would you make any change in its construction?—None whatever.

9397. Lord *Elcho.*] What is the height of the great rooms at Munich?—Forty-eight English feet.

9398. What is the greatest height at which you hang pictures in the large rooms?—Thirty feet.

9399. When you say 30 feet; does that apply to the top or bottom of the pictures?—To the top.

9400. Then there are in the large rooms occasionally two tiers of pictures?—Sometimes three.

9401. *Chairman.*] Did you find it necessary to make any alteration in the arrangement of the pictures or of the lights at St. Petersburgh, as compared with Munich, on account of difference of climate?—No.

Baron *De Klenze.*

21 July 1853.

9402. Then you do not think it would be necessary to make any difference in the case of London?—No; the principle would remain the same; but a greater quantity of light would be required in proportion to the greater obscurity of the atmosphere.

9403. Were you required to make any change in the introduction of your light at St. Petersburgh, in consequence of the snow?—A change was required in the arrangement of the light from the roof, for the purpose of preventing damage from the snow, but not with a view to any alteration in the effect of the light itself.

9404. Lord *Elcho.*] Do you not think 30 feet is rather too great a height for pictures?—At Munich they are obliged to hang pictures up to that height, inasmuch as they have some which are 25 feet in height; but if we had not such large pictures, I would not advise them to be hung higher than from 20 to 22 feet.

9405. Mr. *B. Wall.*] Supposing the top line to be 30 feet, how far off should the spectator be to enable him to take in the painting at one glance?—Twenty-four feet should be the distance.

9406. What is the width of the gallery at Munich?—Forty feet.

9407. What would be the smallest sized picture that you would hang up on the top line?—I think that it does not so much depend upon the size of the picture as the figures that are represented, because you may have a small picture where a head is represented twice the size of life, and you may have a large picture where the figures are so small as to require to be seen near.

9408. *Chairman.*] I believe you were employed to arrange the objects of art in both the buildings, in the Pinacothek and the Glyptothek?—Yes.

9409. Do you consider it necessary that the architect employed should prepare his plan, with the understanding that he is to be employed in arranging the works in the building?—I would not exactly lay down that as a rule; but if he were not employed to do so himself, it would be desirable that he should act in concert with the director as to the disposal of the light, and the plan of the building, with reference to the subsequent arrangement of the works of art.

9410. Lord *Elcho.*] Have you arranged the pictures at Saint Petersburgh?—No; they were arranged in concert with me by Mr. Bruni, a Russian artist, who has long resided in Italy.

9411. What height do they hang the pictures at Saint Petersburgh?—The same height as at Munich.

9412. *Chairman.*] In your Paper of Suggestions you have expressed yourself in a decided manner as to the defects of the present situation of our National Gallery?—Yes.

9413. Do you see any possibility under the circumstances of constructing an edifice in that situation which would be properly adapted to its purpose?—No.

9414. Mr. *B. Wall.*] What is the quantity of ground that is covered by the Pinacothek at Munich?—About sixty thousand square feet.

9415. In reference to an opinion given by you at the bottom of page 763 of your Suggestions, with regard to the form of building which you recommend, two designs are mentioned; one regularly academic, and the other what you term picturesque; will you have the kindness to explain your meaning a little more in detail?—I mean by an academic design, a design that is strictly regular in its form; but as in England the collections are so very numerous, and of so many kinds, I think that if a group of buildings were imagined, without perhaps being too much tied down to the regularity of one particular plan, the different galleries connecting the chief body of the building might be made into different shapes, according to the objects they were to receive.

9416. Lord *Elcho.*] Can you cite any examples of the two styles to which you refer, as applied to galleries of art?—I cite the Pinacothek as an example of the academic, and the Vatican as an example of the picturesque style.

9417. Do you think that in the picturesque style of architecture you might have the advantage of being able, as the collections increased, to add a gallery here or there, as appeared most convenient, without damage to the general effect of the building?—Certainly; that is the great advantage of it, as in the case of the Vatican.

Mr. *Henry Farrer*, called in; and further Examined.

9418. *Chairman.*] YOU have heard the evidence of Baron Klenze on the subject of the Damar varnish?—Yes.

9419. Are you acquainted with that varnish?—I have used it for years, but more particularly latterly, having found that, as mastic increased in price, they were adulterating the varnish with all sorts of balsams, which are very injurious to pictures, and that varnish so adulterated is being employed to this very day. I was then led to make experiments on different gums. I knew that this was employed on the Continent, and I found it better than the mastic varnish; in the way I make it, it has all the quality of mastic; that is, that it can easily be removed, and that without danger to the picture, because it rubs up easier than mastic varnish. Another quality it possesses is, that it polishes better, and is not likely, I think, to chill so much. I found that to be the case more particularly in Paris; I took seven pictures there; I remained there during the whole of the wet weather, and not one of them chilled; but it is generally the case on the Continent, that the pictures do not chill there as they do here.

9420. What is the origin of the name Damar, which is given to the varnish of which you speak?—I have always been led to believe that that name was given to it because it was a gum that came from Damascus.

9421. Lord *Seymour.*] Is that name which you have mentioned the commercial name by which it is known?—Yes.

9422. How is it spelt in English?—Damar.

9423. Is it in common use in this country?—No, I know of no other person using it but myself; I make it myself, and I should advise that, in future, whenever varnish is employed in the National Gallery, care should be taken that it is prepared by proper people.

9424. Lord *Elcho.*] What first drew your attention to the Damar varnish?—My attention was first called to it in consequence of the adulteration of the mastic varnish.

9425. How did you hear of it in the first instance?—I heard of it on the Continent some years ago.

9426. *Chairman.*] Is it not generally known in England?—No.

9427. Do you consider it to be preferable, upon the whole, to mastic varnish?—Yes, I like it better, and I never knew it to crack.

9428. Lord *W. Graham.*] How long have you used it?—Some years.

9429. Have you used it for 10 years?—No; but I have used it sufficiently long to know that it may be used with safety on pictures.

9430. Lord *Seymour.*] You say that you were induced to use it from observing that the mastic varnish that was sold in the market was considerably adulterated?—That is the case now; and it has been so for a long time, in consequence of the high price the gum has attained.

9431. Is there any easy test which you can apply to mastic varnish, so that you can ascertain whether or not it is adulterated?—I should know it, because the mastic varnish dries hard.

9432. I understand you to say that you would know, and be able to detect it, after it was applied to a picture?—Yes.

9433. Would you in purchasing varnish, at once be able, by holding it up to the light or otherwise, to ascertain whether it had been adulterated by any other balsam?—No, I think not; a chemist might know whether it had been adulterated or not.

9434. Lord *Elcho.*] Have you yourself any knowledge of chemistry?—No, I do not know sufficient for that; I have detected some few things. I had sent to me, from a very celebrated house, sometime ago, a colour which they wished me very much to employ in restorations; it was said that if I would employ this colour for that purpose, it would be a great benefit to them. When I put it to the test, I found that it changed from white to a yellow colour, it being a preparation of zinc.

9435. *Chairman.*] Do you not think it desirable that professional picture-cleaners, particularly the one employed in the National Gallery, should have sufficient elementary knowledge of chemistry to be able to judge for himself with regard to matters of that description?—No, I do not think there is any

Mr. *H. Farrer.*

21 July 1853.

necessity for that; he can easily test colours against other colours by exposure to light, &c.; and he can observe what are the changes produced thereby.

9436. You say that from a want of knowledge of chemistry, you are not able to test the quality of varnish; but would not a certain elementary knowledge of chemistry enable you to do it?—That is more a question for a chemist.

The Rev. *Henry Wellesley*, D. D., called in; and Examined.

Rev. *H. Wellesley*, D. D.

9437. *Chairman.*] YOU have been long acquainted with the pictures in the National Gallery, have you not?—I remember them from the time they were in Mr. Angerstein's house.

9438. What is your opinion as to their condition generally at present?—I think they have gradually deteriorated from that time.

9439. To what causes do you ascribe that deterioration?—The climate and atmosphere of London.

9440. Lord *Seymour.*] Have they deteriorated more than other pictures in private collections during that time?—*Cæteris paribus*, no.

9441. *Chairman.*] Is the climate of London the only cause to which you ascribe the deterioration?—No; the cleaning to which the pictures may have been subjected is a special cause. I must observe that, of course, I cannot speak generally as to collections with reference to cleaning.

9442. When you speak of climate, do you mean to include exposure to dust, and other influences, besides smoke?—I mean the London climate, and coal smoke containing sulphur.

9443. Have you observed any bad effects of cleaning on any pictures in the gallery, or do you speak of the effects of cleaning in all cases?—My first answer was general; but I should answer specially with respect to those that have been pointed out as having been cleaned, that I do not think the pictures have been badly cleaned, or that they have been more unskilfully cleaned than pictures generally are.

9444. Lord *Seymour.*] Are you now speaking of the pictures that were cleaned in 1852, or are you speaking generally of all pictures that have been cleaned in the National Gallery?—The recent cleanings, I think, have not been more unskilfully done than they generally have been; but I think the pictures ought not to have been cleaned.

9445. When you say you think they ought not to have been cleaned, do you speak from your own knowledge of their condition prior to their being cleaned?—I speak as far as I can judge, never having expected that I should be asked the question. I can only speak from general recollection; I am clear that they have suffered in their general effect, but I do not think they have been injured.

9446. You think then, as I understand, that though their appearance at present is deteriorated by the cleaning, the pictures have not been essentially damaged?—I do not think the pictures have been damaged, but I think the cleaning was an injudicious step.

9447. Lord *Elcho.*] Do you think they are now in a perfect state?—Almost all oil pictures which are on canvas bear the marks of damage.

9448. Were those marks of damage visible before the last cleaning?—I am not speaking of the ones that have been cleaned as having been damaged. I am speaking generally of damaged pictures. I do not think they were cleaned because they were damaged. I do not think they were repaired pictures.

9449. With reference to those pictures that have been cleaned, do you see any damages upon them?—No.

9450. Do you consider them in a pure and perfect state?—I cannot speak with regard to glazing.

9451. Is not glazing a very important part of a picture?—Yes; but it is a thing about which one cannot give evidence positively. Glazing is so mixed up with the effect of varnish, and it is of so evanescent and subtle a nature that one cannot give positive evidence upon it; at least I cannot, from memory. I cannot say whether a picture has lost any portion of its glazing, recollecting it a few years back and now. I cannot speak from memory as to the glazing, but I can speak as to the positive deterioration of a picture in its substance.

9452. Do you think they have deteriorated in substance?—Not owing to the cleaning.

9453. *Chairman.*]

9453. *Chairman.*] Either from the effects of later or former cleanings?—I am speaking of the three Claudes in particular, and the Velasquez.

9454. Do you not observe upon any of the Claudes injuries done to the original work of the master, without perhaps being able to say whether those injuries have been done at one time or at another?—I think they are uninjured generally, except with respect to the glazing which they may have had. I would merely guard myself with respect to the glazing. I see no trace of other injury done to them.

9455. Lord *Elcho.*] Do you not consider that the question at issue at present is, whether those glazings have or have not been removed?—No, not entirely.

9456. Have you examined the Claudes minutely?—Yes.

9457. Do you see those glazings there in whole or in part?—I do not think the little Beaumont Claude had any occasion for glazing.

9458. You think it never had?—No; I do not think it is painted on a principle to require glazing; but with regard to the larger pictures I cannot speak.

9459. With regard to the Queen of Sheba Claude, do you see the glazings there?—The Velasquez had no glazing, I should say.

9460. Have you any reason to suppose that the larger Claudes had glazing?—It is quite possible, I think.

9461. Do you see that glazing still left in parts?—No, I do not. It is quite possible that they might have had it, and I cannot tell whether it has been taken away or not; I cannot speak to that; but I think the small picture had no occasion for any glazing, and I do not think any has been removed, or that it has suffered in any way whatever, except in the general effect, which is suffering in another sense.

9462. From your knowledge of art generally, and from your knowledge of Claude's works in particular, should you say that in his marine pieces, and especially in painting water, he used glazing?—I cannot speak to that; I am very imperfectly acquainted with the process of oil painting.

9463. You have not studied oil paintings so much as drawings?—I have not studied oil paintings at all. I am well acquainted with drawings, and I think I could not be deceived in design and composition; but with reference to oil painting, it is so subordinate a portion of art, that I have neglected it.

9464. Your attention has been mostly devoted to drawings?—To design; though I have been as familiar with pictures as any other amateur.

9465. *Chairman.*] Is it your opinion that the position of the gallery is so objectionable as to render it expedient to remove it to another site?—I think it very objectionable.

9466. Would you consider it advisable that it should be removed elsewhere?—Yes, I think so.

9467. What would you consider to be the requirements of the new site in order to secure it against the evils to which it is now exposed?—To remove it beyond the influence of London smoke.

9468. Lord *W. Graham.*] Quite into the country?—Beyond the reach of London smoke, whether that be called country or suburb.

9469. Do you think that any suburb would be beyond the reach of London smoke?—It depends upon the direction in which London may extend itself; building may go on at such a rate as by-and-by to take in Hampstead.

9470. *Chairman.*] You would prefer having as much open space as could be secured, would you not?—Yes, I should say Kensington would be well guarded; at all events much better than the present site.

9471. Have you any further suggestions to offer with respect to the state of the pictures in the gallery?—I have observed that they suffer from chill, and that those on which mastic varnish has been used are more chilled than other pictures elsewhere, that have been varnished by London restorers with mastic varnish, are subject to chill, and more so than pictures of my own; and I am inclined to think it is not a very proper varnish to use.

9472. Is not the chill a temporary evil which may, by judicious treatment and care, and time, be got rid of?—I think the temperature of the rooms has a great deal to do with it, and the very rapid alternations of temperature, which precipitate the humidity on one sort of varnish more than another.

9473. Did you hear the evidence of Baron Klenze as to his having never observed a chill on any pictures except in London and at Dresden, and his

Rev. *H. Wellesley*, D. D.

21 July 1853.

consequent belief that chill was an evil which arose from the effect of coal smoke?—Yes.

9474. Do you coincide with him in that opinion?—I think it has a great deal to do with it; there is a moisture on the pictures which gives them the appearance of smoke having adhered to them; it looks like smoke.

9475. Lord *Seymour.*] I understand you to say you think it doubtful whether mastic varnish should be used for the pictures in the National Gallery?—Yes.

9476. Is there any other varnish that you would recommend in preference?—I should take the opinion of persons like Sir Charles Eastlake with regard to points of that kind; I can only speak as to the injurious effect, but I might be mistaken if I were to recommend any other course; I should take the opinion of a learned person.

9477. Are you aware whether or not mastic varnish has been used under the directions especially of Sir Charles Eastlake?—No.

9478. Mastic varnish has many advantages, has it not?—I believe it has.

9479. One advantage is that it can easily and safely be removed again?—Yes, while copal varnish cannot; and copal varnish changes colour.

9480. Whatever varnish is adopted for pictures which are to be preserved, and which must be occasionally cleaned, it is desirable it should be a varnish which is easy of removal?—Yes.

9481. Mr. *B. Wall.*] In varnishing your own pictures, what varnish do you use?—I find with respect to pictures that I have bought, in which mastic varnish has been used, that they appear to be clouded.

9482. Is not Sir Charles Eastlake in the habit of recommending the use of mastic varnish?—I do not know what his opinion of it is.

9483. But you would refer to him as the highest authority upon that subject?—Yes; upon any point of that kind, I should not like to speak myself when I could obtain his opinion; but the question should be asked him, I think.

9484. Lord *Seymour.*] Are there any other points relating to the state of the pictures, to which you would wish to call the attention of the Committee?—With reference to the question that was asked me as to the injudicious effect of cleaning, I should say that the effect of time should be allowed to operate on certain pictures. I think I ought to explain my meaning, in saying it was an injudicious step to clean them; what I meant to say was, that it removed the beneficial effect of the mellowing by time; what I meant to say was, that it was injudicious, as destroying the beautiful effect produced by time in mellowing a picture; the pleasure of the picture is gone; that is the case in the picture of the Sea-port in particular.

9485. *Chairman.*] Have you any further observations to offer as to the state of the pictures?—No.

9486. Mr. *B. Wall.*] When you say that the pleasurable feeling of the picture has gone, do you think that it may be restored in the course of some years, when the toning of time has had an effect?—Yes, I think it is possible; but it would be a long time before it took place.

9487. Would it take place in 50 years do you think?—A hundred; it would depend upon the situation; I should say it might take 50 years in London, and a hundred years elsewhere.

9488. *Chairman.*] Do you consider that picture-cleaning generally is so hazardous and doubtful an operation, that it would be desirable in the National Gallery to place it under checks and safeguards greater perhaps than have hitherto been adopted?—I think that all oil pictures must dry and crack merely from the effect of time, and, more or less, according to the pigments employed by each master and in each school. I do not think there is any general rule as to varnishes and necessary restorations; they vary *pro re natâ*; nor do I think there is any general rule as to the mischief which solvents, turpentines, or other liquids may produce; but all oil pictures must perish and require constant restoration; we must in my opinion trust to a director to do the best he can to preserve them as long as is possible. Designs upon paper, if torn or mutilated, may still retain their value if unrepaired, and not be considered unsightly; but if an oil picture has a rent or a hole in it we do not treat it in the same way, it must be filled in.

9489. Do you comprise mending a rent or a hole in a picture under the general head of picture-cleaning; is not that rather an extra thing?—Where-

ever

ever a picture is re-lined, it must be in bits; all pictures painted on canvas must crack with time; it is a question of time; all canvas must give in the course of time.

9490. Mr. *B. Wall.*] Would not that be rather in favour of frequent cleaning?—It is necessary.

9491. In point of fact, the process of what is called feeding?—The process of feeding.

9492. The cracking is prevented by a certain quantity of oil or varnish being used on the surface of the picture?—Yes.

9493. And that process being frequently employed prolongs the life of a picture?—Yes. During the course of the last century nearly all the pictures in oil in the National Gallery seem to have undergone the process of restoration, and to have suffered from injudicious and unskilful restoration; that should be borne in mind with reference to the state of those pictures now.

9494. Should you say that that was more the case with pictures that have come over to this country than with those that exist in foreign galleries?—Yes, more so, I should think.

9495. Is not that a little owing to the circumstance of their changing hands so frequently in this country?—Yes.

9496. Is it the case very often that when a gentleman gets a picture home he sends it to a picture-cleaner to have something done to it?—Yes; that has been going on for centuries, and consequently there is not one picture in 20 that is in a pure state.

9497. *Chairman.*] Is it not generally understood that at the time of the French taking possession, during the revolutionary war, of so many fine pictures throughout Europe, they introduced a more extended system of cleaning which was followed in many European galleries?—Yes; the French did infinite mischief in that way, particularly by removing pictures from panel on to canvas; they have required more feeding in consequence, and some have turned black in the shadows.

9498. Are you of opinion that the practice of picture-cleaning was as prevalent at the close of the last century, before the French revolution, as it has been since the operations of the French to which you have alluded?—Quite so; the old collections abound more in ill-restored pictures than the modern collections do.

9499. Do you not make a distinction between the process of cleaning and the process of restoration?—No, I mean restoration.

9500. Is it not the case that very often there is an extensive practice of cleaning pictures which are not understood to require restoration?—I think careful cleaning is peculiar to our time; up to our time the cleaning was done in a very coarse and careless way; that is quite evident.

9501. On what do you found that opinion?—From seeing the state of the old collections; such a one, I would say, as General Guise's collection; the wholesale mischief that was done by picture-cleaners in the last century is very remarkable.

9502. Do you consider that as much injury was done to the pictures in the great Italian collections prior to the occupation of Italy by the French as has been done since?—No; there has been more since; there has been more by the French.

9503. Lord *Seymour.*] Do you know so much of the subject that you can form an accurate opinion as to what damage was done before the occupation by the French, and what damage has been done since the occupation by the French?—My opinion is founded on a view which I had of the pictures in 1814, in the Louvre, and a view I had of them after they had been restored.

9504. You found them in a considerably worse state after they had been restored?—Yes, I found them in a considerably worse state when I saw them again in Italy than that in which they were when I saw them in the Louvre.

9505. *Chairman.*] Were they restored subsequently to the first view you took of them; you say you saw the pictures in 1814; had they not been restored then?—Something had been done to them since.

9506. After 1814?—After 1814.

9507. By whom?—I cannot say; I suspect it was by the French.

9508. Before they went back to Italy?—I suspect so.

9509. Are you aware whether anything had been done to them on their being

Rev. *H. Wellesley*, D. D.

21 July 1853.

transferred from the Italian galleries to the Louvre before you saw them in 1814?—Some of them had been removed from panel to canvas, as I understood.

9510. Have you directed your attention at all to the system of management adopted at the National Gallery?—I think that the direction by a Board of Trustees is objectionable.

9511. Do you speak of the trustees generally, or of an unpaid Board?—An unpaid body.

9512. Lord *Seymour*.] What would you substitute for that system?—I would substitute a single director, and concentrate the chief management and responsibility in him.

9513. He would have the care of the gallery, I suppose?—No, I mean that the chief management and responsibility should be concentrated in a director; there should be under him special conservators for each department, for painting, for sculpture, and so on.

9514. *Chairman*.] What powers and responsibilities would you assign to the chief director?—He should have unlimited power; he should be a person in whom perfect confidence could be reposed.

9515. When you speak of a chief director, do you allude to the National Gallery alone, or do you extend your observation also to a combination of collections?—Yes.

9516. Would you give him a general superintendence over the whole establishment or establishments, with special directors for each individual department?—Yes.

9517. Would you make him responsible to any particular department of the Government?—Yes.

9518. Would you make him responsible to the First Lord of the Treasury?—He should be appointed under the responsibility of being liable to lose his place.

9519. To what department of the Government would you propose that he should give account?—To the highest.

9520. You think that the Treasury would be the preferable department?—I cannot judge whether it would be preferable or not; I think he should have the utmost power that could be given to him; that is all I should say.

9521. Lord *Elcho*.] You would give him a good salary, I suppose?—I have not considered that point.

9522. Do you think that he ought to be a salaried officer?—I have not considered that.

9523. Do you think you could have sufficient responsibility without it?—Yes; I think if you appoint a gentleman you would choose a person who would lose his character if he acted without honour or judgment, or betrayed his trust in any way.

9524. *Chairman*.] Would you assimilate his office to that of the chief director in Paris?—Yes.

9525. Lord *W. Graham*.] Would you give him the responsibility of purchasing pictures?—Yes, he should be the highest authority on that subject; otherwise I should say it was not a proper appointment.

9526. Mr. *B. Wall*.] Would he be removable at pleasure, and if so, at whose pleasure?—That is a difficult question for me to answer, and on that account I should have preferred as another course that the Museum should be Royal. No gallery is well conducted unless it is conducted by a person with the feelings of an individual; and to be well done it must be done upon the principles on which private individuals form their collections; you must endeavour to possess a person with the feelings of an individual, which no board or body could have.

9527. Would not that be impossible in this country?—I think that is the great difficulty.

9528. It makes all comparisons between the proceedings of other countries and this country really of very little importance, does it not?—In other countries they succeed in forming galleries worthy of them; we find it difficult to do so.

9529. *Chairman*.] Has that system ever been tried in this country?—Yes.

9530. In what particular instance?—King Charles the First formed a collection; the Sovereign will always form a collection, if you will trust him to do it as an individual.

9531. I allude

9531. I allude to the system of having one chief director, as is the practice in Paris and Berlin, and I ask you whether there would be a difficulty in adapting that system to the habits of this country; do you think it fair to judge of the result of a system which has never been tried?—I would endeavour to remedy the defects of our system by trying that which has succeeded abroad; that is what I mean.

9532. With reference to the remarks you made as to the great difficulty in this country of adopting such a system, if such a system has never been tried, have we not yet to judge whether it is so difficult as it has been said to be by some of the gentlemen who have given their opinion on the subject?—The principal difficulty is the financial one.

9533. What is the particular difficulty you find there?—That the whole expenses of the management and purchase are not undertaken, as abroad, by an individual without reference on all occasions to any body or board, and without consulting any House of Commons.

9534. Do you mean that the head of the Berlin or Paris galleries has an unlimited power of spending money?—He has it virtually; he knows that he will be borne out in any proper purchase.

9535. Is it not the case that, in some of the galleries, they have an annual sum allotted to them to dispose of at their own discretion, and that in extraordinary cases they make special application to the department of government under which they act?—Yes.

9536. Could not that practice be adopted in this country?—I think it ought to be understood that a certain sum is to be placed at the director's disposal, and I think that it should not be limited to that, but that it should be in the nature of an advance.

9537. According to an annual estimate of what would be required?—According to an annual estimate of what would be required for off-hand purchases.

9538. That is done at the British Museum, is it not?—Yes.

9539. If any extraordinary opportunity should offer of acquiring valuable objects, the trustees of the Museum would apply to the Government for an additional grant?—Yes.

9540. Might not the same plan be pursued by the general director you propose to substitute for the trustees?—The difference between this country and another would lie in this: that the director would feel sure of being borne out by the Sovereign, but he would not like to be overhauled by the House of Commons.

9541. Lord *Seymour*.] You state you are dissatisfied with the management of the trustees, and therefore propose a single director instead?—Yes.

9542. Do you think the trustees have selected bad purchases?—In some instances they have made worse purchases than a single person would have done.

9543. Will you state what purchases you consider they have made that are worse than a single person would have done?—I think a single director would not have bought the Titian of the Tribute Money.

9544. Lord *Elcho*.] Do you think it is a Titian?—I had rather not be asked that question; even if it be a Titian, I do not think a single director would have recommended its purchase for our gallery.

9545. Lord *Seymour*.] Will you mention any other?—The Adoration of the Shepherds, by Velasquez.

9546. Lord *W. Graham*.] What is your objection to that picture?—I do not think it is worth having; it is an inferior picture in every respect.

9547. Lord *Seymour*.] These pictures having been bought with the united approbation of different trustees, you think there would be safety in having one such person as you propose, instead of a number?—Yes; a number shelter themselves in their number.

9548. You think that if there had been only one individual he would not have ventured on such a purchase?—I think not; I think he would have called in, if he had felt a doubt, better judges than they would have called in; and if he had been properly appointed, he would have been himself a better judge than the Board.

9549. You assume, first, that we shall find one director a better judge than all the trustees who have been selected?—Certainly; I think it is easier to find a competent person than a competent body.

Rev. *H. Wellesley*, D. D.

21 July 1853.

9550. Mr. *B. Wall.*] That last purchase of which you have spoken disrespectfully was acquiesced in by Sir Charles Eastlake, was it not, to whose judgment you say you would appeal?—I do not know; but that is nothing in contradiction of my former mention of Sir Charles Eastlake as a person possessing a knowledge of the practical part of art.

9551. *Chairman.*] When you speak of the Velasquez picture of the Adoration of the Shepherds as a picture that ought not to have been purchased, do you mean that in your opinion it ought not to be purchased at the price that was paid for it, or that you think it a bad picture?—I think it a bad picture.

9552. Are you aware of the price that was paid for it?—No.

9553. Are you aware that it was upwards of 2,000 *l.*?—I am very sorry to hear it.

9554. What is your opinion of the more recent purchase still of the Venetian picture called the Giorgione, which you saw in the gallery?—I think that was a very judicious purchase.

9555. You consider it a very fine specimen of the school?—It is a very remarkable specimen of that school.

9556. Although it is understood not to be in a very entire state, and although there may not be positive proofs of its authorship, yet, as a specimen of that school, you think it was quite worth the money that was paid for it?—Yes; it is invaluable.

9557. Mr. *B. Wall.*] But money is, in point of fact, no test of the value of a picture, is it?—It is a test merely of the state of the public taste; it is a test of fashion.

9558. What I mean is this, that no picture is of value because it is bought cheap?—Cheapness is no recommendation, and nothing good is dear; everything bad is dear.

9559. Lord *Seymour.*] As you object to the system of purchase by the trustees, I wish to call your attention to an answer given by Baron Klenze, who has had opportunities of being acquainted with most of the collections in Europe, and who says that the collection in the National Gallery, although as yet young and not numerous, contains nevertheless very fine works of the greatest masters; and, observing the proportion of the pictures to those in other collections, fewer equivocal and moderate pictures than are to be met with in other galleries?—Yes; I agree with him in that.

9560. Surely then, a collection, which although young in its foundation, contains very fine works of the greatest masters, and contains also fewer equivocal and moderate pictures than any other gallery, is a collection that has not been got together without considerable judgment and ability?—Precisely; because the best pictures were selected by an individual, Mr. Angerstein.

9561. Then you attribute all the good to the individual and the failures to the trustees, as I understand you?—No; the trustees have made most admirable purchases; they have gone to two extremes, they have bought the very finest and the very worst pictures.

9562. *Chairman.*] They have not bought very many, have they, in comparison with the rest of the collection?—Very few; the gravamen of my charge against the trustees is not to be measured by what they have purchased, so much as by what they have not purchased.

9563. Lord *Elcho.*] You think their sins of omission have been greater than their sins of commission?—I think their sins of omission have been greater than their sins of commission.

9564. Lord *Seymour.*] That is a question of finance, is it not?—Yes; and that brings it to what I have stated.

9565. Then do you blame the trustees because they have not had unlimited funds at their disposal?—I am not here to blame anybody; but it is unfortunately the fact that they have let the finest things go.

9566. You have stated that the trustees have so far dissatisfied you in collecting pictures that you wish the management to be under one director; and then when I ask you why you think so, you say their sins are sins of omission and not of commission; that is, that they have not purchased enough?—Yes; but when I said one director, I did not say one director limited. I said one director with full powers; not one director with the same power that the trustees have, which is no power at all.

9567. Is it not that you mix up two complaints against the present management,

ment, the first and the essential one being the want of funds?—I was not making the complaint against the trustees, but against the system of employing trustees in the management.

9568. But whatever dissatisfaction you have with the collection of pictures turns upon this in the first place, as I understand, that you think sufficient funds are not placed at the disposal of whoever purchases a picture for the National Gallery; is that so?—I should say, not funds, but powers.

9569. When you say powers, do you mean powers with respect to money?—I mean management altogether; that is to say, not merely the amount, but the nature of the purchases.

9570. Then the Committee may understand, that you think the trustees have had sufficient money placed at their disposal?—No; I do not know what money they have had placed at their disposal; but of course, if they could not do justice to their trust, it was for them to resign; if they could not carry it on creditably they should have spoken out.

9571. What do you imagine they were appointed to do; do you imagine that they were empowered to make a collection worthy of the British Empire?—If so, they ought to have been charged with sufficient power to do so; and if they have not that power, that is a fault of the system.

9572. Do you believe they were appointed for any such purpose?—I cannot speak as to the intentions of the Legislature.

9573. If you attach blame to them for not having made a proper collection, surely that blame must depend on whether or not they have adhered to the directions given to them by the Treasury; must it not?—I am in ignorance of the directions given to them.

9574. But you are, as I understand, dissatisfied with the result?—I am dissatisfied with the system that produces such a result.

9575. But you do not know whether that system depends on the representative government of the country, and the control of Parliament, or whether it depends on a certain number of gentlemen appointed as trustees of the gallery?—I believe it arises from what you first said.

9576. Partly on the representative system of this country controlling the expenditure of money?—Yes; I would use those words.

9577. But if the representative system controls and interferes with the expenditure of public money for such purposes, would it not equally be liable to interfere with one director as with a body of trustees?—That is the reason why I do not see my way to the course I would recommend; and that leads me to propose the other course which I have just mentioned.

9578. What you now suggest as the better course is, that the collection should be made upon the system on which the finest collections have been made at different times, by the power of the Crown?—Yes; acting as an individual and instead of a director-general; being in fact the director-general, as Charles the First, as the King of Bavaria, as Louis the Fourteenth, as the Popes, as the Grand Dukes of Tuscany, and others. All great collections have been formed either by directors-general, sufficiently empowered, or by the sovereigns themselves.

9579. Lord *Elcho*.] Are you aware whether Parliament has been niggardly in regard to the National Gallery, and that the directors have often been prevented making purchases in consequence of that Parliamentary control being exercised to which Lord Seymour has just referred?—No, I do not think that the Parliamentary control which has been exercised has been so great an obstacle as the unwillingness of the Chancellor of the Exchequer to advance money.

9580. Are you aware of the Chancellor of the Exchequer having frequently refused to sanction purchases which have been proposed to him by the trustees?—I am aware that in the case of the Lawrence Gallery the trustees of the British Institution recommended the purchase not to be made.

9581. Then in that case it was not the nation, and it was not the Chancellor of the Exchequer, but it was the trustees themselves who declined to recommend that purchase?—The House of Commons would have made no objection; if the Chancellor of the Exchequer had proposed it, it would have been carried *nemine contradicente*.

9582. You say that Parliament has not been niggardly in regard to these purchases. I want to know whether you can say, from a knowledge of these matters, that the Chancellors of the Exchequer have been niggardly, and that in consequence of their refusal to sanction purchases, the trustees have been pre-

Rev. *H. Wellesley*, D. D.

21 July 1853.

vented from making purchases, which they otherwise would have made?—I think that under our Government they must be niggardly, in order to do their duty.

9583. I ask whether from your own knowledge you can speak to that having been the case as a general rule?—I can speak to the case of the Lawrence Collection, which ought to have been purchased.

9584. By whom was the purchase of it refused?—It rested with the Chancellor of the Exchequer.

9585. Who was the Chancellor of the Exchequer of that day?—I do not know.

9586. Are you aware whether the Chancellor of the Exchequer of that day refused to sanction the purchase of the Lawrence Collection, which purchase was recommended at that time by the trustees?—I am aware that the transaction extended over many years, and possibly under many Governments. The purchase was open for many years; but I can only speak as to the final rejection of the valuation which I made in conjunction with other parties.

9587. Then you can speak to the fact of that purchase having been recommended by the trustees of the National Gallery, and to its having been refused by the Chancellors of the Exchequer?—The trustees of the British Institution, as I understood, recommended the purchase not to be made.

9588. Then that is a case in which the trustees of the National Gallery did not recommend a purchase which ought to have been recommended?—Yes; by the Chancellor of the Exchequer to Parliament.

9589. *Chairman.*] Are you sure that the trustees of the National Gallery had anything to do with that transaction; are you sure it was not the trustees of the British Museum?—I think not; I think Sir Thomas Lawrence intended that the trustees of the British Museum should be consulted, but I believe that, instead of taking their opinion, the opinion of the trustees of the British Institution was taken.

9590. Lord *Elcho.*] In that case you find fault not with the Chancellor of the Exchequer for refusing to sanction the purchase, or with Parliament for grudging the money, but with those who were intrusted with the management and collection of the pictures and drawings for the National Gallery for not having recommended the purchase?—Yes, the blame rests with them.

9591. Then that instance which you cite is not an instance in which the failure to purchase that collection by the nation resulted from parsimony, either on the part of Parliament or on the part of the Chancellor of the Exchequer?—No.

9592. The want of money was not the cause of that collection not being purchased?—No; I think the Chancellor of the Exchequer did wrong in asking the opinion of the trustees of the British Institution, and that their adverse opinion did the mischief.

9593. Lord *Seymour.*] Do you know when this purchase was refused to be made?—It was in 1837.

9594. Was that the only occasion on which it was refused?—There had been previous ineffectual negotiations.

9595. Do you know when the first negotiation took place?—Soon after the death of Sir Thomas Lawrence.

9596. Could you give me the date?—In 1834 Mr. Woodburn offered the whole or a portion of the collection to Government.

9597. Do you know at what price?—No; the purchase was not made; on the 25th of March 1835 they obtained an answer, declining the proposition.

9598. That was an answer from the Government, I presume?—I suppose so.

9599. Are you aware whether or not the trustees of the National Gallery had made any formal report to the Treasury upon the subject?—I have only understood that the trustees of the British Institution were asked for an opinion, and that they gave an adverse opinion.

9600. But you are not aware whether or not they gave such an opinion in writing, or whether, in fact, all this information that you have rests on any other foundation than that of rumour?—I believe it is in print.

9601. But a rumour may be in print; I wish, therefore, to ascertain whether the trustees are justly to be censured, because in 1834 the Government did not buy the drawings of Sir Thomas Lawrence?—I think it could not have happened,

pened, except under our present system, that that collection would have been lost in that way.

9602. But in saying that, you do not put the blame pointedly upon the trustees of the National Gallery, but you put it upon the general system, which takes in as well the control of Parliament, and the management of the Chancellor of the Exchequer, together with the trustees of the National Gallery; is not that so? I want to know who is to be blamed?—I was blaming the system; I was not attaching blame to the individuals, but I was blaming the system of having to come to Parliament, and complaining of the system under which that transaction failed.

9603. *Chairman.*] Can you state any instance in which Parliament has been niggardly in regard to supplying money to make a collection worthy of the nation?—No.

9604. Why then do you consider that the constitution of Parliament is unfavourable to the object of making a fine collection worthy of the British nation?—Because the Chancellor of the Exchequer must think of his colleagues and his place.

9605. Lord *Elcho.*] Suppose a sum of money were voted by Parliament?—It is inconvenient to propose any sum.

9606. *Chairman.*] Can you mention any instance of importance in which the trustees, having made application to a department of Government for the purpose of effecting a valuable purchase, that application has been refused?—I am not aware of any instance of it.

9607. Are you not aware that an application for the purchase of that picture which you have not only condemned as not worth upwards of 2,000 *l.*, but as exceedingly inferior, was made to the Government, and was acquiesced in readily; and is it not the case that many other purchases of pictures admitted to be of inferior value have been acquiesced in by the Government from time to time readily when an application has been made by the trustees?—I am aware of omissions to purchase.

9608. Lord *Seymour.*] You are aware that pictures have not been bought?—Yes.

9609. But you are not aware who is to blame for not having purchased them?—I think the blame is divided so much that I do not think anybody is particularly chargeable; I think it is the system that is vicious; as I said originally, a body shelters itself in its numbers.

9610. Are you aware whether or not the Chancellor of the Exchequer sometimes gives a private hint to the trustees, that from financial considerations they must not apply to him for money to purchase pictures that year?—I confess I think that is hardly a fair question; I could not speak to a private transaction with the Chancellor of the Exchequer.

9611. Lord *Elcho.*] You complain of the sins of omission of the trustees having been greater than their sins of commission; from your knowledge of the pictures that have been sold in England during the last 20 or 25 years, or since the trustees have been nominally forming a collection, do you think that for the sum of money they have expended on the pictures they have purchased, they might have selected better pictures than they have selected for the National Gallery?—Yes, I think they might.

9612. I put my question generally; during the time the trustees have been spending the public money in the purchase of pictures, do you think that for the sums they have so expended they might have acquired works, generally speaking, more worthy of the nation than those which they have acquired?—I think so.

9613. Supposing a sum of money were voted by Parliament annually for the purpose of purchasing pictures for the nation, would that sum do you think be more likely to be advantageously and profitably spent by a single director, or by a body, such as the present trustees?—By a single director.

9614. You say you would like to see established in this country the same system as that under which collections have been formed abroad by single directors acting under the sovereign, and you instance the case of Charles the First's collection in our own country; do you or do you not think, that if a certain sum were voted by Parliament, and if that sum were placed at the disposal of a sole director, you would have practically the same system as that which you say you would wish to see established in this country?—If he did not act under a fear of his conduct being disapproved of, and if he were sufficiently independent.

Rev. *H. Wellesley*, D. D.

21 July 1853.

9615. You would, I suppose, allow him assistants?—Yes.

9616. A secretary, and some sort of keeper resident at the Gallery?—Yes.

9617. Should you or should you not think it desirable, supposing you had a sole director with assistants, that he should be, to a certain extent, under the control of some Minister, either the Chancellor of the Exchequer or the Commissioner of Woods?—I would put him as much as possible, *mutatis mutandis*, in the position of directors-general in foreign galleries.

9618. *Chairman.*] I presume you would consider it desirable that an annual report should be given by the director?—For the information of the public.

9619. And of Parliament?—Yes, but not as controlling him.

9620. Upon the understanding that Parliament made an annual grant, it would be reasonable, would it not, that they should know in what way that grant had been expended?—Yes, and everything beyond it; but if he were not unshackled he could not make the purchases creditably; he must act also with secrecy; he must act *pro re natâ*; if he purchases pictures in Italy, he must employ agents, because there are no public sales there; if he purchases in London or at Paris, he may buy in open sale, and must do so in many cases, or lose the best pictures; in Germany he must have recourse to dealers and agents, and he must deal with private possessors everywhere; so that no general rules can be laid down; he must act as a private individual would act for his private interests.

9621. You have heard the evidence of Baron Klenze, on the mode in which the Bavarian Government increased their collection by sending from time to time confidential persons, or employing confidential persons; consuls and others?—Yes; that is acting as no Board or body of trustees could act; they could not possibly employ agents, but a chief director might do so; that is one of the modes to be employed in making the collection. I think there has been great misapprehension as to the power of making purchases, and the opportunities, which have been supposed to be greater and different from what they are really; it has been supposed that there is time for treaty; it is very rarely the case, in very marketable and first-rate works of art, that there is time for consulting anybody; the most valuable purchases are made on the instant, and things are lost while the opinion of a body is taken; and you cannot be sure that the best judges in that body will be in attendance on any given occasion.

9622. Lord *Seymour.*] Can you mention any facts on which you found that statement as regards the National Gallery, for instance?—I am aware of collections which have not been purchased, and which ought to have been. I can say no more than that.

9623. You state, as I understand you, that valuable works of art are sometimes offered, and that a decision must be so quickly arrived at with regard to them, that there is no opportunity to consult other persons?—Yes, I speak from my own experience as an individual collector.

9624. I asked you whether, with reference to the National Gallery, you knew of any valuable works, the loss of which could be attributed to that cause?—No.

9625. Lord *Elcho.*] Do you think it possible that such losses may have occurred from those causes?—I think it is next to certain that they have; I cannot specify instances, but, in the nature of things, such must have been the case.

9626. Do you think it can be otherwise with a system where you have a body of trustees who, when a sale takes place in which a picture worthy of the nation suddenly appears, have to meet to discuss that picture, and who subsequently having formed their own judgment upon it, have to apply to the Treasury for authority to purchase it, and finally to purchase it?—That is a very cumbrous proceeding; no private individual could form a collection in that way.

9627. And is it not likely that under the existing system, with what you describe as cumbrous machinery, it will get wind that the nation intends to buy such and such a picture, and that the price may be raised in consequence?—Certainly.

9628. Do I understand you to be of opinion that with a single director that evil would in a great measure be avoided, if not entirely?—Naturally it would be so; as in the case of a private individual, everybody contrives the best means of securing what he wants at the cheapest rate.

9629. You want to put the nation in the position of a private individual who wishes

wishes to form a collection of pictures?—Yes; and I think that if the Sovereign were in that position, and were entrusted with a *carte blanche*, and opened the Royal collection to the public, as is done in other countries, every condition would be fulfilled, and the best precaution would be taken to insure a creditable collection.

9630. *Chairman.*] Supposing the chief director not to be appointed on that system of Royal and supreme direction, but upon our constitutional system by Parliament, you would consider it desirable probably that Parliament should give some general instructions and authority to the director as to the mode in which the collection should be augmented and completed, for his guidance, and to relieve him of a portion of his onerous responsibility?—That should be included in his appointment; he should not be appointed unless all that were taken for granted, or unless he were as well able to give an opinion as those who appointed him.

9631. The collection has for many years remained with very small additions, and a general complaint exists of the want of augmentation. Unless some public expression took place as to the necessity and propriety of making rapid and great augmentations, the director would not know that he had power to do so; and, therefore, would it not be desirable that some intimation should be made to the director as to what he should be expected to do?—Yes, I think he should be made aware that he has larger powers than have been hitherto exercised by an individual.

9632. Do you not think it desirable that he should make up the collection in some historical or chronological series, or complete the collection of works by masters of particular schools, and arrange them properly, and that he should get some general intimation as to his course of proceeding?—Yes, I think he should be appointed, on the understanding that he is a person of great zeal, knowledge, and judgment, and likely to act in the manner most creditable and most efficient.

9633. Without any instructions whatever as to the desirability of making speedy and useful additions?—Everything of that kind, I think, is taken for granted.

9634. Lord *W. Graham.*] Do you think there are any individuals to be found in England possessing all the qualifications which would be necessary for a general director?—I should be sorry to think that this country was in that respect worse off than other countries in which such men are found. I cannot but think that this country would produce persons possessing an equal amount of honour, judgment, education, taste, and zeal.

9635. *Chairman.*] You are aware it has been complained of, and has been said publicly in Parliament, and also by the trustees, that one of the great reasons why things have not gone on well has been that there has been no distinct understanding or instruction as to the mode in which the trustees were to act in making up a collection. That being the case, do you think it desirable to introduce a new system, without any general instructions being given by the nation as to how the director of the national collection was to proceed?—I think his instructions should be general; he should be told to act for the best.

9636. Lord *Elcho.*] Would you give him instructions to this extent; that it is the wish of the nation to have a collection of pictures containing not only fine works of art, but containing specimens of the different schools chronologically arranged?—Yes; if that is a desirable object, in the opinion of him who is the best judge, I would let him act upon his judgment.

9637. *Chairman.*] Is not that the system upon which the trustees have acted, doing generally what they have thought best?—I do not know but what they have; I only judge of results. I imagine it is considered a failure, as I have just been informed in your question.

9638. Lord *Elcho.*] You think that if a competent director were appointed for the collection of pictures, he would naturally do that which my previous question suggested he should be instructed to do?—Certainly.

9639. Namely, collect good specimens of fine works of art, and arrange them chronologically?—Yes.

9640. Lord *W. Graham.*] Among what class of persons would you look for your director; would you look for him among connoisseurs, artists, or picture-dealers?—I would not take any particular class.

9641. Where do you think you would be likely to find him?—He would be found among the same class of persons as that in which he is found in other countries.

Rev. *H. Wellesley*, D. D.

21 July 1853.

9642. Are they artists?—No; I believe they are not persons in any particular profession; I do not think it is desirable that they should be; but I would not say a person should be excluded because he is an artist.

9643. *Chairman.*] You are favourable, are you not, to the combination of the various branches of fine art and monumental antiquity, which has lately been much agitated?—Yes, but I do not attach much importance to concentration; I think the public convenience is best consulted otherwise.

9644. To what do you allude when you speak of concentration?—What takes place in the British Museum, where there is too much.

9645. I limited my question to monuments of antiquity and fine art; do you think it desirable to combine the art collections in the British Museum with the art collections in the National Gallery?—Upon principle, you should keep the fine arts together; but as the case stands now, having made our arrangements, we cannot do it; it would be necessary to break up the British Museum and remove the gigantic sculpture that is there collected.

9646. Are you aware whether the directors of the British Museum themselves consider there would be any inconvenience in removing the sculptures?—I have not spoken to any of them on the subject.

9647. Are you aware that Mr. Hawkins has said that the expense of removing the large Egyptian statues from one part of the building to another is not much less than the expense of removing to a place some distance off would be?—I know nothing about the expense, but it would obviously be a great expense and trouble.

9648. Do you think, with regard to the great monuments which have been brought from Thebes and Egypt to this country, that there would be any insuperable difficulty in removing them from the British Museum to the neighbourhood of Hyde Park or Kensington Gardens?—No.

9649. Lord *Seymour.*] Having spent a large sum of money in making a place at the British Museum to show the antiquities of Nineveh and of Egypt, do you think it would now be desirable to build another large place, and to remove them all, in order that they may be shown in that other place?—I think it is a great pity that they were placed at first within the region of London smoke; and I feel some doubt as to whether the expense of removing them is worth incurring.

9650. *Chairman.*] Do you mean that the expense is hardly worth being incurred of removing them from the region of London smoke?—Yes; and the sacrifice of the outlay for building rooms, which would be unfit for any other purpose.

9651. You mean to say, that having been once exposed to the influence of smoke, it is better to leave them there than to relieve them from it at a certain expense?—It is a mere question of incurring great expense and trouble; but that they are deteriorating is beyond all doubt, in consequence of the action of the London atmosphere.

9652. Do you not think that great benefit might arise in what is admitted to be the crowded state of the British Museum from handing over that space to other departments which are greatly in want of room, and transferring the monumental antiquities to a more favourable situation?—On principle, it would be better to recast the whole, and separate the works of art; but the prints and drawings which are in the British Museum ought, on principle, to be with the pictures.

9653. Lord *Seymour.*] Are you acquainted with the collection of pictures and drawings at the British Museum?—Yes.

9654. Are you acquainted with the additions that have been made to that collection for some years?—Yes.

9655. Do you think that those additions have been judiciously made?—I think they have.

9656. You think that, as a national collection, with a limited sum of money applicable to the purpose, the money which has been allowed for the collection of prints and drawings has been well expended?—They have done very well.

9657. That is an expenditure carried on under the management of a body of trustees, I think?—Yes; but greater discretion has been left to the individual at the head of the department than there was originally.

9658. There there is the responsibility of the trustees to the Government, and the responsibility of the head of the department to the trustees?—Yes.

9659. If

9659. If that system has answered well for the collection of prints and drawings, why should not some analogous system answer well for the collection of national pictures?—I propose that the director-general should have a person in each department under his control, and with power sufficient for the carrying on of their respective departments with success and efficiency, of which the director-general should be the judge. Rev. *H. Wellesley*, D.D. 21 July 1853.

9660. But having shown that the system adopted with regard to the collection of prints and drawings under the management of the trustees at the British Museum has succeeded very well, I understand you propose a very different system for the management of the National Gallery?—Yes, I do, because there is no interposition there of a single director.

9661. Do you not think it would be advisable to have first a director, then to have a body of trustees as visitors and advisers, who might have a general control, without interfering further than the trustees at the British Museum have interfered with the collection of prints and drawings, for instance?—If they let him have sufficient liberty, there would be no objection to that.

9662. Lord *Elcho.*] In the print and drawing department you said the individual had a great deal to do with it, meaning the person at the head of that department?—Yes.

9663. Are we to understand that, practically, he has had the management of that department?—I believe he has had a larger sum at his disposal than some previous keepers have had.

9664. In the expenditure of that sum, to what extent would the trustees interfere with or regulate his purchases?—I believe he has to refer to them for extraordinary outlays, which must occasionally occur; and that the sum placed at his disposal annually is for ordinary purposes.

9665. Lord *Seymour.*] Are you aware whether or not, although there is a sum of money placed by Parliament under the direction of the Treasury for the purchase of prints and drawings, yet the head of that department makes no purchases without first reporting to the trustees his intention so to purchase?—I do not know whether he always reports his intention, or how far the control acts upon him.

9666. You are not aware how far the control of the trustees is exercised over the head of the department of prints and drawings?—I cannot say to what extent it is exercised; but I believe, from the better way in which the purchases have been made of late years, that greater liberty has been used by Mr. Carpenter than was exercised by his predecessors.

Veneris, 22° *die Julii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Lord Elcho.
Lord William Graham.	Lord Seymour.
Mr. Vernon.	Mr. Baring Wall.

COLONEL MURE, IN THE CHAIR.

George Saunders Thwaites, Esq., called in; and further Examined.

9667. *Chairman.*] I THINK you are the oldest officer of the gallery under the trustees?—I have been there from the first institution of the National Gallery. *G. S. Thwaites*, Esq. 22 July 1853.

9668. You have a recollection, have you not, of the mode of doing business during the early period of the institution?—I have a distinct recollection of it.

9669. What was the exact nature of the part taken by the trustees in the business of the gallery at that period?—They, for nearly four years, had occasional consultations with the keeper, Mr. Seguier, and acted upon his recommendation, and upon their own views.

G. S. Thwaites, Esq.

22 July 1853.

9670. They were appointed in July 1824?—The six early trustees were appointed in July 1824.

9671. During those first four years, or nearly four years, no meetings were held?—No meeting was held whatever.

9672. I believe Mr. Seguier was not constantly in the gallery?—He was not constantly in the gallery, but he was very frequently there.

9673. When the trustees visited the gallery did they come in a body officially, after a notice; or did they come in accidentally, or according as it suited their convenience?—I cannot speak of any notices, for none were issued by me; but they frequently came in threes and fours, and very often singly. There were one or two of the trustees who seemed to take a leading part; I should name Lord Farnborough, who was then Sir Charles Long, Sir George Beaumont, and Sir Thomas Lawrence. All the trustees, including Lord Liverpool, then Prime Minister, were frequent in their visits.

9674. When I spoke of notices, I did not mean notices issued by you requesting their attendance, but whether they gave notice that it was their intention to visit and inspect the gallery?—I have no recollection of any; but such notices may have been given to Mr. Seguier.

9675. When they came in that way singly, or in groups of two or three or more, did they give instructions to you or to the head keeper?—Rarely to me; their instructions were almost invariably given to Mr. Seguier, the keeper; but occasionally I was made the channel through which those communications were made.

9676. Are you aware of the reason which induced them to commence holding meetings in the usual form?—I should say it proceeded from the circumstance of Sir Robert Peel being appointed a trustee in the autumn before; and he, being a man of business, thought it necessary to adopt a more formal course with respect to the transactions of the trustees.

9677. The first meeting held was on the 7th of February 1828, I think, according to a return with which you were kind enough to favour the Committee?—Yes; and that you will find followed closely upon the appointment of Sir Robert Peel.

9678. Several pictures having been purchased during that early period, how were the purchases effected?—By a communication between the trustees and the Treasury.

9679. During the period that elapsed prior to holding a meeting, when they were in the habit of visiting the gallery in the way you have described, there were several pictures purchased?—There were four, I think.

9680. You say they were purchased on the recommendation of the trustees to the Treasury?—Yes.

9681. Do you know how the trustees became aware that those pictures were for sale, or made up their minds as to the propriety of recommending the purchase of them, as they were not in the habit of holding meetings?—They were perfectly and thoroughly acquainted with the whole of the four pictures.

9682. In what mode came they to be acquainted with them?—One was a well-known picture, that came from the collection of the King of Spain; it had been in the country before, and had been examined and seen by all the trustees; it then passed over to Paris, where it was purchased by Monsieur Perrier, and at his sale it was purchased by Mr. Nieuwenhuys, who brought it to this country, and immediately offered it to the trustees for the National Gallery. The other three pictures were equally well known and authenticated.

9683. There was no formal or business meeting, discussion, or arrangement among the trustees, as to the expediency or otherwise of purchasing these pictures?—There must necessarily have been considerable discussion, but there were no minutes of any kind taken of the circumstances, to my knowledge.

9684. Then there is no official record as to the date of those purchases; the date is merely given here from your recollection of the period when they came into the gallery, or how do you make it out?—The date of the purchase of the pictures is taken from a comparison of our catalogues; I am not prepared to say if there was any other guide to us in making that return, but I presume that the former was the course.

9685. It appears, according to this return, that in 1828, the first year in which meetings were held, there were three meetings held; is not that the case?—Exactly.

9686. In 1829 no meeting was held?—I am not aware of any.

9687. In 1830 two meetings were held?—Exactly so.

9688. In each of the two subsequent years, 1831 and 1832, there was one meeting?—Yes; there were no pictures purchased during those years.

9689. In 1833 there were two meetings?—There were.

9690. After which period the meetings became more frequent?—Much more frequent.

9691. On the 10th of June 1840 the trustees passed a resolution that it was desirable to have periodical meetings, and that there should be a meeting held on the first Monday of every month during the sitting of Parliament?—Exactly, which has been complied with; but I wish it to be understood that there were special meetings called whenever it was necessary, besides those pointed out by that minute.

9692. Are you aware of any particular reason which induced the trustees, who had been hitherto in the habit of meeting according as circumstances might occur, to adopt a resolution to have fixed meetings?—I am clearly of opinion that it was from the increase of business, and from the necessity that arose for a more systematical method of meeting it.

9693. According to the minutes, it appears to have been the practice at the meetings that the whole proceedings or resolutions adopted should have the appearance of being unanimous?—Certainly.

9694. It has not been the practice to record dissents where there was a difference of opinion?—Certainly not.

9695. That practice has prevailed, has it not, up to the present time?—Up to the present time.

9696. Even where there might have been serious differences of opinion among the trustees, and a division might take place, still they have been in the habit of only entering in their minutes anything that was adopted?—Whatever was adopted was entered as the decision of the trustees.

9697. Were you of opinion that at that early period of the office of the trustees, they were in the capacity of a managing or of an inspecting and controlling body?—They were certainly only appointed in the first instance as a managing body. I think those were the very terms in which they were appointed. The purchase of pictures appears to have been invariably authorised by the Treasury.

9698. Do you consider that that can be characterised as a managing body, which holds no regular meetings, and where only individuals come in incidentally rather than officially, and look at pictures from time to time, and give occasional instruction to the keeper?—I should say it was not a very official way of transacting business; but at that early period so little was required of the trustees, that this is not extraordinary.

9699. Do you not think that that species of activity to which I have alluded would be more properly characterised as the interference of an inspecting and controlling body than of an actually managing body?—I am hardly prepared to answer that question.

9700. Lord *Seymour*.] It appears from your evidence now, that in the early years of the National Gallery, the management was much more left to the keeper than it has been of late years?—Decidedly so.

9701. In 1843, when Sir Charles Eastlake was appointed keeper, the trustees took a somewhat more active part than they had done previous to 1843, did they not?—I should say that gradually the trustees fell into a more official routine of business than had obtained in the early part of their appointment.

9702. And again, during the time that Mr. Uwins has been keeper, the meetings of the trustees have been more regular, and their system of business somewhat more methodical?—I think it has gradually been becoming so.

9703. *Chairman*.] Did you consider Mr. William Seguier as a very efficient officer?—I should say he was as efficient an officer as could possibly be found.

9704. Do you consider that the pictures were in a good state during his period of management?—Generally speaking they were; it is obvious that many of the pictures from the first had suffered to a small extent; they were in a very good state, as far as the real condition of the pictures went; but many of them had become very brown from repeated varnishing during the time that had elapsed from our first acquiring them; and perhaps that may have been caused in some measure by a small proportion of oil having been mixed with the

G. S. Thwaites, Esq.

22 July 1853.

varnish, which had brought them to a degree of brownness, if I may use the expression, not satisfactory or agreeable to the eye of the spectator.

9705. Mr. *Vernon.*] Have the trustees been in the habit of taking any special interest in the studies of the students?—Occasionally they have, decidedly; they have regulated the study entirely; the admission of students has been regulated by their minutes, and they have frequently visited the gallery on the private days, and have taken considerable interest in the works that were going forward.

9706. Have any representations been made to them at any time by students as to the want of accommodation in the gallery, or as to their not being allowed to be there sufficiently often?—Representations have occasionally been made, and they, as far as we could remedy them, have been remedied; there was an application from the students as a body about 12 or 14 years ago, urging the trustees to allow the whole of the students to come without being appointed to special lists; instead of having 40, and afterwards 50 students at a time, and then having that number changed, they wanted every student to be admitted permanently at all times; but the trustees considered that with the limited accommodation of the gallery, it could hardly be done without great inconvenience to the artists themselves.

9707. When you say permanently, do you mean that when once admitted they were always to be admitted?—I mean that whenever they thought proper to enter the gallery for the purpose of study, they were to be admitted at all times.

9708. Lord *Seymour.*] Will you state what is the reason why the students are limited to a quarter; are they obliged to miss a quarter before they can come again for study?—The reason is, because if they were to put down their names for two consecutive quarters, it would throw out new applicants.

9709. But in cases in which the places in the gallery are not filled, would it not be convenient if you admitted those who had studied in the previous quarter?—That might be done.

9710. Has it ever been considered?—It has been done in a limited degree; the keepers, both Sir Charles Eastlake and Mr. Uwins, have granted extra time to the students when they wanted a few days to complete the works they had undertaken for the three months.

9711. Then it seems that by your arrangement a favour is shown to the students of the Royal Academy which is not conceded to other students, namely, the favour that they may study for six months consecutively, whereas other students can only study for three months, and then they must be deprived of the advantage of studying for the three following months?—That is so; but I wish to observe that it does not interfere with the students on our special list in any way.

9712. Why is a favour granted to the students of the Royal Academy to the disadvantage of other students?—I cannot say why it was done; but I should say that it was not to the disadvantage of those other students.

9713. You have already told me that students come for a quarter, and are then excluded for a quarter, for the convenience of other persons?—Certainly.

9714. But is it not the case that the students of the Royal Academy may come for a quarter and may continue for the next quarter?—They are allowed to come there for half a year.

9715. Therefore they come for a quarter and continue for the next quarter?—They continue for the next quarter; but then we presume that they are out for two quarters, so that it brings it to the same point.

9716. But is it not the fact that they go out for a quarter and then come back again?—They are put down in a list furnished by the Royal Academy for six months.

9717. But are you aware whether when a student of the Royal Academy has studied for six months, he may go away for three months, and then come back again?—He may then be placed on our list, so that he may have nine months.

9718. Then he may get nine months in the year where another student can only get six?—Yes.

9719. Is not that an advantage to the students of the Royal Academy in comparison with others?—Certainly it is; but I do not think it is at the expense of the others, because there is a small number of students on our list.

9720. It

9720. It must tend to exclude a certain number of the others, must it not?—I think not; it may in one or two instances, perhaps.

9721. The whole number admitted is limited, is it not?—The whole number is limited, except that we have the power of adding as supernumeraries students who come from foreign countries, or from distant parts of our own country, so that we very frequently have from eight to ten supernumeraries.

9722. Who admits the supernumeraries?—The keeper, under the authority of the trustees.

9723. Is there any regulation laid down by the trustees as to the admission of these students?—I am not aware that there is any minute of it.

9724. Then this rests upon some understanding between the trustees and the keeper?—I presume so.

9725. Are you aware whether or not the keeper does practically admit students without reference to the trustees?—Without reference to the trustees, probably; but not without their authority.

9726. Because he has a general authority, has he not?—I have every reason to believe that he has authority for admitting on the list a few supernumeraries who come from distant parts of the country, and come suddenly to London, and it would be a hard case if they were refused admittance under those circumstances. I think no one can be refused admittance under almost any circumstances.

9727. You think that practically no one is refused admittance?—Practically I should say not; but they may have to wait a shorter or a longer period.

9728. Do you think that practically, when a student has come and studied for three months, he is allowed, if he applies, to go on for the next three months?—Certainly not.

9729. That is an instance in which a student is practically excluded?—If he is a resident in London, it is so, certainly; he is then excluded for three months, so as to admit of a succession of new students.

9730. But a student who has been studying at the gallery for three months must be a resident in London or the neighbourhood, must he not?—That does not follow; they frequently come to town for a longer period than three months, and in that case, in all probability, they would find no difficulty in getting a few extra days.

9731. Do you mean to say that, although a person has resided in London for three months, you do not call him a resident in London?—Certainly not, if he permanently resides in the country.

9732. If a person comes and says he wishes to study, and studies for three months, he might, on stating that he comes from the country, be allowed to continue three months more, might he not?—That has been done, but I do not think we could set it down as a rule; in general they rarely require more than three months; if they do require a few extra days, they invariably get it.

9733. Do these applications come to you at all?—The applications may by mistake be addressed to me, but they ought to be addressed to the keeper, and he regulates the thing entirely; I have no control over the lists whatever.

9734. You do not interfere in any way with them?—Not in the least; but I give my opinion when I am asked, as to my knowledge of the students, and their condition and so on.

9735. Do you give any advice as to the number of persons who are occupied in the National Gallery, and as to whether or not there is room for more?—I have never been asked for that advice, that I recollect.

9736. Mr. *Vernon.*] You have no knowledge how the list is dealt with; whether it depends on the order in which they put down their names?—I make out the lists from the letters of application that come to the keeper; the keeper examines them, and if he finds that they are eligible as students, if their specimens have been approved of, and they are eligible in other respects, he hands their letters to me, and I place them on the next list.

9737. *Chairman.*] Have you any recollection of the time when the name of Committee, under which name the trustees, as they are now called, were designated in the minute appointing them, was changed for that of Trustees?—I have not; I have looked over the minutes very carefully, but do not find any trace of it; I believe it was owing to their being addressed from the Treasury as trustees.

9738. It commenced probably at a very early period?—It was commenced at an early period, certainly.

Morris Moore, Esq., called in; and further Examined.

M. Moore, Esq.

22 July 1853.

9739. *Chairman.*] YOU have paid a good deal of attention to the practice of purchasing pictures in the National Gallery?—I have paid some attention to it.

9740. Have you had occasion to be satisfied with the practice of the National Gallery in that respect?—On the contrary, I am very dissatisfied with it indeed.

9741. Will you state your reasons for dissatisfaction?—My reasons are, that the majority of the purchases which have been made are from inferior schools, and that some of the pictures are not what they profess to be; in short, are spurious.

9742. Do your objections extend over the whole period of the management of the gallery, or do they refer to any particular period?—Since 1843 to the present time.

9743. Were you satisfied with the purchases made previous to that period?—On the whole, certainly, I was satisfied.

9744. What number of pictures have been purchased since 1843, after the death of Mr. William Seguier?—Eighteen pictures. The whole of them have been purchased, either under the keepership or trusteeship of Sir C. Eastlake.

9745. Do you consider that any portion of them were good purchases?—I consider that there is only one unexceptionable purchase among them.

9746. What is that?—"The Vision of a Knight," by Raphael. Of those 18 pictures, only six can aspire to be of the purer and greater ages of art. The remaining 12 are all of a degenerate period.

9747. You mentioned that there was only one unexceptionable purchase made, but that there are other pictures which you consider belong to good periods of art. On what ground do you consider them as objectionable, and which are the pictures to which you allude as being of good periods of art, and yet objectionable?—I allude to the "Doge," by G. Bellini; "A Man's Portrait," by Van Eyck; the "Tribute Money," ascribed to Titian; the "Marriage of St. Catharine," said to be by Palma, the last of which has never made its appearance; and the picture last purchased, and ascribed to Giorgione. These, with "The Vision of a Knight," make the six pictures to which I have alluded, as belonging to the purer and greater ages of art.

9748. Then you merely approve of them as belonging to a good period of art, without reference to their merit?—Precisely. I approve of the purchase of the "Vision of a Knight," by Raphael, in every respect; I consider it an unexceptionable purchase. As to the portrait of the "Doge," by Bellini, and the portrait by Van Eyck, I cannot but object to the price given for them, when I compare it with what has been given for two pictures by the same masters, of much greater importance, and which have been sold during the interval under discussion.

9749. Lord *W. Graham.*] Which two pictures are those you allude to?—I allude, first, to a picture that has been twice sold at Christie's since 1843. It represents "Saint Jerome in his Study," and is by Van Eyck. It was sold in 1848, at Sir Thomas Baring's sale, for 139 *l.* 13 *s.*; and again in 1849, at Mr. Coningham's sale, for 162 *l.* 13 *s.* Thus there have been two opportunities of buying this picture for the National Gallery. Even on the last occasion, it brought less than half the price that was given for the comparatively unimportant head in the National Gallery, which cost us 365 *l.* The "Van Eyck Head" was sold at Lord Middleton's sale, in 1851. Sir C. Eastlake and Mr. William Russell were present at the sale, and bid for it; but it was knocked to Mr. Farrer for 315 *l.* A few days after, it was purchased by the Gallery for 365 *l.* Then, as to the "Doge," by Bellini, there have been sold within the same interval, no less than three pictures by the same master, of greater importance, and two of them at smaller prices; namely, "The Virgin and Child," sold at Mr. Coningham's sale, in 1849, for 183 *l.* 15 *s.*; "The Virgin Enthroned, with Infant Christ and Saints," at Mr. Dawson Turner's sale, in 1852, for 378 *l.*; and a "St. Francis in the Desert," at Mr. Buchanan's sale, likewise in 1852, for 735 *l.* The first of these pictures cost less, by 26 *l.* 5 *s.*, than one-third of the price given for the "Doge;" the second, notwithstanding the greater interest of its subject, and its superiority in every respect, only 63 *l.* more than half; and the third, although a work of singular importance, only 105 *l.* more. "The

Virgin

Virgin and Child," and "The Virgin Enthroned, &c." together, cost less, by 68 *l.* 5 *s.*, than the "Doge" alone. The one is now in Mr. Thomas Baring's collection; the other, in Lord Ashburnham's.

9750. Have those pictures you mentioned, been sold since those were bought? —The three Bellinis have been sold since the purchase of the "Doge," for the National Gallery; the "Saint Jerome," by Van Eyck, also was sold, on both occasions, before the Van Eyck Head was bought for the National Gallery.

9751. Mr. *Vernon.*] But the Coningham sale was subsequent?—Both Sir T. Baring's and Mr. Coningham's sales were subsequent to the purchase of the "Doge," but anterior to the purchase of the Van Eyck Head.

9752. Was the time when that picture you have alluded to by Van Eyck was sold at Mr. Coningham's sale, subsequent to the purchase by the National Gallery of the portrait?—No; it was anterior to the purchase of the National Gallery portrait. The latter was bought last year; the "Saint Jerome" was first put up for sale at Sir Thomas Baring's sale, in 1848, and then again at Mr. Coningham's sale, in 1849.

9753. Then the purchase for the National Gallery has been subsequent? —Yes.

9754. *Chairman.*] Then these pictures to which you have just adverted are objectionable, not so much on account of being bad pictures, but because high prices have been paid for them, when other works as good, or better, by the same masters, might have been purchased at a cheaper rate?—Precisely; because works so much finer, by the same masters, have been sold for little more than half the price that we gave for them. This is the only objection I have to the purchase of those two pictures. I do not say that the price paid for them was positively too great; I am not now giving an opinion as to that; I merely wish to make it known that finer pictures, by the same masters, have been sold, since 1843, for half their cost.

9755. And you consider that, on the occasion of those sales, the trustees of the gallery had the same opportunities of purchasing the pictures which they omitted to purchase, as of purchasing the pictures they have acquired?—Certainly. With regard to the "Tribute Money," though, in my opinion, falsely ascribed to Titian, yet, as a work of Titian's school, and as possessing considerable merit for colour, I cannot condemn it altogether. I must here draw your attention to the fact, that this picture, for which we have been made to pay the preposterous sum of 2,604 *l.*, might have been purchased a few months previously, for 1,000 *l.*; but even this would have been a sum far beyond its value.

9756. Under what circumstances?—It was sent here by the executors of Marshal Soult, and was consigned to Mr. Nieuwenhuys, at whose house it was seen by some of the trustees. A very fine picture, by Sebastiano del Piombo, was sent with it.

9757. Into whose hands did that picture pass from Mr. Nieuwenhuys?—It was returned to Marshal Soult's executors, in order to be put into the Soult sale, which took place last year. Both the Sebastiano del Piombo and the "Tribute Money" together, might have been purchased for less than was given for the last picture alone. I have never seen the Sebastiano del Piombo, but I have heard from good authority, that it was a very fine and unquestionable work of the master.

9758. Are you aware whether there were, at that time, other pictures belonging to the collection which might have been had for a comparatively small sum? —I am not aware that there were other pictures of that collection sent to London.

9759. You are not aware whether the great Murillo, which was sold for 23,000 *l.*, might have been obtained for a much smaller sum?—Mr. Samuel Woodburn frequently told me he might have purchased the whole collection for less money than was given for that single picture.

9760. Why did he not purchase it?—Because he did not think it a good speculation.

9761. Do you think that that showed much judgment on his part?—I never saw the collection; but, to judge from the catalogue, which I have seen, I should say that what the Murillo fetched was quite as much as the whole collection was worth. To proceed with the National Gallery purchases. It appears that the Palma, which was purchased for the nation last year at M. Collot's sale, in Paris, for 168 *l.*, but which we have never been allowed even to see, has been considerately

M. Moore, Esq.

22 July 1853.

considerately taken off our hands by one of the trustees. "The Minutes of the Trustees, from 1847 to 1852," inform us that the sum of 4,500*l.* was destined for the purchase of the "Tribute Money" and of this Palma, to be divided thus: 3,000*l.* for the "Tribute Money," and the remaining 1,500*l.* for the Palma; but, in the event of the "Tribute Money" bringing less than the 3,000*l.*, the entire balance between its cost and the original sum of 4,500*l.* was to be devoted to the acquisition of the Palma. The "Tribute Money" was knocked down for 2,604*l.*; the agent, therefore, had full power to give 1,896*l.* for the Palma. It brought 168*l.*

9762. Are you led to believe that that picture has turned out to be a genuine Palma?—I have not the slightest notion. I believe it is generally understood that one of the trustees has taken it off our hands, to save exposure; it was considered too bad a picture to hang. Such is the general impression; I cannot in any other way account for a trustee's venturing upon such a course. If this picture was really worth no more than the 168*l.*, the voting 1,896*l.* for the purchase of such a work is a remarkable instance of the want of judgment of the trustees, and of the reckless manner in which the public money is expended at the National Gallery. If, on the other hand, it was worth this large sum, we have one of the trustees actually appropriating 1,896*l.* worth of the public, minus the 168*l.* which the picture cost. The last of these pictures, which I have described as belonging to a great period of art, is the one ascribed to Giorgione, recently purchased.

9763. What is your opinion of that picture?—My opinion is, that it is in so wretched a state, as to be entirely unavailable for study. Therefore, it is not a purchase I can approve of.

9764. Lord *Elcho.*] What is your opinion as to the authenticity of that picture?—My impression, when I first saw it in 1841, was that it was by Giorgione; but I am no longer convinced that it is by that master. I now see in it much more of Giovan Bellini.

9765. It was you who discovered that picture, was it not?—Yes; and it was I who gave it the name of "Giorgione."

9766. You say it is long since you have ceased to consider it a Giorgione?—I have no longer the conviction that it is a Giorgione; it may be partly by Giorgione, and partly by Bellini.

9767. How long is it since you have doubted its authenticity?—I have, for a long time, doubted its being by Giorgione.

9768. Did you doubt it, and express those doubts to the late Mr. Woodburn, during his life?—I always avoided conversing with him about this picture; he frequently alluded to it, but I thought it a very ill-judged purchase of his, on account of its wretched condition; and, therefore, I made a point of turning the conversation whenever he began to speak of it.

9769. Was it partly through you that he was induced to purchase it?—I had nothing whatever to do with his purchasing it. It was not until some time after Mr. Woodburn had purchased it, that I was made aware of the fact.

9770. Did you, subsequently to the purchase of that picture by the nation, express to any one any opinion as to its being a picture by Giorgione, though in a damaged state?—Never.

9771. You did not say to me in your room, subsequent to the purchase of that picture, that you considered it a Giorgione, though injured?—Certainly not; I expressed no positive opinion upon it. I have, long since, entertained doubts of this picture's being by Giorgione. It is not, however, a question upon which I should care to dispute. The opinion I even now entertain of it, is not altogether incompatible with its being an early Giorgione.

9772. What was the object of your having that letter written to you by Mr. Baldeschi, with reference to that picture?—Merely to prove how that picture had come into notice.

9773. Your wish was to prove that that picture had come into notice, in a great measure, through you?—Yes.

9774. Was that wish in consequence of your considering it a valuable picture?—Certainly. It was once a valuable picture.

9775. At that time you considered it to be a Giorgione that you had discovered?—I can hardly specify the date at which I first doubted its being by Giorgione.

9776. When you first discovered that picture, did you or not consider it a Giorgione?

Giorgione?—I did; it was on my authority it was thus received in Rome and elsewhere.

9777. *Chairman.*] You say you are now rather inclined to consider it a Bellini?—I am.

9778. Do you not think the two younger male figures are more like the style of Giorgione?—I certainly think the kneeling figure resembles Giorgione.

9779. Do you know any picture by Bellini with figures painted in that manner?—If the picture, generally, had not some great resemblance to Bellini, I should certainly not feel inclined to ascribe it to that master. There is, however, something about it that I cannot entirely reconcile with either master; and yet I can see in it a likeness to both.

9780. When you say the picture has strong symptoms of being by an early master, or by his pupil, that gives rise to a fair presumption that the picture may have been painted by the young painter, when emerging from the school of the elder one?—I do not consider any part of it sufficiently stamped with the characteristics of Giorgione, to make me feel confident that it is his work.

9781. Lord *Elcho.*] What was the date of the discovery of that picture?—1841.

9782. Do you consider that you have gained great experience in the knowledge of pictures since 1841?—I think so.

9783. Do you consider that your opinion now is more valuable than it was in 1841 with regard to the authenticity of a picture?—I hope so.

9784. Is it in consequence of the experience you have gained by time, and the study of works of art, that the picture which in 1841 you considered to be original, and to have been a discovery of a Giorgione by yourself, you now consider to possess so few of the characteristics of Giorgione, that you are rather disposed to attribute it to Bellini?—I still consider it to be an original work; but I am now more disposed to attribute it to Bellini.

9785. Do you know any picture painted by Bellini with a figure at all resembling in style and character that of the kneeling knight?—Certainly, I have seen pictures by Bellini that resemble it.

9786. Where?—Many.

9787. Will you name one?—I have seen pictures in Italy, by Bellini, resembling it in style very much.

9788. Will you name one, if you please?—I might refer you almost to any Bellini.

9789. Do you know any in this country?—I do not know any Bellini of a similar subject in this country; but I have seen many Bellinis resembling it.

9790. Then it must be easy, having seen so many, to name one?—I should say it is like Bellini, generally. If strong presumptive evidence, say of an historical kind, were adduced in favour of its being by Bellini, there is nothing, even in the figure of the "knight," which would make me care to contest it. This figure is, certainly, somewhat Giorgionesque in character; it was this that originally made me think the picture was by Giorgione. I consider the "Virgin and Child" to be decidedly Bellinesque, but so excessively feeble in character, that it is no great compliment to Bellini, to attribute it to him. If really by this master, it would be but a very poor example of him.

9791. Is there much resemblance between Bellini and Giorgione?—A very great resemblance.

9792. Mr. *Vernon.*] Are you not prepared to admit that it is at all events a genuine picture of the transition period between Bellini and Giorgione?—I am quite prepared to admit that; at least as far as I may, in its present detestable condition.

9793. And as such is it not a highly interesting and valuable work to possess?—I consider that, in its present state, it is utterly unavailable for study; therefore, were I to acquiesce in the propriety of such a purchase, it would be merely from a feeling of veneration for a canvas which I know to have been, at one time, adorned with some of the eminent qualities that distinguished a great school of art.

9794. Is it not a picture which, even in a somewhat dilapidated condition, is so genuine a picture of the transition period between Bellini and Giorgione, that it must be an agreeable picture for a lover of good Italian art to look upon?—The phrase, "a somewhat dilapidated state," too faintly indicates its actual condition. This picture is now only the shadow of its former self; indeed, it is barely recognisable as the same picture I saw, in 1841, at Florence. Deprived,

M. Moore, Esq.

22 July 1853.

as it is, of that beautiful quality of colour, which once rendered it so attractive, it is now remarkable only for excessive poverty of form and design. To me it is anything but agreeable in its present condition.

9795. Lord *Elcho.*] Do you consider that in its present condition it is a purchase which should not have been made for the nation?—I repeat that my chief, if not my only reason for acquiescing in the propriety of such a purchase, would be a feeling of reverence for a canvas upon which there once existed a beautiful painting. Considered as a work of instruction with regard to the principles of the Venetian school, it can scarcely be said to be of any use; not a vestige of the original surface of the picture remains; to this I can give my personal testimony.

9796. On what is that testimony founded?—I repeatedly saw the picture when entirely stripped of its original surface. Since then it has been bedaubed, and "toned down," as we now see it. Notwithstanding this "toning down," it is many degrees paler in hue than t was.

9797. *Chairman.*] Do you not think that it is a picture calculated to improve public taste, and to impart a certain degree of feeling towards that period of art with which it is generally supposed to be desirable to inspire the public; I am not speaking of artists and copyists, but of the public generally who visit the gallery?—To a person not well acquainted with the peculiar excellence of colouring for which that period of the Venetian school was so conspicuous, and on which that school rests its chief claim to our admiration, it may still possess some charm; but, to me, it is an object rather of pain than of pleasure.

9798. Do you not consider that that is a picture calculated to form a good addition to our collection, as tending to purify and improve the taste of the public? —I object to the purchase of that picture on the ground of its being in a most dilapidated state, and also on the ground of other pictures of the same class, and in a much finer state, having been neglected, although they might have been secured for even smaller sums. These are the grounds of my objection to the purchase of the picture in question.

9799. Lord *Elcho.*] Are those pictures which you describe as being of the same quality and period of art, and which you describe as having been sold for much less money, now to be had?—That is a question I cannot answer, as the parties who purchased those identical pictures, may not be disposed to part with them; but I have little doubt that others of the same category may yet be had.

9800. *Chairman.*] Will you have the kindness to answer, yes or no, whether that is not a picture calculated to improve and purify the public taste in reference to these earlier schools of Italian art?—In its present condition, it is a picture I should not study myself, neither should I recommend any one else to study it. I can scarcely, therefore, admit that it is of much use towards improving and purifying the public taste. It looks more like a feeble, chalky copy, than an original work of the Bellinian age.

9801. Mr. *Vernon.*] You stated just now that there were many other pictures which might have been purchased; do you mean that there had been any opportunity of purchasing pictures of which there was a fair presumption that they might be the work of Giorgione?—The bare question of their being by Giorgione or not, would be comparatively indifferent to me; my remarks refer to works of the same description, that is to say, to works which exemplify the same principles, and possess the same attractions, as the one of which we are speaking formerly did.

9802. Have you seen pictures of which there was a fair presumption that any of them was by Giorgione?—I have seen specimens of that transition state to which you refer, as interesting and valuable as the one under discussion once was; whether they were by this master or that, is comparatively of little consequence.

9803. Is it not the case that pictures by Giorgione are of very rare occurrence? —They are; but I consider the picture recently purchased for the gallery as far from being an unquestionable Giorgione.

9804. Pictures with a fair presumption that they are by Giorgione, at any period are very rare?—Undoubted pictures by Giorgione are very rare indeed.

9805. *Chairman.*] Have you finished your remarks on the pictures which you considered of a good period, or not absolutely objectionable, but objectionable on special grounds?—Yes. There remain 12 pictures; of these I have made exceptions in favour of three. First, the "Jewish Rabbi," by Rembrandt, knocked down

down to Mr. Farrer, for 430 *l.* 10 *s.*, at Jeremiah Harman's sale, in 1844, and purchased by the Gallery, a few days afterwards, for 473 *l.* 11 *s.* This picture is in a very fine condition. I must, however, remark, that works of a much higher character have been frequently sold for less money than this cost us. The beautiful little Raphael, "The Martyrdom of S. Placido," was sold, in 1849, at Mr. Coningham's sale, for 325 *l.* 10 *s.* Secondly, Gerard Dow's own portrait, by himself. I have excepted this almost entirely on account of its being the portrait of a celebrated Dutch painter, and in good condition. I must here also remark, that although this picture cost only 131 *l.* 5 *s.*, infinitely finer works may, at any time, be had for less money.

9806. Do you think 131 *l.* 5 *s.* an unreasonable price for that picture?—I object to the price, inasmuch as finer works are neglected, although they are frequently sold for smaller sums. Thirdly, I have made an exception in favour of the "Temptation of St. Anthony," by A. Caracci, because it is a fine specimen, in excellent condition, of a very distinguished, if not a first-rate master. It was purchased privately from Lord Dartmouth, in 1846, for 787 *l.* 10 *s.* I cannot, however, forget that Mr. Coningham's far more beautiful picture of "Christ in the Mount," by Raphael, was knocked down for the same sum, without any attempt being made to secure it for the gallery. With regard to the remaining nine pictures, "The Infant Christ and St. John," purchased in 1844, at Jeremiah Harman's sale, as a Guido, for 409 *l.* 10 *s.*, should not have been purchased at any price; nay, it ought not to have been accepted, even as a gift. Neither ought the other two Guido pictures of "Lot and his Daughters," and "Susanna and the Elders," to have been purchased at any price. The former cost the nation 1,680 *l.*, the latter 1,260 *l.* I have no hesitation in saying the like of the "Monk," by Zurbaran, lately purchased at Louis Phillippe's sale, for 265 *l.* Then as regards Sir C. Eastlake's Holbein, there is a further sum of the public money utterly thrown away. The pictures which remain to be mentioned are, "The Judgment of Paris," by Rubens, "The Boar Hunt," by Velasquez, Rembrandt's own portrait, by himself, and the "Adoration of the Shepherds," by Velasquez.

9807. Will you give the reasons why you consider these several pictures to be more or less unworthy of a place in the gallery?—The "Infant Christ and St. John," has not one redeeming virtue. I can say no better of the "Susanna and the Elders," attributed to Guido. This picture does not possess one single quality that could either instruct the student, or assist in elevating public taste. It is a model of what to avoid in art; the gallery would be better without it.

9808. Lord *Seymour*.] You do not dispute its being a Guido?—I should be very sorry to assert that it is a Guido; there are so many duplicates as good. The mere fact of its being by Guido, if not a picture fit for study, or of any use in elevating public taste, of course would be no argument in its favour.

9809. Do you mean that it does not elevate public taste on account of the style of the painter?—On account of the style. Only works of a fine style can elevate public taste. This picture is of a very bad style, whether as to form, design, composition, or colouring. It cannot, therefore, elevate public taste.

9810. Lord *Elcho*.] Do you consider that the works of Guido generally are calculated to elevate the public taste?—Certainly not. Guido is not a master to be held up as a model in any respect. In a gallery professing to represent the entire range of art, Guido's works must necessarily find a place; but I do not believe it would be of any great injury if we had no Guidos at all in the gallery.

9811. Mr. *Vernon*.] Have you ever seen the Guidos in Bologna?—I have; if I remember rightly, the works of his I have admired most are there. So far from my looking upon Guido as a second, or even a third-rate painter, I consider him as scarcely a thirtieth-rate painter.

9812. *Chairman*.] Do you not think the "Aurora," in the Rospigliosi Palace at Rome, is an exception?—I certainly think that a very charming composition; still, the general style, even of this work, clearly indicates a degenerate period of art.

9813. Mr. *B. Wall*.] Your answers are in a comparative rather than in a positive sense, are they not?—With respect to some pictures, in a positive sense. The "Infant Christ and Saint John," for instance, ought to be turned out of the National Gallery.

9814. What I wish to have on record is, an answer to my question as it affects the different schools, and the character of the paintings of the different artists?—

M. Moore, Esq.

22 July 1853.

With respect to certain pictures I have mentioned, I answer in a positive, and not in a comparative sense.

9815. You would wish your opinion with regard to Guido to remain as it does, in a positive sense, and not in a comparative sense?—In a positive sense, with respect to the Guidos purchased of late years for the National Gallery.

9816. *Chairman.*] Now, continue your reasons, if you please, for objecting to the pictures. You have mentioned "Susanna and the Elders"?—The remarks I have made with reference to the picture you have just mentioned, would apply, in a similar manner, to the other Guido, "Lot and his Daughters," the so-called Holbein, and the "Monk," by Zurbaran.

9817. Mr. *Vernon.*] I should be glad to know your objection to the Zurbaran?—I consider it a picture of a thoroughly bad style of art.

9818. Do you make no distinction, in your reprobation of these pictures, between their being spurious or bad pictures, and pictures belonging to a class of art you personally do not like?—I disapprove of such works as this Zurbaran, because I consider them produced altogether upon false principles. If this be the case, so far from their assisting to elevate the public taste, they would have a contrary effect. I think it would be more injurious than beneficial to look at such pictures.

9819. I will again put to you: do you class a spurious picture, which the Holbein is generally admitted to be, and a picture by Zurbaran, which the admirers of Zurbaran think is a good specimen of his style, in the same category?—I have no hesitation in saying that even the Holbein picture recalls to mind a better style of art than the Zurbaran.

9820. Then your objection to pictures, such as this, applies more to the school of art, in fact, than to the question of their being original pictures?—I have no prejudices either against or in favour of particular schools. I endeavour to judge of pictures by what I conceive to oe the true principles of art. It is because I believe the "Monk," by Zurbaran, to be a work produced upon utterly false principles, that I condemn the purchase of it.

9821. You are aware, I suppose, that there are persons who admire the qualities observable in the pictures of the Spanish school?—It is going rather too far to infer, as your question implies, that I proscribe the entire Spanish school, because I condemn what I know to be a bad picture.

9822. You condemn as a bad picture that which many persons acquainted with the Spanish school think to be not a bad specimen of that school?—If those persons pronounce this a good picture, I believe I may safely say that, however great their pretensions may be as judges of the Spanish school, they must be but very sorry judges of art.

9823. Do you mean to say that you do not consider that picture to be a good specimen of Zurbaran?—I do not care whether it is a good specimen of Zurbaran or not; I condemn it because I consider it worthless as a work of art. Hence my argument, that it was wrong to purchase it for the gallery.

9824. It is a picture which does not please you?—And it does not please me because I know it to be a bad picture. I will go farther; I will say, that if I heard anybody express admiration for that picture, I should feel confident that he could have little or no perception of what was really fine in art.

9825. Are you acquainted with Zurbaran's works generally?—I have seen several of his works.

9826. In this country or elsewhere?—In France and here. In France I saw those very works by Zurbaran which have been lately sold here.

9827. Are you accustomed exclusively to adopt the standard of Italian art in your mode of looking at pictures?—I am accustomed to adopt the great Italian schools as standards, for no other reason than because their vast superiority to all other schools, fully entitles them to be taken as standards. The works of the greatest era of Italian art are produced on what I feel, and, perhaps, I may say, on what I know to be the true principles of art; and I am strengthened in this belief by the practice of the most eminent masters of other schools, whose best productions are acknowledged to be those which most resemble the works of the great painters of Italy.

9828. Are you aware that the pictures of the Spanish schools were almost invariably painted for churches and conventual establishments, where certain strong effects of light and shade were designed?—I am aware of that; and the same may be said of most of the great works of the Italian school. But those effects of

of light and shade to which you allude, are given by the Spanish school, in a manner vastly inferior to that in which we find them represented by the great schools of Italy. I believe I have explained to the Committee that my unqualified condemnation of this bad and damaged work, by Zurbaran, must not be taken as extending to the whole of the Spanish school, whose better productions, I believe, I am able to appreciate.

9829. Lord *Elcho.*] Suppose it to be thought desirable that the National Gallery should acquire a specimen of the works of Zurbaran, do you think that at that sale which has been referred to, a finer and more agreeable specimen of the works of that master could have been obtained for the same, or for a less sum than the picture which was purchased?—I have no precise knowledge of the prices the pictures fetched at the sale to which you refer. There were certainly, at Louis Phillipe's sale, pictures by Zurbaran, more striking than the one purchased for the gallery.

9830. Lord *W. Graham.*] Were they also painted on false principles of art?—Certainly they were. They were pictures which displayed a great deal of talent; but they were not of a class to elevate the public taste.

9831. I understand your answer to come to this, that as far as you are acquainted with Zurbaran's works, you would be inclined to exclude them from the national collection altogether?—I think that is drawing rather too wide an inference from what I have said; if it be a question of a gallery so extensive as to embrace in the collection specimens of the most reputed painters of all the different schools, I would, of course, include many works which I personally might care little about, and, among them, some examples of Zurbaran; but then they would never be the objects of my study. Of such works I would select the best and least damaged I could find; not such a work as the Zurbaran lately purchased for the gallery. The only excuse for introducing into the gallery works produced on false or ill-digested principles is, that they should be the best of their kind; I should introduce them, principally, with a view to completing the collection; if I had a gallery of my own, I should not care to have such works in it.

9832. If you are to have a national collection, assuming that you have space enough, is it not desirable that that national collection should embrace good specimens of all the celebrated masters?—As regards the historical completeness of the gallery, but not as regards instruction; there is no instruction to be obtained from such works as this Zurbaran.

9833. Of course a student in art would select those which pleased him most; but there are various tastes and feelings to be consulted, are there not, in the formation of a national collection?—The object of a national gallery is to elevate the public taste in art, not to pander to the ever-varying eccentricities of untutored tastes and feelings. The surest, speediest, and cheapest means of attaining this object, and, ultimately, of producing what is so desirable, a perfect agreement of taste, I mean with respect to the manner in which every subject should be treated, is to acquire works of consummate excellence; for these, when understood, and these only, can enable us to judge of all works of art with accuracy, and, consequently, with unanimity.

9834. *Chairman.*] What is your opinion of the "Boar Hunt," by Velasquez?—That it is a picture that, at a certain sum, might have been purchased, but that it should not have been thought of at the preposterous price of 2,200 *l.* Within the interval during which this picture was purchased for the nation, namely, from 1843 to the present time, four works by Raphael have been sold for 1,683*l.*, 7*s.*, that is to say, for 516*l.* 13*s.* less than was paid for this inferior work alone; the difference between the cost of the "Boar Hunt" and that of the four Raphaels, exceeds the price paid for each of three of the latter.

9835. What were those Raphaels?—One was a "Virgin and Child," the property of Lord Methuen; this was sold in 1844, I believe, for 500 *l.*; I am not quite sure that this was the exact sum given for it, but I know that Mr. Coningham might have bought it for 500 *l.*; it was purchased by Sir Thomas Baring, and is now in Mr. Thomas Baring's collection. It may be interesting to the great admirers of Dr. Waagen, to learn that that "eminent connoisseur" forgot to mention this Raphael in his account of the Corsham collection. The omission is all the more interesting, from his having made especial mention of pictures in its immediate vicinity.

M. Moore, Esq.

22 July 1853.

9836. You consider it an undoubted Raphael?—I do. Both Mr. Woodburn and Mr. Coningham told me they might have bought it for 500*l.*; and I have heard both of them regret not having done so.

9837. Had the trustees the offer of that picture?—They knew of it; the pictures were on view at Yates's, in Bond-street; Sir Charles Eastlake saw it there. Then there were the two Raphaels at Mr. Coningham's sale, in 1849, the "Martyrdom of St. Placido," and that beautiful picture of "Christ on the Mount." The former brought 325*l.* 10*s.*; the latter, 787*l.* 10*s.* I believe the "St. Placido" was purchased by a gentleman of the name of Stuart. The "Christ on the Mount" was exhibited in 1844, or 1845, at the British Institution, where it deservedly had the post of honour. It now belongs to Mr. Fuller Maitland, of Stanstead, in Essex. The other Raphael to which I have alluded, represents "Apollo and Marsyas." It belongs to myself. On this account I feel some reluctance in quoting it; but as I consider it not only eminently characteristic of Raphael, but the finest work of art I have ever seen sold, it would, I think, be a serious omission if I neglected to mention it on such an occasion as this. I am fully sensible of the boldness of this assertion, but I am also prepared to defend it. The "Apollo and Marsyas" was sold at Christie's for 70*l.* 7*s.*

9838. Lord *W. Graham.*] When was that sold?—On the 2d of March 1850.

9839. Lord *Elcho.*] Was it seen by any of the trustees?—It was seen by Sir Charles Eastlake, as well as by some of the trustees; and it was for five days on public view at Christie's.

9840. Its genuineness as a Raphael has been doubted, has it not?—Only by those who know nothing about Raphael. I have never heard it doubted by any one who has earned a title to pronounce a decided opinion upon the subject.

9841. Have those who have doubted its genuineness as a Raphael expressed any doubt as to its being a fine specimen of the finest period of Italian art?—Nobody has expressed any such doubt to me. On the contrary, some persons of this class have been ready to admit that it was even superior to Raphael, which would be granting more than I care for.

9842. *Chairman.*] In this case, as the picture you now value at so very high a rate was sold for only 70*l.* in open auction, that would imply that the public present at that sale were as blind to its merits as the trustees?—Unquestionably. That is the only conclusion we can come to.

9843. Lord *W. Graham.*] Have you any other authority besides your own for believing it to be a Raphael?—Yes; the authority of many.

9844. *Chairman.*] Has any offer been made to you for it?—One thousand guineas has been offered for it. Its merit, or rather its claim to be by Raphael, admitted (for this would be the grand point with modern critics), 1,000 guineas would be a sum far beneath its commercial value. I will here observe that the difference alone between the total cost of the four Raphaels, just mentioned, and the price paid for the "Boar Hunt," by Velasquez, exceeds, by 16*l.* 13*s.*, the sum paid for the Methuen Raphael, and by 120*l.* 16*s.* the united cost of the "St. Placido" and the "Apollo and Marsyas." My impression is, that I could, even now, get a larger sum for the "Apollo and Marsyas."

9845. You have referred to the "Boar Hunt" by Velasquez?—That is, or rather *was*, a good picture; it is painted, if not on perfect, at least on good principles; it is a picture from which something might have been learned. Had it cost 500*l.* instead of 2,200*l.*, I should not have found fault with its purchase; not that such a sum might not be far more judiciously laid out, but as Velasquez has been for some time promoted to the rank of a fashionable master, there is little or no probability of obtaining a specimen of him at so low a rate as infinitely finer works are constantly selling at. I must here mention a circumstance connected with the purchase of this picture, which I believe would never have been purchased but for a disreputable trick that was practised on the trustees. They were led to believe that it was about to be exported to the King of Holland, at that time a great purchaser of pictures, and this caused them to place an adventitious value upon it. The impression they were under that they could prevent its going out of the country, stimulated the trustees to purchase it. It turned out afterwards that at that very time the picture had but just returned from the King of Holland, rejected by him. The intimation that it was about to go to Holland, and the fear lest it might be lost to the country, were the immediate, if not the only, causes of its being purchased for the nation.

9846. Mr. *B. Wall.*] Do you not think that when a picture comes from a royal palace, and is presented to the accredited minister of the Court of St. James's, that of itself puts a fictitious value on that specimen of the master, and proves its authenticity?—This would not prove its authenticity; still less would it prove its merit. I contend that the only evidence of real value, as to authenticity, is the internal evidence of the work itself. As to those titles, they are certainly very sonorous; but still, they could not, I think, enhance the merit of any work, and the merit is all that is of real value. Whether a picture had been "in a royal palace, and had been presented to an accredited minister of the Court of St. James's," or whether it had emerged from a broker's shop, would be much the same to me.

9847. If you can trace it from a royal collection to a broker's shop, that makes a difference, does it not?—But you cannot absolutely trace it; and if you could I should not attach a jot more value to it.

9848. It was in the Escurial?—So I have heard; but how can we be certain, except from the internal evidence of the work, that in the course of 200 years, a copy may not have been substituted for the original? There are many pictures in Italian galleries, the owners of which have very plausible reasons for believing them to be originals; yet we see, in their stead, palpable copies. Some of these parties will show what they conscientiously believe to be historical evidence of certain works having been painted for their families, and they will produce the very receipts of the artists who painted them; still, we find the reputed originals, spurious. Needy ancestors may have sold the originals, and either from pride, or not to disturb the appearance of the collection, substituted copies in their stead. It is by no means an uncommon circumstance for Italian noblemen, when they contemplate parting with some valuable family picture, to make it a condition of the transfer, that the purchaser should be at the expense of having a copy made, in order to cover the place of the original. So that, after all, the only evidence of real value is the internal evidence of the work. But in order to judge of this, great knowledge of art is necessary.

9849. Mr. *Vernon.*] Are you aware that this picture is one of two companion pictures?—I think I have heard so.

9850. Are you aware that it was so highly prized, that a copy of it was put up to be a reminiscence of the picture, and hangs, where you may now see it, in the Gallery at Madrid?—I have recently heard that also; but, before I decided what degree of importance should be attached to this circumstance, I must know by whom "it was so highly prized."

9851. You have spoken of Velasquez as a fashionable master; are you well acquainted with his works?—I have seen many works of his, of great merit. When I said he was "fashionable," I did not mean to under-rate his merit, which is undeniably great; I merely meant to state the fact, that Velasquez happens to be a fashionable master, in order to account for his works fetching a much higher price than those of some far greater masters.

9852. You consider him a fashionable master in the same way as Titian?—Velasquez is a much more fashionable master than Titian.

9853. You would have applied the same epithet to Titian?—No; Titian is by no means so fashionable a master as Velasquez. Indeed, I should not call Titian a fashionable master.

9854. Mr. *B. Wall.*] Do you recollect a picture somewhat similar to that of which you speak, by Velasquez, in the collection of Lord Ashburton, and formerly in the collection of Marshal Soult?—Yes; I saw it the other day.

9855. Do you know what price was given for that picture?—I do not know; nor would the price given for it, however great, have any weight with me.

9856. Do you consider it a finer picture than the one in the National Gallery?—I could not see it well enough; it strikes me as being a fine picture, though very objectionable in composition. There is a fine tone of colour upon it; but I could not get near enough to examine it as I wished. It hangs, moreover, in an unfavourable light.

9857. Should you not say either of those fine pictures of themselves were a school of art?—I must ask you to explain what you mean by a "school of art," before I can answer that question.

9858. Do you not think that if you had students who wished to study figures, originality, composition, colour, effect, and picturesque grouping they would go to those pictures before almost any in the National Gallery?—If they knew but little

M. Moore, Esq.

21 July 1853.

little about art, they might; but not otherwise. At all events, this is my opinion. There are many pictures in the National Gallery to which I should refer, in preference to those; in fact, I should not think of going to them for the purpose of serious study, while there are so many works immeasurably finer, and, consequently, far more instructive. I look upon the pictures you mention as talented and agreeable works, but I cannot admit that they are great models for study.

9859. You would not even admit that there was great spirit and originality in the conception of the master?—There is certainly an originality of conception in them, and considerable spirit; I think them very clever pictures. I think so well of them, that had I an extensive gallery of my own, I should be glad to possess them; always provided I could obtain them on terms somewhat in proportion to their merit. There is certainly much more to be learned from them, than from the "Monk," by Zurbaran. As I have already said, they are painted on good, if not on perfect principles.

9860. Mr. *Vernon.*] Do you believe that the fashion which you attribute to the works of Velasquez may be ascribed to persons having been latterly more in the habit of visiting the Gallery at Madrid, where alone his great works can be studied?—Perhaps; but it is impossible to account for the caprices of fashion. We find one master rising into notice one year, and a different one, another; and this frequently happens, in defiance of every artistic principle.

9861. *Chairman.*] Will you explain to the Committee what is your authority for the various particulars you mention as to the picture having been rejected by the King of Holland, and afterwards purchased here because there was an apprehension that it might be sent to the King of Holland?—I have the authority of Lord Cowley's agent himself. It was he who told me that the picture would have gone to the King of Holland had it not been purchased for the gallery; and he repeated the same tale to Mr. Coningham. It has been twice stated before this Committee, by a gentleman who had a great deal to do with the purchase of this picture, that he was under the impression it was about to go to Holland.

9862. You said it had been to Holland, and that it had been rejected there?—Yes.

9863. What authority have you for stating that to be the fact?—This is admitted by the agent himself.

9864. Lord *W. Graham.*] Admitted by Lord Cowley's agent?—Yes.

9865. He admitted that after he had sold the picture?—Yes; since the sale of the picture.

9866. *Chairman.*] Have you any further remarks to make upon any of the pictures, in the list of pictures which you think ought not to have been purchased?—Rembrandt's portrait of himself, I class among the objectionable purchases, on account of its having been so desperately injured.

Mr. *Henry Farrer*, called in; and further Examined.

Mr. *H. Farrer.*

9867. Mr. *B. Wall.*] HAVING heard the evidence of Mr. Morris Moore, upon the subject of the Velasquez, which you sold to the National Gallery, did I understand you correctly to say, that you would not object to give to the trustees of the National Gallery 2,000*l.* now for the Velasquez which is hanging on the wall?—I have no objection to sign a paper to that effect, and take it whenever they please. That is the price that I paid to Lord Cowley for it; and as to any mode I took of imposing on anybody, if the imputation came from a person who I thought would be believed, I should take it up.

Mr. *Morris Moore.*] Now, sir, I really think that, in justice to me, the gentleman to whom I have alluded, as having had a great deal to do with the purchase of this picture, and who is a Member of this Committee, should be called upon to state under what impression he went to Sir Robert Peel.

Chairman.] I think it would be desirable to finish your evidence first.

Mr. *Morris Moore.*] Sir, I consider that a flagrant insult has been offered to me before this Committee by a person now present.

The room having been cleared, and the Committee having deliberated—

Mr. *Moore* was again called in, and his Examination was resumed.

M. Moore, Esq.

9868-9. *Chairman.*] YOU complained, before the room was cleared, of expressions of an offensive description having been used towards you. The Committee regret

regret that offensive language should be addressed to anyone in the course of the proceedings. You must be aware, however, that you have yourself frequently used language towards others which might reasonably give offence. Under these circumstances, the Committee consider their duty simply to be, to inquire into the matter of fact at issue between you and the gentleman to whom you have alluded; and, first, to call upon you to prove your statement, that the trustees were induced to purchase this picture by what you have described, in answer to a previous question, as a disreputable trick, by which they were made to believe that the picture was going out of the country to Holland, and that, on that ground, they bought it in an inconsiderate manner. Have you any proof that such deception was practised on the trustees?—The Member of this Committee to whom I have alluded, must surely remember under what particular impression he went to Sir Robert Peel. He can hardly fail to recollect whether he stated, or not, to Sir Robert Peel, that the picture was about to leave this country for Holland It must, indeed, have been some very urgent representation that he made to Sir Robert Peel, which could have induced the latter to purchase it with such precipitation.

9870. Do you mean that the impression under which an Honourable Member of the Committee was as to the picture leaving this country, was an erroneous one, and that he had been made to believe, by a disreputable trick, that that was the case when he went to Sir Robert Peel?—Undoubtedly; that is precisely what I mean.

9871. Can you prove that there was no intention whatever of sending that picture out of the country?—What I can prove is, that the trustees had been led to believe, that this picture had not been out of the country, and that their purchasing it would prevent its being sent out of the country.

9872. Can you prove that the representation made to them, that the picture was going out of the country, was false, and was only made to induce them to purchase it?—Certainly; that is to say, the representation that it was then going to Holland, was false; for it had just returned from that country. The trustees were made to believe that they could prevent its being purchased by the King of Holland, whereas, there could be no fear of that, since the King had but just refused to purchase it.

9873. Are you certain that the statement or representation that was made, of the picture being likely to quit the country, applied to Holland?—I am certain of it. I can give my own personal testimony to that fact; it was Lord Cowley's agent himself who told me so.

9874. Who is the agent?—Mr. Farrer.

9875. Mr. Farrer told you the picture was going to Holland?—He told me distinctly that the trustees were but just in time to save it from exportation to the King of Holland. He stated this, not only to me, but also to Mr. Coningham, and to Mr. Chambers Hall, and to several other persons.

9876. He particularly mentioned Holland as the country it was going to?—Yes, particularly; and Holland only. He told me, besides, that the King of Holland was sure to buy the picture. Moreover, the packing-case was standing in Mr. Farrer's front shop, with the King of Holland's address upon it, written in French. Mr. Farrer appealed to that address as a proof that there was "no humbug about it," as he expressed himself, and, with a curious pronunciation of the French, he read the address aloud.

9877. Lord *Elcho.*] Would not the address on the case, as it had returned, you say, from Holland, have been Mr. Farrer's?—"*A sa Majesté le Roi des Pays Bas,*" was the address I read upon it.

9878. But was there no direction to Mr. Farrer besides?—I can speak positively only to the inscription I have quoted; but I do not believe there was any other.

9879. Mr. *B. Wall.*] That would look as if it were going there?—Certainly. It was necessary to the success of Mr. Farrer's scheme, that it should so appear; but, in reality, the picture had only just returned from Holland.

9880. Lord *Elcho.*] You said you had a written statement?—A written statement of what occurred.

9881. By whom?—By myself.

9882. When?—Some time ago.

9883. Was it written at the time?—No, it was not. It was long after.

M. Moore, Esq.

22 July 1853.

9884. Is there any date to it?—No, it does not profess to be a literal account of what was said; but I distinctly remember certain expressions.

9885. Lord *Seymour*.] To whom do you impute what you call a disreputable trick?—I impute it, of course, to the agent.

9886. You impute a disreputable trick to the agent, and, as I understand, you take offence because the agent disclaims having practised any disreputable trick; is that so?—I take objection to his declaring that to be a falsehood, which is truth.

9887. He disclaims a disreputable trick, and at that you take offence?—No; I take offence at his denying, in the terms in which he did, that which he knows to be strictly true.

9888. Will you proceed now to show how you prove it to be true?—I am ready to take my oath that he represented to me what I have stated. Mr. Coningham is under the same impression.

9889. Lord *Elcho*.] Is he under that impression from what you said to him, or from what Mr. Farrer said to him?—From what Mr. Farrer said to him; for at that time there was a difference between myself and Mr. Coningham. We were not on terms, and at that time had no communication with each other. Mr. Coningham has since spoken with me on the subject frequently. The particulars of the purchase of the Velasquez were brought to light in my general exposure of the mismanagement of the National Gallery, on account of the picture-flaying of 1846.

9890. Lord *Seymour*.] As you wish the Committee to interfere in this matter, I want to know what evidence you can give to the Committee besides your own word in support of the statement you make, that there was a disreputable trick practised?—I can offer no further proof, at this moment, than the names of other witnesses who have heard from the party who was guilty of this disreputable trick, the very same story he told me. Moreover, I repeat, that there is a gentleman now present, a Member of this Committee, who went to Sir Robert Peel and made a representation to him about this picture, which caused its immediate purchase by the Government. This gentleman must surely remember what it was he said to Sir Robert Peel that caused the sudden purchase of a work which, for years, had been neglected by every one.

9891. *Chairman*.] Are you sure that the representation was not to the effect that the picture was going to France?—I am positive it was not; that would be a paltry evasion.

9892. It is desirable not to use such strong expressions?—Well, then, it is incorrect; but it is an evasion.

9893. Who are the other gentlemen you mention?—Mr. Coningham and Mr. Chambers Hall.

9894. Were they present with you when you saw this packing-case?—No; we were never together at Mr. Farrer's. The same story that was told me was related to them. I have already said that I was not in communication with Mr. Coningham at the time this affair occurred.

9895. Lord *Seymour*.] Mr. Farrer not only stated to you that the picture was going to the King of Holland's collection, but you say there are other witnesses who can speak to the fact of his having stated to them that the picture was going to the King of Holland?—Yes.

9896. And those witnesses are Mr. Coningham and Mr. Chambers Hall?—Yes; I am sorry they are both out of the country at present.

9897. Lord *Elcho*.] What is your proof of the picture having been to the King of Holland, and of its having returned again?—I believe the agent himself does not deny that; what he denies is, that there was any false representation; not that the picture went to Holland previous to its being purchased for the Gallery. The way in which I came to discover the trick was this: Mr. Chaplin, senior, the picture-dealer, happened to go to the National Gallery a short time after the "Velasquez" had been hung up, and seeing it there, said to Colonel Thwaites, "So, I see you have got that picture at last!" Now Colonel Thwaites was rather proud of its having been saved from the King of Holland's collection, and boasted of it to Mr. Chaplin. This appearing not quite intelligible to the latter gentleman, he said to Colonel Thwaites, "There must be some mistake, for I saw the picture at my packer's in Rotterdam a few weeks ago." Colonel Thwaites was quite surprised at the information. He also must be able to state what was once his impression upon the subject of this picture's having been

prevented

prevented from going to Holland, since it was such news to him to hear that it had been in Holland; and that the trustees, although they had purchased it, had not saved it from the King of Holland.

9898. Mr. *Vernon.*] Independent of anything you may have heard, you say you recollect the address that was written upon the case?—Yes, I remember the address that was written on the case.

9899. Do you recollect specifically what the address was?—My memory may not be quite correct, but I have a strong impression that it was, "*A sa Majesté le Roi des Pays Bas, à la Haye.*"

9900. Are you prepared to say that there was no other address upon it?—No; but I should say there was no other address.

9901. You only recollect seeing that address upon the case?—That is the only one I can recollect.

9902. But you are not prepared to say you do recollect that there were not cards or other addresses upon the packing-case?—No; but my conviction is that there were no other addresses. I can, however, positively assert, that that address was particularly pointed out to me as a proof that the picture was going to the King of Holland.

9903. By Mr. Farrer?—By Mr. Farrer.

Mr. *Farrer.*] That is quite true.

The *Witness.*] I say as a proof that the picture was going to Holland.

9904. Mr. *Vernon.*] Was it pointed out to you after the purchase was made, or when the picture was in Mr. Farrer's possession?—I cannot state positively whether the negotiations were actually concluded.

9905. Was it in Mr. Farrer's premises?—Yes, the case was; but as it was not open, I cannot assert that the picture was in it.

9906. And was it after the purchase was concluded?—I cannot exactly say, but I presume that the purchase must have been already concluded, from Mr. Farrer's remarking that the trustees had been "only just in time to save the picture from going to Holland."

9907. At the time you went to visit Mr. Farrer, and your attention was called to the packing-case which was said to contain the picture, did you go there with reference to the purchase which you heard had been concluded, or was it simply that you were there with reference to other matters?—I have no recollection of the reason of my going to Mr. Farrer's at that particular time. I must have gone there accidentally.

9908. I want to fix the date at which you saw the picture at Mr. Farrer's premises?—I have no recollection of the precise date; but it was at the period of the purchase of the picture for the gallery.

9909. You say you did not go to Mr. Farrer's premises in reference to this particular picture?—I should say not, certainly. I could have had no business with respect to that picture. Indeed, I did not see it; I merely saw the packing-case.

9910. Might not the occasion have been some time previous?—No; certainly not; for how then could Mr. Farrer have spoken of the Velasquez as having been all but lost to the country.

9911. *Chairman.*] That is your case against Mr. Farrer?—Yes.

Mr. *Henry Farrer*, called in; and further Examined.

9912. *Chairman.*] WILL you explain, from your own recollection, the circumstances under which you sold to the trustees the picture of which Mr. Moore has been speaking?—The picture had returned from the King of Holland's palace; in fact, it returned with me; I sold three or four other pictures to the King.

9913. Lord *Seymour.*] Can you give us the date?—I cannot recollect the date without referring to my book.

9914. It was in the year 1846, was it not?—I think it was. I think it might be perhaps three or four weeks before the picture was purchased.

9915. Mr. *B. Wall.*] I think I can recall it to your recollection: it must have been late in the Session, on this account, that Sir Robert Peel stated there was to be no meeting of the trustees till after the next meeting of Parliament?—He did so.

Mr. *H. Farrer.*

22 July 1853.

9916. And therefore, as he took upon himself the responsibility of purchasing it, it must have been late in the year?—Yes; it was late in the year.

9917. *Chairman.*] It is stated in the minutes that a communication was made by Sir Robert Peel, on the 12th of August 1846, to the trustees, to the effect that the picture by Velasquez, belonging to Lord Cowley, could be purchased for the nation at the price of 2,200 *l.*?—Yes, I am aware of that. I have been charged with doing all I could to deceive the trustees; but so far is that from being the fact, that I never took any steps whatever in the matter. Mr. Baring Wall came into my house on one occasion, and seeing the case there, he asked me what it contained; I told him it contained the Velasquez, and that I was about to send it abroad, which was the fact, because my intention was to have offered it to the Louvre, where I was going, for I have been an exporter of pictures now for the last 25 years, and have sold pictures in Prussia, in Frankfort, and in the Netherlands, to the value of many thousands of pounds, even up to the last year. Mr. Baring Wall is now present; what his impression may have been from what was written on the case, I cannot tell, but certainly the picture never had been seen by a single trustee, and Mr. Baring Wall did not see it. Sir Robert Peel very cautiously wrote a letter, in which he asked me whether the picture was in the same state as when I received it from Lord Cowley; I returned an answer to Mr. Baring Wall, and he brought me a letter, which I believe I still have, stating that I was to deliver the picture to Sir Charles Eastlake, then Mr. Eastlake, and that he had made an arrangement with Mr. Wood for settling the affair. I never took any step whatever to recommend it, or did any act to facilitate its purchase by the trustees.

9918. Lord *Elcho.*] Did you tell Mr. Baring Wall at that time that the picture had been to Holland?—No; in fact, it was an instantaneous thing; it was done in a moment; the case was lying in the front part of my premises, and Mr. Baring Wall merely asked me out of curiosity, "If you are going to take any steps in the sale of that picture, will you give me two or three days?" I said, I would. What took place within those two or three days I do not know; it is quite true that I may have said to Mr. Baring Wall that the picture was going to Holland; his Majesty had said to me that he had laid out as much as he wished to lay out at that time, but he did not give up the picture, and I think it very possible that had he lived I should have placed that picture with him, for he regretted the loss of it when he heard that it was bought for the National Gallery.

9919. *Chairman.*] At what period did your interview with Mr. Morris Moore take place?—Before I went to Holland.

9920. The circumstance of his coming in and seeing the picture addressed to the King of Holland took place before the picture was sent to the King of Holland?—Yes, when the picture was going away; it was a very large case and everybody could see and read the address as they came into the premises; there was no secresy used, it was just about to go with me; when it came back to this country after having been to Holland, it was placed in the same place again with the address upon it.

9921. Had you a second interview with Mr. Morris Moore when the packing-case was there, after the picture had returned to this country?—I do not think he ever saw it after the picture had returned; I think it is all a mistake. Mr. Morris Moore, in a letter he has written on the subject, says he does not know which to admire most, the gullibility of the trustees, or the cupidity of the dealer. I declare that I used none.

9922. Lord *Elcho.*] Did you go to Holland yourself with that picture?—Yes.

9923. And did you bring it back yourself?—Yes.

9924. Was it always in your possession?—No; it remained in the palace till it returned with me.

9925. *Chairman.*] And you are confident that at the time of your interview with Mr. Morris Moore the picture was then going to Holland?—That I am sure of.

9926. Lord *Elcho.*] Do you recollect mentioning this subject to the gentlemen to whom Mr. Morris Moore has referred?—I do not deny it; the case was there, and everybody could see it; I had nothing to disguise.

9927. Did you say it to them also before the picture went to Holland?—Yes; they could see that it was going to Holland.

Mr. *H. Farrer.*

22 July 1853.

9928. Your interview with Mr. Chambers Hall and Mr. Coningham took place previous to the departure of the picture for Holland?—Yes.

9929. *Chairman.*] Did you mention in your interview with Mr. Baring Wall, that the picture had returned from Holland, and was then lying in its case; and did you state that you had an intention of sending it abroad again if it was not purchased in this country?—I do not know that I said that.

9930. Mr. *B. Wall.*] Will you allow me to recall to your recollection an answer given by you to this question put by me, No. 1445: "At the time I came to you on the part of Sir Robert Peel, I understood you to say that the picture was just going to the King of Holland?" Your answer was, "No, you mistook me; the picture had been to the King at the time. I was about to send it away to Paris when you came to me"?—That is correct. I did intend to send it to Paris or Frankfort, or some other place; I had not made up my mind exactly where I should send it; there are many openings for a picture of that kind. I had no expectation at that time of selling it to the Gallery, as it had been twice recommended by the trustees for purchase by the Treasury at the price of 3,000 *l.*, and 2,500 *l.*, being 300 *l.* above what was afterwards given for it.

9931. *Chairman.*] Were there any other gentlemen who came to you either incidentally or on purpose, after the picture returned, and who saw it lying in a packing-case, and asked whether it was really to go abroad again?—No; I never unpacked it till the Government bought it.

9932. Was there anybody who saw the case, knowing the picture to be in it?—They could only know what was in it from what I told them.

9933. After the picture returned from the King of Holland, and was in its case, still lying in your premises, with the direction of which you have spoken upon it, your mentioning incidentally that you were going to send the picture abroad might naturally give rise to a misunderstanding, might it not, that you were going to send it to Holland rather than to France or some other country?—I think that is possible; I think it is a mistake; I am sure I did not represent it at all as going to Holland; the mistake may have arisen from my having said that I was going to send it abroad.

9934. Mr. *B. Wall.*] You say there were a few days elapsed, and that I asked for time?—You asked me to take no further steps, I think, till you had communicated with somebody; you then came back, and asked me whether the picture was in the state in which it was when I received it from Lord Cowley, and you brought me a letter from Sir Robert Peel, directing me to put the picture in the hands of Sir Charles (then Mr.) Eastlake, he having agreed to the purchase without my knowledge. A mistake may have arisen, but there certainly was no misrepresentation on my part. I have no doubt Mr. Moore is perfectly correct in supposing me to have said the picture was going to Holland; I made no secret of it; I think the mistake originated in the address to the King of Holland being still on the packing-case, and it might be supposed it was going there, when in fact it had been there.

9935. Lord *Seymour.*] I understand you to say, you still think the King of Holland would have bought it?—I do.

9936. Therefore if you intimated that the King of Holland might buy the picture, that would also have justified the supposition that it was again going to Holland?—I did not know so much at the time I sold the picture to the Gallery as I knew afterwards. The King of Holland had taken some advice upon the matter, and one of his agents, who used to come over to me on matters of business in connexion with other people's pictures, told me he was desirous of buying it. He said, "I think you will sell your picture yet." I have no doubt he would have bought it.

Charles Baring Wall, Esq., a Member of the Committee, Examined.

C. B. Wall, Esq., M.P.

9937. *Chairman.*] WILL you be kind enough to tell us what is you recollection with regard to the purchase of the picture, of which we have been speaking?—My recollection very much agrees with that of Mr. Farrer. It was at the end of July 1846 that I mentioned the subject of this picture to Sir Robert Peel; having found out accidentally, on visiting Mr. Farrer, that it was, as I thought, packed up to go to the King of Holland; but upon that point my recollection, it appears, does not serve me very correctly. It certainly was in its case, which was directed to the King of Holland, and I suppose I thought it was going there,

C. B. Wall, Esq., M. P.

22 July 1853.

there, whereas it appears that it had returned. On referring to the former evidence given by Mr. Farrer upon the subject, I find he stated that he was about to send it away to Paris when I came to him.

9938. I suppose you think it likely that the case containing the picture, lying there with the address of the King of Holland, from whom it had just come back, upon it, any other gentleman hearing that the picture was going to be sent abroad, might naturally suppose that it was going to Holland again?—Yes.

9939. Lord *Elcho.*] You do not recollect Mr. Farrer having told you it was going to the King of Holland?—It was rather my impression that he had told me so; but it is extremely likely that I may be mistaken upon that point. Certainly the inscription to the King of Holland was upon the case, and it constantly connected itself in my mind with Holland, knowing it was going abroad.

9940. Did you go to Sir Robert Peel after that, and did you convey to Sir Robert Peel the impression which you say you had in your own mind, that the picture was going to the King of Holland?—I certainly thought I had stated that to Sir Robert Peel. I may have said that I thought it was going abroad. I know I said I saw it packed up in a case. I attached importance to that picture. I thought it most important that the National Gallery should possess it. I still retain that opinion. I went to Sir Robert Peel and asked him whether he would allow me to put a question to him in the House of Commons, with regard to the history of the picture and its future destination. He advised me not to do so. He said he thought there must be some authority, and that the House of Commons and the country must acquiesce and back that authority. I told him I deferred to his opinion. About three weeks afterwards, the subject having dropped, Sir Robert Peel came to me, and said he had been thinking over the subject; that London had gone out of town; that there was to be no other meeting of trustees till the following Session, and that he would take upon himself the responsibility of the purchase of the picture, if I thought I could still obtain it at the price I had mentioned to him. I should say, in justice to Mr. Farrer, that he never varied in his price. I then went back again to Mr. Farrer. I told him that some negotiation was pending, and that I should be much obliged to him, if the picture was still in his possession, if he would give me the refusal of it before he sent it elsewhere; and, upon Sir Robert Peel stating what he was willing to do, I went again to Mr. Farrer, and told him the circumstances of the case, and the picture was purchased, I must say, with the most perfect concurrence of opinion that I ever recollect any picture to have been purchased with.

Mr. *Moore.*] The only thing I wish to state, and I am ready to state it on oath, is, that the conversation between me and Mr. Farrer occurred *after* the picture had returned from Holland.

Morris Moore, Esq., Examination resumed.

M. Moore, Esq.

9941. *Chairman.*] Have you any further remarks to make as to those pictures which you have condemned as not being proper purchases?—Yes.

9942. What are your remarks upon those pictures?—That not only are they all of a degenerate period of art, but that most of them are even bad and damaged specimens of their class; and that fine works, of the purest period, might have been purchased for much less money than was paid for them.

9943. With respect to the opportunities which the trustees have had of purchasing better pictures, have you any complaint to make of those opportunities having been neglected?—I have great complaints to make upon this subject. I have here a list of several fine pictures, of the best period of art, which have been sold since 1843; and although almost all of them were sold at extremely low prices, no attempt was made to secure them for the nation.

9944. Were these pictures that you think might have been deserving a place in the National Gallery?—Yes.

9945. Will you read over the list of those pictures, and characterise the list?—Perhaps you will first allow me to discuss the purchases of late years. I have divided my list of the 18 pictures purchased since 1843, as follows: namely, nine admissible, as coming under the head of works belonging to a great period of art, or as possessing some distinctive qualification to compensate, in some measure, for their belonging to an inferior category. Six of those nine claim

do

to be of a great period. Of the remaining nine, some are absolutely worthless, others but little better, and the rest, though possessing merit, ought never to have been even thought of, at the exorbitant prices that have been paid for them; while all belong most decidedly to the decline of art.

9946. Lord *Seymour.*] Will you read those last nine?—"The Infant Christ and St. John," Guido; "Lot and his Daughters," Guido; "The Judgment of Paris," Rubens; the libel on Holbein; "Susanna and the Elders," Guido; "A Boar Hunt," Velasquez; "Rembrandt's Portrait," Rembrandt; "A Monk Praying," Zurbaran; and "The Adoration," Velasquez. Some of these are so bad that they ought not to have been accepted, even as gifts.

9947. Mr. *Vernon.*] Will you mention those pictures that you consider should not be there even as gifts?—"The Infant Christ and St. John," and the "Holbein," ought not to have been admitted into the gallery, even as gifts. They cost the nation 1,039 *l.* 10 *s.*; a sum exceeding the total amount paid for three Raphaels, namely, the Methuen "Virgin and Child," the "St. Placido," and the "Apollo and Marsyas," by more than double the price of the last.

9948. You mention four of the last nine pictures as worthy of a place in the National Gallery, if they could have been bought at a reduced price?—I mean "The Judgment of Paris," by Rubens; "The Boar Hunt," by Velasquez; "Rembrandt's Portrait," by Rembrandt; and "The Adoration," by Velasquez. If these pictures could have been bought for about one quarter of the sums they have cost us, say, 1,000 *l.* for the Rubens; 500 *l.* for the Velasquez "Boar Hunt;" 100 *l.* for the defaced "Portrait of Rembrandt," simply because it is his portrait; and 500 *l.* for the Velasquez "Adoration;" although, even at this reduced price, far greater works can at all times be procured; yet, as an extensive national gallery might be thought to demand various specimens even of inferior works, and as the vitiated taste of the day has agreed to fix a higher value on these, I might, however reluctantly, have acquiesced in their purchase, or at least abstained from animadverting upon it, had their cost been within the bounds of discretion. I say reluctantly, for I shall never reconcile myself to the acquisition of inferior works, so long as great ones are to be obtained for less money. The total amount of the prices I have attached to the four pictures under consideration, amounts to 2,100 *l.*, a sum which exceeds, by 416 *l.* 13 *s.*, the cost of the four Raphaels to which I have already alluded in this day's evidence.

9949. Then with regard to the other three pictures which you have not specified, but which you also condemn for some reason or other?—You mean three of the six pictures I have classed as works belonging to a great period.

9950. You would accept them as a gift, but you would not purchase them?—One of them, the Collot "Palma," for which the trustees were prepared to give 1,500 *l.*, and, conditionally, even 1,896 *l.*, we have never yet seen; so I cannot say whether I would accept it as a gift or not. I have named it among the six works of a good period, in order to show what proportion of works of this class the trustees have attempted to obtain. As to the other two, "The Tribute Money," ascribed to Titian, and the work ascribed by Sir C. Eastlake to both Vincenzo Catena, and Giorgione, the price of the one is so preposterous, and the condition of the other so bad, that, although I would accept them as gifts, I would purchase neither. I have said that "The Tribute Money" is not to be unconditionally condemned. I will allow, say 500 *l.* for it. The nine pictures I have described, either as bad or as belonging to the decline of art, have cost us 13,125 *l.* If I deduct the 500 *l.* I have conceded for "The Tribute Money," from 2,604 *l.*, its cost price, and then add the balance, 2,104 *l.*, to the amount paid for those nine pictures, we have the sum of 15,229 *l.* for the ten pictures. If, again, I deduct from this last, the sum I have allowed for "The Judgment of Paris," "The Boar Hunt," Rembrandt's portrait of himself, and the Velasquez "Adoration," there yet remains the sum of 13,125 *l.*; and this, I contend, has been not only uselessly, but perniciously spent. Now, there have been sold during the same interval, among other fine works of the great period of art, the following 12.

9951. Lord *Seymour.*] The period from 1843 to the present time?—From 1843 to the present time. I have first selected the following 12, because they are of singular importance. They are, No. 1, "The Virgin and Child," from Lord Methuen's collection, 500 *l.*

9952. Lord *Elcho.*] By whom?—By Raphael. It was purchased by Sir

M. Moore, Esq.,

22 July 1853.

Thomas Baring, in 1844, I believe, as I have already said, for 500 *l.*; at all events, it might have been had for that sum. It is now in Mr. Thomas Baring's collection, in Grosvenor-street. No. 2, "The Martyrdom of St. Placido," by Raphael. This was sold at Mr. Coningham's sale in 1849 for 325 *l.* 10 *s.*; it was purchased, as I have heard, by a gentleman of the name of "Stuart." No. 3, "Christ on the Mount," by Raphael. This also, was sold at Mr. Coningham's sale in 1849. The price of this important and most beautiful work was not, by 52 *l.* 10 *s.*, half that of "Lot and his Daughters." It was purchased by Mr. Fuller Maitland for 787 *l.* 10 *s.*, and is now at his seat, in Essex.

9953. Mr. *B. Wall.*] I think the answer in the early evidence is that you are not quite sure of that; perhaps you had better see that it is so?—My doubts referred to Mr. Stuart, not to Mr. Maitland. No. 4, the "Apollo and Marsyas," by Raphael. This was sold at Mr. Duroveray's sale in 1850, for 70 *l.* 7 *s.*; I was the purchaser, and the picture is still in my possession. The total cost of these four Raphaels was 1,683 *l.* 7 *s.*, only 13 *l.* 17 *s.* more than was paid for those two bad Guido pictures, the "Infant Christ and St. John," and "Susanna and the Elders." No. 5, "The Virgin, Child, and St. John, with Saints," by Michael Angelo. This great work, superior to any in the national collection, was offered to the trustees for 500 *l.*, in 1845, at the very time they were in treaty for that wretched "Holbein." It belonged to a lady of the name of Bonar. The two pictures were in the same room at the National Gallery, and at the same time. The daub was secured, the masterpiece rejected. The Michael Angelo was subsequently exhibited at the British Institution in 1847. It remained on sale nearly the whole period of Sir C. Eastlake's keepership; and it was at last sold in 1849, by Mr. Colnaghi, for Mrs. Bonar, to Mr. Labouchere, for 525 *l.* It still belongs to Mr. Labouchere. The sum for which these five pictures by the two greatest masters of the greatest period of Italian art, were sold, is 2,208 *l.* 7 *s.*, only 8 *l.* 7 *s.* more than was paid for the "Boar Hunt," and less by 106 *l.* 7 *s.* than was lately given for two black and opaque Spanish pictures. The four Raphaels were sold for only 3 *l.* 7 *s.* more than was given for "Lot and his Daughters;" the "Apollo and Marsyas," the finest of them, for less than one-eighth of the cost of the Eastlake "Holbein." I offer these remarks to show what might have been done by the National Gallery, and what has been done by other parties. No. 6, "The Holy Family," by Sebastiano del Piombo. This also was sold at Mr. Coningham's sale in 1849. It was purchased for 1,980 *l.*, by Mr. Thomas Baring, and may still be seen in his collection. This is a noble specimen of a master, whose works must ever be held in the highest consideration by all who are capable of understanding what is truly great in art. I make bold to assert this, notwithstanding that a "professor of painting," of the Royal Academy, Mr. Leslie, singles out for hostile criticism, in his lectures to the students, "The Raising of Lazarus" itself; the most renowned and greatest performance of Sebastiano del Piombo; a performance which, Vasari tells us, "was publicly exhibited in competition with Raphael's 'Transfiguration,'" and like that famous work, "infinitely extolled by all." This is how Rome spoke of "The Raising of Lazarus," in the age of Michael Angelo and Raphael. No. 7, "A Portrait of a Cardinal," attributed to Raphael. This picture belonged to Sir Robert Gordon, and was for some time on sale at Messrs. Graves'. It was afterwards offered for sale by Mr. Christie, with Sir Robert Gordon's other pictures, and bought in at 1,000 *l.*, this being the reserve price. This sum was actually bid; but for some reason or another, the bidder was not allowed to have the picture.

9954. Lord *W. Graham.*] Why should you wish the Gallery to purchase it, when you say, it was only "attributed" to the painter?—Because it was a great work of art; I care not who was its author. No. 8, the "Tarquin and Lucretia," by Titian. This picture, whose history was already connected with this country, as having been in the collection of Charles the First, was brought to England by Joseph Buonaparte, and in 1846, was sent for sale to Christie's. I particularly drew the attention of one of the trustees to it, while it was hanging in the auction-room, but no attempt was made to secure it. Shortly afterwards, it was privately sold to a picture-dealer, of whom it was purchased by Mr. Coningham. It was again put up to auction at Mr. Coningham's sale, in 1849, and bought in at 525 *l.* It was finally sold privately, for about 700 *l.*, to Lord Northwick, and is now in his collection. No. 9, "The Rape of Europa," by Titian. This picture, of the finest period of Titian's practice, was sold last year at

at Mr. Dawson Turner's sale, for 288*l.* 15*s.* I do not feel at liberty to name the present proprietor. No. 10, "St. Francis in the Desert," by G. Bellini. This picture was imported by Mr. Buchanan, and after having remained some time in his possession, was sold last year at Christie's for 735*l.* It was a most remarkable work, in fine preservation, and a much more powerful specimen of its period than the picture lately purchased for the gallery, as a "Giorgione." No. 11, "The Virgin enthroned, with Infant Christ and Saints," by G. Bellini. This beautiful picture was sold last year, at Mr. Dawson Turner's sale, for 378*l.* It was purchased by Mr. Nieuwenhuys, but, I believe, it now belongs to Lord Ashburnham. No. 12, "Christ on the Mount," by Andrea Mantegna, and signed. This fine picture was purchased at Cardinal Fesch's sale, in 1846, and was brought to London by Mr. Artaria, of whom it was bought by Mr. Coningham. It was bought in at Mr. Coningham's sale, in 1849, at 420*l.*; Mr. Coningham having, I believe, paid from 600*l.* to 800*l.* for it. It was again put up at another sale of Mr. Coningham's, in 1851, and knocked down for 252*l.*, the purchaser being Mr. Thomas Baring, in whose collection it now is. On neither occasion was any attempt made to secure it for the nation. The total cost of these twelve pictures, by some of the greatest masters of the best period of Italian art, is 9,275*l.* 9*s.*; while that of the nine pictures condemned by me as bad, or as belonging to a degenerate age of art, or as extravagantly dear, is 13,125*l.*; the difference between the two lists being 3,849*l.* 11*s.* in favour of the former; a sum which exceeds, by 482*l.* 17*s.* (only 17*l.* 3*s.* less than the price of the Michael Angelo), double the cost of the four Raphaels I have mentioned. In the list I have given of 12 pictures of the greatest period of art, the prices range from 70*l.* 7*s.* to 1,890*l.* The prices of the nine pictures, which, on one account or another, I have condemned, vary from 265*l.* to 4,200*l.*; yet, I dare assert, that whichever picture you might select from the former list, is a finer work of art, and, therefore, of greater importance to the gallery, than any specified in the latter. I mean, that if there were no alternative but to give for the least desirable picture of the former list, the highest amount paid for any in the latter, or to leave matters as they are, I should not hesitate to make the exchange. I have made a further selection of 15 other pictures of the greatest schools of art, which also have been sold in London, since 1843. These pictures are: No. 1, "The Virgin and Child," by Andrea Verocchio, the master of Leonardo da Vinci. This interesting little picture was sold in 1844, at Jeremiah Harman's sale, for 105*l.* The name of the artist is inscribed as an ornament on the border of the drapery of the Virgin. This picture is now the property of Mr. Thomas Baring. No. 2, "A Cupid with a Dove," by Titian. This beautiful little picture was sold at Mr. Harman's sale, for 162*l.* 15*s.* It now belongs to Mr. Wynne Ellis. Sir C. Eastlake was at that time keeper of the National Gallery, and as he was familiarly acquainted with Mr. Harman's collection, he deliberately selected that wretched picture, "The Infant Christ and St. John," at 409*l.*, in preference to both the preceding works, at 267*l.* 15*s.* No. 3, "An Angel Praying," a most exquisite work by Filippino Lippi. This was purchased for 52*l.* 10*s.*, at Sir A. Calcott's sale, in 1845, by Mr. Wynne Ellis, to whom it still belongs. I have heard it stated that, shortly afterwards, an attempt was made by the trustees to obtain this picture for four times the amount it had fetched at the sale. No. 4. "The Annunciation," by Carlo Crivelli, signed and dated. This was purchased by Mr. Labouchere for 341*l.*, and is now in his collection. No. 5. "The Visitation," by Gaudenzio Ferrari. This was sold for 399*l.*; no attempt was made to secure it to the Gallery, although it was a better work than the one attributed to the same master, for which the trustees offered in 1844, during Sir C. Eastlake's keepership, 2,200*l.* No. 6. "The Virgin with Infant Christ and Saints," by Innocenzo da Imola, signed and dated. This picture brought 325*l.* 10*s.* No. 7. A similar subject, by Girolamo da Treviso, signed and dated, and mentioned by Vasari, as "the best of his works." No. 8. "The Virgin enthroned, with Infant Christ and Saints," attributed to Giorgione, a very noble work. This was knocked down for 525*l.* The five last pictures were in Mr. Solly's collection, which was sold at Christie's, in 1847. Mr. Solly's pictures were 42 in number, all of them belonging to the great schools of art. The entire collection fetched under 6,000*l.*, a trifle less than was given for "Lot and his Daughters" and "The Judgment of Paris" alone. No. 9, "St. Jerome in his Study," by J. Van Eyck. This exquisite little picture has been twice sold by auction, since 1843; first,

M. Moore, Esq.

22 July 1853.

first, at Sir Thomas Baring's sale, in 1848, for 139*l.* 13*s.*; and, secondly, at Mr. Coningham's sale, in 1849, for 162*l.* 15*s.* More than double this price was given by the trustees, in 1851, for a comparatively insignificant specimen of the same master. No. 10, "The Virgin and Child," by G. Bellini, signed. This brought 183*l.* 15*s.*, and is now in Mr. T. Baring's collection. No. 11, "An Angel declaring the Resurrection," by Andrea Mantegna. It was sold for 134*l.* 8*s.* No. 12, "The Martyrdom of St. Catharine," a very fine *predella*, by Luca Signorelli. This was purchased for 52*l.* 10*s.*, by Mr. Labouchere. No. 13, "La Madonna del Cardellino," by Giovan Battista Cima da Conegliano, which was sold for 68*l.* 5*s.* No. 14, "The Wise Men of the East, &c.," ascribed to Filippo Lippi, and sold for 283*l.* 10*s.* No. 15, the same subject, ascribed to Filippino Lippi, and sold for 199*l.* 10*s.* I doubt whether the two last pictures were attributed to the right authors. One of them looked more like Benozzo Gozzoli. But however this may be, they were two exceedingly beautiful Florentine works of the second period, and, consequently, would have been very valuable acquisitions to the National Gallery. The six preceding pictures were sold at Mr. Coningham's sale in 1849. The total cost of these 15 pictures is only 3,268*l.* 8*s.*; that is to say, less by 711*l.* 2*s.* than was squandered on those four worthless pictures, "The Infant Christ and St. John, the miscalled Holbein, "Lot and his Daughters," and "Susanna and the Elders." This last picture cost 1,260*l.*, but the trustees might have purchased it, a few months previously, for about 800*l.* The 27 pictures I have selected have been sold for 12,543*l.* 17*s.*, while at least 13,125*l.* have been worse than uselessly spent; for, to lay out money on what can serve only to deprave public taste, is, I repeat, to spend it perniciously. I might add to the 27 pictures I have selected, a very beautiful work which I knew when it was in Cardinal Fesch's collection at Rome; I allude to the "Adoration of the Shepherds," by Giorgione. I believe it brought only 400*l.* at the Cardinal's sale; but I saw it sold at Christie's, in 1847, at Mr. Tarral's sale, for, if I remember rightly, 1,500*l.* It was in a much finer state when I used to see it in Cardinal Fesch's gallery; but although it had lost much of its fine tone by the removal of some of its glazings, it had so far escaped as to be still a very desirable work. It was bought by Mr. Wentworth Beaumont. Of course, I do not assume that these 28 pictures could have been purchased by the Gallery for the identical sums I have named, since it is self-evident that had they been bought by any persons but those to whom they were knocked down, their cost must have necessarily somewhat increased. In three instances, however, namely, in those of the Methuen Raphael, the Michael Angelo, and the "Tarquin and Lucretia," any one might have obtained those works at the prices I have specified, that is to say, the three, for 1,775*l.*; 275*l.* less than the cost of the last-purchased Velasquez. If we made the very liberal advance of, say, 30 to 40 per cent. upon the price of the first 12 pictures on my list, we should not, even then, raise it above that of the nine pictures to which I have so strongly objected. Yet with such an advance, we may fairly take it for granted that, with scarcely an exception, those 12 pictures would at this moment adorn the walls of the gallery. With respect to the "Holy Family," by Sebastiano del Piombo, I have heard it stated that Mr. T. Baring was prepared to bid a very high price for it, partly in consideration of its having been formerly in his father's collection. We might, therefore, have had to make too great a sacrifice to obtain it. I feel convinced that, with this exception, a very few bids beyond the sums they fetched, would have secured to the nation the pictures I have specified.

9955. *Chairman.*] Are you aware, in any of these instances, whether the trustees bid for the picture?—I am not aware that they bid for any of these pictures. I can only say that if they did, it would tell against them, almost more than if they had not; for it would prove how little they appreciated them, not to have gone beyond such prices for such pictures; the prices at which they were sold, being, in every instance, very moderate, and in some cases, exceedingly low. Take, for example, the highest in price, namely, "The Holy Family," by Sebastiano del Piombo; I consider 1,980*l.* a very moderate price for such a work. The total cost of the 28 pictures, which include among them some which have realised 1,000*l.*, 1,500*l.*, and even all but 2,000*l.*, is only 14,043*l.* 17*s.*

9956. Lord *Seymour.*] Then you think that the trustees have been very ill-advised in the purchases they have made ever since 1843?—Undoubtedly; but I do not hold them responsible for the bad management at the gallery. The Government appointed as keeper a person presumed to be an artist of eminence; and

and as such the trustees received him. They very properly, therefore, gave him their entire confidence. Had the keeper really been an artist of eminence, he must, necessarily, have been a great judge of the merit of all works of art, and would, consequently, by an able administration of the Gallery, have fully justified the confidence reposed in him. We have heard Sir Charles Eastlake admit in his evidence, that the trustees never shackled him in any way. They looked up to him as the professional chief of the institution. With regard to "cleaning," they gave him authority to do as he liked with the pictures; and with respect to purchasing, we have heard him, after fully admitting his responsibility for the purchase, and, consequently, for the rejection of pictures, at least of the Italian school, state in reply to Questions 6011–12: "When a picture, or a collection of pictures were offered, perhaps by correspondents abroad, or even by persons in London, to the consideration of the trustees, it was their custom to send the keeper to examine the collection or the picture, and to make a report upon the subject. I undertook that duty." Again, in answer to Question 6016: "When intimation was given to the trustees that a picture was at their disposal, I was sent to examine it." And again, in reply to Question 6017: "If I reported that the picture was not worthy of their attention, nothing more was thought of it." This proves that the trustees gave him full authority, and that he accepted the full responsibility of its exercise. Unless it could be shown that the trustees had obstructed the professional chief of the institution in the exercise of his functions, it would be repulsive to common sense to attach responsibility to any other person.

9957. We have been told by a witness that the collection in the National Gallery, although it is a small collection, yet contains, in proportion to the number of pictures, fewer moderate pictures, and fewer equivocal pictures, than almost any other gallery in Europe; do you agree with that opinion?—I think there is considerable foundation for that statement.

9958. So that although the trustees have not done so well as you think they might have done, yet upon the whole they have produced a collection of which it may be said, that looking to the number of pictures it contains, it has a better proportion of good pictures than almost any gallery in Europe?—I should say that the Pitti Gallery might claim at least as high a rank in this respect. The pictures that were purchased for the National Gallery, previous to 1843, are mostly of a high character; the bad purchases made since, are not in sufficient number to affect, extensively, the character of the collection.

9959. You mean that the pictures since 1843, though inferior, being few in number, would not so far reduce the average of the whole?—Certainly not to the extent of giving it the character of an inferior collection. Since 1843, however, the proportion between good and bad purchases, is lamentably against the management.

9960. Yours, after all, must be a matter of opinion with respect to the pictures you prefer as compared with the pictures that the trustees have preferred?—What I am now stating before this Committee is certainly nothing but an opinion; nor is it for me to assert that mine is right; but I cannot concede that it is a matter of opinion which class of works ought to be bought by the nation. That is decidedly a question of fact; a question of what ought to be done, and what ought not to be done. If I am right, the trustees, or rather, their professional advisers, are most lamentably wrong, and *vice versâ*.

9961. You have said that many of those pictures are painted on false principles of art?—Decidedly they are.

9962. And, therefore, that they are not to be purchased with a view of elevating the national taste?—I have said so.

9963. They are pictures, therefore, that you would not yourself recommend any one to study, as I understand?—Certainly not; I would, on the contrary, caution every one against studying them.

9964. When you state that opinion, is it from the studies you yourself pursued when you were in Italy?—From the studies I have pursued everywhere; from studying the principles of art generally, not from a bigoted preference for a particular school. During this examination I have certainly confined myself, in a great measure, to the works of the greatest period of art in Italy, but I hope I may not on that account be misunderstood as having an exclusive taste, unless to admire most, that which most deserves admiration, be to have an exclusive taste. Whenever I see a work displaying principles that should be common to all

M. Moore, Esq.

22 July 1853.

schools of art, I admire it, whether it be Dutch, Spanish, or Italian; I care not which. Many noble specimens of the Dutch, and other schools, have been neglected, which I should like to have seen on the walls of the gallery.

9965. Then the Committee are brought back to consider your own system of study; of course the plan you recommend to others is the plan you have, as far as possible, pursued yourself?—Had I known of a better one, of course I should have adopted it.

9966. As far as you yourself are concerned, that plan of study resulted in your giving up the profession of an artist, and taking to the profession of a picture-dealer, did it not?—There certainly has been a change in my pursuits.

9967. What confidence can the Committee have that the pictures which you recommend should be studied, are the best kind of pictures to recommend other persons to study hereafter?—I do not expect that the Committee will be influenced by any views of mine. As to the remark upon the change in my pursuits, I made that change in consequence of finding those great works, to the investigation of whose principles, I had devoted years and years of study, with the hope, though but a forlorn one, of reviving some of their beauties, not only neglected, but frequently treated even with contumely. I had to obtain a living, and I plainly saw that this would be impossible, if I continued to pursue that, which, even when achieved, my evidence affords abundant proof, is held in such small account. I felt that I must either abandon the practice of art, or so alter my system as to become a party interested in the triumph of daubs over master-pieces. I preferred the first; nor can I understand how this should render me less deserving of confidence. With regard to my former studies, I still pursue them as well as my humble abilities will admit; if no longer practically, at least, theoretically.

9968. Then the fault, I may rather suppose, is in the public taste of this country preferring a lower style of art to that which your studies in Italy have led you to admire; is that so?—The evil lies in the ignorance of the public with respect to art generally. I feel thoroughly convinced that if you were to take a picture by Titian, the "Bacchus and Ariadne," for instance, were to place it in an auction-room, and could guard against any one's knowing it to be that identical picture, few or none would regard it with the same feelings as when they saw it on the walls of the gallery; no one would venture upon giving a Titian price for it.

9969. Then it is not only the trustees who have not a sufficiently high notion of art, but the whole of the public in this country, who do not appreciate these works of the first masters in the way they ought?—Certainly; the public generally is at present too ignorant of art to appreciate such works.

9970. Lord *Elcho.*] The price that is given for pictures at auctions shows that, does it not?—Yes; to a great extent.

9971. *Chairman.*] When you say that nobody would, at a sale-room, appreciate that picture, do you mean that no man in Great Britain except yourself could appreciate it?—I spoke generally, and without reference to myself.

9972. Do you mean nobody in a literal sense?—My remark was, I repeat, pointed to the general ignorance that exists respecting art; I have, I may say, daily proof of great works being neglected. If we turn to the auction-room, there we may see fine works knocked down for the lowest sums, while daubs instantly command thousands.

9973. Lord *Elcho.*] Your attention has been called to the statement of a witness, that in the National Gallery, taking it as a whole, there are a smaller quantity of inferior pictures than in other galleries; are you aware of the number of the pictures in the National Gallery, and what proportion of that number has been purchased by the trustees?—The number is 225, I believe; but I do not exactly remember; you will find the number stated in the printed Evidence upon the management of the National Gallery, of 1850.

9974. Excluding the Vernon Collection and the Angerstein Collection, and taking an equal number of pictures that have been bequeathed and pictures that have been purchased by the trustees, which would you say would be the finest works of art?—I cannot answer the question, because I do not remember sufficiently well which are the purchased pictures, and which the bequeathed; if I examined the list, I could easily give an opinion upon the subject.

9975. Speaking generally, and comparing the Angerstein Collection and the pictures bequeathed to the nation, and those purchased by the trustees, which should

should you say were the preferable works of art?—The Angerstein, I should say; but I should like to see the list.

9976. Do you, or do you not consider that the pictures that have been purchased by the trustees are inferior to the pictures that have been purchased by the nation; namely, the Angerstein Collection and pictures which have been bequeathed to the nation?—My present impression is, that the pictures in the Angerstein Collection are the finest.

9977. You consider then that the purchases made by the trustees are inferior to the other pictures of the old masters in the National Gallery, generally speaking?—I would rather give you an answer after seeing what pictures belong to each set. (*A list of the pictures was handed to the Witness.*) I have looked through the list, and I find there are some very important pictures indeed that do not belong to the Angerstein Collection; the "Bacchus and Ariadne," for instance. I should like to examine the list further before I give a definite answer.

9978. Can you answer, generally, to the effect of whether you consider that the pictures purchased by the trustees are superior or inferior to the other pictures by the old masters in the National Gallery?—I cannot remember sufficiently one set from the other; I find here certain pictures which I thought belonged to the Angerstein Collection; but I see that they have been purchased since. My impression was, that the Angerstein pictures were, on the whole, the finest.

9979. *Chairman.*] There are only from 40 to 50 pictures purchased by the trustees during the 29 years since the purchase of the Angersfein Collection?—I see that many fine works have been bequeathed.

9980. Was not the "Peace and War" bequeathed?—It was presented to th nation by the Marquis of Stafford.

9981. Lord *Elcho.*] You wish your evidence with reference to the purchases effected by the trustees, as I understand you, to show that during the same period that the trustees have effected these purchases which hang on the walls of the National Gallery, they might have, for less sums of money, acquired finer specimens of art, and of a finer period of art?—With reference to the purchases effected since 1843; that is, since Royal Academicians have been the professional advisers of the trustees. That, I think, I have proved beyond all doubt.

9982. Opinions may differ as to the merits of different pictures, but is it, or is it not the case, that with regard to art there are certain periods of art which are recognised by the world, and by every one conversant with art, to be superior to others?—Certainly it is so, and justly.

9983. Do you, generally speaking, or not, consider that comparing the pictures which have been purchased by the trustees of late years, with those that they have not purchased, the pictures purchased are of an inferior period of art to those which they might have acquired?—With the exception of the Vision of a Knight, by Raphael, they are very inferior; there can be no dispute about it.

9984. As you have stated that those who are conversant with art are agreed as to the finest period or periods of art, are they equally agreed as to the pictures which it is desirable to place before students, with a view to elevating their taste, and forming their judgment in matters of art?—Those who are really competent to judge are perfectly agreed upon that point. A difference of opinion on the subject, would argue also a difference of knowledge.

9985. And is it, or is it not the case, that of late years in England we have seen Greuzes, and pictures of that period, sell for high prices, when pictures which would come under the period of fine art which you have described, have been sold for comparatively trifling sums?—Yes; there are many instances of it; and not only have such instances occurred, but they are constantly occurring.

9986. Do you consider that Greuze is a painter who might be considered as a great artist, and as coming under the definition of the fine period of art?—Certainly not. He was of a very corrupt period, and his works prove it.

9987. Lord *Seymour.*] You have said that the trustees have purchased pictures which are very inferior to those they have neglected; and at the same time you have stated, that the public taste in this country is somewhat vitiated as to paintings?—The public taste is very vitiated; it is in the lowest state.

9988. Therefore the trustees may have purchased inferior pictures, and yet may have purchased pictures which are more pleasing to the generality of the public than better pictures would have been?—I should say that the inevitable

M. Moore, Esq.

22 July 1853.

consequence of a vitiated taste would be to feel more pleased with bad pictures than with good ones. According to my experience, the more ignorant a person is of art, the more likely he is to be pleased with bad pictures.

9989. Then the trustees have done wrong in purchasing what is generally pleasing to the public, but ought rather to have sought out and purchased pictures which are less pleasing to the generality of the public?—They have done wrong to purchase inferior works, at all events, unless it could be proved that fine ones, even though, at first, less attractive to the public, can never become pleasing; but it must be evident to every reflecting mind, that works of the highest character, that is, works which illustrate, in a consummate degree, any one or more of the great principles of art, contain not only the greatest amount of instruction, but, to a mind educated into a perception of its beauties, pleasure of the most exquisite kind.

9990. If the trustees had bought better pictures, you think that they would have gradually led the public to appreciate them?—I have no doubt of it. The public cannot learn to appreciate them, except by having opportunities of becoming familiar with them. Give the public the opportunity, and they will learn to prize what is really fine.

9991. Lord *Elcho.*] What do you consider to be the main object of a National Gallery?—To instruct the people in a knowledge of art, which would teach them to look upon nature herself with a more intelligent eye.

9992. Do you consider it almost of more importance to instruct the public, and to elevate their taste, by placing really fine works of art before them, or to merely please their eye, by placing before them works which are of a comparatively inferior character, but which in the vitiated state of the public taste please the public, and please their eye more than those higher class of works?—It is my conviction that works which contain the greatest instruction must also afford the greatest pleasure; unless, indeed, we are to believe that no pleasure is to be derived from instruction. Therefore, the best works would ultimately become the most attractive.

9993. Do you consider that the trustees would be fulfilling their duties more by endeavouring to raise and elevate the public taste than in contributing to the public amusement?—I cannot perceive the alternative implied. To elevate the public taste would be to contribute to the public amusement. In the end, the greatest works would amuse the most.

9994. If it so happens that in the present state of public taste their eyes are pleased with the Greuzes, and displeased with the Sebastian del Piombos, and the works of Michael Angelo, should you consider it the duty of the trustees, in deference to that vitiated state of public taste, to purchase Greuzes, and to neglect the purchase of Sebastian del Piombos and Michael Angelos?—It would be highly reprehensible in them to do so. Were they to pay deference to a vitiated taste in their selection of works for the gallery, it would be a manifest violation of the very first duty of their trust, since this was established for the express object of promoting a sound taste in art. To reason from analogy, such a system in ethics would be to exalt vice at the expense of virtue, whenever the former afforded a momentary gratification.

9995. Mr. *Vernon.*] You have spoken of the vitiated taste of the public; how do you judge of that vitiated taste, by their patronage of living artists, or by their appreciation of ancient works, as far as you know it?—Both by their extravagant patronage of modern works, which are all of a very corrupt style, and their utter want of appreciation of the great works of the ancient masters. Even those who are loud in their condemnation of the vitiated taste of the day, would, in many cases, far more willingly invest their money on a daub than on a masterpiece, because they are well aware that in case of their wishing to sell, it would be easier to find a customer for the one than for the other.

9996. Do you judge of the taste of the public by what you see passing in an auction-room?—I have other means of judging besides the auction-room; but, still, that is not a bad test.

9997. Are you not of opinion that works of art of the really best periods of art, and we are all agreed as to what that term means, which are sold in auction-rooms, now fetch increasing rather than diminishing prices?—I am not aware that they do, although I have heard it stated by other witnesses. As far as my experience extends, fine works are neglected as much as ever; occasionally one hears

hears of a good picture selling for an increased price, but I have as often known the reverse.

9998. Do you not place reliance on the statement of a very great auctioneer, who, in answer to the question, "Have you observed a marked tendency in the "public to appreciate pictures of that class of late years more highly than they "used to do?" said, "Yes, they are much better appreciated than they used to be"?—No. I think I have better opportunities of judging of that than the gentleman to whom you refer; my opinion is decidedly opposed to his.

9999. Do you consider, if you take ordinary sales and auctions as a test, in a country like this, that possibly the greater certainty of obtaining authentic works of inferior masters, such as some of the Dutch painters and others, may, to a certain degree, influence persons?—Yes; but such a consideration ought not to influence them; nor would it, had they a knowledge of art.

10000. In preference to getting pictures on which there is more doubt thrown?—The very circumstance of valuing a work of art otherwise than for its merit, argues ignorance of art. What does it matter who painted the picture, except as a merely subordinate question, if it be good? The dread people have of getting what is called a "spurious" picture is occasioned in most instances, not so much by the inferiority of the work, as by the likelihood of their losing their money.

10001. Do you mean that you would be perfectly satisfied with an extremely clever copy of a celebrated picture, even though you might have very good reason to believe it was a copy?—If it really were a reproduction of the whole merit of the original, I should see no reason to exercise a preference. Such a copy as I am supposing, would be, if it were of a great original, either a repetition of it, by the master himself, or a copy by an artist almost as excellent. There is the well known instance of the copy of Raphael's "Leo the Tenth," by Andrea del Sarto, which is reported to have deceived an artist who had been actually employed by Raphael to paint some part of the original; but then, Andrea del Sarto was one of the greatest of the painters contemporary with Raphael.

10002. Having in view the object of elevating the public taste, by teaching the public to appreciate works of art, would you advocate the formation of a collection which should embrace pictures from the earliest period of art?—I think it would be very desirable. I wish it to be distinctly understood that I would have specimens of all schools. But with regard to those schools which, by comparison, I have called inferior, but which, nevertheless, comprise works I greatly admire, I would purchase only such examples of them as were the best, both as to merit and condition.

10003. You do not understand my question; supposing we take the Italian school, for instance, which is generally considered the finest, in order to appreciate it thoroughly, and learn its beauties, would you, or would you not, advocate having in the national collection specimens of Italian artists from the very earliest day in a chronological series?—I think it would be highly desirable to have such specimens. A National Gallery would be very deficient without them.

10004. You think that that is the best mode of enabling persons to trace the progress of art, and to appreciate the height of merit to which, for instance, Raphael attained, by seeing his master's works and those before him?—I think such works would be of great assistance. Many of the early Italian pictures you have mentioned, are not interesting merely in a chronological sense, but they are works of very high artistic merit.

10005. You say that works of art of the highest importance have been less appreciated latterly than they used to be formerly?—I hardly said that. I denied that they were more appreciated now.

10006. Take the Sebastiano del Piombo, of which you have spoken justly in great praise, are you aware what the difference in price was at which it was first sold at Sir Thomas Baring's sale, and what it was subsequently bought for by Mr. Thomas Baring?—It was sold privately to Mr. Coningham, I believe, for 1,000 *l.*

10007. Are you aware that in one case it was sold for 800 *l.* and in the other case it was sold for 1,800 *l.*?—I did not know the precise sum Mr. Coningham gave for it; but I was aware that the difference was very considerable; and I believe I have in some measure accounted for it on principles not necessarily connected with art. On the other hand, I could quote a much finer picture as having been

M. Moore, Esq.

22 July 1853.

sold three years ago, in the same auction-room, for a mere trifle. I must remind you that besides Mr. Thomas Baring's determination to repossess that Sebastiano del Piombo, there were other circumstances that helped to increase its price. It was a picture of great celebrity, and had been more than once exhibited at the British Institution. The instance I said I could quote of a much finer work having passed unobserved in the same auction-room, is the picture in my possession, namely, the "Apollo and Marsyas," by Raphael, which I mentioned in a former part of this day's evidence. This picture was publicly exhibited at Christie's during six days, and then sold for 70*l.* 7*s.* I could mention pictures even by Sebastiano del Piombo, a master you so justly praise, which have been put up for sale and passed without a bid, because they did not enjoy the same notoriety as Mr. Baring's picture.

10008. *Chairman.*] With reference to the improvement of the public taste, is it not the case that the mass of the public of this country have generally a strong feeling in favour of pictures on sacred and biblical subjects, particularly the middle and the lower classes?—I am not aware that such a feeling exists. There appears to me to be a preference for familiar subjects.

10009. You do not think they have any preference for sacred or biblical subjects?—I am not aware that they have.

10010. You wish, I believe, to make some explanation with regard to a passage in Armenini, a writer of the 16th century?—Yes. In reply to Question 2435, (5th sitting), in my evidence upon the flaying of the national pictures, whether there existed any written contemporary authority that the great masters of the schools of Italy glazed their pictures, I said that Gio. B. Armenini, a writer on art, contemporary with the great masters, distinctly states in the second book of his work, entitled, "De veri Precetti della Pittura," that they did employ the process of glazing over the entire surface of their pictures. Mr. Dyce, R.A., on the other hand, in reply to Question 3844, (8th sitting), on the same subject, but in immediate reference to the Venetian school, after graciously admitting that Armenini was a contemporary authority, declares that this author confines himself to describing the "practice of another school," that is, "of his own," which, according to Mr. Dyce, was "the school of Ferrara;" that his work is interesting on that account, but that "he does not enter into details." Armenini was a native of Faenza. He was neither of Ferrara, nor of the Ferrarese school. I believe I may venture to say that the word "Ferrara" does not occur in the whole of his treatise; at all events, not in a sense to bear out Mr. Dyce's assertion, which must have been a dashing hit to prove the profundity of his learning, and of my ignorance. It is possible, however, that this accomplished Academician, who quotes Italian without being able to translate it, or even to pronounce it decently, may have mistaken "Faenza" for "Ferrara." As the Committee considered it of importance to ascertain whether Mr. Uwins' stupendous theory (Question 116) that glazing is "quite a modern quackery, that has nothing to do with the noble "works of remote ages in art," could be grappled with by any authority contemporary with the great masters, and as both myself and Mr. Dyce have in our examination quoted the same author on this subject, it cannot be altogether a matter of indifference to the Committee to know which of us is to be relied upon. One or two short extracts from Armenini's book will show the writer's title as an authority, whose practice it is that he undertakes to describe, and, at the same time, Mr. Dyce's scrupulous accuracy. Armenini tells us that he went to Rome when 15 years of age, and that after remaining there some time (he does not say how long), he travelled for nine years over Italy. In the first book of his work, he says: "Posso dire con verità d'havere pratticato lungamente con i migliori, "e più rari dissegnatori et pittori dei tempi nostri e specialmente nello studio di "Roma;" which may be thus rendered: I can say with truth that I was long in "familiar intercourse with the most excellent designers and painters of our times, "and especially when studying at Rome." Elsewhere (Proemio) he emphatically says: "Intendo confirmar tutto ciò ch'io dirò con autentiche e vere ragioni, et "eziandio con l'uso, et con l'esempio de' più eccellenti artifici che sieno stati;" which may be translated as follows: "I will prove all that I shall relate by "authentic and sound arguments, and also by the practice and example of the "most excellent artists that have existed." Armenini's work, therefore, is not interesting on account of its describing the practice peculiar to an inferior school, but on account of its containing an exposition of the practice of "the most excel-"lent artists that have existed;" that is to say, of the true method of producing the

the finest colouring. Armenini's book was published in 1586 or 7, only 10 or 11 years after the death of Titian, a year or two before the death of Paul Veronese, and six or seven before that of Tintoret. Mr. Dyce's assertion that Armenini "does not enter into details," is quite fit company for that other one of his, namely, that our author "confines himself solely to describing the practice of "his own school of Ferrara." Any person who will take the trouble to refer to Armenini's second book, will be able to inform this Royal Academician that he does "enter into details." The Committee can now rely upon contemporary authority that glazing is not altogether "a modern quackery," but that it had something "to do with the noble works in the remote ages of art."

10011. *Chairman.*] Have you any further remarks to make?—I have no further remarks to make, unless you wish to ask me any questions about the management, or the site of the gallery.

10012. We have nothing particular to ask you; but if you have any remarks to make on any of these points, we should like to hear them?—With regard to the site, I think it would be a very lamentable thing if the National Gallery were removed from its present central position.

10013. Will you state your objections to the removal of the site?—My great objection to the removal of the National Gallery to a distance less accessible to the public, is, that it would, to a great extent, neutralise the very object for which that institution was established; namely, to elevate public taste. As to the pictures receiving any damage from atmospheric influences, in their present situation, I deny it altogether. I do not believe there is any foundation for the assertion. I am a frequent visitor at the National Gallery, and have been a close observer of the pictures there for the last 10 years. The result of my experience is, that I do not hesitate to assert that the pictures have not suffered during that period, except from violence, and injudicious treatment.

10014. Lord *Seymour.*] You do not think that coal smoke hurts the pictures?—I can see no evidence of it. I find, for instance, the Titians at the National Gallery, looking like the Titians I know elsewhere; whether in France, in Italy, in my own possession, or in private galleries in England. And so of the rest. Had this rapid decay, which has been so much talked about, been really going on, occupied as I constantly am with pictures of the same class as those in the gallery, I must certainly have observed it. But I contend that this idea is an utter delusion. I believe it was first suggested by the Royal Academy, not from any regard for the national pictures, but simply in order to obtain for themselves exclusive possession of a public building, one half of which they have too long encumbered. I feel thoroughly convinced that by the removal of the National Gallery to a distance difficult of access, and even Kensington would be too difficult of access, you would so diminish the chances of instructing the people in art, that the object of the institution would be in a great measure defeated. The more frequent the opportunities for contemplating models of excellence, the more rapidly will education in art advance. Therefore, we ought to take care not only not to diminish those opportunities, but, on the contrary, we should use every endeavour to multiply them.

10015. Are the Committee to understand that you would sooner have the present National Gallery placed where it is, than have a larger gallery with more rooms and allowing of a better arrangement of the pictures, if it was to be at a greater distance than the present National Gallery from the centre of the metropolis?—In order to answer that question properly, I must have proof that there is no other alternative. I do not contend for that identical spot, if it should be found impossible to procure sufficient space there to raise a gallery commensurate with the dignity of the country. What I meant to say was, that a National Gallery ought to be in a central situation.

10016. All you mean is, as I understand you, that the conveniences and the disadvantages of a site must be carefully weighed before it is fixed upon?—That is self-evident. But I am decidedly of opinion, that provided sufficient space could be obtained, there is no site in the metropolis that combines so many advantages for a National Gallery as the present one. Whether the gallery remain where it is, or whether it be removed, I contend for the necessity of a central situation.

10017. Do you contemplate a much larger gallery than the present National Gallery?—Yes, a much larger one.

10018. Do you contemplate giving further facilities to students for seeing and

M. Moore, Esq.

22 July 1853.

copying pictures?—Of course; everything should be on a much more comprehensive scale.

10019. Then space becomes a very important object for that purpose?—Necessarily.

10020. And the cost of space in any central position is very considerable in this town?—I am aware of that difficulty; but, still, I maintain, that the increased facilities for contemplating works of excellence, which a central situation would afford, must so improve the taste of the people, and, thence, both the style and commercial value of our manufactures, as to amply repay, in the end, even a very considerable pecuniary sacrifice.

10021. But students have told us that they would sooner go further, even as far as Kensington, if they could have better accommodation, and a gallery where they could more constantly study without interruption; do you not think that evidence of that kind is of value in regard to this question?—I must beg leave to ask who those students are? Am I to understand that they are the habitual copyists at the gallery? The mere making, what I may term, coloured maps of pictures, which is the case with the majority of the copyists I have seen at the gallery, without investigating the principles upon which those pictures were produced, is not being a "student," as I understand the term. I understood your question to relate to the habitual copyists at the gallery.

10022. You do not think that they ought to be much consulted?—Perhaps they ought to some extent; but very little ought to be sacrificed to them.

10023. What persons can the Committee examine except persons who have frequented the gallery either as amateurs or for the purpose of copying pictures?—There are many other persons, who, although they may never make copies at the gallery, yet have a far higher claim to be considered as students than the majority of those who do; consequently, their convenience also deserves consideration. These require the gallery to be in a central situation, that they may constantly use it as a place of reference; as a place where, like in a library, the best authors may be consulted. I do not mean to assert that none who copy at the gallery are students in the higher acceptation of the term; what I say is, that, in order to come under the category of "student at the gallery," it is not necessary to make copies there. To meditate before fine works, again and again, to build theories as to the principles upon which their great qualities were produced, and then, at home, to test practically, in various ways, the value of those theories, is as much being a student as making tame maps of entire pictures. Then, the convenience of the public at large must be thought of, and this is best met by retaining the gallery in a situation where it is most easy of access to the greatest number.

10024. You would call those persons either artists or amateurs?—The persons to whom you refer, that is, those who frequent the gallery for the purpose of copying pictures, may be either.

10025. Therefore, if the Committee have had the evidence of artists, and amateurs, and copyists, they have had, generally, the only available evidence upon this question, have they not?—The evidence of such persons is, of course, entitled to fair consideration; but it must be borne in mind, that they form only a very small section of the community, or even of the class more immediately connected with art. It must be clearly proved to me that it is impossible to obtain space for the gallery in town, before I consented to its being removed to a distance.

10026. You think that almost any sum of money should be sacrificed in order to obtain available space, rather than leave a central situation?—I consider the advantages of a central situation so great, as to be well worth our while to make a very considerable pecuniary sacrifice in order to secure it. Of course, there must be a limit. I repeat, that the capital so invested would eventually return a very large interest. The increased opportunities there would be of elevating public taste could not fail to act beneficially upon the character of our manufactures, and consequently upon the commerce of the country.

10027. Do you think it of importance that, in connexion with the pictures, there should be a combination of any other objects of art, such as statues, or other antiquities, and that prints and drawings should be brought into the same building with the National Gallery; or do you attach no great importance to such a combination?—I attach no great importance to such a combination; but I think that drawings strictly belong to the picture gallery.

10028. With

10028. With regard to the prints?—I think the prints would be of advantage to the National Gallery; but far less so than drawings.

10029. Do you think it desirable that there should be a collection of casts of all the best statues, collected close at hand?—I think we ought to have a collection of all the finest casts that could be obtained. This collection ought to contain casts not only from all the finest Greek and more ancient statues, but likewise from the sculptures of Michael Angelo, and other sculptors of the 15th century. It should also comprise casts from the Phidian and other marbles, in the British Museum. Indeed, every town in the kingdom ought to have a gallery of the finest casts.

10030. You mean every town of considerable population?—Yes; such as Manchester, Birmingham, and Liverpool.

10031. If we were to endeavour to combine these various collections in one group of buildings, it would require a very considerable space?—It would; but I do not see the necessity of combining them.

10032. You think that, with a view of keeping the National Gallery in a central position, it would be as well to put these different collections, which require great space, more distant from the centre?—I do not exactly understand why keeping the National Gallery in a central situation should necessitate the removal of the sculptures to an inconvenient distance.

10033. You say that you see no great reason for combining in one building the casts and sculptures with the pictures?—I do not see any necessity for it.

10034. Then you would prefer keeping the pictures in a central situation, and letting the casts and sculpture go to a more distant situation?—The casts and sculptures might also be kept in a central situation, although not under the same roof. I call the British Museum strictly a central situation.

10035. Then you would incur two expenses, one to procure space enough for the National Gallery, and another to get space enough for a building adapted to the sculpture, that extensive collection of sculpture which your present view would require?—I can see no disadvantage in having several museums or galleries in so large a place as London, but the contrary; by keeping the museums separate, according to their legitimate divisions, there would be less danger of any of them being over-crowded, an evil to which some ascribe such disastrous consequences, at least to paintings.

10036. Then you think it an advantage to disperse the collections, so that persons may go from one building to another, rather than that they should all be crowded together in one spot?—I do not see any positive disadvantage in combining paintings, sculptures, drawings, and prints under the same roof; but you would then certainly be liable to the evil of which many so bitterly complain; namely, to crowds of people collecting in the building, and perhaps on one particular spot, at the same time.

10037. They may not only be injurious to the collection, but they are in each other's way?—There would certainly be an advantage in dividing the visitors.

10038. *Chairman.*] If the locality where the collections were placed were two or three times as large, so as to adapt it to the increased amount of objects, would not that neutralise the crowding?—It would to a certain extent; but you could hardly compel the public to distribute themselves equally over the building. There would frequently be crowds collected in one particular department

10039. There has been no difficulty found in the British Museum on that account?—Not that I have heard; but, now, our collections of art are in separate buildings.

10040. Have you any further observations to make?—No.

W. B. Spence, Esq., called in; and Examined.

10041. YOU are well acquainted with the Uffizzi Gallery, of Florence, and also with the Pitti Gallery?—Yes, I am.

10042. You were at Florence, I believe, at the time when the list of queries sent out from the Foreign Office at my request, was placed in the hands of the directors of the Florentine Gallery?—I was.

10043. And I believe they were desirous you should give some additional details besides those they did us the favour to send in writing?—Such was the case.

W. B. Spence, Esq.

22 July 1853.

10044. Are you aware of its having been stated by a gentleman of great authority, Cornelius, the well known German painter, that the Florentine Gallery was one of the best planned and arranged of any he knew in Europe?—So he said to me, in a conversation we had on the subject.

10045. Did he in stating that, allude merely to the architectural arrangement, or did he seem to consider that the combination of sculpture and painting in the same saloons was an advantage?—I think he alluded principally to the architectural arrangement and the various sections of art contained under one roof.

10046. He was decidedly favourable to that combination which exists in Florence, and which has been frequently under discussion in this Committee?—Decidedly.

10047. Was he also of opinion that the arrangement at Florence of an outer gallery, and a number of contiguous chambers devoted to special parts of the collection, was an advantage?—Yes, I think he was.

10048. There is a good deal of attention paid, is there not, to the colour of the walls in hanging pictures at Florence?—Yes; they have lately tried some experiments in a new room which has been painted red. The Tribune and all the older parts of the gallery are hung with red silk, nor did they ever make any attempt to paint the walls by colouring the plaster; the colour that has been tried has entirely failed, and spoils the effect of the pictures.

10049. Do you mean that it is the same red as the silk which you allude to in the Tribune?—No; the red that they have painted is so very strong in colour that it completely kills the effect of the pictures; the director himself said it was done merely as an experiment, and that they thought silk was the best material. He gave me part of the silk of the Tribune, which I brought with me to show the Committee (*producing it*). A door has been made to the old portion of the Tribune, but the curtains are modern to match the rest. This is the attempt to match it, but it looks a little brighter.

10050. But they consider that a good species of colour for giving a favourable effect to the pictures?—Yes; and I have observed in the rooms at Florence, in the gallery where they have carpets down half the year, they take them up during the summer months, which often makes a difference in the aspect of the pictures, for the carpets being dark, and the rooms small, when the carpets are taken up the marble pavement reflects the light on those pictures which hang lowest, and makes them appear discoloured, as it were, from the change.

10051. In short, the result of your experience is, that a great deal depends upon the colour of the walls, the floor, and other incidental circumstances in regard to the effect of pictures in the gallery?—Yes.

10052. They pay a good deal of attention to that in Italy?—Yes.

10053. I believe but little attention has been paid to those matters in this country?—Yes, I believe it has.

10054. And in that respect it would be desirable, would it not, that we should take example from the older and more experienced galleries on the Continent?—Yes.

10055. You have been in communication with what is called the restorer in Florence, have you not?—Yes, I have.

10056. He is a salaried officer of the establishment, I believe?—He is.

10057. Are his services entirely confined to the establishment?—Entirely to the gallery.

10058. Lord *W. Graham.*] It is stated in answer to the questions that there are two restorers?—There are two, but one belongs to the Pitti Collection, and the other to the Uffizzi.

10059. *Chairman.*] In both instances they are entirely confined to their own collections?—Entirely; they are not at liberty to restore other pictures.

10060. Have they any other duties to perform?—No, that is their sole duty.

10061. Is there such a constant amount of restoration going on as constantly to employ them?—Yes.

10062. Do you consider that amount of restoration beneficial to the pictures?—Not without it is required. When the Duchy of Lucca went over to Tuscany, several pictures which were bought or came over from Lucca, being in a very dilapidated condition, required cleaning, to make them at all visible; they were not, however, pictures of any very great value, and when I was last there, the restorer was employed in cleaning some of these.

10063. Do you mean that those two gentlemen were engaged specially in consequence

consequence of a fresh supply of pictures having come to the Florence galleries from Lucca or elsewhere?—Yes.

10064. Then they are not normal and constant officers of the gallery?—They are normal and constant; but they were more employed than usual from that cause.

10065. Supposing these gentlemen are constant and salaried officers of the gallery, is there sufficient employment for them in the pictures of the old collections of Florence?—Yes.

10066. Then I suppose there must be much more cleaning and restoration going on in Florence than here?—Decidedly. You may perhaps recollect that they have an immense number of pictures at Florence, some of which are scarcely ever seen by the public, because they are put in what they call their deposit; there are always several pictures waiting to be restored, in order to be hung up in the gallery.

10067. According to your idea of the best mode of preserving pictures, do you consider the services of these gentlemen constantly employed in the gallery necessary?—I should say they are.

10068. Do you consider that their services are beneficially bestowed, as regards the condition of the pictures?—That very often is a matter of opinion. I should certainly have said that some pictures which I have seen seem to have been very ably restored; but sometimes I am not so well satisfied.

10069. Do you know what are the requisite qualifications for the restorer of the gallery in Florence: what sort of education and knowledge must he possess?—He must be a practical restorer; he should be able to draw; he should have received an education as an artist; he should be able to paint to some extent; for instance, if there is a hand, or a finger, or a nail wanting, he should be able to paint it in such a way that, supposing it were a fine master, it should not be an eyesore, though not as fine as the picture itself.

10070. That it should not be distinguishable, if possible?—If possible.

10071. Of course picture-restoring comprises picture-cleaning?—Yes.

10072. Do they require any scientific or chemical knowledge?—I think their chemical knowledge is entirely practical. When I was there, the restorer was filtering some varnish; I asked him if I could see it, and he said, "We have no "secrets here; this is a new varnish that we have got from France, Damar "varnish, which I have employed the last years with great success; we find it of "a much lighter quality, and though we have not yet had many years expe- "rience, I fancy it will entirely supersede the use of mastic varnish, which has "many disadvantages, especially that of being often very difficult to take off."

10073. Do you or do you not think, from your own knowledge of the education these gentlemen have, that they require to possess some elementary knowledge of chemistry?—I consider that they do. I do not think, however, they could make a chemical analysis.

10074. Mr. *Vernon.*] Practically, they have no chemical knowledge?—No, except as regards their art.

10075. *Chairman.*] Is it your belief that they require to pass something of an examination, as to a certain amount of elementary chemical knowledge, which should make them cautious in dealing with the materials they employ?—Yes.

10076. You alluded to this Damar varnish, and said that it was lighter and better adapted to preserve and improve the appearance of pictures than the mastic varnish; has it long been in use in the Florence Gallery?—He said about a year.

10077. It is of recent introduction?—Yes, of recent introduction.

10078. Do you consider that they have had sufficient experience of it to make it quite safe to employ that varnish generally?—He had been making experiments with it, but not upon the most valuable pictures; they were second-rate pictures that he was employed in restoring, and he said he made experiments on them, and found the result very satisfactory.

10079. They were dealing cautiously with it at first, in order to test its qualities before they applied it to pictures of great value?—Yes.

10080. You have alluded to their care in purifying and filtering this varnish; were they in the habit of preparing the mastic varnish in ordinary use?—Yes.

10081. Is it prepared by the cleaner?—It is prepared by the cleaner.

W. B. Spence, Esq.

22 July 1853.

10082. Then of course he has sufficient knowledge of the ingredients and composition of the varnishes to be able to test their quality?—He said that he never trusted to the people who sold the varnish made up, because there was so great a demand very often for it, that they sold it before it was sufficiently seasoned, or had been kept sufficiently long to be fit for use; and it is a well-known fact that all varnish, mastic varnish especially, if not kept, has a very deleterious effect on pictures.

10083. They attach very great importance in Florence to the quality of the varnish that they put upon the pictures?—They do.

10084. They consider it essential to the preservation of the pictures that the varnish should be of the best description, pure, and altogether unexceptional in its quality?—Certainly.

10085. What is the number of officers of various kinds employed in the establishment at Florence?—From 18 to 20.

10086. Are those officers, or any portion of them, employed in other duties besides the mere attention to the pictures and their preservation?—With regard to the inferior officers, their constant occupation is to act as guardians of the pictures, and to see that they are not injured by the public; but they also must be acquainted with some manual occupation, as joiners, blacksmiths, reliners of pictures, and so forth; and when repairs are required in the gallery, they are employed, because the direction they would not like to trust to people whom they did not perfectly well know, as they are often left alone in the gallery at times when it is not open to the public.

10087. I suppose the officers of that class are more numerous than they might be otherwise, for the purpose of being able from time to time to enable the directors to avail themselves of their services in those ways?—I think so.

10088. That you consider a very beneficial plan?—I do.

10089. It saves the risk of tradesmen, not conversant with localities where precious objects of that kind are exposed, dealing carelessly or ignorantly with the business that they are put to?—Yes.

10090. Mr. *Vernon.*] How do you find the climate of Florence tell upon the pictures?—I think that the climate of Florence produces no material effect upon the pictures if once they are well cleaned.

10091. Then what is it that keeps the picture-restorer in such constant employment; is his occupation principally the removal of all old varnish for the sake of putting on a new one?—That is principally his occupation.

10092. What is the principal cause of the varnish becoming so injured as to make it necessary that it should be frequently removed?—The pictures which the restorer is generally occupied in cleaning in Florence are those of the 17th century, of which there are a great number; and these pictures were principally varnished with bad mastic varnish, and even some of the pictures, as he showed me, had a varnish upon them made of amber, which it is almost impossible to get off, because it unites with the under coat, the painting adheres to it, and, in fact, to take it off destroys the picture; there is no remedy for it.

10093. You are alluding to pictures such as those of the Bolognese school?—Yes; and also of the Florentine school of the 17th century.

10094. Do you mean to say by the description you have given, that this amber enters into the composition of the paint itself, or only into the composition of the varnish which was intended to protect the paint?—I think the amber varnish was made with amber; this varnish adheres to the paint so firmly, that any acid sufficiently strong to bring it off would bring with it the painting itself.

10095. That has been found to be very frequently the case with masters of that later period, has it not?—Yes, very often.

10096. You consider that that alone would be an answer to my question, as to the necessity for the constant employment of a person to deal with that varnish?—No; I think that in cases where pictures are varnished with that varnish they must be left alone, because the very varnish itself almost precludes the possibility of taking it off.

10097. In fact, at Florence they are at present very much engaged in removing varnish, which almost invariably adheres to the picture, so that practically they are constantly taking off some part of the picture, which they require the restorer

restorer to repaint?—No; the pictures on which this varnish is employed are happily second rate pictures; in the gallery I only saw two or three.

10098. You mean that answer to apply generally to the masters of the 17th century, and not to any great number of pictures in the Uffizzi?— Yes.

10099. Is it the practice in Florence now to restore pictures, or to repaint them to any great extent?—I think it is.

10100. Is there a practice now which obtains very much in the north of Italy to bring in pictures from churches which are in a damp and damaged state, and to have them completely repainted?—I should not say that they completely repainted them, but I have known instances in which pictures which have been much spoilt and injured in parts have been repainted and restored, and made up for sending away, perhaps to America; but that does not apply to works of a high class.

10101. Do you consider that in the management of the Florentine Gallery there is, upon the whole, a conscientious desire to daub or paint over the genuine work of the old masters as little as possible?—I certainly think so now; but that was not the case some years ago.

10102. *Chairman.*] Some of those varnishes to which you have alluded, such as the amber varnish, and the copal varnish, they used in old times to put on the pictures, did they not, for the purpose of almost glazing them, as a protection to the pictures for ever?—That often was the idea.

10103. Are they not in the habit, in Italy, in cases of necessity, of removing varnish by means of penknives and sharp instruments?—I believe sometimes that has been had recourse to.

10104. Is the system of cleaning with the penknife much practised in the Florence Gallery?—I think it is, in certain pictures, where dirt in fact has to be removed from crevices.

10105. Is it not, when very cautiously and skilfully done, considered in that country the safest of all modes of cleaning?—Yes, it is.

10106. It is practised a good deal at Rome, is it not?—I think it is.

10107. Do you know the studio of Capalti?—Yes.

10108. Do you know that he is in the habit of cleaning pictures in that way?—No, I do not.

10109. Can you state the number of pictures in the two galleries, the Uffizzi and the Pitti?—No; but in the Uffizzi alone there must be from 5,000 to 6,000, if not more; there is a collection of portraits, which goes the whole way round the gallery.

10110. Do you mean the portraits of painters?—No, portraits of everybody, from Adam down to the present time almost; there are from 600 to 800 of them. I may mention that the restorers are constantly occupied, not only for the galleries, but for the whole of the state pictures in Tuscany.

10111. Are the Pisan and other collections under the charge of these gentlemen?—At Pisa I do not think there is a collection which strictly comes under their care.

10112. Are these two gentlemen employed in cleaning pictures in the other galleries?—No; at Sienna they have an establishment of their own.

10113. Do you know the salary of the restorers at Florence?—No, I do not know what their salary is; but I think I can tell pretty nearly.

10114. Do you consider them very well paid?—I do not know whether they would be considered well paid in England, but they have about 40 dollars a month.

10115. Is that considered a high salary at Florence?—It is.

10116. Is the salary made what they consider high, upon the principle that it is necessary to pay people of that description well, to ensure caution and trustworthiness in the performance of their duties?—Yes, I think they are paid higher in proportion than any other *employés* in the gallery.

10117. Have you any notion of the time they take in cleaning a picture; are they very cautious with it; cleaning it in part first, and then letting it stand; or do they clean them out and out?—I think they have generally two or three pictures in hand at once, and that they are not in too great a hurry; because many pictures from being cleaned in too great a hurry may be injured; whereas

W. B. Spence, Esq.

22 July 1853.

if emollients are used instead of acids, in process of time they will have the same advantage, without having any deleterious effect upon the pictures.

10118. Lord *W. Graham.*] In No. 3, of the answers from Florence, it is stated, "All works having reference to the fine arts are admissible to the "museum, except copies and material reproductions;" can you explain what is meant by "material reproductions"?—I should say, that copies in casts from marbles are meant; that is the literal translation of the Italian; the meaning is certainly that.

10119. *Chairman.*] As distinct from mere surface painting?—Yes.

10120. Have you any further observations to make?—I merely wish to say, that very often the varnish, from age and so on, may give a merit to a painting which it does not possess; and a painting which has come into the hands of the cleaners may be restored perfectly well, and yet, instead of having gained anything by the cleaning, it may have lost both in the eyes of the public and of the connoisseur, although the cleaner himself would not be to blame. The Italians have a proverb, that "Time paints, but does not draw." In cleaning pictures, you must more or less take off the painting, as it were, of time; if pictures were *never* cleaned, they would probably become perfectly black; and you might then as well have so many slates hung up in the gallery as pictures, and that even in the climate of Italy. As an instance of this I may mention that a picture bought by the King of Bavaria (a Raphael) had been entirely lost sight of, in consequence of the action of the atmosphere and smoke in the room in which it was hung; it had been condemned to the servants' room, and considered a painting of no value; it was discovered by the doctor, who went to see one of the servants who was sick; and on looking up, while he was feeling his pulse, his eye caught this picture; the doctor, who was a connoisseur, directly informed the Marquis, to whom the picture belonged; which shows that if pictures are *never* cleaned, they become obliterated and almost invisible, even in that climate. Still I apprehend, that from the great improvement in the restoration of pictures now introduced, such as using turpentine or varnish instead of oil in the repainting, and of avoiding boiled oil or deleterious varnishes to give them effect, pictures once well restored and not exposed to damp, will require no further restoration for many years, and then merely the removal of the varnish.

10121. What do you consider to be the nature of the Damar resin, which is made into varnish?—It is a resin, I think, of the same quality as the mastic.

10122. Do you know where it comes from?—I believe it comes from the East, but I am not sure.

10123. Do you know what it takes its name from?—No, I do not; I have heard it always called Damar varnish.

10124. You were under an impression, were you not, that it took its name from a French manufacturer of that name?—I heard so.

10125. You heard Mr. Farrer state in his evidence, that he believed the name was an abbreviation of Damascus, did you not?—No, I did not.

10126. Lord *W. Graham.*] It comes from Damascus, does it not?—I knew it came from the East, but I was not aware whether it came from one of the islands, or where. The great secret in the Damar varnish which is sold in France, I believe, is merely that the turpentine mixed with it should be perfectly pure and well seasoned.

10127. *Chairman.*] You have a document, I believe, with you, which the director of the gallery at Florence requested you to lay before the Committee relative to the hanging of pictures, the decorations of the walls, and so forth, have you not?—Yes, I have.

Vide App. No. 20.

[*The Witness delivered in the same.*]

Veneris, 29° *die Julii*, 1853.

MEMBERS PRESENT.

Colonel Mure.	Mr. Vernon.
Mr. Ewart.	Mr. Monckton Milnes.
Mr. Baring Wall.	Lord William Graham.
Lord Elcho.	Mr. Stirling.
Lord Seymour.	

COLONEL MURE, IN THE CHAIR.

Sir *William Cubitt*, called in; and Examined.

10128. YOU are one of the Commissioners of the Great Exhibition of 1851?—I am.

10129. You took part in that capacity in the purchase of the ground at Kensington Gore?—Yes; that was the first ground we bought.

10130. Can you mention the extent of the ground; it has been stated by the Secretary to be about 86 acres?—That is about the amount that has been already purchased.

10131. There is an allusion made, in answer to question No. 8740, by Mr. Bowring, to an extension of the ground, which would make it 170 acres in all; is that the case?—We have no means of doing that at present.

10132. Is there any reason to suppose that there is either ground sufficient in that neighbourhood available for the purpose, or that there is any intention on the part of the Commission to purchase ground to the amount of 170 acres?—Not that I am aware of; I believe we could have purchased 170 acres, had we had the means at the time.

10133. Lord *Seymour.*] Eighty-six acres have been purchased, as I understand?—They have.

10134. Were those 86 acres purchased solely with the money of the Commissioners, or were they purchased by the contribution of Government, together with the money of the Commissioners?—It was a joint contribution; the Commissioners found 150,000 *l.*, and the Government another 150,000 *l.*, the whole of which is not quite expended.

10135. Then those 86 acres altogether have cost nearly 300,000 *l.*?—Very nearly.

10136. *Chairman.*] Then there are at this moment no disposable funds for increasing the purchase to the extent alluded to of 170 acres, nor is there any actual intention of augmenting the ground to that amount?—No; the feeling is that the Commissioners, with the assistance of the Government, have now obtained as much land as they originally proposed to buy, although they pointed out that Parliament would do well to purchase the whole of the unoccupied ground contiguous to their own purchase.

10137. Mr. *Ewart.*] Was there not an ulterior object proposed at first, that the Commission contributing a certain portion of land purchased out of the surplus of the late Exhibition, the Government were to furnish an equal portion?—Yes; that whatever we could supply out of the surplus, the Government should meet with an equal sum, and that has been done.

10138. Mr. *B. Wall.*] There having been 86 acres purchased already, the other 84 acres to make up the 170 acres, would probably cost 300,000 *l.* more; those 170 acres being contemplated by the Commissioners to be a sufficient quantity of land for the purpose of moving the gallery to Kensington Gore, supposing the gallery to be moved there?—My feeling is, that there is room enough for the gallery at Kensington Gore now.

10139. Upon the 86 acres that have been purchased?—Yes.

10139*. Then why did the Commissioners propose to purchase 84 acres more, if those additional 84 acres are not wanted for public purposes there?—I have not

Sir *W. Cubitt.*

29 July 1853.

not said that the Commissioners did make any proposition for such a purchase with their own funds; I am not aware that they did. I have heard the purchase talked of, but I never was present at any meeting of the Commissioners at which a proposition of the kind was made.

10140. Then this proposition, I understand you to say, was never before the Board of Commissioners at all?—Not for the purchase of 170 acres.

10141. Mr. *Ewart.*] Is there any such condition expressed in a report that was made?—Not that I am aware of, except in a hypothetical manner.

10142. Lord *Seymour.*] The Government having contributed 150,000 *l.*, and the Commissioners having contributed an equal sum, is there any sub-division of the property, so that now it could be ascertained which portion actually belongs to the Commission, and which to the Government, or do they hold it jointly?—They hold it jointly, and many Members of the Government are also Commissioners.

10143. *Chairman.*] Is it not understood that, although nominally and in courtesy the surplus from the Exhibition is mentioned as money belonging to, and appropriated by the Commission, yet virtually it is Government money, like that advanced by Parliament?—They both stand in the same predicament.

10144. That is to say, the Commissioners could not have applied that money to any purpose without the sanction of Government?—Certainly not, as regards the joint property.

10145. But if Government intended to apply it to a purpose different from the Commissioners, the Government would be fully entitled to do so?—I do not think so.

10146. Then you do not consider that the surplus was intended to be at the disposal of the Treasury or the Chancellor of the Exchequer?—No; it was at the disposal of the Commissioners themselves, until they entered into the arrangement with the Government to meet it with an equal sum.

10147. Lord *Elcho.*] Would it have been in the power of the Commission to have spent that sum of money for any purpose they thought fit, without consulting the Government?—Certainly, we have a right to do what we please with that surplus.

10148. Lord *Seymour.*] In whom now are the 86 acres vested?—In the names of the Royal Commissioners.

10149. The Government having paid half the money, the whole of the property is vested in the Royal Commissioners?—Under certain conditions. They cannot act independently of the Government in the disposal of the property. If they had bought the property alone, and kept it to themselves as Commissioners, they might have done so; but that did not appear likely to answer so good a purpose.

10150. Mr. *M. Milnes.*] Do you understand that, supposing that site not to be accepted for any national purpose, the Commissioners will not be able to dispose of the property again as they think fit?—It would be necessary that there should be a mutual understanding come to before they could do so. The whole of the 86 acres now stands as it were joint property.

10151. Mr. *B. Wall.*] Were the negotiations that took place between the Commissioners and the Government upon the subject brought formally before the Commissioners at their meetings?—Yes.

10152. Have you any objection to lay any report of the proceedings which took place at those meetings before the Committee?—They all came before the committee of the Commissioners, and the results came before a general meeting of the Commissioners; the terms were settled by the Government of the day.

10153. Have you any objection to state whether there was any difference of opinion among the Commissioners, or whether their decision was unanimous?—Their decision was unanimous; we never had any division in the Commission.

10154. Mr. *Ewart.*] Under what common name or title are the Commissioners, and the Government who assented to the proposition of the Commissioners, now combined?—The members both of the former and of the present Government who have acted in this matter are all Commissioners, possessing the same rights as the original Commissioners, and they are all formed into a corporation.

10155. *Chairman.*] I understand the fact to be, that the purchase made in the first instance by the Commissioners of their portion of the property was made before the grant of the extra sum was acceded to by the Government; is

that

that so?—Yes; we bought the Gore House estate, and agreed for the purchase of Baron Villars's estate, which took the whole of the money we had to spare.

10156. You took upon yourselves the risk of that, assuming it to be a step which would ultimately be approved of and ratified by the Government?—Yes; we fully concluded that it would be approved of and ratified by the Government; indeed, we had a consultation with the Government in the first instance.

10157. Lord *Elcho.*] Which portion of the property was purchased first by you?—The Gore House estate.

10158. Then the portion that belongs at present to the Commission is the whole of the frontage, and the portion purchased by the Government is that part which is behind?—There is no part that belongs separately to the Government or to the Commission.

10159. But the first purchase made by the Commission was the frontage, the Gore House estate?—Yes.

10160. What is the extent of that frontage?—Six hundred feet.

10161. Mr. *B. Wall.*] Will you have the goodness to point out to the Committee the 84 acres which it has been proposed to purchase in addition to the 86 acres already purchased?—This is it (*pointing it out on the plan*).

10162. Is the whole of that property held under one proprietor?—No; there are several; we bought the whole of Baron Villars's estate.

10163. *Chairman.*] Will you have the goodness to explain to the Committee what were the circumstances which induced the Commissioners originally to make that purchase, and the circumstances under which the purchase was made?—The object was to find, if possible, sufficient ground in a good situation for the purpose of a centre for industrial art and industrial science; that was the leading star of the whole.

10164. Was there any recommendation or suggestion made to the Commissioners by the Government, or by any public or authorised body, that it would be desirable to obtain ground of that description?—It originated with the Commissioners themselves as soon as they found that they had a surplus.

10165. They conceived that there was a feeling on the part of the public that it would be desirable to unite a number of public institutions in one locality, and they thought that a good mode of expending their surplus fund?—Yes, we came to a determination to spend all the surplus we had, or all the money we could get granted, on ground suitable for the purpose we had in view.

10166. The idea originated with the Commissioners themselves?—Yes.

10167. Had that any special reference to the recommendations of former commissions or committees employed specially to look out for sites fit for the National Gallery?—We always understood that it would form a site for a national gallery, if those who had the management of a national gallery so wished; we always held ourselves in readiness to give up any portion of that land for those purposes, and we do so now.

10168. Were there any other sites that appeared to be eligible offered to the attention of the Commission about the same time?—No, none that we could deal with, for our ideas were rather large; we thought we could manage about 100 acres, and had the land been cheaper we should have bought more; we did nearly agree for some, which we afterwards had to give up again.

10169. Will you have the goodness to mention to the Committee what sites were examined on the part of the Commission, and afterwards given up?—There were none suggested to us which we had examined, and which were afterwards given up; whatever suggestions were made we made ourselves.

10170. Mr. *Ewart.*] Can you produce to the Committee the original document by which you made your proposition to the Government?—I have it not here; but had I known the Committee desired to see it, I would have brought with me a book containing all the minutes of the meetings of the Commissioners, and I could have read any extracts from those minutes that might have been considered necessary to elucidate the proceedings of the Commission.

10171. *Chairman.*] In purchasing this ground was the question of the especial adaptation of any portion of it to the purpose of a national gallery at all taken into consideration?—Yes, so far as discussion and conversation went.

10172. Did that discussion involve the question as to the expediency of combining sculpture and painting?—The question of a national gallery in a general sense was considered.

10173. That is, the combining of collections of sculpture, antiquity, and fine art generally,

Sir *W. Cubitt.*

29 July 1853.

generally, with the collection of the National Gallery of paintings?—So I always understood, and we also proposed that there should be (as I suppose eventually there will be) a national school of design, such as that which exists now in a smaller degree at Marlborough House.

10174. Was it considered essential that that combination should take place, or in the event of that combination not taking place, would they still have preferred that site for the National Gallery of Paintings, although the other collections might remain at the British Museum and elsewhere?—We always supposed that it was a good site for a national gallery of paintings, and I think it is so as far as I am able to judge of such things, as I know of none so clear of buildings to be had about London.

10175. Even if the National Gallery were not to be united, the Commission, you apprehend, would still consider it desirable to remove the National Gallery of Pictures to that site?—I think that would be the idea of the Commissioners; in fact, the Commissioners did everything they could with a view to the advancement of art in its best sense.

10176. Can you state how many other institutions it was proposed to collect upon the same site?—Speaking of chartered institutions like the Royal Society and the Astronomical Society, I do not know how many there were; there might be perhaps four, or possibly more than that.

10177. Lord *Elcho.*] Besides the four chartered institutions to which you have referred, I understand you to say you intended to make it the centre of industrial art and industrial science; did you mean to transfer the School of Design from Somerset House to that site?—Certainly.

10178. Any other institutions?—The School of Design chiefly regards art, but our scheme embraces schools of scientific industry; in fact, the site would be the nucleus for study of all objects of art.

10179. You say there would be four chartered institutions such as the Royal Society?—I say that there might be, not that there will be.

10180. Would they occupy a considerable space of ground?—No, our supposition always was, that the institutions that came there would form altogether a building with apartments suitable to each, and accessible to a good library and philosophical apparatus.

10181. Was it intended that there should be several buildings, or one large building only?—We never got so far as to intend buildings of any kind; the question is a general question; there may be, and if the thing goes on there no doubt will be, buildings erected there, but that would be done not by the Commissioners, but by the parties for whose benefit they were intended; all the Commissioners have done, or can do, is to find the means of having them, and if the parties who are more interested, and the Government think fit to have them, that is their affair.

10182. You say the design was merely to afford the parties interested the opportunity of there being connected together on one spot a great industrial art and scientific institution, or institutions; have the parties interested, to whom you allude, received that proposal favourably, or otherwise?—Some have received it favourably, and some unfavourably; some of them do not like removing; some say that Kensington Gore is too far west. My answer to them is, that if that is not the right place now, it will be so in a few years; and that it will be the centre of all the élite of the metropolis connected with art.

10183. Are you aware whether the chartered societies to which you allude, have, or have not, declined to remove their collections to Kensington?—We have never entered into any negotiations with them. They have some of them sent us memorials and resolutions, telling us we are too far off.

10184. Is the effect of their resolutions, that they would rather remain where they are?—No; none of them are content to remain exactly where they are. There is no other place I could mention, possessing equal advantages, that they could have on such terms; and as to the distance, I am of opinion that that objection will vanish altogether within 20 years.

10185. Do you think it suitable for schools of design?—I think so; and it will become more and more so every day.

10186. You do not think it too far removed from the centre of London?—No; because it will be the centre of the best part of London, in the course of a few years.

10187. Do you mean by that to say, that in the direction of Kensington there

there will be many buildings, streets, and squares erected which do not now exist?—They will be erected wherever there is room for them, and they will be the best kind of houses.

10188. Is there at present unoccupied ground to the westward of the ground you have purchased, which you think is likely, in the course of time, to be built on and inhabited?—Yes; but the whole of the property in that neighbourhood will be so valuable, that none but the best class of houses will be built upon it; that land will sell at the rate of from 5,000*l.* to 7,000*l.* an acre.

10189. You anticipate, do you not, that there will be buildings erected to a considerable extent to the westward of the site you have purchased?—I do not say to a considerable extent; but there will be some building no doubt.

10190. Do you think that the objections which are now made to the site of the present gallery, in consequence of the smoke which proceeds from the buildings surrounding it, will hold good with regard to this site in the course of time, when, as you describe it, the ground which is not at present built on is covered with buildings and inhabited?—The two cases are not at all the same. The Kensington site never can be in the same predicament as the site of the present National Gallery, which is surrounded by factories, gas works, and things of that kind; that state of things never can exist at Kensington.

10191. Are there at present no factories at Kensington?—None, except floor-cloth factories, which are matters of no consequence, as far as this question is concerned.

10192. Do you think that the buildings likely to be erected on the present unoccupied ground will not be of a character to emit great quantities of smoke, such as baths and washhouses and other things, in the neighbourhood, of the National Gallery?—Yes.

10193. Mr. *Vernon.*] Are there not some chemical works in that neighbourhood?—Not that I am aware of.

10194. Mr. *B. Wall.*] Would you not be one of the first to recommend the erection of baths and washhouses?—Yes; they are highly necessary no doubt; but I should mention that they do not emit large volumes of smoke like manufactories.

10195. In building your gallery at Kensington, you would bring a working population about it, would you not, who would need that convenience in the one district that is given in the other?—No; I think that baths and washhouses are not likely to be required in the neighbourhood of our land at Kensington Gore as they are in Seven Dials.

10196. Mr. *M. Milnes.*] Would not the houses that would be built in the neighbourhood of Kensington Gore be likely to be such as would be inhabited principally during the summer time, and which therefore would not be likely to produce so much smoke as houses in the more populous parts of the town?—Yes; they would be the best class of houses, such as those at Prince's Gate, which are of a very superior kind.

10197. Mr. *B. Wall.*] Do you not think that, generally speaking, there is great hardship in making it necessary to remove the population of one district to another five or six miles off?—I do not contemplate that anything of that kind will be done.

10198. Do you not think that the necessary consequence of removing the Schools of Design, and institutions of that nature, to a very much greater distance from the population that now makes use of them than they are at present, would be a hardship upon them?—I can scarcely say, but it must be remembered that it is not five or six miles to this site.

10199. How, for instance, would the population of Spitalfields, a population eminently in want of instruction in design, be benefited by the removal of the School of Design three miles further off from them than it is at present?—They would be in the same position as the schools of design in other parts of the kingdom.

10200. Mr. *Ewart.*] And there is a local school at Spitalfields at present, is there not?—Yes; and that would remain in connexion with the principal school.

10201. Mr. *B. Wall.*] Then it would be only the removal of the staff, and not the removal of the population, that you contemplate?—Certainly; the principal school of design would be in my mind something like an university, and there would be schools in connexion with it all over the kingdom.

Sir *W. Cubitt.*

29 July 1853.

10202. Mr. *Ewart.*] It would be a central school of design?—Yes; that is what we always contemplated.

10203. Are you aware that that was recommended by the Committee of 1836?—No.

10204. You do not know that it was recommended that there should be a central school in London, which should radiate and be in connexion with other schools in the country?—No, I was not aware of it; but that makes our case stronger; we desire to prepare for such a thing.

10205. You have said something about your original plan of treating with the different institutions you have mentioned; having heard that some of those learned bodies dissent from and disapprove of the proposition for their removal, what is your present plan?—We have no plan.

10206. Have you ever contemplated what would be the probable extent of the buildings that would be necessary for all the various institutions?—There would be very few buildings necessary.

10207. You have no definite plan, I understand you to say, at present?—No. Somerset House is but one building, though it is used for a variety of purposes; we do not propose to build; questions are put to me as if we proposed to do certain things, whereas the fact is that we propose to do nothing but find the ground.

10208. You have no definite plan at present?—No.

10209. You have no definite idea of the number of institutions that it would be proper to combine with the National Gallery?—No.

10210. Mr. *B. Wall.*] Did the Commissioners cause the soil to be examined by competent authorities?—We knew the soil generally; it is gravel, with very little clay.

10211. Do you consider it a dry soil?—Yes, very much so.

10212. Is it not a very shelving piece of land?—No.

10213. How much of the 86 acres you have purchased would be called table land, upon which there would be the power of building on a flat surface?—Very little, except the lower part; the lower part is flat.

10214. That is the part which is the furthest from the road, is it not?—Yes; no part of the land falls very much, but it is very well adapted to forming terraces.

10215. Mr. *Vernon.*] Although the Commissioners contemplated a larger scheme, are you able to say whether or not they would object to any portions of this land being given up for a gallery of pictures, or for a school of design alone, without any other institution being added to it?—The land could be given up for any particular purpose, but there is no one thing that would take 80 acres of land, or even 50.

10216. Assuming it to be considered desirable to place a gallery of pictures or of sculpture there, and that it was desirable that it should be sufficiently isolated from surrounding buildings to be secure against smoke, do you believe that the Commissioners would be prepared to give up a sufficient portion of the ground they now possess for that one specific purpose?—That would depend on circumstances, which I cannot at present foresee. I think they would be quite ready to give up a sufficient quantity of ground for the erection of a most excellent National Gallery, or any building of that kind; I feel no doubt upon that subject.

10217. I take it for granted, that having purchased so large a property with a view to a more extended scheme, they would not be willing to devote the whole of that property to any one portion of that scheme?—That would not be carrying out the whole of our ideas.

10218. *Chairman.*] Is it not the case that the portion of the ground which has been considered best adapted to the purpose of a national gallery is the frontage towards the road?—We have always supposed that if a national gallery is to be erected there, it would be next the Kensington-road.

10219. When you spoke of a piece of ground being obtained for the National Gallery, which should have a sufficiently open space about it to dilute and purify the air, do you think that the breadth of ground you would have there would be sufficient to guard against the influences you would wish to escape from?—Yes. There need not be other buildings within a considerable distance of it.

10220. What frontage have you to the road at present?—About 600 feet.

10221. What

10221. What do you suppose would be the length of the frontage of the building you would erect?—I cannot answer that question.

10222. Do you think that a frontage of 600 feet would give you sufficient space to erect a handsome building, and yet leave space enough on each side to purify the air that came from the surrounding buildings?—Quite. It would be entirely open in front, and almost entirely open at the back.

10223. Mr. *B. Wall.*] Would not the building being brought nearly flush with the road render it very subject to dust?—It would not be necessary to bring it within 400 or 500 feet of the road.

10224. If you put it back from the road, would it not then be placed on shelving land?—Yes, it would be on shelving land; but no man would erect a building on shelving land, with the door-sills level with that land. It would be built on arches and groins, and it would have the benefit of excellent terraces, which would be a great advantage. The land is well laid out by nature for it.

10225. In what part of the ground would you consider it most desirable that the National Gallery should be placed, supposing it to be built in the situation to which you now refer?—I think the Gore House estate would be the best for such a purpose.

10226. Lord *W. Graham.*] What width would you get by going 400 or 500 feet back?—We should then have altogether about 800 or 900 feet in width.

10227. *Chairman.*] If the Commissioners were to purchase the narrow wedge, which at present has not been purchased, would it not be necessary to pull down the houses that are built upon it, in order to avoid the smoke or other influences they might create?—We should pull down all the houses built on that narrow wedge. We are now making bargains for a great deal of property along that road.

10228. You would pull down those small houses?—Yes.

10229. Are not some of them very valuable houses?—No; the only really valuable houses are those in a large terrace fronting the Kensington-road. They would not come down; they would remain as they are. Those are houses the smoke from which would never do any harm to the National Gallery.

10230. Do you contemplate buying and pulling down those houses?—We contemplate, though perhaps not in the present generation, getting the whole of those houses.

10231. What is the length of the leases?—I do not know how many years they have to run. I think they were originally 60 years' leases; how long they have been built I do not know.

10232. Mr. *Ewart.*] If the building were carried 400 or 500 feet back, it would be amply protected, would it not, from the too great proximity of those houses?—Yes.

10233. Has it ever entered into your consideration in making plans, or do you think it desirable, that ornamental gardens for the recreation of the public should be formed in the neighbourhood of the buildings?—We always contemplated laying out all the ground that was to spare, until it should be wanted for public purposes, in an ornamental manner for the use of the public.

10234. You never can want to occupy the whole space for buildings?—No.

10235. The intermediate space might be laid out for the recreation of the public as ornamental gardens?—Yes; such has been our intention.

10236. Has the price of land risen much in the neighbourhood since you made your purchase?—Yes.

10237. Can you give us any idea how much?—Yes; when we began to purchase we could buy for 3,000*l.* an acre, and now we cannot for 5,000*l.*

10238. Therefore, as an investment, this was a very good purchase?—Yes; I think we shall take no harm from it.

10239. Mr. *M. Milnes.*] You are losing the interest of the money all this time, are you not?—Yes; we have some few rents coming in.

10240. The amount which you receive in rent is very small, is it not?—It is not a great deal; I do not know how much.

10241. Lord *Elcho.*] Do you think there is any probability of the Government, or of the Commissioners, at any time getting possession of the whole of the wedge of which you have spoken?—Yes; we ourselves propose going to Parliament to enable us to do so.

10242-3. You propose to go to Parliament for power to purchase the whole of that

Sir *W. Cubitt.*

29 July 1853.

that wedge up to the road?—Yes; we propose to apply for an Act of Parliament to purchase the fee, and then to deal with the leases as time and circumstances would allow. We should wish to do away with the temporary buildings, of which there are a great many there.

10244. *Chairman.*] So long as you have that row of houses along the road, the leases of which are for 60 years, you never could avail yourself of the ground behind those houses for the front of the gallery?—No, but I think it likely that the gallery would be built in such a way, as to admit of extension at a future time; you would build a gallery suitable for present purposes, with means of extending it ultimately.

10245. Supposing a new gallery of such an extent, and of such beauty, as has been contemplated, to be built at Kensington Gore, do you think it would look seemly to have a long row of private houses in its immediate neighbourhood?—It might not look seemly in the first instance, but it would when the whole came to be completed.

10246. Mr. *Ewart.*] Even if those houses were left standing?—Yes.

10247. *Chairman.*] The wind sets generally in this island from the south-west, does it not?—Yes, the prevailing winds in this country are from the south-west.

10248. And the buildings that would be erected in the neighbourhood of this ground would also be chiefly towards the south-west, would they not?—There would be buildings on both sides of the ground, because the building property we have here is so exceedingly good.

10249. It was stated by another witness, in answer to question No. 8613, that the mischief from atmospherical influences came chiefly from the north, and that it was so considered by the Commissioners in making the purchase; is that your opinion?—I cannot give a definite answer to that question; I think it is a great advantage, its being clear to the north, or on any side.

10250. When the wind sets from the east, the great mass of smoke comes from the densely populated part of the City, does it not?—Yes, when it is in the east, but it is less in the east than in the west, therefore the buildings there would be well situated with reference to the prevailing winds.

10251. If a large city were to spring up there, or if, as Mr. Cubitt says, it already exists to the south-west of Kensington Gore, you would get a good deal of smoke from that quarter, would you not?—You would have such smoke as houses give, but that is very different from the smoke that is produced by manufactories or gas works.

10252. Do you consider it would be necessary, in case of this great scheme being carried out, and these numerous public institutions being established upon that ground, that there should be a thoroughfare through Hyde Park to enable persons living on the north side of London to obtain convenient access to them?—I think so; and I think there are ways and means of doing that which would prevent its being such a nuisance as to make it undesirable to do it.

10253. What plan have you proposed?—I have proposed no particular plan; it might be either above or below the ground, but I think the most seemly thing would be what they call a ha-ha, or sunk road, with a walk or slope on each side, planted and well fenced.

10254. You would have that go through the centre of the park?—I would not say through the centre of the park.

10255. In what part would you propose to make it?—I think about the place where the road now turns off; near what was the end of the Great Exhibition.

10256. When I speak of the centre of the park, I mean the centre of the large extent of forest and pleasure-ground, which includes Hyde Park and Kensington Gardens?—It would be where Rotten-row now turns off into the drive.

10257. Mr. *Ewart.*] How would you cross the Serpentine bridge?—That would be more the other way, I think.

10258. Lord *Seymour.*] Have you considered the subject of this road much?—Not much.

10259. *Chairman.*] Is it not the general opinion of those persons who have given their attention to the subject, that the inhabitants of that large city which has sprung up in Tyburnia, if they wanted to get to the great mass of public institutions, supposing them to be collected together on the proposed site, would not be

be disposed to go round by Cumberland-gate and Hyde Park Corner, but would expect some readier access across the park?—Yes; there is only one other access, by Palace-gardens.

10260. But that would also make it necessary for them to go a good way round, would it not?—Yes.

10261. Lord *Seymour.*] If there is to be a road made at all from the north to the south side of the park, near Kensington Gardens, have you considered how they are to pass the Serpentine?—No, I have not considered it particularly. I have merely considered the general want of a road, if establishments of the kind referred to were removed to the Gore House estate, or its neighbourhood.

10262. If there is to be a ha-ha road, unless it is beyond the Serpentine, the Serpentine would interfere with it, would it not?—It appears to me that the ha-ha road ought to be very near the division of Hyde Park from Kensington Gardens.

10263. You are aware, are you not, that the Serpentine is not only in the park, but that it continues into Kensington Gardens?—No, I was not aware of that.

10264. The fact being that the Serpentine not only passes through the park, but continues through a large portion of the gardens, will not the Serpentine be very much in the way of making a ha-ha road between the gardens and the park?—Not altogether. It would be very easy to carry the Serpentine over a sunk road.

10265. Then your ha-ha road would go under the Serpentine by means of a tunnel?—Not by means of a tunnel, properly so called, but by means of a sunk road, the top of which should be covered over with iron plates. I recently carried a large navigation over a railway in the same way.

10266. Are you aware that there is a road right through Kensington-gardens, which would save all that work, if the gates at the two ends were opened?—No; I know very little of Kensington Gardens.

10267. You have spoken of the site at Kensington Gore being intended partly for a school of design?—Yes; that is one of the objects contemplated.

10268. I think you explained that school of design to be rather what you would call a college of design?—Yes.

10269. Not a school to which young students should come for the purpose of elementary study, but a school in which those who were more advanced should complete their education?—Yes. It would be a sort of university, with colleges all over the kingdom.

10270. Therefore, the inconvenience that would arise if young lads were required to go there for daily study would not occur in the case of those who had gone through their elementary studies, and who were only completing them at a more mature period of life?—That would be so.

10271. You have spoken of different societies and institutions that might be collected at this spot?—Yes; as distinct from institutions or buildings for industrial purposes.

10272. You are aware of the societies and institutions that were pointed out in the Second Report of the Commissioners?—Yes.

10273. Are you aware whether or not, since that Report was published, most of those societies and institutions have objected to go so great a distance from London?—Some of them I know have objected to the distance.

10274. But they have all expressed a wish, have they not, to get buildings appropriated for them?—Yes, all of them, I believe, have expressed that wish.

10275. And many of them have expressed a wish, have they not, to be brought near to other institutions?—Yes; they admit the general principle of juxtaposition to be good, as far as I have seen, but they say the distance is too great. My answer to that is, that the distance keeps lessening day by day.

10276. You have stated also, that the Commissioners only propose to find ground, and do not propose to do more, either for a national gallery, or for these different institutions?—They have no means of doing more.

10277. Do they not propose hereafter to take to themselves the management of some of these institutions?—The industrial institutions.

10278. Then, although they give the ground for other societies and institutions, they would retain, as regards the industrial institutions which would

Sir *W. Cubitt.*

29 July 1853.

occupy a portion of this space, the control and management of them to a certain extent?—Partly.

10279. Have you considered how much of the 86 acres would be requisite for the purposes of the School of Design and its accompanying buildings?—No. I think the industrial institutions would be built in two or three different parts. We have never made any plans for such buildings, and the party who has most considered the matter is our President himself.

10280. You have been asked about the land being table land, for the purpose of such buildings as it would be proposed to erect upon it; would there be any advantage in the land being all table land?—No; I should say rather the contrary, because with falling land like this, you may build on one side, and have excellent terrace room on the other. I think that is a great advantage, as it would enable you to make the building much more handsome.

10281. What quantity of frontage have you now, that is actually available?—Six hundred feet next to the Kensington-road.

10282. Without reference to the wedge that has been spoken of, the position of which it is desirable to obtain?—Yes.

10283. If the ground to which you have alluded could be obtained, you would have a frontage of nearly 1,200 feet, would you not?—Yes, between 1,100 and 1,200.

10284. Do you know what the frontage is of the ground on which the present National Gallery is placed?—No, I do not.

10285. Will you take this plan in your hand (*handing it to the Witness*), and tell me from it what is the frontage of the building which is at present occupied partly by the National Gallery, and partly by the Royal Academy?—Four hundred and fifty-five feet.

10286. You have been asked about baths and washhouses; would it, in your opinion, be necessary for the population of the district that baths and washhouses should be put within a few feet of the ground which has been acquired by the Royal Commissioners?—No; the neighbourhood would not require baths and washhouses to be near to it at all.

10287. Do you mean that the persons in that neighbourhood requiring baths and washhouses might have them within a convenient distance, without their being contiguous, or closely contiguous, to the site which has now been acquired by the Royal Commissioners?—They might be placed within a convenient distance of the ground itself, and in a more convenient situation for the parties requiring to use them.

10288. Do you think there is any security that no baths and washhouses, or factories of any kind, would be built on ground closely adjoining to that belonging to the Commissioners?—There could be none close to it, for our roads are to be laid out from 80 to 100 feet wide.

10289. The first security is that you have 86 acres already in one plot?—Yes; and another security is, that the adjacent land is so valuable that it could not be appropriated to such purposes at all by the parties owning it.

10290. Are you aware of the distance of the baths and washhouses from the present National Gallery?—No, I am not.

10291. Your first security is that you have 86 acres in one plot?—Yes, which could not be encroached upon.

10292. Next, you are surrounded by roads nearly 100 feet wide?—Yes; there are two roads from north to south, 100 feet wide and 80 feet wide respectively, and a road from east to west 80 feet wide.

10293. And you consider also that you have this further security, that the ground adjoining those roads will rise so much in value, that it will not be appropriated to such purposes as those to which I have alluded?—Yes; besides, nearly half the frontage to those roads belongs to the Commissioners.

10294. Therefore the Commissioners may take care that on that ground nothing objectionable is built?—Yes.

10295. Mr. *Ewart.*] Are there not several outlying portions of the property which it would be difficult to appropriate to any public purpose, such as corners running into other people's property?—Yes; we propose to deal with that as we best can, either by exchange or otherwise, so as to get perhaps more frontage next the roads.

10296. Mr. *Vernon.*] Supposing it were an object to erect a National Gallery only on this site, what extent of ground have you that would be perfectly free from

Sir *W. Cubitt.*

29 July 1853.

from encroachment or intrusion by other parties?—In the first place, there would be a square piece of ground of ten acres next the Kensington-road.

10297. Having a frontage to the road of 600 feet?—Yes.

10298. You would at present have no security, would you, that there might not be some obnoxious buildings erected on either of the blocks of land to the right and left?—The block of land to the left is Eden Lodge, belonging to Lord Auckland, which we once nearly bought, and had to give up again; his Lordship did not wish to part with it.

10299. And what is there on the other part?—The gardens of the very good houses I have mentioned near the Kensington-road.

10300. You say you propose to have an Act of Parliament to enable you to purchase that?—We have proposed to get an Act of Parliament empowering us to remove that, which would be no injury to the public.

10301. Assuming there to be portions of the ground in this block to the west which are highly prized by their possessors, do you propose to take it from them compulsorily under the power of an Act of Parliament?—Yes, the inferior property.

10302. Upon what principle would you propose to take it from them, if you would not apply the same principle to the land on the other side?—We think we can show a better reason for taking that property at its full value than can be shown for allowing it to remain an interruption and a nuisance.

10303. Supposing that Act of Parliament not to be obtained, buildings might be erected, might they not, immediately contiguous to your proposed new gallery?—Yes; I admit the possibility of it, although it is not in the slightest degree probable.

10304. Mr. *B. Wall.*] Is there not a floor-cloth manufactory close to Eden Lodge at present?—No, I think not very near.

10305. That has not been part of your purchase?—No.

10306. *Chairman.*] If the National Gallery, although not erected upon this piece of ground, were erected in an eligible situation not far distant in the neighbourhood of the park or Kensington Gardens, or on a portion of either, the object of the Commissioners in having the museum of fine art in the immediate neighbourhood of other institutions would be partially attained, would it not?—Yes, partially; if the Government should determine to erect a National Gallery in Hyde Park, where the roads meet in front of this site, it would require an alteration in the mode of laying out the ground for other purposes.

10307. Do you mean you have a distinct plan as to how the ground is to be laid out?—No; we have no plans.

10308. You say that if anything else were to be done with the National Gallery, it would cause an alteration in the mode of dealing with the ground?—Yes; an alteration would naturally follow.

10309. If the National Gallery were to be built so near to this site as to be easily accessible, and almost as near as it might be under any circumstances, would not the object of the Commissioners be partially attained?—Yes; if that should be determined upon by the Government, who have an equal voice with the Commissioners.

10310. Mr. *M. Milnes.*] Was there any suggestion or offer made to the Royal Commission to purchase any other property?—No, we never had any land offered to us; people never knew what we wanted; and what we wanted we endeavoured to obtain as quietly as we could.

J. Pennethorne, Esq., called in; and further Examined.

J. Pennethorne, Esq.

10311. *Chairman.*] I BELIEVE that at the suggestion of a noble Lord, a Member of this Committee, you at one time examined another piece of ground on the opposite side of the road to the Kensington Gore ground, with a view to the erection of a National Gallery upon it?—Yes; the ground which I mentioned when I was last examined before the Committee.

10312. We are desirous to have some further explanation of your view with regard to that piece of ground; had it occurred to you that it would be peculiarly eligible for the purpose?—I thought it at that time the most eligible site that had been proposed.

10313. Was that before the idea of making the Kensington Gore purchase was made known?—Yes, before the purchase of that ground was contemplated.

J. Pennethorne, Esq.

29 July 1853.

10314. It was subsequent to the Report of the Commission upon the two other sites in Kensington Gardens, was it not?—Yes.

10315. Lord *Seymour.*] Have you brought with you any plan of that site?—Yes; I have brought plans of the site, and of the locality generally (*producing them*).

10316. Is it the site at the end of Rotten-row?—Yes; this plan was made for the purpose of avoiding any encroachment on Kensington Gardens, but the building would be better if placed further northwards than this plan shows.

10317. What is the length of the building?—About 625 feet.

10318. Lord *Elcho.*] Would it not be better still, do you think, more eastward, opposite the Kensington Gore site?—I think the situation shown on this plan would be the preferable of the two, because the building would be exactly central with the basin, and therefore it would form a more architectural feature with reference to the gardens and the palace, if at any time the latter should be enlarged and treated architecturally.

10319. If it were built further eastward, opposite the Kensington Gore ground, it might then, might it not, be made to communicate with any buildings that were erected upon the new ground by an arch over the road?—I do not think you could make an arch, with good architectural effect, except at a great expense, and then there would be a difficulty in arranging the levels.

10320. The objection would be on the score of expense?—Yes, and the difficulty of making communications over a public thoroughfare 70 feet broad of a character corresponding to the buildings, they being also on different levels.

10321. *Chairman.*] Do you not think that the junction of the ride commonly called Rotten-row, of the carriage drive through the park, and of the great public road, with a turnpike, just in front of the building, might be rather an objection on the ground of publicity and dust?—The junction would be considerably removed from the turnpike, and according to this plan the entrance into the park would be thrown back 100 feet from the present road.

10322. If you have a turnpike at one end, and the junction of three roads on the other, and a large open gravel space immediately in front of the building, do you not think that those circumstances would rather tend to interfere with the avoidance of dust and other influences from which it is desirable to escape?—That is one reason why I think the building should be removed further north than this plan shows it.

10323. And upon that ground you would prefer, were your plan adopted, to have your building removed further into Kensington Gardens, towards the basin?—Yes.

10324. Lord *Elcho.*] Does the ground slope considerably from the new broad walk, which runs into Rotten-row at the new iron gates, to the point which you have selected for the site of the gallery?—Yes, the ground falls considerably between those two points, but that would be in some measure counteracted by keeping the building on a much higher level, which for every reason would be advantageous, because then it would be seen much better from the gardens, and from the park, and the effect would be much finer from the high road.

10325. If you place the building where you propose to place it, it will be, will it not, in the immediate vicinity of a row of houses near the turnpike which are private property, and which, as far as we know, there is no intention of purchasing and adding to the property purchased by the Commissioners on the Kensington Gore site?—Yes, but those houses are gentlemen's houses, and if the building should be placed further north, with gardens in front of it, I do not think that any annoyance whatever would arise from those houses.

10326. You are aware that the Kensington Gore site has been purchased with a view of combining on one spot art institutions of various kinds, schools of design, and other buildings which have industrial objects in view; do you not think it would be an advantage to bring the National Gallery as near as possible to those buildings which are proposed to be erected upon the Kensington Gore site?—Speaking of it as a question of distance, of course it would be an advantage; and for many other reasons it would be advantageous.

10327. Do you not think it would be perhaps a preferable site to the one you have selected for this building, if it were removed more to the eastward, and erected nearer the broad walk, and opposite to the ground which has been purchased by the Commissioners and by the Government?—That requires a great deal of consideration; my first impression is, that if that site were adopted, the

Standidge & Co. Litho. Old Jewry

[To face page 724]

Nº 867. Ordered by The House of Commons to be printed, 4th August 1853.

the building should be at right angles to the broad walk, but then it would not be parallel to the buildings upon the site of Gore House; it would be a difficult subject to manage.

10328. Have you ever examined the ground with that view?—Not with a view of having two buildings there; but I have always considered that supposing the National Gallery to be placed upon the site of Gore House, it should be made to appear like a part of the park, by changing the fences, and decorating that part of the boundary of the park.

10329. If it were built on the spot which I have pointed out to you on the map, opposite the Kensington Gore site, it would be on more elevated ground, and would be in a more commanding position, would it not?—The ground itself is more elevated, but on the other site there might be erected a gallery equally high, and although this which I am now pointing out on the map is a low part of the gardens, I think that by opening it to the basin, raising the levels, and laying it out in an ornamental manner, it might be made a much more architectural feature than if it were built on the site facing Kensington Gore.

10330. What is there between this part of Kensington Gardens, as laid out upon your plan, and the broad walk; is it an open space, or is it covered with trees?—It is partly an open space, and partly covered with trees; it is crossed by an avenue; it is not a thickly planted part of the gardens.

10331. Would there be any difficulty, supposing the gallery were to be erected on the site I have pointed out, in making decorative garden ground opposite the site proposed in Kensington Gardens?—If the building were erected on the site opposite to Kensington Gore, it ought to stand parallel to the schools proposed there, and standing parallel to the schools, it would be exceedingly difficult, according to the present laying out of the gardens, to form ornamental gardens which would assimilate with the new building and with Kensington Gardens, for then the building would not stand at right angles to the new broad walk.

10332. Lord *W. Graham.*] Do you think it would be absolutely necessary, in order to make it look well, to build it parallel to any new buildings in Kensington Gore?—I think that if the National Gallery were to be built directly opposite to the new School of Art it should be built parallel to it, and the two buildings should appear to be parts of one design; it would not be necessary that they should accord in detail, but they should appear to be built at the same time, and in connexion with each other. I think they ought to be parallel to look well. When I say they should be parallel, I mean that on the ground-plan they should occupy parallel sites.

10333. Mr. *Ewart.*] They should square with each other?—Yes.

10334. Lord *Elcho.*] It need not necessarily be a regular building, but might be what was described by a distinguished foreigner, Baron Klenze, as a picturesque more than a regular building?—Yes; but where you have a large public thoroughfare passing between the two, I think it would be much better that they should be built on a formal plan.

10335. Supposing it to be desirable, or even necessary, to treat the buildings uniformly, are you of opinion that the nature of the ground is such that, having that object in view, you could not erect the building on the spot I suggest?—That is no doubt a very good site for a building, but there would be great difficulty in erecting buildings on that site, the plan of which would assimilate both with the gardens and with another building on the site of Gore House.

10336. You see on the plan to which I am now pointing of the Kensington Gore site, there is a portion marked green; there is another portion which is not coloured, but which enters in a wedge-like shape between the portions of green; I presume you are aware that it is the intention of the Commissioners, or that they hope eventually to acquire the whole of that frontage?—Yes, but at a future period.

10337. Supposing them to have acquired the whole of that frontage, amounting to 1,200 feet, would not the site I suggest come precisely in the centre of the Commissioners' ground?—If those houses were purchased, a great many of the difficulties would be removed; all I have said hitherto has been upon the assumption that you were referring only to the site of Gore House.

10338. You are aware that it is in the contemplation of the Commissioners to get possession of that remaining portion of ground?—No, I was not aware of it; I never heard that it was in contemplation; I only heard that it was in contem-

J. Pennethorne, Esq.

29 July 1853.

plation to buy up the ground-rents, with a view of being able at some future period to obtain possession of the lessees' interests.

10339. If that ground were purchased, and the whole frontage were in the hands of Government, or of the Commissioners, your objections to the site I suggest would be obviated, would they not?—They would be very considerably removed.

10340. Mr. *Vernon.*] If you were to attempt to make the buildings on the one side of the road harmonise with those on the other, would not the different directions in which the roads at present run materially aggravate the difficulty?—It would be necessary entirely to change the direction of the west end of Rotten-row.

10341. It would be necessary, would it not, to change both roads?—Yes.

10342. Lord *Elcho.*] Do you not by your plan propose to change the roads?—Yes, but only very slightly; according to my plan they would be continued into the Knightsbridge-road almost as at present.

10343. Why could not that be equally well done higher up?—The two roads so branch off that it would be more difficult.

10344. Might not the evil to which your attention has been directed with regard to the position of the road be obviated by altering that position?—Yes; the erection of the building on that site would involve the change in the roads.

10345. Lord *Seymour.*] I understand you to mean that, comparing the site referred to in the plan you gave in first and the site now suggested to you, your chief objection to the last site is that it would be a greater encroachment on the park than the former site?—That is one chief objection.

10346. Mr. *Vernon.*] I presume you consider, that taking an extreme angle of the gardens would be a less encroachment upon the gardens than if you cut a piece out more in the centre?—No; I think that placing the building on the site where it was first proposed to be, central to the basin, would be a great advantage.

10347. And would it not be a less encroachment also upon the gardens, being more at the extremity of them?—It would be a much less encroachment both upon the park and the gardens; it would take away from the park a part which is now a nuisance, and from the gardens it would take away a low part which nobody ever goes into.

10348. The ground falls there a good deal, you say?—Yes.

10349. And you also say that that inconvenience might be remedied by raising the foundation of the building?—Yes.

10350. Would not that involve a very considerable expense?—It would only involve the expense of foundation-work; one of our great faults hitherto has been that we have erected our buildings on basements much too low. I think that money expended in foundation-work is always well laid out.

10351. Would you prefer a higher site without the necessity for artificial raising of the foundation, or would you prefer a lower site with such necessity?—If the site is raised, you have of course the power of arranging the approaches to it, whereas, if you take the high site, you will in some measure lose that advantage; you have height of ground, but not apparently height of building.

10352. Then, architecturally speaking, without reference to the question of expense, you would prefer elevating your site artificially?—I do not say that; but whether the building is erected on high ground or low, I would prefer that the foundations of the building should be raised above the natural level.

10353. Lord *Elcho.*] Could you not easily, on artificial foundations, raise the building on the site I have suggested?—Yes, but it would not stand on a terrace as on the other side.

10354. And the building would have the additional advantage of being on a higher natural level?—Yes; I should not think the cost of foundations a question of consequence.

10355. I understand you to say that some people, objecting that the site you have pointed out is too low, you could obviate that objection by raising it?—I think it would be a great advantage to raise the building, because it would have a much finer effect both from the gardens and from the park.

10356. Mr. *Vernon.*] Irrespective of questions of public convenience, and questions of expense, which of the two last pointed-out sites would you, as an architect, prefer to select for such a building?—Always providing that the building

building is placed high, and back from the road, I should prefer the site that is central with the basin.

10357. Lord *W. Graham.*] Would not the site opposite Kensington Gore give you the advantage of a large open space on both sides of the building?—That would depend on what is done with the ground in Kensington Gore.

10358. But that, being in the power of the Commissioners, can be reserved, can it not?—I have already said that if the building on the garden site is kept well back, with gardens in front of it, the gentlemen's houses would not be an objection; but another great reason why I should prefer the site central to the basin is, that there the building would be seen all the way from the Uxbridge Road, by opening the vista central with the basin; whereas if the other site were selected, the north front could only be seen from a very short distance.

10359. Mr. *Ewart.*] It would not be seen at all from the park, and the one opposite the Kensington Gore buildings would be seen?—The south front would be seen from the park entrance.

10360. But not the back façade?—That would be seen conspicuously from Kensington Gardens and from the Uxbridge Road.

10361. Is it not rather a disadvantage that the building should be placed with a natural slope, the ground inclining sideways?—That would be entirely remedied by placing the building further back.

10362. Would not the lines of nature be somewhat at variance with the lines of art?—Nothing can be worse than placing a building on a sloping line; there should always be a perfectly level base for it to stand upon.

10363. Is not the natural line a sloping line in this case?—The natural line would be the line of the park railing, a long way in front of the building: all within the railing would be level.

10364. *Chairman.*] You said in answer to a question put to you in your former examination, with reference to a site which was suggested in the centre of Hyde Park, that you thought it would be architecturally finer than any other; what did you mean by that expression?—I meant that it would be seen from great distances, and that it would be a great feature; if it were in that situation, it might be seen from every point of view.

10365. You mean that a building executed with fine taste in that locality, might prove a splendid specimen of architecture?—Yes.

10366. You have heard the evidence which has just been given by Sir William Cubitt?—Yes.

10367. Assuming the numerous public buildings which have been referred to, as proposed to be erected on the Kensington Gore ground, are you of opinion with Sir William Cubitt, that a public thoroughfare through the park would sooner or later require to be opened up for the purpose of giving access to those great institutions?—I think it would most likely be asked for.

10368. Do you think that it would be necessary that the inhabitants of the north-western parts of the town should have that facility of access given to them?—I think they would expect to have the means of access given to them either through the park or through Kensington Gardens.

10369. Do you not consider that having a large open space round the ground you speak of as being architecturally finer than any other as a site, would be a great advantage as tending to prevent injury to paintings and other works of art from the smoke and other injurious influences?—That is a question more for a painter or a chemist than for me. Speaking as an architect, I do not see any great difference as respects atmosphere between any of the four sites that have been under discussion to-day.

10370. Lord *Seymour.*] You heard it stated by Mr. Bowring, that there was a plan which he considered an ingenious one for carrying a communication across the park, nearly in the line of the sunk wall, by means of a tunnel, which was to go under some of the principal drives or pleasure roads of the park; had you ever heard of that scheme before?—I think I had heard of it, but any sunk road of that description would have, I think, a very bad effect, and would be highly detrimental to the park; supposing it absolutely necessary to form a road, I should say let it be on the surface, and as handsome as possible.

10371. You think it would be more desirable to have an open road as ornamentally laid out as possible than a tunnel such as that which has been suggested?—I think so; in fact, if it were absolutely necessary to have a road there, and there were no special objections to making use of the broad walk through

J. Pennethorne, Esq.

29 July 1853.

Kensington Gardens, that would be the finest road that could be chosen, and supposing the National Gallery to be built on the first site I have pointed out near the turnpike, then that road, by being opened only at the north end for persons going to the gallery, so as not to be a thoroughfare, would be a very good approach to it.

10372. In that case people wishing to go in from the north side must go to the other end of the garden?—Yes.

10373. Would they not complain of that, do you think?—I think that would be a very great convenience; they might from that road drive into the gardens in front of and belonging to the National Gallery without making it a regular thoroughfare.

10374. *Chairman.*] Do you mean that supposing they wanted to get from the National Gallery to the other institutions, which it is proposed to connect so closely with the National Gallery, they must go back to the Bayswater-road, and round by another road?—No, the Kensington-road would be the communication between those institutions and the gardens in front of the National Gallery.

10375. Do you not think, considering there is now a drive passing along the sunk wall to which we have adverted, that it would be a greater interference with the privacy of the pleasure-ground comprised in the names of Kensington Gardens and Hyde Park, to open up another public road along that long walk, the drive remaining as it is, than to make the present drive applicable to both purposes, that of giving access to the new buildings, and affording a means of communication across the park?—If it were absolutely necessary to form a road, I think the present broad walk would be the best to adopt, provided the traffic were limited as in Hyde Park at present.

10376. If you had two roads across the park, one a public road along the broad walk, and the other a drive for carriages as it is now, would not that be a greater interference with the retirement and privacy of the park than if you made the existing road suit both purposes?—I do not think it would be advisable to use the existing drive for traffic. I have not thought sufficiently on the subject to be able to speak off-hand, but I fear that if the drive round the park were to be opened for even a limited traffic, you would find it would be considered a great interference with the privacy of the park, and that it would lead to the entire park being so opened; the best way to preserve the privacy of the park would be to adopt the broad walk as the new road, if a new road be absolutely necessary, with an invisible fence; but a fence would not be required if it were only used as a drive to the gallery.

10377. Do you not think that making the broad walk a public road would give offence to people taking an interest in Kensington Gardens?—I think not; there may be objections, which I know nothing about, to permitting a drive through Kensington Gardens.

10378. Lord *Elcho.*] During the Exhibition of 1851 a portion of the gardens was railed off in that way, was it not?—That was the case with this same walk.

10379. Were any great objections raised on the part of the public to that?—The objections, I think, were to its being appropriated exclusively to riders.

10380. Taking the public as a whole, were they in favour of it?—To the best of my recollection, people said what a great advantage it would be if it were made a permanent road.

10381. You think that at the time the experiment was tried in 1851, on the very same ground as that to which you allude, the public were in favour of what was done, and considered that it would have been a great advantage if it were a permanent thing?—That last is my impression.

10382. *Chairman.*] Do you consider that that impression is consistent with the feeling that has been expressed before this Committee, as to the great objection the population of London have to interference by means of public drives with the parks?—I think that if the institutions were brought together the drive from north to south would be called a public convenience. The convenience would be so great that I am disposed to think the public, if allowed to partake of it, would prefer it.

10383. You think the public convenience would be served by a good road through the parks, from one populous part of the town to the other, open to public carriages as well as to private carriages?—I think that a road across, from the Knightsbridge-road to the Uxbridge-road, would be a public advantage, but

but I think it would be injurious to the park and gardens unless the traffic were limited.

10384. You do not think it would be a great public advantage if it were carried along the present line of the sunk wall, but you think it would be a great public advantage if it were carried along the long avenue where no road now runs?—I said that the former would be an interference with the privacy of the park, and that therefore the broad walk would be the better of the two.

10385. That, you think, would not be an interference with the privacy of the gardens?—It would not be so great an interference, because there would not be any outlets, and carriages would be obliged to go direct, whereas if the park drive were adopted it would be impossible to prevent them using the whole circle.

10386. Lord *Seymour*.] The Chairman has alluded to a road running alongside of the sunk fence; is it the fact that there is such a road?—It does not run parallel to it, but in parts it goes near to it.

10387. It passes round the powder magazine, does it not?—Yes; and it does not go over the bridge.

10388. Mr. *Vernon*.] Was there not a great objection made to opening part of Kensington Gardens for a ride?—The great objection was, that riders only were admitted; it was not that it was made a public thoroughfare, but that it was only made a ride.

10389. Is it within your recollection that when it had been so opened very little objection was shown with regard to it?—That is my impression, but I do not remember much about it.

10390. Lord *Seymour*.] You have been asked some questions respecting the site of the gravel pits, which is more in the centre of the park, with the gardens at the back, as I understand?—The site I have been asked about I understand to be between the gravel pits and the wall which divides the park from Kensington Gardens.

10391. That is near the road, is it not, that now goes round the park?—Yes.

10392. If that site were adopted, it would be necessary, would it not, to open the whole of the park to the public?—If that site were adopted, it would of course involve the necessity of forming an approach to it for the public from both roads, and that is a great objection to that site.

10393. At present the parks are locked up at night, are they not?—Yes.

10394. If these buildings were put there, and keepers and others in charge of the gallery were to reside there, those regulations must also be altered, must they not?—It would be necessary to have the road open at all hours.

10395. Are you not aware, from your connexion with the Office of Works, that there are objections to opening the parks at night?—The parks are not in my department, but I know there is the greatest possible objection to it, and that even now they find great difficulty in preventing offences.

10396. Lord *Elcho*.] You say the chief objection to the building being on that site would be the necessity of opening the park at night?—Yes; and the necessity for making an approach both ways.

10397. Do you not think there would be a great objection to having a large building in that portion of the park?—I do not think so. I think a large building there, if it were handsome, would be such a fine, conspicuous object that it would be a great ornament to the park.

10398. Do you not think it would destroy the character of that portion of the park, that portion of the park being undulating, broken ground of a park-like character?—I think the site itself is so fine, and architecture always assimilates so well with foliage, that it could not be otherwise than an improvement.

10399. *Chairman*.] Do you not think its being at the extremity of that long vista with Kensington Palace in front, gives it also an architectural effect?—Yes, that is an advantage. It would be seen all the way from the gardens and from the palace; and again looking at it from the eastward, it would be seen from the Marble Arch and all the east side of the park.

10400. Do you think it would be any inconvenience to the public if they had access to the building from each side of the park, it being understood that they should return the way they came, and that the road should not be made use of as a thoroughfare?—I am afraid that if it were once opened so far, it would be difficult to do otherwise than make it a thoroughfare.

10401. Mr. *Ewart*.] Do you think there would be a great objection on the

T. Pennethorne, Esq.

29 July 1853.

part of the public to having a large public building erected in the centre of Hyde Park?—I do not call that the centre of Hyde Park; it is quite on one side; people are very jealous, no doubt, of having the parks built on, or of having any portion taken for building purposes; but for a public purpose like that, I can scarcely think there would be an objection.

10402. Have you ever thought of such a situation, if it could be obtained, as the pond in Kensington Gardens, and the filling that up?—That would be too close to the palace.

10403. Suppose there were no palace there?—Suppose there were no palace there, then the site of the palace would be the finest and most appropriate site about London, provided the platform of the building were kept high above the general level of the gardens.

10404. *Chairman.*] You have been asked about locking the gates of the park; I presume it never could be intended that the National Gallery, as a public object, should be open after dark?—No, but there would always be people residing there.

10405. Is it not the case with regard to some other similar establishments where privacy is required, that people especially connected with the building may have the privilege of coming in at night upon showing that they do belong to the establishment, although the public generally may not be admitted?—Yes, but the great difficulty in my mind is, that if you once admit the public, no matter under what restrictions, it will lead to the formation of a public road.

10406. Mr. *Stirling.*] Would there be any difficulty in having the broad walk, if it is to be used as a public road, fenced in in the same way as the Bird-cage Walk is fenced in, or any other road that passes through the Park?—I should say that supposing the broad walk in Kensington Gardens were converted into a road, with gates at each end, it is doubtful whether any fence would be necessary, because there would be no other drive they could turn into, and therefore there would be no inducement for parties to diverge from the road; but if you were to make a road through Hyde Park, you would of necessity require a fence on both sides, which would cut off the communication between the park and the gardens; it would be carrying as it were a turnpike-road across the park, and entirely destroy its character; a turnpike-road carried across Kensington Gardens or Hyde Park would I think be extremely objectionable, but the conversion of the broad walk into a private drive to the gallery, under proper restrictions, would not be so objectionable.

10407. Do you not think it would be a great advantage to have the new galleries of art in such a position as would insure that no other buildings would be erected within half a mile or so of them?—That might be an advantage.

10408. Do you know any other position in which that advantage could be obtained, except some point in Hyde Park?—I think all the sites that have been talked of are sufficiently removed from buildings, whether it be the site by the turnpike, that at Gore House, or that opposite to it.

10409. Do you know any site so perfect in that respect as one that might be obtained in Hyde Park?—No; not so clear of buildings.

10410. In that respect you think the site there would be the best?—Yes.

LIST OF THE APPENDIX.

Appendix, No. I.

Returns relative to the National Gallery:

No. 1.—Date of the Appointment of the Trustees of the National Gallery - - p. 733

No. 2.—Dates of the Meetings held by the Trustees of the National Gallery since their Appointment, prior to 1844 - - - - - - - - - - - - - p. 734

No. 3.—Extract from the Minutes of the Trustees of the National Gallery, of the 10th June 1840 - - - - - - - - - - - - - - - - - p. 734

No. 4.—Statement of the Number of Pictures now in the National Gallery - - p. 735

Appendix, No. II.

Copy of the Minutes of the Trustees of the National Gallery of the year 1844 - - p. 735

Appendix, No. III.

Extracts of the Minutes of the Trustees of the National Gallery, from the 1st November 1852 to the present time, having reference to the Cleaning, &c. of Pictures, and the Management of the Gallery - - - - - - - - - - - - - - - - 743

Appendix, No. IV.

List of Pictures varnished with Mastic Varnish only - - - - - - - - p. 747

Pictures which have not been varnished since their reception, but presumed to be varnished with Mastic Varnish - - - - - - - - - - - - - - - p. 747

Appendix, No. V.

Documents laid before the Committee of the House of Commons, by the Keeper of the National Gallery, 26 April 1853:

No. 1.—Copy of the "Regulations for the care of the Pictures," mentioned in p. 41 of the Return of Minutes of Meetings of Trustees, laid before the House of Commons in February 1853 (Parl. Paper, No. 104) - - - - - - - - - p. 748

No. 2.—Copy of the "Existing Regulations" alluded to in p. 49 of the same Return, by which the Trustees are precluded from recommending to the Treasury the purchase of the Works of living Artists - - - - - - - - - - - - - - p. 748

No. 3.—Number and Designation of the Pictures in the National Gallery, cleaned by the Removal of coats of Discoloured or Decayed Varnish, since that Collection has been deposited in the present Gallery in Trafalgar-square - - - - - - p. 748

EXTRACT from the MINUTES of the TRUSTEES of the NATIONAL GALLERY, of the 10th June 1840.

THE Trustees took into consideration the advantage of fixed periods for their Meetings, when it was resolved,—

1. That the Trustees of the National Gallery be summoned to meet on the first Monday in every month during the Sitting of Parliament.

2. That, if anything especial is to be submitted to them for consideration, it should be mentioned in the notices.

	TOTAL		406

* Two of the above belong to the British Museum and Foundling Hospital.

Appendix, No. II.

COPY of the MINUTES of the TRUSTEES of the NATIONAL GALLERY of the Year 1844. Appendix, No. II.

AT a Meeting of the Trustees of the National Gallery, held on Monday, 5th February 1844: Present, the Most noble the Duke of Sutherland, K.G., in the Chair; the Right honourable Lord Monteagle.

READ and confirmed the minutes of the last meeting.

Read a letter from the Secretary of the Treasury, of 24th November last, communicating to the Trustees that the Lords Commissioners have been pleased to appoint Mr. Charles Lock Eastlake to the situation of Keeper of the National Gallery, with a salary of 200*l.* per annum, which had become vacant by the decease of Mr. Seguier.

The Keeper brought to the notice of the Trustees one of the national pictures, "Leda," by P. F. Mola (No. 51 of the Catalogue), which was wilfully and greatly damaged on the 23d ult. by one of the visitors.

The Secretary then informed this meeting that, receiving notice of the outrage immediately on its occurrence, he proceeded to the room in which the picture hung, and caused the offender, a working man on crutches (with one of which the injury was done), to be conducted to the station-house of the police, from whence he was taken before Mr. Maltby, a magistrate of Marlborough-street Office, and the charge substantiated against the prisoner who was remanded to the 24th, as it was judged necessary to consult Sir Robert Peel on the subject of further proceedings against him. The Secretary, at the request of Mr. Eastlake, waited upon the First Lord of the Treasury on the morning of the 24th, who suggested the propriety of consulting the Home Secretary on the occasion. He afterwards received, through Mr. Manners Sutton, a notice from Sir James Graham, that he thought it advisable to leave the prisoner to be dealt with at the discretion of the magistrate. He was accordingly fined 5*l.* (the highest penalty the magistrate was empowered to award), and, in default of payment, was sent for two months' imprisonment, with hard labour, in Tothill Fields Bridewell.

Resolved, That the circumstances of this case be taken into consideration by the Trustees at a future meeting.

Read a letter from the Chevalier Bunsen to Mr. Eastlake, offering to the consideration of the Trustees a collection of pictures for sale, belonging to the Prince Wallenstein, as detailed in a catalogue furnished by him.

Resolved, That it be communicated to the Chevalier Bunsen, that the Trustees are not in the habit of recommending to Parliament the purchase of entire collections of pictures.

Read a letter from Sir Robert Peel to Mr. Eastlake, on the subject of the collection of pictures of the Cardinal Fesch, about to be sold in Rome.

Resolved, That should any favourable report on the subject of these pictures be received by Mr. Eastlake, he is requested to authorise the Secretary to call a special meeting of the Trustees to consider of it.

Read letters from Mr. Henry Cole, of the Public Record Office, of the 10th August last, and 1st instant, requesting to be allowed to sell his "Illustrated Catalogues" (copies of which were laid before the meeting) within the hall of the Gallery.

Resolved, That it be communicated to Mr. Cole, that the Trustees regret the general rule they have adopted deprives them of the pleasure they would otherwise have in complying with his request.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined; viz., Mr. Galwey, Mr. James Broughton, Mr. C. R. Burford, Mr. Godwin, Mr. Fairbairn, Mr. Earl, senior, Philadelphia, Mr. Hengst, Nimeguen.

(signed) *Colborne*,
19 February 1844.

Appendix, No. II.

At a Meeting of the Trustees of the National Gallery, held on Monday, the 19th February 1844: Present, the Right honourable Lord Colborne, in the Chair; the Right honourable Lord Monteagle; William Wells, Esq.

Read and confirmed the minutes of the last meeting.

The Keeper again submitted to the consideration of the Trustees the opportunity that occurs of adding to the pictures in the National Gallery by a purchase of a part of the collection of the Cardinal Fesch.

Resolved, That the following letter be addressed to Mr. Woodburn, being first submitted by Mr. Eastlake to the First Lord of the Treasury:

(Draft.)

"Dear Sir, "National Gallery, London, February 1844.

"I duly received your letter. dated Palermo, the 25th January, respecting the Fesch Gallery, in Rome, and I am desired to express to you the thanks of the Trustees of the National Gallery for your offers of service.

"The Trustees having met on the 19th instant, expressly to consider the subject, I am authorised by them to acquaint you that they are desirous of securing the following pictures from the Fesch Collection, at or within the prices here named:

		£.
No. 700.	The Crucifixion; Raphael - - - - - - - -	2,000
173.	Christ Preaching to the Multitude, a picture in brown and white; Rembrandt - - - - - - - -	800
630.	The Madonna Enthroned, and the Doctors of the Church, called Pordenone - - - - - - - - -	1,000
739.	Fragment of a Mural Painting, by Sebastiano del Piombo -	250

"(The numbers are those of the Catalogue published in 1841.)

"Should the sale be postponed, so as to admit of your writing to me, and receiving an answer (with some allowance for the time required to call a meeting of the Trustees), you are then requested to give me an account of the state of the above-mentioned pictures, your opinion of their value, and any other particulars which you may think important.

"Should there be such sufficient time, you are further requested to give your opinion as to the best pictures in the collection, particularly of the Italian school.

"But should the sale take place at the period first expected, you are hereby authorised to purchase the four pictures above mentioned at or within the prices fixed; and should the pictures first sold be purchased by you for less than the sums named, you are then at liberty to add the balance to the other biddings, if such addition should be required. The picture which the Trustees are most anxious to secure is the Raphael.

"I am further instructed to recommend you to ascertain, with due caution, whether it might be possible to purchase the pictures herein named by private contract. This is especially to be considered if the sale should be long postponed.

"In the event of your purchasing the pictures in question at the sale, the deposit can probably be advanced by yourself; but should there be any difficulty, your banker in Rome will, on seeing the present instructions, no doubt advance what is required till your hear from London.

"I am, &c.

"Wm. S. Woodburn, Esq. (signed) "*C. L. Eastlake.*"

"Messrs. Tortonia, Rome."

Mr. Eastlake having submitted the above draft of a letter to Mr. Woodburn to Sir Robert Peel, received the following answer:

"Dear Sir, "Whitehall, 20 February.

"I do not disapprove of the letter, of which the enclosed is a draft, being sent to Mr. Woodburn, as it is the wish of the Trustees that it should be addressed to him; and as I believe you have seen the pictures, the purchase of which it sanctions, and recommend them to the Trustees as valuable acquisitions to the Gallery.

"Yours, &c.

"C. L. Eastlake, Esq." (signed) "*Robert Peel.*"

Mr. Eastlake, upon the receipt of the above letter from the First Lord of the Treasury, forwarded the following letter to Mr. Woodburn, in which appear some necessary but inconsiderable deviations from the original draft:

"National Gallery, London,
21 February 1844.

"Dear Sir,

"I DULY received your letter, dated Palermo, the 25th January, respecting the Fesch Gallery in Rome, and I am desired to express to you the thanks of the Trustees of the National Gallery for your offers of service.

"The Trustees having met on the 9th instant, expressly to consider the subject, I am authorised by them to acquaint you that they are desirous of securing the following pictures from the Fesch Collection, at or within the prices here named:

		£.
No. 173.	Christ Preaching to the Multitude, a picture in brown and white, Rembrandt	800
630.	The Madonna Enthroned, and the Doctors of the Church, called Pordenone	1,000
700.	The Crucifixion, Raphael	2,000
739.	Fragment of a Mural Painting, by Sebastiano del Piombo	250

"The numbers are those of the Catalogue published in 1841.

"Should the sale be postponed, so as to admit of your writing to me and receiving an answer (with some allowance for the time required to call a meeting of the Trustees), you are then requested to give me an account of the state of the above-mentioned pictures, your opinion of their value, and any other particulars which you may think important.

"Should there be such sufficient time, you are further requested to give your opinion as to the best pictures in the collection, particularly of the Italian school.

But should the sale take place at the period first expected, you are hereby authorised to purchase the four pictures above mentioned at or within the prices fixed. Should the pictures be put up for sale in the order of the numbers above given (173, 630, 700 and 739), and should the two first be purchased by you for less than the sums named, you are then at liberty to add the balance to the third (No. 700), if such addition should be required, but not the fourth. The picture which the Trustees are most anxious to secure is the Raphael.

"I am further instructed to recommend you to ascertain, with due caution, whether it might be possible to purchase the pictures herein named by private contract; this is especially to be considered if the sale should be long postponed.

"In the event of your purchasing the pictures in question at the sale, the deposit can probably be advanced by yourself; but should there be any difficulty, your banker in Rome will, on seeing the present instructions, no doubt advance what is required till you hear from London.

"I am, &c.
(signed) "*C. L. Eastlake.*"

"William S. Woodburn, Esq.
"Messrs. Tortonia, Rome."

The Trustees having again taken into consideration the circumstances attending the injury done to one of the national pictures, as detailed in the Minute of the 5th instant,

Resolved, That should any mischief be hereafter done to a picture in the National Gallery, a special meeting of the Trustees be called with as little delay as possible, to take the subject into consideration, an immediate communication being made to the Lords of the Treasury, with a view to the protection of the national property, and the prosecution and punishment of the offenders.

Read a letter from Mr. Hall, of this day's date, enclosing a letter from the Commissioners of Woods, &c., on the subject of the expense of strengthening the floor for the reception of the monument of the late Sir David Wilkie.

Resolved, That a letter be written to the Lords of the Treasury, informing their Lordships that these works were necessary for the safety of this building, and requesting that their Lordships will be pleased to give directions for the payment of the same.

(signed) *Colborne*,
4 March.

Appendix, No. II.

At a Meeting of the Trustees of the National Gallery, held on Monday, the 4th March 1844: Present, the Most honourable the Marquess of Lansdowne, K. G.; the Right honourable Lord Colborne.

Read and confirmed the minutes of the last meeting.

Read letters from Mr. Wm. S. Woodburn to Mr. Eastlake, dated Rome, 20th and 22d Feb., by which it appears that the pictures of the Fesch Collection, Nos. 173, 630, 700, and 739, recommended for purchase by the Trustees at their meeting of the 19th ultimo, will not (according to the best information that could be obtained), be put up for sale until next year, with the exception of the last, No. 739, a fragment of a mural painting by Sebastiano del Piombo, which will probably be sold this year, and the value of which Mr. Woodburn estimates at 500 *l.*

Read letters from the following persons, whose offers of pictures for sale the Trustees declined: Mr. T. C. Harrison (Treasury), Mr. Bracher, Mr. Hatch, Mrs. Spinks.

(signed) *Northampton,*
1 April 1844.

At a Meeting of the Trustees of the National Gallery, held on Monday, the 1st April 1844: Present, the Most honourable the Marquess of Northampton, in the Chair; the Most honourable the Marquess of Lansdowne, K. G.; the Right honourable Lord Colborne; the Right honourable Lord Monteagle.

Read and confirmed the minutes of the last meeting.

Read a letter from the Secretary of the Treasury, in answer to an application by the Trustees, of the 20th February last, praying their Lordships to order payment to be made of the sum of 13 *l.* 12 *s.* 8 *d.*, being the amount of the expense incurred in strengthening the floor of the inner hall of this Gallery, for the reception of the monument of the late Sir David Wilkie, which sum the Commissioners of Woods, &c., have declined to pay from the funds of their department; in which letter their Lordships acquaint the Trustees, that in declining to provide for an expenditure undertaken without the authority of my Lords, the Commissioners of Woods, &c., have only strictly fulfilled their duty.

Resolved, That the Trustees consider this expense of 13 *l.* 12 *s.* 8 *d.* as having been necessarily incurred for the security of the building, and that the Keeper have their authority for charging the amount in his next half-yearly account with the Treasury, stating, on the face of the account, that the work was executed under the directions of and by persons employed by the Office of Woods, &c.

Read a letter, dated 29th March, from Mr. Tiffin, offering a sketch by Rubens (which was submitted to the Trustees), at the price of 200 guineas.

Resolved, That Mr. Tiffin be informed that the Trustees decline recommending to Government the purchase of this picture at the price named.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined; viz., Mr. Buchanan, Mr. Henry Gilbert, Messrs. F. Geisler & Co., Mr. Robert Brereton, Mr. James B. Pow, Mr. L. G. Banks.

(signed) *Sutherland,*
23 April 1844.

At a Meeting of the Trustees of the National Gallery, held on Tuesday, the 23d April 1844: Present, the Most noble the Duke of Sutherland, K. G., in the Chair; the Most honourable the Marquess of Northampton; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; Sir Martin A. Shee, Knt., P. R. A.; Samuel Rogers, Esq.

Read and confirmed the minutes of the last meeting.

Lord Monteagle brought under the notice of the Trustees a picture by Giovanni Bellini, a Portrait of the Doge Loredeno, from the Grimani Palace, purchased by the late Lord Cawdor, and sold by him to its present proprietor, which has been offered for sale by the agent of Mr. Beckford, for 600 guineas; his Lordship also submitted to the meeting a letter he received from Sir Robert Peel, of which the following is a copy:—

"My dear Lord, "Whitehall, 22 April.

"I saw the portrait by Bellini on Saturday last, at the National Gallery.

"If Mr. Eastlake thinks the acquisition a desirable one for the Gallery, and the price not unreasonable, and the Trustees are disposed to recommend the purchase, I will undertake to sanction it on the part of the Treasury.

"Yours, &c.

'The Right honourable Lord Monteagle." (signed) "*Robert Peel.*"

His

His Lordship submitted, at the same time, the following memorandum from Mr. Beckford:

"My price is fixed—600 guineas. Should the smallest objection arise to the prompt payment of that exact sum, I shall most willingly take back the picture, having at length arranged in my own mind a situation in which it can be placed advantageously."

Resolved, That the Trustees recommend to the Lords of the Treasury the purchase of this picture for the sum of 600 guineas; and that a communication to this effect be made to Mr. Beckford's agent, with a statement that the Trustees have the assurance of the Government that their recommendation will be adopted.

Read a letter from the Secretary of the Treasury, requesting the Trustees to report to the Lords Commissioners their opinion on the subject of an offer made to them of a picture by Hondius, for sale, by Mr. Edward Gardner, auctioneer.

Resolved, That it be reported to the Lords Commissioners that the Trustees decline recommending to the Government the purchase of the picture, which they consider unfit for this Gallery; and that the party making the offer be informed of their decision.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined; viz., Mr. J. Bell, executor of the late Mr. Briggs, R.A.; Mr. Tiffin, Mr. J. T. Schomberg, Mr. Alloway, Mr. Aubert.

(signed) *Northampton*,
6 May 1844.

At a meeting of the Trustees of the National Gallery, held on Monday, the 6th May 1844: Present, the Most honourable the Marquess of Northampton, P.R.S., in the Chair; the Most noble the Duke of Sutherland, K. G.; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; Samuel Rogers, Esq.

Read and confirmed the minutes of the last meeting.

Read a letter from the Secretary of the Treasury, of the 30th April last, conveying to the Trustees the authority of the Lords Commissioners for the purchase of the picture recommended, a Portrait of the Doge Loredeno, by Giovanni Bellini, at a price not exceeding 600 guineas.

The Trustees having before them the catalogue of the pictures belonging to the late Mr. Jeremiah Sherman, which are about to be sold by auction on the 17th instant, and Mr. Eastlake having reported that he considers the collection to contain pictures fully deserving the attention of the Trustees, which opinion is supported by their own convictions, it appears most desirable that this opportunity of adding to the National Gallery should not be lost.

The Trustees consider that the best mode of attaining this object would be to solicit the Government to place at their disposal such a sum as might enable them, after minute inspection, and upon the report of Mr. Eastlake, to become the purchasers of such of these pictures as may be thought the most desirable additions to the Gallery.

The Trustees also recommend for purchase a picture by Gaudenzio Ferrari, belonging to Mr. Farrer, as a fine and well-known specimen of a very scarce and highly appreciated master. The price of this picture has been stated at a sum not exceeding 2,500 *l.*

In making this recommendation, Her Majesty's Government will bear in mind that all proceedings are suspended, under the authority already given, for the purchase of pictures from the collection of Cardinal Fesch, that sale having been postponed.

Resolved, That a letter founded upon the above minute be addressed to Sir Robert Peel.

Read letters to the Secretary from Mr. Samuel Woodburn, of the 3d and 6th instant, accompanied with certain sealed proposals, and on the subject of the purchase of pictures by the party and his brother for this Gallery.

Resolved, That it be communicated to Mr. Woodburn that the Trustees are not desirous of troubling him on the subject of the purchase of any pictures at present; and that the "proposals" be returned to him unopened.

Read a letter from Mr. Edwin Williams, whose offer of a picture for sale the Trustees declined.

(signed) *Sutherland*,
13 May 1844.

Appendix, No. II.

At a Meeting of the Trustees of the National Gallery, held on Monday, 13th May 1844: Present, the Most noble the Duke of Sutherland, K.G., in the Chair; the Most honourable the Marquess of Lansdowne, K.G.; the Most honourable the Marquess of Northampton, P.R.S.; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; Samuel Rogers, Esq.; William Wells, Esq.

READ and confirmed the minutes of the last meeting.

The Trustees took into consideration the correspondence between the Duke of Hamilton and Lord Monteagle, as well as the Treasury Minute of the 26th April, and the former papers respecting the purchase of the Portrait of the Doge Loredeno, by Giovanni Bellini.

Considering the purchase to be fully concluded, and the delay in paying over the purchase-money to have arisen from the neglect in presenting Mr. Beckford's receipt, they can only explain the dates of the several transactions to the Duke of Hamilton, informing his Grace that the Trustees have no authority to comply with his request.

Resolved, That a letter, of which the following is a copy, be written to the Duke of Hamilton; and that copies of this letter, as well as of his Grace's letter to Lord Monteagle of the 8th instant, and his Lordship's reply of the following day, be transmitted to the Lords of the Treasury:

(Copy.)

"My Lord Duke, "National Gallery, 14 May 1844.

"The Trustees of the National Gallery have had under their consideration your Grace's letter of the 8th instant, and Lord Monteagle's reply of the following day.

The Trustees have it not in their power to part with any picture which is placed in their custody, having been purchased on behalf of the public by the Treasury, their duties being all prescribed to them, and subject to the controlling authority of the Treasury.

"But from their respect and deference for your Grace, the Trustees have directed me to put your Grace in possession of all the facts coming within their knowledge, and relating to the purchase of the Portrait of the Doge Loredeno, painted by Giovanni Bellini.

"The propositions for the sale of this picture were made to them on behalf of the late Mr. Beckford, and the picture was submitted to their inspection on the 1st day of April last. Considering the picture to be an important addition to the National Collection, after some semi-official communication with Sir Robert Peel, the Trustees resolved, on the 23d April, to recommend this picture to the Treasury, to be purchased for the nation at the price fixed by Mr. Beckford himself in writing.

"The Trustees had before them the following memorandum in Mr. Beckford's handwriting:

'My price is fixed—six hundred guineas; should the smallest objection arise to the 'prompt payment of that exact sum, I shall most willingly take back the picture, having 'at length arranged in my own mind a situation in which it can be placed advan-'tageously.'"

A letter was addressed by Mr. Beckford's Agent on the 24th April, to the Secretary of the Treasury, of which the following is a copy:

"Sir George, "Bath, 24 April 1844.

"Lord Monteagle desired me to write to acquaint you into whose hands the money of the late purchase of the picture for the National Gallery, and belonging to Mr. Beckford, was to be paid. I therefore most respectfully beg to acquaint you, that I have handed Mr. Beckford's receipt for the amount, 630 *l.*, to our bankers here, requesting them to desire their agents to present it to the Treasury for payment. I shall therefore feel greatly obliged by your kindly giving the necessary directions.

"I remain, &c.,

(signed) "*Edmund English*, Jun."

"Sir George Clerk, Treasury."

On the 26th April the Lords of the Treasury formed their Minute, giving authority to purchase the picture for 630 *l.*, this sum to be paid on Mr. Beckford's receipt.

This receipt had been signed previously by Mr. Beckford, and forwarded through a Bath bank to its correspondents, Messrs. Glyn, Halifax & Co., and the money became payable accordingly.

The picture was hung up in the Gallery, and made one of the National Collection.

By some delay or other, Mr. Beckford's receipt was not presented to the Treasury till the 3d and 4th May, on which a doubt arose, not in respect to the purchase and transfer of the picture, which had been already closed, but in respect to the party entitled to receive the 630 *l.* On this subject the Trustees have not the means of forming any judgment, the question

question being one which rests solely with the Treasury, the purchasers of the picture. But the Trustees understand that the money is ready to be paid to whomever may be entitled by law to receive it.

I have, &c.
(signed) *G. Saunders Thwaites.*

The Most Noble
the Duke of Hamilton, K.G.

Read a letter from Sir Robert Peel, of which the following is a copy, and in answer to the Secretary's letter to him of the 7th instant:

"Dear Sir, "Whitehall, 13 May 1844.

"I very much fear that the necessity of attending a Cabinet, summoned for two this day, will prevent me from fulfilling my intention of being present at the meeting of the Trustees of the National Gallery.

"I have seen the picture by Gaudenzio Ferrari, and I must say I think the sum of two thousand pounds is a very large price for it, with reference to its intrinsic merit.

"If the Trustees think it desirable to give that sum for it, I will advise the Lords of the Treasury to sanction the purchase; but I should wish to have some high professional authority as a warrant for the offer of a larger sum.

"It seems to me that we should give a preference to works of sterling merit, that may serve as examples to the artists of this country, rather than purchase curiosities in painting, valuable as illustrating the progress of art, or the distinctions in the styles of different masters, but surely less valuable than works approaching to perfection.

"I will advise the Treasury to give a discretionary power to the Trustees to expend the sum of three thousand pounds (3,000 *l.*) in purchases at the approaching sale of Mr. Harman, of works which they may deem deserving a place in the National Gallery, and which can be purchased at a sum not exceeding a liberal estimate of their value.

"I apprehend Mr. Harman's pictures will sell for prices which would have been deemed extravagant a few years since.

"I am, &c.
"C. L. Eastlake, Esq." (signed) "*Robert Peel.*"

Resolved, That a meeting be summoned for Wednesday, at three o'clock, and that Mr. Eastlake be requested to inspect Mr. Harman's pictures, and give his opinion how 3,000 *l.* might be most advisably expended at that sale.

Mr. Eastlake having reported unfavourably on a picture offered for sale by Major-General Mercer on the part of Colonel Blagrave, said to be painted by Raphael, and which was referred to him for his opinion at the last meeting,

Resolved, That the Trustees decline recommending its purchase.

(signed) *Sutherland.*

At a Meeting of the Trustees of the National Gallery, held on Wednesday, 15 May 1844: Present, the Most noble the Duke of Sutherland, K.G., in the Chair; the Most honourable the Marquess of Lansdowne, K.G.; the Most honourable the Marquess of Northampton, P.R.S.; the Right honourable Lord Francis Egerton; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; Sir Martin A. Shee, Knt., P.R.A.; William Wells, Esq.

Read and confirmed the minutes of the last meeting.

The Trustees having heard Mr. Eastlake's report of the pictures of Mr. Jeremiah Harman's collection, which he considers desirable as purchases for the National Gallery, deferred any further consideration of the subject till a future meeting, after the sale shall have taken place.

Read letters from the following persons whose offers of pictures for sale the Trustees declined: Major-General Mercer, on the part of Colonel Blagrave; Mr. Edward N. Shannon; Mr. Archibald Hunter; Mr. Edward W. Chubb.

(signed) *Sutherland.*

Appendix, No. II.

At a Meeting of the Trustees of the National Gallery, held on Monday, 3 June 1844: Present, the Most noble the Duke of Sutherland, K. G., in the Chair; the Most honourable the Marquess of Lansdowne, K. G.; the Most honourable the Marquess of Northampton, P. R. S.; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; Samuel Rogers, Esq.

Read and confirmed the minutes of the last meeting.

The Trustees again took into consideration the recommendation of the Keeper, at the last meeting, of the purchase of pictures at the sale of the late Mr. Jeremiah Harman's collection, as well as the result of the sale, by which it appears the following pictures have been secured for the National Collection, at the prices here named:—

	£.	s.	d.
The Youthful Saviour embracing St. John, by Guido	409	10	–
A Jewish Rabbi, Rembrandt	473	11	–
His own Portrait, Gerard Douw	131	5	–
£.	1,014	6	–

Resolved, That a letter be addressed to the Lords of the Treasury, requesting their Lordships to give directions for the payment to the following persons of the sums due to them respectively for the above pictures:

	£.	s.	d.
Messrs. Christie & Munson	540	15	–
Mr. Henry Farrer	473	11	–
£.	1,014	6	–

The Trustees resumed the consideration of the offer by Mr. Farrer of a picture, the Nativity, by Gaudenzio Ferrari, for the sum of 2,500 guineas.

Resolved, That the Trustees do not consider themselves justified in offering a greater sum for the above picture than 2,000 *l.*

Mr. Eastlake brought to the view and consideration of the Trustees an unfinished picture by Dominico Ghirlandaio, of the Holy Family, &c., the property of Mrs. Bonar, which he has reason to believe may be purchased for about 250 *l.*

Resolved, That a letter be addressed to Mrs. Bonar, offering her the sum of 250 *l.* for this picture.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined; viz., Edward Solly, Esq., Mr. Brett, Mr. Hickman, Mr. Baker, Mr. Lerfaty, Señor A. de Villalobos, Mr. T. Smith, Mr. H. W. Potter.

(signed) *Northampton.*

At a Meeting of the Trustees of the National Gallery, held on Wednesday, 3 July 1844: Present, the Most honourable the Marquess of Northampton, P. R. S., in the Chair; the Most honourable the Marquess of Lansdowne, K. G.; the Right honourable Lord Colborne; the Right honourable Lord Monteagle; the Right honourable Sir Robert Peel, Bart.; Samuel Rogers, Esq.

Read and confirmed the minutes of the last meeting.

Read a letter from the Secretary of the Treasury, enclosing one from Mr. Buchanan, offering for sale a picture by Barroccio, for 1,500 guineas; also, a letter from the same gentleman to the Trustees, offering the picture for sale for 1,200 guineas.

Resolved, That the Trustees are not prepared to recommend to Government the purchase of this picture, and that communications to this effect be made to the Lords of the Treasury and to Mr. Buchanan.

Read a letter from Mr. Farrer, declining the offer by the Trustees of 2,000 *l.* for the picture by Gaudenzio Ferrari.

Read a letter from Mrs. Bonar, declining the offer of the Trustees of 250 *l.* for the picture submitted to them, the work of Dominico Ghirlandaio.

The Trustees took into their consideration the sale of Mr. Penrice's collection of pictures, about to take place at Messrs. Christie's rooms.

Resolved,

Resolved, That the Trustees consider it desirable that the following pictures be secured for the National Collection, Mr. Eastlake having expressed a favourable opinion of their merits: Appendix, No. II.

The Judgment of Paris, by Rubens.
Lot and his Daughters, by Guido.

Read a letter from Messrs. Smith, of Bond-street, calling the attention of the Trustees to Lord Cowley's picture, a Boar Hunt, by Velasquez, now on sale at their rooms.

Resolved, That the consideration of this question be postponed.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined: Mr. Atherstone, the Rev. C. B. Tayler, Mr. De Lyons de Fencher, Mr. Fee.

(signed) *Colborne.*

At a Meeting of the Trustees of the National Gallery, held on Monday, 5 August 1844: Present, the Right hon. Lord Colborne, in the Chair; Sir Martin Archer Shee, Knt., P.R.A.; Samuel Rogers, Esq.

Read and confirmed the minutes of the last meeting.

Mr. Eastlake stated to the Trustees that the following pictures were purchased for the Gallery, at the sale of Mr. Penrice's collection (pursuant to the resolution of the Trustees at their last meeting), at the prices set against them; viz.

	Guineas.
The Judgment of Paris, by Rubens - - - - - - -	4,000
Lot and his Daughters leaving Sodom, by Guido - - -	1,600

Mr. Eastlake brought to the notice of the Trustees the expediency of causing such of the pictures in the Gallery as require cleaning, &c., to be dealt with during the ensuing vacation.

Resolved, That Mr. Eastlake be authorised to take this opportunity of causing such work to be executed by proper persons, to be selected for the purpose.

Read a letter from Mr. Baxter offering to present three pictures, being copies, by his mother, from works of Sir Joshua Reynolds:

Resolved, That a letter be addressed to Mr. Baxter, in the usual terms, declining his offer.

Read letters from the following persons, whose offers of pictures for sale the Trustees declined:

Mr. R Lane.	Mr. Stephens.	Mr. W. B. Clarke.
Mr Rochard.	Mr. John.	Mr. Dalmahoy.
Mr. L. Phillips.	Mr. Buchanan.	Mr. Sangster.
Mr. Watts.	Le Chevalier Berardi.	Messrs. Konig and Spitzer.
Rev. J. A. Malet.	Mr. Denyer.	

(signed) *Lansdowne.*
3 March 1845.

Appendix, No. III.

EXTRACTS of the MINUTES of the TRUSTEES of the NATIONAL GALLERY, from the 1st November 1852 to the present time, having reference to the Cleaning, &c. of Pictures and the Management of the Gallery. Appendix, No. III.

At a Meeting of the Trustees of the National Gallery, held on Friday, the 12th November 1852: Present, the Right honourable Lord Colborne, in the Chair; the Most honourable the Marquess of Lansdowne; the Most honourable the Marquess of Northampton; the Right honourable Lord Monteagle; the Right honourable Lord Overstone; Sir Charles L. Eastlake, Knt., P.R.A.

Read and confirmed the minutes of the last meeting.

Read a letter from Mr. Hamilton, of the 31st July last, communicating to the Trustees the authority of the Lords Commissioners of the Treasury for the transfer to the Marquess of Lansdowne, of the picture by Palma Vecchio, or Giorgionie, purchased at Monsieur Collot's sale, on his Lordship paying the amount of the purchase-money into the hands of the Paymaster-general to the public account.

 Read

Appendix, No. III.

Read a draft of an agreement—The Trustees and Executors under the Will of J. M. W. Turner, R.A., deceased, with the Trustees and Directors of the National Gallery, London;—in which the executors consent to deliver to the Trustees two pictures by the late Mr. Turner, "Dido Building Carthage," and the picture formerly in the De Tabley Collection, the Trustees agreeing to relinquish to the executors the said pictures safe, whole, properly cleaned, framed, preserved, repaired, and protected (damage by fire or other unavoidable accident only excepted), if called upon to do so by the Court of Chancery, or any other competent court of jurisdiction: and at all times hereafter to save harmless and keep indemnified the said executors from all costs, charges, damages, and expenses in consequence of the two pictures having been so delivered into the possession of the Trustees.

Resolved, That the Trustees concur with this agreement; and that the chairman of this meeting be requested to sign it; and that the secretary countersign it by order of the Trustees and on their behalf.

Resolved further, That, upon the solicitor of the Treasury sanctioning the agreement, Mr. Uwins is requested to receive the two pictures in question from Mr. Turner's executors, and that Mr. Seguier be called upon to put them in order without loss of time, Mr. Uwins being authorised by the Trustees to charge the necessary expenses incurred on the occasion in his accounts with the Treasury.

The Trustees took into consideration the cleaning and other restoration of pictures during the past vacation, as directed by their minute of the 5th July last; namely,

The varnish removed from the following pictures:—Nos. 12, 14, 61, by Claude, the old varnish removed; 26, Paul Veronese; 22, Guercino; 57, Rubens; 127. 163, Canaletti; 165, N. Poussin, the old varnish removed; Nos. 1, Sebastiano del Piombo; 33, Parmegiano; 13, Murillo, the varnish partially removed; and the whole of these pictures revarnished.

Resolved, That the Trustees approve of the result of their instructions on this head, as evinced in the improved appearance of the pictures, and of the manner in which the operations have been performed by Mr. Seguier, under the superintendence of Mr. Uwins.

Mr. Uwins submitted to the Trustees the following bills for work done during the vacation, and at other times since the 26th March 1852; viz.

	£.	s.	d.
Mr. Seguier's bill for cleaning, restoring, varnishing, &c., pictures, amounting to	57	15	–
Mr. Thick's bill for hanging and taking down pictures, cleaning, and dusting frames, and other work	40	–	–

Resolved, That the Trustees consider the foregoing bills to be just and moderate, and that Mr. Uwins has their authority for paying them, and charging the amounts in his accounts with the Treasury.

The Trustees took into consideration the necessity that the two pictures, painted and bequeathed to them by Mr. Turner, should be put in order for placing in the Gallery so soon as they shall be handed over to them by the executors.

Resolved, That, upon the receipt of them, Mr. Seguier be requested to put them in order and that the frames be regilt, or cleaned and altered, as the case may require; and that Mr. Uwins is authorised to close the Gallery when ready to place them, till the arrangements required shall be completed.

(signed) *Northampton*,
6 December 1852.

At a Meeting of the Trustees of the National Gallery, held on Monday, the 6th December 1852: Present, the Most honourable the Marquess of Northampton, in the Chair; the Right honourable Lord Overstone; William Russell, Esq.

Read and confirmed the minutes of the last meeting.

Mr. Uwins reported that the two pictures, painted and bequeathed by the late Mr. Turner, were now ready to be placed in the Gallery.

Resolved, That the Gallery be closed on Wednesday the 8th, and Thursday the 9th instant, for the new arrangement of the Gallery necessitated by the reception of these pictures; and that notice be given accordingly.

(signed) *Monteagle*, Chairman,
14 February 1853.

At a Meeting of the Trustees of the National Gallery, held on Thursday, the 9th December 1852: Present, the Most honourable the Marquess of Lansdowne, the Right honourable Lord Overstone, William Russell, Esq.

The Trustees, having assembled in the Gallery, proceeded to view the two pictures painted and bequeathed to them by the late Mr. Turner, and recently put in order by Mr. Seguier, "The Building of Carthage," and the De Tabley picture; and to decide respecting the new arrangement of the collection by Mr. Uwins, which had become necessary through the reception of these works.

Resolved, That the Trustees entirely approve of the course pursued in both the above instances.

(signed) *Monteagle*, Chairman,
14 February 1853.

At a Meeting of the Trustees of the National Gallery, held on the 14th February 1853: Present, the Right honourable Lord Monteagle, in the Chair; Sir Charles Eastlake, Knt., P.R.A.; William Russell, Esq., Thomas Baring, Esq.

Read and confirmed the minutes of the last meeting.

Read a letter from the Secretary of State of the Home Department, of the 11th December last, addressed to Mr. Uwins, enclosing a copy of a Resolution of the House of Commons, of the 9th December 1852, to the following effect:

"House of Commons, Jovis, 9° die Decembris, 1852.

"Resolved, That an humble Address be presented to Her Majesty, that she will be graciously pleased to give directions that there be laid before this House List of the names and official designations of the Trustees or Commissioners for the management of the National Gallery, stating by whom appointed, and the dates of appointment;

"Copies of the Instructions under which they conduct their duties as Trustees;

"Of the Minutes of the Trustees from the 5th day of February 1847 to the 1st day of November 1852, with the names of all the Trustees present at each meeting;

"And, of the Orders and Instructions to the Keeper of the Gallery respecting the cleaning of the pictures, and any directions in respect to their arrangement, and of any documents relating thereto (in continuation of Parliamentary Paper, No. 40, of Session 1847)."

And calling for the preparation of a return accordingly with the least possible delay.

Upon which Mr. Uwins stated to the Trustees that he complied, without loss of time, with the requisition, and forwarded the required return and documents to the Secretary of State.

Read a letter from the Secretary of the Treasury, enclosing, at the request of the Trustees, copies of a minute of the Lords Commissioners, of the 29th June 1824, on the first appointment of a Committee of Management for the superintendence of the National Gallery; and of an Extract from another minute of that Board, of the 30th March 1824, on the first appointment of a Keeper of the National Gallery; copies of which Mr. Uwins reported that he furnished the Secretary of State for the Home Department with, in addition to the documents before referred to.

At a Meeting of the Trustees of the National Gallery, held on Monday, the 7th March 1853: Present, the Right honourable Lord Colborne, in the Chair; the Right honourable Lord Ashburton, William Russell, Esq.

Read and confirmed the minutes of the last meeting.

Read a report made this day to the Trustees by the Keeper to the following effect; viz.

"In pursuance of the instructions of the Trustees, the following nine pictures were placed in the hands of Mr. Seguier during the vacation of 1852:

No. 12. The Mill
14. The Sea Port } called the Bouillon Claudes.
61. Small Claude, presented by Sir George Beaumont.
26. Pauli Veronese, The Consecration of St. Nicholas.
22. Guercino, Angels weeping over the dead Body of Christ.
57. Rubens, Conversion of St. Bavon.
127. Canaletti, View in Venice.
163. Canaletti, Grand Canal, Venice.
165. Poussin, The Plague at Ashdod.

"On the subject of these pictures I beg to enclose Mr. Seguier's report to me (as asked for by the Trustees at their last meeting); in addition to which I have to state, that I attended daily at the Gallery to watch the proceedings. Nothing could exceed the care and caution with which Mr. Seguier executed his commission, and I feel confident the results will be found satisfactory.

(signed) "*Thos. Uwins.*"

Appendix, No. III.

(Copy)

"My dear Sir, "3, Russell-court, 2 March 1853.

"I beg to acknowledge the receipt of your letter, relative to what had been done to the pictures in the National Gallery, which I was instructed to attend to during the recent vacation. I found the pictures much obscured by an accumulation of varnish, oil, and common dirt. This last I removed first, and afterwards as much of the varnish as I thought proper; and I assure you, that during a very extensive practice, I do not recollect to have had any pictures improve more to my satisfaction.

"Thomas Uwins, Esq., R.A." (signed) "*John Seguier.*"

Mr. Uwins submitted to the Trustees the following bills for work done since the vacation:

	£.	s.	d.
Mr. Seguier's bill for cleaning, varnishing, &c., two pictures by Turner, and other work done in the Gallery - - - - - -	15	4	6
Mr. Thick's bill for making, &c. frames and other work - - -	37	10	–

Resolved, That the Trustees consider the above charges moderate, and that Mr. Uwins is authorised to pay the bills and charge the amounts in his accounts with the Treasury.

Read a letter from Mr. Samuel Heath, jun., informing the Trustees that a portrait of Thomas Daniel, R. A., by Sir David Wilkie, has been bequeathed to them by Miss Mary Ann Fuller, deceased.

Resolved,—That this bequest be accepted, and that the thanks of the Trustees be given to Mr. Heath for his communication; and, as the payment of the legacy-duty on the picture is not provided for by the will, that application be made to the Treasury for a remission of the tax.

(signed) *Ashburton*, Chairman,
11 April 1853.

At a Meeting of the Trustees of the National Gallery, held on Monday, 11th April 1853: Present, the Right honourable Lord Ashburton, in the Chair; the Most honourable the Marquess of Northampton, the Right honourable Lord Colborne, the Right honourable Lord Monteagle, the Right honourable Lord Overstone, William Russell, Esq.

Read and confirmed the minutes of the last meeting.

Read a letter from the Chancellor of the Exchequer, of the 9th instant, addressed to Mr. Uwins, asking him to make known to the Trustees the subject of a letter addressed by him to Mr. Gladstone, respecting certain allegations contained in a letter from Mr. Morris Moore, which appeared in the "Times" newspaper of Monday, the 4th instant.

Resolved, That Lords Ashburton and Overstone are requested to see the Chancellor of the Exchequer, and to state to him that in consequence of the late hour at which the Trustees have met, sufficient time will not be given to supply him with the required answer at 4. 30. of the present day.

Mr. Seguier having been requested to be in attendance at this meeting, and being called in, explained the manner in which he treated the three pictures alluded to by Mr. Morris Moore in his letter in the "Times" newspaper of the 4th April instant.

He is requested to prepare a letter in answer to the charges of Mr. Morris Moore, and bring it with him when he attends the next meeting of the 13th instant.

He is requested also to bring a cloth of the description ordinarily used by him in absorbing the moisture previously applied by him in the process of washing a picture.

Resolved, That a special meeting be summoned for two o'clock, on Wednesday, the 13th instant.

(signed) *Monteagle*, Chairman,
13 April 1853.

At a Meeting of the Trustees of the National Gallery, held on Wednesday, the 13th April 1853: Present, the Right honourable Lord Monteagle, in the Chair; the Most honourable the Marquess of Lansdowne, the Most honourable the Marquess of Northampton, the Right honourable Lord Ashburton, The Right honourable Lord Colborne, the Right honourable Lord Overstone, Sir Charles L. Eastlake, P. R. A.; William Russell, Esq., Thomas Baring, Esq.

Read and confirmed the minutes of the last meeting.

Lords Ashburton and Overstone reported to the Trustees, that in pursuance of the minute of the 11th instant, they waited upon the Chancellor of the Exchequer, and explained that the Trustees were unable to comply with his wishes for an answer to his letter of the 9th instant, to be prepared by 4. 30. of that day. They further assured him, that the Trustees were directing their earnest attention to the subject of the cleaning and preserving of the pictures; but that no cleaning of the pictures could take place except during the usual vacation in the autumn, and that in the meantime, the care and treatment of the pictures is under the careful attention of the Trustees.

Resolved, That a letter be written to the Chancellor of the Exchequer, informing him that the Trustees have proceeded to take into their consideration Mr. Lawley's communication of the 9th instant, and have obtained from Mr. Uwins and Mr. Seguier reports on the subject of his inquiry; that no cleaning of the pictures of the National Gallery can take place till after the prorogation of Parliament, and that nothing will be done in the meanwhile but a continuance of that care and attention which have been directed by the minutes of the 9th February 1852, copies of which have already been laid before the House of Commons.

That

That copies of the Reports by Mr. Uwins and Mr. Seguier be enclosed to the Chancellor of the Exchequer, with a view, if he shall so think fit, of laying those documents before the Select Committee of the House of Commons; and the Trustees will be prepared to furnish any further information which either the Chancellor of the Exchequer or the Select Committee may wish to procure. Appendix, No. III.

(signed) *Egerton Ellesmere,*
2 May 1853.

Appendix, No. IV.

NATIONAL GALLERY.

The rest of the pictures in the National Gallery have been, from time to time, varnished with mastic varnish mixed with oil.

Appendix, No. V.

Appendix, No. V.

DOCUMENTS laid before the Committee of the House of Commons, by the Keeper of the National Gallery, 26 April 1853.

No. 1.—"COPY of the 'Regulations for the Care of the Pictures,' mentioned in p. 41 of the Return of Minutes of Meetings of Trustees, laid before the House of Commons in February 1853."—(Parliamentary Paper, No. 104.)

THERE are no written regulations by the Trustees for the care of the pictures of the National Gallery. Previously to each annual vacation, they instruct the keeper as to any work of the nature of cleaning, varnishing, &c., that shall appear necessary; and, until the adoption of the Minute of the 9th February 1852, the use of a feather-brush was the course pursued for removing dust from the pictures. It was considered that without some definite instruction of the Trustees, nothing further should be done.

No. 2.—"COPY of the 'Existing Regulations' alluded to in p. 49 of the same Return, by which the Trustees are precluded from recommending to the Treasury the purchase of the Works of living Artists."

THERE does not appear to be any written regulation upon this subject, but it has always been the understanding, from the commencement of the trust, that no proposition for making any such purchases should be entertained, nor has the propriety of this determination ever been questioned.

No. 3.—NUMBER and Designation of the Pictures in the National Gallery, Cleaned by the removal of Coats of Discoloured or Decayed Varnish, since that Collection has been deposited in the present Gallery in Trafalgar Square.

Mr. Seguier, 1844:	1.	Titian	Venus and Adonis	Discoloured and decayed varnish removed so far as was thought prudent.
	2.	Wilkie	Blind Fiddler	
	3.	„	Village Festival	
	4.	Guido	Lot and his Daughters	
	5.	Rubens	The Brazen Serpent	
Mr. Brown, 1844:	6.	Teniers	The Misers	Varnish removed from the pictures by Teniers and Maas; not so closely from the Rubens.
	7.	„	A Musical Party	
	8.	„	Boors Regaling	
	9.	Maas	The Cradle	
	10.	„	Dutch Housewife	
	11.	Rubens	Judgment of Paris	
Mr. Seguier: 1845:	12.	Guido	Susannah and the Elders	Discoloured and decayed varnish removed so far as was thought prudent.
1846	13.	Rubens	Peace and War	
	14.	Cuyp	Cattle in Landscape	
	15.	Velasquez	Boar Hunt	
	16.	Titian	Bacchus and Ariadne	
1850	17.	Wilson	Niobe	
	18.	„	Mæcenas' Villa	
1851:	19.	Rembrandt	His own Portrait	
1852	20.	Guercino	Dead Christ	
	21.	Claude	The Annunciation	
	22.	„	Marriage of Isaac and Rebecca	
	23.	„	Embarkation of the Queen of Sheba	
	24.	P. Veronese	The Consecration of St. Nicholas	
	25.	Canaletti	The Grand Canal, Venice	
	26.	„	Buildings and Figures	
	27.	N. Poussin	The Plague at Ashdod	
	28.	Rubens	St. Bavon	

No. 4.—

No. 4.—Number and Designation of Pictures belonging to the National Collection, at present Deposited in other Localities, and from what Cause.

1.	Sir Joshua Reynolds	The Holy Family.
2.	Ditto	The Graces.
3.	Gainsborough	The Market Cart.
4.	Sir D. Wilkie	The Blind Fiddler.
5.	Copley	The Death of Lord Chatham.
6.	Sir G. Beaumont	A Landscape.
7.	Sir Joshua Reynolds	A Man's head.
8.	Ditto	The Banished Lord.
9.	R. Wilson	Mæcenas' Villa, Tivoli.
10.	Gainsborough	Landscape and Figures.
11.	R. Wilson	Landscape.

Appendix, No. VI.

REPORT OF MR. SEGUIER.

Appendix, No. VI.

My Lords and Gentlemen, Russell-court, 13 April 1853.

My attention having been very recently called to a letter in the "Times" newspaper, relative to what had been lately done to three of the pictures in the National Gallery, I beg to inform you that the Velasquez (Boar-hunt), which was varnished not long since, had bloomed. This picture was washed with a soft sponge and warm water, and dried with a cloth; it was afterwards polished up with old silk handkerchiefs. I beg to remark, that had this picture been too much moistened, I should presume it would not have polished up so well as it did. The Rembrandt (Woman taken in Adultery) I washed over, dried it immediately with a cloth, and polished it with an old silk handkerchief. I afterwards examined the small Turner, which had the appearance of being chilled; but as I had some doubts whether the appearance was not caused by the varnish being absorbed, I merely wetted a small portion of the picture, and finding what I suspected to be the case, viz., that the varnish was absorbed, the rest of the picture was lightly wiped over with an old silk handkerchief. I do not recollect to have heard any noise caused by these operations.

To the Trustees of the National Gallery.

I remain, &c.
(signed) *John Seguier.*

Appendix, No. VI.

REPORT OF MR. UWINS.

In pursuance of a resolution of the trustees, which will be found on the minute of the 9th February 1852, Mr. Seguier was in attendance on Saturday, the 2d April 1853, for the purpose of removing the chill from the varnish of those pictures which required such attention. One of these was the Boar Hunt, by Velasquez; this picture had been recently varnished, at which time it was most minutely examined, so that the state of the surface was well known. The removal of the chill or bloom that had come upon it, was best done as it hung in its place. For this purpose, tepid water, in which a very soft sponge was wetted, and then squeezed till almost dry, was the course adopted (tepid water being used in preference to cold, because it dries quicker). The little moisture remaining on the surface was immediately absorbed by soft linen cloths especially fitted for this purpose by age and use. When thoroughly dry, the silk handkerchief was gently applied, so that not the smallest scratch or injury of any kind could happen to the picture.

The perfect result may be seen by any one who will take the trouble to visit the Gallery.

The small picture by Rembrandt, of the Woman taken in Adultery, is painted on panel, with a full body of colour. The surface was slightly chilled. The sponge was gently applied to it, and then the silk handkerchief; less could not well be done, and the possibility of injury by such a process is perfectly absurd to all who know anything of art.

The Sunrise, by Turner, having been recently most minutely examined and varnished, required little attention. A sponge scarcely dipped in tepid water was applied to a small portion of the surface, but as it produced no effect, the moisture was immediately absorbed by soft cloths, and the silk handkerchief passed gently over it. Here the process ended.

It must be observed, there are no material cracks in any of these pictures which could expose them to the chance of injury by the process above described. There is a small injury, visible to every eye, in the Velasquez; it is in the centre of a comparative empty space. This injury existed before the picture was purchased by the Trustees of the National Gallery.

The softness of old linen cloths is universally known; for this especial quality it is sought after in many professions as well as by artists, and its absorbent qualities make its application to pictures the best possible preparation for the silk handkerchief.

The only person who has been found to have been present at the Gallery (as the students cannot be met with till Friday) denies that there was any sound to be heard of rubbing, or otherwise, during the whole time that Mr. Seguier was attending to the pictures.

Appendix, No. VII.

Answers to Queries on the Galleries and Museums of Fine Arts in different Counties.

ANSWERS FROM BELGIUM.

1. The collections of this kind in Belgium are, the Royal Museum of Painting and Sculpture, and the Royal Museum of Armour and Antiquities. Each of these museums is placed in a separate building appropriated to itself, and at a considerable distance from each other.

to the above. The chief part of these collections was brought together in the museum under King Frederic William III., and, as the building was not from the first moment spacious enough, a second building, connected with the same by a covered archway, has been constructed by his present Majesty; so that, when quite finished, they will contain all the above-mentioned collections within them. Should the space at a remote period become too confined, there is room for further buildings in the immediate neighbourhood, which already belongs to the administration of the Royal Museums.

2. The building which contains the Royal Museum of Painting and Sculpture contains also the Royal Museum of Natural History, and the rooms destined for the sittings of the Royal Academy of Science, Literature, and Beaux-Arts, and for the Royal Society of Medicine.

3. The collections of the Royal Museum of Painting and Sculpture are divided into two principal sections; the one appropriated to the arts of design, the other to statuary.

The first section comprises two divisions, viz.,

The first division, which itself comprises two sub-divisions;

1. From the origin of the art to the time of Rubens.
2. From Rubens to the 19th century.

The second division also comprises two sub-divisions;

1. Objects of art, by masters who have died since the beginning of the 19th century.
2. Those by living artists.

The second section is composed of three divisions, namely,

First division, composed of the productions of sculptors of all periods.
Second division, composed of the works of living artists.
Third division, composed of casts from original works in other collections.

Separate rooms are, as far as possible, assigned o each division and sub-division.

The Royal Museum of Arms and Antiquities is ivided into two principal sections.

The first section comprises all ancient offensive nd defensive arms, as well as articles of every ind having reference to archæology, and espeially to the national archæology.
The second section comprises fire-arms, as well s all modern offensive and defensive arms.

4. No; the painted vases and antique frescoes, there were any, would be kept in the Museum of rms and Antiquities. The engravings and oriinal drawings are deposited in the Royal Library.

ANSWERS FROM BERLIN.

1. The Royal Collections of Antiquity and Fine Art took their rise in the Cabinet of Art (so called Kunstkammar) formed by the Electors, in the Palace. During the late King's reign, everything that was considered conducive to the purpose of a comprehensive and instructive collection, and that was scattered among the royal palaces, was united

2. Disposed of by the foregoing.

3. The principal part of the Museums consist of:

1. The collection of choice casts, of sculpture and architectural parts of edifices of all countries and periods.

To these are joined,

2. The ethnographical collection.
3. The collection of northern antiquities.
4. The collection of Egyptian antiquities.
5. The collection of antique sculptures, and of the greater sculptures of the middle age down to the present time.
6. The antiquarium, which comprises:
   a. The inscriptions.
   b. The painted vases.
   c. The unpainted clay works (terra cotta).
   d. The objects of glass, mosaic, fresco painting, and such like.
   e. The bronzes.
   f. The cut stones (gems).
   g. The ornaments.
   h. The ancient coins.
   i. The coins of the middle age, and of later times.
7. The collection of historical curiosities of the Royal House, of this country and of other countries; models of monuments, models of constructions of the middle age, made exactly on the same scale.
8. Collection of the smaller works of art of the middle age and of modern time, in wood, ivory, glass, majolika, porcelain, seals, and such like.
9. The picture gallery.
10. The collection of hand drawings, miniatures, and prints (usually called "copper engraving" cabinet). With this is connected a library specially established for the purposes of the institution, with a sphragusical collection, and an archæological apparatus.

4. The collection of paintings contains no vases, or antique or modern frescoes; the two former are to be found in the antiquarium, the latter are placed in the 10th department, where they are seen to better advantage; only one fresco painting taken from the wall (out of a palace at Mantua), the Giulio Romano, has found a place in the picture gallery.

ANSWERS FROM FLORENCE.

1. The Florentine Gallery includes every object of art, as well ancient as modern, and in sculpture equally as in painting; bronzes, terra cotta, cameos, medals, drawings, &c.; and is situate in the upper floor of the great building called the "Uffizi," which serves in the lower floors for other uses.

2. In the same building, but in separate rooms, according to the collections of the different schools of painting.

3. All works having reference to the fine arts are admissible to the museum, except copies and material reproductions; and they are dependent on the same director.

4. The same department may contain them, provided they are separate from each other.

ANSWERS FROM FRANCE.

1,2. Il existe des collections d'objets d'art dans plusieurs palais ou bâtiments, soit au Louvre, où la plupart des grandes collections sont réunies dans un même palais, soit à l'Ecole des Beaux-Arts, soit au Musée Cluny.

3, 4, 5. Les catégories d'objets exposés ou conservés dans les galeries sont, le plus possible, spéciales, et ce n'est que par des exceptions fort rares et parceque le classement n'a pas encore été fait que quelques objets sont exposés confusément. Ainsi les peintures, les sculptures, les dessins, les gravures, les modèles d'architecture, les plâtres, les médailles, etc. etc., forment autant de collections distinctes.

ANSWERS FROM MUNICH.

Art. 1 et 2. Les collections d'Antiquités et Beaux-Arts à Munich sont placés dans édifices différens, et non contigues les uns aux autres.

Art. 3, 4, et 5. La distribution de ces collections a été faite d'après le principe établi et adopté par M. de Klenze, architecte des bâtimens qui les contiennent:

a.) Un édifice séparé, la Glypthothèque devoit contenir seulement les monuments plastiques; c'est à dire, les sculptures, antiques en marbre, bronze, ou terrecuite, ainsi que du temps de la Renaissance, et même de notre époque, réunies en collection par l'amour des beaux-arts qui distingue S. M. le Roi Louis I.

b.) Un autre édifice, la Pinacothèque, également construit sous le même Souverain et par le même architecte, fut destiné à tous les ouvrages graphiques, hormis pourtant les tableaux modernes, pour lesquels ce Souverain fait construire un bâtiment séparé, dans lequel on a suivi complètement le même système de distribution et de placement adopté par l'architecte dans la Pinacothèque.

Cet édifice contient donc les tableaux de tous les maitres et de toutes les écoles modernes; la collection des dessins originaux, des gravures, des porcelaines, des vases antiques, considerés comme de droit de préference sous le rapport de leurs peintures, et non de leurs formes, et enfin quelque spécimens de peintures de mosaique, et murales antiques.

c.) Un autre édifice arrangé ad hoc par le même architecte, contient sous le titre de collections réunies les objets antiques de moindre dimension nommés anticaglie, comme terrecotte, objets en or, argent ou bronze (dont une autre partie se trouve même dans une salle du Palais Royal), et une suite de monuments tumulaires antiques; les mêmes collections réunies comprennent également de superbes cabinets Chinois, Indiens, Japonais, &c. &c.

d.) Les cabinets de monnaies, médailles, et camées enfin, sont placés dans les édifices de l'Académie des Sciences et Beaux-Arts, comme appartenants au moins autant aux recherches scientifiques qu'à ces beaux-arts.

Il est à noter ici, qu'appelé à St. Petersbourg, le même architecte, M. de Klenze, y a construit un grand muséum, dans lequel toutes les collections d'art ont été placées convenablement.

ANSWERS FROM NAPLES.

1, 2. The National, or rather the Royal Collection of Antiquities and Fine Arts in Naples are united in a single building, called the Museo Reale Borbonico.

3, 4, 5. The questions from No. 3 to 5, may be thus answered:

The objects of antiquity and fine arts in the museum are divided into different classes, each forming as it were, a separate collection, and occupying an apartment proportioned to its extent.

The following is the classification adopted in arranging these collections.

1st. Antique paintings, mosaics, and mural inscriptions.

2d. Statues and bassi-relievi in marble.

3d. Statues and bassi-relievi in bronze.

4th. Egyptian antiquities.

5th. Antique inscriptions on marble; dry and liquid measures.

6th. Antique objects in bronze and ivory, for domestic and religious purposes.

7th. Antique glass and terra-cottas.

8th. Italian, Greek, or Etruscan vases.

9th. Cameos, antique gold and silver ornaments, and other objects, together with fruit, bread, colours, &c., found at Pompeii.

10th. Objects of the middle ages.

11th. Papyrus manuscripts found at Herculaneum.

12th. Gallery of paintings.

13th. Library.

ANSWERS FROM ROME.

1. The collections are placed in entirely separate buildings; such as the Vatican, the Capitol, the Lateran, the Kirkerian Museum; not to mention private galleries and museums.

2. The Egyptian and Etruscan Museums are at the Vatican; the Greek and Roman Statues at the Vatican, the Capitol, and the Lateran; the Bronzes and Coins at the Kirkerian Museum; and the Christian Museum at the Vatican and Lateran. The Galleries of Pictures are both at the Vatican and the Capitol, but in separate places from the Sculpture. The inscriptions form a separate collection.

3. Under the head of Antiquity and Fine Arts is comprehended all that is found from the most remote antiquity to the 16th century.

4. The Pictorial Department does not include the Etruscan Greek vases, as these belong to archæology, and not to painting. The collection of engravings is separate.

ST. PETERSBURG.

Translation of a Paper as to the Management of the Imperial Academy at *St. Petersburgh*.

On the Order and Management of the Imperial Academy of Arts and its Museum.

The Imperial Academy of Arts contains a collection of pictures, moulds of ancient as well as several modern statues, a collection of impressions of cameos, a certain number of models of ancient edifices in Rome, a collection of prints and original drawings by the ancient masters.

All these objects of art are deposited in the principal building of the Academy, in halls destined for the purpose, and divided into separate halls, according to their classes.

Ancient painted vases, the number not being great, are likewise placed in the apartments appointed for painting; besides several engravings and drawings.

In the department of ancient sculpture there are coins, different stones and inscriptions: the number of medals and various stones, however, is very small; but of the latter there are many impressions.

The productions of different schools and epochs are deposited together, according to the convenience of the arrangement in the museum, and to be of more service to the learners; no strict system is followed in their disposition.

In the museum of the Academy there is a rich collection of moulds of the best ancient sculptural productions, as also architectural models in cork and wood.

The Academy has excellent copies of the celebrated works of Raffael Sancio and other great masters.

These copies are placed in the museum of the Academy when the exhibitions of the works of art take place, as there is no particular place appointed for them.

All the academical collections are under the immediate control of the heads of the Academy.

The Academy forms a part of the ministry of the Imperial Court, and is under the direction of the Minister of Appanage. The President of the Academy is Her Imperial Highness the Grand Duchess Maria Nicolaerna; under whom the direction and the council manage the affairs of the Academy. The members of the council are professors of the arts, and all members of the direction.

The direction manages all scholastic and economical affairs, disposes of sums destined for those purposes, appoints and dismisses the officials, not being artists, serving in the Academy, superintends the general order and everything that regards the good arrangement of the Academy. The direction assembles once every week, and once a month examines the Academy's treasury.

The

(*continued*)

ANSWERS FROM BELGIUM. (*continued*)

5. No; coins and engraved stones are deposited in the Royal Library; ancient inscriptions in the Royal Museum of Arms and Antiquities.

6. No; only the collection of casts (plâtres) contain some models of architecture.

7. No; but it contains at this moment, as an addition to the Royal Museum of Painting, a gallery specially dedicated to objects of art, having a considerable historical interest, such as costumes, &c. Copies of works not belonging to the Museum might be admitted into this gallery.

8. No.

9. The answer to No. 3 shows the different collections which form part of each museum. *See* also the answers to Nos. 10 and 15.

10. The Royal Museum of Painting and Sculpture is under the direction of a committee, composed of a president and six members, named by the King.
The members are chosen either from amongst the artists, or from such persons as are known for their love and knowledge of the arts.
With regard to the Royal Museum of Arms and Antiquities, each section is placed under the direction of a special officer, with the title of "Director."
The general and daily superintendence is entrusted to an officer, with the title of "Conservator."

11. The services of the Committees of the Royal Museums of Painting, and Arms and Antiquities, are gratuitous. The conservator of the latter is alone paid.

12. The Museum and all the galleries and collections are under the control of the Minister of the Interior.

13. No.

14. The nomination of the officers permanently employed in the different galleries, &c. belongs to the Minister of the Interior.
The Committees name those who are only temporarily employed, and are charged with the accounts of their respective expenditure, under the control of the Minister of the Interior.
As regards architectural improvements and repairs they have only the right of proposal; the preservation and repairs of public edifices are entrusted to the corps of engineers of the "Ponts et Chaussées," which is under the control of the Minister of Public Works.

ANSWERS FROM BERLIN. (*continued*)

5. The Antique sculptures form a separate department; the coins, gems, and inscriptions are placed under 6 *a*, *f*, *h*, in the antiquarium.

6. It has already been replied to No. 3, that the casts are considered to form the chief part of the museum, because in no other department such perfection can be attained. The architectural models of the middle age are placed under No. 7; of architectural models from the antique there are but few and insufficient.

7. Only old copies (and then only in cases of necessity) are admitted to the picture gallery. In the royal palaces there are collections of copies, for example, from Raphael.

8. No.

9. The above-mentioned collections, which form the complex of the museums, are under a general director.

10. The officers employed in both museums are subordinate and responsible to the general director. Formerly an artistical board, consisting of the director of the departments, and some artists and savans specially appointed for the purpose, acted with him, which board, under the general director's presidency, decided by majority of votes upon purchases, restorations, disposal of the works of art, and so forth. This arrangement did not prove satisfactory, wherefore this part of the regulations has long since been annulled. The publication of a new and thoroughly revised set of regulations will shortly take place.

11. The directors are paid.

12. The superintendence is vested in the ministry of ecclesiastical, scholastic, and medical affairs.

13. *See* answer to No. 10.

14. The hiring of servants, the receipts and expenditure within the fixed yearly account, orders concerning building matters and internal arrangements, and in general all that belongs properly to the management, emanates from the general director, who hears the directors of the departments concerned therein. For matters relating to building, he has a technically educated building and house inspector.

ANSWERS FROM FLORENCE. (*continued*)

5. It may, certainly; because such monuments of art have a natural connexion.

6. No; these are contained in the Academy of the Fine Arts, which serves for the education of artists.

7. No; the Academy of the Fine Arts is better adapted for these, as such copies serve for models to young students.

8. The public exhibition of modern works of art takes place once a year in the Academy of the Fine Arts, thus tending to instruct artists; the months of September and October, being the vacation at the Academy, are chosen for this purpose.

9. The director of the gallery superintends as well the collection in the establishment as those united in other places in the city.

10. The director of the museums possesses separately, as a single superior officer, the direction of the galleries or museums; and all the officers of such establishments are subordinate and responsible to him. Such director is independent equally in the administration as in all matters connected with it.

11. The director of the Royal Galleries receives a salary.

12. The director of the gallery is responsible to the Minister of Finance.

13. There are no printed regulations respecting the special office of the director; and the head of the department is therefore responsible to the Government for the preservation of the monuments, for their proper disposition, for the discipline of the establishment, and for economy.

14. The director of the galleries transmits propositions for the repairs or augmentations of the establishments to the Government, which charges the direction of public edifices with the execution of such works; subject, however, to the modifications desired by the director, though the latter does not occupy himself with the expenses, &c., &c. The servants are proposed to the Government by the director, and when approved by it, become stipendiary officers of the state. Other works done in the galleries, as furnishing, &c., are entirely executed by order of the director.

ANSWERS FROM FRANCE. (*continued*)

6. Il existe des collections de moulages en plâtre, d'après les anciennes sculptures, au Louvre et à l'Ecole des Beaux-Arts. Cette dernière collection comprend des modèles d'architecture.

7, 8. Il n'existe pas des collections de copies de prix; on les expose temporairement à l'Ecole des Beaux-Arts ou dans tout autre local convenable, et on les envoie ensuite aux Eglises ou Aux Musées des départements.

9. A une ou deux exceptions près toutes les collections d'art sont renfermées dans un même bâtiment, qui est le Louvre, et sont sous la direction unique du Directeur-général des Musées, qui est dans les attributions du Ministre de la Maison de l'Empereur.

10. Le Directeur-général des Musées a sous ses ordres un certain nombre de conservateurs spéciaux pour chacune des différentes catégories ou collections. Les conservateurs forment une sorte de Comité consultatif, qui se réunit plusieurs fois par mois sous la présidence du Directeur-général des Musées. Indépendamment des conservateurs il existe aux Musées des Bureaux chargés de la comptabilité et de l'administration.

11. Les directeurs, conservateurs, et employés sont tous rétribués.

12. La direction supérieure des Musées et établissements des Beaux-Arts appartient au Ministre d'Etat et de la Maison de l'Empereur.

13. Il n'existe aucun document imprimé concernant la constitution de la direction des Musées, qui est d'organisation toute récente.

14, 15, 16. Le Ministre d'Etat s'occupe de tout ce qui touche à l'appropriation et à la conservation des bâtiments affectés aux collections. Il nomme le personnel; en un mot, il préside à tous les détails de l'administration.

ANSWERS FROM MUNICH. (*continued*)

Art. 6. Les plâtres de statues antiques, ainsi que les modèles architectoniques, ne font pas partie des galeries et collections sus-mentionnées, mais se trouvent placés, comme moyens immédiats et journaliers d'étude des élèves, dans les salles de l'Académie des Beaux-Arts.

Art. 7. Il en est de même des copies de tableaux bannies de la galerie de peintures, proprement dites.

Art. 8. Les galeries ne contiennent point de local pour des expositions quelconques, mais un vaste édifice séparé a été construit à cet usage dans la proximité de la Glypthothèque et Pinacothèque; les expositions n'y ont pourtant pas lieu continuellement, mais seulement en certaines époques, et en certaines années. Mais il est donné lieu à une exposition non interrompue, et changée toutes les semaines, dans les salles de la Société d'Amis des Arts.

Art. 9, 10, 11, et 12. Les différentes collections d'antiquités et beaux arts sont réunies sous la même direction autant qu'elles se trouvent placées dans le même édifice, mais sous ce directeur se trouvent, des inspecteurs de diverses branches séparées, par example, dans la Pinacothèque, des inspecteurs des tableaux, des vases, des gravures, &c. Il n'y a pas de comité votant par majorité sur les affaires administratives. Ces directeurs sont seuls responsables, et tous soumis à l'autorité du Ministre de l'Intérieur ou de l'Instruction Publique, et leurs fonctions sont rétribuées.

Art. 13. Il n'existe point d'instruction particulière pour le directeur; celle pour les inspecteurs et employés de l'établissement est imprimée et ci-annexée.

Art. 14. La surveillance des bâtiments, des employés et domestiques, l'administration des fonds affectés à leur établissement pour chauffage, nettoyage, éclairage, etc., est dévolue, et sous la responsabilité des directeurs; pourtant l'entretien et les travaux architectoniques s'exécutent indépendamment de leur co-opération, mais sur leur demande, par les architectes du Gouvernement.

ANSWERS FROM NAPLES. (*continued*)

6. No. The museum contains none but original works in sculpture or painting.

7. No.

8. Yes.

9. No. One person is at the head of the whole museum. Each department has a responsible person to superintend it, with three or four persons under him, according to the extent of the collection. All these persons are subordinate to a superior, who has the principal charge of all the collections, and has the chief responsibility for the security of the objects contained in them.

10. all power is united in the chief director; there is no committee possessing co-equal powers.

11. There being but one director-in-chief, he alone is paid.

12. The director is responsible to the Sovereign, and subject to the Minister of Public Instruction.

13. There are only some royal decrees of an old date, of which a copy is transmitted.

14, 15, 16. The director-in-chief has undivided power in all administrative business, being also superintendent of the antiquities. There are, however, some inspectors appointed to watch over the exact observance of the regulations, but their services are gratuitous.

ANSWERS FROM ROME. (*continued*)

5. Ancient Sculpture includes statues, bassi-relievi, groups, &c. Coins naturally form a collection apart, from their historical and chronological importance. So, also, gems and inscriptions, which are never confounded together.

6. Casts are a poor compensation for the absence of the originals, and are kept in a separate place.

7. If the copies are made by a good master, they are esteemed.

8. No; There are, however, places for the exhibition of the works of modern artists; as, for example, that in the Piazza del Popolo, where painters or sculptors exhibit their works for 40 days.

9, 10. The various collections are confided, under the supreme direction of the government, to different directors or archæologists, according to their nature, whether in the same building or not. For example: the prefect of the Apostolical Palaces has the care of the Vatican musems and galleries, and, under the orders of the prefect, the director of the museum and the Inspector of Public Pictures attend, each in his department, to the Museum of Statues and the Picture Gallery. At the Capitol, there is a president of the Museum and a director, who attend to the maintenance of the museum and the gallery, under the superintendence of the municipal authority and the Minister of Commerce and Fine Arts. The Numismatic Collection at the Vatican Library has a director, under the superintendence of the Prefect of the Sacred Apostolical Palaces, and of the librarian. There is also a Commission of Antiquities and Fine Arts, under the direction of the Minister, which attends to the preservation of all ancient monuments.

11. The Commission of Antiquities is composed of the most eminent archæologists and artists, and their services are gratuitous. The directors are paid.

12. The direction at the Vatican, and in the other pontifical palaces, is subject to the Prefect of the Palaces. The other directors are immediately subject to the local superiors. The supreme direction belongs to the Sovereign, and, except in the pontifical palaces, to the Minister of Commerce and Fine Arts.

13, 14. The Public Monuments, which are not collected in museums and galleries, are placed under the superintendence and care of the Minister of Commerce and Fine Arts, who orders restorations to be made when necessary, and causes them to be executed by means of the Commission of Antiquities and Fine Arts, which acts as a council respecting the acquisition of objects considered worthy of a place in the museum or galleries, for which an annual sum of money is assigned by the government. The repairs and other works needed in the edifices, which contain museums and galleries, are made under the direction of the same officers who are entrusted with the care of them, with the assistance of the architects.

ST. PETERSBURG. (*continued*)

Translation of a Paper as to the Management of the Imperial Academy at *St. Petersburgh*—continued.

The council has the management of everything relating to the arts and instruction in the same; appoints various rewards to the academicians, pensioners, and students; decrees to them previously medals, diplomas, and certificates, as classed or unclassed artists, and gives to those of that profession the degrees of academicians, professors, and rectors.

New honorary members and liberal fellows are besides proposed and chosen in the council. But all these professions and dignities ordained by the council are confirmed in the universal public or extraordinary assemblies of the Academy.

Lastly, the council of the Academy judges all matters directly relating to the propagation or approbation of the arts in Russia.

The composition of the direction and council of the Academy is laid out in the academical civil list of the 4th March 1840, as inserted in the printed book annexed.

All functionaries of the Academy receive salaries.

The pecuniary responsibility of the Academy is under the special control of the Ministry of the Imperial Court.

The Academy's statutes and supplements thereto are printed in the book annexed.

All the parts and branches of the museum of the Academy are under the special direction of its guardian.

The Academy has recourse to the renovators of the Imperial Museum of the Hermitage, in case a restoration and cleaning of the pictures is requisite. These commissioners are given on particular conditions, and compensated adequately to the difficulty of the task. Such like arrangements depend upon the council and direction of the Academy.

The Academy's annual income amounts to 65,708 rubles; viz., 61,378 rubles are appointed for the civil list expenditure, and 2,857 rubles for the purchase of the native artists' works. Besides the Academy acquires all artistical productions, as well as those that merit notice, of the present day, in virtue of a regulation of its council, with the decision of the head authorities, or by imperial order.

But the Academy has no especial agents or correspondents abroad for purchasing them; neither is there any special amount nominated for that purpose.

Excepting on holidays, artists and others may daily frequent the museum of the Academy, from 10 o'clock to 3 p. m., with the permission of its authorities.

The Academy's museum is only shut when alterations or repairs are being made in the halls, which are only effected when requisite; the cleaning of the museum takes place after three o'clock p. m.

The

ANSWERS FROM BELGIUM. (*continued*)

15. Each museum in Belgium has its separate lministration and distinct direction.

16. *See* the answers Nos. 3, 4, 5, and 19.

17. No special proceeding is followed in Belgium r the restoration of works of art, nor is any officer ecially attached to the musée for that purpose. the cases arise, the most fit persons are chosen.

18. No restoration, &c. can be made but by cial authority from the Minister of the Interior. The Committee of Direction names to the Mi- ter of the Interior the person to be charged with operation, and after approval by the Minister operation takes place, under the superintend- e and moral responsibility of the Committee.

9. With regard to painting and sculpture, *vide* wer No. 3.

The Museum of Arms is divided into three gene- compartments, each in a separate room:

1. Arms and armour.
2. Objects of antiquity.
3. Objects of ethnology.

. The sum assigned to the Royal Museum of ting and Sculpture is—

	Frs.
For the service - - -	5,900
For acquisitions, &c. -	23,400
Total -	29,300

ANSWERS FROM BERLIN. (*continued*)

15. It may happen that several branches are united under the superintendence of one director, as is now the case, for example, with the ethnographical collection, the collection of northern antiquities, and the collection of smaller works of art of the middle age and of the modern time; then there are assistants for the separate branches.

16. The rule should be, that each chief department have a special director; but this has not been attended to from the commencement.

17. The paintings are restored upon the principle that the original be preserved as much as possible, and the restoration so effected that it always remains feasible, without damage to the painting, to remove or improve the restoration. The only approved method is, to have a good experienced conscientious restorer, such as the Royal Museums possess. The sculptures are seldom cleaned, and if so, it is on their being placed in the gallery, or when the forms become impaired. When the restorations appear desirable, they are effected by competent artists.

18. Cleanings and restorations are ordered by the general director, after consulting with the directors of the departments; and as regards the picture gallery, with the first restorer, and are executed on the responsibility of the latter.

19. The historical principle has been adopted as closely as possible in the arrangement; in the coin department, the geographical (according to Eckhel) prevails, and within the same the chronological is again followed.

20. All in all; about 50,000 thalers.

ANSWERS FROM FLORENCE. (*continued*)

15. The authority of the director is unlimited, relative to the monuments of art entrusted to him.

16. In the Florentine Gallery, where monuments of art of every kind are united, there are different heads of sections, dependent, however, on the director. There is the antiquarian, to whom are especially entrusted objects of antiquity, as Greek sculptures, Etruscan and Egyptian monuments, gems, the cabinet of medals, antique painted vases, &c. There is an overseer of original drawings and prints; two paid restorers, with the special charge of attending to the due preservation of the pictures; and, lastly, two inspectors, responsible for the good conduct of the servants, and of the copyists in the gallery.

17. The inspectors of the galleries, who are cognizant of the arts, refer to the director whenever a painting requires to be restored; and, in conjunction with the restorers belonging to the establishment, determine, in the presence of the director, the mode to be adopted for restoration. The reparation of antique statues is executed under the directions of the antiquarian.

18. The above-named officers, in the manner indicated in the preceding answer.

19. The Florentine Gallery is classed in chronological order. The pictures of minor value are placed in the corridors, according to their date, commencing with the re-establishment of the arts up to the last century. The paintings of greater value are divided into so many cabinets of separate schools. The apartment denominated "The Tribune" contains divers objects chosen from the most celebrated masters of every school.

20. There is no settled fund; and it appertains to the director to propose to the Government, in the annual preventive balance of the gallery, the expenses necessary for the maintenance and embellishment of the establishments containing the works of art entrusted to them.

ANSWERS FROM FRANCE. (*continued*)

17, 18. Le nettoyage et la restauration des tableaux et objets d'art sont ordonnés par le Directeur-général, et se font par des hommes spéciaux choisis au concours.

19. L'ordre historique ou chronologique n'est pas rigoureusement observé dans le classement des collections. Le classement de la peinture, par exemple, a lieu par écoles et par époques.

20, 21. Le crédit applicable aux dépenses des Musées est de 333,000 *fr.* Il est tous entier à la chargedela Liste Civile Impériale depuis sa constitution; auparavant il était alloué par l'état.

ANSWERS FROM MUNICH. (*continued*)

Art 15. et 16. Comme il est dit ci-dessus, les directeurs des branches co-ordonnées d'Art ou d'Antiquité, ont sous eux des inspecteurs chargés des différentes parties et subdivisions.

Arts. 17 et 18. La restauration et le nettoyage des tableaux et ouvrages de sculpture, se fait par ordre et sous la responsabilité des directeurs, et par des personnes placées ad hoc, comme inspecteurs ou serviteurs. Pourtant les directeurs, dans des cas importants de restauration, doivent en demander l'autorisation aux Ministres préposés. Cette autorisation obtenue, le directeur seul reste moralement responsable de l'opération à exécuter.

Art. 19. Pour les ouvrages de sculpture antique, l'architecte a proposé, et suivi, l'ordre historique des ouvrages à placer. La 1ere division comprend l'art Egyptien (qui aujourd'hui peut-être devrait être encore précédé des sculptures Assyriennes); suit alors l'époque Archaistique, l'école d'Egine, l'époque de Phidias et des autres maîtres jusqu'au déperissement de la puissance Hellenique sous Alexandre le Grand et les Romains. Vient alors l'art Romain, ou plutôt les ouvrages des sculpteurs Grecs exécutés pour les Romains et à Rome, dans ses diverses phases; et une dernière salle contient les ouvrages modernes, essais de l'imitation du style antique. Pour la peinture, la division architectonique de l'édifice est disposée de manière à offrir d'abord des salles et cabinets séparés aux grands et aux petits tableaux, et à une division par écoles et par époques chronologiques. La même mode est suivie pour les dessins et gravures, et même dans la collection des vases, probablement la plus riche de toutes celles qui existent, l'architecte chargé du placement a-t-il autant que possible séparé les ouvrages d'après les époques et les lieux de leurs fabrication et confection.

Une sous-division presqu' inévitable dans cette branche d'art; les sujets érotiques et pornographiques sont placées dans une armoire ordinairement fermée, et visible seulement avec une permission spéciale du directeur

Art. 20. Les fonds alloués aux divèrs établissements artistiques sont puisés dans les budjets concédés par les deux Chambres; ils se divisent en appointements, fonds eventuels d'acquisition, et entretien des collections et localités.

ANSWERS FROM NAPLES. (*continued*)

17. One of the chief officers of the museum answers this question as follows: "As a rule, it is not advisable to attempt restoration; at the same time everything is done to preserve what exists. Thus pictures, when much injured, are lined, and cleaned with almond oil and pure water only. The flesh and drapery are left untouched by the brush, but the inferior or landscape portions of a work are restored with colour, if necessary. Again, as regards sculpture, any portion of a statue which may be wanting is not replaced with marble, but with a composition. Etruscan vases, when injured, are made up with simple red terra-cotta. The aim in all cases is to preserve the original portions distinct from the restored portions of an antique work.

18. To execute such labours, a committee of artists and men of taste is appointed to direct the restorations; the said committee being under the control of the director-general and the King.

19. Historical and chronological arrangements are not attended to.

20. No funds, excepting those supplied by Government.

ANSWERS FROM ROME. (*continued*)

15. Properly speaking, each branch should have a separate director, but in cognate branches the charge is confided to a single director.

16. Painting has a special superintendence: as the inspector of painting and director of the Mosaic Establishment. Sculpture has a director, who has the care of the collection. At the Vatican, he is a sculptor: at the Capitol, a literary man and archæologist. The coins are under the care of a medallist. The Egyptian and Etruscan Museum at the Vatican are under the direction of the sculptor director of the Museum. The Christian Museum at the Lateran, which is now growing into importance, is to be placed under the care of a special commission.

17. The practice is to do as little as possible. The less restoration the better. The less objects are cleaned, the better they are preserved. No important restoration, either in sculpture or fine art, is made without the consent and assistance of the Commission of Antiquity and Fine Art, by whom able restorers are employed. If a restoration is to be made of the work of a great master (Capo-scuola), it is made by the Government, as such works are *publici juris*.

18. Applications respecting restorations are made to the Minister of Commerce and Fine Art, who deputes the Commission of Antiquity and Fine Art to examine the object and give their opinion. If the object is of consequence, the restoration is effected in the manner pointed out above. Otherwise, the proprietors of the objects are allowed to make such restorations as they think proper.

19. In collections, chronology according to epochs and schools is followed, as in the Etruscan collection, and the collection of statues. It happens, however, that with respect to the statues, the chronological arrangement is not always followed: as the more or less remarkable objects are placed according to the circumstances of the locality, and the Greek are mixed with the Roman. The Egyptian and Etruscan collections are always kept separate. Historical chronology is always preserved in the numismatic cabinets, and in the lapidary collections.

20, 21. The funds are all assigned by the Government.

ST. PETERSBURGH. (*continued*)

Translation of a Paper as to the Management of the Imperial Academy at *St. Petersburgh*—continued.

The scholars of the Academy are allowed to take copies, upon presentation by the professors; amateurs and artists, however, with the decision of the direction of the Academy. The time appointed for it, excluding holidays, is from nine to four o'clock.

The Academy has no especial printed rules for administering artistical productions. The necessary arrangements on the subject, based upon the existing statutes, are made by the authorities.

The Academy has only written catalogues of its collections, and none for sale.

(*continued*)

QUESTIONS. (*continued*)	ANSWERS FROM BELGIUM. (*continued*)	ANSWERS FROM BERLIN. (*continued*)	ANSWERS FROM FLORENCE. (*continued*)	ANSWERS FROM FRANCE. (*continued*)	ANSWERS FROM MUNICH. (*continued*)	ANSWERS FROM NAPLES. (*continued*)	ANSWERS FROM ROME. (*continued*)
21. How far do they consist of independent revenue accruing from endowments or bequests? How far of annual grants or advances from the ordinary revenues of the State?	21. This allowance is exclusively furnished by the State, but refers only to the ordinary wants of the establishment. When an opportunity of making any important acquisition presents itself, special funds have been voted by the Legislature for that purpose.	21. They are fixed at the same time with the general revenue of the State. There are no revenues from endowments or bequests; from the sale of catalogues about 500 thalers.	21. The funds disposable for the maintenance of the galleries are those approved of in the above-named balance.		Art. 21 et 22. Des dons ou legs faits aux établissements artistiques sont imprévus et sans exemple; le cas échéant, le Ministre préposé à telle ou telle branche devrait, sur la proposition des directeurs, donner l'autorisation d'accepter.	21. The State allows 34,000 ducats annually.	
22. In what mode, and by what advice or authority, are effected those acquisitions of works of art which take place from time to time for the extension or maintenance of the collections?	22. As regards the Museum of Painting and Sculpture, three honorary members, who have been professional picture-dealers, are joined to the Committee under the name of "Commissaires Experts," who are charged to give their opinion on the authenticity and the price of works which there is a question of acquiring. They give their opinion in writing under their signature. Every work of art offered for sale is submitted to the examination of the whole Committee. The vendor is obliged to guarantee the authenticity of the work, and to declare its origin in writing. When works of art are to be sold by public sale, the Committee may depute one or more of its members to inspect them, to whom one of the "Commissaires Experts" is always added. These members make their report of the result of their inspection, and the Committee deliberate on their report. Every purchase is submitted to the preliminary approval of the Minister of the Interior. In urgent cases the Committee would, however, complete the purchase directly, and render an account thereof to the Minister of the Interior.	22. The acquisitions are effected by the general director, after consulting with the directors of the corresponding departments, and other men experienced in the particular branch of art, whom he may call to his assistance. In laying out larger sums of money, the King must be consulted, and his sanction obtained.	22. Acquisitions of works of art are made by the Government on the proposition of the director, who strengthens his opinion by the advice of persons skilled in the fine arts.	22. Les acquisitions destinées à accroître les collections de Louvre sont faites par M. le Directeur-général des Musées, d'après les ordres de M. le Ministre d'Etat et de la Maison de l'Empereur.		22. A committee is appointed to report on any objects found or offered; which report is sent to the King.	22. On the advice given by the General Consulting Commission of Antiquity and Fine Art, purchases are made and sent to the museums.
23. Do those acquisitions include the productions of contemporary art?	23. No; such purchases are exclusively reserved for the administration of the "Beaux Arts," and are paid for out of the funds voted annually for the encouragement of the arts.	23. Only in respect to coins and smaller works of art.	23. The State Galleries do not admit modern works. Such are, however, united in the Sovereign's palace, who encourages living artists by purchasing their labours.	23. Ces acquisitions comprennent les productions du l'art contemporaire. Les ouvrages d'artistes contemporaires qui sont morts, sont acquis par le Directeur-général des Musées sur l'ordre de M. le Ministre d'Etat, et sont placés au Louvre. Les ouvrages d'artistes vivants sont acquis ou commandés par le chef de la section des Beaux-Arts au Ministère d'Etat sur l'ordre de M. le Ministre, et sont placés soit aux Luxembourg, soit dans des musées de province, soit dans les églises et édifices publics.	Art. 23. La peinture moderne a, comme il été dit ci-dessus, un édifice apart; et les tableaux acquis par S. M. le Roi Louis I. trouvent leurs places, mais non dans la grande Pinacothèque destinée seulement aux ouvrages anciens. Il en est de même de la sculpture, dont les produits exécutés ou acquis par le Souverain ou le Gouvernement trouvent leurs places comme monuments isolés ou comme ornement des édifices à élever.	23. No.	23. No; they go only down to the 16th, or at least, the 17th century.
24. Are agents employed, either by mission or correspondence, in foreign countries to effect such acquisitions?	24. No; in general the Museum, on account of the smallness of its resources, makes purchases only in Belgium. In the very rare cases in which purchases have been made abroad, some members of the Committee have proceeded to examine the works on the spot, when they have been of sufficient importance.	24. The general directory have not their own agents.	24. The Florentine Galleries do not employ agents or commissaries in foreign countries to effect acquisitions.	24, 25. S. M. l'Empereur fait aussi acheter sur la liste civile un certain nombre d'objets d'art, qui viennent en accroissement aux collections nationales, ou qui sont placés dans les palais imperiaux. Le chiffre des acquisitions faites par M. le Directeur-général des Musées est annuellement de 100,000 *fs.*, auquel viennent s'ajouter dans l'occasion des crédits extraordinaires. Le chiffre des commandes et acquisitions à faire aux artistes vivants, est annuellement de 950,000 *fs.*	Art. 24. Il n'y a pas d'agens spéciaux pour de pareilles acquisitions; elles sont provoquées par le goût du Souverain, du Ministre, de l'Architecte, ou des directeurs des galeries.	24. No.	24. No; but within the State itself there are commissions in the principal cities, who correspond with the Minister of Commerce and Fine Arts, to whom belongs the care of the municipal Galleries and Museum.
25. Is there any annual sum of money, and if so what sum, specially set apart for these objects?	25. No.	25. About 16,000 thalers, which are included in the annual revenue. (*See* 20.)	25. There is no annual sum destined for effecting acquisitions; such being made by the State on the proposition of the director.		Art. 25. Il n'y a pas de somme annuelle et fixe destinée à ces commandes ou acquisitions; et elles ne peuvent être effectuées que sur des propositions et allouement de fonds spéciaux.	25. Four thousand ducats annually.	25. There is a fixed sum, which is increased according to circumstances.
26. On how many days of the week, and during how many hours of each day, are the galleries open to the public?	26. The Museum of Painting and Sculpture is open to the public on Sundays, Mondays, and Thursdays, as well as on all established holidays, from 10 A.M. to 3 P.M. The Museum of Arms is open to the public on Sundays and established holidays, from 11 A.M. to 3 P.M.	26. The galleries, as far as their arrangements are completed, are open to the public every day in the week from 1st April to 31st September, from 10 to 4 o'clock, and from 1st October to 31st March, from 10 to 3 o'clock.	26. The establishments of the fine arts in Florence are open to all, every day in the week, from nine o'clock in the morning till three in the afternoon, holidays excepted.	26, 27, 28. Les galeries ne sont ouvertes au public que le Dimanche. Elles sont ouvertes aux artistes et aux étrangers munis de passeports ou de permissions tous les jours de la semaine, le Lundi excepté, de 10 hrs. à 4 hrs. Les galeries ne sont fermées que pour cause de réparations. Il n'y a jamais de vacances pour les employés.	Art. 26. Les jours et les heures pour la visite des galeries ne sont pas tout-à-fait mêmes pour toutes. L'ordre observé à cet égard pour les collections conservés dans la Glypthothèque, la Pinacothèque, les collections réunies, et la galerie de tableaux à Schleisheim, est imprimé et joint au présent exposé. Le cabinet de médailles est ouvert 4 fois par semaine de 10 hrs. à midi, et n'est montré qu'en présence de l'inspecteur.	26. Every day, excepting Sundays and Feast-days, from nine to three o'clock.	26. The galleries and museums are open once a week to the public. Every day, except holidays, artists and others are admitted privately, who wish to observe, draw, or copy.
27. On what days are the galleries closed to the public, but open to artists?	27. The two museums are closed to the public on all but the above-mentioned days. They are open every day to artists, who are required only to procure a card of admission.	27. Till now, on no day; yet in the picture galleries two days have been specially set apart for the public, and then no copyists are admitted, except in urgent cases. It will, however, be necessary for the future to fix certain days for study, and for the admission of the public.	27. With the exception of holidays, and some few days in the year, the galleries are open to the public. The work necessary for keeping them clean is performed in the hours during which they are closed to the public; and in case of any considerable reparations occurring in the building, a part of the establishment is always endeavoured to be kept visible to the public.		Art. 27. Il n'y a pas de jours séparés pour les artistes.	27. The galleries are open to artists the same days they are open to the public.	27, 28. Saturday is the only day appropriated to sweeping and cleaning the museums, which are for this purpose closed on that day.

QUESTIONS. (*continued*)	ANSWERS FROM BELGIUM. (*continued*)	ANSWERS FROM BERLIN. (*continued*)	ANSWERS FROM FLORENCE. (*continued*)	ANSWERS FROM FRANCE. (*continued*)	ANSWERS FROM MUNICH. (*continued*)	ANSWERS FROM NAPLES. (*continued*)	ANSWERS FROM ROME. (*continued*)
28. During what period or periods of the year are the galleries closed entirely, for the purpose of cleaning or repairs, or of vacation to officers?	28. There are no regular periods; but the museums may be shut at any period that is deemed expedient.	28. There are no vacations.	28. Copies in oil, miniatures, drawings, &c., are permitted to be made in the galleries; and pictures of moderate size may be moved from their place to be copied in a better light. Artists desirous of being admitted petition the director, indicating the picture they wish to copy, and the time to be employed in the work; and such request is renewed whenever they desire to commence another copy. Permision to model sculpture is also granted by the director, if demanded by a foreign government or academy, or a distinguished artist or individual. These are, however, executed in some part of the gallery set apart for the purpose, by a modeller belonging to the establishment, and under the superintendence of the inspectors.		Art. 28. C'est pendant le mois d'Octobre où toutes les collections sont fermées, et ne sont accessibles que par une permission expresse du directeur, pour vaquer á la réparation et au nettoyement général des localités, et pour accorder aux personnes chargées de l'inspection spéciale un loisir convenable.	28. As a rule, no period.	
29. To what extent are copying of pictures, modelling casts of statues, or tracing of engravings, permitted in the galleries, and under what conditions or restrictions?	29. In general, the pictures of the Museum of Painting may be copied, either entirely or in part: the Committee can, however, forbid a copy of the same dimensions as the original. As to statues, a superintendent modeller is attached to the museum, who is specially charged with all works, either for the museum or for individuals. In the latter case, the preliminary permission of the Committee is required. The tracing of engravings is prohibited.	29. The copying of pictures is allowed to every one who can produce his authorisation; it is permitted to any one to make drawings without setting up an easel. Modelling and taking casts of statues in the galleries of sculpture are not allowed as a rule, since other opportunities for those purposes are afforded in the academy, the ateliers, and so forth. The tracing of engravings is not permitted.	29. There are no printed regulations, but written rules are affixed in the galleries for the information of the officers and the public.	29. Tout artiste muni d'une carte d'étude peut copier dans les galeries. Le monteur des musées peut seul éxécuter des moulages sur les sculptures. Il n'est pas permis de calquer les gravures ou dessins exposés.	Art. 29. La permission de copier des tableaux est généralement accordée aux artistes et amateurs qui justifient leur talent, chaque jour et toute heure, sur une demande addressée au directeur. Il y a pour cet objet une salle et des cabinets disposés exprès dans le plan d'architecte, áfin d'éviter que la galerie ne soit encombrée par des chevalets, echaffaudages, tables et chaises. Quand aux montes à prendre sur les statues antiques, il existe une defense générale, et elle ne souffre d'exception que sur une permission expresse accordée par le Roi. Une égale permission est nécessaire pour dessiner d'après les statues antiques, vu que l'occasion en est donnée pour les cas ordinaires par les copier en plâtre conservées dans les salles de l'Académie des Beaux-Artes.	29. Application must be made to the Minister, who gives an order for six months, which can be renewed.	29. It is necessary to obtain a written permission from the superior authority, in order to copy or to mould casts; and according to priority of date, the place is given for copying. Copies are not usually allowed to be made of the same size as the originals; and the copyist must place himself at a certain distance, in order that he may not trace a picture. Casts can only be taken by means of moulds made of clay, which are called "lost moulds," *i. e.*, which produce but one impression.
30. Is there any printed copy of regulations or instructions as to the management of the collections or galleries, or as to the admission of the public? (If so, it would be desirable that a copy of these regulations be transmitted with the answer, &c.)	30. A copy of the regulations of the two museums is with pleasure annexed.	30. The statute, and the regulations, and so forth, are just at this moment under revision.	30. There are catalogues and guide books belonging to the galleries, both in Italian and French.	30. Il n'existe pas d'exemplaire imprimé des réglements, qui sont variables.	Arts. 30, 31, et 32. Il existe des Catalogues complète et détaillés de presque toutes les collections, en Allemande et Français, et l'on a joint ici, pour exemple, celui de la Glypthothèque et de la Pinacothèque.	30. No.	30. A printed copy is enclosed.
31. Are there complete and accurate catalogues of the collection?	31. Yes.	31. Complete inventories of all the collections exist.	31. They are so. Signed by the Director of the Gallery of Florence, *L. Bourbon del Monte.*	31, 32. On s'occupe de la formation des catalogues, dont quelques-uns sont déjà partiellement imprimés et publiés.		31. There is a manuscript catalogue of the collection.	31. Yes.
32. Are those catalogues printed and circulated?	32. That of the Museum of Painting and Sculpture is printed and sold on the spot. That of the Museum of Arms will be printed in the course of this year.	32. Catalogues of the different departments are printed for the use of the public; they are, however, not yet all alike in form. Copies, as far as they have appeared, are enclosed. There is at present nobody in England capable of giving accurate information upon these and similar questions. Should further and indeed verbal communication be desired, one of the directors, or assistant directors, might obtain leave to go to London in the course of the month of July. The choice of the same, and the precise time of departure, must, however, be left to the general director, as at this period there are many applications for leave of absence, and care must be taken for the due superintendence during the interim.				32. Which is not printed. Signor Abate, a native of Naples, who is now employed in England to decorate the Crystal Palace at Sydenham, is competent to offer much useful information upon the subjects above referred to.	32. They are not in circulation; there are printed notices, which give a summary description or indication.
33. Is there any person, native or foreign, now in England, who is competent to give full and accurate information to a Committee of the House of Commons on the several heads of inquiry above specified?	33. No such person is known.			33, 34, 35. A la connaissance de l'administration, il n'existe personne en Angleterre qui puisse donner au Comité de la Chambre des Communes des renseignements exacts et complets sur les différents chefs d'enquête ci-dessus spécifiés, mais on pourrait trouver à Paris, une personne capable de bien renseigner le Comité.			33, 34, 35. Mr. J. P. Pentland, who is likely to be in England in June, would probably be able to give valuable information on many of these points. His address is known to Mr. H. Dundas Scott, of the Foreign Office.
34. And if not, could any person so qualified be found at who would, for a reasonable remuneration on account of loss of time and travelling expenses, be willing to visit London for the purpose during the ensuing months of May and June?	34. The principal object of such a mission would probably be to give information as to the architectural dispositions of the galleries of Belgium, and especially of the Picture Gallery. These have, however, been long acknowledged as so defective, that means are now sought for the construction of an edifice to be specially dedicated to that purpose. Under these circumstances, such a mission could scarcely offer the advantage the Committee would have a right to expect from it; and the Belgium Government does not therefore think itself in a position to make any proposal.						
35. It would also be desirable that the person so accredited should be conversant with the architectural arrangement of the galleries, &c. with which he is connected, and with the other general details of their arrangement and internal economy, and should be provided with a rough plan of the building.							

App., No. VIII.

Appendix, No. VIII.

RÉPONSE aux QUESTIONS adressées par le Président du Comité de la Maison des Communes, pour l'établissement d'une Galerie nationale de Beaux Arts, à M. de Klenze, Intendant des Bâtimens de la Couronne et Conseiller Privé Actuel de S. M. le Roi de Bavière.

Demande 1°. Les collections d'art et d'antiquité classique à Munich, sont-elles sous une même direction, ou y a-t-il plusieurs chefs d'établissement ?

Reponse ad 1. Les collections d'art à Munich se divisent d'abord en deux parties distinctes : savoir—

a) Celles qui sont propriété de l'état ; et,

b) Celles qui sont propriété privée de S. M. le Roi Louis.

Les premières ont un directeur et un personnel séparé pour chaque division principale, et tous ressortent du Ministère de l'Intérieur.

La direction de la seconde partie est également divisée, mais elle ne ressort que directement du Cabinet du Roi.

2°. Les collections sont-elles aussi disposées dans des édifices différens ?

Ad 2. Les collections sont placées dans des édifices séparés, et même la collection si nombreuse de tableaux, est elle divisée dans quatre galeries différentes : savoir, la Grande Pinacothéque de Munich ; la nombreuse collection dans l'ancien château de Schleisheim ; la chapelle St. Maurice à Nuremberg où se conservent spécialement les ouvrages des anciennes écoles allemandes, et enfin la galerie pour les tableaux modernes, établie par le Roi Louis.

3°. L'opinion de M. de Klenze est-elle favorable à une telle distribution séparée des objets d'art, ou préférerait-il de les voir réunis dans un même Musée ?

Ad 3. En principe parait-il préférable d'avoir un édifice séparée pour chaque branche de l'art, afin que les exigeances d'une collection ne gênent pas celles d'une autre. Mais pourtant peut-il y avoir des cas où il seroit plus convenable de réunir sur une même place et dans un même groupe d'édifices toutes les collections ; si, par exemple, dans une grande ville l'on ne trouvait des places différentes et convenables pour plusieurs établissemens rélativement au jour, à l'air, à l'exposition, etc., qu'à de grandes distances du centre de la ville ou les unes des autres, tandis qu'une et même place satisferait en tout point, et même par sa grandeur, à toutes les exigeances sus-mentionnées.

Dans ce cas il paroîtrait bien préférable d'y réunir les établissemens et localités pour toutes les collections. C'est alors, au jugement des personnes chargés du programme de la construction, et de l'architecte à qui l'exécution sera confiée, de disposer le tout de manière à ce que chaque partie de l'établissement réponde complétement à son but. Un programme bien rédigé, précis et clair pour tout ce qui regarde le système général à suivre et les convenances, sans pourtant aller jusqu'à gêner l'architecte et l'empêcher de se mouvoir avec la liberté nécessaire à l'artiste, est en tout cas de première nécessité dans une entreprise semblable.

4°. Les collections à St. Petersbourg, sont-elles réunies dans un même édifice ?

Ad 4. Oui, et ce système a été adopté et suivi, sans que de cela il soit resulté un désavantage quelconque.

5°. Y sont-elles sous la même direction en chef ?

Ad 5. Elles sont, quoique réunies dans le même édifice, placées sous la surveillance de plusieurs directeurs et inspecteurs, qui tous sont soumis au même ministère de la Maison Impériale.

6°. Quels pouvoirs possèdent les directeurs à Munich, et à qui sont-ils responsables ?

Ad 6. Les pouvoirs de ces directeurs sont illimités quand aux mésures ordinaires à prendre pour la conservation des objets d'art confiés à leurs soins : pourtant agissent-ils même en cela d'après des instructions approuvées par le ministère compétent, et auquel ils sont immédiatement responsables.

7°. Comment se font les achats de tableaux ou d'autres objets d'art ? Y a-t-il une somme destinée à cela ?

8°. Si les directeurs achetent sous leur seule responsabilité ; ou y a-t-il un conseil d'experts qu'ils doivent consulter ?

Ad 7

Ad 7 et 8. Les achats de tableaux et objets d'art pour l'état sont dans des collections si nombreuses et complètes comme celles de Bavière, et surtout celle des tableaux, en cas tout exceptionel et non prévu. Un pareil achat n'aurait lieu que pour des tableaux tout-à-fait capitaux, qui malheureusement ne se trouvent presque jamais.

Pourtant a-t-on profité amplement de pareilles occasions dans le tems où les guerres et les révolutions en Europe les amenaient. Alors un crédit particulier fut toujours accordé par le ministère, ou bien la caisse du Roi fournissait les fonds nécessaires. Les achats s'effectuèrent alors par le directeur de la galerie ou par une personne nommée ad hoc par le Roi ou le Ministre, sans qu'on lui ait adjoint d'autres experts. L'expérience faite sur la divergeance d'opinions rélatives à un tableau douteux et d'un auteur contesté, d'un côté, et, de l'autre, l'unanimité des mêmes opinions sur des ouvrages connus et non contestés, a fait croire qu'une marché collégiale dans ces achats serait ou nuisible ou superflue, et l'on s'est toujours bien trouvé de ce système. Il faut pourtant ajouter à cela qu'en dernière analyse le souverain lui-même se reservait souvent le veto, et que les souverains de Bavière étaient toujours grands amateurs et même connoisseurs en fait de beaux arts. Si pourtant dans ce pays l'on voudrait avoir sur un ouvrage d'art quelconque à acheter une opinion de contrôle, ce serait à l'Académie des beaux arts qu'on aurait recours, et il est dans ses attributions de l'émettre : le ministère deciderait alors en dernière analyse.

9°. Les nettoyages, qui les ordonne, et comment se font-ils ?

Ad 9. Comme tout ce qui tient à la conservation des tableaux rentre dans les attributions du directeur des galeries, le nettoyage lui est également confié, et il n'a pas besoin de demander pour cela une autorisation spéciale. Pourtant est il posé en principe qu'un nettoyage qui s'étendrait jusqu-à *l'enlèvement du vernis*, doit être aussi longtems que possible évité, et n'avoir lieu que dans un cas extrême. Cela sera d'autant plus le cas si la nature et l'état du tableau et du vernis qui le recouvre pouvait, en cas de nettoyage, nécessiter des rétouches. Dans ce cas, le directeur aurait à se consulter avec ses conservateurs-inspecteurs dont l'un doit toujours et est spécialement expérimenté dans les travaux de restauration. Si de cette consultation il résulte la conviction d'un danger quelconque pour le tableau en cas de nettoyage, on s'en abstient volontiers, et si, malgré cela, il parait et devient nécessaire pour éviter un plus grand danger encore, le directeur en fera son rapport au ministre, qui en décide immédiatement, ou bien après un examen collectif fait par les professeurs de l'Académie des beaux arts.

10°. Y a-t-il quelque conseil ou commission pour examiner les tableaux et faire un rapport sur leur état ?

Ad 10. Il n'y a aucun conseil ou contrôle régulier de ce genre.

11°. Quel genre ou degré de connaissance exige-t-on des restaurateurs nettoyeurs ?

Ad 11. L'on en exige au moins assez de talent comme peintre, pour, en cas de besoin, être en état d'exécuter les retouches nécessaires pour réparer et remplacer l'anciens repeints. Outre cela, on exige de lui une parfaite connaissance de la palette, de la composition et fabrication des couleurs, huiles et vernis, et assez de notions chimiques pour pouvoir juger de l'effet du mélange des couleurs, de l'influence de l'air, de la chaleur, du froid, et des huiles et vernis employés pour peindre ou conserver les tableaux.

12°. Quel est le contrôle, ou la surveillance, à laquelle leurs opérations sont soumises ?

Ad 12. Ces restaurations n'ont pas d'autre contrôle direct que celui du directeur de la galerie, qui est responsable de leur effet au ministère préposé.

13°. De quel vernis se sert-on pour les tableaux ?

Ad 13. L'on a depuis longtems banni toute autre espèce de vernis que celui de mastic dissout dans de l'huile de térébenthine purifiée et deliviée de toute partie grasse et résineuse, ce qui est reconnu un point tout-à-fait essentiel. Même depuis une dizaine d'années a-t-on employé fréquemment au lieu de mastic, le Damar dissout de la même manière dans une huile volatile. L'on juge ce vernis plus léger et moins enclin à gercer des couches de couleur très minces et pas encore tout-à-fait durcies, comme de même il devrait être moins sujet à jaunir. L'emploi de l'un ou de l'autre vernis rentre dans les attributions du restaurateur de tableaux.

14°. Y mêle-t-on jamais de l'huile grasse, et quel est l'effet de ce mélange ?

Ad 14. Mêler de l'huile grasse dans un vernis quelconque, est pour moi une pratique nouvelle, et me parait aussi inutile d'un côté, que dangereuse de l'autre. Toute huile doit être consumée plus au moins par l'action de l'air, et rapprocherait donc les époques où un tableau demanderait un nouveau vernis, ce qui serait un mal, sans doute ; ou bien elle ferait noircir ce vernis, ce qui serait un mal plus grand encore. Il me semble donc que ce mélange serait à éviter, à moins qu'un connoisseur profond en chimie pratique, ne trouve une raison majeure pour le justifier.

 15°. M. de

App., No. VIII.

15°. M. de Klenze a-t-il vu les tableaux de la Galerie nationale depuis qu'il se trouve à Londres?

Ad 15. J'ai visité plusieures fois dans des voyages antérieurs, et trois fois pendant mon séjour actuel, la National Gallery, et j'ai examiné avec toute l'attention possible l'édifice, sa situation, et les tableaux qu'il renferme.

16°. Quelle est son opinion sur leur condition actuelle?

Ad 16. Cette collection, quoiqu' encore jeune et peu nombreuse, renferme pourtant non-seulement de très beaux ouvrages de grands maîtres, mais, proportion gardée, moins de tableaux mediocres ou équivoques qu'on en rencontre dans d'autres galeries. Quant à l'état de ces tableaux, il me semble peu satisfaisant, ce qui doit pourtant être attribué plutôt aux défauts du bâtiment et de sa situation, qu'au manque de connaissance et de soins de la part des directeurs.

Ces défauts me paraissent principalement, le jour des salles très mal calculé et distribué; le peu de dignité et convenance du décor; la manière fautive dont il a fallu placer et suspendre ces tableaux pour pouvoir être vus.

17°. Quel changement les tableaux ont-ils subis depuis la dernière visite de M. de Klenze à Londres?

Ad 17. N'ayant vu la collection dans mon dernièr séjour pendant la Grande Exposition d'Industrie, qu'une seule fois, et au milieu d'une foule immense et d'un nuage de poussière, je ne suis pas en état de préciser une différence entre l'effet que m'ont fait ces tableaux pris individuellement alors et aujourd'hui.

18°. Quel est l'effet de la fumée, (moississure ou brouillard (chill)) qui s'observe sur leur superficie?

Ad 18. Une et peut-être la cause principale de l'effet peu satisfaisant de cette interessante collection, est, comme je crois pouvoir le prouver avec la dernière évidence, une couche nébuleuse, bleuâtre, et châtoyante qui couvre leur vernis, et qui, sans le moindre doute, provient de la fumée de charbon de terre, si épaisse et si dense dans ce centre de la ville, et dans une position aussi reserrée où l'édifice est entouré de près par beaucoup d'autres bâtimens.

19°. Le même effet se manifest-t-il à Dresde?

20°. Provient-il de la même cause?

Ad 19 *et* 20. Oui; ce même effet a été observé dans la magnifique galerie de Dresde, *et cela seulement depuis que l'emploi du charbon de terre a été introduit et a augmenté dans cette ville.* Les symptomes sont là absolument les mêmes comme ici, et comme le charbon de Saxe n'est pas aussi bon que celuy d'Angleterre, et contient encore plus de substances nuisibles aux couleurs dorures et vernis, le mal y est aussi plus intense et d'un progrès plus rapide. Il a été la cause principale de la résolution prise, d'abandonner tout-à-fait la galerie actuelle située au centre de la ville, et d'en construire une nouvelle sur un terrain éloigné d'habitations et garanti du danger, que des maisons pourraient y être construites plus tard.

Je crois donc qu'à Londres il n'y aura pas un autre parti à prendre pour obvier au mal indiqué en général, et il serait, outre cela, à ce qu'il me semble, utile et nécessaire de faire examiner la question de détail: *si, par la composition du vernis, ou par une matière quelleconque à y ajouter, il serait possible de neutraliser cet effet de la fumée sans par-là nuire à la qualité du vernis ou au tableau lui-même,* par un chimiste savant et pratique en même tems, comme l'était Sir H. Davy, et comme Liebig l'est aujourd'hui.

21°. Quel est l'effet du nettoyage sur les tableaux?

Ad 21. Il ne peut être que favorable, pourvu qu'on ne s'écarte pas des principes et règles énoncées ci-dessus *ad* 9 et 11. Si cette question se rapportait à des nettoyages faits récemment à la gallerie nationale, les circonstances citées *ad* 17, m'empêcheraient d'y repondre en bonne conscience.

22°. Quel est l'effet du vernis à l'huile de lin, dont on s'est servi dans la Galerie nationale?

Ad 22. Cet effet du vernis mêlé d'huile grasse, soit de lin, de pavôt, ou de noisette, ne me parait pas heureux sous aucun rapport, par les raisons citées ci-dessus *ad* 14.

23°, 24°, 25°, *et* 26°. Quel est l'effet de la poussière sur la superficie des tableaux, sur la toile derrière, et sur les câdres?

Ad 23, 24, 25, *et* 26. Il n'y a pas, autant que je crois, en Europe une galerie dans laquelle il y ait autant de poussière comme dans celle de Londres, et je crois que cela nuit de toute manière aux tableaux et à leur effet. Si même l'on voulait admettre que cette poussière ne pouvait ni atteindre ni séjourner sur la superficie des tableaux à cause de leur position

position inclinée—ce que je ne puis pourtant pas accorder—il fait un effet très désagréable de voir les câdres couverts d'une couche épaisse de cette poussière. De ce séjour où on ne la trouble pas, tandis qu'on la balaye même des trottoirs et des rues, peu-à-peu pourtant elle se repand dans toute la salle et sur les deux côtés des tableaux, lorsque la plus legère oscillation dans l'air produit même par le seul mouvement des visiteurs nombreux, la met en mouvement elle-même.

Or cette poussière est toujours plus ou moins corrosive, et doit peu-à-peu nuire au tableau et au câdre, comme elle nuit à l'idée que les visiteurs se font de la dignité et de la valeur d'objets d'art, pour lesquels on a si peu de soins de propreté; et cela en Angleterre, où la propreté est une qualité nationale.

27°. Quelle est l'opinion de M. de Klenze sur l'inclinaison en avant donnée aux tableaux, et quels sont les motifs de son opinion?

Ad 27. L'on m'a observé que cette manière de suspendre les tableaux avait le but d'empêcher la poussière d'arriver et de séjourner sur leur surface, qui, dans cette position, en était encore mieux garantie par la saillie supérieure des câdres. Mais je ne puis admettre cette raison qu'en partie; car la poussière n'arrive pas seulement en direction verticale, comme la pluie, mais elle se repand beaucoup plus du plancher et du bas des salles, d'où le courant d'air produit par l'ouverture des portes et le mouvement des visiteurs la soulève dans toutes les directions, et la fait arriver sur la surface des tableaux et de leurs câdres.

Cette inclinaison des tableaux, désagréable aux yeux, n'a été choisie et n'est motivée que par la nécessité. La mauvaise disposition des abat-jours, le manque de calcul correcte, les rayons de lumière réflétant de la surface luisante des tableaux, est le seul motif valable pour cette manière de les suspendre, car elle fournit au moins jusqu'à un certain degré le moyen de les voir sans en être empêché tout-à-fait par ce réflet des rayons de lumière, arrivans par les abat-jours. Or, y a-t-il un calcul et une opération géometrique fort simple pour garantir une galerie éclairée par le haut contre cet inconvénient, sans incliner les tableaux; mais il avait échappé au constructeur de la Galerie nationale, et il faut le dire, n'avait pas encore été mis en pratique dans quelqu'autre édifice de ce genre, jusqu'à ce que la construction de la Pinacothéque de Munich fournissait l'occasion de le fixer et de l'effectuer avec une complète evidence.

J'ai dit que cette inclinaison me paraissait désagréable à la vue, et je ne crois pas être contredit sur ce point; j'avoue même qu'elle éveille en moi comme une peur que tous ces tableaux vont, d'après les régles de la gravitation, tomber dans la direction dans laquelle ils inclinent: c'est-à-dire, écraser et enfouir les spectateurs. Elle est outre cela bien sûrement en opposition avec leur origine; parceque le peintre sur le chevalet les exécutait toujours dans une position opposée, c'est-à-dire, inclinée en arrière, et la place pour laquelle les tableaux à l'huile était exécutés: un autel, un mur d'église, un panneau de mur quelconque, ne penche jamais en avant.

Voilà les raisons pourquoi je dois me déclarer contre cette manière de placer les tableaux dans une galerie construite ad hoc, mais justifiée dans la Galerie nationale par les défauts du bâtiment.

28°. A-t-on l'habitude d'épousseter les tableaux dans la Galerie de Munich, et combien de fois par an?

Ad 28. Les salles des collections publiques sont regulièrement nettoyées et balayées une fois par semaine, ce qui suffit pour qu'aucune poussière ne puisse s'y établir, et qu'en époussetant une fois l'année les tableaux et les câdres, le tout soit constamment dans un état de propreté convenable. La partie des tableaux tournée vers le mur ne peut pas être atteinte par la poussière, parcequ'ils sont suspendus tout-à-fait contre ce mur.

29° *et* 30°. Quelle est l'opinion de M. de Klenze du site actuel de la Galerie à Trafalgar-square, et de son entourage?

Ad 29 *et* 30. Ce site me parait complètement inconvenable sous tous les rapports, et il n'y-a, comme il me semble, aucun moyen de le corriger. Le bâtiment est exposé à la fumée et à la poussière: ennemis jurés, pour ainsi dire, des objets d'art, sans compter le danger du feu, qui pourtant plus ou moins doit aussi entrer en ligne de compte. La proximité d'une caserne, qui, à ce que l'on m'a dit, a même une entrée à travers de l'édifice; d'une maison et de bains de pauvres qui exigent beaucoup de feux, et augmentent par conséquent la fumée, sont autant de raisons qui paraissent justifier mon opinion, qui, à ce que je crois, est conforme à l'opinion de tous ceux qui n'ont pas un intérêt personnel à supposer le contraire.

31°. Dans le cas qu'on se décide à changer la place de cette galerie, quelle autre situation serait préférable?

Ad 31. L'énumération des défauts de cette place prouve déjà qu'il n'y a pas moyen de les corriger, et qu'il faut l'abandonner pour arriver à un résultat satisfaisant. En choisissant une autre place, il faut surtout avoir soin qu'elle soit isolée, ouverte de tout côté à la lumière et à l'action de l'air frais; en aucun cas entourée, et même assez éloignée d'habitations et d'établissements qui consument du charbon de terre, et outre cela préservée du

App., No. VIII.

danger de feu. Outre cela serait-il très désirable que cette place offrit un aspect et ait une vue agréable.

32°, 33°, 34°, *et* 35°. Le nouvel édifice doit-il être isolé et éloigné d'autres bâtimens et habitations? Cela est-il le cas pour la Pinacothèque? A-t-on suivi le même principe à Dresde en considération de la fumée de charbon? Une galerie entourée de fauxbourgs qui s'accroissent de jour en jour ne serait-elle pas exposée aux maux qu'on veut éviter à présent, et enfin le sol de la place à choisir doit-il être de préférence argilleux ou sabloneux?

Ad 32, 33, 34, *et* 35. Le sol de ce bâtiment doit avant tout être assez élevé pour être garanti contre l'humidité; il me semble que dans les environs de Londres le sable ou gravier d'alluvion conviendrait le mieux. L'isolement convenable de toute autre espèce de bâtimens a déjà été indiqué ci-dessus comme une condition principale, et c'est une règle d'après laquelle on a agi à Dresde surtout en égard de la fumée de charbon, et même à Munich on en n'en brûle pas. Ici même le Roi ordonna la démolition d'une grande partie de caserne à peine achevée, parcequ'elle se rapprochait assez de la nouvelle Pinacothèque, et l'on planta des quinconces d'arbres à la place.

La proximité d'arbres pourtant doit être bien calculée, parceque plantés trop près, le reflêt du soleil tombant sur les branches feuillées, et quelquefois agitées par le vent, arrive aux fenêtres, et produit sur les tableaux une lumière vacillante très-nuisible à leur aspect. Il est déjà dit que cette place doit non seulement être en ce moment éloignée des quartiers populeux, et elle doit par conséquent aussi être garantie contre l'éventualité d'une pareille situation qui pourrait surgir dans les tems à venir. La même cause, se produisant tôt ou tard, devrait aussi amener les mêmes resultats.

36°. M. J. Klenze connaît-il bien Hyde Park et Kensington Gardens, ainsi que le terrain nouvellement acquis à Kensington Gore, et quel est son jugement sur les qualités de ces divers sites?

Ad 36. Je connais parfaitement ces divers sites, et l'on m'a fait voir en détail l'emplacement acquis à Kensington Gore ainsi qu'un plan qui donne tous les détails de ses limites et entourages. Cette place me parait d'abord fort bien située par rapport à la partie de la ville dont elle est le plus rapprochée. Si l'on achète, comme il parait être l'intention encore un terrain rempli de constructions appartenant d'après l'inscription du plan à John Aldridge, Esq., ainsi que les petites maisons qui bordent la ruelle de Park-lane, on obtiendrait vers Kensington-road une longueur de 1,000 pieds de façade, et même de 1,200 pieds, si cette place pouvait encore être augmentée par la propriété de Lord Auckland, qui coupe dans le terrain acquis du côte de la ville.

Ces dimensions seraient suffisantes pour le développement d'une façade principale vers la grande rue *si l'on tenait à l'avoir de ce côté-là*, et ne préférait pas de l'éloigner du bruit et de la poussière d'une grande avenue.

Comme en s'éloignant de celle-ci ce terrain s'agrandit et s'élargit de tout côté jusqu'à une dimension de profondeur et de largeur atteignant 2,000 et 2,500 pieds, il est en tout cas suffisant pour y placer toutes les galeries de beaux arts, quelle extension l'on voudrait donner à ce mot. Pourtant doit-on supposer que ni sur ce terrain même, ni dans sa proximité il ne s'établisse plus tard un nouveau faubourg, ou même seulement un certain nombre de maisons d'habitation, ce qui lui ferait perdre définitivement son titre à la convenance pour le but proposé et sa qualité principale. Je dois laisser aux personnes plus que moi en état de juger cette éventualité, de décider si elle est à écarter pour tous les tems.

Quand à la conformation de niveau, l'on doit rémarquer que cette place incline assez fortement vers le fond, ce que pourtant, si la considération d'humidité est à écarter, peut être sans désavantage sur le projet architectonique, si le système à y suivre est convenablement adapté à cette conformation, qui dans cette supposition peut même offrir des avantages.

37° *et* 38°. M. de Klenze connait-il les carrières de gravier au bout de l'allée et en face du Palais de Kensington, et quel serait l'effet probable d'un édifice ou d'une groupe d'édifices, sur ce terrain?

Ad 37 *et* 38. Je connais ce terrain dans Hyde Park, et il est tout-à-fait hors d'usage des visiteurs et promeneurs, parcequ'il est occupé de carrières à gravier épuisées ou en exploitation et entouré de barrières. Sans me permettre de juger la question sous le rapport de la convenance par rapport aux sympathies ou antipathies publiques et sociales, je dois *du point abstrait de la discussion* observer que ce terrain me parait également d'une convenance complète pour y bâtir la Galerie Nationale. Cela n'ôterait d'abord aucune partie en usage à présent aux personnes qui fréquentent le parc; ce terrain est même un peu plus rapproché de la ville que Kensington Gore; il est de niveau et de tout côté un peu élevé; par conséquent parfaitement sec et très favorable à l'effet architectonique de l'édifice qu'on pourrait y élever en face de l'allée et du Palais de Kensington. Il est entouré de belle verdure pas trop rapprochée cependant; hors d'atteinte de fumée, poussière et du feu; et, ce qui est la chose principale, à tout jamais à garantir et garanti contre le danger d'une nouvelle partie de ville dans son voisinage.

Si en conformité, ou même contre une idée établie à ce qu'il parait, de ne rien bâtir dans un parc de Londres, on trouverait pourtant ces avantages assez grands pour se décider de

de choisir cette place pour la Galerie Nationale—ce que je ne puis me permettre de juger —il serait peut-être convenable de se restreindre absolument aux édifices contenans les objets d'art antique et moderne proprement dit, et de reserver le terrain à Kensington Gore, pour les établissemens d'art industriel. La proximité des deux terrains permettrait un contact mutuel equivalent presque à une juxtaposition complète.

Je ne me permettrai pas de développer davantage cette esquisse d'idée, s'étendant au delà des questions qu'on m'a adressés, et je me résume à dire que toutes les deux places peuvent, sous les conditions énoncées, convenir parfaitement au but proposé.

39. M. J. Klenze a-t-il visité le Musée Britannique, et quelles sont ses observations sur cet édifice et son contenu?

Ad 39. J'ai déjà visité ce monument dans d'autres tems, et j'ai répété cette visite ces jours-ci. Il me parait un des morceaux d'architecture le plus correct de Londres, pour la pureté du style choisi très convenablement par rapport à son usage.

Pourtant dois-je observer que la rangée de colonnes qui, outre et des deux côtés du portique octastyle, entourent les aîles laterales et leur pavillons, sont entièrement en contradiction avec le style grèc auquel elles appartiennent; inconvenablement placées; nuisibles à l'usage du bâtiment, et par conséquent dépourvues de beauté. Car la veritable beauté architectonique ne peut exister en contradiction avec la convenance.

Elles n'ont et ne peuvent avoir un autre résultat que d'obscurcir les salles qui se trouvent placées derrière elles, et l'aspect de la salle pour les sculptures romaines, prouve clairement qu'elles atteignent ce résultat obscurcissant.

Le style interieur et du décor au moins du rez-de-chaussée me parait fort bien choisi, et il fait du bien au connoisseur véritable de l'antiquité, qu'on y est retourné à l'emploi des couleurs: emploi si essentiellement inhérent à l'architecture antique.

Quand au double système d'éclairer les salles intérieures (outre la troisième caracterisée ci-dessus en partant de la salle des sculptures romaines), c'est-à-dire, par des fenêtres de deux côtés d'une salle, ou bien par des abat-jours dans son plafond, le premier, quand il s'agit d'éclairer des statues ou bas-reliefs est à rejeter *en principe*, car il prive ces ouvrages de l'effet naturel de lumière qu'ils avaient dans l'atelier du sculpteur, et certainement aussi, généralement parlant, de celui qu'ils avaient dans les lieux pour lesquels ils étaient destinés primitivement. Outre cela ce double jour a l'inconvénient d'être toujours vis-à-vis du spectateur et d'éblouir sa vue. Je crois pouvoir citer comme une preuve de tous ces désavantages, la salle des fragmens tirés de l'Asie Mineure.

Mais je dois d'un autre côté convenir que cette manière de disposer la lumière est plus à justifier dans la galerie égyptienne, où l'immense richesse de la collection, sans pouvoir lui consacrer le double ou même le triple de place, motivait d'autant plus la tendance d'obtenir *beaucoup de jour de tout côté, en préférence d'un jour plus parfait, mais d'un côté seul.* Cela parait même d'autant plus justifié dans ce cas, parceque les sculptures égyptiennes ne sont pas d'une perfection telle à chercher pour elles un jour parfait *avant tout*, et puis encore, qu'elles ont été destinées dès l'origine à figurer dans un pays, où la sérénité eternelle du ciel et un soleil éclatant leur procurait, soit directement, soit par le reflet, une lumière générale.

Quand au jour tiré d'en haut pour les salles de sculpture, on ne doit l'admettre qu'avec une certaine restriction et avec un discernement scrupuleux de la nature des objets d'art à exposer, car la place de toute sculpture doit être choisie toujours en la coordannant exactement avec l'angle sous lequel la lumière doit lui arriver, pour y produire l'effet le plus favorable.

L'on peut dire généralement pourtant, que pour les bas-reliefs antiques, ce jour d'en haut est toujours convenable et d'autant plus que ces ouvrages n'ont ordinairement que peu de saillie. Les exemples de la frise du Parthenon, et des marbres de Ninive, prouvent l'avantage de cette manière d'eclairer dans le cas prédit.

Par contre l'aspect de plusieurs statues, placées encore provisoirement dans une salle entre la galerie égyptienne et celles des marbres d'Elgin, montre le danger de ce jour tombant dans une direction trop verticale: presque, et quelquefois toute la tête, et les trois quarts du corps, sont dans l'ombre portée très noire, et l'effet de ces ouvrages est complètement manqué. Je dois encore observer que la forme toute horizontale des plafonds, percés par des abat-jours, n'est pas d'un bon effet, parceque les parties solides de ces plafonds se trouvent dans une ombre profonde et noire.

Ce désavantage serait pourtant facilement à corriger sans sortir, et même plus en harmonie avec le veritable esprit de l'antiquité classique.

40°, 41°, 42°, 43°, 44° *et* 45°. Quelle devrait être la manière d'arranger un édifice destiné à recevoir les collections de sculpture et de peinture? Comment faudrait-il y disposer la lumière pour les tableaux et les ouvrages plastiques? Quelle est la méthode suivie à cet égard dans la Glyptothèque et la Pinacothèque de Munich? Quel y est le système d'arrangement historique et chronologique, et quelle est la manière de placer les objets d'art?

Il resulte presque déjà de tout ce que je viens de dire ma manière de voir rélativement à ces questions, et je m'en vais essayer d'y suppléer par quelques mots complémentaires en envisageant le but spécial que j'ai à poursuivre ici.

La première question en projettant un pareil édifice pour Londres serait, ce me semble, celle du système général d'architecture à y suivre, et si l'on doit choisir de préfer-

App., No. VIII.

ence une régularité dite académique, ou bien un groupe plutôt arrangé pour effet pittoresque.

Les deux manières peuvent avoir leur avantage, mais la forme et le niveau surtout de la place à Kensington Gore me feraient plutôt pencher pour un plan pittoresque; qui, outre cela, bien conçu dès le premier moment, offrirait l'avantage de se prêter à des agrandissemens, sans détruire l'effet ou la convenance de ce que serait fait avant.

Une seconde question serait le style architectonique à choisir. Je crois qu'on peut combiner dans le cas présent la véritable beauté avec le rapport toujours désirable entre le contenant et le contenu. Il faut à cet égard d'abord bannir l'idée de choisir pour cet édifice un des styles du moyen âge, et le style grèc le plus pûr serait plutôt indiqué pour un musée qui contient les admirables sculptures d'Athènes et du Parthénon. Mais il doit aussi contenir les belles peintures de la renaissance de l'art, du xv. et xvi. siècles; et, en considération de cela, faut-il et peut-on admettre que ce style grèc, *étudié et compris dans son principe*, et non-seulement borné à l'imitation servile et l'application souvent mala droite de ces quelques fragmens qui nous en restent, offre la latitude d'une combinaison organique avec ce que cherchaient dans ce xv. et xvi. siècle les Philippo Brunelleschi, les Bramante, les Michelozzo, Sangallo, et autres. L'application que ces grands hommes cherchaient des formes antiques aux usages et exigeances des tems modernes, devait se borner à l'antiquité romaine qui seule leur était connue.

Mais nous, plus heureux, pouvons, au lieu d'une renaissance romaine, poursuivre et réaliser une renaissance grècque infiniment supérieure. Ce serait, il me semble, le style et la marche à suivre dans le projet qui nous occupe, pour arriver à un resultat convenable et beau en lui-même.

Resteraient alors les points d'utilité et de convenance à déterminer, et je crois devoir les traiter en séparant les diverses branches de l'art pour lesquelles il s'agit d'établir des localités. Je commence donc:

a) Par *la Sculpture Antique*.

Ce que j'en ai déjà dit à l'article 39, peut se complèter en ajoutant qu'en principe la classification chronologique (qui correspond plus ou moins en ce cas avec celle par écoles) me parait la plus convenable, et c'est celle que j'ai suivie dans la Glyptothéque de Munich comme la seule sûre et positive. La conviction, tous les jours plus raffermie, que la sculpture, comme tout l'art grèc, repose essentiellement sur l'art asiatic et l'art africain: l'assyro-babylonien, phénicien et l'égyptien, indiqueroit donc pour Londres que les premières salles seraient celles des sculptures égyptiennes; suivrait la magnifique collection assyrienne; puis les échantillons de l'art grèc archaistique; puis les marbres d'Athènes; celles d'Asie Mineure, et enfin les ouvrages romains.

Il serait peut-être possible de trouver une combinaison architectonique qui permettrait à co-ordonner avec ces ouvrages de grande dimension, et sans déranger l'effet des uns et des autres, les petites sculptures en bronze et en terre cuite, enfin de remplir autant que possible, tout le câdre de l'art plastique; et d'offrir, près l'un de l'autre, des points de rapprochement et de comparaison à l'étude.

Quant au jour à choisir, celui tiré de côté par des croisées très élévées du parquet, et suffisamment grandes pour éclairer convenablement *toute la salle*, me parait toujours le plus naturel et le plus favorable.

J'ai émis mon opinion sur le jour tiré d'en haut et de deux côtés, et j'ajoute seulement qu'en employant le premier *pour les statues*, il faut que la proportion des salles ne soit pas trop haute à l'égard de leur étendue pour pouvoir placés les sculptures de façon à ce que les rayons de lumière leur arrivent dans une direction suffisamment oblique, et éviter par-là les ombres partés trop étendus et trop foncés. Ayant le choix, ce sera alors à celui qui sera chargé de placer les sculptures, de juger laquelle sera apte pour l'un ou pour l'autre jour—celui de côté, ou celui d'en haut.

Je me suis déjà complètement expliqué sur le jour tiré des deux côtés.

La décoration de ces salles de sculpture doit être digne et riche, et le système de colorisation ornamentale adopté dans le Musée Britannique me semble très convenable, surtout si l'on y introduisait encore des ornemens plastiques qui procureront une transition convenable entre les formes sevères de l'architecture et l'élégance des ornemens peints.

La couleur des murs doit être en tons décidés, qui reflétent agréablement sur la couleur blanche et grisâtre des statues. A Munich j'ai choisi le marbre rouge antique, vert antique, le Syenite, le jaune foncé de Sienne et de Verône; le brêche violette et le verd d'Orezza.

b) *Pour les camées et monnais antiques* qui appartiennent directement à l'art plastique, la classification chronologique par pays, villes, îles, républiques et empires, est par lui-même indiqué. Comme le grand nombre de cette espèce d'ouvrages rend bien difficile de les exposer tous à la vue, c'est à l'intelligence du directeur de la collection d'en décider un choix, capable à donner aux spectateurs une idée générale et juste de la perfection que l'art glyptique a atteint dans l'antiquité. Les pièces choisies et destinées à ce but, doivent être placées dans des vitrines en forme de tables legèrement inclinées en dos d'âne, et ces meubles doivent être placés autant que possible entre deux croisées et avec leur jour de côté. Ces croisées ne doivent être élévées du parquet qu'entre trois et quatre pieds, pour bien éclairer ces petits objets travaillés avec tant de delicatesse. Il s'entend que la décoration du cabinet de camées et medailles doit être riche et élégant.

c) *Les divers petits objets d'art antique, comprises sous le nom anticaglie*, doivent être également placées dans des pièces éclairées par le côté et des fenêtres pas très élévées du parquet. Alors les vitrines qui les contiennent sont le mieux situées au milieu de ces fenêtres et des pièces mêmes. Des morceaux capitaux peuvent trouver place sur des consoles ou bancs

consoles

à consoles fixés au murs, ce qui offre un motif heureux de décoration. Il y a en cela, pourtant, toujours la considération de sureté contre des sympathies poussées à l'extrême des amateurs passionnés, à faire entrer en ligne de compte.

d) *Les vases peints antiques* paraissent devoir être considérés plutôt sous le rapport de leur belles et interessantes peintures, que de leur forme, et devraient par conséquent être classés avec la collection de tableaux. Le meilleur parti à prendre serait, à ce qu'il me semble, de leur faire faire, joints aux morceaux de peinture en mosaïque, une espèce de transition à la collection des peintures proprement dite.

Pourvu que le jour soit suffisant, il serait à mon avis indifférent de le tirer d'en haut, de côté, ou peut-être, pour le mieux même de deux côtés, dans les salles destinées à ces vases. La meilleure décoration de ces pièces trouverait son modèle et ses motifs dans les hypogés de l'Etrurie, et de la grande Grèce, et j'en ai fait le premier essai dans la Pinacothéque de Munich. J'ai risqué là aussi, je crois pour la première fois, de placer cette grande et belle collection sur des étagères, piedestaux et tables, tout-à-fait découverts et sans verre, sans qu'il en soit resulté le plus léger inconvénient, tandis que l'aspect et l'effet de la collection est des plus beaux. Mais je sais bien qu'il y aurait peut-être trop à risquer d'imiter cet exemple là, ou une plus grande, et quelquefois même très grande affluence de spectateurs encombre à la fois ces salles. En cette considération, faudrait-il bien s'en tenir aux vitrines; et je dois seulement rendre attentif au moyen de faire voir le dessous des vases-tasses, en les plaçant sur des miroirs, et dans une position où elles ne jettent pas un ombre portée trop obscure sur la partie du miroir au-dessous d'elles.

e) *La galerie de tableaux proprement dite*, doit autant que possible tirer son jour d'en haut, et il n'y a que les tableaux de petites dimensions qui trouvent un avantage à tirer leur jour du côté, et du côté nord, pour être préservées contre les rayons de soleil. Je distinguerai encore la manière de placer les tableaux sur des paravens dans des galeries à plusieures croiseés, entre lesquelles sont placés ces paravens. Il me semble que les points principaux à observer pour ces trois manières d'exposition sont les suivants. Pour les salles éclairées par le plafond, et destinées principalement aux tableaux de grandes dimensions, il faut donner à l'architecte le hauteur à laquelle les tableaux doivent atteindre, et puis la distance de laquelle les tableaux placés au plus haut doivent être regardés. Quand ces deux mésures, dont le jugement du directeur connaissant sa collection doit décider, sont déterminées, il sera facile à l'architecte à fixer la grandeur et la forme des salles, ainsi que de leurs abat-jours, de façon à ce que tous les tableaux soient également bien éclairés, et garantis, contre tout reflet et luisant, si désolant pour les spectateurs et amateurs.

Il est encore à observer que le plafond de ces salles doit être de préférence en forme de voute, ou de cône ou pyramide tronqué.

Quant aux galeries dans lesquelles on voudrait placer des tableaux de moyenne grandeur sur des paravens ou écrans, il faut régler leur hauteur sur la nature et les dimensions des tableaux à y placer, et, ce qui est très facile, éviter le défaut qu'on remarque dans des galeries arrangées d'après ce système, que le jour de réflet ne se fasse pas sentir sur les tableaux d'un côté, par celui tombant sur les faces vernissées des tableaux placés vis-à-vis.

Les cabinets pour les tableaux de très petite dimension, ne doivent pas dépasser une largeur et longueur de 18 à 20, sur une hauteur de 15 à 16 pieds.

La décoration de toutes ces salles et cabinets d'exposition, pourra et devrait être très riche; pourtant est-il désirer qu'on n'y fasse pas entrer la peinture proprement dite, et des ornemens colorés. Le stuc, réchampi de bleu et verd clair, et même doré, serait à ce qui me parait, le décor le plus convenable, et le Palais Pitti à Florence, la galerie du Louvre à Paris, la Pinacothéque de Munich, comme le Musée de St. Petersbourg, en fournissent la preuve.

Une chose très essentielle est la couleur du fond sur lesquels les tableaux doivent être placés, et je crois qu'il n'y en a que trois parfaitement convenables: *le rouge cramoisi;* le *verd sâle* (merdoi), et le *chocolat au lait.* Il est pourtant bien à éviter que le rouge ne soit pas d'une nuance chaude tirant sur ce qu'on apelle sang de bœuf, ou le vermillon, ce qui serait très nuisible à l'effet des tableaux. Le directeur de la galerie doit savoir juger laquelle de ces trois couleurs est celle qui convient le mieux pour l'une ou l'autre école; pour l'un ou l'autre tableau. Le mieux serait d'exécuter ces fonds en étoffe de soie, ou bien en papier velouté.

Le parquet de ces salles et cabinets serait pour le mieux en bois de chêne, avec quelques lignes et marquetteries noirs, ou brun foncé.

Quand à la manière d'accrocher les tableaux sur le mur, il n'y en a qu'une de tout-à-fait bonne; c'est-à-dire, des cramaillères mouvantes, et de manière à ce que le câdre touche partout sur la surface du mur. On peut en voir le modêle au Palais Pitti de Florence et au Museum de St. Petersbourg.

Je m'abstiens de citer ici quelques formes et manières particulières à employer pour des galeries de tableaux: comme salles à double jour; écrans placés en diagonale ou angle obtus sur la ligne du mur dans lequel sont les fenêtres, cet. Pourtant peuvent-elles donner d'heureux resultats dans des cas donnés, et c'est à l'architecte chargé du projet d'en faire un usage convenable.

Je me suis déjà expliqué sur l'inclinaison des tableaux à rejetter en tous les cas, et il ne me reste qu'à dire qu'il me parait tout-à-fait contraire à leur effet de les couvrir de verre. Si ce verre n'est pas tout-à-fait pûr, il trouble l'effet par ses accidens et défauts; et s'il a la transparance et la purete d'une glace, toute la galerie s'y réflête, et en prémiére ligne de ce mirage le spectateur découvre son propre image, ce qui ne pourrait être agréable—pardon de la citation qu'au beau Narcisse de la fable. Pourtant cette pratique est justifiée quelquefois,

App., No. VIII.

quefois, ou elle écarte ou diminue un plus grand dommage, comme c'est le cas à la National Gallery, où il s'agit de garantir le tableau contre l'effet de la fumée. Quant à la permission de copier dans les salles de la galerie, elle ne peut pas être refusée en principe. Mais il faut toujours convenir que la vue de tant de chevalets, tables, chaises, et échafaudages, est très désagréable dans une galerie décorée et tenue dignement. Voilà pourquoi j'ai fait dans la Pinacothéque de Munich et dans la galerie de St. Petersbourg, des salles exprès pour les copistes, dans lesquelles on place, en attendant qu'on les copie, les tableaux de la galerie, et où l'on admet également les spectateurs et visiteurs. Ce système a certainement beaucoup d'avantages, mais il serait peut-être difficilement à employer dans une galerie où l'on copie beaucoup, et pouvait se trouver en opposition avec les idées du public. C'est donc une question locale, et non abstraite.

f) *La collection des Mayolicas* doit être comptée dans celle des tableaux, et traitée et placée comme celle des vases antiques, la décoration des salles exceptée.

g) La collection des desseins et gravures appartient nécessairement à la galerie des tableaux ; mais outre le principe généralement adopté d'en exposer toujours un choix dans des câdres et sous verre, il y a une grande divergence d'opinions sur la manière de conserver les feuilles: ou dans des portefeuilles placés dans des étagères en position horizontale, ou bien dans des volumes reliés et rangés verticalement comme dans une bibliothèque. Le dernier système a été adopté à Munich comme le plus conservateur pour les objets d'art eux-mêmes, si même les spectateurs trouvent plus d'agrément à regarder et à manier les feuilles detachés prises dans les portefeuilles.

Le jour pour ces collections doit nécessairement être pris d'un côté, et autant que possible du nord, comme dans un atelier de peintre ou de graveur.

Croyant par ces courtes remarques avoir repondue aux demandes qui m'ont été adressés par le Président du Comité parliamentaire, il ne me reste que quelques mots à dire sur les dernières de ces demandes.

46° *et* 47°. Quelles sont les classes de tableaux qui manquent encore spécialement dans la Galerie nationale? Quels serait les meilleurs moyens pour remplir ces lacunes?

Ad 46 *et* 47. La collection de la Galerie nationale, quoique déjà fournie de beaux tableaux d'à-peu-près toutes les écoles, porte pourtant des signes non à méconnaître de sa jeunesse, et a de grandes lacunes dans toutes les écoles. L'on ne risque donc rien de faire des acquisitions de tous les maîtres, si on en trouve de vrais et beaux ouvrages.

L'on peut pourtant désirer que la collection soit encore augmenté par des tableaux de grande dimension, et que principalement les écoles espagnole et française, ainsi que les anciennes écoles italiennes, germaniques et flammandes soient plus complètement et dignement réprésentés. Il serait à cette fin, je crois, utile, si la direction de Galerie elle-même était chargé de faire un catalogue d'objets désirables, et que ce catalogue serve de base aux personnes à charger des achats.

Quant aux moyens d'effectuer ces acquisitions, il est inutile de dire que d'abord le premier est un des trois qu'un grand général demandait pour faire la guerre : car ce moyen n'entre pas en ligne de compte pour la riche et opulente Angleterre. Mais connaissant à satiété les ennuis et embarras que donnent même à ceux qui veulent en acheter, les marchands de tableaux, je crois plus convenable que de s'adresser à eux, d'avoir dans les villes d'Italie, d'Espagne, d'Allemagne et des Pays Bas, reputées pour entrepôts principaux de tableaux, des agens surs qui seroient à la recherche des bonnes acquisitions à faire. Je m'abstiens à décider ou même à indiquer la marche que ces agens auraient à suivre vis-à-vis du gouvernement ; si en premièr lieu les légations anglaises auraient à y entrevenir, ou si les agens communiqueraient directement avec une direction centrale à nommer auprès, et dans le centre du gouvernement à Londres, qui alors proposerait ou prendrait les mésures convenables pour l'examen des tableaux et pour leur acquisition définitive, soit qu'on s'en rapporterait à l'agent local ; ou qu'on chargea quelqu'autre personne de l'examen sur les lieux ; ou enfin qu'on fasse venir l'objet à examiner à Londres même. Ce système a été suivi en Bavière avec le plus complèt succès, et à procuré a la galerie beaucoup des plus beaux tableaux. Il faut remarquer pourtant que là cette direction générale etait presque toujours concentrée dans la personne du Roi lui-même, qui décidait en dernière analyse du choix du tableau, de l'agent qui devait en estimer la valeur, et enfin de la somme à accorder et payer définitivement.

Je crois devoir me borner à ces aperçus généraux, et abandonner le détail des propositions à faire sous ce rapport aux Membres du Comité, sans doute complètement instruits et en état de décider s'ils peuvent ou non trouver une application utile.

L. de Klenze.

Londres, 15 Juillet 1853.

Appendix, No. IX.

EXTRACT from a LETTER addressed by the Baron *De Klenze* to Colonel *Mure*, M. P., Chairman. Appendix, No. IX.

Munich, ce 3 Août 1853.

Vous me permettrez donc, et je crois même de mon devoir, à vous donner des aujourd'hui quelques notions supplémentaires aux réponses faites, ou par écrit ou verbalement, aux demandes qu'on m'avait adressées.

D'abord, quand au vernis de Damar, il tire son nom de la résine dont il est fait, et qui coule d'un végétal de la famille des conifères dont le nom est *Agathis loranthifolia*, et la patrie l'ile d'Amboina.

Il y a une autre espèce de cette plante nommée *Agathis Australis*, dans la Nouvelle Hollande, et elle donne la résine Cowdée, appelée aussi Dammar d'Australie; mais elle ne se dissout pas dans l'huile volatile; elle est donc facile à distinguer du Dammar des Indes.

Comme je l'ai dit, le vernis de Damar est le produit d'une solution de cette résine dans l'huile térébentine purifiée, et cette résine et tellement legère que dans des cas donnés on la renforce en ajoutant au vernis une petite quantité d'alcohol absolu qui pourtant ne doit jamais excéder $\frac{1}{6}$ de la quantité du vernis même. Voilá des détails qui je crois tireront cette question tout-à-fait au clair, et j'y ajoute seulement encore que la meilleure résine de Damar se paye ici 2 schellings et 4 pences le kilogramme, tandis que le même poids de résine mastic coûte 20 schellings 6 pences, ainsi à-peu-près neuf fois autant.

D'après ce que j'avais indiqué dans ma réponse aux questions No. 19 et 20, j'ai communiqué à M. le Baron de Liebig ce que j'avais dit sur l'influence nuisible de la fumée sur les tableaux; sur le mélange d'huile grasse dans les vernis; sur ces vernis eux-mêmes, et enfin lui ai-je soumis la question s'il y avait un moyen chimique pour neutraliser l'effet pernicieux de la fumée. M. de Liebig a non seulement tout-á-fait approuvé ce que j'avais dit, mais a même rencheri sur moi quand à l'effet destructeur de la poussière et de la fumée sur les tableaux. Quand a la possibilité de les garantir contre l'effet de la derniére par un vernis quelconque, ou par une substance protectrice à mêler au vernis, M. de Liebig la nie entièrement, et croit que le gaz acide, sulphurique, agirait non seulement sur la surface, mais pénétrerait même à travers de tout vernis jusqu'aux couleurs qu'il finirait par attaquer.

Son opinion est donc conforme à la mienne, que le seul remêde efficace est *d'abandonner les bâtimens actuels au milieu de la ville, et d'en construire de nouveaux dans un endroit ouvert et suffisament eloigné des parties habitées de la métropole.*

Appendix, No. X.

LETTER from *R. Ford*, Esq., to Colonel *Mure*, M.P., Chairman, on *Pacheco* and *Andrea del Sarto*. Appendix, No. X.

123, Park-street, 24 May 1853.

MR. FORD begs to forward to the Chairman of the Committee the extract from Pacheco, to which he referred in his evidence, and to state briefly the substance.

Pacheco, the father-in-law of Velazquez, and the official *veedor* or inspector of pictures, when enlarging, in his treatise on the art of painting, on the difficulty of distinguishing what is original in a picture from what is not, observes, that in 1605 the Duke of Alcala brought him an injured Crucifixion painted by Pedro Campana, the Fleming so reverenced of old at Seville. Pacheco having restored it, repainted a blue mantle and the sky, returned it to the Duke, who remarked, "I am sure I have seen in this city exactly the same picture, and one handed down from the time of Campana." When the two were compared, no difference could be found, and the repainted one of the Duke was finally thought the best: "so difficult it is to recognise the touches of the first painter:" p. 458, Arte de la Pintura. F. Pacheco. 4to. Seville, 1649.

The anecdote of Andrea del Sarto, mentioned by Mr. Ford, will be found in Vasari,* a competent authority, and an actual witness, to whom, when at Mantua, a portrait of Leo X. with two Cardinals, was shown by Julio Romano, as the great specimen by Rafael of the city. Vasari in vain questioned its originality: "Must I not be able," said Julio, "to recognise touches of my own in it?" He was finally convinced that he was wrong, and that it was painted by Andrea del Sarto, on being shown a private mark on the edge of the panel put in by Andrea when he made the copy: so exactly can one painter imitate the manner of another.

The Christ in the Garden, bought as the original Correggio by Mr. Angerstein, and on the guarantee of Presidents West and Lawrence; and the Magdalen, bought by Lord Ward at Rome, on that of many supposed best local judges, might be cited as proofs of what can be done in this branch of the imitative arts.

Mr. Ford may have stated his opinion too strongly, in the heat and hurry of an examination neither expected nor prepared for, and would beg to be permitted to observe, that he has such

* Vasari, ed. Bottari, 1759, ii. 236. Roscoe, Leo X. ch. xxii. Bohn, ed. 1846.

Appendix, No. X.

such a conviction of powers of repairers and restorers, that he thinks the damaged Sheba might be very much recovered. To restore or copy a picture, it must be remembered, is quite a different thing from originally conceiving and painting the original. Nicety of touch, knowledge of manner, and mechanical dexterity and practice in "doctoring and trickery," are widely distinct from creative genius.

Extract from *Pacheco.*

"Confirmarè con un raro exemplo la verdad desta dotrina. El año 1605, me entregó el Excelentissimo Señor don Fernando Enriquez de Ribera, tercero Duque de Alcala, una famosa tabla de mano de Masse Pedro Campaña; que avia hallado venturosamente en esta ciudad, en poder de Pedro de Yevenes mercader curioso i rico, i a mucha costa i ruegos se la avia sacado; (porque hazia gran estimacion della) era un Crucificamiento de Cristo entre los dos Ladrones, la Virgen, i San Juan al pie de la Cruz, i muchas figuras pequeñas por lexos; de lo mejor, i mas estudiado de este gran artifice. Yo se la reparè, i restitui el azul del manto de nuestra Señora, los colores del cielo, que estava gastados, i le dore la guarnicion. I llevandosela me dixó que avia visto otra de la misma manera, i tamaño en casa de cierto Cavallero de esta ciudad, que le afirmò que la avia eredado de sus abuelos. Hize instancia con su Excelencia la mandasse traer, traxóse luego. I estando juntas, con mucha atencion i dificultad. Se pudó conocer entre ellas diferencia alguna. Porque cabalmente contenia la una, lo que la otra; i era una mesma cosa el debuxo, i el colorido. Salvo que parecia la del Duque menos antigua, i yo la califiquè por copia de la otra: Sibien juzguè por mejor la copia (cosa que sucede pocas vezes), i si me dieran a escoger escogiera sin duda la del Duque. I assi le supliquè pusieramos el nombre de Mase Pedro en su tabla de que el quèdo satisfecho; porque era copiada de mano de valiente maestro; que en el colorido tenia mas hermosa manera, i mas suave que Mase Pedro; i le pegó al buen debuxo magor gracia. Esta es la cosa mas dificultosa de juzgar de cuãtas se me an ofrecido en mi vida, donde temblara cualquiera en conocer las pinzeladas originales del primer maestro."

Appendix, No. XI.

Appendix, No. XI.

LETTERS from *W. Buchanan,* Esq., to Colonel *Mure,* M.P., Chairman.

London, 5 May 1853.

Sir, No. 11, Panton-square.

The Hon. Mr. Charteris having requested I would examine those pictures in the Gallery which had belonged to myself, and the state of which was perfectly known by me when they arrived to me at different periods from Italy, as stated in the "Memoirs of Painting," a copy of which I now send, and also, that I should state to you, sir, what appears to me to have been the cause and the necessity for cleaning these pictures lately, and on former occasions, I now beg leave to say—

That it appears to me, that about the period when the pictures of the Angerstein Collection were purchased for the nation, Mr. Seguier, the keeper of these pictures, must have varnished them with what is termed an oil varnish, *i. e.,* a varnish of gum mastic, in which a small proportion of oil was introduced, for the purpose of preventing the pictures from chilling, occasioned by damp, or the changes of atmosphere so common in this country.

It appears to me that the keeper of the national pictures must have been ignorant of the inevitable evil which arises to pictures when oil is incorporated with a pure mastic varnish, being the only varnish which ever ought to be used to valuable pictures of the old masters; and for this reason, that all oils, when mixed with gums, not only change colour, but hasten a change of colour in the gum itself, to which pure spirits of turpentine should only have been applied. The progress of oil in varnish generally begins to show itself at the end of two years, by the picture so varnished losing its genuine lustre, and becoming flat in appearance, with a tinge of colour on the surface resembling pale buff leather. In the course of two or three years more, it begins to assume a more positive colour of a dirty yellow; with time, that again increases to a muddy orange hue, and that again to a dingy indefinite black, such as that which is now found on the surface of the large picture by Sebastian del Piombo.

Were it possible to remove a varnish by the easy and simple means by which a pure mastic varnish may be effected, very little injury could be done to a fine picture if in able, skilful and patient hands; but this is not the case with an oil varnish. After a certain length of time, the oil forms an encrustation of the thickness of a sparrow's egg, which again, by affinity, or rather positive attraction, attaches itself to the surface of the picture itself, incorporating itself with the patina of the picture, and often the last finishings of the painting. It then becomes a matter of great danger and difficulty, and of patient labour, to get

get rid of the evil. It required the late Chevalier Bonnemaison nearly two years to clean the four pictures by Raphael for the Crown of Spain, which had an oil varnish on them; and if the picture by Sebastian del Piombo, now in the National Gallery, had been placed in his hands for that purpose, he probably would not have ventured to pronounce it perfect in a less time than six months; for salts, alkalis and acids he would on no account permit, as they all change the colours in the painting on which they are used; and alcohol, which does not change colours, can only be used with great caution, and by the modification of powerful opponents. Indeed, the Italian mode to get rid of an oil encrustation is probably the safest, as it cannot attack the glazings or finishings, where it may not have gone so deep, and that is by scaling off the crust with a steel instrument made for the purpose; it is slow, but it is sure.

I shall now come to the pictures which are stated to have been cleaned.

1.—*Titian.* The Bacchus and Ariadne.

When this picture was purchased for the Gallery by Lord Liverpool, it appeared to be in a fine state, and to require no cleaning. I was informed that water had been freely used in taking away some surface dirt, which, if such was the case, was most improvident and destructive to it, for the reason that, being painted on a *gesso*, and so absorbent ground, the water would penetrate through all the little cracks and fissures of the picture, and scale off, in smaller or larger proportions, the body of the paint itself; but supposing this not to have been the case, I have not the smallest doubt but that it was covered with an oil varnish, which has evidently been only partially removed; and the question now is, that in the system which has been adopted in cleaning the pictures of the National Gallery, would it be prudent to go farther? I should decidedly say it would not.

2.—The Lot and his Daughters, by *Guido.*

As this picture is in the same division of the same room, I shall now beg to say, that when purchased it required no cleaning, but appeared in a rich, warm, and beautiful state. After cleaning, it for some time certainly was cold and crude. It has again recovered its original colour, and I do not consider that it has suffered.

3.—Susannah and the Elders, by *Guido.*

What I have said of the companion of this picture I may also say of this; it was, on first being cleaned, excessively cold and crude, but has again recovered, from the varnish having got more mellow through time. I have, however, to hope, that it is not covered with an oil varnish.

4.—The Peace and War, by *Rubens.*

When this magnificent picture was cleaned, some years ago, I was requested to give my opinion on it to a gentleman who took a great interest in the welfare of the National Gallery, and that the fine pictures in it should not be permitted to suffer by injudicious and unskilful cleaning; and my opinion then was, that it appeared to me that all the warm colours in the flesh had been injured, and changed into cold colours by the application of an alkali; but whether that alkali had been applied in the shape of diluted leys of potash, or in the form of strong soap, I could not say; the fact, however, was quite clear, that the brilliancy and original lustre of the picture was materially impaired; and I am still of the same opinion, that although time has softened the crudity and purply effect of the picture, yet it never will or can regain the glowing and rich effect which it once possessed. In proof that my idea was at that time correct, I shall beg leave here to quote an authority in regard to the changes which colours themselves may suffer, which I believe will be regarded as unquestionable. The Baron Liebig, in his Treatise on Chemistry, in its application to Agriculture, published in 1843, has these few lines: "All blue colouring matter capable of being "reddened by acids, and all red colouring substances rendered blue by alkalies, contain "nitrogen;" and I the more give this quotation as regards the three following pictures, which I consider have been very greatly injured by the use of an alkali in one way or another.

5.—The Plague of Ashdod, by *N. Poussin.*

Previous to my leaving town last year for Scotland, I visited the National Gallery in the month of July with Sir John Pringle, and we were both highly delighted with this capital picture, and considered it in the most perfect state of good keeping and harmony; indeed, in equally good state as the beautiful picture of the Dancing Nymphs by the same master in the Great Room, still perfect, "*Flei mihi, qualis erat, quantum mutatus ab illo!*"

The picture is now totally changed; its colours are changed, its whole character is changed, and much of the original glazings and finishings gone; and I shall here give a short extract from a letter which I received when in Scotland, from a most excellent critic on matters of art, with every part of which I fully agree. "The Plague of Ashdod required "no cleaning; it is now most fearfully scoured, and in many parts nearly destroyed, parti- "cularly in the blue and red draperies, which are offensive to the eye, and from all the "delicate glazings and shadows being totally removed, and the flesh tints in many instances

Appendix, No. XI.

" deprived of their tender carnations and beautiful transparent greys; besides, the picture " has lost that general harmony which it heretofore possessed in such perfection."

I cannot say anything more to this letter, than that I am convinced alkali has been used in the cleaning of this picture, not only from the neutralised indefinite colour which the breast of the dead woman in the foreground has acquired, but from all colour having departed from the buildings and middle ground of the picture, which were formerly so finely but delicately pronounced, and the group of figures in the upper part of the right-hand side of the picture being nearly obliterated, and the draperies generally forced into disagreeable and unharmonious blues.

6.—The Brazen Serpent, by *Rubens.*

Although this picture does not appear to me to have the lustrous effect which it had while in my possession, and that I fear there may still be oil varnish on it, yet it at present possesses a rich harmony of colouring which contrasts strongly with its unfortunate neighbour, the St. Bavon, which has been most cruelly treated.

7.—The St. Bavon, by *Rubens.*

This being the last of the pictures in the Gallery which did belong to me, and that have been cleaned by some strong lixiviate, I have no hesitation in giving it as my opinion, that, as a fine work of art, and one which was greatly prized by the late Mr. Holwell Carr, it has been ruined.

In regard to the Claude pictures, I shall have the honour of addressing to you, sir, another letter to-morrow.

I have, &c.
(signed) *Wm. Buchanan.*

To Colonel Mure, M.P., Chairman.

London, 21 May 1853.
No. 11, Panton-square.

Sir,

Since I had the honour of last addressing you, I have gone several times to the National Gallery, and on examination of the different pictures which have recently been cleaned, it appears to me, that it has been more a question of quantity with the cleaners, as to how many could be scoured within a given time, than a consideration of the great importance of several of the objects which have undergone this operation, and which ought to have been treated with the greatest delicacy, and in the most patient manner.

I shall probably be pardoned for making two or three general remarks on the subject of picture-cleaning, before I give an opinion on three of the important pictures in the Gallery, which I have again examined with care and attention.

There is probably, sir, no branch of the art, which requires a knowledge of painting, and of the great masters of the different schools, and their different modes of treatment, of more importance than the knowledge which a cleaner ought to possess of the subject generally, besides his having a just idea of harmony, a perfect knowledge of the objects which he employs, as well practically in their various strength and proportions, as chemically in their operation on particular colours, especially such as are materially affected by the use of alkalies, acids or salts.

But beyond this knowledge, as a first requisite, a man ought to possess good taste, patience, and bestow anxious care on the valuable property which is entrusted to him; failing in any of these points, he cannot be considered as a safe person to be entrusted with such property; for it is not merely the pecuniary value which may be attached to it, but the perfect impossibility of replacing works of the highest order of art, which have in our days become so scarce, and seldom present themselves in commerce.

Applying these observations to one of those pictures which I have already remarked on, the Marine Claude, I find that this picture has been cleaned in a general and sweeping manner, instead of with care and patience, and taking it in sections, by which it might be proved, *seriatim*, how far the cleaner could go with safety, in the same manner that the late Chevalier Bonnemaison cleaned the four pictures by Raphael, for the Court of Spain, which had an oil encrustation on them, the same as the oil varnish applied to the pictures in the National Gallery, and which requires skill and much care in its removal. Now, sir, I understand that it has been stated, that the Claude had formerly undergone restorations. Admitting this to be the case, so much greater was the need of the cleaner adapting his method to circumstances, and by patiently removing a portion only of the adjoining parts, contrived to harmonise the whole together, without laying open the old wounds, which very seldom, in skilful hands, becomes necessary; but here the whole seems to have been thrown on the hazard of a lixiviate, probably used with a sponge, over which the operator had no control, but trusted to chance as to the result; the consequence has therefore become obvious to every impartial observer; the fine sparkling and rich colours, which formed the charm of this picture, have been washed away, leaving a blank in art on the surface of this once wonderful picture, which no man living can restore to its pristine state.

Such an occurrence would not, in all reasonable calculation, have taken place with any picture in the French Gallery; there the rule is, "spoil picture, pay picture;" a very whole-

some rule; and it even goes farther than the individual employed, for if the operator cannot pay, which is generally the case, those who have employed him are responsible for the loss sustained.

It has been admitted that soap has been employed in the cleaning of the pictures, and it is well known that soap cannot be formed without containing a certain proportion of an alkali, either produced from wood or from sea plants, the first being potash, the second soda, from kali or from natron. It is also well known that alkalies, in a very small proportion, will change colours, but more especially the delicate warm colours which enter into the finishing and last scumblings, as artists term them, of all historical pictures. Now, where alkali in any form of a solution comes in contact with these tender colours, or with the delicate greys, with which the old masters, and Raphael in particular, finished his pictures, the warm colours may suffer different gradations of change, as fully exemplified in Delaval's learned Treatise on "the Change of Colours," according to the strength of the solution employed, while the beautiful greys are immediately forced into a gradation of blues or purples, entirely changing the glowing hue of a picture. This was fully exemplified in the cleaning of the Peace and War, by Rubens; which, from being a sheet of golden colours was, for a certain period, rendered, comparatively speaking, a sheet of leaden colours, and from which it can never again fully recover, however much a change in the colour of the varnish applied to it may cover the defect.

It is unnecessary therefore to inquire whether l'esprit du savon, diluted, was employed in the cleaning of the Rubens' Peace and War, or soap, containing its usual proportion of alkali; the injury which must ensue by such a mode having been adopted was inevitable; and it is not necessary to inform any person who knows that such changes do occur, by what means this picture or that picture was cleaned, whether by an acid or by the agency of an alkali; the picture speaks for itself; it tells in what manner it has been treated by the change effected.

Returning again to the subject of the Claude; the sea, which was a lamp of light, has now become, through the force of some deleterious solution, a flat blue surface, the various gradations of rich and warm colours having been swept away, while that space which the glorious luminary held, appears to have been washed down to the ground painting, or dead colours, as they are called, of the picture itself.

It is hardly necessary to add that, under such a treatment, the cordage of the vessels has suffered, the buildings lost their force, and the mystical gradations of aërial perspective; and that even the name of the painter himself is now hardly discernible.

The companion picture to the Marine Claude I do not consider to have suffered much, although the blue on the lake has been much forced, from the same cause as is above described. It does not appear to have been so violently treated as its companion, nor by the same person who cleaned the other. It is in much better harmony, and the general aspect of the picture has been improved. It never, however, has been a picture which held the same rank in the world of art as the Marine Claude, which has always been placed at the head of the list of this class of that master's works. The sad change which the last of these has undergone is a cruel loss to the National Gallery.

In regard to the great picture by Paul Veronese, although the white drapery in the foreground of the picture has been so much forced as to render the figures in that part of the picture indistinct, and detract much from their force and value, yet that part of the picture will, after a time, recover its tones. The upper part of this picture is thrown outrageously out of both harmony and good drawing by the drapery of the angel who carries the mitre having been forced in colour, quite out of its place. The glazings in the warm colours have been entirely swept away, and that portion which formerly receded has now been cast forward by the orange and yellow colours having suffered a change from the application of the soap cleaning, which has rendered them quite offensive to the eye, and forms a striking example of how much even the colours of a drapery may tend to place the figure itself in good or in bad drawing, by true or false effects, although the original drawing and outlines of the figure may be, or have been, perfectly correct.

Another part of this picture, which cannot fail to strike every person who has a just notion of harmony, is the upper part of the mitre which the angel carries, and which terminates in two white lines, so strong, that they throw the other part of that object so much into shade, that it requires some time to discover what it really is.

Many of the pictures by minor artists I am not competent to give an opinion on, not knowing the state in which they formerly were; but, in regard to the more important objects of the collection, I shall be ready to answer any question which the Committee may think proper to put to me.

At present, I shall only beg leave to add, that I consider the whole system which has been adopted in cleaning the pictures of the Gallery bad and defective; and that if the same is persisted in, every picture will run the risk of being ruined, and men of good taste, and having a love for the art, no longer visit an establishment which can only create pain, instead of affording them pleasure. This has already become a feeling with many persons, and has, since the period when the great Rubens was cleaned, been much on the increase. I speak my mind frankly and freely, and solely in the interest of the public.

I have, &c.

To Colonel Mure, Chairman. (signed) *Wm. Buchanan.*

Appendix, No. XII.

App., No. XII. LETTER from *C. T. Newton*, Esq., to Colonel *Mure*, M. P., Chairman.

Sir, Rhodes, 28 May 1853.

As a Committee of the House of Commons has been recently appointed to consider (amongst other things) "in what mode the Collective Monuments of Antiquity and Fine Art may be most securely preserved and advantageously exhibited," I take the liberty of addressing you on this subject, in the hope that the views which I would submit in this letter may appear to you not undeserving the attention of the Committee of which you are a Member.

In dealing with the question now before them, the Committee will have to take into consideration the various plans which have been proposed for the formation of a new Museum of Art, and this will lead them to examine the condition of two great collections already existing, in the National Gallery, and in the Department of Antiquities at the British Museum.

In the present letter I do not propose to enter upon the question, whether it be desirable or not to remove the National Gallery and the Department of Antiquities from the situations which they now occupy, and thus to combine all productions of the fine arts in one common collection, nor shall I offer any suggestions with regard to the site, plan, and interior arrangements best suited for a new Museum of Art.

I shall confine myself to the question, whether, in the event of an entirely new arrangement of our national collections, the antiquities now at the British Museum ought to be considered as one entire collection, or whether, as has been recently proposed, the finest specimens only should be transferred to a new museum of art, the rest of the antiquities being left where they are at present, or distributed in other museums, of which the formation is now contemplated.

This question is one of the greatest moment, and demands the most careful consideration on the part of the Committee.

If we appeal merely to precedent, it might be argued that the mass of objects comprised under the general term, Antiquities, have always been united and exhibited in juxtaposition in the most celebrated museums of Europe ever since the first establishment of such collections in the fifteenth century; that the most distinguished writers on archæology, from the time of Winckelmann to the present day, have uniformly in their works advocated this principle of arrangement, and consequently that nothing can justify us in deviating from a system so generally adopted in Europe, and supported by such authorities.

But as such a mode of reasoning might appear to a Committee of the House of Commons something like begging the question, it will be well to discuss the case a little more fully, and to examine it for ourselves, keeping out of sight for the moment all arguments derived from precedent in other countries.

In order to determine how the antiquities in the British Museum may be best arranged, we must first consider in what these antiquities consist, and I will therefore here make a brief and rapid survey of the contents of a Department which occupies a large portion of the whole area of the British Museum.

The simplest mode of classifying the various objects contained in this department, and comprehended under the common term, Antiquities, would be to regard them, first, as the productions of various races of the ancient world, and, principally, of four great nations, the Egyptians, the Assyrians, the Greeks, and the Romans; secondly, the productions of each race may be roughly arranged in three classes, namely, Monuments of Art, or productions of what are called the Fine Arts; Inscribed Monuments, under which term I would include all inscriptions, whether on marble, brass, or any other material; and thirdly, Monuments of Handicraft, or productions of the useful and decorative arts.

These several classes may be again arranged chronologically.

Having thus indicated generally the mode in which the whole mass of antiquities may be classified, I will now pass in review the antiquities of the four great nations of the ancient world collected in the British Museum.

In the case of each nation the same three classes, monuments of art, inscribed monuments, and works of handicraft, will have to be considered, both separately and in relation one to another; and again, we must not only regard the antiquities of each race separately, but also comparatively in reference to the antiquities of other races.

The British Museum further contains a collection of mediæval antiquities, but this is hardly yet sufficiently extensive to be worth taking into account in a general survey; mediæval antiquities, however, may be classified on the same plan as the other collections, and must be included in the same general scheme of archæology.

In

In the following remarks I hope to succeed in proving, first, that in the case of each race the three classes under which I have arranged all antiquities, illustrate each other in so many ways, and, when united by juxtaposition, so completely form one subject, that in any plan of future exhibition such juxtaposition must be considered as a paramount and indispensable condition; secondly, that the antiquities of the several races of the ancient world can never be so well understood and appreciated as when the whole of the Egyptian, Assyrian, Greek, and Roman collections are placed in the same museum, and thus afford the most convenient and ready means of comparison by the eye.

To commence with the Antiquities of the Egyptians: the Egyptian collection at the British Museum is probably the most complete and the most instructive in Europe; it contains a number of colossal statues representing deities or kings, and an immense variety of smaller figures, in which the types of the larger sculptures are repeated in bronze, in alabaster, in porcelain, and in other materials.

In order to understand what these specimens of sculpture and of plastic art represent, we must study the inscriptions, which are in a great many cases graven on the statue itself, and which contain the name and titles of the deity or personage represented.

These inscriptions being in the hieroglyphic character, we are at once led from the study of the monuments of art to the study of the inscribed monuments, and it is therefore found convenient to arrange the hieroglyphic texts side by side with the statues.

This is an arrangement which I do not imagine that any one would wish to disturb. In thus combining the hieroglyphic texts with the sculptures, we are but carrying out the design of the Egyptians themselves; for it must be remembered that with them sculpture and writing were hardly considered as distinct arts, and that the hieroglyphic character communicates thoughts to the mind by presenting to the eye the portraits or likenesses of visible things, not by purely conventional signs, such as constitute later systems of writing.

The inscribed monuments of Egypt, studied in connexion with the monuments of art, are among the chief sources of direct information with regard to the religion and history of the Egyptian people, the more valuable, of course, because this peculiar race never possessed a regularly developed literature.

Historical record, mythical tradition, and religious rituals are blended together in these monuments; the Egyptians had no other chronicles nor religious books; they taught theology and recorded real events, partly by actual representations in sculpture, partly by hieroglyphic texts.

Besides these larger monuments, the Egyptian collection contains a vast treasure of miscellaneous antiquities, which I have here designated monuments of handicraft, to distinguish them from monuments of art on the one hand, and from inscribed monuments on the other.

These miscellaneous antiquities acquainting us with the most minute details in the private life of the Egyptian people, form so completely one subject with the monuments of art, and the inscribed monuments, that no reasonable person would, I conceive, wish to separate them.

This is a question which does not require elaborate reasoning; a survey of these antiquities at the British Museum produces a most vivid impression even on the most superficial observer, because a vast mass of historical information is here condensed into a small space, and exhibited in a popular and intelligible form.

I shall not therefore discuss at greater length the question whether the Egyptian Collection of Antiquities, consisting of sculptures and other works of art, inscribed monuments, and miscellaneous antiquities, should be kept together in one place, and regarded as a whole.

Taking the races of the ancient world in the order which I have laid down, the next collection which we have to consider is the Assyrian. This consists, for the most part, of sculptures in bas-relief, accompanied and doubtless explained by a marginal cuneiform text graven on the stone; so that here the monuments of art and the inscribed monuments are in most cases one and indivisible.

Besides these larger monuments are a variety of smaller objects, such as cylindrical seals, clay impressions of seals, and inscribed tablets, ivory carvings, ornaments, and implements.

The mere fact that the whole of these objects, with the exception of the cylinders, were so recently discovered in one locality, would be in itself a sufficient reason for keeping the entire collection together; but, independently of such considerations, the several classes of objects serve to illustrate and explain one another. The same peculiar style of art, the same figures and groups, the same cuneiform characters which we find in the larger friezes, reappear on a reduced scale in the cylinders and seals; one system of mythography and of historical record pervades the whole of the art.

With the Assyrian collection we must necessarily combine the few specimens which we possess of Persepolitan sculpture, and the interesting collection of Persian cylinders, which clearly exhibit the tradition of Assyrian art, and its degradation in the hands of another race.

App., No. XII.

Having considered the antiquities of the two great races of the primeval world, I now pass on to the Greek Collection. Here a much wider and more varied field of inquiry opens out before us; the several classes of antiquities are more clearly defined, and at first sight appear less intimately connected one with another.

Adopting the same threefold classification as before, we have to consider, first, monuments of art; secondly, inscribed monuments; and thirdly, a variety of miscellaneous antiquities.

The collection of Greek sculpture at the British Museum far exceeds in interest that of any of the continental galleries.

The most celebrated statues in the museums of Italy have for the most part little claim to be considered original Greek works. Many of them, as for instance the Apollo Belvidere, and the group of Niobe and her Children, are probably copies executed in the Augustan age, at a period when Greek art had lost its independence, and worked under Roman dictation.

But in the Elgin Marbles we have an unquestionable example of that school of sculpture which the judgment of antiquity pronounced most perfect; these masterpieces, like the *Exemplaria* of classical literature, remain to us as a standard of comparison, to which criticism should ever appeal, as a model by which the taste, not of the English people only, but of all future civilized nations, may be formed and elevated.

But we cannot appreciate the art of Phidias merely by contemplating the scattered fragments of his great design as they are presented to us in the Elgin Room; we must study the larger figures and torsoes as forming part of two great compositions set in the triangular frames of the pediments; we must regard the metopes not merely as individual groups, but as a series of ornaments intended to relieve the monotonous parallelism of horizontal lines in the exterior view of the Parthenon. In criticising the frieze, we must remember that it was intended to be seen from below, in the subdued light of a colonnade, not to be placed on a level with the eye, as it is at present.

Having regarded the Elgin Marbles in their relation to the architecture of the Parthenon, we must next consider them as expressive of the thought of the artist. The design of Phidias was, in fact, a sculptured poem, in which he celebrated the glory of Pallas Athene as the tutelary goddess of the Athenian people. The frieze, the metopes, the pedimental compositions, the chryselephantine statue of the goddess within the temple, all had reference to this main theme. This great design has, unfortunately, not been handed down to us in the perfect state in which Phidias conceived and executed it; but much may be done by the study of collateral evidence, for the illustration and reunion of the fragments which we possess.

This collateral evidence it is the business of archæology to collect and prepare for the general public.

If we would test this evidence for ourselves, we must follow the archæologist through his researches, and we shall then find that, in order to appreciate the motive and meaning of a work of art, we often require a whole museum for collation and reference; that Greek sculptures do not explain themselves, but that for their interpretation we must study not only other sculptures, but other branches of Greek antiquities, vases, coins, gems, bronzes, terra cottas.

All these classes, as I shall show in noticing them separately, deserve to be examined in connexion with Greek sculpture, if we would learn to interpret the meaning, and appreciate the design of the artist to the full.

For instance, we know from Pausanias, that the subject of the composition in the eastern pediment of the Parthenon was the Birth of Pallas Athene; but the central figures in that pediment having been completely destroyed, the character of the original composition would be entirely a matter of conjecture, were it not that this mythic scene is represented on a number of fictile vases, of which the British Museum possesses one of the most perfect specimens.

Having considered the Elgin Marbles as fragments of a great design, and having endeavoured, with the aid of archæology, to fill up the outline of that design in our imaginations, we must next view the work of Phidias in its relation to the whole history of Greek art.

And here the British Museum presents us with a most interesting series of monuments: the Harpy Tomb, in the Lycian Room, a specimen of archaic bas-relief, of which the date is probably not later than B. C. 600; the frieze from the temple of Apollo Epicurius, at Phigalia, which we know to have been executed under the direction of Ictinus, the contemporary and colleague of Phidias; the bas-reliefs from the tomb of Mausolus, at Halicarnassus, more generally known as the Budrum Marbles, of which the date is fixed by historical evidence to about B. C. 350; the friezes from the Xanthian Monument, which are doubtless anterior to the era of Alexander the Great, and which exhibit the curious phenomenon of Greek designs executed by the unskilful hands of less civilised Lycians, and thus, as it were, translated into a barbarous dialect; and lastly, those bas-reliefs from Xanthus, in which, as in the coins of Cilicia, the art has a Persian character, and may be considered as mixo-barbaric.

I trust

I trust that I shall not be thought to exaggerate when I say that this chronological sequence of sculpture is such as no other museum in Europe can boast of. Take away the Elgin Marbles, and the continuity of the series is destroyed; it is as if the keystone had fallen out of the arch.

Besides these undoubted examples of Greek art, and its derivatives, the British Museum possesses a number of sculptures which were probably copied from fine Greek originals in the Augustan age, or even subsequently. The Towneley Venus, the Towneley Cupid, the Discobolus, and probably all the finest statues of the Towneley Collection, are of this later period.

In order to determine the relative merit of these works, and to approximate to their dates, we must refer them to the one standard of comparison, the Elgin Marbles, and endeavour to ascertain what the sculptor really intended to represent by each individual statue. If we do not know what he intended to express, we can judge of his design with but little more certainty than those who venture to criticise a dramatic performance without understanding the language which the actors speak, nor the whole story of the action which passes before their eyes.

How much, for instance, has the interest of the figure in the Gallery of Florence, commonly called "The Listening Slave," been enhanced since this figure has been recognised as part of a group representing the flaying of Marsyas by Apollo; how much of the beauty of the design on the Portland Vase is lost to us, because we cannot be quite sure that the ingenious explanation of this bas-relief proposed by Mr. Millingen is the true one.

The interpretation of ancient sculpture, that is to say, the assigning names to the several figures, and motives for the actions represented, can only be accomplished by the diligent collation of other classes of antiquities.

Greek sculpture, as I before observed, cannot be explained by its own internal evidence, any more than the text of an ancient author can be explained without glosses and commentaries.

In order to make this more clear, I shall now proceed to consider several other branches of Greek art, which must not be lost sight of on account of the paramount interest of sculpture, but which, on the contrary, should be ever studied in connexion with it.

It will be convenient after noticing sculpture in marble to take next in order Bronzes and Terracottas; we thus pass by a natural transition from Glyptic to Plastic Art.

The collection of *Bronzes* at the British Museum, chiefly the bequest of the late Mr. Payne Knight, is a particularly fine one.

These antiquities may be described generally as copies on a reduced scale, cast in metal, with more or less of skill and care, from the larger works of the ancient statuaries. In the art of casting in metal the Greeks possessed a mechanical means of multiplying their finest sculptures, which not only made these works more popularly known at the time, but has been the means of rescuing from oblivion many fine designs; just as, after the frescoes of Italy shall have mouldered away, the conceptions of Michael Angelo and of Raphael, perpetuated by the art of the engraver, will remain to posterity.

Among the finest specimens of this class of art in the British Museum are the bronzes of Paramythia, several of which are thought to be copies from celebrated statues by Lysippus; the Falterona Mars, a very fine example of the archaic style; the Payne Knight Mercury, the head supposed to be of Pindar, or more probably of Sophocles.

Of another kind of metallurgy, the embossed and chased work, the British Museum possesses in the bronzes of Siris an unique and precious example, unrivalled in any of the continental museums.

All these works are of the greatest value in tracing the history of ancient art.

Terracottas, like bronzes, may be regarded as reduced copies, studies, or recollections from the works of the great sculptors, executed in clay somewhat carelessly and hastily, but generally exhibiting the inimitable grace and variety which distinguishes every class of Greek design.

The terracottas deserve far more study than has yet been bestowed on them by the modern artist; many masterly compositions in this material are unheeded by the ordinary observer on account of the roughness of the execution, and the discoloured state of the surface. Amongst the terracottas in the British Museum which specially deserve notice, are some specimens in an archaic style, found in Greek tombs by Mr. Burgon; others from Italian tombs, which still retain their original colours and gilding, are interesting as examples, on a small scale, of polychrome decoration.

The subject of *Terracottas* has a natural affinity to that of *Fictile Vases*, of which the Museum possesses a collection most instructive, as it includes specimens of almost every style of vase hitherto discovered.

A large number of the vases in this collection are decorated with pictures representing mythical subjects. These vase-pictures are of the greatest interest, while the interest attaching to the vase itself as a mere article of ingenious manufacture is comparatively small.

App., No. XII.

We have hardly any knowledge of the paintings of the ancients, for none of the works of the great masters have been preserved to us, but we have in the vase pictures a kind of faint reflection of this higher art. At first sight, indeed, these slight and careless outlines may appear quite unworthy of the attention of the artist, but we must bear in mind the peculiar conditions under which the vase-painter worked: the surface on which he had to paint was either convex or concave, never flat; he was limited to the employment of three colours only; his composition was bounded by the form of the vase itself; the material with which he had to deal did not enable him to represent the effects of chiaroscuro. Allowing for all these defects, we can still find in the vase-pictures of the best period much to admire, and the same grand simplicity and strength of outline which distinguishes the bas-reliefs of Phidias is not wanting in the designs of the vases with red figures on a black ground, many of which were doubtless of the same period as the Parthenon. On some vases the compositions of the great masters were probably copied with little modification, as in the celebrated Meidias Vase in the British Museum.

A well-chosen selection of vase-pictures exhibits a variety of styles, which admit of chronological arrangement in periods corresponding generally with the periods into which the whole history of Greek art may be distributed. It is as necessary for the historian of classical art to include a notice of vase pictures in his general plan, as it is for the historian of mediæval art to have recourse to the collateral illustration of illuminated manuscripts or of Mosaics, in treating of those periods in which other and more perfect examples of painting do not occur.

But vase-pictures present to the student of art another and special interest. The subjects of these pictures are almost always mythical scenes; and thus a collection of Greek vases presents to us a complete treasure of those popular legends which circulated through the agency of art and song, and which formed the staple out of which the poet or the sculptor fashioned their immortal works.

The myth, as treated by the vase-painter, differed from the same myth when amplified and adorned by the genius of Phidias and Polygnotus, as the ballad differs from the epic.

The vase-pictures make us familiar with a number of myths which we do not find elsewhere celebrated in art or literature: the compositions in these pictures being continuous, and the several figures in the scene being, in many cases, identified by the inscriptions which accompany them, we are enabled by the illustration thus incidentally furnished to interpret and to restore many isolated fragments of sculpture in the museums of Europe.

The vase-pictures forming a chronological series, we are enabled to trace the gradual development of the myth in the hands of the Greek artist; how, as archaic types and modes of representation became obsolete, he laid them aside, one by one, substituting in their place forms and compositions more attractive to the eye, giving freer scope to his imagination, and less rigidly adhering to traditional rules.

In the case of Christian Art, if we would comprehend and thoroughly appreciate such designs as the Last Judgment, in the Sistine Chapel, and other great religious paintings of the same period, we must study the language of mediæval art generally, and trace back the progress of iconography through a long series of monuments from the first centuries of Christianity, including in our survey much that is unattractive to the eye for the sake of the information which we thus obtain; and, in like manner, the finest designs of Greek artists cannot be appreciated unless we study Greek mythography as a whole, not rejecting the less inviting portion of the subject, if it serve as a commentary on the rest.

There is another point of view in which Greek vases are of the greatest interest. The Greek myth being essentially popular, and the gods and heroes who form its *dramatis personæ* being almost always invested with the outward form, motives of action, manners, and external circumstances of humanity, the vase-pictures on which these myths are represented reflect the image of the real life of the Greek people, and have thus preserved to us a thousand curious details of costume, armour, &c., which we should not otherwise have known.

It will be convenient after this brief notice of vases to pass on to the consideration of *Coins*, of which the British Museum possesses a magnificent collection, formed partly by the bequest of Mr. Payne Knight, and partly by purchases, for which large sums have from time to time been liberally granted by Parliament.

Coins are a most important branch of Greek antiquities, which we may regard from many different points of view.

They are susceptible of a double arrangement; the geographical and the chronological. Geographically, they may be distributed through the length and breadth of the Hellenic world, along the whole line of coast in the Mediterranean, on the shores of the Black Sea, over the continent of Asia as far east as the conquests of Alexander, in the outlying countries, such as Britain, Spain, and Gaul, to which Greek commerce penetrated with difficulty, and at irregular intervals. Wherever the Greeks planted colonies, there we find a coinage more or less Hellenic in character, in proportion to the ascendancy of the new settlers over the barbarians, among whom they were established.

Coins admit of a chronological arrangement, commencing probably about the first Olympiad

piad and co-extensive with the duration of Hellenic civilisation. What are called the types of coins, that is to say, the devices on the obverse and reverse, were among the Greeks always chosen as the expression of some religious idea; and thus the type was either the figure of some tutelary deity or divine personages, or some animal or symbol consecrated by faith.

These religious figures or symbols which formed the types of coins being in fact the seal of the State impressed on a piece of metal, the engraving of these seals was an object not thought unworthy of the artist.

Hence the finest Greek coins present to us a piece of bas-relief, or rather of mezzo-relievo, treated according to the great principles observed by the sculptor in marble, with certain necessary modifications, which, as has been admirably explained by Sir C. Eastlake in his Miscellaneous Essays, constitute the specific style of Numismatic Art.

Coins being, as I have stated, capable of a geographical and of a chronological arrangement, and being worthy to be studied as works of art, a collection such as that of the British Museum contains a store of materials which have not as yet been turned to sufficient account in tracing out the history of ancient sculpture. It will be found that if a collection of coins, of which the dates are ascertained, be arranged chronologically, their juxtaposition will disclose to us with extraordinary distinctness the characteristics of the style of successive periods, thus affording the most valuable collateral evidence in corroboration of those general criteria which European archæology has laid down in pronouncing on the age of sculptures and other works of art.

On the other hand, a survey of a large collection of coins geographically arranged, shows us that Hellenic art was brought to the greatest perfection wherever Hellenic civilisation existed in its fullest intensity, that it took root wherever that civilisation was planted, grew with its growth, decayed with its decay.

Thus the coins of Sicily and Magna Græcia, and of many celebrated States in Greece Proper and Asia Minor, are among the most exquisite productions of ancient art; they are finished with a delicacy happily described by Pliny as "*Argutiæ operum in minimis quoque rebus custoditæ.*"

On the other hand, in the border countries, where civilisation and barbarism met, the fusion or the collision of races had a certain influence on the art, as we see by examining the coins of Lycia, Cilicia, Cyprus, the North of Thrace, the Carthaginian side of Sicily, the Greek colonies in Gaul, Spain, and other outlying places. The types of coins being, like the subjects chosen by the sculptor and vase-painter, mythical, we thus learn a great variety of modes of representing the proper deities and other objects of worship; a collection of coins in fact exhibits the whole Hellenic Pantheon in miniature.

We find on coins the reduced copies of many celebrated statues of antiquity, of which the originals have perished; and on the other hand, we are enabled by numismatic inscriptions to assign titles to many works of sculpture, the subjects of which would otherwise remain unexplained.

Therefore in the arrangement and study of a sculpture gallery we are continually obliged to have recourse to numismatic illustration, in proof of which, I need only appeal to such works on the history of Greek Art as the Denkmäler der Alten Kunst, by C. O. Müller, in which a large proportion of the engravings represent coins.

In addition to their interest as materials for the history of art, coins have a further claim on our attention as forming part of the evidence of general history.

They are not only monuments of art in so far as regards their types, they are also inscribed monuments, and their inscriptions, besides exhibiting to us many curious specimens of Hellenic palæography, are almost the only memorials of the Phœnicians, Iberians, and other races of the ancient world who borrowed the invention of coinage from the Greeks.

Moreover, the inscriptions themselves record a number of historical facts, as any one may see by turning to Eckhel's great work, the *Doctrina Numorum Veterum.*

Those who occupy themselves with the study of palæography, and of historical monuments generally, should always have a collection of coins at hand for collation and reference.

The subject of coins conducts us immediately to that of *Gems* and *Vitreous Pastes.*

The dies of coins are, as I have already stated, seals engraved for the use of the State; gems, on the other hand, are stones engraved or cut in relief, to please the fancy of individuals. Hence it is that though the subjects cut on gems exhibit the same rich variety of mythical type as we find on coins, and are wrought with the same exquisite delicacy of finish, we cannot so readily throw them into chronological and geographical order.

The inscription, which makes the coin an historical document, is for the most part wanting in the gem, the purpose of the engraver not being to give publicity to what the State wished to commemorate, but to attract and flatter the fancy of individuals. Gems, however, and still more the impressions from gems on vitreous pastes, form a most instructive chapter in the history of ancient art.

App., No. XII.

In the finest gems, as in the finest coins, we see how the Greek artist contrived to attain breadth and grandeur of effect, even when his design was on the most limited scale; we can form some idea of the amazing fertility of invention which enabled him to repeat the same figure or group on a number of separate works, each time with some happy variation; we can appreciate the general refinement of taste which made such objects the cheap luxury of daily life, and circulated them from hand to hand.

The British Museum possesses a very fine collection of vitreous pastes, which deserves to be better known, and more studied in connexion with the history of ancient sculpture.

Having thus noticed the Monuments of Art in the collection of Greek Antiquities, I now come to the Inscribed Monuments.

The system of Greek palæography is made up from a number of sources; it is the result of a careful comparison of the inscriptions on marbles, bronzes, coins, and a variety of other objects.

The materials of the study being so diversified, it is desirable to concentrate them as much as possible, so as to facilitate the work of collation and reference.

If, in the desire to form a museum exclusively devoted to works of art, we admit the inscribed statue, or vase, or coin, but reject the inscribed tablet or pillar, and consign them as mere raw materials of history to some repository of classical learning, we interrupt the sequence in that long series of specimens which is necessary for the study of palæography, and deprive the student of art of a most valuable auxiliary; because it often happens that the date of antiquities, and of sculpture especially, can only be fixed by first determining the age of the inscription which the object in question bears.

Thus, on a votive helmet, in the British Museum, we find the fact recorded that it was dedicated by Hiero, the first king of Syracuse. The forms of the letters in this inscription are identified with those on a very rare coin of Syracuse, the archaic decadrachm, supposed to be the money struck by Demarete, the Queen of Gelon the First. The date of the inscription on the helmet being known, the coin is consequently contemporary in date, that is to say, about B. C. 490, the year of the battle of Marathon, and a comparison of this coin with others similar in style enables us to assign to the same period a large number of Sicilian coins, many of which do not bear inscriptions.

In like manner, from the very archaic character, and almost Phœnician forms of the letters on the celebrated Panathenaic vase of Mr. Burgon, we are justified in assigning this curious example of fictile art to a very early period of Greek history.

A comparison of the style of drawing on this vase with that of other vases which have not inscriptions, leads us to group together other archaic specimens, and we thus classify the uninscribed monuments by the aid of the inscribed.

I have now to consider those *Miscellaneous Antiquities* which I have called *Monuments of Handicraft*, for want of a better general term.

It is impossible to classify them very exactly, for a collection of antiquities may embrace all the products of human industry.

Now, if we regard this class of Greek antiquities merely as materials for the history of the industrial arts, it might be a question whether they should not be completely separated from monuments of art, and isolated in a museum specially devoted to the exhibition of the industry of all nations, in all time, past and present.

But, if we examine the collection at the British Museum carefully, we shall find that these antiquities can be more truly appreciated, and are more really instructive, when exhibited in combination with the other monuments of the Greek race, than if regarded apart from the question of their nationality, as mere specimens of the proficiency attained in certain branches of industry at a particular period in the world's history.

Many of these antiquities were originally placed in tombs, or designed for some other votive purpose, and cannot therefore be understood if we regard them only as ordinary industrial products.

This remark applies to many of the helmets, and other specimens of armour in the museums of Europe, and to the personal ornaments and other objects found in Etruscan tombs.

We must further bear in mind that in the Hellenic race, art exercised an influence over the grosser work of the craftsman, which unhappily cannot be properly appreciated now that we have established so invidious a line of demarcation between the fine arts and the useful arts, as if there could be no alliance between them.

In fashioning implements for daily and domestic use, the Greek craftsman was, of course, bound to adhere to that general form which was prescribed by the nature of the materials in which he wrought, and by the character of the want which his work was intended to supply; but, so long as he fulfilled the conditions thus imposed on him by an external necessity, and accomplished this purely useful aim, he thought himself at liberty to vary the form and fashion of the object which he had in hand in any manner which a lively and sportive fancy could suggest.

Thus it is that in such simple articles as drinking-cups we see a preference for the most grotesque

grotesque and fantastic forms borrowed from animal life; thus the handles of bronze implements are wrought into all manner of curious devices.

It is needless here to accumulate instances; any one who will take the trouble to examine the miscellaneous Greek Antiquities at the British Museum cannot fail to admire the abundant and felicitous employment of ornament in the domain of the purely useful arts.

In thus giving shape and reality to the suggestions of his fancy, the Greek craftsman profited by the influence of the great artists of his day, and conformed, perhaps unconsciously, to the architectonic and æsthetic laws developed in their works; and thus we find the pure ornaments of Greek architecture recurring again and again on costume, armour, furniture, and a variety of other objects. So again the national myth which was enshrined in the noblest edifices of the Greeks, and was repeated in endless variety on the coins, vases, gems, and terracottas, reappears as the familiar ornament of household implements, whenever the surface admitted of such decoration.

I may notice here, as an example, the bronze mirrors in the British Museum, on the backs of which a variety of mythic subjects are engraved.

On these grounds, I would submit that the miscellaneous antiquities of the Greeks, including all their industrial products, should be exhibited in combination with the finest models of ancient art; and I conceive that, thus combined, they would yield a far more valuable lesson to the modern artisan than if banished to an industrial museum. If indeed the ancients had bequeathed to us a series of specimens of steam-engines and other instruments which might serve to show the progress of mechanical science, it would become a question whether such objects ought to be placed in a museum of art and of historical documents. But in the greater part of the material productions of the Greeks, it is rather the handicraft and taste which we have to estimate and to admire than the mechanical knowledge and appliances.

The wheel of the Greek potter was a simple contrivance, such as many nations might claim the invention of, but the innate sense of beauty which gave to the mass of clay such graceful forms, and the fertile fancy which adorned the surface of the vase with mythic representations, were the special privilege of the Hellenic race.

There is, moreover, another point of view in which we must regard these miscellaneous antiquities; they are historical materials, supplying us with a thousand details of the manners and customs and social condition of the Greeks, which the historians of antiquity have omitted to record, and which are yet precisely the points respecting which modern research is most curious and most indefatigable.

The collection of miscellaneous antiquities at the British Museum should thus be examined in relation to the scenes of domestic life on the vase-pictures. These two classes of antiquities will illustrate each other in many ways, particula ly when the juxtaposition is immediate: the vase-picture, for instance, will show us how a sword or any other piece of armour was worn and used; in the adjoining collection at the British Museum we may find the sword itself. So, if we turn to a well-known work, Smith's Dictionary of Antiquities, and examine the illustrations by which any article is explained, we shall find that the woodcut of the object itself is constantly accompanied by an engraving of some scene from a vase-picture or bas-relief, whereby its use may be demonstrated.

In the Museo Borbonico at Naples this kind of illustration may be seen on a great scale, because there we have the opportunity of studying the vast collection of bronzes and other antiquities in relation to the fresco paintings from Pompeii and Herculaneum.

After this rapid survey of Greek antiquities, it remains for me to notice the Roman collection in the British Museum. This collection is far inferior in extent and interest to the Greek; it consists of sculptures, bronzes, terracottas, coins, inscriptions, pottery, glass, and a variety of miscellaneous antiquities. Roman art being a kind of off-shoot from Hellenic art, and the deities of both countries being for the most part the same, we find the Greek myth repeated everywhere on the bas-reliefs of Roman sarcophagi, on coins, on lamps, on every surface which admitted of such decoration, just as in Augustan and later Roman writers we have a repetition of the subjects celebrated in the earlier epic and dramatic poetry.

But the monuments of the Roman period supply most valuable evidence for the later history of classical art, enabling us to trace its decline, step by step, down to the period of its utter decay, in the fourth century of our era, and supplying us with many links in that continuous chain of tradition which connects Hellenic and Christian art, and traverses the vast interval of time between Phidias and Raphael.

The observations which I have already made with regard to Greek coins apply for the most part to the Roman series. Not so deserving of our admiration as works of art, they are historically of even greater value than Greek coins, because they present to us a kind of pictorial chronicle of the chief events of each emperor's reign. Moreover, it is from the inscriptions on coins that we are enabled to identify the statues and busts of emperors and other Roman personages; they are a most valuable illustration of a gallery of Roman sculpture.

App., No. XII.

I have now passed in review the antiquities of four great races; the Egyptians, Assyrians, Greeks, and Romans. I have endeavoured to show that in the case of each race the historical and æsthetic interest of their antiquities may be best appreciated by arranging the whole of these objects in one collection, not by dispersing and subdividing them.

If I have succeeded in establishing this position, it seems to me to follow from it as a necessary consequence that the antiquities of the several races ought to be kept together in one museum; that, if we are not to form separate museums of Sculpture, Inscribed Monuments, Coins, Vases, &c., so in like manner it is not desirable to parcel out the collections of different races into separate museums, but rather to have one museum for the reception of the antiquities of all races.

By placing the Egyptian, Assyrian, Greek, and Roman collections under the same roof, and in immediate juxtaposition, we give to the student of art and to the student of general history the opportunity of exercising the eye in large and suggestive comparisons.

It must be remembered, that in the study of general history, if we have, on the one hand, to trace the tradition of institutions and arts, and to prove how they have been handed down from one race to another; on the other hand, in cases where no such derivation can have taken place, we have to observe, and to speculate on the singular coincidences and contrasts which are to be met with in comparing the inventions and works of different nations.

A museum of antiquities, not of one people or period only, but of all races and of all time, exhibits a vast comparative scheme of the material productions of man.

We are thus enabled to follow the progress of the fine and useful arts contemporaneously through a long period of time, tracking their several lines backwards till they converge to one vanishing point of an unknown past.

Contrasts so marked as that between the Assyrian and Egyptian styles of sculpture cannot fail to strike the eye, and suggest to the mind the inquiry how far these external and visible differences have their origin in essential differences of national character, and are to be taken as evidence thereof. Resemblances so clear as can be traced between some of the earliest specimens of Greek art and the smaller antiquities discovered by Mr. Layard at Nimroud, throw an entirely new light on the relations between Greece and Assyria in ages too remote for our present system of chronology.

The likeness in style between the Assyrian cylinders and clay seals and some of the archaic Greek coins, suggests an Oriental origin for the whole art of coinage; while the supposition, long since entertained, that the designs on the earliest Greek vases were borrowed from the rich embroideries and inlaid art of the Assyrians, receives much confirmation from the general character of the compositions on the Nimroud friezes and other works discovered on the same spot.

Again, the hieroglyphics carved on the ivory panels found by Mr. Layard show a relation between Egypt and Assyria, of which history has left us no direct record.

I will not multiply examples of cases in which unexpected historical relations have been thus disclosed by juxtaposition and comparison of antiquities, because it is not my object here to write a defence of archæology itself, but to recommend that in the arrangement of a National Museum a particular principle be carried out.

Throughout my letter I have endeavoured to show the great advantages of juxtaposition; but these advantages cannot be demonstrated by mere words; they must be learnt by the eye.

The truth of the foregoing remarks respecting the collections in the British Museum, and the reality of the relations thus alleged to exist between the several branches of antiquities, must be tested by a visit to the Museum itself, and by the careful examination of the several classes of objects which it contains.

It may be said that the tone of this letter is somewhat dogmatical, but the assertions which I have made are to me convictions, the result of long and patient labour.

Those who have gone through the course of training which is necessary to enable the eye and the mind to appreciate art properly, those whom the research of years has made familiar with the museums of Europe, and with the works of the most distinguished writers on archæology, will, I trust, allow that the simple facts to which I have had to appeal are not here exaggerated or distorted.

But it may be said that I have dwelt too exclusively on archæological considerations; that the question before the Committee of the House of Commons at this moment is the formation of a Museum of Art, by which the taste of the English people may be educated and elevated, not the arrangement of materials for the use of the historian and the scholar; that the accumulation of collections distracts the eye and confuses the uninformed judgment by the simultaneous exhibition of heterogeneous objects and styles of art; that archæological research and æsthetic culture do not go well together; and that it is better to make a kind of *florilegium* or selection of specimens for a museum of art, so as to separate the beautiful from that which, being simply curious, is fit only to be studied through the spectacles of the antiquary.

To such arguments as these, I would reply that we cannot appreciate art æsthetically, unless we first learn to interpret its meaning and motive, and in order to do this we must study it historically; that if a series of specimens be arranged in schools and periods, according to the time and place of their production, the merit of the more beautiful works of art will be enhanced, not diminished, by contrast and comparison with the rest; that the art of schools

and

and races being, like the life of individuals, subject to a certain law of growth, maturity, and decay, we should do well to pursue its history through the whole series of extant specimens, commencing with the earliest; we should thus see how perfection in art is the result of a long series of previous trials and failures; how the climax of success has never been reached *per saltum*, but is rather the legacy of many generations of artists; with what rapidity after this culminating point has been attained the first symptoms of decline begin to show themselves.

If the Elgin Marbles were presented to us completely isolated and detached from the rest of the monuments of art which remain to us from antiquity; did we not know the fact that Greek sculpture passed through a long course of transitions and preparatory stages before it attained perfection in the hands of Phidias; that he did not create art by miracle, but that he had the genius to surpass the utmost efforts of his predecessors; if, I repeat, the Elgin Marbles were presented to us without this preliminary knowledge, would the lesson they would then convey be more instructive to the people generally, and more encouraging to the young artist, than if they were exhibited in connexion with the whole development of Greek art?

Museums should not merely charm and astonish the eye by the exhibition of marvels of art; they should, by the method of their arrangement, suggest to the mind the causes of such phenomena; in our admiration of the sculpture of Phidias, or of the paintings of Raphael, we should not forget what these great masters owed to their predecessors; we should turn from the contemplation of their immortal works with a fresh and lively interest to the study of the earlier schools, out of which such excellence was slowly developed.

In reply to the objections which may be raised against the combination of works of art and of historical antiquities in the same museum, it may be observed that museums are designed for the instruction and recreation, first, of the general public; secondly, of the artist by profession and of the student of art; and thirdly, of the archæologist and historian.

Why should not all these classes meet on common ground? In what respect do they hinder each other's study and enjoyment?

If the statements in this letter be true, I have shown that a collection of antiquities, such as that in the British Museum, presents an interest so varied that there is hardly any class of spectators that may not find there instruction and recreation. Why break up and disperse these vast stores of historical materials? why destroy the breadth and unity of this impressive picture, in which the nations of the ancient world are grouped together in one great historical composition, and long intervals of time and space so abridged and foreshortened, that the mind embraces the whole complicated perspective readily and without fatigue? It may be said that juxtaposition is a relative term, that if so many and so manifest relations may be perceived between different classes of antiquities, these antiquities might be as conveniently compared if distributed in separate museums as if all under one roof. This is not the case; the comparison of objects in contiguous compartments or galleries is a very different thing from that strain on the mind which takes place when we attempt to transport, in our memories, through the thoroughfares of a crowded city, those fine shades of distinction on which classification mainly depends. The trained student of art can with difficulty do this, even with the help of elaborate drawings and notes; the general public would doubtless, in passing from one museum to another, endeavour to institute comparisons; but these comparisons, appealing to recollections already half obliterated, would be partial and inexact; the public would cease to observe resemblances no longer forced on the attention; their minds would no longer be in a state to receive those ennobling impressions which are suggested, even to the most careless observer, when, by the felicitous combination of the monuments of many races, a vast scheme of historical relations is suddenly disclosed and demonstrated.

In antiquities, as in the phenomena of nature, are many truths which may be readily perceived by the eye, and which thousands might discover for themselves, but practically these truths are never made apparent to the careless senses of the multitude till they have been previously arranged by the hand of science in the order most suitable for demonstration.

Were the results of the labours of Cuvier and other illustrious minds to be cancelled and obliterated; were the many series of specimens in our museums of Natural History dispersed and scattered to the winds, the science of comparative anatomy would indeed exist as heretofore, but would no longer admit of popular demonstration; it would be latent instead of patent truth. In like manner, if adopting an arbitrary and uncalled-for system, and setting aside the principles of arrangement which have been so long recognised in the older establishments of the Continent, we break up those collections of antiquities which are the fruit of much learning, taste, and well-directed labour, and which have been brought together by a combination of favouring circumstances such as may not recur, we shall arrest the progress of historical inquiry, which we had an opportunity of accelerating, and those materials which might have been converted into an instrument of sound and popular teaching will be again consigned to that pristine state of chaos from which the patient industry of archæologists was gradually drawing them forth.

I have, &c.

Appendix, No. XIII.

Appendix, No. XIII.

LETTER from *C. R. Leslie*, Esq., to Colonel *Mure*, M. P., Chairman.

2, Abercorn-place, St. John's Wood,
Sir, 20 May 1853.

In reply to your questions respecting the pictures in the National Gallery that have been lately cleaned, I beg to say that I was intimately acquainted with them in their previous condition. I remember the Consecration of St. Nicholas, by Paul Veronese, from the time of its being purchased by the Directors of the British Institution, long before it was presented by them to the National Gallery; and I have no hesitation in saying that from that time it was never fairly seen until the recent removal of the dirt from its surface, and which I think has been done without the slightest injury; and I fully believe that the picture is now, as nearly as a picture of its age can be, in the condition in which it was left by the painter. I think, also, that the Claudes have been restored as nearly as possible to their original condition, and that the same is true of the large Canaletti, by the recent removal of the dirt from their surfaces.

I do not, however, feel so confident with respect to the St. Bavon of Rubens. It looks colder than it did, and it did not strike me that it required cleaning. There can be no doubt but that pictures are often ruined by injudicious cleaning, but at the same time a careful removal of the dirt and smoke that imperceptibly collects on their surface, particularly in such an atmosphere as that of London, and in a place like the National Gallery, where the public are, as I think, much too indiscriminately admitted, there can be no doubt (I must repeat) that careful cleaning, as long as the present system exists of admitting too great a crowd to enjoy the pictures, or to suffer those who could appreciate them to enjoy them, must be much more often resorted to, than is required in collections more carefully preserved from dust and noxious air, which last is as injurious to pictures as to animals.

It may be noticed, in proof of judicious cleaning and restoration, that Turner's magnificent picture of Carthage was literally dropping to pieces in his gallery, and could not have been removed to its present place unless it had been carefully cleaned, repaired, and varnished.

I remember this picture when it was fresh from the hand of the master; I have had frequent opportunities of seeing it since in his gallery, where I grieved to observe its gradual decay, owing to cold and damp, acting on what may be called the bad constitution which it received from its parent; who, like Sir Joshua Reynolds, was too little careful of the means by which he produced the beautiful creations of his pencil. I confess I never hoped to see such a restoration of this great work as has been effected, and which I consider a convincing proof of the necessity of judicious cleaning and reparation. I beg pardon for trespassing so long on your time; and

I am, &c.
(signed) *C. R. Leslie.*

Colonel Mure, M. P.
&c. &c. &c.

Appendix, No. XIV.

Appendix, No. XIV.

Letter from *Geo. Richmond*, Esq.

Sir, 10, York-street, 9 June 1853.

In obedience to your request that I would transmit to you in writing the remarks which had occurred to me on the appearance of the pictures lately cleaned in the National Gallery, and also on the subject of picture-cleaning generally, I beg, with very great diffidence, to submit to you the following remarks; I say with great diffidence, because it seems to me that there is uncommon difficulty in comparing a wholly cleaned picture with the uncleaned state of it, as it must be the comparison of an existing fact with a past appearance, which obviously can never be recovered, so as to put the matter beyond all question, and recollections strangely differ; but an approach to accuracy, as to the general appearance of a work, may be obtained, when, as is the case with the Claudes and Canalettos (but especially the former), you have pictures by the same master similar in character, and in the cleaned and uncleaned state; as, for instance, the "St. Ursula" and the "Queen of Sheba," which latter picture, if my recollection serves me, I should say was in quite as good a state before the cleaning as the "St. Ursula" is now. But the comparison now is greatly in favour of the uncleaned state.

In

In the "St. Ursula" you may see foul streaks of discoloured varnish or dirt over the sky, and feel the surface of the picture to be generally degraded; but the picture, as painters say, is in good keeping one part with another, and the effect of the whole most pleasing; but not so the "Queen of Sheba," for, with the dirt the light or luminousness has gone, and that rich golden haze which told so powerfully, although apparently by such gentle means, is now no longer to be traced in the picture.

The other Claude, called a "Grand Landscape," was, ever since I knew it, a somewhat crude picture, but it is now much more so than it was, to the extent of being really disagreeable.

The two Canalettos, marked in the Catalogue 127 and 163, and described as a "View in Venice," and a "View on the Grand Canal, Venice," have suffered as much as the Claudes have, and whatever luminousness these pictures possessed, they have now lost it, and although they will doubtless get yellow again from the darkening of the varnish which is upon them, and from other causes, they will, I fear, never recover that true warmth which I think they formerly had.

I am sorry to say, that the small Claude, marked 58, and known as Sir George Beaumont's favourite picture, now looks harsh and crude to what it used, and has lost a portion of the atmosphere, as well as of the harmony which it formerly had; of this picture I rather speak of as it looked to me some years ago, for I have not observed it carefully within the last four or five years.

"The Plague of Ashdod," by N. Poussin, was never a harmonious picture in colour, but the background and sky were particularly fine, and fine in colour; but in both these particulars it has suffered, for it is less harmonious than it was, and it has lost in beauty of tint, both in the background and sky.

If the injuries in the St. Bavon, attributed to Rubens, existed in the uncleaned state (as I think probable), the late cleaning has made them only more apparent, and as a whole, the picture is not improved.

The Guercino, "A Dead Christ with Angels," I should have liked better if less had been done to it; for although parts of this picture have come out with great beauty, the lights generally seem to have been rather over-cleaned, especially the white drapery over the middle of the Saviour's figure.

Of the Paul Veronese, I should say as of the Guercino, that it had been better if less had been done to it, although this picture appears to me to have gained in parts as none of the others have, although it has obviously suffered in others, and is not perfectly harmonious as a whole, which I suppose arises from unequal cleaning.

Those parts which appear to have been injured by the recent cleaning, or revealed by it (for, no doubt, if former injuries and repairs have been veiled by dirty varnish, the removal of the varnish only would make them much more apparent), are the face of the Saint; the upper part of the face and eye of the boy, who kneels on the right of the picture; the deeper shadows in the folds of white drapery of the priest to the left of the picture; something about the hands of the Saint (but very slight); then the sky is out of harmony with the rest of the picture, either from too much or too little cleaning, or from some change of hue in the original colour used, compared with other parts, I cannot tell which, from the distance at which the picture may be seen. Before it was lately cleaned, every one will remember the brown smears which obscured the light dress of the priest to the left; these are happily removed, and throughout the work the greys now tell, as in all the well-preserved pictures of the master, and the more highly coloured portions of the picture are very bright and splendid, particularly the descending Angel. To so glorious a work the least injury is a calamity, but so is the gain great in having impurities removed from the face of it; and, I think, on the whole, this picture may be said to have gained more than it has lost; that is, supposing the two states to be absolutely permanent. I should prefer the cleaned to the uncleaned. Notwithstanding this opinion on the Consecration of St. Nicholas, by Paul Veronese, with respect to cleaning generally, my experience is, that so much injury is done to pictures in the attempt to clean them, that I would have the cleaning of one of our national pictures to be a very great exception, and then only after the particular picture has been (if I may so say) very solemnly put upon its trial.

A picture may become so obscure and black by dirt or foul varnish, that little or nothing is to be seen of it, and, unhappily, in our National Collection, it seems as if all the pictures, at no very distant date, might become so, judging from the sad change which has come over them during the last quarter of a century, excepting only those pictures which have been glazed, and those are, I hope, almost as unchangeable as they are unchanged. I need only quote the little "Holy Family," by Correggio, which looks just as fresh and pearly in colour as when it was first added to the collection, now, I think, six or seven and twenty years ago.

The same may be said of the Annibal Caracci, of "Our Saviour appearing to St. Peter after his Resurrection," No. 9 in the National Gallery Catalogue; the Leonardo da Vinci, No. 18; the two large Correggio, Nos. 10 and 15. These came into this collection a few years later; but they now look as they did, and I fully believe will long look as they do, if the glasses are kept over them, and they are neither rubbed, washed, oiled, or varnished, or whatever else may have been done or left undone, within the last 25 years, to bring the unglazed pictures to the dingy state in which so many are; but as the pictures under glass, although in the same circumstances, have not suffered, it is to be earnestly hoped that the next move will be to put the whole collection under glass; and it will be some compensation to us, for the inconvenience of such an arrangement, to think that if we cannot see our

Appendix, No. XIV.

pictures with as much comfort as we would, that future generations may do so, which I fully believe they never will, unless they shall in future be more effectually guarded from injury than they have been. To conclude, I will just recapitulate the substance of the above remarks, which is,

1st. That I think the pictures have been more or less injured by cleaning.

2d. That cleaning generally is so perilous, that it should only be attempted i very extreme cases.

3d. That all the pictures should be put under glass.

I have, &c.

(signed) *Geo. Richmond.*

Appendix, No. XV.

Letter from *M. G. B. Cavalcaselle* to Colonel *Mure*, M. P., Chairman.

Appendix, No. XV.

20, Silver-street, Regent-street,
9 Giugno 1853.

Signore,

Mi credo in dovere di protestare, in questa occasione, come ho sempre fatto, contro il Vandalismo che si commette sotto pretesto di pulire e ristaurare le opere di belle-arti,—Vandalismo, devo confessarlo, commune a tutte le Gallerie d'Europa. E mia intenzione di parlare ora solamente di quei quadri ch' io ho conosciuti avanti la cosi detta pulitura o ristauro; ma farò eccezione del quadro di Velasquez, il quale non ho veduto prima che queste operazioni l'abbiano ridotto allo stato deplorabile in cui ora si trova. Al Museo di Madrid conservasi copia perfettamente simile a questo di Londra. Le parti di questo quadro che dicesi essere state rifatte al suo arrivo in Inghilterra, a causa dei guasti sofferti avanti ancora che la galleria ne facesse l'acquisto, sono senza dubbio quelle che si vedono più o meno imbrattate qua e là da colore, specialmente nelle figure che stanno in ombra, incominciando dall' uomo a cavallo nell' angolo a sinistra dello spettatore, fino al gruppo centrale. Le tre figure in ombra di questo gruppo nel centro, sono tutte rimpasticciate da colore, come anche lo sono parte del vicino cavallo, i due muli, ed il sottoposto terreno. Ognuno vede che questo imbratto non è da confondersi colla pittura di Velasquez. Che il quadro sia stato scorticato ed anche ritocco in altre parti, lo mostra lo stato deplorabile a cui esso è ridotto presentemente. Manca d' accordo d' intonazione, di prospettiva aerea, di vigore e trasparenza di colore, effetti del ridipinto, della pulitura e ristauro fatti, come vien detto, in diverse epoche. Che il quadro adunque sia in gran parte distrutto, non v'è quistione, resta solamente a vedere se la Galleria Nazionale lo abbia acquistato nello stato presente, o se la sua distruzione sia dovuta alle operazioni fatte dopo l' acquisto. Sia nel primo, come nel secondo caso, la Galleria Nazionale è responsabile, o di aver comperato un quadro tanto rovinato, o d' averlo rovinato dapo averne fatto l' acquisto.

I tre Claudi (No. 12, No. 14, No. 61) che sono stati recentemente puliti, erano in perfetto stato di conservazione, e non abbisognavano d' alcuna specie di pulitura. Il quadro No. 12, "Rebecca ed il suo Seguito," è stato privato della vigoria del suo colore, dell' intonazione generale, e della prospettiva aerea. Il cielo è ridotto freddo come di ghiaccio, essendone state portate via le velature e le ultime finitezze: velature e finitezze che da taluni sono chiamate sporcizie. Ma queste sporcizie non erano se non che il risultato d' un lungo studio, d' una lunga pratica e conoscenza delle leggi della natura: quella sorte di sporcizie di cui Tiziano era maestro. Le masse degli alberi che staccano sopra il cielo spogliato, come abbiamo detto del suo colore, compariscono scure. Le estremità poi di questi alberi, le punte all' intorno, sono quasi tutte rifatte; nel gruppo del centro un tronco coi suoi rami, sopra il mulino, è tutto moderno. La parte del quadro meno rovinata è quella in ombra a sinistra di chi guarda, ma questa parte sembra annerita perchè le parti vicine sono private del loro colore. La porzione in luce nel piano anteriore nel mezzo al quadro è stata scorticata fino a scoprire la sottoposta preparazione. Cosi si è fatto sulle figure spogliandole inegualmente delle loro velature, mentre in alcune parti ancora se ne scorge traccia. Non intendo con ciò aver notato tutto, ma credo d' aver detto più che non bisogna per provare che il quadro dal buono stato di conservazione in cui era, è presentemente rovinato dalla pretesa pulitura.

No. 14. "L' Imbarcazione della Regina Saba." Lo stesso processo di pulitura ha portato gli stessi cattivi effetti. Solamente noterò alcune cose p. es°; nella parte in ombra delle onde del mare, vicino alla barca ed alla nave, è stato portato via il colore fino a scoprire nette le trame della sottoposta tela. La barca, la nave, sono ridotte senza forma come le figurette che stanno in quelle hanno perfino perduto la maggior parte del colore delle loro vesti, del quale però rimane ancora traccia per mostrarne il tono originale.

Il cielo, il rimanente delle figure, il fabbricato, sono ridotti allo stato deplorabile, dove più dove meno, come nell' altro quadro di Claudio, No. 12. Il gradino in avanti che mette al tempio, tanto è stato pulito da concellare parte della iscrizione che ci era—ora mutilata. Anche questo secondo quadro di Claudio dal buono stato di conservazione in cui era, è presentemente rovinato dalla pulitura.

Rovinato

Rovinato pure è stato dalle stesse manipolazioni il bel Claudio, No. 61, "Agar nel Deserto." Qui osserverò che l'Agar porta un abito di color azzurro, e chi ha la minima cognizione in arte conosce che il contrapposto dell' azzurro è un giallo-arancio, e tale appunto mostra d'essere stato l'abito dell' Angelo come ancora puo vedersi, specialmente sulla spalla, da traccia di detto colore che è rimasto. La veste la quale ora indossa l'Angelo è il colore della sotto-posta preparazione in azzurro spogliata della sua velatura; egualmente le ali sono state pulite del loro colore fino alla preparazione bianca. Il rimanente è più o meno danneggiato come gli altri due quadri.

Cosi devo dire dei Canaletti, No. 127, No. 163. Il No. 127, "Veduta di Venezia." In questo quadro tutto è posto in confusione; la parte addietro viene avanti, la parte avanti va indietro. Molte delle forme sono indecise e quasi perdute; il terreno nella parte in luce è privato affatto del suo colore, e cosi molti degli oggetti mancano delle loro forme e delle loro ombre. Il No. 163, "Veduta del Canal Grande." Questo quadro ha potuto resistere più alla cosi detta pulitura per la maniera con cui fù dipinto, avendo qui Canaletto fatto meno uso di velature. Rovinati egualmente sono il No. 26, Paolo Veronese, "La Consacrazione di S. Nicola"—il No. 57, detto di Rubens (ma che io credo della scuola), "S. Bavon"—il No. 165, di Nicola Poussin, "La Peste di Ashdod." Il No. 22, Guercino, "Cristo morto fra gli Angeli."

A quelli che dicono di mandare nel bel clima d'Italia questi poveri quadri a prendere un poco di Sole, alla guisa che si espongono le frutta a maturarsi, colla speranza che col tempo riacquisterebbero la loro prima bellezza, ritornando loro tutto quello che è stato tolto, io rispondo, che sono puerilità alle quali non conviene prestar orecchio. Non vi è clima, nè uomo, nè mezzo alcuno che possa restituirli al loro primo stato, alla loro primitiva bellezza.

Se Claudio stesso ritornasse al mondo io lo crederei bene imbarazzato a mettere ordine a questi suoi quadri, e penso che alla fine sarebbe costretto a rifarli tutti di nuovo. I danni ed i Vandalismi che si sono comessi sopra i quadri della Galleria Nazionale di Londra, si sono pure fatti in Italia e nel rimanente delle Gallerie di Europa. In Venezia nè fanno testimonianza le molte opere rovinate nelle gallerie, come lo furono, non molti anni sono, parte dei quadri del Palazzo Ducale. A Vicenza il celebre quadro di Gio^{i}. Bellini nella Chiesa di S^{a}. Corona, "Il Battesimo di Cristo," fù ridotto un cadavere. A Roma anni addietro Camuccini, ex-direttore della Galleria del Vaticano, tagliò la gloria del quadro di S. Sebastiano di Tiziano, riducendolo da forma ovale a forma quadrata. In questo momento trattasi di ristaurare tutti gli affreschi di Raffaelle. A Firenze si è commesso il barbarismo di pulire i capi d'opera di scultura, come il "David" di Michelangelo, il "San Giorgio" di Donatello. Al Bargello, in Firenze pure, antico palazzo del Podestà, fù scoperto il ritratto di Dante dipinto dal suo amico Giotto, e fù poi quasi del tutto svisato col ristauro. A Parigi basta citare il Raffaelle conosciuto sotto il nome della "Madonna del Diadema." A Dresda anni addietro chiamarono dall' Italia il miglior ristauratore per ingiuriare il nome di Raffaelle imbrattando parte d'uno dei suoi capi-lavori, "La Madonna, conosciuta sotto il nome di Sisto V." A Madrid, i quadri del Museo sono rimpasticciati in maniera unica. Da più di 10 restauratori sono stipendiati. A Vienna, a Monaco, a Berlino, in una parola, dove vi è galleria vi sono testimonianze dei Vandalismi commessi dal preteso ristauro.

Giacchè adunque la buona sorte ha voluto che i guasti cagionati dall' ultima pulitura dei quadri in questa Galleria Nazionale richiamasse l'attenzione pubblica fino al punto che fosse creata questa commissione per prendere in esame l'affare; io, mentre mi sono creduto in dovere di esporre più brevemente possibile la mia ferma convinzione, dichiarando distrutti ora e per sempre, dalla cosi detta pulitura, i quadri qui sopranominati; mi offro pronto a dare anche maggiori spiegazioni quando ne fossi addomandato.

Egli è tempo, o Signore, d'arrestare la mano distruggitrice che sotto la maschera dell' amor dell' arte perde per sempre le opere dei grandi maestri.

Il bisogno d'una radicale riforma è urgente, e deve essere immediata. Sarà opera onorevole per la nazione Inglese, se vorrà mettersi per la prima in questa via di riforma—come ne ho fede.

Di lei divotis^{o} servo,

G. B. Cavalcaselle.

Al Signor Col^{o}. Mure,
Presidente del Comitato della Galleria Nazionale.

Sir, 29, Silver-street, Regent-street, 9 June 1853.

WILL you permit me at the present juncture to protest, as I have done before, against the Vandalisms which have been committed in the National Gallery under the name of cleaning and restoring,—Vandalisms, it must be owned, which are common to all the galleries of Europe.

It is not my intention here to speak of any but the pictures which I saw previous to being cleaned and restored, with the exception of the large Velasquez, upon which the result of those operations has been particularly fatal. A complete counterpart of this masterpiece may still be seen in the Museum at Madrid, and the portions of it which have been repainted, in consequence of damage sustained before it came into the hands of the trustees, are doubtless those which may be seen here and there daubed with colour, more particularly the figures in shadow, which, from the man on horseback to the left of the spectator to the group in the centre of the picture, are more or less repainted and retouched. As for this central group, three men in shadow are covered with modern colour, and likewise part of the neighbouring horse and mules, and pieces of the ground, which can never be mistaken for the work of Velasquez.

Appendix, No. XV.

That in other places the picture has been flayed and restored, is proved by the terrible state to which it is now reduced. It no longer possesses unity of intonation, harmony of colour, or aërial perspective. It wants both vigour and transparency of tint, the result of cleaning and restoring at various periods. There is no doubt, in fact, that the picture is almost entirely destroyed, and it remains to be seen merely whether the National Gallery purchased it in its present state, or whether its destruction is owing to proceedings subsequent to its acquisition. In either case the Gallery must bear the responsibility of buying a picture damaged in a serious manner, or of damaging it after purchase.

The three Claudes which have recently been cleaned (Nos. 12, 14, and 61) were pictures in perfect preservation, and which required no species of cleaning or restoration. "Rebecca with her Attendants" (No. 12) has been deprived of the vigour of colour, general intonation, and aërial perspective, which made its charm. The sky has been made as cold as ice by the removal of the glazings and the finishing touches. These, indeed, have been called by many dirt; but this dirt is, in fact, the result of the painter's lengthened study, practice, and knowledge of the laws of nature; that sort of dirt, in fact, of which Titian was the master. The masses of the trees which cut upon the sky are rendered black by the changes in their harmony, and the extreme portions of the foliage are almost entirely repainted. In the central group of trees the trunk and boughs above the mill are altered by retouching. The least damaged portion of the picture is that in shade to the left of the spectator, but it wears a darkened look from the absence of all colour in the neighbouring parts. The sunny portion of the foreground has been cleaned so far as to lay bare the cool undertones of the first preparation, and in general the figures have been unevenly deprived of their glazings, which in many places still remain and give them a spotted appearance. Sufficient has now been said, though certainly not all that might be said, to prove that "Rebecca and her Attendants," well preserved as it was before, is now completely ruined under pretence of being cleaned.

The "Embarkation of the Queen of Sheba" (No. 14) has met with the same ill-treatment. It is merely necessary to add, that near the ship and boat the shaded portion of the waves has been rubbed with so much vigour as to lay bare the canvas, the ship and boat themselves having lost much of their original forms, and the figures in them been deprived of most of their original colour; enough of which, however, remains in places to show the tone in which they were first depicted. The sky and remaining figures are reduced to the same state as those in the other Claude, and so far has the cleaning process been carried, that the signature, which before was clear upon the steps, has been made illegible and mutilated. This picture, also once in perfect preservation, is ruined under pretence of cleaning and restoration.

"Hagar in the Desert" has suffered in a similar manner. The figure of Hagar is clothed in blue, and whoever has the slightest knowledge of the laws of colour is acquainted with the fact that the contrast with a blue is orange, and such undoubtedly was once the colour of the Angel's vestment, as may be seen indeed upon the shoulder, where traces of that tint are visible; but now the greater part of the vestment is merely the blue preparation deprived of its orange glazings. The wings of the Angel are likewise deprived of their glazings, and their original colour consequently gone. The flesh and remaining parts of the picture are similarly damaged with those of the other Claudes.

These remarks apply with equal strength to the Canaletti (No. 127 and 163). The first of these, "A View in Venice," is a mass of confusion, the distant parts coming forward, whilst the foreground dwindles into distance; many of the forms are almost gone; the ground in light is deprived of its colour, and many objects on it want their original form and shadows. "The Grand Canal" has been less hurt, because it resisted better the process used in cleaning, on account of the manner in which it was painted, for Canaletto made less than customary use of glazes.

The following pictures have been also spoiled by cleaning: (No. 26) "The Consecration of St. Nicholas," by Paul Veronese; (No. 57) "St. Bavon," said to beby Rubens, but by a pupil; (No. 165) "The Plague at Ashdod," by N. Poussin; (No. 22) "Christ and the Angels," by Guercino. Those who say that these ruined pictures should be sent to Italy to take a little airing in its sunny clime, as fruit is hung up to ripen, with the hope that time may restore them to their former beauty, and give back all that was taken from them, are guilty of puerility; there is no clime, no men, no means that could make pictures so damaged return to their original state. If Claude himself were to revive, he would be much embarrassed in attempting to restore his own pictures, and would no doubt be forced to repaint them afresh.

The Vandalisms committed on the pictures of the National Gallery are imitated in Italy and other places throughout Europe. In Venice may be shown numerous pictures entirely destroyed; a few years ago almost all the canvasses in the Ducal Palace were damaged. At Vicenza the famous Giovanni Bellino, in the church of Santa Corona, representing the "Baptism of Christ," was reduced to a sort of dead painting. At Rome Mons. Camuccini, ex-director of the Vatican Gallery, cut the glory out of St. Sebastian of Titian; and at this moment it is in debate to restore all the frescoes of Raphael. At Florence the barbarism was perpetrated of cleaning those masterpieces of art in sculpture, the "David" of Michael Angelo, the "St. George" of Donatello, and others. In the Bargello of the same city, formerly the palace of the Podesta, was found quite lately the portrait of Dante, painted by his friend Giotto di Bondone, and immediately destroyed by restorers. In Paris, it is sufficient to mention the Virgin and Child of Raphael, known as the "Madonna of the Diadem." At Dresden the best restorer of Italy was called in to damage the name and

pictures

pictures of Raphael by repainting and dirtying part of one of his chef-d'œuvres, the "Madonna of Sexto Quinto." At Madrid the pictures of the Museo are repainted and retouched in a manner quite unique, for more than 10 restorers daily are employed there. At Vienna, Munich, Berlin, and, in fact, wherever a gallery exists, are to be found numerous proofs of the Vandalism of restorers. Appendix No. XV.

As the damage occasioned by the late cleaning of the pictures in the National Gallery so far attracted public attention as to produce the appointment of your Committee, I have thought it my duty to expose as briefly as I am able my firm conviction that the pictures which I have mentioned are destroyed now and for the future by the operations performed upon them, and I am ready, if necessary, to give further explanations if they are required. It is high time to stop the destructive hand which, under the mask of love of art, has ruined for ever the works of the great masters. Radical reform in this respect is wanting, and must take place immediately; it will be honourable to the English nation to have taken the first step in so honourable a direction.

I remain, &c.

Colonel Mure, M. P. *G. B. Cavalcaselle.*

Appendix, No. XVI.

SUGGESTIONS respecting the FUTURE MANAGEMENT of the NATIONAL GALLERY. Appendix, No. XVI.

It will be inferred from my offering some suggestions on the future management of the National Gallery, that I am not prepared to defend the present system. In admitting this, I would first observe, that it is the system, rather than any individual mismanagement, which I think open to objection. I am even of opinion that the system was, in some respects, well adapted for the commencement of such an establishment; I consider that the public has derived much benefit from the disinterested services of noblemen and gentlemen, who, by such example and by their influence, have greatly tended to diffuse a taste for the fine arts in this country; and I much question whether the National Gallery would, at the period of its formation, have been so acceptable to the nation had it not been so supported and recommended. The chief defects in the original and actual system are, on the one hand, the too restricted powers, and on the other, the too vague responsibility of those to whom the management is confided. A change in these respects is generally felt to be desirable, while it appears to be called for at this time by the prospect of an enlarged local establishment.

With regard to future alterations, I would, above all, recommend that the superintendence of the National Gallery should be entrusted only to persons who can give their whole attention to it. I consider that neither Trustees, as at present constituted, nor artists, both being supposed to have other employments and avocations, are fitted for such superintendence. A constant attention to the subjects which the duties in question embrace, is the more indispensable, as the knowledge which is essential for the connoisseur can only be so acquired. That knowledge would be no less necessary for the artist, in such a position, than for the amateur. The value of an artist's opinion on pictures is commonly confined to the question of absolute merit or demerit; on such points his judgment, as tending to correct an exaggerated deference for mere names, is always useful; but artists are rarely connoisseurs in the strict meaning of the word. The same may be said, generally, of private individuals, though possessed, it may be, of great taste and knowledge; but whatever may be their previous qualifications, neither of these classes of judges can, in ordinary cases, give their undivided attention to the peculiar duties referred to, and such attention, on the part of the principal directors of a National Gallery should, I repeat, be regarded as indispensable.

What the special duties are, will be best understood by considering the purposes of such an institution on the largest scale. The ultimate purposes contemplated are too well known to require to be dwelt on; it will be sufficient to consider the immediate objects—the formation, judicious arrangement, conservation, and historical description of the works composing the collection. The fulfilment of these objects must comprehend and define the chief duties of the superintendents; while all the ulterior benefits of such an establishment must greatly depend on a satisfactory attention to these first requisites. With regard to the selection of specimens, in order to have a tolerably clear idea of the plan proposed, a list should be made of all the Masters and their principal followers in the different Schools. Of those Schools, the most fully illustrated by examples, should be those which had the greatest influence on the progress and ultimate excellence of the art of painting; and in which the earlier specimens best exemplify the foundation of that excellence. The Schools of Tuscany and Venice, and the Early Flemish School, are the most remarkable in this point of view. Examples of the decline of art need not be so numerous.

Such being understood to be the general principle, the number of specimens of particular

Appendix, No. XVI.

Masters should chiefly depend on artistic excellence, in the widest acceptation of the term. There could never be too many Raphaels in a collection; hardly, I think, too many examples of some other great painters.

The idea of a catalogue of the Masters who might, sooner or later, be represented in a National Gallery, has occurred to many; but the actual formation of such a list has only been recently undertaken according to a plan suggested by his Royal Highness Prince Albert, and for his Royal Highness's use. With reference to that list, I may add, that the Catalogue of the Italian Masters was prepared by myself, and that relating to the other Schools by Mr. Wornum. The series cannot be considered complete; there are probably both omissions and redundancies; but it may at least be taken as the groundwork for such a guide.

I proceed to consider the question of efficient superintendence—an object to be best accomplished, I think, on two principles—a division of labour, and individual responsibility. The qualifications for connoisseurship are various, and are rarely united in one and the same person. The connoisseur should first possess the artist's knowledge with regard to pictorial merit in an absolute sense, independently of names of Masters and historical associations. He should, in the next place, be thoroughly acquainted with the history of Schools, and the practice, including the changes of style, of individual painters. He should possess an extensive knowledge of the principal works of the Masters, and of the vicissitudes of those works, in regard to change of place, possessors, and price. The connoisseur should further be acquainted with the works of the imitators of such Masters; he should be aware of the number of repetitions of a given Master's productions, with more or less assistance from scholars, and should ascertain which is the best of those repetitions.

This acquaintance with the examples of painting is generally acquired—more or less accurately, and never completely—by long experience only, and certainly cannot be acquired without experience; but it has always to be learnt afresh by every new student, with very little assistance from the labours of previous investigators. In order to amass and preserve an important part at least of the knowledge necessary for these objects, it would be desirable to form, by degrees, catalogues of the works of all the more distinguished Masters; on the principle of Passavant's Catalogue of the Works of Raphael (the most satisfactory both in plan and execution of any list of the kind). Other works having the same object would be of assistance; such as Orsini's Enumeration of the Works of Pietro Perugino; Rigollot's Catalogue of those of Leonardo da Vinci; the Catalogues of Waagen, Michiels and others, of the Works of Van Eyck; Ticozzi's Description of those of Titian; Pungileoni's List of Correggio's Works; Stirling's Catalogues of the works of Velasquez and Murillo; and, last not least, Smith's Catalogue Raisonné.

A labour of this description would be best undertaken by a Secretary, who might receive, in addition to his salary, an occasional allowance for travelling, with a view to rectify and enlarge his catalogues, and to collect information respecting pictures for sale. Such a secretary should be freed from the ordinary duties of keeping minutes of proceedings and conducting unimportant correspondence, although he should be fully cognisant of all such transactions, and might, in especial cases, undertake such duties himself; an assistant-secretary would, however, be indispensable.

A tabular form, like the following, might be adopted for the catalogues. Should the observations be too copious to be so inserted (as might often happen in the case of "Remarks"), a reference might be made to one of the volumes intended to contain such fuller notices; among those more circumstantial memoranda there should be references to all writers of authority who describe the picture or trace its history. In such notes, also, the state of the picture, at a given time, should, as far as description can answer the purpose, be recorded; and if the work has not been engraved, a description of the composition should be given, and should be referred to under the head "Subject." The known prices of pictures, whether disposed of at sales or by private contract, should, in like manner, be recorded. Lost pictures should also be noticed, with references to the authors who describe them; thus several Giorgiones, enumerated by Ridolfi and others, are at present unknown, but may not impossibly yet come to light. Lastly, destroyed pictures; such as those of Titian and others, destroyed by fire in the Ducal Palace at Venice in 1576, should be described; as original sketches, or even copies of such works, would possess a more than ordinary interest.

Name of Master (for example) PIETRO PERUGINO.

1. *Number.**—1-15. An Altar Piece, originally in the Church of S. Pietro Maggiore, at Perugia, ornamented with a lunette above, and with smaller pictures in the predella and pilasters. Two circular pictures over the adjoining doors of the choir formed part of the decoration. The predella contained five pictures, the pilasters six; making, with the lunette, the two circular pictures, and the altar-piece itself, 15 pictures.

2. *Subject.*

* Each work should be numbered for the sake of easy reference. Pictures might be enumerated as the historical materials come to hand; a chronological order is unnecessary in such notes, although it might be attended to in a catalogue formed from them. In cases like the present, where an altar decoration consisted of several pictures, the number of works should be specified.

2. *Subject.*—Subject of the altar-piece, the Ascension. The lunette contained a representation of the Almighty with two Angels. The subjects of the three centre pictures of the predella were the Adoration of the Kings, the Baptism, and the Resurrection; the remaining two were half figures of S. Costanzo and S. Ercolano. The pilasters were adorned with half figures of the following saints: S. Benedetto, S. Scolastica, S. Mauro, S. Placido, S. Flavia, and S. Pietro Abate, founder, and first abbot of the convent. The two circular pictures contained figures of David and Isaiah.

3. *Size.*—Altar-piece, 10 feet 9¾ inches high, 8 feet 9½ inches wide. The three subjects of the predella, each 1 foot 3¼ inches high, 2 feet 2½ inches wide. The half figures of saints, 11¾ inches high, 10¼ inches wide. Measures of the others unknown.

4. *On what Material painted.*—All originally on wood. The altar piece is now transferred to cloth, as are also the three half figures of saints in the Vatican Gallery.

5. *In what Method.*—Oil.

6. *Inscription and Date; Peculiar Marks.*—

7. *In what Place, Gallery, or Collection.*—The altar piece is in the Public Gallery at Lyons. The three predella pictures, from the New Testament, are in the Public Gallery at Rouen, where they are incorrectly attributed to Raphael. Three half figures of saints, S. Benedetto, S. Placido, and S. Flavia, are in the Gallery of the Vatican. The other five half figures of saints returned to Perugia, and are in the sacristy of S. Pietro Maggiore. Where the other three pictures now are, the lunette and the two circular pictures of Prophets, is unknown.

8. *Repetitions, where.*—An inferior repetition of the principal subject, the Ascension, altered only in some colours of the draperies, is in the Duomo of Borgo S. Sepolchro.

9. *Copies, where.*—Copies, in water colour, of the two round pictures of Prophets, are in the sacristy of S. Pietro Maggiore, at Perugia. The same figures were also copied by Raphael when young, in his sketch-book preserved in the Venetian Academy.

10. *Engravings.*—

11. *Original Drawings and Studies for the Work, where.*—

12. *General History. Remarks.*—Painted 1495, for S. Pietro Maggiore, in Perugia. Removed from the high altar to a chapel in the same church in 1751. When in the chapel (if not before), the pictures of the predella and pilasters were protected with glass; what became of the lunette and the two circular pictures is unknown; the rest were taken to Paris during the French occupation of Italy, in 1797. The Altar Piece was ultimately, in 1815, presented to Lyons by Pope Pius VII., when the smaller pictures, with the exception of the three at Rouen, returned to Italy. *See* also vol. , p.

The result of those constant researches of the Secretary would, as they accumulated, form authentic and valuable materials for a history of painting. As regards their more special utility, if such a system were followed up, there would hardly be a picture of importance which would not be registered, with such particulars as would serve to identify it, and to estimate its worth. Under the head of "peculiar marks," or in notes relating to the state of a given picture, might be mentioned obvious *pentimenti* or original alterations. Thus, when Mengs describes a *pentimento* in a picture by Correggio (in his time in the possession of the Duke D'Alba, and once in the collection of Charles I.), representing Mercury teaching Cupid to read in the presence of Venus; observing that a portion of blue drapery originally passed over the arm of the Mercury, he furnishes the means of identifying the picture with that now in the National Gallery, in which the alteration so described is observable.

It may be objected that the volumes thus formed would gradually amount to many hundreds, but, from their plan, they would admit of easy reference, and with regard to the magnitude of the collection, a portion of the lower part of the proposed building might be consistently appropriated to it. On an approximation to the completion of a catalogue of the works of a given Master, the volume, duly condensed, might be printed and transferred to the library; thus reducing the collection of manuscript notes.

The chief duty and responsibility of the Secretary would therefore consist in amassing materials in an easily accessible form, for verifying the specimens of the Masters, and indirectly, for illustrating the annals of painting and of painters; and although extensive previous knowledge of the subject would be required, it is believed that the concentration of attention to this one object, the constant familiarity with works of art and the gradual acquisition of knowledge respecting the existing specimens of any given Master, would, of itself, hardly fail to form a good auxiliary connoisseur.

The Secretary should be well acquainted with the principal languages of Europe; for there are works on the history of painting in German, Dutch, Italian, French, and Spanish,

Appendix, No. XVI.

which would be indispensable in the researches above proposed. The compilation of the catalogues would also involve occasional correspondence with foreign critical authorities, as well as visits to the Continent; for both which purposes a knowledge of languages would be requisite.

The Secretary should also be required to make the necessary additions to the printed Catalogue of the Gallery intended for public use, so as always to keep pace with the collection. In the introductory remarks to the list of painters before referred to, I have recommended that a complete library of books on art, comprehending a collection of engraved works on Galleries, should be connected with the picture gallery; the collection of prints now in the British Museum might also eventually be transferred to the vicinity of the picture gallery.

I have named a Secretary first, because his labours would by degrees be of great assistance in the formation of the collection: the important duties more immediately connected with that object would belong to another officer, who might be called the Director of the Gallery. His chief qualification should be a thorough acquaintance with the hands and styles of the different Masters. He should be in constant communication with the secretary furnishing materials for the catalogues, and, in his turn, availing himself of the secretary's researches. He should propose to a Superintendent, or through him to the Treasury, what pictures should be purchased for the Gallery, and at what price: he should be responsible for such selection and valuation, and should he deem it advisable, in any case, to have further advice, artists or connoisseurs might be consulted accordingly. In extraordinary cases, he should visit the Continent to verify the reports of the secretary, to attend important sales, and to recommend the purchase of desirable works; or, acting under general instructions from the Treasury, purchase them at once. He should report to the Superintendent when newly obtained pictures, or pictures already in the collection, might require cleaning, varnishing, or restoring, and should be responsible for such operations; in this instance also, calling in advice when he might deem it requisite.

All details relating to the general care of the establishment should, I conceive, be entrusted to a third special officer, who might be called the Superintendent; thus relieving from such duties those to whom the concerns of the Gallery, properly so called, would be allotted. Like the secretary, the Superintendent should be wholly unconnected with any other occupation. He would have the direction of the establishment; manage its financial concerns; pay the attendants; be responsible for the cleanliness, ventilation, warming, safety, and order of the building; regulate the admission of students, not only to the picture galleries, but to the gallery of drawings and prints, and to the library: his time should therefore be exclusively devoted to such duties.

The arrangement of the pictures should be regulated, in the first instance, in accordance with a scheme to be proposed by the Director of the Gallery, the Secretary and the Superintendent; a scheme being adopted, the details should be carried out by the Director, who should also decide as to the mode of framing the pictures.

It is proposed that the sum of 10,000*l.* should at first be placed at the disposal of the Superintendent for the purchase of such pictures as the Director of the Gallery might recommend, and such as might occasionally and suddenly come into the market. It is assumed that not more than a third of this sum would, on the average, be expended annually, and if less should be expended, the amount required at the commencement of the year for replenishing the allotted fund would not be considerable. In cases of proposed purchases to a large amount there would be time to apply to the Treasury.

It would be requisite that the Superintendent and the Secretary, and perhaps the Assistant Secretary, should reside in the building, the Director attending frequently. The above-named officers, the Superintendent, the Director of the Gallery, and the Secretary, in connexion with such representatives of the Government as might be permanently appointed or occasionally deputed for such purposes, would form a board, and would meet for the transaction of business periodically throughout the year, extraordinary meetings being held when necessary. The Board would, as a matter of course, be in communication either directly with the Treasury or with some public department, and the Superintendent with the assistance of his colleagues, should make an annual report; such report being always published.

Suggestions in some respects analogous to the above have been made by Mr. Dyce, and by others; but as the plan here proposed occurred to myself before those opinions were made known, it is only necessary to advert to the coincidence, and to express my satisfaction at such agreement.

(signed) *C. L. Eastlake.*

May 1853.

Appendix, No. XVII.

Copy of a Letter from Colonel *Grey* to the Chairman, with Plan for a Collection of Paintings, illustrative of the History of the Art.

Sir, Buckingham Palace, 25 April 1853.

I have received the commands of His Royal Highness Prince Albert to forward the accompanying papers to you, as Chairman of the Committee for inquiring into the subject of the National Gallery.

From what he has read of the debates in Parliament on the subject, as well as from a perusal of many pamphlets that have been written upon it, His Royal Highness is induced to believe that there exists at present no difference of opinion as to the objects which should be kept in view in the conduct of a national gallery. Indeed, public opinion seems to be agreed that, as far at least as relates to painting, it should be as complete a school of art as it is possible to create; and with this view, that the endeavour should not be merely to form a collection of pictures by good masters, such as a private gentleman might wish to possess, but to afford the best possible means of instruction and education in the art to those who wish to study it scientifically in its history and progress.

As a step towards effecting this object, His Royal Highness has thought it very desirable that a classified Catalogue should exist, distinguishing the various schools of painting, and enumerating the masters and principal followers of each in historical order; a glance at which would show, not only what the gallery already contains, but what would be wanting to make such a collection complete.

Were a catalogue of this nature to be adopted as the guide to future acquisitions, the Government might often be in a position to make a comparatively cheap purchase of some picture required to complete a particular series, or as a specimen of a particular school; care being always taken that the picture so purchased should be both a standard work of the master whom it was sought to represent, and that it should possess merit in itself as a work of art.

A further advantage would arise from the possession of a catalogue, showing thus the requirements of the gallery, that private individuals, who might possess specimens of the masters required to complete the collection, would thus be made aware of the want, and might be induced to present them to the nation. At present it would seem to be as difficult for any one to know what to offer, as it is for the trustees to know what to accept; and hence it may often happen, that a refusal on the part of the latter, of what might be valuable as an illustration of some particular school, not only injures the collection, but indisposes others to make similar offers in future.

To render such a collection complete, much time, possibly a long course of years, extending far beyond the lifetime of any individual, would be required; but this is a matter of little consequence, where a nation, and not an individual, is concerned; and it is upon the plan above mentioned that all scientific collections and museums intended to convey really useful instruction are generally formed.

Influenced by these considerations, and knowing how wide is the scope of the inquiry into which the Committee is about to enter, and how much their time and attention will be engrossed by it, His Royal Highness has thought it might not be unacceptable to them if a Catalogue, such as that which accompanies this letter, were laid before them, and His Royal Highness begs that they will make any use of it that they may think advisable.

It has been classified according to schools, and historically arranged, showing the masters, and the disciples of each school at different periods. The Italian school has been kindly arranged by Sir Charles Eastlake, and under his superintendence the details of the German and other schools have been chiefly worked out by Mr. Wornum.

This Catalogue will be found to bring down the history of painting from the earliest times to the present day; not including, however, the names of any living artist. And in desiring me to forward it for the use of the Committee, His Royal Highness is anxious that it should be clearly understood that he is actuated solely by the interest he has always taken in the subject of their inquiry, and that nothing can be further from his wish than to influence in any way either the course of that inquiry, or the recommendations in which it may result.

I am, &c.

Colonel Mure. (signed) *C. Grey.*

PLAN for a Collection of Paintings, illustrative of the History of the Art.

Nature of Specimens.

Specimens of the Art of Painting and of its branches, that are adapted for museums, must consist chiefl works executed on materials originally detached and portable. Wall paintings generally can be represente such collections in fragments only, or by means of copies. Other works of art, such as drawings and miniat in illuminated manuscripts of various ages and countries, are to be sought in libraries, for instance, in tha the British Museum. But separate specimens, otherwise eligible, of drawings in every method—miniatu mediæval and modern; drawings by the best masters as studies for pictures; crayon paintings; water-co drawings,—should undoubtedly be contained in an edifice devoted to the illustration of Painting. S examples should be deposited in a separate gallery; and, if exhibited, should be placed under glass, with exceptions in reference to the injurious effects of light.

There might also be galleries or apartments illustrating, by specimens, the history of Mosaic, of Glass paint of Enamel painting, of storied Tapestry, and of Tarsia (inlaid wood), the possible perfection of which last, a imitative art, applied more particularly to perspective appearances, may be judged of from the specimens in sacristy of S. M. in Organo at Verona.

It would further be desirable that a collection of engravings should be near the picture gallery. Conne with the print rooms should be a library restricted to works on art, but containing all illustrated works on for and English galleries.

The catalogue of paintings might, in its introduction, contain short descriptions of the methods of the var arts represented; those, namely, of Fresco, Secco, Tempera, Encaustic, Miniature or Illuminating, Mo Tarsia, Glass painting, Enamel painting, the transfer of Cartoons to tapestry, Crayon painting, Water-co painting, Oil painting. These descriptions should contain notices of the materials on which works in pain have been executed, such as stone, wood, metal, cloth, &c.; and the ordinary modes of preparing them.

With regard to the principles which should regulate the selection of specimens, the special purposes w such a collection is intended to serve must be kept in view, as distinguished from more general uses. Exam of art may be connected with the study of Religion, History, Poetry; and, in more strictly scientific applicati with the study of Natural History, Physiognomy, Costume, and other facts; but, together with the gen requisites of authenticity and due preservation, the qualities more especially to be looked for in the selectio specimens for a gallery, are—artistic merit, considered in relation to periods and schools; the illustration of connexion between various modes of representation; and well adapted and durable technial processes.

REMARKS.

ANCIENT ART.

Specimens of Ancient Art—Assyrian, Egyptian, Greek, Etruscan, and Roman—coming under this description, and which are otherwise fit for a gallery of paintings, consist chiefly in wall paintings from remains of public and private buildings, and, in the case of the Etruscans especially, from sepulchres. The difficulty of obtaining fragments of such works (to say nothing of the duty of not encouraging the demolition of monuments for the purpose of obtaining them) suggests the question—a question also important with regard to the finest examples of fresco painting by the Italian masters—whether it would not be desirable to procure copies of such works? Referring to the conditions above proposed, a copy cannot exemplify technical processes, so as to be a test of their durability; but in respect to artistic merit, it can sometimes reproduce much of the value of the original; and in exemplifying the habits of design and invention characteristic of a given age and people, it can be equally useful. In all other points, more connected with history and less allied to art considered in itself, copies, in some form, are indispensable.

Next to paintings on buildings and in tombs, the Vases, particularly those of the Greeks and Etruscans, form a vast repertory of the artistic skill of those nations, exemplified in a peculiarly limited and admirably defined style. The merits displayed by those works can, however, be studied with sufficient advantage in engravings, and one or two specimens exhibiting the technical method might suffice. To illustrate the technical processes of the ancients, a few examples of painted tiles, painted architectural ornaments, specimens of Mosaic, more particularly such as contain figures, and even fragments of glass and enamel, might be included.

Later Roman and early Christian paintings, and a large proportion of Oriental paintings, are to be found in manuscripts. These, it has been assumed, would be retained in the British Museum; but, except in the case of Oriental paintings of the kind referred to, a considerable number of manuscript illuminations—like those of the Vatican Virgil in the one case, and the Christian examples copied in the work of D'Agincourt, and more recently in that of Bastard, in the other—may be consulted in engravings.

FIRST EXAMPLES OF CHRISTIAN ART.

The earliest examples of Christian art, first in a classic form and then gradually emerging to an independent style, are to be found in the Roman catacombs, in the Mosaics of Rome, Ravenna, Palermo, and other Italian and Sicilian cities, and, as already said, in manuscripts.

REMARKS.

e specimens more especially fitted gallery of paintings commence with ble paintings on wood by the Byzan- representing the Madonna and Child, figures of saints, and sometimes ex- e compositions on a minute scale. lugh these are the earliest pictures, rly so called, and belonging to Chris- art, in existence, their style and l appearance have been transmitted t without change, to the present time. res are still painted in Greece and ntinople, in Venice, in Naples, and, all, in Russia, resembling, in their and unattractive peculiarities, the t known Byzantine works of the For this reason it is not always o distinguish the older examples. a family of painters of the name of mano, of Otranto, were supposed to lived in the 12th century; but pic- earing their name are unquestion- of much later date. Barnaba or was also first placed in the 12th cen- out a specimen by him in the Frank- allery has the date 1367. Andrea of Candia, is, with more probability, in the 11th century. Probably rliest known Byzantine painting on is that representing the death of hraim, now in the Vatican. The Tzanfurnari, lived in the 9th cen-

nes might be enumerated belonging earliest periods of Italian art—such one Scudario of Pisa, 1169; Berlin- f Lucca, 1235; Salvanello, of Siena, —but the works of those painters, recorded, have either perished or with certainty be identified. On her hand, remarkable works exist example, the wall-paintings in the tery at Parma, executed about 1230, ose in S. Pietro in Grado (between nd Leghorn), probably dating from -which remain without a name. , not a few painters are known only que, inscribed, or otherwise certain, ens—specimens thus forming a class hentic but previously unrecorded tions. In the case of works with- mes, or inscribed with names before wn, the test of artistic merit must determine the question of eligi-

aic painters of importance, such as , Tafi, Solsernus and others, belong 13th and 14th centuries. Their , as illustrating the art of the period, however, only be represented, and ectly so, by copies.

EARLY CHRISTIAN ART, from the Byzantines to Giotto.

Byzantine Specimens.

Early Italian Specimens influenced by Byzantine Art.

The earliest specimens of Italian art, strictly so called, though more or less formed on Byzantine models, belong to the 13th century, and are those by

Giunta da Pisa, born 1202; died 1258.
Guido da Siena, painted 1221.
Cimabue, born 1240; died soon after 1300.

Margheritone d'Arezzo, living 1262.
Diodato da Lucca, painted 1288.
Duccio da Siena, painted 1311.

ITALIAN SCHOOLS.

FLORENTINE SCHOOL, from Giotto to Masaccio.

Giotto, born 1276; died 1336; by whom Italian art was entirely freed from the Byzantine manner.
Gaddo Gaddi, died 1312.
Taddeo Gaddi, 1300, living in 1355.
Angelo Gaddi, son of Taddeo, 14th century.
Giottino, 14th century.
Giovanni da Melano, lived in 1365.
Bernardo Orcagna, 14th century.
Francesco da Volterra, painted 1372.
Andrea Orcagna, died 1389.
Spinello Aretino, born 1308; died 1400.
Don Silvestro, painted 1350.
Francesco Traini, 14th century.
Antonio Veneziano (a Venetian settled in Florence), died 1388.
Niccola di Pietro, painted 1389.
Pietro di Puccio d'Orvieto, close of 14th century.
Don Lorenzo, painted 1414.
Lorenzo di Bicci, died about 1450.
Angelico da Fiesole, born 1387; died 1455.
Masolino da Panicale, born 1377; died 1443.
Paolo Uccello, born 1389; died 1472.

(*continued*)

REMARKS.

The style of the Florentine missal painters of this period is allied to that of the Ghirlandaj. Among these painters the names of Don Bartolommeo della Gatta, Gherardo di Firenze, and Attavante, are prominent.

ITALIAN SCHOOLS—*continued.*

FLORENTINE SCHOOL, from Masaccio to Michael Angelo

Masaccio, born 1401; died 1443.
Fra Filippo Lippi, born 1412; died 1469.
Fra Diamante, his scholar.
Andrea dal Castagno, born 1403; died 1477.
Domenico Veneziano (a Venetian settled in Florence), died about 146
Alesso Baldovinetti, born 1425; died 1499.
Antonio Pollaiuolo, born 1427; died 1498.
Pietro Pollaiuolo, about same time.
Giuliano degli Arrighi, called Il Pesello, born 1380; died 1467.
Francesco di Pesello, his son, called Pesellino, born 1426; died 1457.
Benedetto da Mugello, died 1448.
Sandro Botticelli, born 1437; died 1515.
Filippino Lippi, born 1460; died 1505.
Raffaellino del Garbo, born 1466; died 1524.
Cosimo Rosselli, living in 1496.
Benozzo Gozzoli, painted 1447.
Piero di Cosimo, born 1440; died 1521.
Domenico Ghirlandajo, born 1451; died 1495.
Davide Ghirlandajo, Benedetto Ghirlandajo, } Brothers of Domenico.
Ridolfo Ghirlandajo, born 1485; died 1560.
Bastiano Mainardi, 15th century.
Andrea Verocchio, born 1432; died 1488.
Jacopo detto l'Indaco, painted 1534.
Francesco Granacci, born 1477; died 1544.
Luca Signorelli, born 1440; died 1521.
Leonardo da Vinci, born 1452; died 1519. (*See* School of Milan.)
Lorenzo di Credi, born 1454; died after 1531.
Rocco Zoppo, painted about 1500.
Francesco Ubertini, called Il Bacchiacca, painted about 1500. } Florentine Scholars of Perugino.
Niccolo Soggi di Areggo, commencement of 16th century.
Gerino da Pistoja, painted 1529.
Fra Bartolommeo, born 1469; died 1517.
Mariotto Albertinelli, born 1467; died 1512.
Baccio Bandinelli, born 1487.

FLORENTINE SCHOOL, from Michael Angelo to Cigoli and later Painters.

Michael Angelo Buonarroti, born 1474; died 1565.
Giovanni Antonio Sogliano, lived 1530. Scholar of Lorenzo di Credi
Giuliano Bugiardini, born 1481; died 1556.
Sebastiano del Piombo (a Venetian settled in Rome, where he follo M. Angelo), born 1485; died 1547.
Il Rosso, died 1541.
Marcello Venusti, follower of M. Angelo.
Andrea del Sarto, born 1488; died 1536.
Daniello da Volterra, died 1556.
Battista Franco, called Il Semolei, born 1498; died 1561; a nati Venice, but followed M. Angelo.
Fra Paolo da Pistoja, Plautilla Nelli, } Followers of Fra Bartolommeo.
Jacopo Carrucci, called Il Pontormo, born 1493.
Il Franciabigio, born 1483; died 1524. Domenico Puligo, died 1527. } Followers of Andrea del Sar
Giorgio Vasari, born 1512; died 1574; the celebrated biographer.
Francesco de' Salviati, born 1510; died 1563.
Marco da Pino. (*See* Sienese School.)
Angelo Bronzino, living 1567.

REMARKS.

ITALIAN SCHOOLS—*continued.*

FLORENTINE SCHOOL, from Michael Angelo to Cigoli, &c.—*continued.*

Alessandro Bronzino, nephew and scholar of Angelo.

Santi di Tito, born 1538; died 1603.
Battista Naldini, living 1590.
Bernardino Barbatelli, called Poccetti, born 1542; died 1612.
} Scholars of Angelo Bronzino.

Lodovico Cardi da Cigoli, born 1559; died 1613; eclectic painter, as opposed to the mannered followers of M. Angelo.

Gregorio Pagani, born 1558; died 1605.
Domenico da Passignano, born 1560; died 1638.
Giovanni Biliverti, born 1576; died 1644.
} Followers of Cigoli.

Domenico Feti, 17th century.

Jacopo da Empoli, born 1554; died 1640.

Cristofano Allori, born 1577; died 1621.

Matteo Rosselli, born 1578; died 1650.

Giovanni Manozzi da S. Giovanni, born 1590; died 1636.
Franceso Furini, born 1600; died 1646.
} Scholars of Rosselli.

Baldassare Franceschini, called Il Volterrano Giovane, born 1611; died 1689.

Carlo Dolce, born 1616; died 1686.

Pietro da Cortona, born 1596; died 1669.

Ciro Ferri, born 1634; died 1689.
Guglielmo Cortesi, born 1628; died 1679.
Francesco Romanelli, born 1617; died 1662.
Pietro Testa, born 1617; died 1650.
} Scholars of Pietro da Cortona.

Orazio Lomi, called Gentileschi; born at Pisa, 1563; died in London, 1647; studied the works of Cigoli; was invited to England by Charles I.

Artemisia Gentileschi, his daughter, born 1590; died 1642; accompanied her father to England.

Benedetto Luti, born 1666; died 1724.

Francesco Zuccherelli, or Zuccarelli, born 1702; died 1788.

SIENESE SCHOOL.

The Sienese School, in its earlier character, was remarkable for a religious tendency, not merely as regards the choice of subjects (which were then everywhere of the same kind), but in a certain devotional fervour of expression; resembling, in this respect, Angelico da Fiesole, and also the painters of the Umbrian School. The works of all these painters, though conveying the impression of deep feeling, do not exhibit that variety of form and study of nature which are conspicuous in the Florentines generally, to whom Angelico da Fiesole is thus to be regarded as an exception. With the Sienese, the prevailing tendency of feeling referred to involved a certain limitation in the forms and in the character of heads.

Oderico, canonico di Siena, painted 1213.

Guido da Siena,
Duccio da Siena,
} already mentioned (previous to the Florentine School.)

*Ugolino da Siena, died 1339.

Simone Memmi, died 1344.

Lippo Memmi, painted 1333.

Pietro di Lorenzo, painted 1340; called by Vasari, Pietro Lauroti.

Ambrogio di Lorenzo, his brother.

Berna, lived after 1350.

Taddeo di Bartolo, painted about 1410.

Domenico di Bartolo, painted 1440.

Sano di Pietro
Lorenzo di Pietro
} Painted about the middle of 15th century.

Matteo da Siena, painted 1479.

Andrea del Brescianino, painted 1520.

Bernardino Fungai, painted 1512.

Jacopo Pacchierotto, painted 1535.

Gianantonio Razzi (a Lombard, settled in Siena), born 1480; died 1549.

Domenico Beccafumi, died 1549.

Marco da Pino, called Marco da Siena, died about 1587; first a scholar of Beccafumi, then of Daniello da Volterra; imitated Michael Angelo.

Michael Angelo da Siena, born 1491; died 1554.
Bartolommeo Neroni, called Maestro Riccio, painted 1573.
} Scholars of Razzi.

Baldassare Peruzzi, born 1481; died 1536.

Arcangiolo Salimbeni, painted 1579.

Francesco Vanni, born 1565; died 1609.

Domenico Manetti, about same period.

*Two painters named Ugolino—Ugolino Vieri and Ugolino di Prete Ilario, the first a Sienese—left works at Orvieto.

(*continued*)

REMARKS.	ITALIAN SCHOOLS—*continued.*
	UMBRIAN SCHOOL.
See the remarks on the Sienese School, the devotional and expressive character of which was carried still further by the Umbrian painters; who, however, first derived this tendency from Taddeo and Domenico di Bartolo of Siena. The School of Umbria possessed some representatives allied, in their more realistic aim, to the Florentine School; such as Pietro della Francesca and Luca Signorelli, who may be ranked among the most scientific painters of their time.	Gritto da Fabriano, supposed to be the same as Allegretto di Nuzio, painted 1368. Gentile da Fabriano, born 1412; died 1417; resided for a time in and near Venice; was the master of Jacopo Bellini. Ottaviano di Martino Nello, living in the commencement of 15th century. Matteo di Gualdo, about the same period. Pietro Antonio di Fuligno, about the same period. Niccolo da Fuligno, called Niccolo Alunno, painted 1458. Giovanni Santi (father of Raphael), died 1494. Pietro della Francesca, died 1484. Lorenzo di S. Severino, 15th century. Jacopo di S. Severino, same period. Marco Palmezzano da Forlì, painted 1503. Pietro Perugino, born 1446; died 1524. Bernardino Pinturicchio, born 1454; died 1513. Andrea di Luigi d'Assisi, called L'Ingegno, painted 1484.
According to Vasari, both L'Ingegno and Pinturicchio worked with Perugino for a time (between 1480 and 1484), either as assistants or scholars, in Rome.	Raphael. (*See* Roman School.) Giovanni, called Lo Spagna, painted after 1500. Eusebio di San Georgio, painted 1512. Giannicola Manni, born 1478; died 1544. Berto di Giovanni, born 1497; died 1523. Francesco Melanzio da Monte Falco, painted 1498. Tiberio d'Assisi, painted 1521. Sinibaldo Ibi, painted 1524. Girolama Genga, died 1551. Giambattista Caporali da Perugia, died 1560. — Followers of Perugino. Giovanni da Faenza, painted 1506. Domenico di Paris Alfani, painted 1518. Orazio Alfani, his son, died 1583. Melozzo da Forlì (*see* Paduan School); studied also with Pietro della Francesca. Benedetto Buonfigli, born 1420; died 1496. Fiorenzo di Lorenzo, lived 1490. Luca Signorelli. (*See* Florentine School.)
	ROMAN SCHOOL.
The "Roman School" is a somewhat arbitrary designation; it is appropriated to the Roman style of Raphael and that of his followers, including painters of various parts of Italy. On the other hand, a native Roman School can hardly be said to exist; a few obscure names of early painters are sometimes adduced, but the works of those artists are, for the most part, either uncertain or altogether wanting. The wall-painting of Conciolo (Conxiolus), 1219, at Subiaco, is engraved in the work of D'Agincourt, pl. c. Pietro Cavallini chiefly wrought in Mosaic; some specimens by him still exist in Rome. The supposition that he worked as a sculptor on King Edward the Confessor's monument, in Westminster Abbey, erected in 1260 or 1270, a supposition founded on the inscription "Petrus, Civis Romanus," proves to be groundless, from the fact that Pietro Cavallini was not born before 1259.	Raphael, Rafaello Santi d' Urbino, born 1483; died 1520. Giulio Romano, born 1492; died 1546. Pierino del Vaga, born 1500; died 1547. Gianfrancesco Penni, called Il Fattore, died about 1528. Andrea Sabbatini, called Andrea da Salerno, born 1480; died 1545. Polidoro da Caravaggio, died 1548. Giovanni da Udine, born 1494; died 1564. Timoteo Viti, died 1524. Pellegrino da Modena, painted 1509; died 1523. — Scholars of Raphael. Maturino, died 1528. Adone Doni, living 1567. Tommaso Vincidore of Bologna, the "Thomas Polonius" of Albert Durer's Journal. Vincenzio da S. Gimignano, died after 1527. Jacomone da Faenza, painted 1532. Il Bagnacavallo, born 1493; died 1551. Innocenzo Francucci da Imola, painted 1542. Girolamo Marchesi da Cotignola, painted 1518. — Painters of the March of Ancona; followers of Raphael. Luca Longhi, of Ravenna, born 1507; died 1580. Rinaldo Guisoni, living 1568. Fermo Guisoni, living 1568. Giulio Clovio, a celebrated miniature painter, died 1578. Francesco Primaticcio, born 1490; died 1570. — Scholars of Giulio Romano.

REMARKS.

The Roman school of the 17th century was more remarkable than any other in Italy for cultivating the inferior branches of painting. Besides the painters of grotesque scenes, called Bambocciate, artists in flowers and fruit were much employed. Among the latter may be named Pietro Paolo Bonzi, called Il Gobbo da' Frutti, died 1640, and Michael Angelo da Campidoglio, died 1670.

ITALIAN SCHOOLS—*continued.*

Roman School, from its Commencement to Giovanni Bellini—*cont*[d].

Girolamo Siciolante da Sermoneta, living 1572.

Pasquale Cati da Jesi, living 17th century.

Taddeo Zuccaro, born 1529; died 1566.

Federigo Zuccaro, painted 1560.

Michael Angelo Amerigi, called, from his birth-place, Il Caravaggio, born 1569; died 1609; a Milanese, but worked principally in Rome.

Carlo Saraceni, painted in the commencement of 17th century. Scholar of Caravaggio.

Agostino Ciampelli, born 1578; died 1640.

Giuseppe Cesare d'Arpino, died 1640.

Federigo Baroccio of Urbino, born 1528; died 1612. (*See* Correggio.)

Cristoforo Roncalli delle Pomerance, died 1626.
Giovanni Baglione, died 1642. Writer on Art. } Followers of Baroccio.

Andrea Comodi, born 1560; died 1638; scholar of Cigoli (*see* Florentine School); settled in Rome when young, and may therefore be said to belong to the Roman School.

Giovanni Battista Salvi, called, from his birth-place, Sassoferrato, born 1605; died in Rome, 1685; is supposed to have been a scholar of the Carracci and Domenichino; studied various masters, and among others, Raphael.

Angiolo Caroselli, scholar of Caravaggio, born 1585; died 1653.

Filippo Lauri, his scholar, born 1623; died 1694.

Andrea Sacchi, born 1600; died 1661.

Mario Nuzzi, called Mario de' Fiori, born 1603; died 1673.

Jacopo Cortesi, called Il Borgognone, born 1621; died 1626; a native of France; lived chiefly in Rome.

Michel Angelo Cerquozzi, called Michel Angelo delle Battaglie, born 1602; died 1660.

Carlo Maratti, born 1625; died 1713.

Francesco Trevisani, born at Treviso, 1656; died 1746; studied first in Venice, but was chiefly employed in Rome.

Pompeo Battoni, born 1708; died 1787.

Venetian School, from its Commencement to Giovanni Bellini.

- Giambattista Cima da Conegliano, living 1517.
- Pietro degli Ingannati, painted in the commencement of 16th century.
- Giovanni Buonconsigli, same period.
- Vittore Belliniano, painted 1520.
- Pier Maria Pennacchi, painted 1520.
- Francesco da Santa Croce, painted 1507.
- Girolamo da Santa Croce, living 1549.
- Vincenzo Catena, died 1530.
- Andrea Previtali, painted 1528.
- Sebastiano Florigerio da Udine, painted 1535.
- Marco Marcone, painted 1507.
- Francesco Bissolo, painted 1520.
- Martino da Udine, called Pellegrino da S. Daniello, died about 1545.

Benedetto Diana, painted in the commencement of 16th century.

Marco Marziale, same period.

Andrea Busati, painted 1500.

Marco Bello, painted in the commencement of 16th century.

Giorgio Barbarelli, called Il Giorgione, born 1477; died 1511.

Followers of Giorgione.

- Sebastiano del Piombo, born 1512; died 1574.
- Jacobo Palma, called Palma Il Vecchio, painted 1550.
- Lorenzo Lotto of Bergamo, born 1490; died 1560.
- Pietro Luzzo, called Morto da Feltre, born 1468; died 1513.
- Rocco Marcone, living 1505.
- Paris Bordone, born 1500; died 1570.
- Giovanni Antonio Licinio da Pordenone, born 1484; died 1539.
- Bernardino Licinio, painted in the first half of 16th century.
- Giovanni Cariani of Bergamo, painted 1519.
- Giovanni Paolo dell' Olmo, painted in 16th century.

Tiziano Vecellio, born 1477; died 1576.

Followers of Titian.

- Bonifazio Veneziano, born 1494; died 1553.
- Orazio Vecellio, son of Titian, born 1540; died 1576.
- Francesco Vecellio, brother of Titian, born 1483; living 1551.
- Cesare Vecellio, younger brother of Titian, lived 1590 (the date of the Costumes).
- Marco Vecellio detto Marco di Tiziano, nephew of Titian, died 1611.
- Tizianello, son of Marco.
- Domenico Campagnola, painted 1543.
- Andrea Schiavone, born 1522; died 1582.
- Polidoro Veneziano, died 1565.
- Santo Zago, painted in 16th century.
- Alessandro Bonvicino, called Il Moretto of Brescia, painted 1516.
- Girolamo Savoldo, of Brescia, painted about 1540.
- Girolamo Romanino, of Brescia, born 1504; died 1566.
- Girolamo Dante detto di Tiziano, painted in 16th century.
- Damiano Mazza of Padua, 16th century.
- Alessandro Varottari, called Il Paduanino, born 1590; died 1650.

Jacopo Robusti, called Il Tintoretto, born 1512; died 1594.

Followers of Tintoretto.

- Domenico Tintoretto, his son, born 1562; died 1637.
- Marietta Tintoretto, his daughter, born 1560; died 1590.
- Palma Giovane, great nephew of Palma Vecchio, born 1544; died 1628.

REMARKS.

li Eredi di Paolo Veronese (the heirs
. Veronese), who completed the mas-
unfinished works and commissions,
rehend Benedetto, Carletto, and,
rding to Ridolfi, Gabrielle.

ncesco da Ponte, the father of
mo, born about 1475, died 1530,
d at Bassano, where some of his
exist, in a style resembling the earlier
r of Bellini.

ITALIAN SCHOOLS—*continued.*

VENETIAN SCHOOL from Giov. Bellini to the Followers of Bassano—*cont^d.*

REMARKS.

ITALIAN SCHOOLS—*continued.*

SCHOOL OF PADUA, allied by some of its Representatives to the Venetian School.

Giunto Padovano, or da Padua, is also called Justus. The only authentic specimen—being inscribed and dated—of this painter at present known, forms part of the Öttingen-Wallerstein Collection, now in the possession of His Royal Highness Prince Albert. (Kunstblatt 1841, No. 36.)

Giunto Padovano, born in Florence; painted 1367.

Giovanni Padovano, } His scholars.
Antonio Padovano, }

Guariento da Padua, painted about 1360.

D'Avanzo Veronese, painted 1376.

Altichieri da Zevio, painted 1376.

Giovanni Mireto, painted 1420.

Girolamo Mireto, painted 1441.

Squarcione, born 1394; died 1474.

Giacomo Bellini was father of Giovanni and Gentile Bellini.

According to Vasari, Andrea Mantegna married the daughter of Giacomo Bellini.

The less noted scholars of Squarcione were numerous; among them are Bono Ferrarese, Ansuino da Forlì, and Niccolo Pizzolo: all three assisted Mantegna in the frescoes of the Eremitani at Padua.

Marco Zoppo was also a scholar of Squarcione. (*See* School of Bologna.)

Giacomo Bellini (scholar of Gentile da Fabriano), born 1405; died 1470.

Andrea Mantegna, born 1431; died 1506.

Gregorio Schiavone, painted in 15th century.

Dario da Treviso, about the same period.

Francesco, son of Gentile da Fabriano, about the same period.

Antonio da Fabriano, about the same period.

Stefano da Ferrara, painted in the latter part of 15th century.

Melozzo da Forlì. (*See* School of Umbria).

} Scholars of Squarcione

Giulio Campagnola, painted in the commencement of 16th century.

The principal works of Girolamo da Treviso are in a church near Faenza; he is called Juniore to distinguish him from another of the name, less celebrated.

Bernardo Parentino, born 1437; died 1531.

Girolamo da Treviso, born 1508; died 1544.

Girolamo Padovano, painted in the middle of 16th century.

Gualtieri, about the same period.

Dario Varotari, of Verona (father of Il Paduanino), born 1539; died 15

Pietro Damino, born 1592; died 1631.

(Other painters, natives of Padua, have been enumerated among t painters of the Venetian School.)

SCHOOL OF VERONA, allied in its later Character to that of Venice.

Stefano da Zevio, painted in 15th century.

Turoni, living 1360.

Francesco Monsignore, born 1455; died 1519.

Liberale, born 1451; died 1536.

Girolamo dai Libri, born 1472; died 1555.

Francesco Il Vecchio and Francesco Il Giovane (the father and son of Girolamo dai Libri) were also distinguished by the surname "dai Libri."

Vittore Pisano, called Pisanello, celebrated also for his medals; living 14

Bartolommeo Montagna, of Vicenza, living 1500.

Benedetto Montagna, his brother.

Antonio Badili, born 1480; died 1560; he was the Master of Pac Veronese and Zelotti.

Giovanni Francesco Carotto, born 1470; died 1546.

Fra Giovanni da Verona, painted in the commencement of 16th century

Two Veronese painters named Morone are not to be confounded with Giovanni Battista Morone, of Bergamo, celebrated for his portraits. (*See* School of Bergamo.)

Francesco Morone, born 1474; died 1529.

Paoli Farinati. (*See* Venetian School.)

Alessandro Turchi, called l'Orbetto, born 1552; died 1648.

Nicolo Giolfino, painted in 16th century. The Master of Farinato.

Francesco Torbido, detto Il Moro; born about 1500; died 1581.

Giovanni Battista d'Angeli, detto del Moro, born about 1512. Scholar Francesco Il Moro.

Domenico Riccio, called Brusasorci, born 1494; died 1567.

Paolo Cavazzola, painted in 16th century.

(Later Veronese painters, not distinguished from the Venetian School

REMARKS.

ITALIAN SCHOOLS—*continued.*

SCHOOL OF BRESCIA, allied to that of VENICE.

Pietro Rosa, painted in 16th century; follower of Titian.

Pomponio Allegri, son of Correggio, born 1522.

Francesco Maria Rondani, born 1505; died about 1548.

Michael Angelo Anselmi, born 1491; died 1554.

Bernardino Gatti, called Il Sojaro, died 1475.

Giorgio Gandini, called Del Grano, died 1538.

Lelio Orsi da Novellara, born 1511; died 1587.

Federigo Baroccio, of Urbino, born 1528; died 1612.

} Followers of Correggio.

Ugo da Carpi is less celebrated as a ...ter than as the inventor of a mode of ...ting impressions in chiaro-scuro from ...eral wood blocks. His prints are chiefly ...n Raphael and Parmigianino.

Ugo da Carpi, born about 1486.

Girolamo da Carpi. (*See* School of Ferrara.)

Niccolo dell' Abate, of Modena. (*See* Bolognese School.)

Bartolommeo Schidone, born 1560; died 1616.

Giovanni Lanfranco, born 1581; died 1647; a native of Parma. First studied the works of Correggio; afterwards scholar to Annibale Carracci, in Rome.

Lodovico Lana, born 1597; died 1646.

Giovanni Paolo Pannini, born at Piacenzi 1691; died 1758. Painted chiefly Architectural Views.

SCHOOL OF NAPLES, from its Commencement to Giuseppe Ribera, called Lo Spagnoletto.

Tommaso degli Stefani, born 1231.

Filippo Tesauro, his scholar, born 1260.

Maestro Simone, painted in 14th century.

Stefanone, Francesco, } Di Maestro Simone, his scholars, latter part of 14th century.

Colantonio del Fiore, died 1444.

Antonio Solario, called Lo Zingaro, born 1382; died about 1455.

REMARKS.

Antonello da Messina is celebrated for having introduced the Flemish mode of oil painting into Italy. He repaired to Flanders to study the new method, in consequence of seeing at Naples a picture by J. Van Eyck. He ultimately settled in Venice, and influenced the earliest school of oil painters there.

Three scholars of Raphael—Andrea da Salerno, Francesco Penni, called Il Fattore, and Polidoro da Carravaggio—resided for a time in Naples, and, to a certain extent, influenced its school. Francesco Santafede and his son Fabrizio were followers of Andrea da Salerno, and Leonardo da Pistoja was among the scholars of Penni.

Lo Spagnoletto went to Naples when a boy, and remained chiefly in Italy. He is, however, claimed also by the Spanish School.

The followers of Pierino in Genoa were numerous, but in general of little note.

ITALIAN SCHOOLS—*continued.*

SCHOOL OF NAPLES, from its Commencement to Giuseppe Ribera—*continued*

Antonello da Messina, born about 1414; died about 1493.

Simone Papa, Il Vecchio, born about 1430; died 1488.

Pietro Donzelli, } Scholars of Lo Zingaro; painted in 15th century.
Ippolito Donzelli, }

Silvestro de' Buoni, about same period. Studied under Lo Zingaro and the Donzelli.

Antonio Amato, Il Vecchio, born 1475; died 1555; said to have been a scholar of Silvestro de' Buoni.

Andrea da Salerno. (*See* Roman School.)

Simone Papa, Il Giovane, born 1506; died 1569.

Giambernardo Lama, painted in 16th century.

SCHOOL OF NAPLES, from Giuseppe Ribera, called Lo Spagnoletto.

Giuseppe Ribera, called Lo Spagnoletto, born in Spain about 1589; died at Naples 1656.

Belisario Corenzio, born 1568; died 1643. Studied first at Venice under Tintoret.

Giambattista Caracciolo, born about 1580; died 1641.

Massimo Stanzioni, born 1585; died 1656. Scholar of Caracciolo.

Paolo Domenico Finoglia, died 1656. }
Giuseppe Marullo, died 1685. } Scholars of Massimo Stanzioni.
Andrea Vaccaro, born 1598; died 1670. }

Giovanni Mattia Preti, called Il Calabrese, born 1613; died 1699. (*See* Bolognese School.)

Aniello Falcone, born 1600; died 1666. Scholar of Lo Spagnoletto.

Salvator Rosa, born 1615; died 1673—History and Landscape. First studied with Lo Spagnoletto, and was afterwards a scholar of Aniello Falcone.

Pietro Novelli, called Monrealese, living 1660.

Domenico Gargiuoli, called Micco Spadaro, born 1612; died 1679—Landscape. Scholar of Aniello Falcone, and Salvator Rosa.

Bartolommeo Torreggiani, died about 1673—Landscape. Scholar of Rosa.

Luca Giordano, called Fra Presto, born 1632; died 1705.

Paolo de Matteis, born 1662; died 1728.

Francesco Solimene, detto L'Abbate Ciccio, born 1657; died 1747.

Sebastiano Conca, born 1676; died 1764.

Corrado Giaquinto, died 1675. Scholar of Solimene and Conca.

SCHOOL OF GENOA, from its Commencement to Giovanni Battista Paggi.

Giusto di Allemagna, painted in Genoa, 1451.

Lorenzo di Pavia, } Close of 15th century.
Donato di Pavia, }

Giovanni Massone. (*See* School of Parma.)

Carlo del Mantegna. (*See* School of Mantua.)

Pierino del Vaga. (*See* Roman School.) Formed a school at Genoa.

Luzio Romano, first half of 16th century. }
Lazzaro Calvi, 16th century. } Followers of Pierino del Vaga.
Pantaleo Calvi, his brother, died 1595. }

Antonio Semini, born 1455; living 1547. Follower of Perugino.

Andrea Semini, his son, born 1510; died 1578. Studied the works of Raphael.

Ottavio Semini, son of Antonio, born 1515; died 1604.

Giovanni Cambiaso, born 1495.

Luca Cambiaso, his son, born 1527; died 1585.

Cesare Corte, born 1554.

REMARKS.

About this time (the close of the 16th d beginning of the 17th century) the enoese School was much influenced by eign painters, and among the rest by ubens and Vandyck.

Not to be confounded with Ippolito lantini, born 1627, died 1706, also led Il Prete Genovese.

Tutilo painted a picture of the image of Virgin, long revered at Metz. He is posed by Lessing to be the Theophilus esbyter, who wrote the Latin treatise painting, "De omni Scientiâ Artis gendi."

The convents of Germany afford other mples of skilful artists; but the earliest dence of a school in Germany is the ntion of the painters of Cologne in "Parcival" of Wolfram of Eschen-h.

The works of this school, to be seen efly at Cologne and Munich, are all in pera, and generally upon gold grounds on panel, and are remarkable for bril-nt colouring, and careful detail; the wing is mannered and angular.

Painting was encouraged also very early Prague in Bohemia by the Emperor arles IV. 1346-78.

ITALIAN SCHOOLS—*continued.*

SCHOOL OF GENOA, from Giovanni Battista Paggi.

Giovanni Battista Paggi, born 1554; died 1629. Studied the works of Cigoli and Baroccio. Writer on Art.

Domenico Fiasella, called Il Sarzana, born 1589; died 1669.

Bernardo Castelli, born 1557; died 1629.

Valerio Castelli, his son, born 1625; died 1659.

Giovanni Battista Carlone, born 1594; died 1680.

Andrea Carlone, his son, born 1639; died 1697.

Giovanni Andrea Ansaldo, born 1584; died 1638.

Bernardo Strozzi, called Il Cappuccino, also Il Prete Genovese, born 1581; died 1644.

Giovanni Benedetto Castiglione, born 1616; died 1670.

Giovanni Battista Gauli, called Baciccio, born 1639; died 1709.

Domenico Piola, born 1628; died 1703.

Domenico Parodi, born 1668.

Padre Andrea Pozzi, born 1642; died 1709.

Claudio Beaumont, born at Turin, 1694; died 1766.

GERMAN SCHOOLS.

EARLY PAINTERS OF THE MIDDLE AGES.

Alfred and Ariram, two Bavarian monks, painted in the palace of the Emperor Arnulph, at Regensburg, A. D. 887-899.

Tutilo, or Tuotilo, and Notker, painted in the convent of St. Gall, Switzerland, 891-921.

Ellinger, Abbot of Tegernsee, living 1017-1048.

Conrad, a monk of the convent of Scheyern, living about 1250.

THE OLD SCHOOL OF COLOGNE, or of the Lower Rhine.

14th Century.

Meister Wilhelm (of Herle), painted 1370-1388.

Meister Stephan (painter of the Dom-bild at Cologne), painted 1410.

Israel van Meckenen, painted 1482; died 1503.

Meister Christoph (Peter Christophsen?), painted 1471.

Zuan Alemanno, painted 1440.

Jarenus of Soest, in Westphalia, painted about 1500.

BOHEMIA.

Thomas von Mutina, at Prague, living about 1250-1297.

Niclaus Wurmser, of Strasburg, painted in 14th Century.

Kunze, of Prague, about the same period.

Theodorich, of Prague, about the same period.

SCHOOL OF ULM AND COLMAR.

15th Century.

Early Masters, but of whom scarcely any Works are known.

Beham, about 1450.

Jacob, Peter, and Hans Acker, 15th Century.

Lindenmayer, painted about 1450.

Stocker, about the same period.

Lucas Knechtelmann, about the same period.

Lucas Moser, about the same period.

REMARKS.

Martin, called by the Italians Martino d'Anversa, was the pupil of Rogier van der Weyden, and is the head of the old school of Colmar.

GERMAN SCHOOLS—*continued.*

School of Ulm and Colmar—15th Century—*continued.*

Martin Schoen, the elder, Ulm, living 1394–1416.

Barthel Schoen, the elder, Ulm, living 1429–1440.

Martin Schoen, or Schongauer, born about 1420; painted in Ulm, 1441; in Colmar, 1470; died 1488.

Ludwig Fries, Ulm; died about 1499.

Barthel Schoen, the younger, Ulm, living 1471.

Hans Schoen, Ulm, living 1498–1514.

Ludwig Schongauer, Ulm, living 1480–1491; Colmar, 1493 (sometimes called Ludwig Fries, the younger).

} Brothers of Martin Schongauer.

Friedrich Herlin, of Nordlingen, painted 1455; died 1491.

Bartolomäus Zeitbloom, Ulm, living 1468–1517.

Martin Schaffner, of Ulm, living 1508–1539.

Hans Largkmaier, painted 1483.

EARLY SCHOOL OF NÜRNBERG.—FRANCONIA.

15th Century.

Michael Wohlgemuth, born 1434; died 1519. (The Master of Albrecht Dürer).

Jacob Walch, died about 1500.

Martin Zagel, painted 1503.

Matthäus Grünewald, Asschaffenburg, born 1450; died 1510.

Gabriel Mächselkircher, Munich, painted 1470.

Ulrich Füterer, Landshut, painted 1480.

Hans von Olmdorf, painted 1490.

Hans Baldung Grün (Upper Rhine School), born at Gmünd, in Swabia, about 1470; died 1545.

Melchior Feselen, died 1538—Battle painter.

Bartolomäus de Bruyn, painted 1520–1550.

Hans von Mehlem, painted 1530.

Hans Schöpfer, painted 1569.

SAXONY.

Allied in character to the School of Nürnberg is that of the Cranachs, established in Saxony, but of inconsiderable influence.

Johann Raphon, born 1499; died 1508.

Lucas Sunder, commonly called, from his birth-place, Cranach, born 1472; died 1553.

Lucas Cranach, the younger, his son, born 1515; died 1586.

SCHOOL OF AUGSBURG.—SWABIA.

16th Century.

Thomas Burgkmaier, died 1523.

Hans Burgkmaier, his son, Augsburg, born 1472; died 1559.

Lukas Cromburger, scholar of Thomas Burgkmaier.

Ludwig Schongauer, painted in Augsburg, 1486.

Hans Holbein, the grandfather, painted 1459–1499.

Hans Holbein, the father, born 1450; living 1507.

Sigmund Holbein, his brother, born 1456; died about 1540.

Hans Holbein, the younger, born 1498; died 1554.

Johannes Herbst, of Strasburg, born 1468.

Christopher Amberger, born at Nürnberg about 1490; died about 1568.

Matthäus Kager, born 1566; died 1634.

THE UPPER RHINE.

Basel.

16th Century.

Hans and Sigmund Holbein, about 1507. (*See* Augsburg School.)

Ambrosius Holbein, born 1484.

REMARKS.

If we except the very earliest period, the tory of Art in Germany does not exhibit se peculiar local developments which find in Italy. And from the time of bert Durer, or rather from the esta- shment of the Italian influence in Ger- ny, a very uniform expression of nting prevailed throughout the Empire. e Emperors, or the wealthier electoral nces, generally attracted the chief ta- t of the country to their courts from all ts, not only of Germany, but from Netherlands and from Italy.

Hans Asper, Zurich, born 1499; died 1571.
Herri de Bles, painted 1510. (*See* Flemish School.)

Strasburg.

14th Century.

Niclaus Wurmser, painted about 1350.

15th Century.

Johannes Herbst, or Hirtz, born 1468.
Hans Memling (Flemish), painted 1475.
Hans Baldung Grün. (*See* School of Nürnberg.)

THE GERMAN SCHOOL.

Albrecht Dürer and his Followers.

15th and 16th Centuries.

Albrecht Dürer, Nürnberg, born 1471; died 1528.

Followers of Albrecht Dürer.

Heinrich Aldegrever, Soest, painted 1522–1562.
Hans Scheuffelein, died about 1540.
Barthel Beham, died 1540.
Hans Sebald Beham (his brother), died 1530.
Albrecht Altdorfer, born 1488; died 1548. (Called by the French, with reference to his engravings, le Petit Albert.)
Jost Amman, Zurich, born 1539; died 1591.
Hans von Kulmbach, painted 1513; died about 1545.
Jacob Bink, born about 1504.
Georg Pentz, born about 1500; died 1550.
Hans Springinklee, died about 1540.
Hans Grimmer, died about 1570.
Hans Christian Ruprecht, born about 1600; died 1654.

16th Century.

The Influence of Italy.

Johann von Calcar, born 1500; died 1546.
Georg Pentz, born about 1500; died 1550. Follower of Albert Durer, and subsequently in Italy attached to the School of Raphael.
Hans Mielichs, born 1515; died 1572. Copied Michael Angelo.
Christopher Schwartz, born 1550; died 1597 (Munich).
Niclaus Lucidel (called Neufchatel), painted 1561; died about 1600.
Johann van Aachen, born 1553; died 1615.
Joseph Heintz (his scholar), born 1560; died 1604.
Johann Rottenhammer, born 1564; died 1622. Scholar of Tintoretto.
Adam Elzheimer, born 1574; died 1620.
Johann Georg Fischer, born 1580; died 1643.

LATER GERMAN SCHOOL

17th Century.

Carl Screta, born 1604; died 1674 (Prague.)
Joachim von Sandrart, born 1606; died 1688. Scholar of Honthorst.
Matthäus Merian the younger (his scholar), born 1621; died 1687.
Johann Heinrich Schönfeld, born 1609; died about 1675.
Christoph Storer, born 1611; died 1671. Scholar of Ercole Procaccini.

Johann Franz Ermels, born 1641; died 1693—Landscape.
Philip Roos (Rosa di Tivoli), born 1655; died 1705—Landscape.
F. W. Tamm, called Dapper, born 1658; died 1724—Dead game, &c.
Christian Bernetz, born 1658; died 1722—Flowers.

18th Century.

Peter Caulitz, died 1719—Game, &c.
Christian Reder, died 1729—Battle.
Joachim Franz Beich, born 1665; died 1748—Landscape.
Georg Philip Rugendas, born 1666; died 1752—Battle.
Johann Alexander Thiele, born 1685; died 1752—Landscape.
Johann Elias Riedinger, born 1695; died 1767—Animals.
August Querfurth, born 1696; died 1761—Animals.
Johann B. Haelszel, born 1710; died 1776—Flowers.
Christian Georg Schütz, born 1718; died 1792—Landscape.
Franz Schütz, his son, born 1751; died 1781—Landscape.
Christian Georg Schütz, the younger, born 1758; died 1823—Landscape.
Daniel Nic. Chodowiecky, born 1726; died 1801—Genre.
Johann F. Pascha Weitsch, born 1723; died 1803.
Jacob Philipp Hackert, born 1737; died 1807—Landscape.
Ferdinand Kobell, born 1740; died 1799—Landscape.

19th Century.

Joseph Anton Koch, born 1768; died 1839—Landscape.
Karl von Kügelgen, born 1772; died 1832—Landscape.
Max Joseph Wagenbauer, born 1774; died 1829—Cattle.
Dominicus Quaglio, born 1787; died 1836—Architecture.
Dietrich Monten, born 1799; died 1843—Battle.
Carl Philipp Fohr, born 1798; died 1818—Landscape.

THE SCHOOLS OF THE NETHERLANDS.

THE EARLY FLEMISH SCHOOL.

The Brothers VAN EYCK, and their Followers, at Bruges.

Hubert van Eyck, born about 1366; died 1426.
Johann van Eyck, born about 1390; died 1441.
Lambert van Eyck, painted 1445.
Margaretha van Eyck (their sister), painted about 1420.

SCHOOL OF THE VAN EYCKS.

Peter Christophsen, painted 1417–1449.
Gaeraert van der Meire, painted 1447.
Rogier van der Weyden, of Brussels, born about 1401; died 1464, (the same as Meister Rogel, and Rogier van Bruges, called also Rogerius de Salice).
Goswin van der Weyden, living 1535.
Hans Memling, painted 1450–1499; died in Spain about 1506.
Livin van Antwerpen—Architecture. } His scholars.
Gerhard van Ghent—Miniature. }
Antonello da Messina, painted 1450.
Albert van Ouwater (of Haerlem), living 1467; contemporary with John van Eyck. (Founded the old Dutch School; introduced oil painting into Holland.)
Gerhard van Haerlem, his scholar.

ere is a great affinity between this ol and that of Cologne, which was little anterior to it; but the whole ical conditions of the art were changed ne Van Eycks, about 1410, by the itution of oleo-resinous varnish in the of tempera, as the vehicle of painting. y painters, however, continued to te their pictures in tempera after change, owing partly to want of ledge of the exact method of the Eycks, and partly perhaps to pre- ce.

the titles of schools which follow, e Dutch and Flemish Schools" and e Schools of the Netherlands" are to nsidered synonymous.

REMARKS.

THE SCHOOLS OF THE NETHERLANDS—*continued.*

THE OLD FLEMISH SCHOOL OF BRUGES.

Dirck van Haerlem (Stuerbout), born 1410; died 1470. (Called by Vas Diric da Lovanio).

Lieven de Witte (Livieno d'Anversa), painted in the first half of 1 century—Architecture, &c.

Hugo van der Goes, painted 1467–1480.

Jeronymus Bosch, painted 1450–1500.

Justus van Ghent, painted 1474.

Anton Claessens, the elder, painted 1498.

Quintin Metsys, Antwerp, born 1450; died 1529.

Cornelis Engelbrechtsen, born at Leyden 1468; died 1533.

Aert Claessens, born 1498; died 1564.

Lucas van Leyden, born 1494; died 1533.

Hendrik de Bles, called by the Italians, Civetta, born 1480; died 155

Jan de Mabuse (Gossaert), painted 1490; died 1532. (Signed hims Joannes Malbodius.)

DUTCH AND FLEMISH SCHOOLS of the 16th Century.

The Influence of Italy, from Jan Schoorel and Floris to Rubens a Rembrandt.

Jan de Mabuse (died 1532) may be considered to belong to both this a the previous period. His scholar Schoorel, who visited Italy, was the f to adopt the Italian style.

Schoorel was one of the first who treated landscape as an accessory, with success. He studied at Venice and Rome. He visited the latter city shortly after Raphael's death in 1520.

Jan van Schoorel (Haerlem and Utrecht), born 1495; died 1562.

Antonio Moro (Sir Anthony More), born 1525; died 1581. } Scholars o

Jan Swart, painted in the first half of 16th century. } Schoore

Bernard van Orley (Brussels), painted 1500–1550; studied Raphael.

Michael Coxsie (his scholar), born 1497; died 1570.

Lambert Lombardus (L. Sustermans), born 1506; died 1560.

Martin van Hemskerck (Van Veen), born 1498; died 1574.

Frans Floris (called the Flemish Raphael), born 1520; died 1570.

Jan Metsys, painted 1540–1563.

Jacques de Bakker (Antwerp), painted 1530–1560.

Lancelot Blondel, painted 1530–1560.

Joost van Cleef, born about 1500; died 1536.

Jan van Hemmeson, painted 1537–1568.

Willem Key, died 1568.

Lucas de Heere, born 1534; died 1584

Marten de Vos, born 1520; died 1604.

Jan Mostaert (Haerlem), born 1499; died 1555.

Frans Mostaert, born about 1520; died 1601.

Joachim Patenier (Dinant), painted 1520–1535.

Pieter Aertsen, born 1507; died 1573.

Jan Swart (Groeningen), painted 1525.

Adrian de Weerdt (Brussels), died 1570.

Nicolas Lucidel, painted 1561; died about 1600. (*See* German Schoo

Antoni van Monfort, called Blocklant, born 1532; died 1583.

Frans Pourbus, the elder, born 1540; died 1580.

REMARKS.

Those qualities which distinguish Dutch and Flemish Art in the 17th century, have been its general characteristics throughout, down to the present time. The subjective styles of Rubens and Rembrandt are exceptional. The works of all subsequent masters who are characteristic of these schools, amount to little more than a variety of more or less exact examples of the same essential development of Art —Imitation.

In such a classification of masters as the present, the most prominent only of any given period can be selected. Of the remoter periods the list is more complete, as almost every name preserved to posterity, in the earlier stages of the development of an art, is of historic importance. Subsequent, however, to Rubens and Rembrandt, painters became so numerous in the Netherlands, that only the more conspicuous, comparatively few, have been selected, such as appear to constitute the chief representatives of the various art developments of these schools: otherwise, the works of many of the artists omitted might, in the absence of more characteristic specimens, worthily occupy a place in a comprehensive gallery of pictures.

Cornelius Huysman, born 1648; died 1727.

REMARKS.

The French School of Painting was, til the latter part of the 18th century, all respects a branch of the schools of aly. Its more mature development com- ences with the close of the 16th cen- ry, and is due to the efforts of Francis I., o employed many distinguished Italian inters in the decoration of the then new lace of Fontainebleau. The works execu- l in this palace by Il Rosso, Primaticcio, d Niccolo del' Abate, were the imme- ate examples to which the art owed its dden development in France.

The Mediæval Art, such as is exhibited old Byzantine works and in illumi- ted MSS., flourished in France as else- here. Glass painting and enamel paint- g appear, indeed, to have there sur- ssed the average character of those anches of art in other parts of Europe.

Some of the glass paintings of the Abbot ger of St. Denis, of the 12th century, e still preserved; and the enamels of moges were celebrated even in the time St. Louis.

REMARKS.

Lesueur, the ablest of the French painters of the 17th century, had no influence on the Art of his time: the predominant religious sentiment in his works was little in accordance with the luxurious magnificence of an ostentatious Court; he was obscure, in comparison with his less able though more fortunate rival, Lebrun, whose Art was the truer exponent of the spirit of his age. Posterity has reversed the judgment. There is great vigour, but little real taste, and less refinement of sentiment, in the works of Lebrun: war and tumult are the elements of his style.

THE FRENCH SCHOOL—*continued.*

17th Century—*continued.*

Jean-Baptiste Mola, born 1600; died 1670. Scholar of Albani, in Italy.

Jacques Callot, born 1593; died 1635.

Eustache Lesueur, born 1617; died 1655. (Called the French Raphael.) Scholar of Vouet.

Nicolas Colombel, born 1646; died 1717. Scholar of Lesueur.

Laurent de Lahire, born 1606; died 1656.

Claude Vignon, born 1590; died 1673.

Michel Dorigny, born 1617; died 1665. Scholar of Vouet.

Louis Dorigny, his son, born 1654; died 1742. Scholar of Lebrun.

Claude Gelée le Lorrain, born 1600; died 1682—Landscape. Acquired his art at Rome, with Agostino Tassi, a scholar of Paul Bril.—(Roman School.)

Sebastien Bourdon, born 1616; died 1671—Painted History and Landscape.

Charles Alphonse Dufresnoy, born 1611; died 1685. Writer on Art.

Charles Lebrun, born 1619; died 1690.

Pierre Mignard, born 1610; died 1695. (Called Mignard the Roman, to distinguish him from his brother, called Mignard d'Avignon).

Scholars of Vouet.

Nicholas Mignard, D'Avignon, born 1608; died 1668.

Philippe de Champagne, born 1602; died 1674; a native of Brussels; classed also in the Flemish School. (*See* Schools of the Netherlands).

Jean-Baptiste Champagne, born at Brussels 1657; died 1693.

Louis Testelin, born 1615; died 1655. Scholar of Vouet.

Thomas Blanchet, born 1617; died 1689.

Claude Audran, born 1638; died 1684.

René-Antoine Houasse, born 1645; died 1707.

François Verdier, born 1691; died 1730.

Scholars of Lebrun.

Nicolas Loir, born 1624; died 1679.

Robert Nanteuil, born 1630; died 1678.

Paris Corneille, born 1603; died 1664.

Michel Corneille, born 1642; died 1708.

Jean-Baptiste Corneille, born 1646; died 1695.

Sons of Paris Corneille.

Jacques Courtois, called Le Bourguignon, born 1621; died 1676—Battle painter.

Joseph Parrocel, born 1648; died 1674—Battle painter.

} Scholars of Boucher.
Jean-Baptiste Vanloo, born 1684; died 1746.
Charles André Vanloo, his brother; born 1705; died 1765.
Jean Denys Attiret, born 1702; died at Pekin, 1768.
Louis-Michel Vanloo, son of Jean Baptiste; born 1707; died 1771.
Pierre-Charles Tremolière, born 1703; died 1739.
Louis Jean François Lagrenée, born 1724; died 1805.
Michel-François d'André Bardon, born 1700; died 1783.
Claude Joseph Vernet, born 1714; died 1789—Landscape and Marine.
Jean-Baptiste-Siméon Chardin, born 1699; died 1780—Genre.
Jean-Baptiste Greuze, born 1726; died 1805—Genre. (Sometimes called the French Hogarth.)
Maurice-Quantin Latour, born 1705; died 1788.
Jean-Baptiste-Marie Pierre, born 1715; died 1789.
Jean-Jacques Bachelier, born 1724; died 1805—Fruit and Flowers.

(*continued*)

REMARKS.

Vien, considered the regenerator of painting in France, revived the art from the vapid insipidity to which it had been reduced by Vanloo and Boucher, by an earnest substitution of the study of Nature and the Antique, in the place of fashion and affectation.

The principles of Vien were carried to an extreme, or rather were only partially developed by David and his followers. The School of David, distinctively characterised by the influence of the Antique, exhibited this element so exclusively, and to such excess, as to amount to an abuse of the ideal of form.

François Gerard, born 1770; died 1837.
Pierre Narcisse Guerin, born 1774; died 1833.
Jean Louis Gericault, born 1790; died 1824. Scholar of Guerin.
Mathieu Cochereau, born 1793; died 1817.
Martin Drolling, born 1752; died 1817—Genre.
Pierre Paul Prudhon, born 1760; died 1823.
Achille Etna Michallon, born 1797; died 1822—Landscape.
Leopold Robert, born 1793; died 1835—Genre.
Clement Boulanger, died 1843.

THE SPANISH SCHOOLS.

The Spanish Schools of Painting appear to be of the more recently established in Europe. They have a close connexion, historically and æsthetically, with the Schools of Italy, more especially those of Venice and Naples. The earliest development, however, of painting in Spain seems due to the immigration of Flemish artists.

The principal works undertaken in Spain date from the time of Philip II.; these were, for the most part, executed by Italians, and nearly all the earlier great Spanish painters of repute studied some time in Italy.

The Spanish painters have been classified generally into three principal Schools, those of Madrid, Seville, and Valencia; but these distinctions are as much local as characteristic.

EARLY PAINTERS.

13th Century.

Rodrigo Esteban, painted 1291. (Castille.)

14th Century.

Juan Cesilles, painted 1382. (Catalonia.)
Ferrand Gonzalez, painted 1399. (Toledo.)

15th Century.

Gherardo Starnina, Dello, } of Florence, about 1420.
Maestro Rogel (Rogier van der Weyden?) 1445.
Juan Flamenco (Hans Memling?) painted, 1496–1499. } *See* Flemish School.
Maestro Jorge Ingles, painted 1455.
Pedro Sanchez, painted 1462. (Seville.)
Juan Rodriguez, called Garcia del Barco, painted, 1476, in fresco, the Castle of Barco d'Avila, belonging to the Duke of Alba.

These were decorators, who adorned the Palace of the Duke of Alba with Arabesques (obra Morisca).

Santos Cruz, painted 1483. (Avila.)

These painters of the 15th century belong to what may be termed the Gothic period of Spanish Art.

THE SCHOOL OF TOLEDO.

15th Century.

Juan Alfon, painted 1418.
Diego Lopez.
Martel.
Pedro Berruguete. } Painted 1483.
Alonzo Sanchez.
Juan Gonzalez Becerril.
Luis de Medina. } Painted 1498.
Alvar Perez de Villoldo, painted 1499.

18th Century.

Antonio Villadomat, born at Barcelona, 1678; died 1755—Painted History, Genre, Battles, and Landscape.
Fray Antonio de Villanueva, born 1714; died 1785.

THE ENGLISH SCHOOL.

EARLY PAINTERS IN ENGLAND.

The native school of England is of comparatively very recent date. The art of painting, however, seems to have been advanced, during the early middle ages, as far in this country as in any other in Europe; but its maturer development was very much retarded by the iconoclastic spirit engendered by the Reformation.

16th Century.

Jan Mabuse, painted in England about 1498; died 1532. (*See* Schools of the Netherlands.)
Lucas Cornelisz, born about 1495; died 1552.
Hans Holbein, the younger, born 1498; died in London, 1554; settled in England, 1526. (*See* Augsburg and Upper Rhine Schools.)
John Bossam, painted in the reign of Edward VI.
Sir Anthony More, of Utrecht, born 1525; died 1581. Scholar of Schoorel. (*See* Schools of the Netherlands.)

REMARKS.

What the Italian painters did immediately in Spain and France, was done by Flemish and German masters in England; the Art of Italy, however, operating mediately in this country.

We have very scanty records of English artists of consequence previous to the reign of Charles I., and then of portrait painters only. All important works anterior to Charles were executed by foreigners; also, during and subsequent to the reign of that monarch, foreign artists almost engrossed the higher patronage. The genuine English School commences with the 18th century, and Sir Joshua Reynolds is considered its founder, as regards its distinctive character.

On 24th April 1613, Norgate was paid 10 *l.* for writing in gold and limning (illuminating) certain letters from James I. to the Shah of Persia.

Appendix, No. XIX.

LETTER from Quarter-master General *Freeth* to Colonel *Mure*, M.P., Chairman. Appendix, No. XIX.

Sir, Horse Guards, 7 July 1853.

WITH reference to your letter of the 24th ultimo, addressed to the General Commanding in Chief, relative to the "project of rebuilding the National Gallery upon a more extended plan, which there is little doubt would render it necessary to place at the disposal of the architect the sites of the present barrack, and the workhouse immediately adjoining it," I am commanded by his Lordship to acquaint you that, in his view of the matter, so far as regards the quartering of the troops, it would be impossible to relinquish the barrack:

1. Because the London duties cannot be performed without the accommodation it affords; more especially as the Portman-street barrack is about to be given up, the lease having nearly expired, and it having been found impossible to procure a convenient site upon which another can be constructed.

2. That the present barrack is most conveniently situated, both for the troops it will contain, and for the assembly of others, with free egress to the open space of Trafalgar-square, the Park, the Horse Guards, and the Houses of Parliament, and near to the locality of their duties. It has also proved, in periods of public commotion, of the most important service, being the only barrack at the West End (with the exception of that in St. James's Park, near to the Royal Palace) from which troops may be speedily moved in any direction through the spacious thoroughfares uniting in Trafalgar-square.

3. That no barrack, not combining these advantages, would be eligible for the purposes required; and the necessity of troops on that spot has been proved from the occupation of the late Royal Mews by the military for many years (even in their dilapidated state), previously to the erection of the National Gallery on the site on which they formerly stood.

App., No. XIX.

4. The want of accommodation near to the duties of the troops, obliges the military authorities to place a battalion in St. John's Wood, Kensington, and other small barracks, from whence it is a march of upwards of three miles to their guards, exposed in all weather, and commencing their duties in wet clothes; all manifestly tending to the injury of the health of the troops.

Under all these circumstances Viscount Hardinge cannot assent to the loss of a barrack of such importance, unless another is constructed on nearly the same site, having entrance and egress under the National Gallery, as now existing, with a sufficient parade and all the necessary appurtenances, together with a free carriage communication in the rear, for the reception of supplies, and the passage of baggage-wagons.

I have, &c.
(signed) *J. Freeth,*
Quartermaster-General.

Appendix, No. XX.

Appendix, No. XX.

PAPERS referred to in Mr. *Spence*'s Evidence.

Appunti per la Collocazione dei Quadri e Statue nella Galleria di Firenze.

Nei corridori sono collocati i quadri per ordine cronologico, ed a intervalli sono statue e busti; solamente però da una parete, mentre dall' altra sono le finestre per dar la luce, e sarà bene che queste finestre sieno cinque braccia alte da terra ed in forma di lunetta.

Il colore delle pareti è di color grigio chiaro, e dove campiscono statue sarà più scuro, color di pietra. I soffitti sono a spartimenti, dipinti sul gusto delle grottesche alla Raffaella.

I corridori possono contenere quadri di maggior grandezza, meno che se fossero Capi d' Opera, da meritare un gabbinetto.

I gabbinetti che contengono i quadri delle diverse scuole non sono molto grandi, come si può vedere dalla pianta, e la luce viene dalle lanterne nel mezzo; ma ove non si potessero praticare queste lanterne, sarà pure una luce buonissima facendo delle lunette, o a due, o ai quattro lati della stanza.

Il colore del parato dei gabbinetti sarà sempre preferibile il rosso di seta, specialmente per i quadri da vedersi in distanza. Però per i quadri piccolissimi e finiti della scuola Fiamminga e Olandese è più preferibile il color verde scuro, e la luce, non quella delle lanterne, ma di finestre grandi, e non tanto alte; e quei quadri che resteranno lontani dalle finestre, specialmente i paesi o vedute, sarà ben fatto che sieno bilicati, o impernati da una parte per potersi girare a piacere verso la luce.

Il modo preferibile di attaccare i quadri è il seguente come il più comodo.

Una catena di ferro a bastone che circondi in alto tutta la stanza e sostenuta da forti ganci, No. 1.

A questa catena sono attaccati in modo da scorrere dei ferri piani, ove a questi con delle viti, fatte a borchia, ed aventi un gancio per appendere il quadro, è da abbassarlo ed alzarlo a piacere, No. 2.

Il numero degl' impiegati nella Galleria di Firenze è di 18 o 20.

Un Direttore, un Segretario, due Commessi, un' Archivista, un' Antiquario, un Conservatore di disegni e stampe, ed un Ristauratore.

Due Ispettori consegnatari, due Custodi e No. 6 Guardie.

Tanto i Custodi che le guardie sono persone che hanno fatta o conoscono qualche arte manuale, come legniajoli, tappezzieri, formatori, rintelatori di quadri, muratori, &c.; e la Direzione presceglie questi artigiani perche possino fare dei lavori, che possono di continuo occorrere alla Galleria.

La Galleria si spazza generalmente una volta per settimana, e più spesso se occorre, e si fa nelle ore avanti di aprirla.

I quadri si spolverano con i pennacchi di penne di struzzo, e di penne di cappone, e le statue e le cornici con le code di volpe.

N° 867. Ordered, by The House of Commons, to be Printed, 4th August, 1853.

Henry Hansard, Printer.

Some further PARTICULARS respecting the Arrangement of Pictures and Statues in the Florentine Gallery of the Uffizii (communicated to the Committee of the National Gallery by *W. B. Spence*, from the Direction of the Florentine Galleries). Appendix, No. XX

IN the long corridors, the paintings are arranged in chronological order, and at certain intervals are placed statues and busts. This, however, can only be effected on one side, as on the other are the windows which give light to the gallery; and we (the Direction) should advise that these windows should be about eight feet from the ground, and of a semicircular shape.

The colour of the walls is of a light grey, and where the statues are placed, the background is somewhat darker. The ceilings are divided into compartments, and painted *alla Raffaella*. The corridors may contain pictures of the largest size, excepting those of the highest order (*capi d' opera*), which are to be placed in the cabinets.

The cabinets, which contain pictures of different schools, are not very large, as may be seen from the plan, and the light is generally obtained from a skylight in the centre; but where such a skylight cannot easily be made, semicircular windows, at a certain height, either from two or four sides of the room, would answer equally well.

As regards the colour of the walls of the rooms or cabinets, red silk will be found to be the best, especially where there are pictures of a large size, though we have found that in the smaller rooms, which contain highly finished Dutch and Flemish pictures, dark green silk is preferable. It is also requisite that the light for these small pictures should come from side windows, which may be broad, but not too high, and not from a central skylight. Those pictures which are placed at a distance from the window should be made to turn on a pivot.

The method of hanging pictures in our gallery is the following:

A rod of iron which goes round the top of the room, and which is firmly secured, as in No. 1.

To this rod are attached flat iron bands reaching to the depth required; these are moveable, and by means of a screw having a hook attached to hang the picture on, the paintings may be hung high or low, as occasion may require, as in No. 2.

The number of employés in the Gallery of Florence is 18 or 20.

A director, a secretary, two under secretaries or clerks, a keeper of the archives, an antiquary, a keeper of drawings and prints, a restorer, two head inspectors, two keepers, and six under inspectors or guards.

The keepers and guards are all acquainted with some manual art or trade, as carpenters, picture-liners, masons, &c., and are employed in the galleries in repairing, &c., when their services are necessary.

The gallery is swept once a week, and oftener if it be requisite; this is done before it is open to the public. The pictures are dusted with bunches of ostriches' feathers, and the statues and picture frames with dusters made of the tails of foxes.

Appendix, No. XXI.

App., No. XXI.

COPY of the CORRESPONDENCE regarding the Conditions on which the Lands at *Kensington Gore* are held by the Commissioners of the Great Exhibition of 1851.

Sir, Treasury Chambers, 15 February 1853.

THE Lords Commissioners of Her Majesty's Treasury having had under their consideration the arrangements to be made between the Royal Commissioners of the Exhibition of 1851 and this Board, in relation to the purchases of land for carrying out the plan suggested in their Second Report, preparatory to the issues which will have to be made out of the grant of Parliament in aid of those purchases, I have it in command from their Lordships to transmit to you a copy of a minute which has this day passed their Lordships' Board on the subject, with their request that you will submit it to the Royal Commissioners, and communicate to me, for their Lordships' information, any observations which the Royal Commissioners may desire to make thereon.

I remain, &c.

Edgar A. Bowring, Esq. (signed) *C. E. Trevelyan.*

App., No. XXI.

COPY of a TREASURY MINUTE, dated 15th February 1853.

My Lords read the Second Report of the Royal Commissioners for the Exhibition of 1851, and advert to that part thereof in which the Commissioners refer to their resolution authorising the outlay of a sum not exceeding 150,000 *l.* of the Surplus Fund at their disposal in the purchase of land (including their first purchase), upon the condition that Her Majesty's Government would engage to recommend to Parliament the contribution of a sum of like amount towards the purchases contemplated in their Report, either for account of the Royal Commissioners, or for the joint account of the Commissioners and the Government, or for division between them, as might afterwards be determined.

My Lords read also the Resolution of the House of Commons, dated the 7th December 1852, that a sum not exceeding 150,000 *l.* be granted to Her Majesty towards defraying, in the year 1852-53, the purchase of land at Kensington Gore for institutions connected with science and art, in aid of the funds already contributed thereto by Her Majesty's Commissioners for the Exhibition of 1851.

The Chancellor of the Exchequer states to the Board that the Royal Commissioners have entered into further arrangements for the purchase of land, on the faith of the understanding that such a grant as that made by the House of Commons would be recommended to Parliament; and as the period is now rapidly approaching when some part of this grant will be absolutely required to complete the purchases in question, it has become necessary to settle the terms and arrangements under which such issues shall be made to the Commissioners, so as, on the one hand, to enable the Commissioners to pay the purchase money, and, on the other, to secure for the Crown that superintendence and control which is always necessary when moneys are granted by Parliament for public purposes.

Mr. Gladstone informs their Lordships that he has been in personal communication with the Royal Commissioners on the subject, and he suggests that an arrangement of the following nature should be submitted to them for their consideration. If the Royal Commissioners shall concur therein, and shall express to this Board their readiness to adopt and act thereon, then Mr. Gladstone is of opinion that such sums might properly be issued from time to time, not exceeding on the whole 150,000 *l.*, as may be necessary to enable the Royal Commissioners to pay for such lands as shall be purchased to carry out the plan and arrangements contemplated in their Second Report.

It appears to the Chancellor of the Exchequer that, in order to secure that unity of action which it is highly desirable to maintain over property purchased from various different parties, but intended to be applied to kindred objects, the legal title to the whole should be vested in the Commissioners to whom the lands already purchased have been conveyed; but he suggests at the same time that, for the purpose of securing to the Crown the right of general superintendence, it should be distinctly understood that the Commissioners should hold the whole of such purchases, as well those already made as those to be made hereafter, subject to such directions of appropriation as shall from time to time be issued by this Board in respect to such part, not exceeding one moiety, as shall, by agreement between this Board and the Royal Commissioners, be set apart for such institutions connected with science and art, as are more immediately dependent upon, and supported by the Government from funds voted by Parliament; and subject also, with respect to the other part thereof, to such general superintendence by the Lords of the Treasury as may be necessary to secure that the appropriation proposed to be made, and all the arrangements in relation thereto as regards buildings to be erected thereon, shall be in conformity with some general plan, which shall be adopted as applicable to all parts of the property, whether such buildings shall be erected from public moneys, or by private subscription.

On the other hand, Mr. Gladstone thinks it should be understood that no buildings shall be erected at the public expense on any portion of the property, the whole of which will have been acquired for the public by the joint contribution, in equal moieties, of Parliament on the one hand, and of the Royal Commissioners on the other, without first giving to the Royal Commissioners opportunity of submitting to this Board their objections, if any should occur to them, to what may be proposed in respect to such buildings, whereby a joint superintendence of a beneficial character would be secured for the public over the whole.

It further appears to the Chancellor of the Exchequer that it would be an additional advantage, should the Royal Commissioners see no objection thereto, if certain great Officers of State, viz., the Lord President of the Council, the First Lord of the Treasury, the Chancellor of the Exchequer, the President of the Board of Trade, and the First Commissioner of Works, were nominated *ex-officio* members of the Commission; by which means facility of communication between the Government and the Commission would be established, and at all times maintained.

If it shall appear to the Royal Commissioners that these arrangements would not impede them in the discharge of their important duties, but would contribute to an harmonious action between them and the Government, then the Chancellor of the Exchequer thinks that,

that, upon the expression of their determination to adopt and act upon them, and to concur in such measures as may be necessary for giving full effect to the proposed plan when the purchases shall have been completed, their Lordships would be fully warranted in making such issues out of the 150,000 *l.* as might be applied for in the meantime. App., No. XXI.

Sir, Palace of Westminster, 23 February 1853.

I AM directed by Her Majesty's Commissioners for the Exhibition of 1851, to acknowledge the receipt of your letter of the 15th instant, transmitting, for the purpose of its being laid before the Commissioners, a copy of the Minute of the Lords Commissioners of Her Majesty's Treasury, in which their Lordships suggest, for the consideration of the Royal Commissioners, the arrangements which, in their opinion, it will be proper to adopt in relation to the purchases of land for carrying out the plan suggested in the Second Report of the Commissioners, preparatory to the issues which will have to be made out of the grant of Parliament in aid of those purchases.

Her Majesty's Commissioners direct me, in reply, to express to their Lordships their entire concurrence in the propriety of the several arrangements proposed in their Lordships' Minute, and their readiness to adopt and act upon them. They have accordingly, at their meeting held this day, elected the Lord President of the Council, the First Lord of the Treasury, the Chancellor of the Exchequer, the President of the Board of Trade, and the First Commissioner of Works, *ex-officio* members of the Commission, in pursuance of the powers conferred upon them by their charter of incorporation.

I am further directed to state that Her Majesty's Commissioners will be prepared to unite with the Lords of the Treasury, at the proper period, in taking such further measures as may appear to be necessary for giving full effect to their Lordships' Minute.

I have, &c.

Sir C. E. Trevelyan, K.C.B. (signed) *Edgar A. Bowring.*

Appendix, No. XXII. App., No. XXII.

ANSWERS to QUERIES on the GALLERIES and MUSEUMS of FINE ARTS in different Countries (continued from Appendix, No. VII., page 757).

[*These Answers were received too late to be incorporated with those in* Appendix, No. VII.]

QUESTIONS.—(Repeated from pages 753—757.)

1. ARE the national collections of antiquity and fine art in united in a single building, or in buildings contiguous to each other? Or,

2. Are the different collections, or any portions of them, arranged in altogether separate edifices?

3. What are the precise definition and limits of the classes of objects exhibited or preserved in the galleries under the head of "Antiquity and Fine Art"?

4. Does, for example, the pictorial department include painted vases, antique frescoes, or engravings and original drawings?

5. Does the department of ancient sculpture include coins, gems, and ancient inscriptions?

6. Does the establishment comprise a collection of casts of ancient sculptures, including architectural models?

7. Does it contain copies of paintings of value or interest not in the national collection?

8. Is there any space set apart for the purpose of exhibiting to the public valuable works of art that may be temporarily deposited in the galleries for that purpose, or for the convenience of the proprietors?

9. Are the different collections, whether in the same or separate buildings, under a single or separate directorship?

10. Is that directorship, whether united or separate, vested in a single superior officer or president, to whom the other officers employed in the establishment are subordinate and responsible? or is it vested in a board or committee of managers possessing co-equal

App., No. XXII.

powers, and conducting business by votes of the majority of their body; and if so, how is that committee composed? or, thirdly, does the directorship consist in a combination of these two modes?

11. Are those superior directors or managers paid, or are the services of any of them gratuitous?

12. Is the immediate directorship or management of the several institutions, if united, or of each, if separate, subject to the controlling power of a minister of state? or is it in itself an independent department of administration, responsible to the Sovereign, but to no subordinate authority?

13. Are there any printed or written documents relating to the constitution of this directorship, of which copies may be sent.

14. Is the superintendence of other branches of administrative business, such as architectural improvements and repairs, hiring of servants, and other ordinary details of management and expenditure, vested in the same officer, or board of officers, as the superintendence of the works of art contained in the galleries?

15. How far is the special superintendence of different but cognate branches of art or antiquity combined or separate?

16. Are there, for example, special superintendents for each of the branches of pictures, engravings, and drawings; of Greek sculpture, Egyptian sculpture, coins, vases, &c. &c.? And if not, in what cases is the special superintendence of such branches combined?

17. What is the practice followed in respect to cleaning and restoring pictures or sculptured monuments?

18. In whom are vested the power and responsibility of ordering such cleaning and restoration, or of pointing out and superintending the mode and degree in which those operations should be executed?

19. Whether, and to what extent has the principle of historical and chronological arrangement, according to ages, epochs, and schools of art, been adopted in the collections?

20. What are the funds at the disposal of the managers?

21. How far do they consist of independent revenue accruing from endowments or bequests? How far of annual grants or advances from the ordinary revenues of the State?

22. In what mode and by what advice or authority, are effected those acquisitions of works of art which take place from time to time for the extension or maintenance of the collections?

23. Do those acquisitions include the productions of contemporary art?

24. Are agents employed, either by mission or correspondence, in foreign countries to effect such acquisitions?

25. Is there any annual sum of money, and if so what sum, specially set apart for these objects?

26. On how many days of the week, and during how many hours of each day, are the galleries open to the public?

27. On what days are the galleries closed to the public, but open to artists?

28. During what period or periods of the year are the galleries closed entirely, for the purpose of cleaning or repairs, or of vacation to officers?

29. To what extent are copying of pictures, modelling casts of statues, or tracing of engravings, permitted in the galleries, and under what conditions or restrictions?

30. Is there any printed copy of regulations or instructions as to the management of the collections or galleries, or as to the admission of the public.

(If so it would be desirable that a copy of these regulations be transmitted with the answer, &c.)

31. Are there complete and accurate catalogues of the collection?

32. Are those catalogues printed and circulated?

33. Is there any person, native or foreign, now in England, who is competent to give full and accurate information to a Committee of the House of Commons on the several heads of inquiry above specified?

34. And

34. And if not, could any person so qualified be found at who would for a reasonable remuneration on account of loss of time and travelling expenses, be willing to visit London for the purpose during the ensuing months of May and June?

35. It would also be desirable that the person so accredited should be conversant with the architectural arrangement of the galleries, &c. with which he is connected, and with the other general details of their arrangement and internal economy, and should be provided with a rough plan of the building.

ANSWERS FROM THE HAGUE.

Reponses du Directeur du Cabinet Royal de Tableaux à la Haye.

1 à 6. Sauf une douzaine de bustes ou statuettes en marbre, se rapportant à l'histoire des Pays-Bas, la collection dont il s'agit comprend exclusivement des tableaux de différentes écoles anciennes.

Dans le même bâtiment où elle est établie au premier, se trouve à la vérité un cabinet d'objets Chinois, Japonnais et autres, ayant trait à l'histoire de la Neerlande, mais les collections sont tout à fait distinctes, et leurs administrations entièrement séparées.

7. Il se peut que parmi les tableaux s'en trouvent dont l'originalité est douteuse et que l'on pourrait qualifier de copies, mais comme telles ils ne sont point admis ou classés, et la nature de la collection ne comporte pas d'y joindre des copies confectionnées dans ce but.

8. Aucune place n'est reservée à ces fins. Les expositions de tableaux et d'objets d'art, soit particulières soit générales, ou dans un but philantropique, ont lieu dans un local appartenant à la ville où l'académie de dessin se trouve établie.

9. Voir la réponse donnée ad 1 à 6.

10. La surintendance est confiée à un directeur auquel sont adjoints et responsables un sous-directeur et deux gardiens.

En outre un concierge et portier demeure dans le local, et est également responsable envers le directeur de la collection de curiosités mentionnée ci-dessus.

11. Le directeur n'est point salarié. Le sous-directeur, les gardiens et le portier ont un traitement et l'on fournit en outre au dernier l'éclairage et le chauffage.

12. Le directeur est sous les ordres du ministre de l'intérieur, dont il reçoit des ordres et auquel il adresse ses propositions et ses rapports.

13. Le directeur et ses employés ont des instructions, mais qui ne sont pas imprimées et dont la communication offrirait peu d'intérêt.

14. Comme le bâtiment appartient à l'état, les réparations ou améliorations proprement dites du local ne sont point du ressort du directeur. Cette partie est soignée par la surintendance des édifices publics (Ministère de l'Intérieur). Le mobilier et ce qui s'y rattache tombe dans les attributions du directeur.

15 et 16. Voir le réponse ad 1 à 6.

17. Sauf les cas imprévus et qui nécessiteraient une opération immédiate, les tableaux sont lavés chaque année, au milieu de l'été, lorsque l'atmosphère est sec et le moins chargé de vapeurs.

A cette même époque l'on fait vernir plus ou moins les tableaux qui en auraient besoin.

18. Ce droit est dévolu au directeur, assisté du sous-directeur, qui sont autant que possible responsables des opérations qu'ils jugent nécessaires. Libre au directeur cependant de demander pour quelque cas spécial l'autorisation ou les ordres du Ministre de l'Intérieur.

19. Il n'y point d'arrangement historique ou chronologique. Le gout et l'harmonie président seuls au placement des tableaux.

22. Lorsqu'il y aurait une acquisition à faire, le directeur adresse à cet égard une proposition au Ministre de l'Intérieur, qui décide, avec ou sans le consentement du Roi, et soigne le paiement.

23. La collection d'objets d'art moderne se trouve à Harlem.

24. Le cas échéant on agirait d'après les circonstances.

26. Tous les jours depuis neuf heures du matin jusqu'à trois heures de relevée, sauf les Dimanches et jours de fête. Le Samedi le cabinet est fermé à une heure de relevée.

27. Les artistes et le public sont admis indistinctement.

28. A moins de circonstances extraordinaires, le musée est ouvert toute l'année, même lorsque l'on s'occupe du nettoyage et de l'entretien des tableaux, les différents appartements n'étant pas entamés tous à la fois.

Il n'y a point de vacances pour les employés.

App., No. XXII.

29. On permet de faire des études ou des copies d'après les tableaux, après en avoir obtenu la permission du directeur, ou du sous-directeur; la grandeur est laissée au choix de l'artiste ou de l'amateur.

30. Il n'y a pas de règlement spécial ou imprimé pour l'admission du public. La police des salles est confieé aux gardiens.

Quant aux artistes et amateurs qui désireraient travailler au musée l'on s'est borné à établir les règles dont ci-joint copie.

31 et 32. L'on voudra bien trouver également annexé aux présentes réponses un exemplaire de la notice imprimée du cabinet.

33 à 35. L'on ignore s'il se trouve à Londres une personne apte à donner des détails ultérieurs sur les différentes questions, mais si tel ne fut pas le cas, il y aurait probablement moyen de désigner ici une personne non seulement assez à la hauteur pour satisfaire au désir exprimé, mais aussi disposée à s'y rendre aux conditions indiquées.

Les artistes ou amateurs qui désireraient faire des études ou des copies d'après quelque tableau de la galerie, devront avoir une permission du directeur ou du sous-directeur.

Les tableaux choisis à cet effet ne pourront être déplacés pour être mis sur des chevalets; seulement s'ils se trouvaient dans un jour peu favorable, un changement momentaire pourrait, autant que possible, être autorisé par le directeur ou le sous-directeur, sans que toutefois l'on y soit obligé; et si des échafaudages sont nécessaires, les artistes ou amateurs les feront construire à leurs frais.

L'application de papier à calquer sur les tableaux est défendue.

Si les tableaux étaient ternes ou imbus, l'usage d'un moyen quelconque pour y remédier est interdit, et c'est aux soins du sous-directeur qu'on devra avoir recours.

Le directeur pourra défendre de faire des études ou des copies, si, contre toute attente, des motifs fondés l'y engageaient.

ANSWERS FROM ST. PETERSBURGH.

Les collections d'antiquités et d'objets d'art à St. Petersbourg sont réunies dans le Musée de l'Ermitage Impérial qui forme un seul bâtiment, contigu au palais de Sa Majesté.

Les armes anciennes européennes et orientales sont conservées à la résidence impériale de Tsarskoe Selo, où elles forment un Musée, qui est publié sous le titre de Musée de Tsarskoe Selo, S. Petersbourg et Carlsruhe, 1835-53, folio.

Cette collection est sous les ordres du Bibliothécaire de Sa Majesté.

Il y a en outre:

Des collections scientifiques et ethnographiques au Musée de l'Académie des Sciences, qui de même que toutes les collections des universités de l'empire sont du ressort du Ministre de l'Instruction Publique.

Il y a à Moscou:

Le Musée de l'Oroujeïnaia Palata (Trésor des armures), connu maintenant par la publication, Dpebnocmu Pocciuckaro Tocydapcmba, Antiquités de l'Empire de Russie.

Au Musée de l'Ermitage Impérial les collections sont divisées en deux sections.

I. *Section.*	II. *Section.*
Médailles.	Galerie de tableaux.
Pierres gravées.	Dessins originaux.
Antiques (la Sculpture exceptée) comprenant vases peints, objets en or, argent, bronze, etc.	Sculpture.
Bibliothèque.	Majolica.
Estampes.	Collection de vases et coupes de diverses grandeurs en lapis lazuli, malachite, jaspe, porphyre, aventurine, agate et autres pierres dures et objets en mosaïque, et
Les objets, dont se composent ces collections, sont disposés en ordre systématique dans des salles, galeries et cabinets.	Collection dite des objets précieux.

Le Musée de l'Ermitage ne possède pas des plâtres d'objets de sculpture ancienne ni de modèles d'architecture; il s'en trouve une collection à l'Académie Impériale des Beaux-Arts, qui possède également des copies d'un certain nombre de tableaux de maitres anciens.

Il n'existe pas au Musée de l'Ermitage de salle pour l'éxposition d'objets d'art appartenant à des particuliers. Mais quant aux tableaux il y a des expositions publiques à l'Académie Impériale des Beaux-Arts.

Les

Les collections du Musée de l'Ermitage, de celui de Tsarskoe Selo, de l'Oroujeïnaia Palata de Moscou, de la Bibliothèque Impériale Publique sont de même que celles de l'Académie Impériale des Beaux Arts, sous la direction supérieure du Ministre de la Maison de l'Empereur.

Les affaires d'administration du Musée de l'Ermitage (qui correspond à ce que l'on nommait à Paris le Cabinet du Roi) sont confiées aux deux chefs de la 1re et de la 2de Section. Ils prennent les ordres de leur chef immédiat Mr le Grand Maréchal de la Cour, qui en réfère au Ministre, lequel n'a de compte à rendre qu'à Sa Majesté.

Il y a des règlements particuliers concernant l'administration du Musée de l'Ermitage.

Les deux chefs de sections ont la surveillance et la responsabilité des collections qui leur sont confiées. Ces collections ont leurs conservateurs spéciaux pour les médailles, camées, antiques, livres, estampes, tableaux, sculpture, etc.; ces conservateurs sont responsables envers leurs chefs de section, qui ont la direction des travaux.

Les chefs de section, leurs adjoints conservateurs et leurs employés reçoivent un traitement de la Couronne et jouissent de tous les avantages du service de l'Etat.

Les autres parties de l'administration du Musée, comme réparations, entretien des bâtiments, etc., ne dépendent que de l'autorité supérieure susmentionnée.

Pour maintenir toujours en bon état les tableaux et objets de sculpture, les six restaurateurs de tableaux, attachés à l'Ermitage et l'adjoint du chef pour la partie de la sculpture, font chaque jour l'inspection des tableaux, statues, bustes, bas-reliefs, vases, etc., pour s'assurer de leur état et préviennent le chef de section des réparations qui peuvent être nécessaires. Afin d'assurer ce service quant aux tableaux, toute la collection de ces derniers se trouve partagée entre les six restaurateurs, qui veillent à ce qu'aucun des tableaux, qui leur sont confiés, ne manque des soins de restauration nécessaire et à temps.

Tous les travaux de restauration mécanique et artistique se font par ordre direct du chef de la 2de section de l'Ermitage, qui seul surveille ces restaurations.

Les tableaux sont divisés par écoles, comme suit: Ecoles Italienne, Espagnole, Flamande, Hollandaise, Anglaise, Allemande, Française, et école Russe contemporaine.

Dans la disposition de ces écoles dans les salles on a eu soin de réunir ensemble, autant que possible, les tableaux d'un même maître, d'une même nation et d'une même époque.

Les objets de sculpture sont classés en objets de sculpture Egyptienne, Grecque, Romaine, de la Renaissance, et de l'école Russe contemporaine.

Les collections scientifiques et archéologiques, la bibliothèque et les estampes sont classées et cataloguées systématiquement, et l'on a adopté en cela les bases, admises généralement dans les Musées en Europe.

Le Musée dispose pour son entretien, son administration et ses achats de sommes fixes annuelles, tirées du Trésor, et dont il est rendu compte au Ministre.

Les acquisitions extraordinaires se font par ordre Suprême, après l'examen par les chefs de section des objets proposés. Les produits de l'art contemporain n'en sont pas exclus, s'ils méritent une attention particulière.

Il existe à Rome, auprès de la Mission de Russie, une commission spéciale, instituée par ordre Suprême pour la recherche des objets d'art qui peuvent offrir de l'intérêt pour l'Ermitage.

Quelquefois des agents sont envoyés dans ce but à l'etranger par ordre Suprême.

Il n'y a pas de somme annuelle, fixée pour cela.

Les visiteurs au Musée de l'Ermitage sont admis chaque jour de la semaine, sans en excepter les fêtes, de 10 heures du matin jusqu'au soir, et en hiver aussi longtemps que le jour le permet.

Les galeries sont fermées partiellement quand il y a des travaux de restauration dans les bâtiments.

Il n'existe pas de temps de vacances pour les employés.

On permet les copies des tableaux au Museé, de même que celles des gravures, et cela avec libéralité, mais avec toute la rigueur de surveillance nécessaire.

L'autorisation de copier des tableaux se donne par le chef de la 2de section sur un témoignage que la personne qui demande cette permission s'occupe effectivement de peinture. Ce témoignage doit être présenté pour les artistes de la part de l'Académie des Beaux-Arts, pour les amateurs de la part de personnes connues, et en declarant de vouloir suivre en toutes choses les réglements prescrits à ce sujet. En vertu de ce certificat si le chef de la 2de section n'a pas de son côté quelque motif de refus, il autorise la copie des tableaux. Cette autorisation munie de sa signature, doit être renouvelée au commencement de chaque année. Il n'est pas permis sans autorisation spéciale, de détacher les tableaux des murs pour en faire la copie. Pour copier les tableaux placés au haut des murs on se sert d'échelles mobiles à plate-forme.

L'autorisation de prendre des empreintes en plâtre des objets de sculpture ne se donne que par ordre Suprême.

Il y a des catalogues détaillés et systématiques pour toutes les collections du Musée; jusqu'à présent ces catalogues n'existent qu'en manuscrit.

App., No. XXII.

On ne connait pas de personne en Angleterre, qui puisse rendre compte de toutes les questions, posées par ordre du gouvernement Anglais.

Il y a sans doute au Musée de Sa Majesté des personnes, qui pourraient faire au Comité institué à cet effet les réponses à ce sujet, mais ces personnes, occupées de leur charge, ne sont pas disponibles.

Le Chef de la 1re Section du Musée.
Pillez.

Le Chef de la 2de Section du Musée.
F. Brunj.

St. Petersbourg, le 6 Juin 1853.

ANSWERS FROM AMSTERDAM.

Reply to the Questions of the Committee for the National Gallery by the Board of Management, &c. of the National Museum and of the Collection of Modern Paintings in the Pavilion "Welgelegen," near Haarlem.

In the building of the National Museum at Amsterdam, there is a collection of paintings by old masters and a cabinet of etchings and engravings of all the known schools.

Under the head of paintings, coloured vases, antique frescoes, statuary and drawings are not included.

This is also the case as regards the collection of coins and medals, cut stones and ancient inscriptions.

There are no copies of the original paintings in the collection.

One-half of the building containing the National Museum at Amsterdam is used for the Royal Academy of Science, and it also contains the library of the said academy; this is an entirely separate body, the only connexion existing between it and the National Museum being in the mutual use of the large hall down stairs, where a monthly meeting of the members of the Academy takes place.

The direction of the National Museum and of the collection of modern paintings in the Pavilion near Haarlem, is confided to a Board of Management, consisting of from three to five members, of whom one acts as president and one as secretary; all the other officials are responsible to the Board of Management.

The members of this Board of Control have the right to act upon a majority; on the decease or resignation of a member, they propose a new member to the King; the other employés (as far as regards the officials) are also, upon their recommendation, appointed by His Majesty; the porters and servants are appointed and discharged by them as they may think fit. The members of the Board of Management receive no remuneration for their services.

The Board of Management is in immediate connexion with the Minister for the Home Department, and is placed under the control of his department. There is a Royal Order by which the Board of Management is appointed, and which contains the regulations.

Architectural improvements or changes are not within the province of the Board, and are done on the part of the Government; appointing servants and other ordinary affairs of management and expenditure, must, to be of force, be ordered by the Board of Management.

The control of the Board of Management is confined to the two collections aforenamed, and does not extend to any collateral branches of arts and sciences; in the National Museum there are overseers or inspectors, one of whom takes charge of the collection of engravings, and the other of the paintings, whilst the latter assists the secretary in the discharge of the administrative duties; the service in the National Museum is, however, so organised, that in the event of the sickness or absence of one of the overseers, the other takes charge of both collections. As regards the cleaning and repairing of paintings, the treatment, of course, depends entirely upon the requirements of the painting. The Board of Management orders the cleaning and repairing of the painting; with the Board rests the responsibility.

As the National Gallery of paintings owes its reputation principally to the works of the Dutch School, the order observed in placing them, has been more with reference to their relative harmony of colour, than with respect to their historical and chronological dates, which have not been followed.

The collection of prints is arranged according to the known schools of different nations, and those authors who have described them with the greatest precision have been as much as possible followed; where these, however, were wanting, the centuries, periods and schools of art are mentioned.

The Board of Management has no other funds at its command than are every half year placed at its disposal by the department for Home Affairs.

Thursdays and Fridays, from 10 A. M. to 3 P. M., the collection is open to the public.

Mondays, Tuesdays and Wednesdays, at the same hours, the Museum is open to artists, provided they are natives of Amsterdam.

The rooms are never closed at a fixed period for cleaning or repairing.

There

There are no holidays for the officials. On the 1st and 15th of each month artists are enabled to give notice should they wish to copy paintings or engravings; they then address themselves to a committee from the Board of Management, with proofs of their talent.

There is no printed regulation with reference to admission.

There is an alphabetical catalogue in French and Dutch to be had at the building for 25 cents.

Of the collection of prints there is a very elaborately detailed manuscript.

There is nobody in England at present capable of giving to the Committee the precise and detailed information they require.

It certainly would be possible to find a person capable and disposed to give the Committee information and advice.

ANSWERS FROM HAARLEM.

Reply to the Questions of the Committee for the National Gallery, by the Board of Management, &c. of the National Gallery and of the Collection of Modern Paintings in the Pavilion "Welgelegen," near Haarlem.

In the building "Welgelegen" there are, besides the collection of modern paintings, by Dutch masters, a few busts of marble and images of plaster.

The collection of paintings is entirely separate from the other apartments in this building; the wing is fitted up as a geological museum under a separate control.

There are no copies in the collection of the original paintings which are there.

As regards the superintendence and its formation and working, the answers given regarding the National Museum are sufficient, as one Board of Directors controls both collections. The Board of Management, however, is expected, in cases which are not of daily occurrence, to consult the director of the Royal Collection of Paintings at the Hague.

The Board of Directors do not either receive any remuneration for their services to the collection at the Pavilion.

There is also a Royal order by which the Board of Management is appointed for this collection, and which contains the regulations.

Architectural improvements or changes are not within the jurisdiction of the Board, and are made on the part of the Government; appointing and discharging servants and other ordinary affairs of management and expenditure must be ordered by the Board to have full weight.

The control is confined exclusively to the collection of paintings, marble busts and figures of plaster, and does not extend to any collateral branches of arts or antiquities; there is an inspector who has charge of the collection, and who is responsible to the Board of Management.

The Board of Management gives instructions regarding the cleaning and repairing of the paintings, and the responsibility lies with the Board.

The mode of cleaning and repairing depends upon the condition of the painting.

As this is far from being a complete collection of the modern Dutch School, the general effect alone has been observed in placing these paintings.

The collection is open to the public the entire week, from 10 A. M. till 4 P. M.

For artists, the collection is open the four first days in every week from 10 A. M. to 4 P. M.; they address themselves to the inspector, who brings the subject before the Board in writing, upon which admission is granted or refused.

There is no printed regulation regarding the admission of the public.

There is an alphabetical printed catalogue in the French and Dutch languages, which can be obtained at the Museum for 50 cents.

ANSWERS FROM LEYDEN.

Answers to the Heads of Inquiry proposed to be submitted to the Directors of the Galleries of Fine Arts, &c., in Leyden.

1. The Government's Museum of Antiquities at Leyden.
Medal-room of the University of Leyden.

2. The collections of antiquities in Leyden are united in a single building.
The medals of the University are arranged in a separate room in the same building.

3. Under the head of antiquity, every object from extinct nations or civilisations which are passed away and have made room for new manners and customs.
The Christian monuments are not included as soon as they belong to the Middle Ages.

App., No. XXII.

The head divisions of the Museum are:

I. Asiatic Antiquities, to which are reported also the Carthaginian monuments, and others that have decidedly preserved their Asiatic character.
II. African (or rather Egyptian) monuments.
III. Greek, Roman, Etruscan.
IV. European Antiquities (except Greek, Roman, and Etruscan).
V. American Antiquities.
VI. Drawings and Plates.

The Medal-room of the University contains medals and coins of every age.

5. The Antiquarian Department does not include coins and gems, except a few specimens for special purposes, as there exists at the Hague a separate museum of coins, medals and gems of the Government.

6. Some casts of the most celebrated ancient sculptures, and a collection of casts of gems. In general, the casts are intended to represent the originals if the latter cannot be got.
Models and drawings of architectural and other monuments are likewise collected.

8. Monuments not belonging to the Museum are received, exposed, and taken care of for an unlimited time, but they remain always at the disposition of the owners.

9. No.

10. The superintendence of the Museum of Antiquities is entrusted to a superior officer, with the title of Director; a second officer is appointed with the title of Conservator.
The directorship of the medal-room of the University is entrusted to an officer with the title of Director, who at present bears at the same time the title of Nominal Extraordinary Professor of the University.

11. They are paid.

12. The directorship of the Museum of Antiquities is subject to the controlling power of the Minister of Home Affairs.
The directorship of the medal-room to the curators (trustees) of the Leyden University.

13. There are no printed documents; but there exist written instructions, which, for the Museum, in consequence of change of the officers appointed, and their respective rank, are for the greatest part practically abolished.

14. It is vested in the same officer; but with regard to the building itself, its improvements and repairs, the consent or approbation of the curators of the University is required, the University's funds being charged with the expenses for the building.

15. The Museum of Antiquities, not comprehending objects of cognate, and

16. (Modern) branches of art, no special superintendents are appointed.

17. No particular practice; the monuments are cleaned in the manner the best appropriated to their nature, and the less exposing them to the dangers of being degraded. The practice of cleaning should require a separate indication not only for every class of objects, but even for every object in particular.
As for restoring, no other restorations are practised except the most necessary ones, and such which are required to show the use and the destination of the object; and great care is taken that at the first view the original parts can be distinguished from the restorations.

18. In the chief officer, the director.

19. The historical and chronological arrangement is only adopted as a secondary one.

22. They are different, according to circumstances, for the Museum.

23. The medal-room contains also the modern coins, in so far as its acquisitions include the productions of contemporary art.

24. In the last years not, except by private friends and relations of the Directors. But the principal treasures of the Museum have been acquired by special agents in foreign countries, paid by the Government.

26. The Museum of Antiquities is open to the public every Tuesday, Thursday, and Saturday, from 11 to 4; privately on every day of the week, during the months of April, May, June, July, August, and September, from 7 to 7.

During the months of October, February, and March, from 8 to 5.
During the months of January, November, and December, from 9 to 4.

On Sundays, and the greater feast days (Christmas-day, Easter-Monday, Ascension-day, and the Monday after Whit-Sunday), only from 12 o'clock, after the morning service being finished.
The medal-room is not open to the public, but may be visited by application to its Director, at every hour of the day.

27. See

27. See *ad* 26.

28. They are not entirely closed at regular periods, but only in time of the utmost necessity, in consequence of repairs, &c. Hitherto, however, such has never been the case.

29. With regard to the Museum of Antiquities, as much as the safety of the monuments allows, and can be done without too much inconvenience to the visitors, besides under the conditions specified *ad* 30.

30. The principal regulations for the Museum of Antiquities are the following:

The attendants are not allowed to receive any fees from the visitors on the public hours (conf. *ad* 26); on private days it is allowed, but they may not claim it.

Visitors shall leave their walking-sticks, umbrellas, and parasols at the entrance; they can get tickets, if necessary, to reclaim their property on leaving the Museum, and the attendant is allowed to receive a small fee for having taken care of the objects.

Visitors, or one of each company, who by this is accountable for the rest, shall enter their names, profession, and residence in the album, before being admitted.

Scholars, artists, or students, who desire to visit the Museum continually, for a certain time, for their own study or other scientific purposes, can, on application, get an admittance-ticket from the Director, under the condition not to publish the objects without a special permission, and of presenting, if such a permission is given, a copy of the work to the Museum.

As often as it is deemed necessary, in particular circumstances, the Museum shall be closed; and during that time, admittance alone be granted in very extraordinary and urgent cases.

31. Of the Museum of Antiquities, they are; of the University's Medal-room, only a MS. catalogue.

32. Printed and circulated, and to be got at the entrance of the Museum.

33. As far as I know, there is not.

34. The Director of the Museum of Antiquities is very willing, under the conditions that he shall be kept free of expenses, to give any further or ampler information, if desired, and even to come over to London for the purpose, which, however, he thinks the Committee will find not absolutely required.

The Director of the Netherland Musem of Antiquities, at Leyden,

(signed) *Dr. C. Leemans.*

Leyden, 30 May 1853.

A.

ABERDEEN, Right Hon. Earl. (Analysis of his Evidence.)—One of the surviving original trustees of the National Gallery; circumstances of the foundation of the gallery, 5266–5270——Also, of the management of the collection subsequently devolving upon the Treasury, 5271, 5272——Date of appointment of Mr. Wm. Seguier; there were no instructions or regulations of any kind laid down by the Treasury, 5273–5278——Suitability of the original constitution of the trust to the earlier stages of the institution, 5279–5286——Evils inseparable from a numerous body of trustees; salaried officers charged with a responsibility for the practical management of the details of the institution are to be preferred, 5287–5293.

The institution has never possessed any funds for the purchase of pictures, 5294——They have only been purchased by occasional grants from Government, 5295——Impolicy of placing a fixed sum at the disposal of the managing body for the purchase of pictures, 5296–5299. 5321–5324——The desirability of combining our art collections in one repository must be admitted, but the practical objections to the removal of some objects from the Museum are considerable, 5300–5303——The freedom of discussion in this country is useful, as leading to a more minute and active control, but it would render the position of such a sort of minister of art as exists in France and Prussia, very unenviable, 5304–5306——Expediency of establishing a regular system for the government of the gallery and the purchase of pictures, &c., 5307, 5308.

Desirable to remove the great works of sculpture from the British Museum to an establishment devoted to the Fine Arts; the expense would be considerable, 5309–5312——An annual report from the trustees to Parliament is advisable, 5313——The salary of 200 *l.* a year is not sufficient remuneration for an eminent artist as keeper, 5314——It is not necessary that he should reside in the gallery, 5515——Purchases of importance should be sanctioned by The House of Commons; authority should also be given to a limited body of trustees to give a positive recommendation for the purchase of any picture, 5316–5320——The objection to a sum of money being placed at the disposal of the trustees is, that it would be expended too easily and hastily, 5321–5324.

The British Museum have caused excavations to be made at Nineveh, and have obtained grants for that purpose, 5325——Testimony to the excellent manner in which the trustees of the British Museum have discharged their duties, 5326, 5327——In any change of the present system of the National Gallery, there should be a certain number of unpaid trustees or visitors, 5328——In cases of purchases, a jury of experts might be called in, 5329, 5330——How far a project for a National Gallery was entertained prior to the purchase of Mr. Angerstein's collection, 5331——Each department of the British Museum has a sum allotted to it by the annual vote; the same objections have presented themselves in regard hereto as have been already urged against an annual grant for the purchase of pictures, but the sums have been small, 5332, 5333.

The objections to an annual vote for the purchase of pictures would not be obviated by the responsibility of purchase resting on one individual, 5334–5340——No system has been pursued hitherto in the acquisition of pictures; the gallery ought to comprise everything that can show the progress of art; but this should not at present be made too much an object, 5334–5341——Negotiation entertained with the late Mr. Woodburn, for the purchase of his collection; it was broken off on account of the inadequacy of the funds; it was a great loss, 5343, 5344.*

Accommodation. Number and designation of the pictures offered for sale or as gifts since 1847, which, while otherwise eligible, have been declined by the trustees from want of room for their accommodation, *App.* 750.

Report, 1852-53—*continued.*

Accumulation of Dirt. There is a speedier accumulation of dirt on pictures in the National Gallery than in private collections, *Stansfield* 3729-3732.

Additions to the Collection. The additions have not been made on any definite principle, *Rep.* vi; *Lord Aberdeen,* 5334-5341——Many opportunities have been lost for effecting valuable additions to the collection, *Rep.* vi——The recommendation of the Committee of 1836, that the pictures of Raffaelle and time antecedent should be particularly sought for, has not been attended to, *ib.*——*See* also *Purchases* (*National Gallery*).

Admission to the British Museum. Objection to there being any restriction to the admission of the public, *Oldfield* 8353.

ADMISSION OF THE PUBLIC:

1. *Propriety of Restricting the Admission considered.*
2. *Suggestions for the Daily Admission of the Public and of Students.*
3. *Objection thereto.*

1. *Propriety of Restricting the Admission considered:*

The admission of the public to the National Gallery is unlimited, *Sir C. Eastlake* 5945-5948——No restriction should be put on the admission; propriety of a regulation by which, during the forenoon, persons might be admitted upon writing down their names, considered, *ib.* 6422-6427——Arrangements suggested for deterring mere idlers, *ib.* 6435, 6436——A policeman stationed at the door would be sufficient for the purpose of excluding people not decently dressed, &c., *Hurlstone* 7074-7132——Admission by ticket, as in Dulwich Gallery, would prevent too much crowding in the building, *Dyce* 7508, 7509——In order to restrict the present numerous attendance of the public it is expedient to establish some test of *bonâ fide* visitors, either by compelling them to obtain tickets or to purchase penny catalogues, *Ford* 7945-7969. 8015-8934. 8042-8047—— Objection to the public being admitted on wet days, as bringing in mud and dirt, which on becoming dust injures the pictures, *ib.* 7958, 7959. 7963, 7964——Inexpediency of checking the admission, by obliging the public to obtain tickets at some short distance from the building, *Russell* 8185, 8186. 8188.

2. *Suggestions for the Daily Admission of the Public and of Students:*

Arrangement by which facility might be afforded to the public and to students to attend the gallery without necessitating its being closed to either, *Coningham* 6950-6954——Suggestion that the public be admitted during the attendance of students, as is the case daily at the Louvre, *Hayes* 9193, 9194. 9229-9234.

3. *Objection thereto:*

Objection to pictures being removed to separate rooms for the purpose of being copied, in order that the public might visit the gallery at the same time with the students; the present arrangement is preferable, *Hurlstone* 7101-7106. 7158-7160.

See also *Catalogue.* *Site of the Gallery.* *Visitors to the Gallery.*

ADMISSION OF STUDENTS:

1. *Present Arrangements; how far inconvenient.*
2. *Proposed Alteration considered.*

1. *Present Arrangements; how far inconvenient:*

No regulation of the trustees respecting the admission of students to the gallery, *Rep.* v——Authority of witness, who possesses a student's card to enter the gallery at times when it is closed to the public, *Moore* 2358-2361. 2498-2505——The two days devoted to artists is a very short time; people from the country and foreigners are admitted on those days on sending up their cards, *Sir C. Eastlake* 6428, 6429——Two days in the week devoted to copying, &c., are quite sufficient for the purpose, *Hurlstone* 7158-7160.

Defects and inconveniences of the present regulations concerning the admission of students to the gallery, *Hayes* 9190-9192. 9206-9217——Tests of proficiency required before they are admitted, *ib.* 9218-9226——How far there is inconvenience to the students from their periods of admission being too limited; privilege enjoyed by the Royal Academy students, *Plass* 9250-9252——The arrangements for the admission of students are very inconvenient, as only allowing them to attend for three months at a time, *Davies* 9293-9295——System of the students' admission considered; privilege extended to the Royal Academy students to the prejudice of others; discretion of the keeper to admit supernumeraries as students not resident in London; mode in which the list of those to be admitted is prepared, *Thwaites* 9705-9736.

2. *Proposed Alteration considered:*

It would be an improvement if a large room were set apart, in which the students might attend daily and copy a certain number of pictures, *Sir C. Eastlake* 6457, 6458; *Hayes* 9190-9193——How far it might be expedient to devote more than two days to students for the purpose of copying, &c., in the gallery, *Dyce* 7623. 7655, 7656. 7668.

See also *Admission to the Public,* 2. 3. *Students* (*National Gallery*).

Report, 1852–53—*continued.*

Adoration of the Shepherds, The. See *Velasquez*, I.

Age of Innocence, The. See *Reynolds, Sir Joshua.*

Albert, H. R. H. Prince. Letter from Colonel Grey to the Chairman, forwarding, by command of his Royal Highness Prince Albert, a plan for a collection of paintings illustrative of art, *App.* 791.

Amber Varnish. Difficulty of removing the amber varnish from the Bolognese and Florentine pictures of the seventeenth century, *Spence* 10091–10098. 10102.

Amsterdam. Reply to the Questions of the Committee by the Board of Management, &c. of the National Museum, *App.* 838.

Angerstein Collection. The National Gallery derives its origin from the purchase of this collection in 1823, *Rep.* iii——Fine condition of the pictures in the gallery when in the possession of Mr. Angerstein, and also immediately before the late cleaning, *Coningham* 3048–3051. 3131–3133——The gallery varnish may have somewhat darkened them, but cleaning was not required, *ib.* 3052–3058.

See also *Deterioration of the Pictures. National Gallery.*

Annual Exhibition of Pictures. Proposed establishment of an annual exhibition in the gallery, to which pictures from all parts of the world should, under certain restrictions, be admitted for sale, and from which valuable acquisitions to the national collection might be obtained, *Foggo* 7263. 7276. 7286–7288. 7321–7328.

Annual Grant. See *Parliamentary Grants. Purchases (British Museum). Purchases (National Gallery).*

Annual Reports. See *Reports.*

Annunciation, The. See *Claude's Pictures*, III. 1.

Antiquities Department (British Museum):

1. *Management of this Department; Objects comprised therein.*
2. *Proposed Enlargement of the present Space considered.*
3. *System in regard to Purchases.*

1. *Management of this Department; Objects comprised therein:*

Witness was appointed keeper of the antiquities at the British Museum in 1826 by the three principal trustees, who have the entire power of appointing all the officers, *Hawkins* 7670–7673——Objects comprised in the department; his remuneration is 600 *l.* a year, with a residence, *ib.* 7677–7680——Names and salaries, &c. of the several subordinate officers, *ib.* 7681–7691.

2. *Proposed Enlargement of the present Space considered:*

Amount of space requisite for the formation of a new Museum of Antiquities considered; the length of the present galleries, if placed in a right line, would be about a third of a mile, *Oldfield* 8301–8317——Plan of a new museum of antiquities produced, and explanations thereon, relative to the contents and arrangement of the galleries, and the probable space required for its completion, *ib.* 8357–8381——There is no deficiency of space at the Museum in the department of antiquities, *Hamilton* 8890, 8891——No material discoloration or injury has arisen as yet from the dust occasioned by the additional buildings now in progress, *ib.* 8920–8923.

3. *System in regard to Purchases:*

Mode in which the trustees act in the expenditure of money appropriated to them by estimate; sources whence purchases are made; insufficiency of the present opportunities for the acquisition of antiquities, &c. from Italy, and other foreign countries, *Hawkins* 7779–7787. 7817–7831——Definition of the control exercised by the trustees over the heads of departments with respect to purchases, &c.; illustration thereof in the case of Mr. Hawkins, keeper of the antiquities, *Hamilton* 8956–8969.

See also *Combined Departments of Art*, 2. *Medals (British Museum). Sculptures (British Museum). Smoke*, 2.

Apollo and Marsyas, The. See *Raphael*, 1.

Architecture of the Building. Explanation of the recommendation that the new edifice be built either in the academic or the picturesque style, *Baron De Klenze* 9415–9417.

Armenini. Varnish described by, as having been used by Correggio and Parmegiano, *Rep.* xiv; *Dyce* 7525–7570——Quotations from this writer, cited in order to show that glazings were used by the old Italian masters, *Moore* 2436–2443. 10010.

See also *Varnish. Veronese, Paul*, I.

Report, 1852-53—*continued.*

Arney, George Alfred. (Analysis of his Evidence.)—The inscription on the Queen of Sheba has certainly been partly rubbed out by the cleaning in 1852; 2105——The aerial perspective of the picture and its general tone have also suffered much, and some of the figures have had the surface completely removed, 2106-2111. 2151, 2152.

Arrangement of the Pictures. Suggestions for consideration in erecting a National Gallery for the arts in London, as regards the lighting and arrangement of the pictures, *Baron De Klenze* 2402-2409——Remarks on these suggestions, *Rep.* xiii——Desirability of attention being paid in the National Gallery to the colour of the walls and floor, &c., *Spence* 10053, 10054.——*See* also *Chronological Arrangement of the Pictures.*

Art. To render the National Gallery worthy of the name, the funds appropriated to the enlargement of the collection should be expended with the view to instructing the people in the history of Art, *Rep.* xvi——A National Gallery should contain specimens of every school, *Lord Overstone* 5406-5409——Art may be divided into fine art and mechanical art; objects comprehended by witness under the latter term, *Sir C. Eastlake* 6521, 6522——A chronological arrangement of pictures, or an arrangement in schools, is not desirable under the same roof; the finest specimens of art only should be exhibited *Hurlstone* 7214-7219——Opinion that the House of Commons generally, and the mass of the public, are alike favourable to liberal expenditure in the cause of the Fine Arts, *Ford* 8010-8012. 8027-8041. 8062-8066——Plan for a collection of paintings illustrative of the history of Art, drawn up by his Royal Highness Prince Albert, *App.* 792 *et seq.*

See also *Combined Departments of Art.*

Artists. See *Removal of the Gallery*, 1.

Ashburnham Collection. The sale of Lord Ashburnham's collection was not a good opportunity for the gallery to purchase, *Christie* 5706-5710.

Asphaltum. Use of asphaltum in the works of Titian and the Venetian school, as also by Sir Joshua Reynolds, Hilton, and Sir David Wilkie, *Stansfield* 3636-3642.

Assistant Cleaners. Several eminent picture-cleaners have disapproved of the practice of employing an assistant, *Rep.* xi —— These objections shared by Sir C. Eastlake at the time when he held the office of keeper; the service of Mr. Seguier's assistant then dispensed with during his tenure of office, *ib.* xii —— They have been renewed however since the appointment of Mr. Uwins without opposition, *ib.*——Employment of an assistant by witness on several occasions of his cleaning pictures in the National Gallery and elsewhere, *Seguier* 799-840. 955-960——Objections to the employment of assistants in the delicate process of picture-cleaning, *Brown* 1108-1110; *Farrer* 1365, 1366——*Nieuwenhuys* 1682-1684; *Bentley* 1971, 1972. 1976-1980; *Munro* 4035, 4036——Assistants should only be employed where their inexperience could not be hurtful, *Moore* 2494-2496——The employment of an assistant should be left to the discretion of the cleaner, *Dennistoun* 3406, 3407 —— Mr. Seguier has an assistant; witness does not remember the circumstance of his preventing this person from being employed, *Sir C. Eastlake* 4551-4553.

Assistant Keeper. There should (under witness's plan) be an assistant keeper, resident in the building and in daily attendance, who should be somewhat conversant with art, and should have a salary of from 200 *l.* to 300 *l.* a year, *Russell* 8095.

Assistant Keeper and Secretary. Appointment of Colonel Thwaites to this office; salary assigned; instructions, *Rep.* iv——Colonel Thwaites has apartments on the premises, and is constantly in attendance at all seasons of the year, *Uwins* 28——Witness does not act under any special instructions from the trustees, but generally acts under Mr. Uwins; nature of his duties as communicated by the Treasury on 31st March 1824; the instructions to Mr. W. Seguier were not seen till lately by witness, *Thwaites* 193-200.

Attendants. See *Officers of the Gallery.*

Atmospheric Influences. Frequent cleaning is necessary for pictures in London on account of the foul state of the atmosphere, *Bolton* 1060——Peculiar tendency of the pictures in the gallery to become dirty; the varnish and the effluvia of the atmosphere, &c. combine to produce this result, *Ford* 3892-3898; *Sir E. Landseer* 4159-4165; *Bromley* 3777——Conclusion come to that the London atmosphere is decidedly prejudicial to pictures unless protected by a sound coat of varnish, *Faraday* 5468. 5470, 5471——The effluvia arising from the visitors is much more likely to be injurious to the pictures than smoke, *Hurlstone* 7118, 7119——The effects of damp and the effluvia from open drains, &c. in the outskirts are much more dangerous to pictures than the smoke of London itself, *Foggo* 7430——The smoke and the bad air generally, which enter the present building, are arguments against its centrality, *Dyce* 7493-7503; *Russell* 8187. 8191, 8192——In the present gallery injuries arise from the combined effect of the people's breath, and of the smoke and dust, *Ford* 7980-7984.

See also *Deterioration of the Pictures. Elgin Marbles. Gallery Varnish*, 3. *Isinglass. Smoke. Surfaces of Pictures.*

Report, 1852-53—*continued.*

Auditors. Duties proposed to be vested in the three auditors, (under witness's plan o management,) who should be appointed by a superior authority, and be as distinct as possible from the trustees, *Foggo* 7243, 7244. 7289, 7290. 7306–7313——One of the three auditors should be an accountant, the others should be men of enlarged views and liberal minds; check intended to be exercised by this body, *ib.* 7289, 7290. 7306–7314 ——They should not be remunerated for their services, *ib.* 7311.

Augsburg School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 808.

Authenticity of Pictures. Custom for purchasers of pictures to desire evidence of their genuineness; it is frequently practicable to obtain such evidence, *Christie* 5711–5717.

Bacchus and Ariadne, The. See *Titian. Toning.*

Backs of the Pictures. Report made in May 1850 by the Commission appointed to consider the state of the pictures, suggesting, among other recommendations, that some means should be adopted to preserve the backs of the pictures, *Rep.* xiii——Subsequent approval of this recommendation by a Committee of this House, *ib.*——No effect, however, has been given to it, nor does it appear that the subject has ever been brought under notice of the trustees, *ib.*——Thick deposit of filth with which the Committee found the backs of the pictures to be covered, *ib.*——This state of the pictures tends to show the general absence of combined action or definite responsibility in the management, *ib.*

About three years ago the whole of the pictures were taken down, and their backs dusted; there being no notice in the minutes of such transaction, it has been impossible to ascertain under what circumstances the operation was performed, *Rep.* xiii——Attention drawn to the evidence of Baron De Klenze (2402. 2409) to the effect, that if the gallery is lighted on scientific principles, the pictures may be hung upright against the wall, *ib.*——Suggestion that steps be taken with all convenient speed for the permanent protection of the backs of the pictures, *ib.*——And that, until the whole collection be so protected, the back of each picture be dusted at least once a year, *ib.*——With respect to injuries to pictures from the dust penetrating through the backs of the canvas, no precautions have been taken on this point, the shortness of the vacation preventing the adoption of proper measures, *Uwins* 179, 180. 263–271——No attention has been paid to the backs of the pictures, notwithstanding the recommendation of the Committee of 1850, and of Mr. Faraday, &c.; accumulation of dust on the back of the paintings, and injury inflicted thereby, *Seguier* 737–752——Necessity of a more careful attention to the backs of the pictures in the National Gallery, *Farrer* 1362–1364; *Munro* 3972–3974 ——Reasons assigned by witness for not ordering the great accumulation of dust on the backs of the pictures to be removed therefrom; improbability of the operation having been performed without his knowledge, *Uwins* 2755–2775. 2883–2885. 2896–2902—— Witness saw nothing in the proceedings of the Committee of 1850 to induce him to have the dust removed from the backs of the pictures, *ib.* 2755–2769——He does not consider that injuries arise from the accumulation of the dust behind the frames, &c., *ib.* 2767. 2883–2885.

Witness does not know whether the backs of the pictures were ever dusted previously to the sitting of the Committee of 1850, and is not aware by whose authority the dust was removed in that year, *Seguier* 2959–2967——The pictures were never dusted by the authority of witness; belief that it was prior to the sitting of the Committee of 1850 that the dust was last removed from the backs, *Thwaites* 2968–2974——The pictures were all taken down, and the dust removed from the backs in the vacation of 1850; the order to dust them was given to witness by Mr. Uwins, *Thick* 2975–2985——In consequence of the Report of the Committee, witness recommended, through Colonel Thwaites, that the dust should be removed from the backs of the pictures; much injury may arise from a neglect of this practice, *Seguier* 2986–2988. 2991–2994——No communication has been made to the trustees by witness about removing the dust, nor does he recollect that Mr. Seguier ever suggested his doing so, *Thwaites* 2989, 2990——The backs of the pictures are very much less dusty now than they were prior to the removal of the dust three years ago, *Seguier* 3216–3220——Nothing has resulted from the recommendations of the Commission of Inquiry respecting the preservation of the backs of the pictures from dust, *Russell* 4882–4885.——*See* also *Commission of* 1850.

Barracks (National Gallery). See *George's, St., Barracks.*

Bavaria. Answers to queries on the national collections and museums of Fine Arts in Bavaria, *App.* 753 *et seq.*——Réponse aux questions adressées par le Président du Comité de la Maison des Communes, pour l'établissement d'une Galerie nationale de Beaux Arts, à M. De Klenze, Intendant des Bâtimens de la Couronne et Conseiller Privé Actuel de S. M. le Roi de Bavière, *App.* 758——Extract from a letter, dated 3 August 1853, addressed by the Baron De Klenze to Colonel Mure, M. P., Chairman, relative to the Damar varnish used at Munich, &c., *App.* 767.

Report, 1852–53—*continued.*

Beaumont, Sir George. Passage from letter written by Sir George Beaumont to Lord Dover, expressing his idea of the safety of the pictures in the hands of the trustees, *Lord Monteagle* 5114.

Belgium. Answers to queries on the national collections and museums of Fine Arts in Belgium *App.* 753 *et seq.*

Bellini. Objection to the purchase by the trustees of the picture of the Doge, by Bellini, as being much less valuable than other works of the same master, which have not fetched nearly so much money at public sales, *Moore* 9748–9755——Resemblance between the style of Bellini and that of Giorgione; probability of the reputed Giorgione recently purchased, being the work of the former painter, *ib.* 9764–9792.

Bentley, John. (Analysis of his Evidence.)—Has had extensive practice as a picture-cleaner; learnt the art entirely by practical experience, 1732*–1736——Some knowledge of chemistry is essential in cleaning, 1737, 1738——Objection to cleaning, unless the picture be in a very dirty state, 1739, 1740. 1748, 1749. 1875. 1992, 1993——Reluctance of witness to specify the processes employed by him, 1741–1745——He uses pure mastic varnish in the restoration of pictures, 1746, 1747——The works of the Venetian school are especially susceptible of injury in cleaning, on account of the peculiar glazing used by them, 1750–1755. 1986, 1987. 1997–2005——Mode in which the Flemish painters worked up the surface of their pictures, 1756–1760.

Evidence with respect to the nine pictures in the National Gallery cleaned in 1852; damages inflicted on them by their being over-cleaned; their pecuniary value has not been diminished, 1761–1831. 1868 *et seq.*——Injurious effect of the mixed varnish used in the gallery, and which had to be removed from each of the nine pictures; composition of this varnish; with proper care and time it can be removed without any damage, 1764–1781. 1808–1846. 1928–1933. 1945–1951. 1981–1983——Six weeks was not time enough for the cleaning, 1814, 1815. 1854–1859.

Objections to the use of soap and water in the occasional cleaning of pictures, 1847–1853——The Judgment of Paris has been very well cleaned, and is improved in appearance thereby, 1860–1867. 1923–1927——The Cuyp is altered in tone, but not injured by the application of the gallery varnish, 1907–1912——Objection to the employment of assistants in cleaning, 1971, 1972. 1976–1980——No fault can be found with the cleaning by Mr. Seguier of certain pictures in 1846; 1994.

Bequests to the Gallery. The gallery is more likely to acquire a fine collection by bequest than by purchase; this source of supply will be cut off, if it is to go abroad that the gallery is an unsafe place of deposit, *Lord Monteagle* 5117–5119——List of pictures purchased, or accepted as gift or bequest, by the trustees, since the lowest date specified in the catalogue of the collection appended to the Report of the Committee on National Gallery, in the year 1850, with the prices paid for the purchased pictures, *App.* 751.

Bolton, Retra. (Analysis of his Evidence.)—Has been extensively engaged as a picture-cleaner, 961–965——Would not object to acquaint his employers with the nature of the processes used by him, 966, 967——Desirability of not laying bare the surface of pictures in removing the varnish from them; best mode of averting this danger, 968–971——Evidence with respect to the peculiarities of different schools of painting, and the proportionate risk incurred in the process of cleaning, 972–986——Objections to mixing oil

Report, 1852–53—*continued.*

Bolton, Retra. (Analysis of his Evidence)—*continued.*

oil with mastic varnish; injuries arising therefrom, 987–1003. 1054–1059——Advantages generally of mastic varnish over any other, as applied to pictures, 993–1009——How far there may be any objections to the use of water in occasional cleaning, 1010–1018.

The nine pictures of the National Gallery cleaned by Mr. Seguier, in 1852, are on the whole decidedly improved by the operation, 1019–1051——With a proper assistant, six weeks was ample time for the operation, 1052, 1053——The four pictures cleaned in 1846 were benefited by the process, 1057–1059——Frequent cleaning is necessary for pictures in London, on account of the foul state of the atmosphere, 1060——Nicholas Poussin never used real glazing on the surface of his pictures, 1061, 1062.

Bowring, Edgar A. (Analysis of his Evidence.)—Secretary to the Commissioners for the Great Exhibition, 8541——Is Registrar of the Board of Trade, 8542——Character of the institutions proposed to be accommodated with sites for buildings on the ground purchased by the Exhibition Commissioners at Kensington Gore, 8543–8547. 8680——The extent of the land purchased is 86 acres, 8548, 8549——Joint contribution of 150,000*l.* each by the Government and the Royal Commission, to effect the purchase, 8550——Balance still remaining, with which it is proposed to buy a further strip of land adjoining, 8551–8553——Advisability of the purchase in a financial point of view, 8554, 8555——With the exception of a little strip near the road, the whole estate is on gravelly soil; it can all be drained without the slightest difficulty, 8556–8566——Elevation of the ground as compared with that of the National Gallery and other buildings, 8567–8582——Average breadth of the estate, and width at particular places; extent of frontage towards the road, &c., 8583–8589.

No proposal or recommendation has been made by the Commissioners with respect to any allocation of the ground for the National Gallery and the Art Collections of the British Museum, 8590–8592——It is proposed that the School of Design, now located at Marlborough House, be removed to the site at Kensington, 8593–8595. 8619–8625. 8710–8720——Advantages of the Kensington Gore Estate over any other available site near London, as being more open and likely to be more exempt from smoke and other noxious influences, 8596–8616. 8723–8740——The prevalence of smoke, arising from the projected mass of buildings on the site, need not be apprehended, as smokeless fuel will be used, 8596——Private houses only, and not distilleries, &c., are likely to be built around the estate, 8597–8602——Impracticability of obtaining a site in the centre of Hyde Park, adverted to, 8603——Disadvantages in point of space, &c., of the sites proposed by the National Gallery Commissioners, as compared with that obtainable at Kensington Gore, 8604–8606. 8614–8616. 8723–8729.

How far any inconvenience may arise to the students at the Spitalfields School of Design by a removal of the departments at Marlborough House to Kensington, 8617–8625. 8628, 8629——Evidence in support of the opinion that no inconvenience would result to the public generally, as regards attendance, by the removal of the National Gallery, &c., to Kensington, 8626–8679——Difference of opinion among artists as to the advisability of the removal, 8650–8652. 8669, 8670——Impression that there will be a numerous attendance, at the projected department at Kensington, of persons desirous of receiving instruction in art, 8653–8664. 8713——Objection of certain chartered societies, &c. to remove their institutions to Kensington, 8665–8668. 8671.

Outline of the general objects of the Commissioners in purchasing the Kensington Gore Estate, 8680 *et seq.*——Proposed establishment of a library, devoted to the several departments of science and art, and accessible for purposes of reference and study, 8680–8702——Contemplated communication (accessible to omnibuses, &c.) across Hyde Park to the proposed site, 8703–8706——Desirability of all students at the School of Design, &c. being in close vicinity, and having free access to the National Gallery and the other collections of works of ancient art, 8707–8721——Reference to an application recently made by the Royal Academy of Music for a site on the ground at Kensington Gore, 8723.

Ample space which may be devoted to the National Gallery on the projected site; inexpediency of the whole ground being allocated to the gallery, 8725–8733——Contemplated formation of ornamental gardens on the estate, 8732, 8733——Denial of certain statements as to the dampness of the site, 8734–8738——Existence of a right of way across the estate adverted to; contemplated settlement thereof, 8739, 8740——Only 86 acres out of the entire estate of 170 acres, have as yet been purchased; recommendation that the remainder be immediately secured by Parliament, 8740*——Offer made to the Patent Commissioners to accommodate some portion of their models of inventions on the site at Kensington Gore, *ib.*

Branston, Mr. Refusal by the trustees of an application by Mr. Branston to make drawings from the pictures in the Vernon Collection, for the purpose of illustrating newspapers, *Hurlstone* 6664–6668.

Report, 1852-53—*continued.*

Breschian School of Painting. Classified list of the masters of this school, with names of their principal followers *App.* 801.

Brewster, Sir David. (Analysis of his Evidence.)—Has examined the paintings of Claude with very great care, in reference to the principles of harmony of colouring, 5560——Has been much struck with the injury done to all these pictures by the cleaning, especially with regard to the change of colour, 5561——Details in proof of this, and to show that the yellow tint in Claude's pictures was originally produced by Claude's own operations, 5561-5592. 5600-5605——Particulars as to the glasses, called Claude Lorraine glasses, 5564 *et seq.* 5593-5599. 5603, 5604.

Bridgewater Gallery. Statement of the number of visitors to the Duke of Northumberland's collections at Northumberland House and Sion House; and also to the Bridgewater Gallery and Windsor Castle, in the six summer months of 1851, when the Great Exibition was open, *App.* 829.

British Museum:

1. *Proposed Removal from the Museum of certain Works of Art to the projected Institution at Kensington Gore.*
2. *Inadequacy of the present Building to its requirements.*
3. *Pictures in the National Gallery belonging to the British Museum; their Cleaning considered.*
4. *Management of the Museum adverted to.*

1. *Proposed Removal from the Museum of certain Works of Art to the projected Institution at Kensington Gore:*

The question of combining the artistic and archæological collections in the British Museum with the National Gallery, should be referred to a Royal Commission, *Rep.* xv——How far any difficulties might arise as to the expediency of transferring objects from the Museum to the projected institution, and of allotting them to the respective departments, *Dyce* 7657-7667—— Objection to the removal of works of art from the Museum, as having too intimate a connexion with the library; objects of natural history may, however, be very properly removed elsewhere, *Panizzi* 7842-7849——The removal of the Museum to the suburbs would be an inconvenience to the public, *Oldfield* 8344.

2. *Inadequacy of the present Building to its requirements:*

Difficulties experienced in the British Museum from want of space, *Rep.* xvii—— Inconvenience arising from want of space in almost every department of the Museum; schemes proposed for an enlargement of the building, *Hawkins* 7721-7736——Recommendation of a building in the middle of the quadrangle, which should accommodate 500,000 volumes, and serve more especially as a central reading-room, *Panizzi* 7834, 7835. 7841. 7850-7856——Much inconvenience results from the want of sufficient space, *Oldfield* 8265-8271——Occasional existence of damp in the Museum; means taken to avert it or to destroy its effects, *ib.* 8339-8343——Insufficiency of the present space at the Museum, even supposing the central quadrangle to be covered over and devoted to antiquities, *Sir R. Westmacott* 9010-9016. 9029, 9030.

3. *Pictures in the National Gallery belonging to the British Museum; their Cleaning considered:*

Circumstance of some of the pictures in the National Gallery being the property of the trustees of the British Museum, whose authority, however, was not obtained for the cleaning, *Uwins* 3206-3210——No remonstrance has been made by any of the trustees of the Museum, with respect to the over-cleaning of their pictures, *Uwins and Thwaites* 3221-3227——Witness was not aware until lately, that five out of the nine pictures recently cleaned, were the property of the Museum; intention of communicating an expression of regret to the trustees, *Russell* 4886-4889. 4937, 4938——Number of pictures in the Gallery belonging to the Museum, *App.* 735.

4. *Management of the Museum adverted to:*

Reference to the system by which money is allocated to different departments under the Museum; comments on the administration of this fund, *Coningham* 6868-6871. 6876, 6877——There are no specific regulations for the guidance of the assistants in their duties; they generally act under the superintendence of the heads of their departments, *Oldfield* 8255-8260.

Bromley,

Report, 1852-53—*continued.*

Bromley, Davenport. (Analysis of his Evidence.)—Is the possessor of a collection of pictures, and has had some experience in cleaning, 4348-4354——The Claudes in the National Gallery cleaned in 1852 should not have been subjected to the process, 4355, 4356——The Paul Veronese, and probably some others, required the operation, 4357, 4358——The Claudes were injured in the perspectives, and the most delicate parts, 4359-4362——Belief that the Paul Veronese has not been injured, 4363, 4364——Reference to the Velasquez as having been damaged, 4368-4370——The Gallery varnish and the London atmosphere combine to render the pictures in the gallery dirty; preference given to pure mastic varnish, 4371-4376——Time will never restore the former harmony of the pictures injured by the cleaning, 4377——Pictures are cleaned with greater safety in Italy than England; causes to which attributable, 4378-4384.

Bronzes (British Museum). Correction of a statement that it was usual to clean bronzes in the Museum, and that injury had been inflicted on them thereby; the only bronzes ever cleaned were a few brought home by Mr. Layard, and their value was much increased by the process, *Oldfield* 8385*-8388——The bronzes in the Museum should not be separated from the sculptures, *Sir R. Westmacott* 9006, 9007.

Brown, Thomas Boden. (Analysis of his Evidence.)—Has been extensively engaged as a picture-cleaner for more than 30 years, 1063-1065——Circumstances attending the employment of witness in 1844 to clean certain pictures in the National Gallery; details as to the works operated upon, and the peculiar processes applied, 1066. 1115. 1138 *et seq.*——The glazing of some pictures renders them very susceptible of injury in cleaning, 1116-1123——Occasion of witness having cleaned the Dido and Eneas before it was placed in the gallery; it was in a peculiarly foul state, 1124-1132——The Age of Innocence, by Sir Joshua Reynolds, was also cleaned by witness before it was received into the gallery, 1133-1135.

Evidence in illustration of the processes used by witness generally in cleaning and re-varnishing the works of the old masters; definition of the practice under various circumstances requiring different modes of treatment, &c., 1179-1235——There is no affinity whatever between the lining and cleaning of pictures, 1236-1238.

Brown, Mr. About five or six years ago Mr. Brown cleaned a few pictures for the trustees of the gallery, *Seguier* 429-432——Mr. Brown was recommended by the late Sir R. Peel, for the purpose of cleaning certain Dutch pictures; the trustees assented, *Sir C. Eastlake* 4459. 4650-4653. 5924-5926——Witness does not recollect the circumstance of Mr. Brown being employed in the gallery in 1844; nor that of the Judgment of Paris, when cleaned, being repaired, *Lord Monteagle* 5034-5039.

C.

CANALETTI'S PICTURES:

1. *Treatment to which these Pictures (The View in Venice and The Grand Canal) were subjected.*
2. *Evidence approving of the Cleaning.*
3. *Evidence to a contrary purport.*

1. *Treatment to which these Pictures (The View in Venice and The Grand Canal) were subjected:*

In the case of the two Canalettis cleaned by witness, he was obliged to remove the whole coat of varnish, *Seguier* 506-509. 581-586——The View in Venice and the Grand Canal were both in a very good state; the former required a little restoration, but the touch of the master was not encroached upon, *ib.* 607-611. 912-919——Solvents rather than friction should have been used in the cleaning of the View in Venice, *Bentley* 1986-1991——Objection to this master's mode of painting water, *Moore* 2198-2200.

2. *Evidence approving of the Cleaning:*

Approval of the cleaning of the View in Venice, &c., *Uwins* 58-63. 68——Improvement of these pictures by the cleaning; the operation has been well performed, *Bolton* 1020-1022. 1028——The two pictures by Canaletti were the only ones in which solvents were used for the removal of the mastic varnish, *Seguier* 2910, 2911——Witness cannot

Report, 1852-53—*continued.*

Canaletti's Pictures—Evidence approving of the Cleaning—continued.

observe any of the defects pointed out by Mr. Moore in the View in Venice, *Uwins* 3175-3179——Any imperfection in the perspective of the water of the Grand Canal is attributable to the fault of the master rather than to the recent cleaning, *ib.* 3180–3184 ——Belief that the Grand Canal has not suffered by the cleaning, *Roberts* 3497.

3. *Evidence to a contrary purport :*

Injury done by the cleaning to the two Canalettis, more especially to the View in Venice, *Coningham* 3063–3066——The genial and pleasant warmth formerly apparent in both works has been much damaged, *Sir E. Landseer* 4136-4140——Both the works have been over-rubbed, and consequently injured, *Cheney* 4305, 4306.

Canaletti's View in Venice has been literally flayed by the recent cleaning; the white colours have been reduced to an uniform shade of brightness without any reference to perspective, and the general harmony of the picture is quite gone, *Moore* 2185–2192 ——The work was previously in a fine condition, and did not require cleaning at all, *ib.* 2191, 2192——The cleaning has wrought a great change for the worse in the View in Venice, and has destroyed its characteristic architectural traits, *Hart* 3261–3270. 3302. 3344. 3345—— The View in Venice has been brought into a spotty state by the cleaning, and is altogether out of keeping, *Dennistoun* 3376——The work most injured is the View in Venice, the whole harmony of which is completely gone, and can never be restored, *Roberts* 3495, 3496. 3498. 3508, 3509——The scumblings, and even the paint, have been removed, and the picture is all raw and disjointed, *ib.* 3496. 3498. 3509 ——The injury done to the View in Venice is chiefly apparent in the removal of the warm light which formerly spread from the cloud over the whole picture, *Lawrence* 3545, 3546—— A portion of the original paint has been removed from this work, *Stansfield* 3603-3606—— Whether attributable to the cleaning or not, the picture has lost all its former harmony, and is as crude and raw as possible, *Ford* 3881–3885——The glazings have been removed, and consequently the whole picture is out of keeping, *Stevens* 4085–4089.

The View on the Grand Canal has suffered much in mellowness of tone, and the aerial and linear perspectives have both been injured, *Moore* 2193–2201——The Grand Canal is not changed so much as the View in Venice, but is less subdued and rich in colour than formerly, *Hart* 3264——The Grand Canal has been over-cleaned, and the tone of the picture affected thereby, *Dennistoun* 3373-3375——The effect in the Grand Canal is now very impoverished, meagre, and discordant, *Lawrence* 3547—— The appearance of the water is not very agreeable, but is now just what it was when it left the master's easel, *Stansfield* 3685–3687.

Canvas. Respective merits of canvas and wood as grounds for pictures, *Sir C. Eastlake* 6610.

Caracci, A. See *Purchases* (*National Gallery*), 4.

Caracci School. The pictures of the Bolognese masters are firmly painted, and can be cleaned without much danger, *Seguier* 466, 467.

Care of the Pictures. See *Regulations, &c.* (*National Gallery*).

Carpenter, William Hookham. (Analysis of his Evidence.)—Keeper of prints and drawings at the British Museum; has held the appointment for eight years, 9077-9079——Considerable additions made to witness's department since he has been at the head of it; present size and character of the collection, 9080–9082. 9100-9106——Insufficiency of the present space devoted to the exhibition of the prints, 9083-9086——Room proposed to be built by Mr. Smirke to afford the requisite accommodation, 9086-9090——Suggested employment of screens or frames, covered with glass, for the exhibition of the prints; chronological arrangement might thus be better effected, and the prints could be changed every three or four years, 9089. 9091-9099. 9128, 9129. 9149-9156. 9168——The several classes of prints are generally in equal demand, 9107–9112——The great mass of visitors to the department are students, who are allowed to make sketches from the prints, 9111–9113.

System pursued in making purchases; the trustees are most anxious not to neglect any opportunities for valuable additions; discretion occasionally exercised by witness in obtaining rare acquisitions, 9114-9126. 9170–9181——Greater safety of the prints in frames than in portfolios, though no material injury has resulted from the use of the latter, 9127-9129. 9149-9168—— Occasional washing of the prints and engravings adverted to; hot water only is used, and no damages have been inflicted thereby, 9130–9137. 9169—— Expediency of some of the drawings being placed in frames and rendered more available to the students, 9138–9142— Objections to the collection of prints and drawings being separated from the library, and attached instead to the national pictures, 9143–9148. 9157-9167——The centrality of the Museum is very convenient to the students, 9146–9148——Prints of the works of the old masters have of late years considerably advanced in price, 9182–9184.

Report, 1852-53—*continued.*

Cartoons. See *Drawings. Raphael,* 3.

Casts. A collection of casts should be attached to the gallery of sculpture, in the proposed combined collection of art, *Sir C. Eastlake* 6538-6541——The establishment of a system for the supply of cheap casts of works of art, analogous to the Calcographie at Paris, is well worth consideration, *ib.* 6601-6609——Desirability of a collection of the finest casts being added to the sculpture department at the British Museum, *Coningham* 6898, 6899——Students in painting as well as in sculpture are first taught by means of plaster casts, *Sir R. Westmacott* 9000-9004——Advantages of students in painting being first instructed from plaster casts rather than from the statues themselves, *ib.* 9037-9046——Desirability of students in a school of design studying from the antique in sculpture, by means of casts, *ib.* 9060, 9061.

The sculpture might be dispensed with if they were represented by a complete collection of casts, *Davies* 9306-9308——Increasing demand of late years for plaster casts, on the part of students and the public generally, *Loft* 9330-9332——Expediency of combining a complete collection of casts of the best works in existence with the national pictures; such a collection would be more advantageous to students than the sculptures in the Museum, *ib.* 9333, 9334. 9355-9358——There should be a complete collection of casts in every large town in the kingdom, *Moore* 10029, 10030.

Catalogue. Proposition made to the trustees for affixing to the official catalogue an advertisement of a private speculation; opinion that this would be beneath the dignity of the trustees, *Hurlstone* 6721-6723——Suggestion that admission to the gallery be conditional on the purchase of a catalogue for a penny, or some such low price, *Ford* 7945-7969. 8015. 8034.

Cavalcaselle, G. B. Letter from G. B. Cavalcaselle to Colonel Mure, M.P., Chairman, dated 9 June 1853, respecting the pictures lately cleaned, *App.* 784——Translation thereof, *App.* 785.

Centrality of the Gallery. See *Atmospheric Influences. Kensington Gore. Peel, Sir Robert, The late. Public Opinion. Removal of the Gallery,* 2. *Site of the Gallery.*

Cephalus and Aurora, The. See *Poussin, Nicholas,* III.

Chancellor of the Exchequer. By the Treasury Letter of 12 August 1846, the Chancellor of the Exchequer was appointed an *ex-officio* trustee, *Rep.* v——Opinion that no serious difficulty would arise from the Chancellor of the Exchequer being obliged to sanction purchases recommended by the Director, and thus to give an opinion as to their advisability, *Dyce* 7584-7604.

Chartered Societies. Objections of some of the chartered societies to a removal to Kensington, *Bowring* 8665-8668. 8671; *Sir W. Cubitt* 10182-10184. 10205. 10271-10275.

Charteris, Hon. Francis, M.P. See *Deposit of Works of Art at the Gallery.*

Chateau of Rubens, The. See *Rubens,* III.

Chemical Processes. In what these processes in picture-cleaning consist; their merits and demerits considered, *Rep.* vi, vii.

See also *Florence Gallery. Gallery Varnish. Mastic Varnish. Oil Varnish. Solvents. Spirits of Wine.*

Chemistry. Suggestion as to the advice of chemists being desirable in effecting restorations or cleanings, *Rep.* xiii; *Sir C. Eastlake* 6628-6633——Some knowledge of chemistry is essential in picture-cleaning, *Brown* 1234, 1235——*Bentley* 1737, 1738.

A knowledge of chemistry is not essential in a picture-cleaner, *Farrer* 1535. 9434 9436——Experience is more essential in a cleaner, than a knowledge of chemistry, *Munro* 4018. ——*See* also *Picture-cleaners,* 2.

Cheney, Edward. (Analysis of his Evidence.)—Has been long conversant with the process of picture-cleaning as practised abroad, 4285, 4286——Opinion that the operation is less carefully conducted abroad than in this country, 4287——The pictures in the gallery cleaned in 1852 did not require the process, 4288-4292——Injuries inflicted on them severally to a greater or less extent, from the fact of their having been over-cleaned, 4293-4312. 4346, 4347——Sufficiency of occasional cleaning by means of a silk handkerchief, &c., to keep the dust from the pictures in the gallery, and to prevent the necessity of thorough cleaning, 4314-4322——Circumstance of witness having had some of his own pictures cleaned, when abroad, and having entrusted the process to the discretion of the operator, 4323-4331——Peculiar danger of cleaning the pictures of Claude, from the manner in which he finished off his works, 4332——Similar susceptibility to injury in cleaning, of the works of Rubens, and the Flemish School, from the circumstance of their having painted so much in glazing colours, 4333-4335——The pictures cleaned in 1842 and 1846, were much rubbed in various places, and seemed altogether out of tone and harmony, 4336-4345.

Report, 1852-53—*continued.*

Chill. Chill or bloom arises from the varnish; appearance which it gives to the surface of a picture, *Rep.* viii——The tendency of mastic varnish to throw out chill or bloom was the reason assigned by Mr. Seguier for mixing oil with it, *ib.* xii——The Baron De Klenze states he never observed this effect anywhere except in London and Dresden, and he attributes it to the influence of the sulphur contained in coal smoke, *Rep.* xii.; *Baron De Klenze* 9381-9389——Disagreeable effect of chill in the varnish; its removal is very simple and very expedient, *Sir E. Landseer* 4155-4158——Objections to the use of mastic varnish as tending to produce a chill on the pictures, *Wellesley* 9471-9483.

See also *Mastic Varnish*, 1. *Smoke*, 1.

Christie, George Henry. (Analysis of his Evidence.)—Has been extensively engaged in the sale of pictures as an auctioneer for 22 years, 5606-5608——The practice of cleaning pictures has increased of late years, 5609, 5610——More pictures consequently have been injured, 5611——Pictures sell much better in a dirty state, 5612-5614. 5721-5730 ——General opinion that the market value of the pictures in the National Gallery has been deteriorated in consequence of the cleaning 5615. 5718-5720——Details of purchases made by the trustees since 1835; 5616-5633——Similar details of pictures sold at Mr. Edward Solly's sale, from which specimens of the earlier and purer schools might have been obtained, 5634-5674. 5683-5689. 5711, 5712.

Attendance of officers from the gallery at witness's sales; Mr. Seguier and Sir C. Eastlake have generally purchased, 5675-5682——The pictures alluded to as having been sold at Mr. Solly's sale would fetch much higher prices now, 5690-5701——Whoever attends to bid for the National Gallery should not be known as such, 5702-5705 ——The sale of Lord Ashburnham's collection was not a good opportunity for the gallery to purchase, 5706-5710——Custom obtaining for purchasers of pictures to desire evidence of their genuineness; it is frequently practicable to obtain such evidence, 5711-5717——Witness is not aware of pictures having been injured by bad lining, 5731——The early Italian school has been overlooked in the acquisition of pictures for the gallery, 5732——The large prices occasionally given for single pictures might have bought a dozen valuable pictures of the early schools, 5733-5736——Most of the early pictures of Mr. Solly are still in this country in private collections, 5737 ——Mr. Woodburn's collection is yet unsold, 5738——Whether expedient to purchase whole galleries, and then to draft off such pictures as were not wanted, considered, 5739-5745.

Chronological Arrangement of the Pictures. Desirableness of an immediate chronological arrangement of the present collection, *Dennistoun* 5892——The formation of series of pictures illustrative of the progress of art is desirable, *ib.* 5901, 5902——Circumstances to be guarded against in effecting this object, *ib.* 5903——Plan of arrangement of the gallery as to schools, chronological order, &c. and the principles to be regarded in respect thereto considered; systems adopted in the Berlin Gallery, and in the Academy at Florence, *Sir C. Eastlake* 6512-6519——Recommended adoption of a chronological and historical arrangement of the collection, so as to show the origin and progress of any school of art, *Dyce* 7471, 7472.

Partial condemnation of a chronological arrangement of pictures so as to form a historical series of art, *Coningham* 6943-6949——Objection to a strictly chronological arrangement of the pictures, *Russell* 8206.

Classification of Pictures. See *Arrangement of the Pictures. Art. Chronological Arrangement of the Pictures.*

IV. *Paper laid before the Committee.*

I. *Critical Remarks on the Style and other Characteristics of this Master:*

The colours of this master are exceedingly fine, but his pictures bear cleaning very well; instead of glazing he seems to have used scumbling, that is, passing a light colour over a dark one, *Seguier* 483-486—— Process of scumbling practised by this master in lieu

Report, 1852-53—*continued.*

CLAUDE'S PICTURES—continued.

I. *Critical Remarks on the Style, &c. of this Master*—continued.

lieu of glazing, *Moore* 2609-2611——Remarks on the extent to which glazing was resorted to by Claude, and also on the general character of his works, *Hart* 3294-3297. 3336-3342; *Stansfield* 3630-3647——Peculiar danger of cleaning the pictures of Claude from the manner in which he finished off his works, *Cheney* 4332.

Respects in which the treatment of his pictures by Claude is open to criticism; effects therein to be described as "wooden" or mechanical in touch; the writings of Hazlitt adverted to in regard hereto; how far such may be deemed the result of cleaning, *Sir C. Eastlake* 4720-4740——Reference to the Claudes and to the evidence given by Sir C. Eastlake in regard to their being "wooden," and also as to glazing, *Russell* 4902-4920. ——It was the practice of Claude to glaze his pictures, and they are imperfect if unglazed, *Sir C. Eastlake,* 6232-6234.

II. *General Results of the recent Cleanings of his Pictures:*

The Claude in the last room was very dirty, but was cleaned without difficulty, and the original colours were never touched, *Seguier* 624-627——There is a great rawness and want of tone about the Claudes, but still they have not been damaged to the extent represented by some witnesses, *Roberts* 3494-3510——The Claudes in the gallery, cleaned in 1852, should not have been submitted to the process, *Bromley* 4355, 4356——The Claudes were injured in the perspectives and in the most delicate parts, *ib.* 4359-4362—— There is no evidence to show that any injury has been inflicted by the recent cleanings; special reference herein to the Claudes, *Russell* 4902-4920——Details in proof of the injuries caused by the cleaning of 1852, and to show that the yellow tint in Claude's pictures was originally produced by Claude's own operations, *Sir D. Brewster* 5564 *et seq.* 5593-5599, 5603, 5604.

III. *Evidence in detail with regard to each Picture:*

1. The Annunciation:

Claude's Annunciation has been injured throughout by the cleaning, and is not worth half its former value, *Moore* 2211-2222——The glazing has been almost entirely removed, and the picture has a very meagre look, *ib.* 2220-2222——Injuries inflicted on the picture by the recent cleaning, *Lawrence* 3538——The original touch has been trenched upon, and the work injured by over-cleaning, *Munro* 3982. 4020——The appearance of the picture is very new, and parts of it are more hardly and positively relieved than formerly; time may restore its tone considerably, *Sir E. Landseer* 4141. 4225, 4226——The glazing has been removed and the picture has lost its former delicacy and transparency, *Cheney* 4302. 4310-4312.

Approval of the cleaning of this picture, *Uwins* 58 *et seq.*——The small Claude was easily cleaned; no repairs were made, and the surface was not touched, *Seguier* 618, 619 ——No injury has arisen to this work from cleaning; pure mastic varnish was employed, *Bentley* 1913-1917——Removal of the oil from the Annunciation of Claude by means of soap and water, *Seguier* 3022-3026——Improvements effected in the Annunciation by the late cleaning, which has restored the former beautiful tone of the picture, *Uwins* 3202, 3203——Belief that the Annunciation has escaped injury from cleaning, *Hart* 3289, 3290. 3331-3333——The Annunciation has not been injured so much, but the glow of the original work has been to a great extent removed, *Dennistoun* 3372—— Impossibility of attributing with safety an injury to the sky in this picture, to the effect of the late cleaning, *Dyce* 3778, 3779——Result of the recent cleanings in witness's feeling; special reference herein to Sir G. Beaumont's Claude (the Annunciation); allusion to a copy thereof made by Mr. Constable, *Lord Monteagle* 5072-5075.

2. The Queen of Sheba:

i. Process used in cleaning the Picture:

Detail of the process used by witness in cleaning this work, which was at the time in very great need of it, though it was formerly repaired and varnished by witness; belief that in removing the mastic varnish, he never reached the surface of the picture, *Seguier* 514-552. 574-580. 768-777. 903-909——In the case of the Queen of Sheba, oil alone has occasionally been rubbed over the gallery varnish, *ib.* 2939-2945——When the Queen of Sheba was purchased for the gallery, it required several restorations, which witness was employed to make, and which he afterwards coated with the mixed varnish; this varnish was removed in the late cleaning by soap and water, but the restorations were not disturbed thereby, *ib.* 2995-3015.

ii. Criticism on the Results of the Cleaning:

Opinions of Dr. Waagen and Mr. Buchanan as to the former fine condition of this picture, *Moore* 2451——The work was in a splendid condition before the cleaning, and was one of the finest specimens of Claude extant, *Hart* 3291-3293——Belief that it was never reduced by a former cleaning to the state in which it now is, *Munro* 4021——

Report, 1852-53—*continued.*

CLAUDE'S PICTURES—continued.

III. *Evidence in detail with regard to each Picture*—continued.

2. The Queen of Sheba—ii. Criticism on the Results of the Cleaning—*cont*^{d}.

Witness copied the Claudes before the recent cleaning; the Queen of Sheba was then in good harmony, and had a very nice tone, *Hayes* 9242-9247.

The delicate tints of this work and its general tone have been injured by cleaning, *Nieuwenhuys* 1612-1632——Injuries done to the ropes and rigging, and to the water, by their having been over-cleaned, *Moore* 2089-2100. 2113-2121. 2136——The aerial perspective of the picture and its general tone have suffered much, and some of the figures have had the surface completely removed, *Arney* 2106-2111. 2151, 2152——The picture is rather a sunrise than a sunset representation, *Moore* 2141-2143——Belief that it represents the evening rather than the morning, *Arney* 2201——The cleaning of the Queen of Sheba should not have been undertaken under three months, *Moore* 2492, 2493——The Queen of Sheba has suffered much in appearance, and seems to have been over-cleaned, *Fradelle* 2617. 2658-2689. 2696-2698.

The original glazings were on the Queen of Sheba prior to the late cleaning, by which, however, they have been removed, and considerable injury otherwise inflicted on the picture, *Moore* 2032-2036. 2057-2102. 2113-2143 —— Alterations produced in the general tone of the Queen of Sheba by the cleaning, which has removed the peculiar qualities of Claude's touch, *Hart* 3255, 3256. 3260. 3291-3312——The warm, rich glow, characteristic of Claude, has been removed from the Queen of Sheba, and the work is now raw and crude; the gradations of tint and the aerial perspective have also been disturbed, *Dennistoun* 3367-3371. 3401——The over-glaze was decidedly on the picture before the cleaning, but is now entirely removed, and nothing can ever restore the former character of the work, *Stevens* 4092-4098——Depreciation in the general tone and harmony of the work, which is much more crude than it used to be, and has lost its former gradations; how far any of the original paint or glazing may have been removed, *Sir E. Landseer* 4119-4134. 4181-4193. 4213-4221 ——The glazings have been partially removed, and the picture has suffered very much in the sky, and in the rigging and shadow of the ship, &c., *Cheney* 4300, 4301. 4310-4312.

The inscription on the Queen of Sheba has been partly rubbed out by the cleaning, *Moore* 2071-2076; *Arney* 2105——The inscription was much more legible before the cleaning, *Coningham* 3070——The inscription is in precisely the same state as it was before the cleaning, *Uwins* 3160.

Time will never restore the harmony of tone which has been destroyed by the cleaning, *Moore* 2130, 2131——The Queen of Sheba has been greatly injured, and can never be restored, by time or otherwise, to its former tone, *Coningham* 3062. 3070-3082——Improbability of time, or any artist, ever restoring what the Queen of Sheba has lost by the cleaning, *Hart* 3307-3312——Improbability of the former tone of the Queen of Sheba being restored by the gallery varnish, *Dennistoun* 3401——The former effect of the picture has been completely marred, and can never be restored; present defects in the work cannot be attributed to former cleanings, *Lawrence* 3538-3544. 3564-3566 —— Possibility of the Queen of Sheba, which looks poor and unsatisfactory since the cleaning, being brought back to its former state of perfection by the clever processes of the picture-restorers at Rome, &c., *Ford* 3927-3945——Belief that neither time nor artistic skill can ever restore the Queen of Sheba to its former fine condition, *Munro* 4015, 4016.

This work has been much over-cleaned; former repairs have been disturbed, and some of the original painting taken off; its pecuniary value, however, has hardly been lessened, *Bentley* 1776-1799. 1814, 1815. 1854-1859. 1868-1875. 1879-1882. 1902-1906. 1918-1922. 1931. 1941. 1956. 1973-1975 ——In a commercial point of view the Queen of Sheba is the only picture which has been diminished in value by the cleaning, *Bentley* 1870-1875. 1956——The Queen of Sheba has been reduced to one half of its former value by the recent cleaning, *Moore* 2077-2079——The commercial value of the Queen of Sheba has been considerably diminished by the cleaning, *Fradelle* 2688, 2689—— The original touch has been trenched upon, and the commercial value of the work diminished, *Munro* 3982. 4020.

iii. Evidence in answer to Objections to the Cleaning:

Approval of the cleaning by Mr. Seguier of this picture, *Uwins* 58. 66, 67. 125-129. 286. 320-326. 378. 385—— Denial of the assertions of Messrs. Moore & Arney that certain parts of the original surface of the Queen of Sheba have been completely removed by the cleaning, *ib.* 2797*, 2798——Denial of Mr. Arney's statement that some of the figures were partly rubbed out, and their anatomy completely destroyed, *ib.* 3146. 3151, 3152——The water portion of the picture and the shadow of the ship therein are quite as distinct as ever, *ib.* 3146, 3147——General purity and beauty of the picture as brought out by the cleaning, *ib.* 3150——Further statement in refutation of the charges brought by Messrs. Moore & Arney against the cleaning of the Queen of Sheba, *ib.* 3146-3152. 3159, 3160——The work was never covered all over with a transparent glazing, *ib.* 3159.

The

Report, 1852–53—*continued.*

CLAUDE'S PICTURES—continued.

III. *Evidence in detail with regard to each Picture*—continued.

2. The Queen of Sheba—iii. Evidence in answer to Objections, &c.—*continued.*

The Queen of Sheba is now in a more pleasing state than his St. Ursula, *Seguier* 726–728——Opinion that this picture has not been injured by cleaning, *Bolton* 1031–1036. 1040, 1041——How far this picture may have been injured by cleaning; it may have been imperfect before the operation, *Farrer* 1303–1321. 1325–1330. 1382–1392. 1475–1480——The repairs formerly executed by witness on this picture were on the lower part of it; they are not now visible, *Seguier* 3153, 3154. 3156, 3157——The Queen of Sheba looks somewhat rubbed and over-cleaned, but time will restore its former character, *Sir T. Sebright* 3427. 3464-3474——No injury whatever has been inflicted by the cleaning either on the rigging of the ship or on the water, or any part of the picture; its richness of tone has been somewhat subdued, but will be restored by time, *Stansfield* 3600–3603. 3648–3656. 3679. 3683, 3684. 3688–3697——Opinion that the whole of the varnish was removed in cleaning, *ib.* 3719–3722.

It certainly was more agreeable and harmonious before the cleaning, but it has not been materially injured, and still retains the characteristic qualities of the master, *Dyce* 3781–3800——Before cleaning it was a fine specimen of Claude, as an architectural work; but it may have been injured by former cleanings, and again restored to the excellent condition in which it was previous to the late process, *Ford* 3887–3889. 3927–3942——Further opinion that the Queen of Sheba, or any other picture, may be rendered inharmonious by cleaning, and still not be injured thereby, *Dyce* 4267, 4268——Although certain injuries have been laid bare by the cleaning in the Queen of Sheba, and the other pictures, it is unjust to attribute them to the recent operation only, *ib* 4269. 4277–4283——None of the master's work has been removed, but the picture has been tastelessly cleaned, *Sir C. Eastlake* 4590——The injury done to the Queen of Sheba consists in its having been unequally cleaned; time will rectify this, *ib.* 4711–4721. 4739.

3. *The St. Ursula:*

Dirty state of this picture; there are, however, many in the gallery much worse, *Uwins* 379——It would be much improved by cleaning, *Seguier* 726–728. 763, 764. 856, 857——Reference to the present excellent condition of the St. Ursula, *Farrer* 1315. 1384–1386. 1552–1554. 1559——This work looks better than the Queen of Sheba, but seems to have been varnished very lately, *Nieuwenhuys* 1641–1647——In cleaning this work, the outer varnish only should be removed, *Bentley* 1776–1779——With respect to the St. Ursula, it is a sunrise rather than a sunset picture; fine condition of this work, notwithstanding its being coated with oil varnish, which is very objectionable, *Moore* 2144–2150——Varnish has not been lately applied to the St. Ursula, *Seguier* 2950, 2951.

The St. Ursula is in a very agreeable state, and should by no means be cleaned, *Hart* 3313——This picture possesses the characteristic sunny glow of the master, and does not require cleaning, *Dennistoun* 3368. 3402——The St. Ursula is not in a preferable state to the Queen of Sheba, and should undergo the process of cleaning, *Stansfield* 3655–3667. 3706–3708——Opinion that the St. Ursula does not require cleaning, *Dyce* 3812–3818——Recommendation that the St. Ursula be exempted from cleaning, although it is not in a nice condition, *Munro* 4037, 4038——The St. Ursula, though more pleasing in general tone than the Queen of Sheba, requires a little cleaning; but the operation should not be undertaken without a consultation as to its general expediency, *Sir E. Landseer* 4188–4191. 4194–4196——Symptoms of a former unequal cleaning in the St. Ursula; this case is a proof of time bringing pictures into harmony after such treatment, *Sir C. Eastlake* 6229. 6235.

4. The Meeting of Isaac and Rebecca:

Approval of the cleaning of this picture, *Uwins* 58. 66, 67——Opinion that this work has been injured by the recent cleaning, *Bolton* 1042–1045——The Isaac and Rebecca of Claude has been lamentably injured by the cleaning; the upper glazing is almost entirely gone, and the aerial perspective completely destroyed, *Moore* 2204–2207——Belief that no glazing was ever used in the Isaac and Rebecca, or if there was, that it is still there; the aerial perspective has not been in the least affected by the cleaning, *Uwins* 3174——It is very much colder and fresher in its general hue than formerly, and has been over-rubbed, *Sir E. Landseer* 4142–4146——It has been very much injured, but was in a crude state before the cleaning, *Cheney* 4302. 4310–4312.

5. Other Pictures, viz., the David at the Cave of Adullam, the Death of Procris, &c.:

The David at the Cave of Adullam was recommended by witness for cleaning in the vacation of 1852, but he had no time for it, *Seguier* 753, 754——Unsatisfactory state of the David at the Cave of Adullam, though better cleaned than several works which underwent the process in 1852, *Moore* 2223–2228——The David at the Cave of Adullam requires to be properly cleaned, *ib.* 2531–2534.

Report, 1852-53—*continued.*

Claude's Pictures—continued.

III. *Evidence in detail with regard to each Picture*—continued.

5. Other Pictures, &c.—*continued.*

The picture called the Death of Procris is in a very bad condition, and requires cleaning, *Dennistoun* 3398. 3403.

Excellent condition of the small Landscape with Figures by Claude; inexpediency of its being cleaned, *Moore* 2229–2231.

IV. *Paper laid before the Committee:*

Letter from Mr. Buchanan to the Chairman of the Committee, dated 21st May 1853, condemning the cleaning of the Claudes, *App.* 770.

See also *Cleaning*, 3. *Glazings. Scumbling.*

Cleaner to the Gallery. Recommendation that no picture-cleaner be employed in the gallery who declines to give an explanation of the mode in which he proposes to operate, *Rep.* xiii——No picture should be entrusted to a cleaner who would not define the nature of the processes to be used by him, *Lawrence* 3555-3557——The cleaner to the gallery should be a salaried officer, and not merely employed from time to time; he need not be prevented from cleaning works in private collections, *Stansfield* 3611, 3612. 3615, 3616——The processes employed should not be kept secret by the cleaner, *Stansfield* 3607-3610; *Sir E. Landseer* 4168-4172; *Ford* 3864-3866. 3909, 3910.

Witness was not a salaried officer of the trustees, but was merely employed from time to time, *Seguier* 433——General authority of witness to report to the trustees as to the pictures requiring cleaning; those cleaned in 1852 were submitted to them before the vacation as being in special need of the operation; reference to those recommended for cleaning in 1853, *ib.* 753-755. 759-762. 885-889. 895-900. 922——Circumstances attending the employment of witness in 1844 to clean certain pictures in the National Gallery; details as to the work operated upon and the peculiar processes applied, *Brown* 1066–1115. 1138 *et seq.*——Difficulty of finding fit persons to undertake cleaning when it is required, *Moore* 2506–2510. 2515–2518. 2551–2560; *Hart* 3237. 3319-3322——Precautions to be used in entrusting the national property to the hands of the cleaner; opinion that a properly qualified person being found, the operation must be left solely to his responsibility, *Dennistoun* 3387-3398. 3406, 3407.

Precautions to be observed in appointing any person to the office of cleaner to the gallery, *Stansfield* 3611-3616——It is not desirable that the picture-cleaner himself should be the judge of what pictures should be cleaned, *Sir C. Eastlake* 4696-4698——The cleaning should all be performed by the same person; or at least the Italian by one, and the Dutch by another; it is essential that the cleaner should be conversant with the work of the painter he operates upon, *ib.* 4743-4745——How far objectionable in principle that in picture-cleaning the person consulted should be engaged by the job, *Lord Monteagle* 5026–5033——In cleaning or restoring, a majority of the board of trustees proposed by witness should select the person, and he alone should be responsible for the work, *Dennistoun* 5792-5795——It is not necessary that Government should interfere in the trade of picture-cleaning; the persons to be employed should be left to the discretion of witness's proposed director, *Sir C. Eastlake* 6635-6642.

CLEANING—continued.

II. *As to the Process of Picture-cleaning generally:*

1. Processes employed described.
2. Extent to which attended with Risk.
3. Progress made in the Art of Cleaning of late years.
4. Other Evidence in regard to the Process generally.

III. *Papers laid before the Committee.*

I. *As to the Picture-cleaning at the National Gallery:*

1. Proceedings of the Trustees in regard to Cleaning during the Keeperships of Mr. W. Seguier, Sir C. Eastlake, and Mr. Uwins:

The trustees, since the appointment of Mr. Uwins, have assumed the entire responsibility in regard to picture-cleaning, which, in Sir C. Eastlake's time, had been largely shared by the keeper, *Rep.* v——No record of any pictures having been cleaned during the keepership of Mr. W. Seguier, *ib.* viii——Steps taken by Sir C. Eastlake, on succeeding to the keepership, to bring the state of the pictures under the notice of the trustees, with a view to certain of them being cleaned, *ib.*

General authority thereupon given by the trustees to the keeper, to cause such of the pictures to be cleaned as in his opinion required it, *Rep.* viii——Under this authority, Sir C. Eastlake employed Mr. Seguier and Mr. Brown, *ib.*——Opposition of Sir C. Eastlake to the cleaning after he became an *ex-officio* trustee in 1850; grounds of that opposition, *ib.* ix——Number of pictures which have been cleaned during the keepership of Mr. Uwins; remarks on his evidence, that he never spoke to the trustees on the subject, nor was ever consulted by them, *ib.*

The responsibility of cleaning the pictures in a proper manner rests entirely with Mr. Seguier, who may at his own discretion use whatever means he considers most desirable; he is however responsible only to the trustees, *Uwins* 239-262. 275. 280——Out of about 300 pictures in the National Gallery, only nine have been cleaned since 1846, *ib.* 302-304——Witness has recently reported under a minute of the trustees, on the expediency of cleaning, as in the case of nine pictures cleaned in 1852; in that case the keeper exercised no authority, *Seguier* 439-442——In 1844, witness first noticed the injurious effects of the cleaning; all the pictures cleaned since that year have been irreparably and extensively damaged, *Moore* 2460-2482——The commercial value of the works cleaned since 1844, have been diminished at least one-half by the process, *ib.* 2480-2482.

Number of pictures cleaned in the first year of witness holding the keepership, *Sir C. Eastlake* 4434-4436——Bad state in which he found the pictures on succeeding to the office, *ib.* 4437, 4438——Experiments usually instituted by Mr. Seguier prior to cleaning, to ascertain whether the picture would bear the process, *ib.* 4455, 4456.

Opposition which witness, as a trustee, has always offered to the pictures being cleaned; general reasons which weighed in his mind against it; the subject was repeatedly brought forward by one trustee in particular, *Sir C. Eastlake* 4554-4576. 4617-4630——Conclusion that picture-cleaning in the National Gallery has not been conducted with the caution and deliberation its importance would seem to require, *ib.* 4631——Probable causes of the large number of pictures cleaned in the first year of office of Sir C. Eastlake, *Lord Monteagle* 5015-5018.

2. Details as to the Pictures cleaned in 1846:

i. Notice which this Operation attracted; unfavourable Opinions as to its Result.

Notice which the cleaning of 1846 attracted; letter of Mr. Morris Moore to Lord Ellesmere, condemning it, *Rep.* viii——Steps taken by the trustees thereupon, *ib.*——Names of artists who approved of this cleaning; resolution passed by the trustees justifying it, *ib.* viii, ix——The effect produced on the pictures is still a matter of dispute, *ib.* ix.

The pictures cleaned in 1846 were greatly injured by the operation, which they did not all require, *Nieuwenhuys* 1685, 1686——All the pictures cleaned in 1846 were injured by the process, and in the same way as those recently cleaned, *Lawrence* 3592——Unfavourable opinion with respect to the cleaning of certain pictures in the gallery in 1846, *Dyce* 3737-3740——Depreciation of tone and want of harmony apparent in several of the pictures cleaned in 1846 and 1852, *Ford* 3875-3890. 3921-3934——Time and the discoloration of the varnish will not restore the harmony that has been abstracted by cleaning, *ib.* 3919, 3920——Partial condemnation of the cleaning of certain works in the gallery in 1846, *Munro* 4039-4048——The pictures cleaned in 1842 and 1846 were much rubbed in various places, and seemed altogether out of tone and harmony, *Cheney* 4336-4345.

Report, 1852–53—*continued.*

CLEANING—continued.

I. *As to the Picture-cleaning at the National Gallery*—continued.

ii. Evidence to a contrary purport:

The four pictures cleaned in 1846 were benefited by the process, *Bolton* 1057–1059——The pictures cleaned in 1846 were not injured thereby, *Hart* 3346——Witness has expressed himself favourably with respect to the four pictures in the gallery, cleaned in 1846, *Stansfield* 3592, 3593——Witness was favourably impressed with the cleaning of certain works in 1846, *Sir E. Landseer* 4107–4110.

3. Details as to the Pictures cleaned in 1852:

i. Instructions given by the Trustees as to the Pictures to be cleaned; Pictures actually cleaned:

Disagreement among the trustees at the meeting of 5th July 1852, regarding the extent to which Mr. Seguier should be authorised to carry his operations, *Rep.* ix—— Amended resolution come to at the suggestion of Sir C. Eastlake, *ib.*——Respects in which Sir C. Eastlake considered the instructions of the trustees, in regard to the late cleaning, had been over-passed, *ib.*——Directions given to Mr. Seguier in regard to the cleaning of the nine pictures, and others subsequently added; processes to which these works were subjected, *ib.* x——Conflicting opinions elicited by the Committee in their inquiries as to the condition of the pictures which have been cleaned under these instructions, *ib.* x, xi——Preponderance of testimony to the effect that the appearance of the pictures has for thepresent been rendered less agreeable by the operation, *ib.* xi.

The orders for cleaning the nine pictures emanated from the trustees, but were not given in writing; discretionary power exercised by witness in the matter, and in the occasional cleaning of pictures generally during the vacation, *Uwins* 201, 202. 208–246. 272–274——The nine pictures cleaned by Mr. Seguier were submitted to the trustees by him in a list, as requiring cleaning, *ib.* 381–384——The mode of cleaning these pictures was left entirely to witness, *Seguier* 443–445——With respect to the cleaning of the nine pictures, a list of them was put into witness's hands by the trustees, but he never recommended the operation, *Uwins* 2756. 2763——Non-production before the Committee of the written list which specified the nine pictures to be cleaned, *Uwins and Thwaites* 2803–2827. 2859–2861——Belief that there was no written list; the pictures were recommended for cleaning by witness, and he most probably received verbal instructions through Colonel Thwaites or Mr. Uwins to undertake the operation, *Seguier* 2828–2858.

Discrepancy between Mr. Seguier's report, recommending the nine pictures to be cleaned, the resolution of the trustees thereon, and the pictures actually cleaned; belief that the instructions of the trustees were over-passed, *Sir C. Eastlake* 4617–4630. 4632–4634——No formal inspection of the pictures proposed to be cleaned was made by the trustees, *ib.* 4705–4707——Particulars as to the exact pictures included in the nine cleaned in the last vacation; each picture enumerated, *Russell* 4826–4828——Five other pictures (the Salvator Rosa, the David in the Cave of Adullam, the Sebastiano del Piombo, the Murillo, and the Parmegiano,) likewise dealt with, making 14 in all, *ib.* 4829–4831——Explanation as to the instructions to Mr. Seguier of 5 July 1852; alteration made therein at the instance of Sir C. Eastlake, *Russell* 4831–4833——Mr. Seguier had an entirely discretionary power to clean the pictures in his own way, *ib.* 4947–4953.

ii. Processes pursued in the Cleaning:

Evidence with respect to the cleaning of nine pictures during the vacation of 1852; names of these pictures; belief that the cleaning has been a considerable improvement, *Uwins* 44–69. 110. 125–149. 286. 309–326. 398, 399——The surface has not been exposed in the case of any of the nine pictures cleaned during the vacation of 1852, *Uwins* 399——The surface was reached in the case of the two Canalettis, but not in any other instance, *Seguier* 506–509.

Evidence generally with respect to the nine pictures cleaned by witness and an assistant during the vacation of 1852; they all required cleaning, and have been much improved thereby; detailed account of the operation, and of the subsequent re-varnishing as applied to each picture, *Seguier* 506 *et seq.* 836–881. 901–923——Other pictures cleaned or re-varnished by witness prior to the year 1852; justification of the selection of these works for cleaning, and of the process adopted in each case, *ib.* 678. 687–720. 753 *et seq.*——Besides the nine pictures cleaned in 1852, there were three others washed over in the same vacation; a slight coat of mastic varnish was applied to two of them, *ib.* 679–686. 721–725.

The pictures cleaned in 1852 required more cleaning than those which underwent the process at any former period, *Seguier* 709–711——Personal superintendence constantly exercised by witness during the process of cleaning by Mr. Seguier; nature of this process; further approval of the operation, *Uwins* 2725–2754. 2894, 2895——Coincidence of Mr. Uwins with witness relative to the process employed in the cleaning, *Seguier* 2905, 2906——The entire coat of varnish was removed from all the nine pictures, *Stansfield*

Report, 1852-53—*continued.*

CLEANING—continued.

I. *As to the Picture-cleaning at the National Gallery*—continued.

3. Details as to Pictures cleaned in 1852.—ii. Processes pursued, &c.—*continued.*

Stansfield 3723——It has not been thought necessary that Mr. Seguier should acquaint the trustees with the process he had recourse to in cleaning; they were under the impression that Mr. Uwins superintended, *Russell* 4933-4936——Witness could not undertake from inspection to determine whether any of the under-colour of the nine pictures recently cleaned had been removed, *Faraday* 5549, 5550.

iii. Evidence of an unfavourable tenor as to the Results of the Cleaning:

Evidence generally to the effect that the cleaning of the pictures in 1852 was not properly performed, and that the works have been much injured in consequence, *Nieuwenhuys* 1593 *et seq.*——Evidence with respect to the nine pictures cleaned in 1852; damages inflicted on them by their being over-cleaned; their pecuniary value has not been diminished, *Bentley* 1761-1831. 1868 *et seq.*——All the pictures cleaned in 1852 have been much injured; the damages now apparent are clearly attributable to the last cleaning, *Coningham* 3067-3069——Diminution in the commercial value of the works cleaned in 1852, *ib.* 3090-3093——Most of the pictures cleaned in 1852 have been injured by the process; the Paul Veronese has been improved thereby, *Dennistoun* 3363-3382——Most of the pictures cleaned in the National Gallery in 1852 have a crude appearance, and have been injured by the process of cleaning; but such injury cannot be attributed to the recent cleaning only, if at all, *Sir T. Sebright* 3418-3437. 3464-3476.

Evidence in proof of the injuries inflicted on several of the nine pictures cleaned in 1852, *Roberts* 3492-3500. 3508-3510——Injuries inflicted on them by the cleaning, which has removed the prevailing tone and hue in every case, but in some more than others, and has in several instances also removed the touch of the master, *Lawrence* 3521-3549. 3564-3566. 3579-3583——Time will never restore the former harmony of the pictures injured by the cleaning, *Bromley* 3777——Opinion as to the over-cleaning of several of the works that underwent the process in 1852, more especially of the Claudes, *Munro* 3979-3982. 4020-4031——Injuries inflicted on them severally to a greater or less extent, from their having been over-cleaned, *Cheney* 4293-4312. 4346, 4347——Witness has been much struck with the injury done to all the pictures by the cleaning especially with regard to the change of colour, *Sir D. Brewster* 5561.

iv. Evidence in support of the Cleaning, or in qualification of its Results:

The nine pictures of the National Gallery, cleaned by Mr. Seguier in 1852, are on the whole decidedly improved by the operation, *Bolton* 1019-1051——Evidence with respect to the nine pictures cleaned by Mr. Seguier during the vacation of 1852; under the circumstances of these works having been covered with oil varnish, &c., the cleaning could not have been better managed, and no blame can with any certainty be attached to the operator; the risk, however, should not have been undertaken, and some of the pictures have decidedly been damaged, *Farrer* 1283-1340. 1382-1409. 1446-1451. 1459-1480. 1504-1520——It cannot be safely asserted that any injuries observable in the pictures cleaned in 1852, have arisen from that cleaning; there may have been repairs and damage before the last operation, but not distinguishable through the accumulation of dirt and varnish over them, *Fradelle* 2598, 2599. 2618-2621. 2667-2681——Evidence to the effect that they have not been injured by the process; the richness of tone may have been reduced, but it will be restored by time, whilst the original touch of the master has not been disturbed in any case, with the exception of one of the Canalettis, *Stansfield* 3600-3606. 3626 *et seq.*——The present appearance of the pictures is the result of too rigid an adherence to his instructions by Mr. Seguier, *Russell* 4843. 4852, 4853.

Grounds on which witness arrives at his conclusions as to the effect of the cleaning of 1852, *Dyce* 3736. 3741, 3742. 3749. 3775, 3776. 3803 *et seq.* 4270-4277—Impossibility of attributing with certainty any injuries now apparent in the pictures to the effect of cleaning, *ib.* 3743. 3749-3755. 3776 *et seq.*——General impression of witness that the recent cleaning was not well done, and was very unequal, *ib.* 3743. 3811, 3812——The pictures cleaned in 1852 are now less harmonious in tone, but no material injury has been done to any of them, *ib.* 3750. 3777 *et seq.*——Opinion that the works in the gallery, recently cleaned, are less agreeable and harmonious than they previously were; definition of the effects of the process on the several pictures, showing that generally they have been over-cleaned, but not materially injured, *Sir E. Landseer* 4119-4147. 4178-4193. 4213-4221. 4225-4235——Possibility of time, and the discoloration of the varnish, restoring the harmony of tone of some of the pictures cleaned in 1852, *ib.* 4178-4180. 4213-4218. 4234, 4235——No further injury has been inflicted on them than that alteration in their appearance which is necessarily consequent on the cleaning of all pictures, *ib.* 4201.

Comments on the nine pictures recently cleaned; special attention to the Canalettis and the Poussin and Claude's Queen of Sheba, *Sir C. Eastlake* 4582-4593——Witness considers the Paul Veronese and the Guercino improved by the cleaning,

Report, 1852-53—*continued.*

CLEANING—continued.

I. *As to the Picture-cleaning at the National Gallery*—continued.

3. Details as to Pictures cleaned in 1852.—iv. Evidence in support, &c.—*continued.*

ib. 4708-4711——With respect to the pictures lately cleaned, witness is satisfied that no serious injury has been done, *Lord Monteagle* 5040, 5041——It is witness's opinion that the pictures recently over-cleaned will be harmonized by time, similarly to the St. Ursula of Claude's, *Sir C. Eastlake* 6235——The general effect only, and not the actual surface of the pictures, has been injured by the cleaning process; possibility of some of the glazings having been removed, *Wellesley* 9443-2464——Further reference to the cleaning in the gallery, as being chiefly injudicious, from its having removed that peculiar mellowness of tone which was induced by time, and which it will require many years to restore, *ib.* 9484-9487.

v. How far the Pictures required Cleaning at all:

With respect to the nine pictures cleaned in 1852, they were somewhat dirty, but not sufficiently so from the gallery varnish or any other cause to justify their cleaning, *Moore* 2356, 2357——Evidence in support of the assertion that the pictures cleaned in 1852 did not require the operation; opinions of competent judges as to the previous state of some of them, *ib.* 2446-2459——Those pictures cleaned in 1852, by no means required the process, *Lawrence* 3519, 3520. 3577, 3578——Witness is well acquainted with the former appearance of the works recently cleaned, and considers that several of them required the operation, *Stansfield* 3594-3599 —— Witness considers that those pictures cleaned in 1852 required the operation, *Sir E. Landseer* 4111-4113 —— The pictures in the gallery cleaned in 1852, did not require the process, *Cheney* 4288-4292.

4. Pictures in the Gallery now in need of Cleaning:

Mention of several pictures in the gallery which require, and should be subjected to cleaning, *Dennistoun* 3386. 3398. 3403——Several pictures in the gallery are in a very dirty state, and should, at any risk, be cleaned, *Sir T. Sebright* 3477, 3478.

5. Suggestions with regard to future Cleaning:

Grounds on which the Committee deem it desirable that the management of the gallery, as specially connected with picture-cleaning, should be separately considered, *Rep.* vi——Recommendation that no picture be hereafter cleaned, lined or otherwise repaired, without a previous written report from the director of the gallery to the trustees, *ib.* xiii——Commission then to be appointed, by whom the picture shall be examined, who shall report, *ib.*——Expediency of adopting some simple means by which a picture once in a clean state could be preserved in the same condition; suggestions towards the attainment of this object noticed, *ib.* xiv.

Opinion that the cleaning must always be entrusted to the judgment of some one particular cleaner; how far this is the case on the continent, *Uwins* 289-308. 397——The cleaning should take place in rooms devoted to that purpose, *Farrer* 1500-1503——The cleaning is performed in the rooms where the pictures are hung up; there are several unoccupied rooms which might be allocated to the purpose, *Uwins* 1560-1566——In cleaning an experiment should first be made in the corner of the picture to ascertain the hardness and nature of the varnish to be removed, *Fradelle* 2622——The expediency of cleaning should be decided by an artist rather than by the cleaner, *Stansfield* 3613, 3614.

There should be a council of two or three persons to decide upon the expediency of cleaning, and to see that it was undertaken cautiously, *Ford* 3861-3863. 3908-3916 ——Precautions advisable to be taken in the future cleaning of pictures in the gallery, *ib.* 3861-3869. 3908-3916——The council might consist of an artist, an amateur, and a professional cleaner, *ib.* 3861. 3908——All cleaning and restoring should be done in a place set apart in the gallery for that purpose, *Dennistoun* 5795, 5796——Witness concurs in the suggestion for referring the subject of cleaning and restoring pictures to persons of science for their report, *Sir C. Eastlake* 6634——The expediency of cleaning should be left to the recommendation of the committee of taste proposed by witness, *Foggo* 7254-7256.

II. *As to the Process of Picture-cleaning generally:*

1. Processes employed described:

Different operations comprised under the term picture-cleaning, *Rep.* vi ——Nature of the process in its more familiar sense explained, *ib.*——Description of the mechanical means employed; also of the chemical processes, *ib.* vi, vii——When a picture has passed through these processes it still requires a certain tone to be given to it; how this is to be attained is again a matter of dispute, *ib.* vii.

Circumstances

Report, 1852-53—*continued.*

CLEANING—continued.

II. *As to the Process of Picture-cleaning generally*—continued.

1. Processes employed described—*continued.*

Circumstances which should vary the method to be adopted, *Rep.* vii——In many cases a picture cannot be safely cleaned until it has been re-lined; this operation described, *ib.*——The method to be adopted must depend on the school from which a painting emanates, its condition, state of the lining, basis on which painted, and composition of the varnishes, *ib.*

Evidence in illustration of the processes used by witness generally in cleaning and re-varnishing the works of the old masters; definition of the practice under different circumstances, requiring different modes of treatment, &c., *Brown* 1179-1235——Mode pursued by witness in removing mastic varnish, and in the general cleaning and re-varnishing of pictures; great discretion to be used in the operation, which must entirely be regulated by the nature of the painting, *Farrer* 1260-1282. 1367-1381——Definition of the different processes used in cleaning, and of the best mode of applying them; the different modes are all good under skilful operation, *Nieuwenhuys* 1610, 1611. 1648 *et seq.*

Considerable care and experience necessary in cleaning; instances of peculiar processes used on some pictures of witness's; solvents and friction are alike safe under proper application, *Dennistoun* 3383-3385. 3404, 3405. 3408——Difficulty of laying down any fixed rules by which the cleaner is to be guided and limited in the operation in all cases, *ib.* 3388-3398.

Evidence relative generally to the processes used in cleaning; immense danger of the operation, *Sir T. Sebright* 3438-3457. 3480-3491——The processes used are no secret, and are soap, stale urine, turpentine, spirits of wine, potash water, &c., *ib.* 3482——Impossibility of laying down any general rule whereby the cleaner may be guided and limited in the processes used, *Roberts* 3503, 3504.

2. Extent to which attended with Risk:

The evidence on the comparative safety or danger of the respective processes is extremely inconclusive and unsatisfactory, *Rep.* vi——Experiments undertaken by Mr. Faraday, in order to test the value of these conflicting opinions, *ib.* vii——The cleaning of pictures is an exceedingly dangerous and delicate operation; great variety of opinions as to the merits of different processes; each cleaner has his own process, which he would be very reluctant to divulge, *Uwins* 70-82——The process of cleaning should be avoided as much as possible, *Seguier* 855——Evidence with respect to the peculiarities of different schools of paintings, and the proportionate risk incurred in the process of cleaning, *Bolton* 972-986.

Objections to cleaning unless the picture be in a very dirty state, *Farrer* 1245-1247; *Nieuwenhuys* 1575-1579; *Bentley* 1739, 1740. 1748, 1749. 1785. 1992, 1933; *Moore* 2017-2021; *Fradelle* 2591-2594——The process should be undertaken by an enlightened artist rather than by a picture-cleaner in the common acceptation of the term, *Moore* 2414, 2415. 2551-2555——Not only in the National Gallery, but in the private collections of this country, considerable injury has been inflicted on valuable works by the practice of over-cleaning, *ib.* 2569-2574——Witness objects very strongly to the dangerous process of cleaning, by which some of the finest of the works of the old masters are being gradually destroyed, *Coningham* 3039-3045. 3102. 3110 *et seq.*

Expediency of avoiding as much as possible the necessity of cleaning; susceptibility of pictures to injury thereby, *Hart* 3237-3253. 3347——Objection to cleaning, as it must be more or less injurious, *Roberts* 3499. 3502——Unavoidable infliction of injuries to a greater or less extent by the process of cleaning, *Dyce* 3747, 3748. 3754-3759——Witness avoids cleaning as much as possible in consequence of the great danger arising therefrom, *Ford* 3851. 3858-3860——Precautions taken by witness in submitting his pictures to cleaning; he requires a knowledge of the processes used, and superintends the operation, *Munro* 3947-3957. 3985-4011——Extreme danger of cleaning, which should never be resorted to except in cases of the greatest necessity, *Sir E. Landseer* 4114, 4115. 4134. 4173, 4174.

To clean the pictures to enable the public to see them in their best state is undoubtedly material, but witness was never more impressed with the danger of doing it at all than he is now, *Sir C. Eastlake* 4579-4581——The practice of cleaning pictures has increased of late years, *Christie* 5609, 5610——More pictures consequently have been injured, *ib.* 5611——Throughout Europe, and more especially in Spain, the process of cleaning has been very injurious, and has been carried to a greater extreme than in this country, *Ford* 8073-8075.

3. Progress made in the Art of Cleaning of late years:

The science of picture-cleaning has retrograded rather than otherwise within the last thirty years; paintings latterly have been over-cleaned, *Brown* 1219-1231——The art of cleaning has in late years rather improved than otherwise, *Farrer* 1549-1551.

Report, 1852-53—*continued.*

Cleaning—continued.

II. *As to the Process of Picture-cleaning generally*—continued.

4. Other Evidence in regard to the Process generally:

A picture becomes more pleasing in tone after it has been cleaned for some time, *Seguier* 845-854. 882-884——A pure and undamaged picture might, after the removal of the dirt and varnish upon it, look less pleasing than it did previously, *Fradelle* 2699, 2700——In the eyes of a real connoisseur a first-rate picture, though damaged, is more valuable in its damaged state than if it were restored, *ib.* 2703-2715——Damages rendered visible after cleaning cannot safely be attributed to such cleaning, *ib.* 2724.

How far the appearance of an old picture perfectly cleaned may be preferable to its original tone, *Coningham* 3113-3122——Even after a judicious cleaning the effect of a picture with a comparatively new appearance is very startling, and may mislead as to the actual effect of the process, *Sir E. Landseer* 4136-4138. 4147. 4180. 4200. 4227-4229——Condemnation of the practice generally adopted by the public at large when they buy pictures, of having them re-lined and cleaned at once, *ib.* 4175-4177——Effects of time and varnish on paintings as showing that after the process of cleaning the operator may not be blamable for any alteration in their appearance; illustration of the necessity of cleaning being resorted to, *Spence* 10120.

III. *Papers laid before the Committee:*

Extracts of the minutes of the trustees of the National Gallery, from the 1st Nov. 1852 to the present time, having reference to the cleaning, &c. of pictures, and the management of the gallery, *App.* 743.

Number and designation of the pictures in the National Gallery, cleaned by the removal of coats of discoloured or decayed varnish, since that collection has been deposited in the present gallery in Trafalgar-square, *App.* 748.

Letters from Wm. Buchanan to Colonel Mure, M. P., Chairman, 5th and 21st May 1853, respecting those pictures in the gallery which had formerly belonged to himself, and stating the cause and necessity for cleaning those pictures lately, *App.* 768. 770.

Letters to the Chairman of the Committee relative to the recent cleanings, from the following persons, viz.: C. R. Leslie, *App.* 782; George Richmond, *ib.*; G. B. Cavalcaselle, *ib.* 784.

Combined Departments of Art:

1. *Desirability of combining on one Site the several Collections of Art.*
2. *Arrangement of the different Departments considered.*
3. *Proposals for the Management of the Combined Departments.*
4. *Objections to the projected Combination.*

1. *Desirability of combining on one Site the several Collections of Art:*

The desirability of combining our art collections in one repository must be admitted, but the practical objections to the removal of some things from the Museum are considerable, *Lord Aberdeen* 5300-5303——Advantages that would be gained by a combination of the art collections, *Lord Overstone* 5410; *Dennistoun* 5877-5879. 5893, 5894——Relative advantages of a combined collection, or of two separate museums, *Dennistoun* 5898-5900——Bringing together the present collections of art is chiefly a matter of expense,

Report, 1852–53—*continued.*

Combined Departments of Art—continued.

1. *Desirability of combining on one Site the several Collections of Art*—continued.

expense, *ib.* 5898, 5899——Opinion in favour of combining the several departments of art in one great repository, *Dyce* 7473——Approval of the plan for combining in one building the art collections of the British Museum with the pictures in the National Gallery, *Hawkins* 7746–7776; *Sir R. Westmacott* 9000–9009. 9017–9022——Approval of the principle of combining the fine arts departments of the British Museum with the national pictures; objection to the combination on the score of the expense and practical difficulty attending it, *Wellesley* 9643–9652.

2. *Arrangement of the different Departments considered:*

Arrangement witness would suggest in a combined collection of art, *Dennistoun* 5897——Objects of mechanical art now in the British Museum should be united to the present collection at Marlborough House, *Sir C. Eastlake* 6522–6524——Discrimination required in classifying in a combined collection objects of antiquity, learning, inscriptions, or explanatory of history, *ib.* 6524–6527. 6533–6537——It would be desirable to affix a description to each subject in the collection, *ib.* 657365 75.

Separation of the proposed departments considered; the pictures might be kept in one building, and the sculpture, casts, prints, &c., in another, or if a proper site and space were found, the different institutions might with advantage be under the same roof; under any circumstances the administration should be concentrated as much as possible, *Coningham* 6896–6921——Class of works, &c., proposed to be contained in each of the combined departments, *Dyce* 7474–7489. 7609–7617. 7657–7667——The main distinction to be made in selecting works for the projected departments of art is as a general rule to obtain works of art as distinguished from archæological works, *ib.* 7474, 7475. 7663——The department of paintings should consist of two sections, the gallery and the library, *ib.* 7480–7482——Classes of works suggested for the respective departments of painting, architecture and sculpture, *ib.*

The collection of antiquities and the National Gallery, as forming one department, should be kept quite separate and complete in themselves, *Hawkins* 7765——Prints and drawings should alone be combined in a collection with the national paintings, *Ford* 7933. 7937, 7938——The more material branches of geology and other sciences should not be combined in the same collection as sculpture and painting, *ib.* 7986–7988——Suggestions with respect to the arrangements of the art collections in the Museum, provided they are to be combined under one system with the National Gallery, *Oldfield* 8282–8287. 8318–8335——The collection of sculptures and bronzes and the department of antiquities generally should be kept distinct from the pictures, *ib.* 8286.

Character of the institutions proposed to be accommodated with sites for buildings on the ground purchased by the Exhibition Commissioners at Kensington Gore, *Bowring* 8543–8547. 8680——Recommended combination of the departments of painting and sculpture in contiguous buildings, but not actually under the same roof, *Baron De Klenze* 9360–9363.

3. *Proposals for the Management of the Combined Departments:*

Public interest being greater in pictures than antiquities, more attention to their management would be requisite in a combined collection, *Dennistoun* 5896——Suggestions for the management of a combined collection of art, *Sir C. Eastlake* 6542–6545. 6552–6558——The control of expenditure in any plan for managing a combined collection, ought to rest with the Government, *ib.* 6563–6570. 6592, 6593.

Suggested appointment of a Board of three individuals, who should be salaried officers, and in whom should be vested the responsibility of the general management of the proposed combined establishment of sculpture, painting, and archæology, *Coningham* 6810 *et seq.*——There should be an equal and joint responsibility of the three officers, and a joint action on every question that came before them, *ib.* 6815–6817——Discretion to be vested in the Commission of three, with respect to the fund for the purchase of works of art in the different departments under their charge, *ib.* 6821–6823. 6864–6877——The discretion of the Commissioners must be mainly trusted with regard to purchases, but they should make an annual report to Parliament on the subject through the Commissioners of Woods and Forests, *ib.* 6824. 6888. 6955–6961——How far it might be advisable to give a discretionary power to the Commission of three, or to any one of them, to travel for the purpose of collecting valuable works of art, *Coningham* 6825–6828. 7978, 6979.

Eligibility of artists, in the proper sense of the term, to serve on the proposed commission, or to be responsible for the management of the National Gallery as at present constituted, *Coningham* 6831–6842——How far difficulties might arise from the three directors clashing in their opinions on the expediency of the purchases for the several departments, *ib.* 6854–6877. 6895——Competent judges of sculpture and painting are the most fitting to undertake the triune directorship of the combined fine arts institution

Report, 1852-53—*continued.*

Combined Departments of Art—continued.

3. *Proposals for the Management of the Combined Departments*—continued.

proposed to be established, *ib.* 6860-6863. 6884-6886——According to the discretion of the proposed three directors, they should apply annually for so much to be expended in each department, so that they are only likely to clash when the application is being made, *ib.* 6872-6877——Probability of persons being found who are competent from their general acquaintance with art to undertake the joint management, *ib.* 6878-6888.

With respect to the management of the combined departments of art, it is proposed that a commission be first appointed which might decide preliminary questions as to the classes of works to be exhibited, *Dyce* 7577, 7578. 7662——One chief director and two subordinate heads of departments would be the best system of management, *Hawkins* 7777, 7778——Some specific instructions should be issued as to the precise character of the combined collections of art about to be formed before the future system of management is considered and decided upon, *Russell* 8079, 8080——Advantages of there being a combined direction of the two establishments of painting and sculpture, *Baron De Klenze* 9363, 9364.

4. *Objections to the projected Combination*:

The proposed concentration in one institution of the different departments of art is not desirable; confusion of mind rather than public advantage or convenience is the more likely to result, *Hurlstone* 7206-7219——Objections to large collections of different departments of art, such as sculpture and painting, &c., in the same building, *Foggo* 7405-7416——A combination under one building of pictures with statues and other antiquities is not important or essential: there is no disadvantage in having several museums in so large a place as London, *Moore* 10027. 10031-10039.

See also *British Museum. Kensington Gore. Library* (*Combined Departments of Art*). *Portraits* (*British Museum*). *Prints, &c.* (*British Museum*). *Responsibility*, 2. *Sculptures* (*British Museum*). *Students* (*National Gallery*). *Theatres. Trustees*, 2. *Vatican, The. Visitors to the National Gallery.*

Commercial Value of Pictures. The commercial value of all the pictures in the gallery cleaned since 1844 has been diminished at least one half by the process, *Moore* 2480-2842——The public generally appreciate the worth of a picture, but the commercial value is not an infallible test, *Coningham* 3128-3130——Diminution in the commercial value of some of the pictures in the gallery by the cleaning in 1852, *Munro* 4020——Pictures sell much better when in a dirty state, *Christie* 5612-5614. 5621-5630——General opinion that the market value of the pictures in the gallery has been deteriorated in consequence of the cleaning, *ib.* 5615. 5718-5720——Mr. Christie's opinion that pictures which have been cleaned fetch in consequence a less price in his auction-rooms, is not to be acquiesced in as a rule, *Sir C. Eastlake* 6384-6387.

Commission of 1850. Recommendations of the Commission in May 1850 respecting the preservation of the backs of the pictures from the accumulation of dirt, *Rep.* xiii——These recommendations approved after further inquiry by the Committee of this House of 1850, *ib.*——No effect, however, given to them, nor the subject ever brought to the notice of the trustees, *ib.*——Witness was a member of the Commission in May 1850, which reported on the injury done to the pictures by the exposure of their backs to the accumulation of dirt; extent to which he assents to the terms in which that exposure is deprecated, *Sir C. Eastlake* 4667-4677.——*See* also *Backs of the Pictures.*

Commission of Examination. Suggestion for the appointment of a Commission of Examination to report on every picture which the director of the gallery shall hereafter propose to be cleaned, *Rep.* xiii.

Commission of Superintendence of Cleaning. Suggestions with respect to the cleaning in the National Gallery; recommendation for the appointment of a commission of well-known cleaners, who should see that certain precautions were observed by the operator, *Nieuwenhuys* 1580-1592. 1708-1710——A picture should never be entrusted to the discretion of one cleaner; the necessity and the mode of cleaning should be decided by a commission of artists constituted for the purpose, *Fradelle* 2623, 2624—Superintendence exercised by witness on occasions of his pictures being entrusted to others for cleaning and re-lining; combination of opinions before the processes were performed, *Ford* 3903-3916.

Commissioners of the Great Exhibition of 1851. Copy of the correspondence regarding the conditions on which the lands at Kensington Gore are held by the Commissioners of the Great Exhibition of 1851, *App.* 832.

Committee of Gentlemen. See *Management of the Gallery*, 1. *Trustees*, 1.

Committee of the House of Commons. See *Periodical Investigation.*

Report, 1852-53—*continued.*

Committee of Selection for Cleaning. Suggestion that three artists of known reputation should be selected to decide upon the expediency of cleaning, *Roberts* 3501-3508——There should be a consultation of competent persons to decide upon the expediency of cleaning, *Sir E. Landseer* 4166, 4167.

Sir Edward Landseer's suggestion for a committee to select the pictures for cleaning is objectionable, on the ground of its doing away with individual responsibility; a very experienced person is to be preferred, *Sir C. Eastlake* 4694——Not essential that such person should be an artist, *ib.* 4695——Not difficult to find a person qualified for this office, *ib.* 4698——Making him responsible to the trustees or some other body would be an additional security, *ib.* 4699——He should be a salaried officer, *ib.* 4700.

Committee of Taste. See *Management of the Gallery*, 2. *Purchases* (*National Gallery*), 5, 6. *Responsibility*, 2.

Coningham, William. (Analysis of his Evidence.)—Has been an extensive collector of prints and pictures, 3035-3038——Objects very strongly to the dangerous process of cleaning, by which some of the finest works of the old masters are being gradually destroyed, 3039-3045. 3102. 3110 *et seq.*——Fine condition of the pictures in the gallery when in the possession of Mr. Angerstein, and also immediately before the late cleaning, 3048-3051. 3131-3133——The gallery varnish may have somewhat darkened them, but cleaning was not required, 3052-3058——The Salvator Rosa, though very dark, should not undergo the process, 3054, 3055. 3106. 3109——The glazing or original surface of the Paul Veronese has been partly removed by cleaning, and the harmonious effect of the picture is quite lost, 3059-3061——The Queen of Sheba has also been greatly injured, and can never be restored, by time or otherwise, to its former tone, 3062. 3070-3082——Damages done by the cleaning to the two Canalettis, more especially to the View in Venice, 3063-3066.

All the pictures cleaned in 1852 have been much injured; the damages now apparent are clearly attributable to the last cleaning, 3067-3069——The Peace and War of Rubens suffered greatly by cleaning some years ago, 3084, 3085——The Judgment of Paris, formerly cleaned, did not at all require the process, and lost much of its luminous tone thereby, 3085-3089——Diminution in the commercial value of the works cleaned in 1852; 3090-3093——Explanation with respect to the purchase and sale by witness of the Orleans Titian, the defects of which had been concealed by the restorations of Mr. Farrer; witness was quite mistaken in placing a high value on this picture, 3094-3100. 3140-3145.

Expediency of the nation purchasing works in good condition, and of not cleaning them, 3101-3105——How far the appearance of an old picture, perfectly cleaned, may be preferable to its original tone, 3113-3122——Condemnation of the want of proper regulations in the gallery to preserve the pictures from dirt, 3124, 3125——The public generally appreciate the worth of a picture, but the commercial value is not an infallible test, 3128-3130——Possibility of cleaning being properly performed; in such case it should be left to the discretion of the cleaner, 3134-3138.

[Second Examination.]—Objection to the present system of management of the gallery, inasmuch as no one person is responsible to the public, 6808, 6809——Suggested appointment of a board of three individuals, who should be salaried officers, and in whom should be vested the responsibility of the general management of the proposed combined establishment of sculpture, painting, and archæology, 6810 *et seq.*——There should be an equal and joint responsibility of the three officers, and a joint action on every question that came before them, 6815-6117——Discretion to be vested in the commission of three with respect to the fund for the purchase of works of art in the different departments under their charge, 6821-6823. 6864-6877——The discretion of the commissioners must be mainly trusted with regard to purchases, but they should make an annual report to Parliament on the subject through the Commissioners of Woods and Forests, 6824. 6888. 6955-6961——How far it might be advisable to give a discretionary power to the commission of three, or to any one of them, to travel, for the purpose of collecting valuable works of art, 6825-6828. 6978, 7979——Eligibility of artists, in the proper sense of the term, to serve on the proposed commission, or to be responsible for the management of the National Gallery as at present constituted, 6831-6842.

Belief that the responsibility of one person might be ample for the purposes of the gallery as at present limited to one department; he should, however, have a secretary, and a competent superintendent under him, 6833-6836——Objections to the trustees being retained in the management of the proposed fine arts institution, 6843-6853——How far difficulties might arise from the three directors clashing in their opinions on the expediency of the purchases for the several departments, 6854-6877. 6895——Reference to the system by which money is allocated to different departments under the British Museum; mal-administration of this fund, 6868-6871. 6876, 6877——According to the discretion of the proposed three directors, they should apply annually for so much to be expended in each department, so that they are only likely to clash when the application is being made, 6872-6877.

Report, 1852-53—*continued.*

Coningham, William. (Analysis of his Evidence)—*continued.*

Probability of persons being found, who are competent, from their general acquaintance with art, to undertake the triune management, 6878-6888——Faulty administration of the affairs of the Berlin Gallery, referred to, where Dr. Waagen is chiefly responsible, and has committed several blunders in the purchase of pictures, &c., 6889-6894. 6973-6977—— Separation of the proposed departments considered; the pictures might be kept in one building, and the sculptures, casts, prints, &c., in another, or if a proper site and space were found, the different institutions might, with advantage, be under the same roof; under any circumstances the administration should be concentrated as much as possible, 6896-6921.

Evidence to the effect that the present site of the National Gallery is as good as any other that can be devised, and in consequence of its centrality far better than Kensington, 6896. 6922-6934. 7005-7022——If the gallery were to be thrown open on Sundays, as it ought to be, it would be an argument in favour of the Kensington site, 6896. 7009-7011——Possibility of ground being obtained adjoining the present site for an enlargement of the gallery, if found expedient, 6935-6942——Partial condemnation of a chronological arrangement of pictures so as to form a historical series of art, 6943-6949——Arrangement by which facility might be afforded to the public and to students to attend the gallery without necessitating its being closed to either, 6950-6954.

Remarks on the proceedings of the present trustees with respect to purchases; also as to their omitting to purchase certain works, 6955-6957. 6961-6988——Under a management of three directors, as proposed, or even of one, really responsible, the mistakes made in purchasing would be avoided, 6955. 6961, 6962. 6972——Class of works most desirable to be purchased, as well for the sake of students as for the public, 6959, 6960. 6987-6989——Objection to the works of living artists being bought for the nation, 6990-6993——Similar objection as regards Turner; extreme inferiority of his works to Claude, 6994-6997.

As a general rule it is by no means desirable to have copies of the great masters made for the gallery, 6998-7004——A site for the gallery at Kensington might be some advantage in taking the public into a more healthy atmosphere, 7018-7022——Remarks relative to Mr. Farrer's skill as a cleaner and restorer; in some instances he has restored some pictures for witness and given him every satisfaction, 7023-7026.

Coningham, Mr. Opinion as to the pictures at Mr. Coningham's sale; reason why none of them were bought for the gallery, *Sir C. Eastlake* 6076-6082.

Consecration of St. Nicholas, The. See *Veronese, Paul,* II.

Continental Museums. Mode in which continental museums are controlled, *Sir C. Eastlake* 6546-6549.

Control. The freedom of discussion in this country is useful, as leading to a more minute and active control, but it would render the position of such a sort of minister of art as exists in France and Prussia very unenviable, *Lord Aberdeen* 5304-5306——The National Gallery is controlled by the Treasury, aided by the trustees as to details; desultory character of the proceedings of the latter, *Lord Overstone* 5394. 5414——The three principal officers suggested by witness in his scheme for the future management of the National Gallery should be controlled by the Treasury, *Sir C. Eastlake* 5983.

See also *Chancellor of the Exchequer. Director of the Gallery. Management of the Gallery. Purchases (National Gallery). Responsibility. Treasury, The. Trustees.*

Copies. It is not desirable to spend money on modern copies of masterpieces in foreign galleries, *Dennistoun* 5815, 5816——As a general rule it is by no means desirable to have copies of the great masters made for the gallery, *Coningham* 6998-7004——In the pictorial department it would be desirable to some extent to have a collection of copies, *Dyce* 7484-7489——Approval of the introduction of copies of celebrated works into the gallery, *Ford* 7940-7942.

Copying of Pictures. Practice of copying in the gallery adverted to; colour is chiefly studied; accurate copies are frequently made but are seldom sold, *Loft* 9346-9351. 9354.

See also *Admission of Students. Copyright of Pictures. Students (National Gallery.*

Copyright of Pictures. Remarks as to the right exercised by the trustees of granting or refusing to individuals the privilege of engraving from the pictures, and publishing such engravings as a private speculation, *Hurlstone* 6650-6688——The copyright of a picture is very valuable property, and the nation might at some future time make use of it for national purposes, *ib.* 6652——Opinion that the copyright should either be kept entirely in the hands of the trustees, or else some alteration made in the disposal thereof, *ib.* 6689——Explanation

Report, 1852–53—*continued.*

Copyright of Pictures—continued.

——Explanation respecting the copyright of the pictures in the gallery; facilities to copy are now given to the public generally, *Russell* 8175–8177.

See also *Doo, George J.* *Gilkes, Edward.* *Graves, Harry, & Co.*

Cost of Cleaning. Particulars as to Mr. Seguier's charges for cleaning, *Russell* 4946.

Cotton and Water. Preference given to cotton and water over sponge and water in the cleaning of pictures, *Uwins* 170–172.

Council of Art. Suggested appointment of a council of art, attached to the trust of the gallery, consisting of five persons versed in art either practically or theoretically, selected by Government, each with a salary of about 300 *l.* per annum; definition of the duties to be undertaken by them with respect to purchasing, &c., *Russell* 8095 *et seq.*——Every school of art should be understood by some one of the five members, *ib.* 8112——The members should not be excluded from other occupations, *ib.* 8114.

Crowds. See *Visitors* (*National Gallery*).

Cubitt, Thomas. (Analysis of his Evidence.)—Builder, 8741——Evidence relative to the ground at Kensington Gore purchased by the Exhibition Commissioners, 8743 *et seq.*——This site is already part of London as regards the accumulation of houses around it, 8743, 8744. 8752, 8753——Any unoccupied ground in the immediate neighbourhood will very speedily be built over, 8744. 8752——The vicinity of Hyde Park will tend to render it somewhat airy, and in point of freedom from smoke, &c., it will be a far superior site to that of the National Gallery, or of any other locality near London, 8745–8752. 8780–8782——The houses yet to be erected in the vicinity of the Kensington Gore estate will, most probably, be of a large description, with but very few inferior dwellings amongst them for the working or trading classes, 8754–8779——The ground at Kensington is capable of being perfectly drained without any serious difficulty, 8783–8785——The soil is chiefly of gravel with a slight covering of clay, 8786–8791——It would be more convenient and advantageous to the working classes if the gallery were at Kensington Gore instead of on the present site, 8793–8802——Recommendation that the building be opened on Sundays, 8801. 8803, 8804——Advantage of its being surrounded with ornamental gardens, 8802——Suggestion that the ground be formed into a hanging level or uniform slope, 8803, 8804.

Cubitt, Sir William. (Analysis of his Evidence.)—One of the Commissioners of the Great Exhibition of 1851; 10128——Circumstances attending the joint purchase by the Commissioners and the Government of eighty-six acres of land at Kensington Gore, in which land they have a joint and equal interest, 10129, 10130. 10133 *et seq.*——A further purchase of eighty-four acres adjoining was partly contemplated; but means were not at hand, 10131, 10132. 10139*–10141. 10161, 10162——The purchase of the eighty-six acres absorbed nearly 300,000 *l.*, which sum was found in equal moieties by the Commissioners and the Government, 10134, 10135——The land thus bought is sufficiently ample for the purposes of the projected combined departments of art, 10138, 10139——The idea of the purchase originated with the Commissioners, the object being to find sufficient ground in a good situation as a centre of industrial art and science; institutions proposed to be accommodated with sites for buildings, 10163–10181——There has been no definite plan or proposal made in regard to the buildings or the character thereof, 10181. 10205–10209.

Some of the chartered societies object to a removal to Kensington as being too far west, 10182–10184. 10205. 10271–10275——In course of time, however, the site will become central, from the number of houses that will be built around it, 10182–10187——The best class of houses only will be erected, and the prevalence of smoke will not be nearly so great as in the crowded vicinity of the present gallery, 10187–10196——It is extremely improbable that any baths and washhouses, or factories of any kind, will be built in the neighbourhood, 10191–10196. 10286–10290. 10294–10305——The removal of the School of Design to Kensington, as projected, will be no hardship to the population of Spitalfields, as they have a local school already, 10197–10204. 10267–10270——The soil of the land at Kensington Gore is chiefly of gravel, and is very favourable for building purposes, 10210–10214. 10280——It is by no means contemplated to give up the whole of the ground to a national gallery, or any one institution, 10215–10217.

That portion of the purchase proposed to be devoted to the gallery is exceedingly well adapted to the purpose; extent of width and frontage, &c., that may be obtained, 10218–10226. 10280–10285. 10289–10297——The gallery, as generally understood, would be erected next the Kensington-road, 10218. 10225——There would be a space in front completely open, and it would also be almost entirely open to the air from the back, 10219–

Report, 1852–53—*continued.*

Cubitt, Sir William. (Analysis of his Evidence)—*continued.*

10223—It is proposed by the Commissioners to purchase a narrow wedge of land, with the houses thereon, now encroaching on the estate, and to pull down the houses; parliamentary powers will be sought for to enable them to effect this object, 10227–10232. 10243. 10299–10303——Part of the ground will be laid out as ornamental gardens, 10233–10235——The land in the immediate neighbourhood of Gore House has risen considerably since the purchase; the investment is pecuniarily a good one, 10236–10240——Even if the houses adverted to cannot be obtained, the seemly appearance of the projected gallery will not be affected thereby, 10244–10246.

The fact of the prevailing winds being from the south-west will not make the smoke especially injurious to the picture gallery, as there will be no factories, &c., in that direction, 10247–10251——A communication for omnibuses, &c., across Hyde Park to Kensington can be conveniently effected, though the Serpentine would have to be carried over a sunk road, 10252–10266——The industrial institutions that may be built at Kensington Gore will be alone under any control of the Commissioners, 10276–10279——If a site for the National Gallery could be procured in Hyde Park, the object of the Commissioners in purchasing the Gore House estate would still be partially attained, as the gallery would be contiguous to the other institutions that might be erected on the purchased ground, 10306–10309——The purchase of the estate was effected as quietly as possible, 10310.

Cuyp. There is no particular danger in cleaning Cuyp's works, *Bolton* 983, 984; *Brown* 1217, 1218——The Cuyp in the gallery is altered in tone, but not injured by the application of the gallery varnish, *Bentley* 1907–1912——The Cuyp has been improved in appearance by cleaning in 1846, *Fradelle* 2701, 2702——It has improved in its general tone from the darkening of the gallery varnish then applied, *Dennistoun* 3400, 3401——————Injury done to a picture by Cuyp on the occasion of its transfer from the Angerstein Gallery to the new building, *Sir C. Eastlake* 4431, 4432.

D.

Damar Varnish. Nature and composition of the Damar varnish used at Munich, &c.; advantages attributed to it, *Baron de Klenze* 9375–9391——Definition of the peculiar advantages of the Damar varnish; origin of its name, *Farrar* 9418–9429——The detection of adulteration in mastic varnish, some years ago, first induced witness to use the Damar varnish, *ib.* 9419. 9424. 9430–9432——Recent introduction of the Damar varnish into the gallery at Florence; composition of this varnish, which has been found to answer extremely well; care taken in its preparation, *Spence* 10072. 10076–10082. 10121–10126——Extract from a letter, dated 30 August 1853, addressed by the Baron De Klenze to Colonel Mure, Chairman of the Committee, showing the composition, &c. of the Damar varnish, *App.* 767.

David at the Cave of Adullam, The. See *Claude's Pictures,* III. 5.

Davies, James. (Analysis of his Evidence.)—Student at the National Gallery; has also studied at the British Museum, 9290–9292——The arrangements for the admission of students to the gallery are very inconvenient, as only allowing them to attend for three months at a time, 9293–9295——Insufficient size of the rooms, which are occasionally crowded in parts by the students, 9296–9300. 9312–9314——Approval of the projected removal of the gallery to Kensington, 9301–9309——Advantage to students in a combination under the same roof of the art collections now in the Museum with the pictures, 9303–9305. 9309——The sculptures might be dispensed with if they were represented by a complete collection of casts, 9306–9308——Class of pictures generally studied by witness in the gallery, 9310, 9311. 9315–9322——Inconvenience in the gallery from the rain occasionally dropping through the roof, and from the defective ventilation, 9323.

Day, Hamilton Smith. (Analysis of his Evidence.)—Has been extensively engaged as a picture-cleaner and restorer, 7868, 7869——Cleaned the Velasquez about thirty-five years ago, when it was in the possession of Sir Henry Wellesley; it was then in an exceedingly fine and pure condition, and had never been restored or re-touched, 7870–7881——Has lately seen the picture, and considers it in a very harmonious state, but has detected the appearance of modern colouring, 7882–7885.

Dead Christ, The. See *Guido,* II. 1.

Death of Procris, The. See *Claude's Pictures,* III. 5.

De Klenze, Baron. (Analysis of his Evidence.)—Privy councillor and chamberlain of his Majesty the King of Bavaria, 9359——Recommended combination of the departments of painting and sculpture in contiguous buildings, but not actually under the same roof, 9360–9363——Explanation as to the two collections being under the same roof at St. Petersburgh,

Report, 1852–53—*continued.*

De Klenze, Baron. (Analysis of his Evidence)—*continued.*

Petersburgh, 9363——Advantages of there being a combined direction of the two establishments, 9364-9369——Mode of direction at Munich adverted to, as involving the responsibility of the heads of departments to the minister of the interior, who exercises a control over them, 9365–9369——Reference to the system of purchasing adopted at Munich formerly and of late years, 9370–9375——Nature and composition of the Damar varnish used at Munich, &c.; advantages attributed to it, 9376–9391.

Building of the Pinacothek at Munich, by witness, adverted to; size of the rooms and arrangement of the pictures, &c., 9392. 9395–9400. 9404–9408. 9414——Subsequent building by witness of the Museum of Art and Antiquity at St. Petersburgh, which is arranged on the same principle as the Pinacothek with respect to light, and the hanging of the pictures, &c., 9393, 9394. 9401. 9403. 9410, 9411——Suggestions for consideration in erecting a national building for the arts in London as regards the lighting and arrangement of the pictures, 9402. 9409——Explanation of the recommendation that the new edifice be built either in the academic or the picturesque style, 9415–9417.

De Klenze, Baron. Réponse aux questions adressées par le Président du Comité de la Maison des Communes, pour l'établissement d'une Galerie nationale de Beaux Arts, à M. de Klenze, Intendant des Bâtimens de la Couronne et Conseiller Privé Actuel de S. M. le Roi de Bavière, *App.* 758——Extract from a letter addressed by the Baron de Klenze to Colonel Mure, M.P., Chairman, 3 August 1853, *App.* 767.

Dennistoun, James. (Analysis of his Evidence.)—Author of a work relative to painting, &c., entitled "Memoirs of the Court and Times of the Dukes of Urbino," 3352, 3353——Has devoted much time to the art of painting, and has collected some choice pictures by the early Italian masters, 3354–3357——Reference to an article on the National Gallery which was written by witness, and appeared lately in the Edinburgh Review, 3358, 3359.

The Paul Veronese was the only one of the nine pictures cleaned in 1852 that required the process and was benefited by it, 3360-3362. 3380——Most of the other pictures have been much injured by the process, 3363–3382——The warm, rich glow, characteristic of Claude, has been removed from the Queen of Sheba, and the work is now raw and crude; the gradations of tint and the aerial perspective have also been disturbed, 3367–3371. 3401——The Annunciation has not been injured so much, but the glow of the original work has been to a great extent removed, 3372——The Grand Canal has likewise been over-cleaned, and the tone of the picture affected thereby, 3373–3375——The View in Venice has been brought into a spotty state by the cleaning, and is altogether out of keeping, 3376——The former unsatisfactory condition of the Plague at Ashdod has been rendered worse by the cleaning, which was an especially injudicious risk in this case, 3377–3379——Belief that the character of the master's touch has not been removed from the Guercino, 3381——The St. Bavon is now in a very bad state, and most probably was much injured by the cleaning, 3382.

Considerable care and experience necessary in cleaning; instances of peculiar processes used on some pictures of witness's; solvents and friction are alike safe under proper application, 3383–3385. 3404, 3405. 3408——Mention of several pictures in the gallery which require, and should be subjected to, cleaning, 3386. 3398. 3403——Precautions to be used in submitting the national property to the hands of the cleaner; opinion that a properly qualified person being found, the operation must be entrusted solely to his responsibility, 3387–3398. 3406, 3407——Condemnation of the process of cleaning as practised in the gallery at Florence, 3399——Tendency of the varnish used in the National Gallery to become dark, 3400——Instance of this in the case of a Cuyp, cleaned in 1846, which has improved in its general tone from the darkening of the varnish then applied, 3400, 3401——Improbability of the former tone of the Queen of Sheba being restored by the gallery varnish, 3401——The process of cleaning should be continuous throughout the year in a room devoted to the purpose, 3405——Injustice done to Mr. Seguier by the placing of two Claudes recently cleaned by him in juxta-position with two uninjured Turners; the works of these masters are not properly tested thereby, 3409–3411.

[Second Examination.]—Recent article in the "Edinburgh Review" on the subject of the National Gallery again referred to; conclusion that the Gallery does not fulfil the conditions to be expected from a national collection, 5746——Witness was also author of an article in the "Foreign Quarterly Review," in 1845, which incidentally alluded to picture purchasing for the gallery, 5747, 5748——The present system of management in the National Gallery is defective in its connexion with the Treasury, the absence of concentrated responsibility, and the want of an annual sum for purchases, 5749——The responsibility desired can only be obtained by giving salaries to those in whom it it vested, 5750, 5751——Vesting the whole responsibility in one person seems the natural remedy; but witness despairs of an individual properly qualified being found, 5752, 5753——To give such an officer access to extraneous advice would continue the evil of divided responsibility, 5754.

Report, 1852-53—*continued.*

Dennistoun, James. (Analysis of his Evidence)—*continued.*

The individual responsibility desirable might be had in a Board of five or six trustees, salaried, independent of the Treasury, with large powers and responsible to Parliament alone, 5754-5758——One of them should be in Parliament but not removable with the Government, 5759——Manner in which their acts should be individually regulated, 5760——The amount of their salaries is a question of detail, 5761——Class of gentlemen witness would recommend, 5761, 5762——Regulations for them and the establishment might be agreed upon, on the commencement of the system suggested, 5763, 5764——An annual report should be made to Parliament, but entire publicity of detailed transactions is not desirable, 5765——The appointment and removal of the keeper and other officers should be controlled by the Board, 5766-5771——The annual report ought to embody the motives guiding the trustees in their transactions, both collectively and individually, 5772-5774.

An objection to the whole responsibility resting in one person, is the difficulty of selecting a gentleman with the requisite qualifications, yet able to stand the brunt of public criticism, 5774-5777——The Board ought to have the entire control of the Parliamentary grants, 5778-5780——Witness looks to the principle rather than the amount of salary compelling an onerous discharge of the Board's duties, 5781-5786——The proposed Board should be appointed by the Treasury in the first instance, 5787-5789——The trustee in Parliament, as head of the Board, need not be salaried, 5790——The danger of disagreement among trustees selected as proposed would be less than the inconvenience of an undivided responsibility, 5791——In cleaning or restoring a majority of the Board should select the person, and he alone should be responsible for the work, 5792-5795——All such work should be done in a place set apart in the gallery, 5795, 5796——Witness has no suggestion to make as to the admission of the public, 5797, 5798——Greater sensitiveness of public opinion on subjects of art as compared with other subjects, 5799, 5800.

Sum witness would propose to be annually granted for purchasing pictures; that named by Dr. Waagen in the "Art Journal" is too large; the trustees should have the control of balances, and be able to anticipate grants, 5801-5805——Circumstances which must affect the grant for the establishment, 5806——The whole responsibility of purchases made at home should be provided for by the trustees in each case as it arose, 5807——They should be empowered to send one or more of their number abroad, to examine and report upon pictures offered to them, 5808, 5809——The purchase should be made on the resolution of the majority of the board, 5809, 5810——Individual trustees might buy pictures at their own risk when travelling, but only receive cost price for them, 5811——Those portions of collections given to the gallery, and not considered worth being placed there, might, the donors consenting, be beneficially sent to the provinces, 5812-5814——It is not desirable to expend money on modern copies of masterpieces in foreign galleries, 5815, 5816——The trustees should have power to sell such portions of collections bought by them as it is not desirable to retain, 5817-5820.

It would be desirable that the Crown, public bodies, and private collectors should be able to exhibit their pictures in a distinct gallery, under the control of the trustees, 5821-5826——This might interfere with private bequests, 5827——Proper objects of a national gallery, 5828. 5838——Absence of system in purchases made by the trustees; their preference for the schools of Bologna and the Netherlands, 5829. 5891——Expediency of supplying the deficiency of works of the Italian, Flemish, German and Upper Rhine schools, 5830-5836——Preference of the public for the severe and earlier school of art; degree in which it may be beneficial, 5837-5840.

Principle which should guide the trustees in their purchases; instance of a recent Spanish picture bought by them, 5841. 5846. 5850, 5851——Character of the Spanish collection lately sold in London, 5842-5845——Witness would exclude no school of painting; he has heard of the increasing desire of Spain to retain works of art in that country, 5848, 5849——The treatment of religious subjects by the Spanish school will frequently be open to criticism, 5852, 5853——The Manfrini collection at Venice has been over appreciated, 5854, 5855.

The gallery varnish, and not atmospheric influence, has caused the dirty appearance of pictures in the National Gallery, 5856-5859. 5872-5874——(*Colonel Thwaites.*) Statement as to the use of the gallery varnish in the cases alluded to by last witness, 5860-5871——(*Mr. Dennistoun.*) Difficulty of limiting admissions to the gallery, 5875. 5876. 5880——(*Mr. Uwins.*) The large Murillo is varnished with mastic varnish, 5869-5871——(*Mr. Dennistoun.*) Advantages that would be obtained by a combination of the art collections, 5877-4879. 5893, 5894——Witness has never seen the National Gallery when crowded, 5880, 5881——In the event of a union of art collections, it would be advisable to adhere to the proposed plan of a board of trustees for the control of the pictures, 5882-5886——There are no reasons for continuing the accidental local connexion of the gallery with the Royal Academy, which would be severed by the removal of the former,

Report, 1852-53—*continued.*

Dennistoun, James. (Analysis of his Evidence)—*continued.*

former, 5887-5890——Desirableness of an immediate chronological arrangement of the present collection, 5892——Lectures on art might be beneficial, 5895.

Public interest being greater in pictures than antiquities, more attention to their management would be requisite in a combined collection, 5896——Arrangement witness would suggest in a combined collection of art, 5897——Bringing together the present collection is chiefly a matter of expense, 5898, 5899——Relative advantages of a combined collection, or of two separate museums, 5898-5900——The formation of series of pictures, illustrative of the progress of art, is desirable, 5901, 5902——Circumstances to be guarded against in effecting this, 5903——Remarks relative to the galleries of Munich and Florence, 5903-5907.

Deposit of Works of Art at the Gallery. It would be desirable that the Crown, public bodies, and private collectors should be able to exhibit their pictures in a distinct gallery under the control of the trustees, *Dennistoun* 5821-5826——The temporary exhibition in the gallery, of pictures from private collections, might interfere with private bequests, *ib.* 5827——There is no regulation against the temporary exhibition in the National Gallery of valuable private pictures, *Sir C. Eastlake* 5943, 5944——Desirability of sanctioning deposits of works of art by private individuals; difficulty that would arise from the necessity of refusing to accept many such works, *Sir C. Eastlake* 6483-6486. 6492-6502. 6530——Special reference to an offer made by the Hon. Francis Charteris to deposit for a time in the National Gallery his fresco by Pelegrino Tibaldi, *ib.* 6487-6491——Objection to part of the gallery being devoted to an exhibition of pictures from private collections, *Dyce* 7628, 7629.

Deterioration of the Pictures. Opinion that the pictures in the gallery have gradually deteriorated since they were in Mr. Angerstein's collection, *Wellesley* 9438——Such deterioration is due to the London atmosphere, the smoke, and the cleanings to which they have been subjected, *ib.* 9439-9442——The pictures are fast deteriorating on the present site, *Plass* 9258-9260.——*See* also *Smoke*, 3.

Dido and Eneas, The. Occasion of this picture having been cleaned before it was placed in the National Gallery, *Brown* 1124-1132.

Diploma Pictures. Reference to the non-exhibition by the Royal Academy of the "diploma" pictures, *Hurlstone* 7134, 7135.

Director of the British Museum. It would be much better if there were only one chief director, whose decisions might be immediate, and to whom there should be at all times prompt access; qualifications necessary in this officer, *Hawkins* 7714-7720. 7805-7812——Witness objects to the suggestion that the trustees of the Museum be replaced by one director, who should decide all questions now referred to them, and who should be responsible for purchases, &c., *Hamilton* 8885-8888. 8970-8985.

Director of the Gallery:

1. *Proposals for the Management of the Gallery by means of a Director; Power and Responsibility, &c. to be vested in him.*
2. *Possibility of a Competent Person being found.*
3. *Suggested formation of a Board of three Directors.*
4. *Recommendations by the Committee.*

1. *Proposals for the Management of the Gallery by means of a Director; Power and Responsibility, &c., to be vested in him:*

Witness would have the director, in his scheme of a constitution for the National Gallery, vested with independent action, and only subject to the control of a Government department or a minute of the Crown, *Sir C. Eastlake* 6576-6581——Office of director recommended with the duty of looking after the ordinary care of the pictures and reporting thereon to the trustees, *Foggo* 7243. 7245.

Suggestion that the individual responsibility of one managing director be substituted for the present trustees; definition of the duties to be fulfilled by him, more especially if placed in charge of the proposed combined departments of art, *Dyce* 7439-7478. 7571-7608. 7618-7620——He should draw up for the sanction of the Government, a scheme for the proper contents of the various collections which the establishment is to contain, *ib.* 7443. 7470. 7575-7578——He should also prepare a scheme for a subordinate management of the departments, and define the specific duties of the officers employed, *ib.* 7443. 7571-7574——Course to be taken by the director in making purchases for the gallery; advice under which he should act, *ib.* 7450, 7451. 7456-7469. 7579 *et seq.* 7618-7620. 7630-7632——Recommendation that he report annually to Parliament, through the Treasury, and prepare estimates of expenditure for the general conduct of the establishment, *ib.* 7450. 7453-7455——The office of director should be similar to that of secretary to the School of Practical Art, as held by Mr. Cole, *ib.* 7466. 7586-7596. 7651, 7652.

Report, 1852-53—*continued.*

DIRECTOR OF THE GALLERY—continued.

1. *Proposals for the Management of the Gallery, &c.*—continued.

Suggestion that in lieu of the trustees one chief director or president be appointed, in whom very extensive powers and the sole responsibility should be vested, *Ford* 7890-7939. 7989-7995. 8050-8056. 8060, 8061——His position should be considered a post of honour, and he should be an amateur rather than an artist, *ib.* 7890, 7891——He should be responsible to Parliament through the Home Secretary, and should report annually with respect to the supply of funds, &c., *ib.* 7892-7896. 7906. 8023-8025——His salary should be from 1,000 *l.* to 1,500 *l.* a year, *ib.* 7897——In case all the departments of art are combined the proposed management by one director would require modification, *ib.* 7932-7936. 7992-7995——With respect to picture-cleaning, it is desirable that the director proposed by witness should understand something of it, but in consequence of the present inquiry, the national paintings are not at all likely to be over-cleaned again, *ib.* 8067-8072——Objection to the chief director being vested with the responsibility of purchases, &c., *Hamilton* 8885-8889. 8956-8987.

Recommended substitution, in lieu of the trustees, of a director, in whom the chief management and responsibility and very full powers should be invested, and who should have control over the heads of the several departments, *Wellesley* 9512-9520. 9566-9578. 9617-9621——He should be responsible to the highest department of the Government, *ib.* 9517-9520. 9617——He should have as nearly as possible the same powers and duties as directors-general in foreign galleries, *ib.* 9524-9540. 9578. 9617. 9631.

2. *Possibility of a Competent Person being found:*

How far difficulty would be experienced in securing a director for the gallery with the various qualifications indicated by witness; leaning of most connoisseurs and artists towards one school or another; connoisseurs less so, however, than artists, *Sir C. Eastlake* 6408-6418. 6508-6511——Possibility of an artist being found perfectly competent to undertake the directorship proposed by witness, *Dyce* 7583. 7607, 7608. 7647-7650——It is easier to find a competent person than a competent body, *Wellesley* 9547-9549——Probability of persons being easily found who are competent to undertake the proposed directorship; the appointment should not be restricted to artists, or to any particular class, *ib.* 9640-9642.

3. *Suggested formation of a Board of three Directors:*

Recommended appointment of three directors who should perform all the artistic business of the gallery, and be responsible for the result; relations that should exist between them and the trustees, *Hurlstone* 6740 *et seq.*——They should be salaried officers, and should be intimately acquainted with art, *ib.* 6780-6783.

4. *Recommendations by the Committee:*

Suggestion that a salaried director be appointed by the Treasury for a definite time, at the expiration of which he may be re-appointed, *Rep.* xv——The director should be appointed for a term of five years, and receive a salary of not less than 1,000 *l.* a year, *ib.* xvi——Qualifications which should be united in such an officer, *ib.*——The plan of a single director-in-chief now generally prevails in the foreign galleries, *ib.*

See also *Control.* *Purchases* (*National Gallery*), 5. *Responsibility*, 2.

Dirt. See *Accumulation of Dirt.* *Atmospheric Influences.* *Cleaning.* *Dust.* *Smoke.*

Discoloration of Pictures. Difficulty of ascertaining how far the discolouring of a picture arises from an internal change in the colours, or from the incrustations of varnish, or of dirt, *Uwins* 190-192.

Dissents. It has not been the practice for the trustees, even in the more important questions, to record dissents where difference of opinion has arisen, *Rep.* v.

Donations to the Gallery. Belief that those who have given pictures to the gallery would not have done so had they felt that a system was pursued dangerous to the pictures themselves; names of the principal donors referred to, *Lord Monteagle* 5112-5114——Those portions of collections given to the gallery, and not considered worth being placed there, might, the donors consenting, be sent to the provinces, *Dennistoun* 5812-5814——Pictures might be accepted from donors, on condition, if not thought eligible to be retained, of being sent to provincial museums, *Sir C. Eastlake* 5985-5987.

See also *Bequests to the Gallery.* *Onslow, Lord.*

Doo, George J. Circumstance of an application by Mr. Doo for leave to copy in water colours one of the pictures in the gallery, for the purpose of engraving, having been acceded to by the trustees, *Hurlstone* 6657-6659. 6662, 6663——No harm could arise from acceding to an application from so eminent an engraver, *Russell* 8177.

Report, 1852-53—*continued.*

Dow, Gerard. See *Purchases* (*National Gallery*), 4.

Draft Report. Draft report on picture-cleaning, as proposed by the Chairman, *Rep.* xxv.

Drawings. Feeling of the trustees of the gallery as to the purchase of original drawings, *Sir C. Eastlake* 6001-6004——Witness has not considered the purchase of original drawings as part of the duties of the director; this duty has hitherto been fulfilled by the British Museum, but it should be performed by the National Gallery, *ib.* 6369-6373——Original drawings by the old masters should be framed and kept in the pictorial library of the proposed gallery; source from whence they might be obtained, *Dyce* 7609-7616. 7634-7636. 7644——Recommended introduction of cartoons and drawings by the ancient masters into the projected enlarged gallery, *Russell* 8206——The National Gallery would be much improved by an addition of prints and drawings, more especially of the latter, *Moore* 10027, 10028.

See also *Framing of Prints and Drawings.* *Prints, &c. (British Museum).* *Purchases* (*British Museum*).

Dresden Gallery. In this gallery alone has glass been extensively, and, in the opinion of the directors, beneficially employed, *Rep.* xiv——Successful effect of covering the pictures in this gallery with glass adverted to, *Dyce* 7519, 7520.

Dry Rubbing. See *Friction.*

Dulwich Gallery. Approval of the system of management of Dulwich Gallery, where, for the last thirty years, the pictures have not been cleaned, or, at all events, have not suffered by the process, *Roberts* 3511——The pictures at Dulwich are not in a better condition than those in the National Gallery, *Hurlstone* 7120.

Durability of Pictures. The durability of pictures is unlimited if properly preserved, *Sir C. Eastlake* 6611, 6612——Nature of preservation necessary to secure durability, *ib.* 6613-6616.

Dust. Though considerable dust settles on the frames, there is but little on the face of the pictures from their being slanted forward from the top; there has been no occasion for the use of the handkerchief for the last month or so, *Thwaites* 357. 372-377——Better precautions might be taken to make visitors dust their feet, *Sir C. Eastlake* 6430——Means by which the rooms might be kept more free from dust and dirt, *ib.* 6503-6507.

See also *Accumulation of Dirt.* *Atmospheric Influences.* *Backs of the Pictures.* *Frames of the Pictures.* *Occasional Cleaning.*

Dusting of Pictures. Suggestion that the pictures be constantly dusted, *Farrer* 1496——Condemnation of the want of proper regulations in the gallery to preserve the pictures from dust, *Coningham* 3124, 3125.

See also *Backs of the Pictures.* *Dust.* *Frames of the Pictures.* *Occasional Cleaning.*

Dutch School of Painting. Classified list of the masters of the several Dutch and Flemish schools, with names of their principal followers, *App.* 811 *et seq.*

Dyce, William, R.A. (Analysis of his Evidence.)—Was formerly at the head of the Government School of Design, 3734——Author of a pamphlet on the subject under the inquiry of the Committee, 3735——How far witness is competent from his knowledge of the former and present condition of the pictures cleaned in 1852 to arrive at a safe conclusion as to the effect of such cleaning, 3736. 3741, 3742. 3749. 3775, 3776. 3803 *et seq.*——Unfavourable opinion with respect to the cleaning of certain pictures in the gallery in 1846; 3737-3740——General impression of witness that the recent cleaning was not well done, and was very unequal, 3743. 3811, 3812——Impossibility of attributing with certainty any injuries now apparent in the pictures to the effect of the cleaning, 3743. 3749-3755. 3776 *et seq.*——Custom in the gallery of not restoring any imperfections rendered visible by cleaning; objection to this custom, 3743-3747.

Unavoidable infliction of injuries to a greater or less extent by the process of cleaning, 3747, 3448. 3754-3759——The pictures cleaned in 1852 are now less harmonious in tone, but no material injury has been done to any of them, 3750. 3777 *et seq.*——Tendency of the gallery varnish to become dark in consequence of the effect of ammoniacal gas, &c., on the mixture of oil with mastic, 3760-3774——Opinion that the St. Ursula does not require cleaning, 3812-3818——Reference to the practice formerly obtaining in the gallery of restoring the pictures when cleaning rendered any injuries apparent, 3821-3825——Doubts as to the removal of the glazings from the draperies in the Paul Veronese, 3826——Authority of Boschini quoted as showing that Paul Veronese did not use glazing in his draperies; definition by the same authority of the peculiar process used by this master in finishing off his works, 3826-3846.

[Second Examination.]—Further reference to Boschini, and extracts from his work in explanation of the process of glazing used by Paul Veronese, 4237-4244——Inference

Report, 1852-53—*continued.*

Dyce, William, R. A. (Analysis of his Evidence)—*continued.*

therefrom that the Consecration of St. Nicholas is not an original work by Veronese, but painted by one of his pupils, and probably designed by him, 4245-4255——The uneven character of the cleaning in 1852 is very observable in the case of the Paul Veronese; recommendation that those parts which have been over-cleaned should be touched slightly in water-colours to reduce their force, 4256, 4257.

Justification of the practice being adopted in the gallery of retouching the pictures after cleaning, inasmuch as almost every old picture has been injured, and as cleaning necessarily renders such injuries apparent, 4258-4265. 4284——Further opinion that the Queen of Sheba or any other picture may be rendered inharmonious by cleaning, and still not be injured thereby, 4267, 4268——Although certain injuries have been laid bare by the cleaning in the Queen of Sheba and the other pictures, it is unjust to attribute them to the recent operation only, 4269. 4277-4283——Explanation with respect to witness having been unprepared at his former examination to enter in detail into the question of the recent cleaning, 4270-4277.

[Third Examination.]—Witness has paid considerable attention to the management of the gallery, and has written a pamphlet pointing out certain defects therein, 7433, 7434——There is a want of proper definition of the duties and responsibilities of all the officers connected with the establishment, 7435——The constitution of the trust is of a very cumbersome character; the trusteeship should be abolished altogether, 7435. 7437, 7438——Objection to the board or committee of management being unpaid, 7436.

Suggestion that the individual responsibility of one managing director be substituted for the present trustees; definition of the duties to be fulfilled by him, more especially if placed in charge of the proposed combined departments of art, 7439-7478. 7571-7608. 7618-7620——He should draw up, for the sanction of the Government, a scheme for the proper contents of the various collections which the establishment is to contain, 7443. 7470. 7575-7578——He should also prepare a scheme for the management of the subordinate departments, and define the specific duties of the officers employed, 7443. 7571-7574——Course to be taken by the director in making purchases for the gallery; advice under which he should act, 7450, 7451. 7456-7469. 7579 *et seq.* 7618-7620. 7630-7632——Recommendation that he report annually to Parliament, through the Treasury, and prepare estimates of expenditure for the general conduct of the establishment, 7450. 7453-7455——Definition of the duties of the subordinate officers proposed to be employed under the director, 7450-7452. 7476-7478. 7579-7582. 7618-7620.

Supposing the institution to be divided into the three main heads of painting, sculpture, and architecture, there should be an officer over each department, 7452——There should also be a secretary appointed, 7453——The office of director should be similar to that of secretary to the School of Practical Art, as held by Mr. Cole, 7466. 7586-7596. 7651, 7652——Recommended adoption of a chronological and historical arrangement of the collection, so as to show the origin and progress of any school of art, 7471, 7472——Opinion in favour of combining the several departments of art in one great repository, 7473——Class of works, &c. proposed to be contained in each of the combined departments, 7474-7489. 7609-7617. 7657-7667——There should be a library attached to the institution, containing books, engravings, and drawings, &c., in conformity with the respective departments, 7479-7482. 7609-7615——Lectures might also be given in the institution, 7483——In the pictorial department it would be desirable, to some extent, to have a collection of copies, 7484-7489.

Evidence in support of the projected removal of the gallery to Kensington, 7490-7515. 7621, 7622——The want of space for an enlargement of the building is one objection to the present site, 7491, 7492. 7637——The smoke and the bad air generally which enter the building are further arguments against it, 7493-7503——Means by which too numerous an attendance of the public in the gallery might be prevented, 7504-7509. 7624-7626——Opinion that the removal of the gallery to Kensington would not tend to decrease the number of visitors, 7510-7515. 7621, 7622. 7638——Expediency of covering the pictures with glass if it can be done without depreciating their appearance, 7516-7525——Explanations relative to a varnish described by Armenini as having been used by Correggio and Parmegiano for the preservation of their works; recommended application of this varnish to the pictures in the gallery, 7525-7570. 7639-7643. 7645, 7646——With respect to the management of the combined departments of art, it is proposed that a commission be first appointed, which might decide preliminary questions as to the classes of works to be exhibited, 7577, 7578. 7662——Possibility of an artist being found perfectly competent to undertake the directorship proposed by witness, 7583. 7607, 7608. 7647-7650.

Opinion that no serious difficulty would arise from the Chancellor of the Exchequer being obliged to sanction purchases recommended by the director, and thus to give an opinion as to their advisability, 7584-7604——Original drawings by the old masters should be framed and kept in the pictorial library; source from whence they might be obtained, 7609-7616. 7634-7636. 7644——How far it might be expedient to devote more

than

Report, 1852-53—*continued.*

Dyce, William, R.A. (Analysis of his Evidence)—continued.

than two days to students for the purpose of copying, &c. in the gallery, 7623. 7655, 7656. 7668——Suggestion that a return be procured of the number of persons visiting the gallery on certain days, distinguishing the country visitors from the town visitors, 7626, 7627——Objection to part of the gallery being devoted to an exhibition of pictures from private collections, 7628, 7629——In case of the gallery being removed it is very desirable to surround it with ornamental grounds, 7633——Preference given to individual responsibility in management over the responsibility of a triune directorship, 7649-7654——How far any difficulties might arise as to the expediency of transferring objects from the British Museum to the projected institution, and of allotting them to the respective departments, 7657-7667.

Dyce, Mr. Plan of preserving the surfaces of pictures in a clean state by means of two coats of varnish adverted to, *Rep.* xiv.

E.

Eastlake, Sir Charles. (Analysis of his Evidence.)—President of the Royal Academy, 4385——Keeper of the National Gallery from 1843 to 1847; 4386-4389. 4430——Was appointed a trustee in November 1850; 4390——Had no specific instructions when appointed keeper; the understanding come to with Sir R. Peel was, that witness should be chiefly consulted respecting the Italian masters, 4392-4398——During the period when no meetings of trustees were held, witness (being unable to consult the trustees) corresponded with Sir R. Peel, 4399-4405——Regulations or instructions issued to Mr. William Seguier relative to cleaning alluded to, 4406-4409——Such regulations were mere minutes or resolutions of the trustees, 4410, 4411—— Instructions laid down by trustees present at one meeting have been entirely lost sight of by those present at another meeting, and different directions given; exemplification thereof with respect to the cleaning of pictures by washing, 4412, 4413.

As keeper, witness considered it his duty to make spontaneous suggestions to the trustees; he attended their meetings, and was the medium of communication with the inferior officers, 4414-4418——Character of the instructions given by witness to Mr. Uwins, on his accession to office, 4419-4422——Witness gave in his resignation to Lord John Russell without any formal intimation to the trustees; grounds of that resignation, 4423-4429——Witness is not aware that Mr. Seguier expressed any opinion as to the dangers of cleaning, 4431-4433——Number of pictures cleaned in the first year of witness holding the keepership, 4434-4436——Bad state in which he found the pictures on succeeding to the office, 4437, 4438——Nature of the suggestions witness was in the habit of making to the trustees, 4439-4442. 4445——Resolution at page 11 of the Return of 1847, adverted to in regard hereto, 4443, 4444——Practice pursued by the trustees as to consulting Mr. Seguier respecting the cleaning of particular pictures; Mr. Uwins' statement that he was not consulted by the trustees somewhat surprises witness, 4446-4454.

Experiments usually instituted by Mr. Seguier prior to cleaning, to ascertain whether the picture would bear the process, 4455, 4456——Witness having confidence in Mr. Seguier, did not inspect his operations during the cleaning of pictures; he used greater precaution, however, in regard to Mr. Brown, 4457-4461. 4543——Reference to Question 1089 of evidence given by Mr. Brown, respecting certain pictures cleaned in 1844; special reference made to the Judgment of Paris, by Rubens, 4462-4466. 4511-4516——In what the cleaning of a picture actually consists; whether the process is to be deemed to extend to the removal of the glazing as well as the varnish, considered; special reference to the Velasquez, now in the gallery, and also to the Peace and War, by Rubens, 4467-4488. 4500-4510. 4517-4523——Testimony to the fitness of Mr. Seguier to be entrusted with picture-cleaning, 4489——Definition of the term, and explanation of the operation of glazing; the difference between the Flemish and Italian practice exemplified, 4490-4499.

Extent to which restoration was required and carried in the course of cleaning the Judgment of Paris, by Rubens; satisfactory manner in which the operation was performed by Mr. Brown; parts repainted by witness, 4524-4542——Witness was not authorised by the trustees to repair as well as clean pictures, 4544-4547——Mr. Seguier did not use spirits of wine in removing the varnish; witness would not have objected, 4548, 4549——The six weeks' vacation was a short period for the number of pictures that were placed in Mr. Seguier's hands on the last occasion, 4550——Mr. Seguier has an assistant; witness does not remember the circumstance of his preventing this person from being employed, 4551-4553——Opposition which witness, as a trustee, has always offered to the pictures being cleaned; general reasons which weighed in his mind against it; the subject was repeatedly brought forward, and by one trustee in particular, 4554-4576. 4617-4630.

Report, 1852–53—*continued.*

Eastlake, Sir Charles. (Analysis of his Evidence)—*continued.*

The restriction of the cleaning to the vacation only is an inconvenient practice; witness stated that in a printed letter, addressed to Sir R. Peel, 4577, 4578. 4654, 4655——To clean the pictures to enable the public to see them in their best state is undoubtedly material; but witness was never more impressed with the danger of doing it at all than he is now, 4579-4581——Running commentary on the nine pictures recently cleaned; special allusion to the Canalettis and the Poussin and to Claude's Queen of Sheba, 4582-4593——The like in regard to the Paul Veronese; probable reasons which influenced Mr. Dyce in giving the opinion he has done in regard to this picture, 4594-4600——Witness did not interfere with Mr. Seguier or Mr. Brown in the use of the particular varnishes which they applied; Mr. Seguier has high authority for the use of oil; Mr. Brown's is nothing but mastic varnish, 4601-4607. 4610-4612——The cleaning of the Susannah was undertaken in consequence of a private correspondence between witness and Sir R. Peel, as First Lord of the Treasury, and trustee; anomaly herein, 4608, 4609. 4613-4616. 4635-4638. 4650-4661.

Discrepancy between Mr. Seguier's report recommending the nine pictures to be cleaned, the resolution of the trustees thereon, and the pictures actually cleaned; belief that the instructions of the trustees were over-passed, 4617-4630. 4632-4634——Conclusion that picture-cleaning in the National Gallery has not been conducted with the caution and deliberation its importance would seem to require, 4631——The picture called the Vision of a Knight has not been cleaned since its purchase from Mr. Egerton; Mr. Woodburn was consulted as to the purchase; statement reported to have been made by him, that the picture had been cleaned and damaged; witness does not believe there is any foundation for it, 4639-4649——Mr. Brown was recommended by Sir R. Peel for the purpose of cleaning certain Dutch pictures; the trustees assented, 4650-4653——Tenure on which the Royal Academy hold their portion of the building; language said to have been used by his late Majesty in delivering the keys to Sir Martin Shee, 4662-4666.

Witness was a member of the Commission in May 1850, which reported on the injury done to pictures by the exposure of their backs to the accumulation of dirt; extent to which he assents to the terms in which that exposure is deprecated, 4667-4677——General understanding among the trustees that the time is approaching when the management of the National Gallery will require to be reconsidered; disposition to postpone consequent thereon, 4671-4675——Occasional cleaning practised during witness's keepership; wiping with a silk handkerchief or sponging with water is perfectly unobjectionable, 4678-4684——The pictures are likely to get extremely dirty in their present situation; witness's opinion given in 1850 as to the desirableness of a change of site remains unaltered, 4685-4691——Doubt whether the gallery varnish has had much to do with the discoloration on pictures, 4689——The floors of the gallery were watered every day, 4692, 4693.

Sir Edwin Landseer's suggestion for a committee to select the pictures for cleaning is objectionable on the ground of its doing away with individual responsibility; a very experienced person is to be preferred, 4694——Not essential that such person should be an artist, 4695——Nor desirable that the picture-cleaner himself should be the judge of what pictures should be cleaned, 4696, 4697——Not difficult to find a person qualified for this office, 4698——Making him responsible to the trustees or some other body would be an additional security, 4699——He should be a salaried officer, 4700——Picture-cleaners lean too frequently towards cleaning; some of them describe it as a fascinating occupation; it is also interesting to painters, 4701, 4702——Practice pursued in the Berlin Gallery, 4703, 4704.

No formal inspection of the pictures proposed to be cleaned was made by the trustees, 4705-4707——Witness considers the Paul Veronese and the Guercino improved by the cleaning, 4708-4711——The injury done to the Queen of Sheba consists in its being unequally cleaned; time will rectify this, 4711-4721. 4739——Respects in which the treatment of his pictures by Claude is open to criticism; effects therein to be described as "wooden" or mechanical in touch; the writings of Hazlitt adverted to in regard hereto; how far such may be deemed the result of cleaning, 4722-4740——The Velasquez also is to be considered improved by cleaning, 4741, 4742.

The cleaning should be all performed by the same person; or at least the Italian pictures by one and the Dutch by another; it is essential that the cleaner should be conversant with the works of the painter he operates upon, 4743-4745——The person superintending the gallery need not be a professional picture-cleaner, 4746-4749——Further critical details on the nature of glazing, and the extent to which it may be damaged by cleaning, and the lights of a picture rendered inharmonious, 4750-4766——Effect of such treatment on the pictures of Poussin, who painted on a red ground, 4767-4770——None of the pictures have been lined since witness has had the management of the gallery; he never would sanction it on account of the delicacy of the operation, 4771-4779.

Report, 1852-53—*continued.*

Eastlake, Sir Charles. (Analysis of his Evidence)—*continued.*

[Second Examination.]—Period of Mr. W. Seguier's death, 5908, 5909——Circumstances under which witness entered upon his duties as keeper of the National Gallery, 5910-5918——Destruction of the picture by Francesco Mola in 1844; 5919-5923——Particulars as to the employment of Mr. Brown, 5924-5926——Explanation of a minute by the trustees in 1844, giving witness unlimited discretionary power as to cleaning pictures in the gallery, 5927-5933——Manner in which Mr. Seguier exceeded the directions of the trustees, to remove the varnish from certain pictures, 5934-5936——Opinion of witness upon Mr. Seguier's treatment of the pictures in question, 5937-5942.

There is no regulation against the temporary exhibition in the gallery of valuable private pictures, 5943, 5944——Admission of the public is unlimited, 5945-5948——There was no restriction during witness's tenure of office as to the keeper directing pictures to be cleaned, 5949-5952——Practice as to pictures for sale being deposited in the gallery for the inspection of the trustees, 5953-4957——Number of trustees required for a quorum of their meetings; extent to which the necessity of a quorum has been disregarded, 5958-5966——Manner in which business was transacted in the absence of the trustees from town, 5967-5969——Directions were sometimes given to officers by individual trustees, 5970, 5971——Defects in the system of management, 5972.

Witness recommends individual responsibility in his scheme for the future management of the gallery, 5973. 5977. 5983——The director should be wholly responsible for purchases, 5975. 5977-5979——The superintendent should have the general management of the gallery, 5976, 5977. 5981, 5982——And the duty of the secretary would be to collect and record information, 5975. 5980——All these proposed officers should be controlled by the Treasury, 5983.

[Third Examination.]—Explanation of the term declined "on the usual grounds," occurring in the trustees' minutes as to offers of pictures, 5984——Pictures might be accepted from donors, on condition, if not thought eligible to be retained, of being sent to provincial museums, 5985-5987——Statement as to the grounds on which a picture by Santo di Titi and another by Domenico Panetti were declined, 5988-5992——Refusal of Mr. Woodburn's offer of a collection of drawings, 5993-6000——Feeling of the trustees as to the purchase of original drawings, 6001-6004——Understanding on witness's acceptance of the keepership, as to his opinion being had with reference to pictures, 6005-6009——It was the practice of the trustees to have witness's report on the merits of pictures offered, 6010-6014. 6016-6019——Mode in which the trustees obtained information as to the eligibility of offers, 6015. 6020-6022. 6075. 6187——Pictures were purchased solely for their individual merit, and without reference to any historical or chronological system, 6023, 6024. 6028——Opposition of Sir Robert Peel to purchases of the early Italian school, 6023——Suggestions made by witness as to purchases, 6025-6027.

The purchases were chiefly of the Flemish and Bolognese schools, 6029——Failure of the proposed purchase from the Fesch gallery, 6029-6033——Remarks made in Parliament lessened the disposition of the trustees to make purchases, 6034-6041. 6045-6053——Witness has no knowledge as to purchases not being made from 1847 to 1851; 6042-6044——Character of the Solly collection sold at Mr. Christie's, 6054-6059. 6064——The principle chiefly influencing the trustees in purchases was to confine themselves to pictures of the highest merit, 6059. 6066. 6068, 6069——Observations as to the "Luini" in the Solly collection, 6060-6065——The trustees should have money at their disposal, as the time lost in getting the sanction of Government is frequently a fatal impediment to a purchase, 6067. 6072——No opportunity of purchasing fine pictures should be allowed to pass, 6070, 6071——In forming a collection on any fixed system, such as Prince Albert's, a certain discretion must obtain, 6071. 6073, 6074——The trustees did not make purchases on any systematic principle, 6073——Reasons for which no pictures were bought from the Solly and Coningham collections, 6076, 6077——Opinion as to the pictures in Mr. Coningham's sale, 6078-6082——The Susanna, by Guido, was bought as a companion to Lot and his Daughters, 6083-6087.

Witness is not aware of any rule preventing the trustees recommending the purchase of collections to Parliament, 6088, 6089——It would be desirable to purchase collections when the opportunity occurred, and either sell the inferior pictures, or give them to provincial galleries, 6090-6105——Opinion of witness as to the character and value of the Manfrini collection at Venice, 6105-6110. 6112, 6113. 6123, 6124. 6136-6138——Particulars as to the negotiation for its purchase by the trustees, and their dissatisfaction with Mr. Woodburn's report on the collection, 6111. 6114-6122. 6125-6127. 6129-6132. 6135. 6139-6143. 6212, 6213——The trustees declined to purchase the collection, not thinking it a desirable one, 6122. 6133, 6134. 6144——(*Colonel Thwaites.*) Witness is not aware of any explanatory letter from Mr. Woodburn accompanying the inventory of the collection, 6128——(*Sir C. Eastlake.*) The offer made of Sir Thomas Lawrence's collection of drawings to the Government, and refused, was in order to placing

Report, 1852-53—*continued.*

Eastlake, Sir Charles. (Analysis of his Evidence)—*continued.*

placing them in the British Museum; it would have been desirable to have secured them for the nation, 6145-6160.

Witness is not aware that the Francias in the gallery might have been obtained for a sum much less than that eventually given, 6161——Circumstance of the sale of the Raphael in the Lucca collection, 6162-6167——Witness has no knowledge of the tapestries after Raphael's cartoons, bought for the Berlin Gallery, having been for sale in England in 1840; 6168-6171——Statement relative to the purchase of the alleged Holbein, 6172-6188——Circumstance of a picture by Domenico Ghirlandajo, but attributed to Michael Angelo, being refused, 6178, 6179——Steps taken by the Treasury as to the Holbein, 6181-6185——Witness does not recollect two cartoons by Raphael being refused in 1846; 6189-6192.

Whilst witness was keeper, many opportunities of making good purchases were lost, from the inability of the trustees to close at once, 6193-6197——The only remedy for this evil is to put a sum of money at the disposal of the trustees for opportune purchases; in the case of large collections, Parliament should be applied to, 6198-6201——Reason of purchases being suspended at times, 6202——Instances of the Treasury declining to purchase on the trustees' recommendation, 6203-6208——Mr. Woodburn was commissioned to bid for particular pictures at the sale of Marshal Soult's collection, 6209-6211——Witness does not think that the fruit of that commission was satisfactory, 6214——Prices Mr. Woodburn was authorised to bid, 6215-6217——Lord Lansdowne purchased the picture by Palma Vecchio, it not being thought worth keeping by the trustees, 6218-6220——Witness is not aware if the Tribute Money, by Titian, was ever in this country before, 6221, 6222——Mr. Woodburn is one of the best connoisseurs in the country, 6223-6225.

The evils in the present system of purchasing pictures for the gallery, arise from the defectiveness of the institution, and not from lack of zeal in the trustees, 6226-6228——The document given by witness to the Committee embodies his views without calling for farther details, 6229——Symptoms of a former unequal cleaning in the Saint Ursula by Claude; this case is a proof of time bringing pictures into harmony after such treatment, 6229. 6235——Materials used for toning and glazing pictures, 6229-6231——It was the practice of Claude to glaze his pictures, and they are imperfect if unglazed, 6232-6234——Errors in the later edition of Sandrart's work of 1774; 6232, 6233——It is witness's opinion that the pictures recently overcleaned will be harmonized by time similarly to the Saint Ursula of Claude, 6235.

[Fourth Examination.]—Further explanation in detail with regard to the three officers, the director, the secretary, and the superintendent, proposed by witness under an improved system of management, and their duties; means by which the desired responsibility would be secured, 6236-6293——£.10,000 is the amount witness recommends to be always in the hands of the director for the purchase of pictures; not more than one-third would on the average be expended annually; but this would be exclusive of demands for larger sums from time to time, 6294-6307——Many opportunities of making advantageous purchases have slipped by because there has not been time to apply to the Treasury; instance in regard to a recent sale of Spanish pictures, 6297. 6307-6313.

Further explanation as to the powers with which the proposed director should be vested, and the means by which his responsibility should be secured, 6314-6328. 6337-6368. 6374-6383. 6392-6407. 6478, 6479——Newspaper and other criticism to which the director would be exposed; extent to which public opinion is expressed on the Continent, 6329-6336——Witness has not considered the purchase of original drawings as part of the duties of the director; this duty has hitherto been fulfilled by the British Museum, but it should be performed by the National Gallery, 6369-6373——The opportunities missed of purchasing pictures have resulted both from the number of trustees and from their having no money at their disposal, 6374, 6375——Mr. Christie's opinion that pictures that have been cleaned fetch a less price in his auction rooms is not to be acquiesced in as a rule, 6384-6387.

A director, such as witness contemplates, would hardly make such a mistake as that made in the recent purchase of the Holbein; opinion with which witness was fortified in regard to that picture, 6388-6391——How far difficulty would be experienced in securing a director for the gallery with the various qualifications indicated; leaning of most connoisseurs and artists towards one school or another; connoisseurs less so, however, than artists, 6408-6418——No danger under the proposed system of the National Gallery becoming subject to the treatment to which foreign galleries are exposed with reference to the entire restoration of pictures, 6419-6421.

No restriction should be put on the admission of the public to the gallery; propriety of a regulation by which, during the forenoon, persons might be admitted upon writing down their names considered, 6422-6427——The two days devoted to artists is a very short time; people from the country and foreigners are admitted on those days on sending

up

Report, 1852–53—*continued.*

Eastlake, Sir Charles. (Analysis of his Evidence)—*continued.*

up their cards, 6428, 6429——Better precautions might be taken to make visitors dust their feet, 6430——Covering pictures with glass is the most effectual mode of preserving them; inconveniences attending its use, 6431-6434. 6437-6454——Arrangements suggested for deterring mere idlers, 6435, 6436——Reference to a paragraph in a letter from Mr. George Richmond to the Chairman, advocating the putting the whole collection under glass, 6437 *et seq.*

It often happens that students are refused leave to copy pictures from want of space in the gallery, 6455, 6456——An arrangement by which a separate room might be devoted to copying, and into which the particular picture would be wheeled, approved of, 6457, 6458——Witness is not prepared to say that the establishment of the National Gallery has had any effect in improving the public taste; a love of art is more generally spread than it was a few years ago, 6459-6465. 6481, 6482——The rage is at present for very early works of art; a gallery chiefly composed of early Italian painters would not alone be adapted to raise the public taste, 6466–6469. 6480——Belief that this taste for early pictures has much of fashion in it and will not endure, 6470-6475——Difficulty felt by witness in offering advice in regard to the schools from which purchases should be selected, 6476-6480.

Desirability of sanctioning deposits of works of art by private individuals; difficulty that would arise from the necessity of refusing to accept many such works, 6483–6486. 6492-6502——Special reference to an offer made by Hon. Francis Charteris, to deposit for a time in the National Gallery his fresco by Pelegrino Tibaldi, 6487-6491——Means by which the rooms might be kept more free from dust and dirt, 6503–6507——How far there might be difficulty in finding persons to fill the offices of director and secretary, 6508–6511——Plan of arrangement of the gallery as to schools; chronological order, &c., and the principles to be regarded in respect thereto considered; systems adopted in the Berlin Gallery, and in the Academy at Florence, 6512-6519.

[Fifth Examination.]—Witness has considered the subject of the proposed combination of collections of art, 6520——Art may be divided into fine art and mechanical art; objects comprehended by witness under the latter term, 6521, 6522——Objects of mechanical art now in the British Museum, should be united to the present collection at Marlborough House, 6522-6524——Discrimination required in dividing into the above classes in a combined collection, objects of antiquity bearing inscriptions or explanatory of history, 6524-6527. 6533-6537——A library illustrative of art should be united to the collection, 6528, 6529——Pictures not of the national collection should be exhibited in a distinct room, 6530——Manner in which engravings might be disposed of, 6531, 6532——A collection of casts should be attached to the gallery of sculpture, 6538–6541.

Suggestions for the management of a combined collection, 6542–6545. 6552–6558——Mode in which continental museums are controlled, 6546–6549——It is not expedient to include theatres in the jurisdiction of the proposed management, 6550, 6551——Desirableness of periodical investigations in matters of art by Committees of the House of Commons, 6559–6562——The control of expenditure should remain with the Government, 6563-6570. 6592, 6593——The cartoons at Hampton Court might be nearer London, if secured from the influence of smoke, 6571, 6572——It would be desirable to affix a description to each object in the collection, 6573-6575——Explanation relative to witness's statement as to Mr. Hume's opposition to grants for pictures, 6575.

Witness would have the director in his scheme of a constitution for the National Gallery vested with independent action, and only subject to the control of a Government department or a minister of the Crown, 6576-6581——The responsibility of recommending extraordinary purchases should rest with such department or minister, 6582-6591——A stated annual sum for purchases should be put at the disposal of the director, and amounts required in excess of it should be granted on the responsibility of the Treasury, 6592–6600——The establishment of a system for the supply of cheap casts of works of art, analogous to the Calcographie at Paris, is well worth consideration, 6601–6609——Respective merits of canvas and wood as grounds for pictures, 6610——The durability of pictures is unlimited, if properly preserved, 6611, 6612——Nature of preservation necessary, 6613–6616——Pictures, if kept under glass, never require varnishing, 6617, 6618——Destructive tendency of transferring pictures from panels to canvas, 6619–6624.

Circumstance of the sale at Mr. Christie's of a picture by Luini, which had been restored, being confirmatory of witness's opinion of the increased value of restored pictures, 6624–6627——Suggestion made by witness as to the advice of chemists being desirable in effecting restorations, 6628-6633——Witness acquiesces in Mr. Faraday's suggestion for referring the subject of cleaning and restoring to persons of science for their report, 6634——It is not necessary that Government should interfere in the trade of picture-cleaning; the persons to be employed should be left to the discretion of the proposed director, 6635-6642.

Report, 1852–53—*continued.*

Eastlake, Sir Charles. (Analysis of his Evidence)—*continued.*

[Sixth Examination.]—Details of a purchase (just concluded at Christie's) in illustration of the mode in which pictures may be recommended to the trustees, and showing the necessity of immediate action on their part, without attending to the regulations of the Treasury, 7027–7052——History of the picture in question, which is considered a Giorgione, and was purchased for 500 guineas, 7028–7032——Witness takes the responsibility of the purchase on himself, as having been the chief mover in the matter; opinion of Signor Cavalcaselle as to its being an original work, 7028–7037——Infringement by this transaction of an order by the Treasury (made after the Holbein purchase), that no picture should be bought without the opinion of two properly qualified valuators being taken as to its merit; remarks in justification of such infringement, 7038–7052.

Eastlake, Sir C. Remarks on the evidence of Sir C. Eastlake, referring to the objection offered by him to the cleaning of some of the pictures, *Rep.* ix——Remarks on Sir C. Eastlake's statement, that he considered the instructions of the trustees in regard to the late cleaning had been overpassed, *ib.*

The operations of witness as picture-cleaner to the gallery in 1844 were generally superintended by Sir C. Eastlake, from whom his instructions were received, *Brown* 1086–1094. 1098–1103. 1174, 1175——Comments on the inefficiency of the late keeper on the subject of cleaning, of which he had the entire superintendence, *Moore* 2384–2387 —— Perfect coincidence between Mr. Seguier's report and the pictures actually dealt with by him according to the instructions issued; witness is at a loss to see why Sir C. Eastlake does not perceive this conformity, *Russell* 4826 (*Ev. p.* 306)——Nature of the objections entertained by Sir C. Eastlake to cleaning the pictures; modification in a resolution effected on one occasion at his suggestion; his evidence on this topic adverted to, *Lord Monteagle* 4995–4999——Evidence to show that Sir C. Eastlake is to be considered a party to the resolution of 12 November 1852, approving of the results of the cleaning operations, *ib.* 5065–5071.

Suggestions by Sir C. Eastlake respecting the future management of the National Gallery, *App.* 787.

Edinburgh Review. Reference to an article on the National Gallery, which was written by witness, and appeared lately in the Edinburgh Review, *Dennistoun* 3358, 3359. 5746.

Effluvia. See *Atmospheric Influences.*

Electrotype Process (*British Museum*). Use of the electrotype process in the Museum for duplicating certain objects; advantage of its being further employed, *Oldfield* 8382–8384.

Elgin Marbles. With respect to the preservation of the antiquities, the site of the British Museum is only objectionable as regards the Elgin Marbles; injuries inflicted on them by the London smoke and soot, &c.; process of washing them with water adverted to, *Hamilton* 8892–8911. 8917–8919. 8924–8927——Recommendation that the Elgin Marbles be removed to Hampton Court for the sake of preservation, *ib.* 8892, 8893. 8911–8917 ——How far the room in which the Elgin Marbles are may be capable of improvement as regards light, &c., *ib.* 8928——Possibility of covering the marbles with glass adverted to, *ib.* 8949-8952.

Effect of the smoke of London in discolouring the Elgin Marbles, *Sir R. Westmacott* 8990. 8992, 8993——Occasional washing with water does not restore their original whiteness, *ib.* 8990–8992—— Objection to their being covered with glass, *ib.* 8994–8999 ——The juxtaposition of the Nineveh sculptures with the Elgin Marbles is not likely at any time to weaken or prejudice the public taste for the latter, which are the most admirable things in the world, *ib.* 9050-9059——Objection to a removal of the Elgin Marbles to Hampton Court as being too far from London; they might be removed to Kensington with great advantage, *ib.* 9074-9076.

English School of Painting. Classified list of the masters of the English school of painting from the earliest period to the present time, *App.* 824 *et seq.*

Engravings. Manner in which engravings might be disposed in a combined collection of art, *Sir C. Eastlake* 6531, 6532.——*See* also *Copyright of Pictures. Drawings.*

Enlargement of the present Gallery. Evidence as to the possibility of additional space being obtained adjoining the present site, and of the gallery being sufficiently enlarged thereon, *Coningham* 6935-6942; *Hurlstone* 7075-7092; *Russell* 8209-8214——Meeting on the subject at the Royal Institute of British Architects, *Foggo* 7391. 7393-7397.

Witness is author of a pamphlet published in 1849, suggesting a plan for the reconstruction and enlargement of the National Gallery on its present site, so as to adapt it

Report, 1852-53—*continued.*

Enlargement of the present Gallery—continued.

it not only to pictures, but also to sculptures and antiquities, &c. from the British Museum, *Fergusson* 8390-8398. 8540——Explanations in detail of this plan and its advantages; buildings required for its ultimate extension; contemplated arrangement of the several departments, &c., *ib.* 8399-8442. 8447-8452. 8490. 8520-8538——The height of the proposed building would be nearly double that of the National Gallery, *ib.* 8422. 8428-8431——If a combination of the departments of art should not be decided on, the present building, by being brought somewhat more forward, would afford ample space for the pictures, *ib.* 8527-8532——Probable ultimate expense of the extended edifice for the accommodation of the combined departments on the site of the present gallery; cost of the ground and of the purchase of the barracks and workhouse adverted to, *ib.* 8536-8538.

Witness has prepared several plans for the enlargement of the gallery on the present site, *Pennethorne* 8811-8814——Explanation of a plan for a building (to contain paintings and sculptures) to be erected on the present site, including the barracks and workhouse at the back; the entire cost to the nation would be about 400,000 *l.*, *ib.* 8815-8836.

Unusual expense and difficulty that would attend the enlargement of the present site, *Rep.* xvi.

See also *George's, St., Barracks.*

Ethnographical Collection (*British Museum*). Objection to any one part of the department of antiquities, except the ethnographical collection, being separated from the rest, *Hawkins* 7760-7762. 7802-7804.

Etruscan Vases (*British Museum*). These vases, as being essentially works of art, should be removed from the British Museum to the projected combined departments of art at Kensington, *Sir R. Westmacott* 9022.

Evans, Richard. (Analysis of his Evidence.)—Made a copy of the St. Bavon, about thirty years ago, when it was in the possession of Mr. Holwell Carr, 2294-2296——Belief that the St. Bavon is an original work of Rubens, though rather a sketch than a finished picture, 2297-2303——Mode pursued by Rubens in finishing off his sketches and other works; definition of the different processes of glazing employed by him, and other masters, 2303 *et seq.*——When witness copied the St. Bavon, the over-glaze, or toning, was perfect upon it; belief that it has since been removed by cleaning, but that the inner glaze or surface of the picture has not suffered except in the figure of one of the women; the general tone and richness of the work has certainly been marred by cleaning, 2307-2349.

Exhibition Commissioners. See *Commissioners of the Great Exhibition of* 1851. *Kensington Gore.*

Exhibition of Private Works of Art. See *Annual Exhibition of Pictures.*

Ex-officio Trustees. The First Lord of the Treasury and the Chancellor of the Exchequer were appointed *ex-officio* trustees by Treasury letter of 12 August 1846, *Rep.* v.

See also *Chancellor of the Exchequer. First Lord of the Treasury. Official Trustees.*

F.

Faraday, Michael. (Analysis of his Evidence.)—Was a member of a commission in the spring of 1850, for inquiring into the state of the pictures in the National Gallery, and the influences to which they were exposed, 5441. 5551-5555——Experiments instituted by witness with reference to the value of varnish as a means of protecting the surfaces of pictures from atmospheric effects; these experiments did not extend to the "gallery varnish," 5442-5445——Result of these experiments in regard to the mastic varnish; tests used; their effect, and as compared with pictures in a collection, 5446-5467——Conclusion come to, that the London atmosphere is decidedly prejudicial to pictures unless protected by a sound coat of varnish, 5468. 5470, 5471——Serious objections to the site of the gallery in the centre of London, 5469.

Detail of the experiments tried for the removal of the varnish by means of spirits of wine; conclusion arrived at, that, as regards removing varnish of this kind, there was no tendency to the removal of the surface of the picture with it; results of these experiments on certain pictures (by Mr. Penry Williams), 5472-5508. 5556-5559——Effect of spirits of wine in cases where water colour had been used as a wash, or to paint transparently on the surface of a picture, 5509-5514——Ordinary mastic varnish would not get much harder with time, so as to resist the action of spirits of wine, or to be a protection to the picture, 5515-5519——Experiments tried by witness conjointly with Sir C.

Report, 1852-53—*continued.*

Faraday, Michael. (Analysis of his Evidence)—*continued.*

Eastlake some time since on pictures of the Venetian school, 5520-5523——Axiom laid down in regard to the use of solvents, that whatever will remove varnish, will remove in some degree the under parts of a picture, 5524.

A better situation for the gallery might be selected by going westward, 5525-5527——No chemical harm could result from enclosing pictures in glass; they need not be hermetically sealed; witness would not expect the surface of the picture to turn black, 5528-5540——No opinion can be formed of the value of the two varnishes, the pure mastic and the gallery varnish, without experiment; surprising that no information on these points has been obtained, 5541-5548——Witness could not undertake from inspection to determine whether any of the under-colour of the nine pictures recently cleaned has been removed, 5549, 5550.

Faraday, Mr. Remarks on the experiments instituted by Mr. Faraday as to the effects of alcohol in picture-cleaning, *Rep.* vii——Mr. Faraday's researches into the nature of the varnishes are not yet completed, *Russell* 4892——Unfairness of Mr. Faraday's experiments with respect to the damage inflicted by smoke, noxious air, &c., *Foggo* 7361, 7362. 7382-7386. 7432.

Farrer, Henry. (Analysis of his Evidence.)—Extensively engaged as a picture-cleaner, also as a dealer and valuer, 1239-1244——Objects to the cleaning of paintings unless in extreme want of it, 1245-1247——Under any circumstances it is very undesirable to lay bare the surface of the work, 1248-1254. 1276, 1277——Reluctance of witness to reveal the processes used by him in cleaning, 1255-1259——Mode pursued by witness in removing mastic varnish, and in the general cleaning and re-varnishing of pictures; great discretion to be used in the operation, which must entirely be regulated by the nature of the painting, 1260-1282. 1367-1381——Susceptibility to injury of the glazings used by the Venetian and other masters, 1269-1277. 1536-1542.

Evidence with respect to the nine pictures cleaned by Mr. Seguier during the vacation of 1852; under the circumstances of these works having been covered with oil varnish, &c., the cleaning could not have been better managed, and no blame can, with any certainty, be attached to the operator; the risk, however, should not have been undertaken, and some of the pictures have decidedly been damaged, 1283-1340. 1382-1409. 1446-1451. 1459-1480. 1504-1520——Objections to the mixture of oil with mastic varnish as applied to pictures, 1288-1298. 1343-1355. 1367 *et seq.*——Reference to the present excellent condition of the St. Ursula, 1315. 1384-1386. 1552-1554. 1559——Desirability of pictures being lined before they are cleaned; the process of lining is not dangerous, 1341, 1342. 1521-1526——The Sebastian del Piombo was endangered by the recent washing; this work has been growing darker for some time, 1349-1353——The cleaning of pictures in foreign galleries is entrusted entirely to the discretion of the cleaner, 1356-1361.

Necessity for a more careful attention to the backs of the pictures in the National Gallery, 1362-1364——It would be better not to clean the Salvator Rosa in consequence of the danger of removing the oil varnish, which has been injuriously put upon it since its purchase by the nation, 1372, 1373. 1452-1458——Deterioration in the general tone of the Judgment of Paris since its cleaning whilst in the gallery, 1410-1419——The tone of the Velasquez has also been affected by its cleaning, 1420-1445——Processes employed in cleaning pictures in some of the foreign galleries, 1481-1495——Suggestion that the pictures be constantly dusted, 1496.

The discretion of cleaning must always be entrusted to one person, 1497-1499——Six weeks was a very insufficient time in which to undertake the cleaning of nine pictures, 1497. 1504-1514——The cleaning should take place in rooms devoted to that purpose, 1500-1503——Successful restoration by witness some years ago of the Orleans Titian, 1544-1548——The art of cleaning has in late years rather improved than otherwise, 1549-1551——Oil varnish would be the more injurious if the pictures were covered with glass, 1555, 1556——(*Mr. Uwins.*) The cleaning is performed in the rooms where the pictures are hung up; there are several unoccupied rooms which might be allocated to the purpose, 1560-1566.

[Second Examination.]—Definition of the peculiar advantages of the Damar varnish; origin of its name, 9418-9429——The detection of adulteration in mastic varnish, some years ago, first induced witness to use the Damar varnish, 9419. 9424. 9430-9432——Witness cannot test the quality of mastic varnish before its application to pictures, 9430-9433——Slight knowledge of chemistry possessed by witness; opinion that such knowledge is not essential in a picture cleaner, 9434-9436.

[Third Examination.]—Willingness of witness to take the Velasquez from the trustees at the same price which he paid Lord Cowley for it, viz. 2,000*l.*, 9867——Denial of Mr. Moore's assertions in regard to the sale of this picture to the gallery by witness, 9867.

Report, 1852-53—*continued.*

Farrer, Henry. (Analysis of his Evidence)—*continued.*

[Fourth Examination.]—Further explanation of the circumstances connected with the purchase of the Velasquez from witness; part taken by the late Sir Robert Peel in the matter, through the instrumentality of Mr. C. B. Wall, 9912–9936.

Farrer, Mr. Comments on the evidence given by Mr. Farrer with respect to his so termed "successful restoration" of the Orleans Titian, *Moore* 2390–2395——The picture was infinitely more valuable before Mr. Farrer had painted over it, *ib.* 2391–2395——Remarks relative to Mr. Farrer's skill as a cleaner and restorer; in some instances he has restored some pictures for witness, and given him every satisfaction, *Coningham* 7023–7026.

See also *Velasquez*, II. 2.

Feather Brush. See *Occasional Cleaning.*

Fergusson, James. (Analysis of his Evidence)—An architect, 8389——Author of a pamphlet published in 1849, suggesting a plan for the re-construction and enlargement of the National Gallery on its present site, so as to adapt it, not only to pictures but also to sculptures and antiquities, &c., from the British Museum, 8390–8398. 8540——Explanations in detail of this plan and its advantages; buildings required for its ultimate extension; contemplated arrangement of the several departments, &c., 8399–8442. 8447–8452. 8490. 8520–8538——The barracks and the barrack-yard would be required if sculptures are to be included in the projected collection, 8399. 8402. 8533, 8534——Mode by which the pictures should be lighted, 8412, 8420. 8521–8526——The height of the proposed building would be nearly double that of the National Gallery, 8422. 8428–8431——The Royal Academy are proposed to be excluded from any occupancy in the building, 8423–8425.

The next best site to the present would be in the Regent's Park at the end of Portland Place; possibility of ground being obtained there for the purpose, and means by which a proper drainage could be effected 8443. 8501–8519——Objection to the proposed site at Kensington Gore as being too far from the centre of London, 8444–8446——Disadvantages of having a large open space surrounding the national building; great expense consequent thereon, 8447–8451——Drawbacks against the site at the end of the broad walk in Kensington-gardens, 8453, 8454——Clumsy character of Mr. Oldfield's proposed building, as being arranged with a view to unlimited extension, 8455–8460.

Further consideration of the projected site at Kensington Gore; objections to it as being exceedingly flat and difficult of drainage, and as being liable to be quickly surrounded with houses, &c.; the gallery should be built on the slope where the mansion is situate, 8461–8489. 8496–8500——Elevation of the ground as compared with that of the present National Gallery, 8462–8466——Experience of witness as an architect; he has never constructed any public building, 8491–8495. 8539——If a combination of the departments of art should not be decided on, the present building, by being brought somewhat more forward, would afford ample space for the pictures, 8527–8532——Probable ultimate expense of the extended edifice for the accommodation of the combined departments on the site of the present gallery; cost of the ground, and of the purchase of the barracks and workhouse, adverted to, 8536–8538.

Ferrarese School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 803.

Fesch Gallery. Failure of the proposed purchases by the trustees from the Fesch Gallery, *Sir C. Eastlake* 6029–6033.

First Lord of the Treasury. This officer, prior to 1846, was usually, if not invariably, one of the nominated trustees, *Rep.* v——By Treasury letter of August 1846 he was appointed an ex-officio trustee, *ib.*——Under the system of purchasing, &c. proposed by witness, it might be expedient that the First Lord of the Treasury no longer continue an ex-officio trustee, *Russell* 8130–8138.

Flemish School of Painting. Oil painting was introduced into Italy from Flanders, *Sir C. Eastlake* 4496——There is not much glazing used in the old Flemish pictures; they are very firmly painted and not difficult to clean; instance of this in the case of a large Cuyp cleaned a few years since by witness, *Seguier* 466–478——Peculiar preparation by this school of the back ground or panel on which they painted, *Hart* 3334——Classified list of the masters of the several schools, with names of their principal followers, *App.* 811 *et seq.*——*See* also *Rubens.*

Floors of the Gallery. The floors of the gallery were watered every day, *Sir C. Eastlake* 4692, 4693.

Florence. Great importance attached in Florence to the quality of the varnish applied to pictures, *Spence* 10083, 10084——Inferior pictures are constantly being restored and repainted in Florence for purposes of sale, &c., *ib.* 10099, 10100——Answers to queries on the national collections and museums of fine arts at Florence, *ib.* 753 *et seq.*

See also *Uffizii Gallery (Florence).*

Report, 1852–53—*continued.*

Florence Gallery. Condemnation of the process of cleaning as practised in the gallery at Florence, *Dennistoun* 3399——Remarks relative to the class of pictures in the gallery and their arrangement, *ib.* 5904–5907——Interesting arrangement of the pictures in this academy in an historical series, adverted to, *Coningham* 6945–6948——Considerable attention paid in the gallery to the colour of the walls and floor, and to other incidental circumstances in regard to the effect of the pictures; document relative thereto handed in, *Spence* 10048–10052. 10127——Explanation of the system of cleaning and restoring practised in the gallery; employment of a restorer in each of the collections; they are salaried officers, and their services are exclusively required for the gallery, where there is always enough for them to do in removing the old varnishes, &c., *ib.* 10055–10075. 10090–10097. 10111, 10112——Generally speaking the operations of the restorers have been beneficial to the pictures, *ib.* 10067, 10068. 10100——Qualifications requisite in the restorers appointed to the Florentine Gallery, *ib.* 10069–10071——How far it is essential that they understand chemistry; great attention paid to the quality of the varnish, *ib.* 10072–10075. 10083, 10084.

There are from eighteen to twenty officers of various kinds engaged in the Florentine Gallery; multifarious duties undertaken by them, *Spence* 10085–10089——The restorers are paid about forty dollars a month each, which is considered a high salary, *ib.* 10113–10116——Ample time taken by them in the process of cleaning some pictures, *ib.* 10117——Opinion of Cornelius, the celebrated German painter, adverted to, as being extremely favourable to the architectural arrangements of the Florentine Gallery and the mode therein adopted of combining the several departments of art under one roof, *ib.* 10044–10047.

Particulars respecting the arrangement of pictures and statues in the Florentine Gallery of the Uffizii, *App.* 831.

Florence Museum. Explanation as to the class of works admitted into the Florence Museum (as stated by the directors of the gallery); copies in casts from marbles are not admissible, *Spence* 10118, 10119.

Florentine School of Painting. Classified list of the masters of this school from Giotto to Masaccio, with names of their principal followers, *App.* 793——From Masaccio to Michael Angelo, *ib.* 794——From Michael Angelo to Cigoli and later painters, *ib.* 794, 795.

Foggo, George. (Analysis of his Evidence.)—Was examined before the Committee of 1836; 7220——As secretary to the National Monuments Society, has devoted considerable attention to questions of fine art collections, 7221——Objects strongly to the present system of management in the National Gallery, as involving great irregularity, and the want of any definite responsibility, 7222–7232——Condemnation of the management in allowing the Royal Academy to establish themselves in the building to the prejudice of the public, 7225–7230.

Suggestions in detail for an improvement in the future management of the gallery, 7233 *et seq.*——Proposed appointment of trustees by the Treasury as an inspecting body; they should not be remunerated, and should be responsible to Parliament; there should be an acting committee of trustees, apart from the general body, with certain powers and duties peculiar to themselves, 7233–7242. 7291–7303. 7343–7354——Office of director recommended, with the duty of looking after the ordinary care of the pictures and reporting thereon to the trustees, 7243. 7245——The duties of the secretary should be to conduct the correspondence, and to keep the accounts of the institution, 7243. 7277, 7278——The office of treasurer might be undertaken by one of the trustees who should report on the expenditure of the funds, 7243. 7279——Duties proposed to be vested in the auditors, who should be appointed by a superior authority, and be as distinct as possible from the trustees, 7243, 7244. 7289, 7290. 7306–7313.

Suggested appointment of a committee of taste, composed of three salaried persons, elected by the trustees, with the concurrence of the Treasury; power and responsibility to be vested in this body in the purchasing and cleaning of pictures, &c., 7247–7264. 7273–7275. 7280 *et seq.* 7343–7354——Probability of disputes or collisions occurring between the several officers suggested by witness; opinion that such collision is not unwholesome, and that well-advised cleaning and prudent purchases, &c. are better than hasty action and consequent mistakes, 7252–7254. 7274, 7275. 7294. 7304, 7305. 7314, 7315——Neglect by the present managing body of sundry opportunities of acquiring valuable works for the gallery; within the last three years the collection might have been made one of the finest in the world, 7257. 7329–7342.

The committee of taste need not necessarily consist of artists or professed connoisseurs, 7258–7273——Their responsibility in making purchases should be entirely of a moral and honourable kind, 7259–7261——In special cases, one of the committee of taste might purchase pictures abroad, and if necessary the other members of the committtee should go and see them beforehand, 7262–7264. 7274, 7275——Proposed establishment of an annual exhibition in the gallery to which pictures from all parts of the world should under certain restrictions be admitted for sale, and from which valuable acquisitions to the national collection might be obtained, 7263. 7276. 7286–7288. 7321–7328——Recommended

Report, 1852-53—*continued.*

Foggo, George. (Analysis of his Evidence)—*continued.*

mended transfer to the gallery of the pictures by Rubens on the ceiling in Whitehall Chapel; they could be removed with perfect safety, and would be more appreciable if suspended against a wall, 7263. 7265-7272. 7408-7410.

There is no necessity for the committee of taste devoting their sole attention to the duties of their office; divided interest, as at present, is much worse than divided time, 7280-7282. 7286. 7430——Proposed remuneration of the committee of taste, 7284, 7285——Responsibility of the proposed staff of officers relatively considered, 7293-7303. 7343-7354——The general body of trustees should be mainly responsible to Parliament, 7293, 7294——The standing committee of trustees, as acting under delegated authority from the general body, would be responsible to them, 7296-7303——Opinion that the expenditure under witness's scheme of management would be very small, 7310, 7311——Injudicious purchases made for the gallery of three pictures by Guido, and of the Soult Titian, 7315-7320.

Witness entirely concurs in Mr. Hurlstone's objections to the removal of the site of the gallery, 7355, 7356. 7390——There is seldom or ever any inconvenience in the gallery from too numerous an attendance of the public, 7357. 7387——The Pantheon has double the number of visitors, and the place is nevertheless kept free from dust, and the pictures are not injured by the effluvia from the crowds, 7357-7360——Unfairness of Mr. Faraday's experiments with respect to the damages inflicted by smoke and noxious air, &c., 7361, 7362. 7382-7386. 7432——Any injuries arising from smoke might be easily prevented by the application of isinglass inside the varnish; the most dangerous varnishes can be removed without causing damage provided the isinglass be first laid on, 7361-7381——The present site cannot therefore be objected to on account of the London smoke, 7367.

The effluvia within the gallery attributed to defective ventilation, 7388——In Marlborough House, notwithstanding the great crowds, and the bad ventilation, some of the pictures are in an excellent condition, probably because not rubbed with oil varnish, 7388, 7389——The removal of the gallery to Kensington would be exceedingly injurious and imprudent, more especially as regards the working classes, 7390-7392——Reference to a meeting, about the beginning of 1853, at the Royal Institute of British Architects, at which it was proved that the gallery could be readily enlarged, and additional ground obtained, 7391. 7393-7397——Positive dislike expressed by the working classes in different parts of the metropolis to the removal of the gallery, 7391, 7392.

Suggested works most suitable for exhibition in the gallery; many small and inferior pictures now there might be removed with advantage, 7398, 7399. 7417-7426. 7431——Pictures in foreign countries may, as a general rule, be readily acquired without sending persons to look after them, 7400-7404——Objections to large collections of different departments of art, such as sculpture and painting, &c. in the same building, 7405-7416——Museums of antiquity judiciously selected, are calculated to afford much information, 7427-7429——Possibility of the partial prevention of smoke throughout the metropolis adverted to, 7430——The effects of damp, and the effluvia from open drains, &c. in the outskirts are much more dangerous to pictures than the smoke of London itself, *ib.*——Expediency of not admitting into the management of the gallery any person who may have a divided allegiance, or may from any cause be adverse to the interests of the establishment, *ib.*

Ford, Richard. (Analysis of his Evidence.)—Author of several works in which the Spanish art of painting is commented on; has devoted more than forty years to a consideration of the art generally, 3847—— Is the possessor of a collection of works of almost all the ancient masters, 3848-3850——Avoids cleaning as much as possible in consequence of the great danger arising therefrom, 3851. 3858-3860——Processes adopted by witness when cleaning is indispensable; use of friction, and employment of a penknife to remove the little deposits of dirt on the granulated surface, 3852-3857——Precautions advisable to be taken in the future cleaning of pictures in the gallery, 3861-3869. 3908-3916——Objection to the use of spirits of wine in cleaning, 3870-3874——Depreciation of tone, and want of harmony apparent in several of the pictures in the gallery cleaned in 1846 and 1852; 3875-3890. 3921-3934.

Peculiar tendency of the pictures in the gallery to become dirty; the varnish and the effluvia of the atmosphere, &c. may combine to produce this result, 3892-3898——Expediency in cleaning of leaving a slight coat of varnish over the surface of the picture, 3899-3902——Superintendence exercised by witness on occasions of his pictures being entrusted to others for cleaning and re-lining; combination of opinions before the process were performed, 3903-3916——Time and discoloration of the varnish will not restore the harmony that has been abstracted by cleaning, 3919, 3920——Possibility of the Queen of Sheba, which looks poor and unsatisfactory since the cleaning, being brought back to its former state of perfection, by the clever processes of the picture restorers at Rome, &c., 3927-3945.

Report, 1852-53—*continued.*

Ford, Richard. (Analysis of his Evidence)—*continued.*

[Second Examination.]—Objection to the present system of management of the gallery, as involving want of power, and of defined responsibility in the heads of the institution, 7887-7889——Suggestion that in lieu of the trustees one chief director or president be appointed, in whom very extensive powers, and the sole responsibility should be vested, 7890-7939. 7989-7995. 8050-8056. 8060, 8061——His position should be considered a post of honour, and he should be an amateur rather than an artist, 7890, 7891——He should be responsible to Parliament through the Home Secretary, and should report annually with respect to the supply of funds, &c., 7892-7896. 7906. 8023-8025——His salary should be from 1,000*l.* to 1,500*l.* a year, 7897.

Power to be vested in him with respect to purchases; he should have control over a sum placed at his disposal by Parliament, but in special cases requiring a large expenditure, he should consult the Home Secretary, 7899. 7904-7931. 8017-8026. 8050-8056. 8062-8066——Probability of but very few mistakes occurring in the purchases made by the director; he might, if he found it advisable, consult competent persons as to the expediency of any purchase, 7900. 7907-7917. 7990, 7991. 8050-8054——Recommended appointment of a secretary, whose duties should be to conduct the correspondence, and to carry out the dictates of the director, 7901-7903——Reference to the occurrence of mistakes under the management of the British Museum, in neglecting to purchase certain valuable prints about five years ago, 7919-7924——In case all the departments of art are combined, the proposed management by one director would require modification, 7932-7936. 7992-7995.

Prints and drawings should alone be combined in a collection with the national paintings, 7933. 7937, 7938——Approval of the introduction of copies of celebrated works into the gallery, 7940-7942——Evidence in support of the proposed removal of the gallery; advantage of obtaining, if possible, a site in Hyde Park, near the boundary between the park and Kensington Gardens, 7943-7985. 8047-8049——Objection to the centrality of the present site, as inducing persons to enter the gallery for shelter from rain, and as involving the attendance of children and noisy crowds, 7944-7948. 7964-7968——This objection might be obviated if admission were granted by ticket, 7945-7969. 8042-8047.

The proposed site at Kensington seems to be sloping, low, and full of drains, 7950. 7970——Objection to the public being admitted on wet days, as bringing in mud and dirt, which on becoming dust, injure the pictures, 7958, 7959. 7963, 7964——In the present gallery injuries arise from the combined effect of the people's breath, and of the smoke and dust, 7980-7984——The more material branches of geology and other sciences should not be included in the same collection as sculpture and painting, 7986-7988.

The formation of such a collection of paintings as England should possess would now require a period of ten or fifteen years, 7999, 8000——Several opportunities have however been recently lost for making valuable additions to the gallery, 8001-8004——Reference to the activity of Dr. Waagen in acquiring valuable works for the Berlin Institution, 8005-8009——Opinion that the House of Commons generally, and the mass of the public are alike favourable to liberal expenditure in the cause of the fine arts, 8010-8012. 8027-8041. 8062-8066——The public should be admitted to the gallery on Sundays, as enjoying thereby a rational, innocent, and instructive amusement, 8013-8016.

With respect to picture cleaning, it is desirable that the director proposed by witness should understand something of it, but in consequence of the present inquiry, the national paintings are not at all likely to be over-cleaned again, 8067-8072——Throughout Europe, and more especially in Spain, the process of cleaning has been very injurious, and has been carried to a greater extreme than in this country, 8073-8075.

Ford, Mr. Letter from Mr. R. Ford to Colonel Mure, M P., Chairman, dated 24 May 1853, on Pacheco and Andrea del Sarto, *App.* 767.

Foreign Galleries, &c. The cleaning of pictures in foreign galleries is entrusted entirely to the discretion of the operator, *Farrer* 1356-1361——Processes employed in cleaning in some of the foreign galleries, *ib.* 1481-1495——The foreign galleries are very badly managed with respect to cleaning, *Nieuwenhuys* 1693-1695. 1732, 1733——Belief that cleaning is not better understood abroad than in England, and that pictures in foreign galleries have been much injured by the operation, *Moore* 2519-2527. 2561-2564——Definition of the mode of cleaning, or rather of repairing, adopted in the galleries of Florence, Venice, &c., *Stevens* 4061-4071——The varnish, or rather the over-glazing, is never attempted to be removed, *ib.* 4066-4071——Opinion that the operation of cleaning is less carefully conducted abroad than in this country, *Cheney* 4287——Comparison of the treatment of the pictures in the National Gallery with the galleries of France, Italy, or Dresden, *Lord Monteagle* 5114, 5115.

Answers to queries on the galleries and museums of fine arts in different countries, *App.* 753 *et seq.*——Réponse aux questions addressées par le president du comité de la maison des communes, pour l'établissement d'une galerie nationale de beaux arts, à M. de Klenze,

Report, 1852-53—*continued*.

Foreign Galleries, &c.—continued.

M. de Klenze, intendant des bâtimens de la Couronne et conseiller privé actuel de S. M. le Roi de Bavière, *ib.* 758——Extract from a letter addressed by the Baron de Klenze to Colonel Mure, M.P., Chairman, 3 August 1853, *ib.* 767.

Foreign Quarterly Review. Witness was author of an article, published in 1845, incidentally referring to the gallery, *Dennistoun* 5747, 5748.

Formation of the Gallery. How far a project for a National Gallery was entertained prior to the transaction with regard to Mr. Angerstein's Collection, *Lord Aberdeen* 5331.

Former Cleanings. See *Previous Cleanings.*

Foundling Hospital. Number of pictures in the National Gallery belonging to the Foundling Hospital, *App.* 735.

Fradelle, Henry. (Analysis of his Evidence.)—Professional artist; has had some experience in picture cleaning, 2577-2590——Objects to cleaning, unless pictures are in a very dirty state, 2591-2594——Danger of removing the coat of varnish immediately over the surface, 2595-2597. 2601-2603——It cannot be safely asserted that any injuries observable in the pictures cleaned in 1852 have arisen from that cleaning; there may have been repairs and damages before the last operation, but not distinguishable through the accumulation of dirt and varnish over them, 2598, 2599. 2618-2621. 2667-2681——Recommendation of a mixture, in equal parts of turpentine and spirits of wine, for removing the varnish, &c.; spirits of wine alone are dangerous to the original paint, 2600-2602. 2693-2695——Varnish should never be removed by means of friction, 2604, 2605——Definition of the process of glazing, as used by the old masters; toning, or over-glaze, was not employed, 2606-2612.

The nine pictures cleaned in 1852 looked better before the operation, which they did not require at all, 2613-2616——The Queen of Sheba has suffered much in appearance, and seems to have been over-cleaned, 2617. 2658-2689. 2696-2698——In cleaning, an experiment should be first made in the corner of the picture, to ascertain the hardness and nature of the varnish to be removed, 2622——A picture should never be entrusted to the discretion of one cleaner; the necessity and the mode of cleaning should be decided by a commission of artists constituted for the purpose, 2623, 2624.

Explanation relative to the system of cleaning at the Louvre; there are three cleaners constantly employed, who also execute the repairs; how far any control may be exercised over them by the director; complaints have been made against the performance of the process, as some damage has been done thereby, 2625-2657——With respect to the Queen of Sheba, its commercial value has been considerably diminished by the cleaning, 2688, 2689——Insufficiency of the time devoted to the cleaning in 1852; 2690-2692——The outer coat of varnish was entirely removed from several of the pictures, 2696-2698.

[Second Examination.]—A pure and undamaged picture might, after the removal of the dirt and varnish upon it, look less pleasing than it did previously, 2699, 2700——The Cuyp in the gallery has been improved in appearance by the cleaning some years ago, 2701, 2702——In the eyes of a real connoisseur, a first-rate picture, though damaged, is more valuable in its damaged state than if it were restored, 2703-2715——Practice of Rubens to paint his works on white grounds, 2716-2720. 2722, 2723——Further opinion that damages rendered visible after cleaning cannot be safely attributed to such cleaning, 2724.

Frames of the Pictures. The frames have been dusted only once during the last three or four weeks; opinion that the dust should be removed from them daily, *Thwaites* 358-367——The frames should be cleaned once a week, *Seguier* 935-944.

See also *Dust.*

Framing of Prints and Drawings. Greater safety of the prints at the British Museum in frames than in portfolios, though no material injury has resulted from the use of the latter, *Carpenter* 9127-9129. 9149. 9168——Expediency of some of the drawings being placed in frames and rendered more available to the students, *ib.* 9138-9142.

France. Answers to queries on the national collections and museums of fine arts in France, *App.* 753 *et seq.*

See also *Foreign Galleries. French School of Painting. Louvre, The.*

Francia. Condition of the Francia in regard to blistering; mitigation of the evil by Mr. Seguier, by covering the picture with glass; the blistering is not owing to the use of the gallery varnish, *Russell* 4921-4923. 4955——Witness is not aware that the Francias in the gallery might have been obtained for a sum much less than that eventually given, *Sir C. Eastlake* 6161.

Report, 1852-53—*continued.*

Freeth, Major-General James. (Analysis of his Evidence.)—Quartermaster-general, 8219——Attends before the Committee in order to give the opinion of the General Commanding-in-Chief as to the possibility of removing the barracks and barrack-yard behind the National Gallery, 8219*——The opinion of Lord Hardinge is decidedly adverse to such removal; grounds for this opinion; no portion of the parade ground can be given up, 8220-8242.

Letter from Quartermaster-general Freeth to Colonel Mure, M.P., Chairman, dated 7 July 1853, detailing the reasons why the barrack and yard at the back of the National Gallery cannot be given up for the purposes of a new gallery, *App.* 829.

French School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 817 *et seq.*

Friction. Manner in which friction is applied to the removal of varnish from the surface of pictures; in what the dangers and advantages of this process consist, *Rep.* vi, vii——Conflicting evidence as to the resort, by Mr. Seguier, to the process of friction or dry rubbing, *ib.* x.

Danger of removing the varnish from pictures by means of friction, *Uwins* 256-262; *Moore* 2052-2055; *Laurence* 3550-3552——Any change in the colour of the dust removed by friction denotes that the repairs are reached, but not the colours of the master, which are much harder, *Seguier* 534-542——The use of friction, rather than spirits of wine, is the best means of preserving a thin coat of varnish over the picture, *Nieuwenhuys* 1610-1614——Oil varnish cannot be removed by friction, *Bentley* 1832-1844——The use of friction for the removal of any kind of varnish is objectionable, *ib.* 1936, 1937. 1986-1991; *Fradelle* 2604, 2605.

There is great danger in using friction near the original surface of canvas pictures, *Moore* 2497——Although Mr. Seguier chiefly used friction in cleaning the nine pictures, witness did not see him apply that process, and believed that he employed spirits of wine, *Uwins* 2730-2748——Cleaning can be effected most safely by carefully rubbing off the old varnish, *Sir T. Sebright* 3452-3457——Process adopted by witness when cleaning is indispensable; use of friction, and employment of a penknife to remove the little deposits of dirt on the granulated surface, *Ford* 3852-3857.

See also *Cleaning,* II. *Guercino,* 2. *Mastic Varnish,* 1. *Steel Instruments.*

Funds. The National Gallery has never possessed any funds for the purchase of pictures, *Lord Aberdeen* 5294—— Impolicy of placing a fixed sum at the disposal of the managing body for the purchase of pictures, *ib.* 5296-5299——The objection to a sum of money being placed at the disposal of the trustees is, that it would be expended too easily and hastily, *ib.* 5321-5324.

Witness would prevent the evil of opportunities of purchase being lost, by giving the head of the gallery, in his suggested constitution, an open credit, to be used under conditions restrictive of abuse, *Lord Overstone* 5423. 5427, 5428. 5435——Sum witness would propose to be annually granted for purchasing pictures; that named by Dr. Waagen, in the "Art Journal" is too large; the trustees should have the control of balances, and be able to anticipate grants, *Dennistoun* 5801-5805——The trustees should have money at their disposal, as the time lost in getting the sanction of Government is frequently a fatal impediment to a purchase, *Sir C. Eastlake* 6067. 6072.

Whilst witness was keeper, many opportunities of making good purchases were lost, from the inability of the trustees to close at once, *Sir C. Eastlake* 6193-6197——The only remedy for this evil is to put a sum of money at the disposal of the trustees for opportune purposes; in the case of large collections, Parliament should be applied to, *ib.* 6198-6201. 6592-6600——Ten thousand pounds is the sum witness recommends to be always in the hands of the director for the purchase of pictures; not more than one-third, on the average, would be expended annually; but this would be exclusive of demands for larger sums from time to time, *ib.* 6294-6307. 6592-6600.

Galleries and Museums of Foreign Countries. Answers to queries on the galleries and museums of fine arts in different countries, *App.* 753 *et seq.*

GALLERY VARNISH:

1. *Composition of this Varnish; how far injurious in its Effects.*
2. *Extent to which used in the National Gallery.*
3. *Injuries resulting from its application; Objections to its use.*

1. *Composition of this Varnish; how far injurious in its Effects:*

Composition of this varnish; effects of the mixture; conflicting evidence on this point; its final abandonment by Mr. Seguier, *Rep.* xii——Its composition consists of certain portions

Report, 1852–53—*continued.*

GALLERY VARNISH—continued.

1. *Composition of this Varnish, &c.*—continued.

portions of mastic varnish and of light drying oil, mixed in a peculiar way, to which some turpentine is subsequently added; the oil is boiled before admixture, *Bentley* 1945–1951 ——The composition of the gallery varnish is a small portion of oil, boiled with mastic; witness procures it somewhere in Long Acre, and has never analysed it, *Seguier* 2915–2917. 2952–2958.

Solvents, carefully applied, will remove it without injury, *Bentley* 1832–1846. 1895–1899; *Seguier* 3211-3215. 3228——Objection to this varnish on the ground of its being very difficult of removal, and because it darkens the pictures and gives an excuse for cleaning; it is not otherwise injurious, *Coningham* 3052–3058——The gallery varnish is objectionable, as having a thin body and drying too slowly; the admixture of oil with the mastic varnish is not however injurious, *Lawrence* 3558–3563——Its tendency to darken is in consequence of the effect of ammoniacal gas, &c. on the mixture of oil with mastic, *Dyce* 3760–3774——Its dirty and discolouring effect on the pictures is attributable mainly to the bad light and air of the gallery, *Dyce* 3761–3774——Doubt whether the gallery varnish has had much to do with the discoloration on pictures, *Sir C. Eastlake* 4689——No opinion can be formed of the value of the two varnishes, the pure mastic and the gallery varnish, without experiment; surprising that no information on these points has been obtained, *Faraday* 5541–5548.

2. *Extent to which used in the National Gallery:*

Belief that the same varnish has always been used in the gallery, *Seguier* 2918–2926 —— All the pictures cleaned in 1852, with the exception perhaps of the Annunciation, had been formerly covered with the gallery varnish, *ib.* 2933–2944——Mention of several pictures as most probably having been coated with this varnish, *Dennistoun* 5858, 5859 ——Statement as to the use of the gallery varnish on the pictures alluded to by Mr. Dennistoun, *Thwaites* 5860–5871.

3. *Injuries resulting from its Application; Objections to its use:*

Injurious effect of the mixed varnish used in the gallery, and which had to be removed from each of the nine pictures cleaned in 1852; with proper care and time it can be removed without any damage, *Bentley* 1764–1781. 1808–1846. 1928–1933. 1945–1951. 1981–1983——Tendency of the varnish used in the National Gallery to become dark, *Bentley* 1928–1930; *Dennistoun* 3400; *Sir T. Sebright* 3460–3463; *Munro* 3975-3978 ——The difficulty of removing the varnish without injury should have prevented any attempt to disturb it, *Moore* 2041–2044——An accumulation of dirt and grease had softened into the oil which had been rubbed over the varnish; this dirt would probably not have been so great if simple mastic varnish only had been used, *Seguier* 2935, 2936. 2946–2948——The pictures cleaned in 1846, when the gallery varnish was used, will in time require re-cleaning, as dirt will certainly accumulate upon them, *ib.* 3033, 3034.

Objections to the use of oil in the varnish; influence exercised by witness with Sir C. Eastlake in inducing Mr. Seguier to forego its use, believing that such a point was better left to the discretion of the cleaner; witness never brought the matter before the trustees, *Russell* 4867–4881——The gallery varnish, and not atmospheric influence, has caused the dirty appearance of pictures in the National Gallery, *Dennistoun* 5856–5859. 5872–5874——The discoloration attributed to smoke is mainly owing to the use of the varnish, *Hurlstone* 7167–7173.

Genoese School of Painting. Classified list of the masters of this school, with names of their principal followers, from its commencement to Giovanni Battista, *App.* 806——From Giovanni Battista, *ib.* 807.

George's, St., Barracks. The opinion of Lord Hardinge is decidedly adverse to the removal of the barrack and barrack yard behind the National Gallery; grounds for this opinion; no portion of the parade ground can be given up, *Freeth* 8220–8242—— Without the barracks no suitable building can be erected on the present site, even for the exhibition of pictures only, *Pennethorne* 8827, 8828——The barracks and the barrack yard would be required if sculptures are to be included in the projected collection, *Fergusson* 8399. 8402. 8533, 8534——Letter from Quartermaster-general Freeth to Colonel Mure, M.P., Chairman, dated 7 July 1853, stating in detail the reasons why the barracks, &c. cannot be given up for the purposes of a new gallery, *App.* 829.

German Schools of Painting. Classified list of the masters of the several German schools, with names of their principal followers, *App.* 807 *et seq.*

Ghirlandajo Domenico. Circumstance of a picture by Domenico Ghirlandajo, but attributed to Michael Angelo, being refused, *Sir C. Eastlake* 6178, 6179.

Report, 1852–53—*continued.*

Gifts. Number and designation of the pictures offered for sale, or as gifts, since 1847, which, while otherwise eligible, have been declined by the trustees from want of room for their accommodation, *App.* 750——List of pictures purchased or accepted, as gift or bequest, by the trustees, since the lowest date specified in the catalogue of the collection appended to the Report of the Committee on National Gallery, in the year 1850, with the prices paid for the purchased pictures, *ib.*

See also *Bequests to the Gallery. Donations to the Gallery. Onslow, Lord.*

Gilkes, Edward. Circumstance of the trustees having refused an application by Mr. Gilkes for leave to copy on wood some of the pictures in the gallery, for the purpose of engraving, *Hurlstone* 6655, 6656. 6660, 6661——Such refusal attributed to the novelty of the application, *Russell* 8176.

Giorgione. History of a picture just purchased at Christie's, which is considered a Giorgione, and was bought for 500 guineas, *Sir C. Eastlake* 7028–7032——Witness takes the responsibility of the purchase on himself, as having been the chief mover in the matter; opinion of Signor Cavalcaselle as to its being an original work, *ib.* 7028–7037——Infringement by this transaction of an order by the Treasury (made after the Holbein purchase), that no picture should be bought without the opinion of two properly qualified valuators being taken as to its merit; remarks in justification of such infringement, *ib.* 7038–7052——The Giorgione recently purchased is a very valuable acquisition, *Wellesley* 9554–9556.

Condemnation of the picture ascribed to Giorgione on the ground of its being in a most dilapidated state, and quite unavailable for study; former opinion of witness that this work was an original one, though he now attributes it rather to Bellini; similarity of the styles of these painters, *Moore* 9762–9804.——*See* also *Woodburn Collection.*

GLASS:

1. *Steps taken with a view of Protecting the Pictures in the Gallery by means of Glass.*
2. *Advisability of such Protection being adopted.*
3. *Objections thereto.*
4. *Recommendation by the Committee.*

1. *Steps taken with a view of Protecting the Pictures in the Gallery by means of Glass:*

Allusion to the report as to the protection of the pictures by glass, *Russell* 4826 (*p.* 304)——Steps taken for the protection of the pictures, by placing certain of them in glass cases; inquiries instituted with the view to ascertaining the best description of glass to use, *ib.* 4890, 4891. 4893——There are no means of testing the question of the influence of glass on varnish, with which oil has been mixed, *ib.* 4956, 4957.

2. *Advisability of such Protection being adopted:*

Expediency of covering the pictures with glass, if it could be done without depreciating their appearance, *Munro* 4033; *Dyce* 7516–7525——No chemical harm could result from enclosing pictures in glass; they need not be hermetically sealed; witness would not expect the surface of the picture to turn black, *Faraday* 5528–5540——Covering pictures with glass is the most effectual mode of preserving them; inconveniences attending its use, *Sir C. Eastlake* 6431–6434. 6637–6454——Reference to a paragraph in a letter from Mr. George Richmond to the Chairman, advocating the putting the whole collection under glass, *ib.* 6437 *et seq.*——Pictures, if kept under glass, never require varnishing, *ib.* 6617, 6618——Protection to be afforded against dirt and exhalations, by covering the pictures with glass, *Hurlstone* 7121.

3. *Objections thereto:*

Inexpediency of covering the pictures with glass unless it be essential to their preservation, *Russell* 8193–8195——Objection to the pictures being covered with glass, as interfering with the convenience of the students, *Hayes* 9235–9241——Inconvenience to the students of the pictures being covered with glass; it might however be removed during the copying, *Plass* 9261–9265.

4. *Recommendation by the Committee:*

Considerable difference of opinion on the question as to the expediency of covering the pictures with glass, *Rep.* xiv——The returns procured from abroad show that the directors of most of the foreign galleries are unfavourable to glazing, *ib.*——In the Dresden Gallery alone glass has been extensively, and, in the opinion of the directors, beneficially used, *ib.*——If the pictures are to remain in their present situation, it is desirable to afford them this protection, *ib.*——*See* also *Elgin Marbles.*

GLAZINGS:

1. *Explanation of the Process; its susceptibility to Injury by Cleaning.*
2. *How far it was used by the Ancient Masters.*
3. *Proofs of Glazings having been extensively used.*
4. *Removal by Cleaning of the Glazings from certain Pictures in the Gallery.*

1. *Explanation*

Report, 1852-53—*continued.*

GLAZINGS—continued.

1. *Explanation of the Process; its susceptibility to Injury by Cleaning:*

Susceptibility to injury of the glazings used by the Venetian and other masters, *Brown* 1116-1123; *Farrer* 1269-1277. 1536-1542; *Moore* 2022-2031——Definition of the process of glazing or the use of transparent colours as used by the old masters; toning or over-glaze was not employed, *Moore* 2351-2355. 2511-2514. 2565-2569; *Fradelle* 2613-2616; *Evans* 2302 *et seq.*——Process of glazing adopted by the Venetian and other masters, *Hart* 3239, 3240. 3245. 3275-3283. 3314-3318. 3330. 3334-3343——The colours superimposed over the paint are of a very diaphanous character, and have very little hold of the colour underneath; they are therefore very susceptible of removal by cleaning, *ib.* 3245——Scumbling and glazing are, in effect, similar processes, differing in degree only, *Lawrence* 3569-3576——Definition of the term and meaning of the operation of glazing; the difference between the Italian and Flemish practice exemplified, *Sir C. Eastlake* 4490-4499——Further critical details on the nature of glazing, and the extent to which it may be damaged by cleaning, and the lights of a picture rendered inharmonious, *ib.* 4750-4766.

2. *How far it was used by the Ancient Masters:*

It is very doubtful whether glazings were used at all by the ancient masters, *Uwins* 114-124——Explanation with respect to witness's view of the use of glazing by the old masters; difference of opinion between him and Mr. Moore on this point, *ib.* 2779-2797. 2880-2882. 2886-2893——The existence of "ultimate" or of "graduated" glazing cannot be proved, *ib.* 2781,2782——Belief that glazing was part of the process of the painter, but that neither the Venetian or other masters ever finished off their works with it; they rather finished in their tints of semi-opaque colour, *ib.* 2781-2793. 2880-2882. 2886-2893——The Italian terms for glazing "velare" and "velatura," as defined in the Dictionary of the Academy of Bologna, relate most probably to the preparation of the canvas, *ib.* 2794-2797.

The work of Armenini does not refer to glazing as having been used by the Venetian masters, *Dyce* 3844, 3845——Quotation from the work of Boschini, showing that glazing by the Venetian masters referred more to the substantial of the picture in transparent or opaque colours, than to over-glazing over the entire surface of the work, *ib.* 4237-4244.

3. *Proofs of Glazings having been extensively used:*

The process of glazing or the use of transparent colours exists in all the works of the ancient masters, *Farrer* 1435-1439; *Nieuwenhuys* 1687-1692. 1725, 1726; *Bentley* 1997-2004——Deficient knowledge of the present keeper on the subject of glazing, *Moore* 2445——Quotations from old Italian writers, showing that "velatura" or glazing was used in the paintings of the Venetian and other schools, *ib.* 2435-2443. 2511-2514——The term "velatura" is by no means modern; it is mentioned by Boschini, and there can be no doubt that glazing was used by the Venetian and other masters, *Hart* 3314-3318——The term "velatura," as used by the old writers, applies to surface glazing, *ib.* 3334-3342——Quotations from Armenini cited, to prove that glazing was used by the great masters of the Italian schools, and to show the errors made by Mr. Dyce in referring to this writer as implying that such was not the case, *Moore* 10010.

4. *Removal by Cleaning of the Glazings from certain Pictures in the Gallery:*

Every picture cleaned under the superintendence of Sir Charles Eastlake and Mr. Seguier has been injured by the removal of the glazings, *Moore* 2037-2040——In what the cleaning of a picture actually consists; whether the process is to be deemed to extend to the removal of glazing, as well as of the varnish, considered; special reference to the Velasquez, and the Peace and War, by Rubens, now in the gallery, *Sir C. Eastlake* 4467-4488. 4500-4510. 4517-4523——Uncertainty of witness as to the removal of the glazings from any of the pictures in the gallery, by the cleaning in 1852, *Wellesley* 9450-9464.

Gore House Estate. See *Kensington Gore.*

Gore House Exhibition. Numbers who have visited the exhibition since its opening; reduction of the price of admission adverted to, *Bowring* 8631-8637.

Grand Canal, The. See *Canaletti's Pictures.*

Graves, Harry, & Co. Comments on the permission granted by the trustees to Messrs. Graves & Co., to make drawings of certain pictures in the Vernon Collection, for the purpose of engraving therefrom, *Hurlstone* 6669-6676——Explanation relative to the permission to copy, accorded to Messrs. Graves & Co., *Russell* 8177.

Grey, Hon. Colonel. Letter from Colonel Grey to the Chairman, dated 25 April 1853, forwarding, by command of H. R. H. Prince Albert, a plan for a collection of paintings, illustrative of the history of the art, *App.* 791.

Report, 1852-53—*continued.*

GUERCINO:

1. *Injuries inflicted on the Picture of the Dead Christ by the recent Cleaning.*
2. *Denial that the Cleaning was injurious.*

1 *Injuries inflicted on the Picture of the Dead Christ by the recent Cleaning:*

The Dead Christ, by Guercino, was in a very fine state before it was cleaned; but is now greatly depreciated by the removal of the upper surface, *Moore* 2208-2210——Opinion of Dr. Waagen in 1838, as to the fine condition of this picture at that time, *Moore* 2452——Belief that some of the colour has been removed, *Hart* 3288——It has been too much rubbed, and having lost its glazings, is quite out of harmony, *Cheney* 4309.

2. *Denial that the Cleaning was injurious:*

Approval of the cleaning of the Guercino, *Uwins* 58. 69——Although the whole of the varnish may have been removed in the cleaning, the surface was untouched; there are no glazings in this master's works, *Seguier* 620-623——The picture might have been better cleaned, but the original colours have not not been touched, *Bolton* 1051——The varnish was removed from the Guercino by friction, but no injury could have resulted from the careful manner in which the operation was performed, *Seguier* 2907-2909——The injuries imputed to the Guercino are not visible to witness, *Uwins* 3201——Belief that the master's touch has not been removed, *Dennistoun* 3381.

GUIDO:

I. *Inferior Rank as a Painter assigned to this Master.*
II. *His Works in the Gallery; their Value and Cleaning commented on:*
1. Susannah and the Elders.
2. Lot and his Daughters.
3. The Infant Christ and St. John.

I. *Inferior Rank as a Painter assigned to this Master:*

Designation of Guido as a very inferior painter, whose works are not worthy to be held up as a model in any respect, *Moore* 9810-9815.

II. *His Works in the Gallery; their Value and Cleaning commented on:*

1. Susannah and the Elders:

Injuries inflicted by the cleaning of 1844 on the picture of Susannah and the Elders, *Moore* 2461-2467. 2475——Reparation to which this picture had been subjected; effort made by witness to conceal the joining of the canvas, *Sir C. Eastlake* 4545——The cleaning of the Susannah was undertaken in consequence of a private correspondence between witness and Sir R. Peel, as First Lord of the Treasury; anomaly herein, *ib.* 4608, 4609. 4613-4616. 4635-4638. 4650-4661——The Susannah and the Elders was bought as a companion to Lot and his Daughters, *ib.* 6083-6087——The purchase was a very great mistake, *Coningham* 6968-6970——The Susannah and the Elders is a very objectionable work, and from its inferior style can only tend to depress rather than to elevate art, *Moore* 9806-9815——Remarks of Mr. Buchanan on the cleaning of the Susannah and the Elders, *App.* 769.

2. Lot and his Daughters:

Injuries inflicted by the cleaning of 1844, on the picture of Lot and his Daughters, *Moore* 2461-2467. 2475——The picture of Lot and his Daughters should not have been purchased at any price, *ib.* 9806. 9816——Remarks of Mr. Buchanan on the cleaning of the Lot and his Daughters, *App.* 769.

3. The Infant Christ and St. John:

The picture of the Infant Christ and St. John is a disgrace to the gallery, and is not an original work, *Coningham* 6970, 6971——The Infant Christ and St. John has not one redeeming virtue, and should be turned out of the gallery, *Moore* 9806, 9807. 9813-9815.

H.

Haarlem. Reply to questions, issued by the Committee, from the management of the Pavilion "Welgelegen," near Haarlem, *App.* 839.

Hague, The. Replies of the director of the Royal Gallery of Pictures at the Hague, to questions issued by the Committee, *App.* 835.

Hamilton, William Richard. (Analysis of his Evidence.)—Has been a trustee of the British Museum since 1838; 8883——Has been especially familiar with the department of antiquities, 8884——Objects to the suggestion that the trustees of the Museum be replaced by one director, who should decide all questions now referred to them, and who should be responsible for purchases, &c., 8885-8888. 8970-8985——Approval of the present system of management by trustees, and heads of departments under them, as the best

Report, 1852–53—*continued.*

Hamilton, William Henry. (Analysis of his Evidence)—*continued.*

best that can be devised, 8889–8975. 8979–8987——There is no deficiency of space at the Museum in the department of antiquities, 8890, 8891——With respect to the preservation of the antiquities, the site is only objectionable as regards the Elgin Marbles; injuries inflicted on them by the London smoke and soot, &c.; process of washing them with water adverted to, 8892–8911. 8917–8919. 8924–8927——Recommendation that the Elgin Marbles be removed to Hampton Court, for the sake of preservation, 8892, 8893. 8911–8917——No material discoloration or injury has arisen as yet from the dust occasioned by the additional buildings now in progress, 8920–8923——How far the room in which the Elgin Marbles are, may be capable of improvement as regards light, &c., 8928.

Objections to a combination of the departments of sculpture and painting, for the purpose of students in art; the extensive objects comprised in such a collection would create distraction in a young mind, 8929–8945——Inexpediency of any separation of the sculptures and antiquities, 8946–8948——Possibility of covering the Elgin Marbles with glass adverted to, 8949–8952——Chronological arrangement, to a certain extent, of the various marbles and sculptures in the museum, 8953–8955——Definition of the control exercised by the trustees over the heads of departments with respect to purchases, &c.; illustration thereof in the case of Mr. Hawkins, keeper of the antiquities, 8956–8969——Approval generally of the present system of management as regards purchases by the heads of the departments under the control of the trustees, 8958–8987——Discretion vested in Mr. Panizzi, in purchasing for the printed book department, 8985–8987.

Hardinge, Viscount. See *George's, St., Barracks.*

Hart, Solomon Alexander, R.A. (Analysis of his Evidence.)—Is well acquainted with the pictures in the National Gallery, 3231——Copied the Paul Veronese about 25 years ago, when its appearance was very similar to what it now is, 3232–3235——Expediency of avoiding as much as possible the necessity of cleaning; susceptibility of pictures to injury thereby, 3237–3253. 3347——Difficulty of finding persons competent to undertake cleaning, 3237. 3319–3322——Definition of the process of glazing used by the Venetian and other masters, 3239, 3240. 3245. 3275–3283. 3314–3318. 3330. 3334–3343——Any injuries now apparent in the nine pictures cleaned in 1852, may have been occasioned by former cleanings, but concealed under the subsequent accumulation of dirt upon the surface, 3246–3250.

Alterations produced in the general tone and complexion of the Queen of Sheba by the cleaning, which has removed the peculiar qualities of Claude's touch, 3255, 3256. 3260. 3291–3312——Some slight injury has been done to the Paul Veronese by the removal of some of the tints and glazings, 3257–3259——The cleaning has wrought a great change for the worse in the View in Venice, and has destroyed its characteristic architectural traits, 3261–3270. 3302. 3344, 3345——The Grand Canal is not changed so much, but is less subdued and rich in colour than formerly, 3264——Inharmonious and disagreeable appearance of the Plague at Ashdod; witness is not intimate with its former condition, 3271–3275——Crude and unfinished look of the St. Bavon; it seems to have been over-cleaned, 3284–3287.

Opinion that some of the colour has been removed from the small picture by Guercino, 3288——Belief that the Annunciation has escaped injury from cleaning, 3289, 3290. 3331–3333——Process of glazing used by Claude, remarkable for the general hue or tint produced thereby, 3294–3297. 3336–3342——Improbability of time, or any artist, ever restoring what the Queen of Sheba has lost by the cleaning, 3307–3312——The St. Ursula is in a very agreeable state, and should by no means be cleaned, 3313——The Paul Veronese was the only one of the nine pictures that witness would have submitted to the process, 3323–3326——The lining of pictures is a much easier process than the cleaning, 3327–3329——The pictures cleaned in 1846 were not injured thereby, 3346——The Peace and War was not affected by that cleaning, 3348–3350.

[Second Examination.]—The mode of glazing practised by Claude did not consist in mere toning or in the use of varnish, but was rather a process of final painting, termed scumbling, and was not peculiar to him only, 3412.

Hawkins, Edward. (Analysis of his Evidence.)—Keeper of antiquities at the British Museum, 7669——Was appointed in 1826 by the three principal trustees, who have the entire power of appointing all the officers, 7670–7673——There are altogether between 50 and 60 trustees of various classes, 7674–7676——Objects comprised in the department under witness's care; his remuneration is 600*l.* a year, with a residence, 7677–7680——Names and salaries, &c., of the several subordinate officers in the department of antiquities, 7681–7691——Responsibility, directly or indirectly, of all the officers of the Museum to the trustees, 7691–7705. 7815, 7816——Restrictions imposed upon the heads of the departments in making purchases, and opportunities of valuable acquisitions frequently lost thereby, 7706–7711. 7795–7801——Objection to the body of trustees as being too numerous, and tending to encumber the management, 7712, 7713. 7813–7816——It would be much better if there were only one chief director, whose decisions might

Report, 1852-53—*continued.*

Hawkins, Edward. (Analysis of his Evidence)—*continued.*

be immediate, and to whom there should at all times be prompt access; qualifications necessary in this officer, 7714-7720. 7805-7812.

Inconvenience arising from want of space in almost every department of the Museum; schemes proposed for an enlargement of the building, 7721-7736——The effect of the London smoke is very detrimental to the monuments, and the surfaces of the antiquities generally, 7737-7742——The attendance of the public is never so numerous as to cause inconvenience, 7743——In restoring mutilated monuments, &c., no attempt is made to represent the original, 7744, 7745——Approval of the plan for combining the art collections of the British Museum with the pictures in the National Gallery, 7746-7776——No difficulty would arise from the removal of the large monuments to another situation, 7751-7753. 7790-7794——Advantages of the middle of Hyde Park as a site for the projected combined departments of art, 7756-7759. 7766, 7767.

Objection to any one part of witness's department, except the ethnographical collection, being separated from the rest, 7760-7762. 7802-7804——The collection of antiquities and the National Gallery, as forming one department, should be kept quite separate and complete in themselves, 7765——One chief director and two subordinate heads of departments would be the best system of management, 7777, 7778——Mode in which the trustees act in the expenditure of money appropriated to them by estimate; sources whence purchases are made; insufficiency of the present opportunities for the acquisition of antiquities, &c., from Italy and other foreign countries, 7779-7787. 7817-7831——With respect to the cleaning of marbles, &c., on their arrival in the Museum, Sir Richard Westmacott is responsible for the operation to the trustees, 7788, 7789.

Haydon. Successful cleaning of one of Haydon's works, in the possession of witness, by Mr. Dujardin and himself; the processes employed were based upon a knowledge of the vehicle used by Haydon in his paintings, viz., linseed oil, *Sir E. Landseer* 4148-4156. 4172. 4222-4224.

Hayes, Francis Samuel. (Analysis of his Evidence.)—Student at the National Gallery, 9185, 9186——The general feeling of the students is rather against the removal of the gallery to Kensington, 9187-9189——Defects and inconveniences of the present regulations concerning the admission of students to the gallery, 9190-9192. 9206-9217——It would be an improvement if a large room were set apart, in which the students might attend daily, and copy a certain number of pictures, 9190. 9193——Suggestion that the public be admitted during the attendance of students, as is the case daily at the Louvre, 9193, 9194. 9229-9234——Advantages to the student of a combination under one building of sculpture and paintings, 9195, 9196. 9199-9205——Convenience of students being allowed to attend in the British Museum on every day in the week, except Saturday, 9197, 9198——Tests of proficiency required of students before they are admitted to the gallery, 9218-9226——Privilege enjoyed by the students of the Royal Academy in their periods of admission being extended, 9227, 9228——Objection to the pictures being covered with glass, as interfering with the convenience of the students, 9235-9241——Witness copied the Claudes before the recent cleaning; the Queen of Sheba was then in good harmony, and had a very nice tone, 9242-9247.

Heads of Departments. Supposing the projected institution of fine arts to be divided into three main heads of painting, sculpture, and architecture, there should be an officer over each department, *Dyce* 7452.

Historical Arrangement of the Pictures. See *Art. Chronological Arrangement of the Pictures.*

Holbein. Statement relative to the purchase of the alleged Holbein, *Sir C. Eastlake* 6172-6188——Steps taken by the Treasury in the matter, *ib.* 6181-6185——A director, such as witness contemplates for the management of the gallery, would hardly make such a mistake as that made in the recent purchase of the Holbein; opinion with which witness was fortified in regard to that picture, *ib.* 6388-6391——The purchase of the Holbein was a very great mistake, *Coningham* 6961-6964——The money given for the Holbein, purchased through Sir C. Eastlake, was utterly thrown away, *Moore* 9806.

Holland. See *Haarlem. Hague, The. Leyden.*

Holy Family, The. See *Murillo. Piombo, Sebastiano del,* 2.

Hurlstone, Frederick. (Analysis of his Evidence.)—President of the Incorporated Society of British Artists, 6643——Was examined before Mr. Ewart's Committee in 1836; 6644——Was not examined by the Committee of 1850, but sent them a letter, which was published in the Appendix, 6645-6647——Has devoted considerable attention to the National Gallery, with respect to the site of the building, and the general management of the institution, 6648, 6649——The principal defects in the system of management are, that the duties and responsibilities of all the officers connected with the institution are quite indefinite, 6650. 6734, 6735——Remarks as to the right exercised by

Report, 1852-53—*continued.*

Hurlstone, Frederick. (Analysis of his Evidence)—*continued.*

by the trustees of granting or refusing to individuals the privilege of engraving from the pictures, and publishing such engravings as a private speculation, 6650–6688——Opinion that the copyright should either be kept entirely in the hands of the trustees, or else some alteration made in the disposal thereof, 6689.

Objectionable exercise of power by the trustees in granting permission to 20 student of the Royal Academy to have special privileges of painting, &c., in the gallery; peculiar advantages are thus given to a private body to the prejudice of students generally, 6690–6720——Observations on a proposition for affixing to the official catalogue an advertisement of a private speculation; opinion that this should be beneath the dignity of the trustees, 6721–6723——Objection to the president of the Royal Academy being one of the trustees of the National Gallery; grounds for this objection, 6724–6733.

Future management of the gallery considered; suggestions with respect to the appointment and power of the trustees, directors, &c., 6736-6807——The gallery has done much to improve the public taste, and to promote the progress of art, but its effects have been far inferior to what they would have been under a better system of management, 6784–6793.

[Second Examination.]—Evidence generally to the effect that it is very undesirable to remove the gallery from its present site to Kensington, 7053–7205——The centrality of the gallery, and its accessibility to the public from all parts of the metropolis, are strong arguments against its removal to Kensington, where the number of visitors would be greatly reduced, 7058. 7122, 7123. 7136–7154. 7181–7195——The present site is perfectly dry, whereas there is a general impression that the soil at Gore House is damp, 7058. 7195–7205——Opinion that the smoke of London is not of itself injurious to the pictures in the gallery; condition of the works in various private collections adverted to in support of this opinion, 7059–7070. 7110–7121. 7161–7173.

The anxiety of the Royal Academy to obtain possession of the gallery infers that they do not consider smoke injurious even to their newly painted works, and tends to prove the general advantages of the present site, 7062–7069. 7162–7166——Any other influences, besides that of smoke, which are likely to injure the pictures at present would affect them equally elsewhere, 7071——Proper regulations in the gallery by means of an efficient staff of attendants or policemen are quite ample for the purpose of preventing too numerous an attendance of the public, or for the preservation of order and security generally, 7072. 7127–7129——Admission by ticket would prevent the crowding of the gallery, but it is very desirable that the public should attend as numerously as possible, and witness has never experienced any inconvenience from too great an assemblage of persons, 7073. 7093–7100. 7113. 7122–7131——A policeman stationed at the door would be sufficient for the purpose of excluding people not decently dressed, &c., 7074. 7132.

Possibility of ample space being found at the back of the building, or of its being considerably enlarged on its present site, in order to render it sufficient for all future purposes; the necessary ground should be acquired as soon as possible, to prevent its becoming enhanced in price, 7075–7092——Objection to pictures being removed to separate rooms for the purpose of being copied, in order that the public might visit the gallery at the same time; the present management is preferable, 7101–7106. 7158–7160. ——Reference to the great crowds which frequent the Louvre on Sundays and fête days, 7107–7109——Sufficiency of the ventilation in the National Gallery, 7113——The effluvia arising from the visitors is much more likely to be injurious to the pictures than smoke, 7118, 7119——The pictures at Dulwich are not in a better condition than those in the National Gallery, 7120——Protection to be afforded against dirt and exhalations, by covering the pictures with glass, 7121——The present inquiry is attributed by witness to the central position of the gallery, in being the more under the public eye, 7133. 7174–7176.

Reference to the non-exhibition by the Royal Academy of the "diploma" pictures, 7134, 7135——With the protection of glass coverings, the cartoons at Hampton Court would be quite secure in the National Gallery, 7155–7157——Opinion that the discoloration attributed to smoke is mainly owing to the use of the gallery varnish, 7167–7173 ——Witness sees no advantage in removing the gallery out of London, and surrounding it with ornamental grounds, 7177–7180——The Crystal Palace at Sydenham, and the proposed National Collection of Fine Arts at Kensington, are not parallel cases from which to imply that they will each be equally well attended by the public, 7181–7191 ——Objections to the proposed concentration in one institution of the different departments of art; confusion of mind rather than public advantage or convenience is likely to result, 7206–7219.

Hyde Park. Remarks on a proposed site in Hyde Park for a new gallery; objections to which liable, *Rep.* xvii——Advantages of the middle of Hyde Park as a site for the projected combined departments of art, *Hawkins* 7756–7759. 7766, 7767——Evidence in support of the proposed removal of the gallery; advantage of obtaining, if possible, a site in Hyde Park, near the boundary between the Park and Kensington Gardens, *Ford* 7943–7985. 8047–8049——Impractibility of obtaining a site in the centre of Hyde Park,

Report, 1852-53—*continued.*

Hyde Park—continued.

adverted to, *Bowring* 8603——If a site for the National Gallery could be procured in Hyde Park, the object of the Commissioners in purchasing the Gore House estate would still be partially attained, as the gallery would be contiguous to the other institutions that might be erected on the purchased ground, *Sir W. Cubitt* 10306-10309 —— The centre of Hyde Park is the finest site for architectural effect on account of its commanding position, *Pennethorne* 10364, 10365——Some situation in Hyde Park is on the whole the most desirable that can be selected, *ib.* 10401. 10407-10410.

Isinglass. Any injuries arising from smoke might be easily prevented by the application of isinglass inside the varnish; the most dangerous varnishes (including copal varnish) can be removed without causing damage, provided the isinglass be first laid on, *Foggo* 7361-7381.

Italian Schools of Painting. The early Italian school has been overlooked in the acquisition of pictures for the gallery, *Christie* 5732——The rage is at present for very early works of art; a gallery chiefly composed of early Italian painters would not alone be adapted to raise the public taste, *Sir C. Eastlake* 6466-6469. 6480——Belief that the taste for early Italian, &c. pictures has much of fashion in it and will not endure, *ib.* 6470-6475——Classified list of the masters of the different Italian schools, with names of their principal followers, *App.* 793 *et seq.*——*See* also *Peel, Sir Robert, The late.*

K.

KEEPER OF THE GALLERY:

1. *Duties of the Keeper; relation in which he stood to the Trustees.*
2. *His Authority and Powers in respect to Picture-cleaning.*
3. *Special reference herein to Sir C. Eastlake, the former Keeper.*
4. *And to Mr. Uwins, the present Keeper.*
5. *Suggestions with regard to the future Regulation of the Office.*

1. *Duties of the Keeper; relation in which he stood to the Trustees:*

Duties of the keeper as defined by the Treasury minute of 1824, appointing Mr. Seguier to the office, *Rep.* iii——Relation in which the keeper stood to the trustees and to the Treasury; extent to which he was consulted by them, *Russell* 4792-4795; *Monteagle* 4961. 4978 *et seq.*——Position, responsibility and duties of the keeper, *Lord Overstone* 5430, 5431——The keeper of the gallery rather than the trustees, is responsible for the purchases made since 1843, as full authority and discretion were vested in him in every way, *Moore* 9956.

2. *His Authority and Powers in respect to Picture-cleaning:*

The authority to clean formerly emanated from the keeper, *Seguier* 434-438——The keeper (Mr. Uwins) was generally present during the operation of cleaning the nine pictures, in order to see that it was performed satisfactorily *ib.* 446, 447——In 1847 the instructions to clean were given by Mr. Eastlake, who personally superintended the process, *ib.* 756-758.

Though witness is responsible generally to the trustees and to the public for the protection of the pictures, his only responsibility on the subject of cleaning is to superintend the

Report, 1852-53—*continued.*

KEEPER OF THE GALLERY—continued.

2. *His Authority and Powers in respect to Picture-cleaning*—continued.

the process, *Uwins* 2764. 2862, 2863. 2877-2879——Witness is not aware that this officer had any instructions to observe the pictures and recommend any for cleaning, *Russell* 4796-4798——Relations existing between the trustees and the keeper in reference to the question of picture-cleaning, theoretically as well as practically, *Lord Monteagle* 5042-5044——Practice during the time Sir C. Eastlake was keeper, *ib.* 5045-5048——There has been no departure from that practice since Mr. Uwins has been in office, *ib.* 5049.

Explanation of a minute by the trustees in 1844, giving witness unlimited discretionary power as to cleaning pictures in the gallery, *Sir C. Eastlake* 5927-5933——There was no restriction during witness's tenure of office, as to the keeper of the National Gallery directing pictures to be cleaned, *ib.* 5949-5952——Directions were sometimes given to officers by individual trustees, *ib.* 5970, 5971.

3. *Special reference herein to Sir C. Eastlake, the former Keeper:*

Witness had no specific instructions when appointed keeper; the understanding come to with Sir Robert Peel was, that witness should be chiefly consulted respecting the Italian masters, *Sir C. Eastlake* 4392-4398——As keeper witness considered it his duty to make spontaneous suggestions to the trustees; he attended their meetings and was the medium of communication with the inferior officers, *ib.* 4414-4418——Witness gave in his resignation to Lord John Russell without any formal intimation to the trustees; grounds of that resignation, *ib.* 4423-4429.

Nature of the suggestions witness was in the habit of making to the trustees, *Sir C. Eastlake* 4439-4442. 4445——Resolution at page 11 of the return of 1847 adverted to in regard hereto, *ib.* 4443, 4444——Circumstances under which witness entered upon his duties as keeper of the National Gallery, *ib.* 5910-5918——Understanding on witness's acceptance of the keepership, as to his opinion being had with reference to pictures, *ib.* 6005-6009.

4. *And to Mr. Uwins, the present Keeper:*

In former years the trustees confided implicitly in the discretion of the keeper as to the care and treatment of the pictures; of late years, during the keepership of Mr. Uwins, the trustees have exercised a more immediate control, *Rep.* x——Witness produces a Treasury minute of November 1847, appointing witness to the office of keeper, vacant by the resignation of Mr. Eastlake, with a salary of 200 *l.* per annum, *Uwins* 8, 9——On his appointment to the keepership of the gallery, witness consulted Mr. Eastlake on the nature of his duties, but received no special instructions from the trustees on any subject whatsoever, *ib.* 10-20——Witness does not reside in the building, but visits it on an average four days in the week, *ib.* 21-27.

With respect to the cleaning of the pictures, witness is merely instructed to employ Mr. John Seguier, and is personally irresponsible in the matter, nor does he consider it any part of his duty to offer an opinion as to the advisability of cleaning; the subject is generally arranged between Mr. Seguier and the trustees, witness merely attending during the process to see that no mischief is done to the pictures, *Uwins* 29-53. 83-92——Vague nature of witness's instructions on his accession to the office of keeper of the gallery; he cannot now recollect the instructions given him by Sir C. Eastlake, *ib.* 2870-2876——Character of the instructions given by witness to Mr. Uwins on his accession to office, *Sir C. Eastlake* 4419-4422——Not the slightest difference in the mode of the trustees' dealing with Mr. Uwins in questions of picture-cleaning, &c., than was the case with Sir C. Eastlake, *Lord Monteagle* 4978-4986——No written or other instructions were given to Mr. Uwins on his accession to office; his appointment emanated from the Treasury, without the knowledge of the trustees, *ib.* 5105-5107.

5. *Suggestions with regard to the future Regulation of the Office:*

The office of keeper should be abolished, *Rep.* xv——Expediency of the keeper of the gallery being thoroughly conversant with the peculiarities of the old masters, *Moore* 2444——The salary of 200 *l.* a year is not sufficient remuneration for an eminent artist as keeper, *Lord Aberdeen* 5314——It is not necessary that the keeper should reside in the gallery, *ib.* 5315——The appointment and removal of the keeper and other officers should be controlled by the Board of Trustees proposed by witness, *Dennistoun* 5766-5771——Proposed appointment of a keeper of the gallery, who should be an artist, should receive a salary of about 500*l.* a year, and be in frequent attendance, *Russell* 8095——The keeper should be the organ of official communication between the trustees and the Council of Art (suggested by witness) when any purchase was being proposed, *ib.* 8097. 8170, 8171.

See also *Assistant Keeper. Assistant Keeper and Secretary. Cleaning. Eastlake, Sir C. Management of the Gallery. Purchases (National Gallery), 1. 4. Regulations, &c. (National Gallery). Responsibility. Trustees. Uwins, Mr.*

Report, 1852-53—*continued.*

Kensington Barracks. Site for a gallery at this spot suggested by Mr. Pennethorne; its advantages, *Rep.* xvii, xviii——Site formerly contemplated by witness, viz., the small barracks adjoining the corner of Kensington Gardens; plans of the locality, &c., produced, *Pennethorne* 8839-8844. 10311-10316——It would be an improvement on this plan if the building were removed further into Kensington Gardens, towards the basin, *ib.* 10316. 10321-10325——The length of the building proposed by witness would be about 625 feet, *Pennethorne,* 10317——If the building can be kept well back from the road, its advantages as a site, independently of expense or public convenience, are still preferable to a suggested site opposite the Gore House estate, *ib.* 10356-10363——Contemplated elevation by artificial means of the site suggested, at the end of Rotten Row, *ib.* 10324. 10329. 10348-10352. 10355——The existence of a row of private houses near the turnpike need not be prejudicial to the site, as by means of ornamental grounds their appearance could be concealed from the gallery, *ib.* 10325. 10358.

Kensington Gardens. Particulars as to the sites proposed for a new gallery in Kensington Gardens; objections to which liable, *Rep.* xv. xvii——The position suggested at the extremity of Kensington Gardens is to be preferred, but the acquisition of such a site is attended with difficulties which there are no adequate means of removing, *ib.* xv ——Drawbacks against the site at the end of the broad walk, *Fergusson* 8453, 8454 ——Advantages of a site near the gravel pits, *Pennethorne* 8845-8850——If the site near the gravel pits were decided on, the park gates should necessarily remain open during the night, which would be exceedingly objectionable, *ib.* 10390-10400. 10404, 10405—— Consideration of the suggestion that the site be at a point directly opposite the Kensington Gore estate; objections thereto as being less desirable and involving more expense than that proposed by witness on the site of the Kensington Barracks, *ib.* 10318-10320. 10326-10358.

Kensington Gore:

1. *Circumstances attending the Purchase of this Estate; Extent and Character of the Land acquired; Objects of the Purchase, &c.*
2. *Its Advantages as a Site for a National Gallery.*
3. *Its Disadvantages.*
4. *Projected Communication across Hyde Park.*
5. *Acceptance of the Proposed Site recommended by the Committee.*

1. *Circumstances attending the Purchase of this Estate; Extent and Character of the Land acquired; Objects of the Purchase, &c.:*

The extent of the land purchased at Kensington Gore is 86 acres, *Bowring* 8548, 8549 ——Reference to a map prepared by Mr. Mylne, which completely exhibits the nature of the soil of the ground purchased at Kensington Gore by the Exhibition Commissioners, *ib.* 8556-8566——The purchase of the 86 acres absorbed nearly 300,000 *l.*, which sum was found in equal moieties by the Commissioners of the Great Exhibition and the Government, *Bowring* 8550; *Sir W. Cubitt* 10134, 10135——Balance still remaining, with which it is proposed to buy a further strip of land adjoining, *Bowring* 8551-8553—— Advisability of the purchase in a financial point of view, *Bowring* 8554, 8555; *Sir W. Cubitt* 10236-10240——With the exception of a little strip near the road, the whole estate is on gravelly soil; it can all be drained without the slightest difficulty, *Bowring* 8556-8566——Average breadth of the estate and width at particular places; extent of frontage towards the road, &c., *ib.* 8583-8589.

No proposal or recommendation has been made by the Commissioners with respect to any allocation of the ground for the National Gallery and the arts collection of the British Museum, *Bowring* 8590-8592——Outline of the general objects of the Commissioners in purchasing the Kensington Gore estate, *ib.* 8680 *et seq.*——Existence of a right of way across the estates adverted to; contemplated settlement thereof, *ib.* 8739, 8740——Only 86 acres out of the entire estate of 170 acres have as yet been purchased; recommendation that the remainder be immediately secured by Parliament, *ib.* 8740.

Circumstances attending the joint purchase by the Exhibition Commissioners and the Government, of 86 acres of land at Kensington Gore, in which land they have a joint and equal interest, *Sir W. Cubitt* 10129, 10130. 10133 *et seq.*——A further purchase of 84 acres adjoining was partly contemplated, but means were not at hand, *ib.* 10131, 10132. 10139*-10141. 10161, 10162——The idea of the purchase originated with the Commissioners, the object being to find sufficient ground in a good situation, as a centre of industrial art and science; institutions proposed to be accommodated with sites for buildings, *ib.* 10163-10181——There has been no definite plan or proposal made in regard to the buildings or the character thereof, *ib.* 10181. 10205-10209——It is by no means contemplated to give up the whole of the ground to a National Gallery or any other institution, *ib.* 10215-10217——The gallery as generally understood, would be erected next the Kensington Road, *ib.* 10218-10225.

It is proposed by the Commissioners to purchase a narrow wedge of land, with the houses thereon, now encroaching on the estate, and to pull down the houses; Parliamentary powers will be sought for to enable them to effect this object, *Sir W. Cubitt*

Report, 1852–53—*continued.*

KENSINGTON GORE—continued.

1. *Circumstances attending the Purchase of this Estate, &c.*—continued.

10227-10232. 10243. 10299-10303——Even if the houses adverted to cannot be obtained, the seemly appearance of the projected gallery will not be affected thereby, *Sir W. Cubitt* 10244-10246——The industrial institutions that may be built at Kensington Gore, will alone be under any control of the Commissioners, *ib.* 10276-10279——The purchase of the estate was effected as quietly as possible, 10310.

Copy of the correspondence regarding the conditions on which the lands at Kensington Gore are held by the Commissioners of the Great Exhibition of 1851, *App.* 832.

2. *Its Advantages as a Site for a National Gallery:*

In what the advantages of this site consist, *Rep.* xvii, xviii——A site for the gallery at Kensington might be some advantage in taking the public into a more healthy atmosphere, *Coningham* 7018–7022——The removal of the gallery to Kensington would only diminish the attendance of those whose room would be better than their company, *Ford* 7948. 7965-7968. 7978, 7979——An open space surrounding the building and ornamental grounds adjoining it would be a great advantage, *ib.* 7971–7975. 7996–7998——Elevation of the ground as compared with that of the National Gallery and other buildings, *Bowring* 8567–8582——Advantages of the Kensington Gore estate over any other available site near London, as being more open and likely to be more exempt from smoke and other noxious influences, *ib.* 8596–8616. 8723–8740——Ample space which may be devoted to the National Gallery on the projected site; inexpediency of the whole ground being allocated to the gallery, *ib.* 8725–8733——Denial of certain statements as to the dampness of the site, *ib.* 8732–8738.

Evidence relativet o the ground at Kensington Gore purchased by the Exhibition Commissioners *T. Cubitt* 8743 *et seq.*——This site is already part of London as regards the accumulation of houses around it, *ib.* 8743, 8744. 8752, 8753——Any unoccupied ground in the immediate neighbourhood will very speedily be built over, *T. Cubitt* 8744. 8752; *Sir W. Cubitt* 10182–10187——The vicinity of Hyde Park will tend to render it somewhat airy, and in point of freedom from smoke, &c. it will be a far superior site to that of the National Gallery or of any other locality near London, *T. Cubitt* 8745–8752. 8780–8782——The soil is chiefly of gravel, *T. Cubitt* 8786–8791; *Sir W. Cubitt* 10210–10214. 10280——The ground is capable of being perfectly drained without any serious difficulty, *T. Cubitt* 8783–8785——Suggestion that the ground be formed into a hanging level or uniform slope, *ib.* 8803, 8804.

The site of Gore House, taking all circumstances into consideration, is the most eligible that can be adopted, *Pennethorne* 8850–8852——Suggested plan for a national building on this site; explanation as to the height, frontage, &c., of the proposed edifice; contemplated allocation of the ground, &c., *ib.* 8853–8881——Expediency of removing the National Gallery to Kensington for the sake of available space; injuries at present inflicted on the pictures by the London smoke, *Sir R. Westmacott* 9023–9025. 9028, 9029. 9072, 9073. 9076——The land is sufficiently ample for the purposes of the projected combined departments of art, *Sir W. Cubitt* 10138, 10139——That portion of the purchase proposed to be devoted to the gallery, is exceeding well adapted to the purpose; extent of width and frontage, &c. that may be obtained, *ib.* 10218–10226. 10280–10285. 10289–10297——There would be a space in front completely open, and it would also be almost entirely open at the back, *ib.* 10219–10223.

3. *Its Disadvantages:*

A removal of the gallery to Kensington would be a very great injury to the cause of fine art, and to the diffusion of taste among the people, *Coningham* 6915——No objections apply to Trafalgar-square that do not apply to Kensington; and the dampness of the latter place might make it the more objectionable of the two; the injury arising at present from the atmosphere is inappreciable, *ib.* 6922–6930. 7021, 7022——The proposed site at Kensington seems to be sloping, low, and full of drains, *Ford* 7950. 7970——How far any class of the public might be put to inconvenience by a removal of the site to Kensington, *Russell* 8189.

Objection to the proposed site at Kensington Gore, as being too far from the centre of London, *Fergusson* 8444–8446——Disadvantages of having a large open space surrounding the national building; great expense consequent thereon, *ib.* 8447–8451——Further consideration of the projected site; objections to it as being exceedingly flat and difficult of drainage, and as being liable to be quickly surrounded with houses, &c.; the gallery should be built on the slope where the mansion is situate, *ib.* 8461–8489. 8496–8500——Elevation of the ground as compared with that of the present National Gallery, *ib.* 8462–8466——The object of the National Gallery would be in a great measure defeated by the removal of the site to Kensington, which from its inaccessibility, would materially diminish the chances of instructing the people in art, *Moore* 10014–10016.

4. *Projected Communication across Hyde Park:*

Contemplated communication (accessible to omnibuses, &c.) across Hyde Park to the proposed site, *Bowring* 8703–8706——A communication for omnibus, &c., across Hyde Park

Report, 1852-53—*continued.*

KENSINGTON GORE—continued.

4. *Projected Communication across Hyde Park*—continued.

Park can be conveniently effected, though the Serpentine should have to be carried over a sunk road, *Sir W. Cubitt* 10252-10266——In the event of a public thoroughfare for vehicles, &c., being made across the Park, it is more desirable that the road be on the surface, and that the broad walk through Kensington Gardens be used for the purpose under certain res trictions, and ornamentally arranged, than that a tunnelled road along the sunk fence be provided, *Pennethorne* 10366-10389. 10406.

5. *Acceptance of the proposed Site recommended by the Committee:*

The estate at Kensington Gore, purchased by the Royal Commissioners of the Exhibition of 1851, and by them offered to the nation, recommended to be accepted, *Rep.* xv. xviii.

See also *Architecture of the Building. Chartered Societies. Combined Departments of Art*, 2. *Hyde Park. Ornamental Grounds. Patent Commissioners. Removal of the Gallery*, 1. *Royal Academy of Music. School of Design (Marlborough House). Site of the Gallery. Smoke*, 4. *Spitalfields School of Design. Students (National Gallery). Working Classes.*

Kensington Palace. Kensington Palace itself would be the finest and most appropriate site about London for a National Gallery, *Pennethorne* 10402, 10403.

Klenze, Baron de. See *De Klenze, Baron.*

L.

Lance, George. (Analysis of his Evidence.)—Details respecting the restorations effected by witness to the Velasquez alluded to by Sir C. Eastlake (Q. 4477), as having been seriously injured whilst in the hands of a picture-cleaner named Thane, 5120-5229. 5253-5264——Similar information with regard to a Rembrandt belonging to the Archbishop of York, into which witness, by Mr. Thane's desire, introduced the head of a black man, 5230-5253——Witness declines to give an opinion as to the picture-cleaning in the National Gallery, 5265.

[Second Examination.]—Letter from witness to the Chairman of the Committee, adverted to, as stating that certain restorations in the Velasquez were not executed by witness; he cannot, however, be positive that these touches have been introduced since the picture was in his hands, 7863-7867.

Landseer, Sir Edwin. (Analysis of his Evidence.)—Is familiar generally with the pictures in the gallery, 4105, 4106——Was favourably impressed with the cleaning of certain works in 1846; 4107-4110——Considers that those cleaned in 1852 required the operation, 4111-4113——Extreme danger of cleaning, which should never be resorted to except in cases of the greatest necessity, 4114, 4115. 4134. 4173, 4174—— Opinion that the works in the gallery, recently cleaned, are less agreeable and harmonious than they were previously; definition of the effects of the process on the several pictures, showing that generally they have been over-cleaned, but not materially injured, 4119-4147. 4178-4193. 4213-4221. 4225-4235——A picture may be over-cleaned by too great a removal of the surface varnish, &c., without the original paint being encroached upon, 4120-4129 ——Even after a judicious cleaning, the effect of a picture, with a comparatively new appearance, is very startling, and may mislead as to the actual effect of the process, 4136-4138. 4147. 4180. 4200. 4227-4229.

Successful cleaning of one of Haydon's works, in the possession of witness, by Mr. Dujardin and himself; the processes employed were based upon a knowledge of the vehicle used by Haydon in his paintings, viz., linseed oil, 4148-4156. 4172. 4222-4224 ——Disagreeable effect of chill on the varnish; its removal is very simple, and very expedient, 4155-4158——The peculiarly dirty appearance of the pictures in the gallery is attributable very much to the dust and the London atmosphere, &c., as well as to the discolouring effect of the varnish employed, 4159-4165——There should be a consultation of competent persons to decide upon the expediency of cleaning, 4166, 4167—— The processes employed should not be kept secret by the cleaner, 4168-4172.

Advantage of the cleaner being thoroughly conversant with the works of the old masters, and being acquainted with the vehicle employed in each case, 4172, 4173—— Condemnation of the practice generally adopted by the public at large whenever they buy pictures, of having them re-lined and cleaned at once, 4175-4177——Possibility of time and the discoloration of the varnish restoring the former harmony of tone of some of the pictures cleaned in 1852; 4178-4180. 4213-4218. 4234, 4235——The St. Ursula, though more pleasing in general tone than the Queen of Sheba, requires a little cleaning, but the operation should not be undertaken without a consultation as to its general expediency, 4188-4191. 4194-4196.

Report, 1852-53—*continued.*

Landseer, Sir Edwin. (Analysis of his Evidence)—*continued.*

Belief that the pictures in the National Gallery have not been worse treated than those in private collections, 4197-4200——No further injury has been inflicted on them than that alteration in their appearance which is necessarily consequent on the cleaning of all pictures, 4201——Facility of removing by simple means the common accumulation of smoke, dust, &c.; the difficulty lies in the removal of the varnishes over the surface of the picture, in such a manner as not to encroach upon the master's touch, 4205-4212——Definition of the process of glazing used by the masters of the Venetian school; danger of its removal by cleaning, 4208-4212.

Landseer, Sir Edwin. See *Committee of Selection for Cleaning.*

Lawrence Collection. The offer made of Sir Thomas Lawrence's collection of drawings to the Government, and refused, was in order to placing them in the British Museum; it would have been desirable to have secured them for the nation, *Sir C. Eastlake* 6145-6160—— Blame attributed to the trustees of the gallery in not taking the proper steps to secure this collection, *Wellesley* 9583-9602.

Lawrence, Samuel. (Analysis of his Evidence.)—Professional artist; chiefly practises as a portrait painter, 3512, 3513——Is well acquainted with the former appearance of the pictures in the gallery, 3514-3518——Those cleaned in 1852 by no means required the process, 3519, 3520. 3577, 3578——Injuries inflicted on them by the cleaning, which has removed the prevailing tone and hue in every case, but in some more than in others, and has in several instances also removed the touch of the master, 3521-3549. 3564-3566. 3579-3583——Danger of cleaning pictures by means of friction, 3550-3552——Successful removal of old varnishes by the application of the same substance of which they are composed, 3553, 3554——No picture should be entrusted to a cleaner who would not define the nature of the processes to be used by him, 3555-3557.

Objections to the use of the gallery varnish, as having a thin body, and drying too slowly; the admixture of oil with the mastic varnish is not, however, injurious, 3558-3563——Conclusion, from long researches into the ancient mechanical processes of art, that all old pictures are equally accessible to injury through the process of cleaning, 3567-3576——Injury done to the Judgment of Paris by cleaning in 1846; time has increased rather than diminished the monotonous and insipid effect produced by the cleaning, 3584-3591——All the pictures cleaned in 1846 were injured by the process, and in the same way as those recently cleaned, 3592.

Lectures. The establishment of lectures in the projected institution of art, on art, might be beneficial, *Denistoun* 5895; *Dyce* 7483.

Leedham, Mr. Production before the Committee of a Paul Potter, belonging to the Duke of Bedford, as illustrating the skill and safety of the process of relining, as practised by Mr. Leedham, *Russell* 8179-8183.

Leslie, C. R. Letter from C. R. Leslie to Colonel Mure, M. P., Chairman, dated 20 May 1853, respecting the pictures lately cleaned, *App.* 782.

Lewis, Miss. Portrait of Lewis the comedian, permitted by the trustees to remain in the possession of Miss Lewis during her life, *App.* 735. 749.

Leyden. Answers to the heads of inquiry submitted to the directors of the galleries of fine arts, &c., in Leyden *App.* 833.

Library (*British Museum*). Great inconvenience arising from the insufficiency of the space devoted to the library; suggestions for its enlargement, *Panizzi* 7833-7841. 7850-7859——At present the quietest place for study in the library department is the general reading-room, *ib.* 7856-7859——All due facilities are given by the trustees to distinguished literary individuals who may wish to study in the building, *ib.* 7860-7862.

Library (*Combined Departments of Art*). Advantage of there being a library attached to the projected combined departments, *Sir C. Eastlake* 6528, 6529; *Coningham* 6900-6908; *Sir R. Westmacott* 9065-9068——There should be a library attached to the institution, containing books, engravings, drawings, &c., in conformity with the respective departments, *Dyce* 7479-7482. 7609-7615——Proposed establishment of a library devoted to the several departments of science and art, and accessible for purposes of reference and study, *Bowring* 8680-8702.

Lighting of the Gallery. Mode by which the pictures should be lighted, *Fergusson* 8412. 8420. 8521-8526.

Lining of Pictures. Opinion maintained by witnesses of high professional reputation, that in many cases a picture cannot be safely cleaned and restored until it has been relined, *Rep.* vii——In what the process of lining consists, *ib.*——It is a work of difficulty, and involving considerable risk; but it can be executed in a skilful and satisfactory manner, *ib.*

Report, 1852-53—*continued.*

Lining of Pictures—continued.

Necessity for attention being paid to the lining of the pictures when required, *Seguier* 890-894——All pictures in a dilapidated state should be lined before they are cleaned, *Brown* 1231——There is no affinity whatever between the lining and cleaning of pictures, *ib.* 1236-1238——Desirability of pictures being lined before they are cleaned; the process of lining is not dangerous, *Farrer* 1341, 1342. 1521-1526——All the canvas pictures cleaned in 1852 should have been previously lined, *Nieuwenhuys* 1615-1620. 1634, 1635——The Queen of Sheba and the Isaac and Rebecca should have been lined before they were cleaned, *Bentley* 1816, 1817——The lining of pictures is a much easier process than cleaning, *Hart* 3327-3329——Necessity of a picture being re-varnished, but not cleaned, after it has been lined afresh, *Stevens* 4099-4102.

None of the pictures have been lined since witness has had the management of the gallery; he never would sanction it, on account of the delicacy of the operation, *Eastlake* 4771-4779——No pictures have been lined since witness has been a trustee, *Russell* 4954, 4955——Mr. Seguier was considered responsible for pictures committed to his charge for re-lining, although he may have employed another hand to perform the operation; admission that it is desirable that the name of the person by whom this act was undertaken should be known to the trustees, *Lord Monteagle* 5103, 5104——Witness is not aware of pictures having been injured by bad lining, *Christie* 5731——Possibility of re-lining the pictures in the gallery without the slightest damage resulting therefrom, *Russell* 8179.

See also *Cleaning* I. 5. II. 1. *Leedham, Mr.*

Living Artists. Objection to the works of living artists being bought for the nation, *Coningham* 6990-6993——Recommendation that the works of living artists be excluded from the gallery, though some inferior works might be admitted for purposes of general information and comparison, *Foggo* 7417-7426.

Copy of the "existing regulations" alluded to in p. 49 of the Return, laid before the House of Commons in February 1853 (Parliamentary Paper, No. 104,) by which the trustees are precluded from recommending to the Treasury the purchase of the works of living artists, *App.* 748.

Loft, James. (Analysis of his Evidence.)—Sculptor; is conversant with the system of studying at the National Gallery and the British Museum, 9326. 9328, 9329——Is proprietor of an establishment for the sale of plaster casts, 9326, 9327. 9329——Increasing demand of late years for plaster casts, on the part of students and the public generally, 9330-9332——Expediency of combining a complete collection of casts of the best works in existence with the national pictures; such a collection would be more advantageous to students than the sculptures, &c., in the museum, 9333, 9334. 9355-9358——Inconvenience to students of a removal of the National Gallery to Kensington, 9335-9345——Practice of copying in the gallery adverted to; colour is chiefly studied; accurate copies are frequently made, but are seldom sold, 9346-9351. 9354——Insufficient time now devoted to students; improved arrangements which may be effected if the gallery be removed, 9347, 9348. 9352, 9353.

Lot and his Daughters. See *Guido,* II. 1.

Louvre, The. Explanation relative to the system of cleaning at the Louvre; there are three cleaners constantly employed, who also execute the repairs; how far any control may be exercised over them by the Director; complaints have been made against the performance of the process as some damages have been done thereby, *Fradelle* 2625-2657——The authority of the management of the Louvre is centered in one individual, *Coningham* 6846. 6848——Great crowds which frequent the Louvre on Sundays and fête days, *Hurlstone* 7107-7109.

Lower Rhine (Cologne) School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 807.

Lucca Collection. Circumstance of the sale of the "Raphael" in the Lucca collection, *Sir C. Eastlake* 6162-6167.

Luini. Sale at Mr. Christie's of a picture by Luini, which had been restored, being confirmatory of witness's opinion of the increased value of restored pictures, *Sir C. Eastlake* 6624-6627.——*See* also *Solly Collection.*

M.

Madrid School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 822, 823.

Maguylp. See *Gallery Varnish.* *Mixed Varnish.*

Report, 1852–53—*continued.*

MANAGEMENT OF THE GALLERY:

1. *Imperfections in the present System.*
2. *Suggestions with regard to the Future; proposed Schemes noticed.*
3. *Papers laid before the Committee.*

1. *Imperfections in the present System:*

The investigation of this part of the subject has engaged much time and attention, *Rep.* iii——Many imperfections and some irregularities in the working of the present system brought under notice, *ib.*——Defects and anomalies of the system itself in which these originate, *ib.*

Origin of the gallery, *Rep.* iii——Appointment of Mr. W. Seguier as keeper; definition of his duties, *ib.* iii, iv——Committee of gentlemen nominated to superintend the gallery, *ib.* iv——Appointment of Colonel Thwaites as assistant keeper and secretary, *ib.*——Duties of the committee and of the keeper, so far as defined by the Treasury, *ib.* ——Meetings of the trustees held, *ib.*——Resolution of June 1840 to hold monthly meetings, *ib.* v——Interregnum of six or seven months during which no meetings are held, *ib.*——complaints made of undue privileges being granted to students of the Royal Academy in regard to copying pictures, *ib.*

Want of regulations; became more serious as the business increased, *Rep.* v——The duty of picture purchasing, originally attached to the office of keeper, has completely devolved on the trustees, *ib.*——The additions to the collection have not been made on any definite principle, *ib.* vi——Many opportunities have been lost for effecting valuable additions, *ib.*——Proofs of the general absence of combined action or definite responsibility in the system of management, *ib.* xiii.

General bad management of the gallery since the death of Mr. W. Seguier, *Nieuwenhuys*, 1700–1705——General understanding among the trustees, that the time is approaching when the management of the National Gallery will require to be re-considered; disposition to postpone consequent thereon, *Sir C. Eastlake* 4671–4675——The present system of management is defective in its connexion with the Treasury, the absence of concentrated responsibility, and the want of an annual sum for purchases, *Dennistoun* 5749——Respects in which the system of management is defective, *Sir C. Eastlake* 5972.

The principal defects in the management of the gallery are, that the duties and responsibilities of all the officers connected with the institution are quite indefinite, *Hurlstone* 6650. 6734, 6735——Witness objects strongly to the present system of management in the National Gallery, as involving great irregularity, and the want of any definite responsibility, *Foggo* 7222–7232——Objection to the present system of management of the gallery, as involving want of power, and of defined responsibility in the heads of the institution, *Ford* 7887–7889.

2. *Suggestions with regard to the Future; proposed Schemes noticed:*

Resolutions come to by the Committee in regard to the future management of the gallery, *Rep.* xv——The various schemes of alteration and reform brought under the notice of the Committee adverted to, *ib.* xv, xvi.

Suggestions with respect to the future management of the gallery with reference to cleaning; superintendence recommended to be exercised by some person possessing an ample knowledge of the old masters, and of the different processes employed by the cleaner; acquisitions necessary in the latter, *Moore* 2382–2389. 2397–2415. 2551–2555 ——Witness is not prepared to offer any definite suggestions in regard to the future management of the gallery, *Russell* 4926–4928——The management of the gallery is susceptible of considerable improvement in reference particularly to cleaning, *Lord Monteagle* 5116, 5117——Expediency of establishing a regular system for the government of the gallery and the purchase of pictures, &c., *Lord Aberdeen* 5307, 5308——In any change of the present system of the National Gallery, there should be a certain number of unpaid trustees or visitors, *ib.* 5328.

Any modifications in the constitution of the National Gallery must be determined by the objects of the nation in forming the gallery, and the nature of its contents, *Lord Overstone* 5367, 5368——Witness would substitute for the present defective constitution of management, one responsible and salaried head, who should be assisted by a council appointed by the Treasury, *ib.* 5414–5420. 5432–5434——A like constitution should apply to a combined collection of art, *ib.* 5421——Minutes of the proposed council's transactions should be laid before Parliament, *ib.* 5424–5426——Future arrangement of the gallery considered; suggestions with respect to the appointment and power of the trustees, directors, &c., *Hurlstone* 6736–6807.

Suggestions in detail for an improvement in the future management of the gallery, *Foggo* 7233 *et seq.*——Suggested appointment of a committee of taste, composed of three salaried persons, elected by the trustees with the concurrence of the Treasury; power and responsibility to be vested in this body in the purchasing and cleaning of pictures, *ib.* 7247–7264. 7273–7275. 7280 *et seq.* 7343–7354——Probability of disputes or collisions occurring between the several officers suggested by witness; opinion that such

Report, 1852-53—*continued.*

MANAGEMENT OF THE GALLERY—continued.

2. *Suggestions with regard to the Future, &c.*—continued.

collision is not unwholesome, and that well-advised cleaning and prudent purchases, &c., are better than hasty action and consequent mistakes, *Foggo* 7252-7254. 7274, 7275. 7294. 7304, 7305. 7314, 7315——There is no necessity for the committee of taste devoting their sole attention to the duties of their office; divided interest, as at present, is much worse than divided time, *ib.* 7280-7282. 7286. 7430——Proposed remuneration of the committee of taste, *ib.* 7284, 7285——Opinion that the expenditure under witness's scheme of management would be very small, *ib.* 7310, 7311.

Objection to the board or committee of management being unpaid, *Dyce* 7436——Future management of the gallery considered; suggestions in detail relative to the proposed officers and their duties, &c., *Russell* 8089-8174. 8215-8218——Suggestions with respect to the future management of the gallery; defects of the present system, *Wellesley* 9510 *et seq.*

3. *Papers laid before the Committee:*

Extracts of the Minutes of the Trustees of the National Gallery, from the 1st Nov. 1852 to the present time, having reference to the cleaning, &c. of pictures, and the management of the gallery, *App.* 743.

Suggestions by Sir C. L. Eastlake, dated May 1853, respecting the future management of the National Gallery, *App.* 787.

See also *Cleaner to the Gallery. Cleaning. Council of Art. Director of the Gallery. Heads of Departments. Keeper of the Gallery. Picture Cleaners*, 1. *President of the Royal Academy. Purchases* (*National Gallery*). *Regulations, &c.* (*National Gallery*). *Responsibility. Royal Academy. Salaried Officers. Secretary. Trustees.*

Manfrini Collection. Measures adopted by the trustees with reference to the offer of the Manfrini collection at Venice; mission authorised by the Treasury to examine the collection, and determination of the trustees on the report thereof not to recommend its purchase, *Lord Overstone* 5373-5380. 5389-5392——Statement as to the valuation of the collection, made by witness and Mr. Woodburn, *Uwins* 5380. 5382-5388——Witness can produce the valuation made by Mr. Uwins of the Manfrini collection, *Thwaites* 5381.

The Manfrini collection at Venice has been over appreciated, *Dennistoun* 5854, 5855——Opinion of witness as to the character and value of the collection, *Sir C. Eastlake* 6105-6110. 6112, 6113. 6123, 6124. 6136-6138——Particulars as to the negotiation for the purchase of the collection by the trustees, and their dissatisfaction with Mr. Woodburn's report on the collection, *ib.* 6111. 6114-6122. 6125-6127. 6129-6132. 6135. 6139-6143. 6212, 6213——The trustees declined to purchase the collection, not thinking it a desirable one, *ib.* 6122. 6133, 6134. 6144——Witness is not aware of any explanatory letter from Mr. Woodburn accompanying the inventory of the Manfrini collection, *Thwaites* 6128.

Mantuan School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 801.

Marbles, &c. (*British Museum*). With respect to the cleaning of marbles, &c., on their arrival in the museum, Sir R. Westmacott is responsible for the operation to the trustees, *Hawkins* 7788, 7789——Reference to a proposal for the protection of the Nineveh and other sculptures by means of glazing, *Oldfield* 8276-8281.

See also *Elgin Marbles. Nineveh Sculptures. Sculptures* (*British Museum*). *Smoke*, 2.

Marriage of St. Catherine, The. See *Palma Vecchio.*

Marlborough House. In Marlborough House, notwithstanding the great crowds and the bad ventilation, some of the pictures are in an excellent condition, probably because not rubbed with oil varnish, *Foggo* 7388, 7389——Number of pictures at Marlborough House, *App.* 735.

Want of accommodation for the School of Design, &c., adverted to, *Bowring* 8713.

See also *School of Design* (*Marlborough House*).

MASTIC VARNISH:

1. *Character generally of this Varnish; how far approved of.*
2. *Extent to which used in the Gallery.*

1. *Character generally of this Varnish; how far approved of:*

Chill arises especially from pure mastic varnish, *Rep.* viii——The chill may be removed without danger from mastic varnish by the use of a silk handkerchief passed occasionally

Report, 1852-53—*continued.*

MASTIC VARNISH—continued.

1. *Character generally of this Varnish; how far approved of*—continued.

occasionally over it, *Uwins* 272-274; *Seguier* 874-879——Objections to the use of simple mastic varnish on account of its tendency to chill, *Seguier* 782-793. 881-884.

The removal of this varnish can be effected by friction or by solvents; in the former case a white dust rises up from the picture, *Seguier* 498, 499——Any change in the colour of the dust is attributable to the repairs being reached, but not the colours of the master, *ib.* 534-542——Advantages generally of mastic varnish over any other, as applied to pictures, *Bolton* 993-1009——Circumstances under which solvents and friction are respectively preferable in removing this varnish from pictures, *ib.* 993-996——Witness uses pure mastic varnish in the restoration of pictures, *Bentley* 1746, 1747——Simple mastic varnish assumes in time quite as yellow and dark a colour as the mixed varnish, *Seguier* 2928-2932——Admission that pure mastic varnish is most suited for the National Gallery, *ib.* 3018-3021——The tendency of oil mixed with it would be to preserve the picture, as mastic varnish is of itself perishable; the mixture would not darken the painting, *Lawrence* 3562, 3563.

The varnish used by witness on his own pictures is mastic, with a little oil to prevent its chilling, *Stansfield* 3618-3625——Preference given to pure mastic varnish over gallery varnish, *Munro* 3975, 3976——Result of these experiments made by witness in regard to the mastic varnish; tests used, their effect, and as compared with pictures in a collection, *Faraday* 5446-5467——Ordinary mastic varnish would not get much harder with time, so as to resist the action of spirits of wine, or to be a protection to the picture, *ib.* 5515-5519——In every instance isinglass should be first applied and then pure mastic varnish; protection thus afforded against smoke, &c., *Foggo* 7364-7380. 7386.

2. *Extent to which used in the Gallery:*

Mr. Seguier, as instructed by the trustees, used simple mastic varnish in the cleaning of the nine pictures in 1852, *Uwins* 133-136. 148, 149. 206, 207. 281-283——With the exception of the Paul Veronese, mastic varnish only was used in restoring the appearance of the nine pictures, *Seguier* 628——Witness, as instructed by Mr. Russell and Mr. Uwins, used simple mastic varnish, though he prefers a mixture of oil with it, *ib.* 654-669. 862-866.

List of pictures varnished with mastic varnish only, *App.* 747——Pictures which have not been varnished since their reception, but presumed to be varnished with mastic varnish, *ib.*

See also *Damar Varnish.* *Gallery Varnish.* *Oil Varnish.* *Parmegiano.* *Piombo, Sebastiano del*, 1. *Poussin, Nicholas*, II. 1.

Medals (*British Museum*). Inexpediency of annexing the collection of medals in the museum exclusively either to a department devoted to art or to one devoted to archæology and literature, *Oldfield* 8318-8335——Doubts as to the propriety of the medals being removed from the museum and combined with the sculptures in the proposed collections of art, *Sir R. Westmacott* 998-10021.

Meetings of the Trustees. For the first three and a half years after their appointment no meetings were held; date of the first formal meeting; other meetings in the same and subsequent years, *Rep.* iv——Resolution passed in 1840 for the periodical holding of meetings, *ib.* iv, v——Irregularities in regard to the manner of holding these meetings, and the presence of trustees thereat, *ib.*

During the period when no meetings of trustees were held, witness (being unable to consult the trustees) corresponded with Sir Robert Peel, *Sir C. Eastlake* 4399-4405——Meetings of the trustees; when held; special meetings; the business of the gallery in no way suffered from the interregnum of five or six months during which no meetings were held, *Lord Monteagle* 4963-4965——The summonses to the trustees to attend meetings were in writing; they are a mere form, the nature of the business to be transacted not being stated, *ib.* 5000-5004——It would have been expedient to state that the trustees were assembled for the purpose of considering as to picture-cleaning, &c., *ib.* 5005-5010——It is not advisable to alter the practice as to attendance of trustees at their meetings under the present constitution, *Lord Overstone* 5422.

Dates of the meetings held by the trustees of the National Gallery since their appointment, 1828 to 1843, *App.* 734——Extract from the minutes of the trustees, 10 June 1840, respecting fixed periods for their meetings, *ib.*

See also *Quorum of Trustees.* *Trustees*, 1.

Milanese School of Painting. Classified list of the masters of this school, from its commencement to Leonardo da Vinci, with names of their principal followers, *App.* 803, 804——From Leonardo da Vinci to the Proccaccini, *ib.* 804.

Report, 1852–53—*continued.*

Minutes of the Trustees. Extract from the minutes of the trustees of the National Gallery, 10 June 1840, respecting fixed periods for their meetings, *App.* 734——Copy of the minutes of the trustees for 1844, *ib.* 735——Extracts from the minutes of the trustees, from 1 Nov. 1852 to the present time, having reference to the cleaning, &c. of pictures, and the management of the gallery, *ib.* 743.

Mola, Francesco. Destruction, in 1844, of the picture by Francesco Mola, adverted to, *Sir C. Eastlake* 5919–5923.

Monk, The (Picture). See *Zurbaran.*

Monteagle, Right Hon. Lord. (Analysis of his Evidence.)—Has been a trustee of the gallery since 1835; 4958——No code of rules exists for the government of the trust; witness's idea as to what the duties cast upon the trustees were, 4959. 4966. 4971–4977——The Treasury appointed all the officers, 4960——Relation in which the keeper stood to the Treasury and to the trustees, 4961. 4978 *et seq.*——No regular reports were made by the keeper to the trustees of the state of the pictures; periodical reports should be provided for, 4962——Meetings of the trustees; when held; special meetings; the business of the gallery in no way suffered from the interregnum of five or six months during which no meetings were held, 4963-4965.

The phrase "regulations," used in the returns made of the minutes of the trustees, merely applies to usages that prevailed; none exist in writing, 4966——Origin of the expression "trustees;" terms in which spoken of by Lord Liverpool in the original minute appointing them, 4967, 4968——Legal status of the trustees; illustrations thereof in recent proceedings, 4969, 4970——Not the slightest difference in the mode of the trustees dealing with Mr. Uwins in questions of picture-cleaning, &c., than was the case with Sir C. Eastlake, 4978–4986——Mr. Uwins' statement that with reference to the nine pictures lately cleaned his opinion was not asked by the trustees, comes upon witness with a great deal of surprise; evidence in proof of a contrary state of things, 4987-4995.

Nature of the objections entertained by Sir C. Eastlake to cleaning the pictures; modification in a resolution effected on one occasion at his suggestion; his evidence on this topic adverted to, 4995–4999——The summonses to the trustees to attend meetings were in writing; they are a mere form, the nature of the business to be transacted not being stated, 5000–5004——It would have been expedient to state that the trustees were assembled for the purpose of considering as to picture-cleaning, &c., 5005–5010——Witness had had much experience of Mr. William Seguier; the practice in his life-time was the same as at present, 5011–5014——Probable causes of the large number of pictures cleaned in the first year of office of Sir C. Eastlake, 5015–5018.

The cleaning takes place in the lower rooms, and always during the vacation; the cleaner had full authority to take more or less time, 5019–5025——How far objectionable in principle that in picture-cleaning the person consulted should be engaged by the job, 5026–5033——Witness does not recollect the circumstance of Mr. Brown being employed in the gallery in 1844; nor that of the Judgment of Paris when cleaned being repaired, 5034–5039——It was never understood that the cleaner was to repair or tone down pictures; the Titian's Bacchus and Ariadne was slightly touched up, 5039. 5088——With respect to the pictures lately cleaned, witness is satisfied that no serious injury has been done, 5040, 5041.

[Second Examination.]—Relations existing between the trustees and the keeper in reference to the question of picture-cleaning, theoretically as well as practically, 5042–5044——Practice during the time Sir C. Eastlake was keeper, 5045–5048——There has been no departure from that practice since Mr. Uwins has been in office, 5049——Witness was present at the meeting of 5 July; Mr. Uwins also; evidence showing that Mr. Uwins is responsible for having approved of the cleaning 5050–5064——Evidence also to show that Sir C. Eastlake is to be considered a party to the resolutions of 12 Nov. 1852, approving of the results of the cleaning operations, 5065-5071.

Result of the recent cleanings in witness's opinion; special reference herein to Sir G. Beaumont's Claude (the Annunciation); allusion to a copy thereof made by Mr. Constable, 5072–5085——Witness was not aware until recently that the Judgment of Paris was touched with colour; the trustees should be acquainted when such an operation is needed, 5086-5089——The trustees were not in the habit of delegating their authority to one of their body; instance of witness singly acting as for the whole body (10 April 1848), 5090——How far therefore the application of Sir C. Eastlake to Sir R. Peel, in 1845, with reference to the cleaning of Susanna and the Elders, was consistent with propriety; instances when witness was a minister of his acting without the knowledge of the trustees, 5090–5093.

The elder Mr. Seguier attended the meetings of the trustees regularly; the present Mr. Seguier only when sent for; occasions of his opinion being sought, 5094–5100——Evidence of Mr. Uwins quoted with reference to his opinion not having been asked in regard to the nine pictures; surprise of witness at the view taken by Mr. Uwins of his position, 5101, 5102——Mr. Seuierg was considered responsible for pictures committed

to

Report, 1852-53—*continued.*

Monteagle, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

to his charge for relining, although he may have employed another hand to perform the operation; admission that it is desirable that the name of the person by whom this act was undertaken should be known to the trustees, 5103, 5104——No written or other instructions were given to Mr. Uwins on his accession to office; his appointment emanated from the Treasury without the knowledge of the trustees, 5105-5107.

Reference to Mr. Seguier's evidence, Q. 862 to 864, and 699, in which he disclaims being responsible to Mr. Uwins for the cleaning of the pictures; this does not agree with witness's view of his position; he considers Mr. Seguier to have acted under the direct superintendence of Mr. Uwins, 5108-5111——Extract of letter from Sir R. Peel, 27 December 1846, respecting complaints made of the supposed over-cleaning of pictures, 5112——Belief that those who have given pictures to the gallery would not have done so had they felt that a system was pursued dangerous to the pictures themselves; names of the principal donors referred to, 5112-5114.

Passage from letter written by Sir George Beaumont to Lord Dover, expressing his idea of the safety of the pictures in the hands of the trustees, 5114——Comparison of the treatment of the pictures in the National Gallery with the galleries of France, Italy, or Dresden, 5114, 5115——The management of the gallery nevertheless is susceptible of considerable improvement in reference particularly to cleaning, 5116, 5117——The gallery is more likely to acquire a fine collection by bequest than by purchase; this source of supply will be cut off if it is to go abroad that the gallery is an unsafe place of deposit, 5117-5119.

Monthly Meetings. See *Meetings of the Trustees.*

Moore, Morris. (Analysis of his Evidence.)—Dealer in pictures; was formerly an artist, and has had some experience in picture-cleaning, 2006-2016——Objects to cleaning, unless the pictures are in a very dirty state, 2017-2021——By the process of cleaning, there is great danger of removing the glazings from the works of the Venetian and other masters, 2022-2031.

The original glazings were on the Queen of Sheba, prior to the late cleaning, by which, however, they have been removed, and considerable injury otherwise inflicted on the picture, 2032-2036. 2057-2102. 2113-2143——With respect to the St. Ursula, it is a sunrise rather than a sunset picture; fine condition of this work, notwithstanding its being coated with oil varnish, which is very objectionable, 2144-2150——The Plague of Ashdod, by Nicholas Poussin, has suffered much by cleaning, and the glazing or upper surface of the original work has been removed from the greater part of it, 2153-2180——The Cephalus and Aurora is a more deeply painted work than the Plague of Ashdod; it is in a fine condition, and does not require cleaning, 2162. 2181-2184.

Canaletti's View in Venice has been literally flayed by the recent cleaning; the white colours have been reduced to an uniform shade of brightness, without any reference to perspective, and the general harmony of the picture is quite gone, 2185-2192——The View on the Grand Canal has also suffered much in mellowness of tone, and the aerial and linear perspectives have both been injured, 2193-2201——The Paul Veronese has likewise been damaged by the removal of part of the glazing, and by a general depreciation of tone in consequence, 2202, 2203——The Isaac and Rebecca of Claude has been lamentably injured by the cleaning; the upper glazing is almost entirely gone, and the aerial perspective completely destroyed, 2204-2207.

The Dead Christ, by Guercino, was in a very fine state before it was cleaned, but is now greatly depreciated by the removal of the upper surface, 2208-2210——Claude's Annunciation has been injured throughout by the cleaning, and is not worth half its former value, 2211-2222——Unsatisfactory state of the David at the Cave of Adullam, though better cleaned than several works which underwent the process in 1852; 2223-2228——Excellent condition of the Small Landscape with Figures, by Claude; inexpediency of its being cleaned, 2229-2231.

[Second Examination.]—Injuries inflicted by cleaning on the St. Bavon; the effect of this picture has been totally destroyed by the removal of the glazing, and the disturbance of the original paint, 2232-2293.

[Third Examination.]—Definition of witness's view of the process of glazing as practised by the old masters; a general toning down or over-glaze of one peculiar tint was not generally employed, 2351-2355. 2511-2514. 2565-2569——With respect to the nine pictures cleaned in 1852, they were somewhat dirty, but not sufficiently so, from the gallery varnish, or any other cause, to justify their cleaning, 2356, 2357——Authority of witness, who possesses a student's card, to enter the gallery at times when it is closed to the public, 2358-2361. 2498-2505.

Condemnation of the system of occasional cleaning, as practised in the gallery, 2358-2381. 2539-2549——Suggestions with respect to the future management of the gallery in regard to cleaning; superintendence recommended to be exercised by some person possess-

Report, 1852–53—*continued.*

Moore, Morris. (Analysis of his Evidence)—*continued.*

ing an ample knowledge of the old masters, and of the different processes employed by the cleaner; qualifications necessary in the latter, 2382–2389. 2397–2415. 2551–2555.

Worthless character of the evidence hitherto given by all the witnesses examined before this Committee, excepting Mr. Nieuwenhuys, 2390–2396——Comments on the evidence of Mr. Farrer, with respect to his so-termed successful restoration of the Orleans Titian, 2390–2395——The picture was infinitely more valuable before Mr. Farrer had painted over it, 2391–2395.

Condemnation of the practice of toning down pictures, as adopted by some cleaners, 2416–2419——Restorations to injuries are utterly unjustifiable, if they encroach upon the original surface, 2420–2423——Authority of Vasari quoted against the restoration by Sodoma, though a great painter, of some injuries in a work of Luca Signorelli, 2424–2428.

The warmth of tone, and general harmony of colouring of the old masters, are not attributable to the effects of time and varnish, but to the art of the painter, who produced those results at the time, 2429–2434——Quotations from old Italian writers, showing that "velatura," or glazing, was used in the paintings of the Venetian and other schools, 2435–2443. 2511–2514——Expediency of the keeper of the gallery being thoroughly conversant with the peculiarities of the old masters, 2444——Deficient knowledge of the present keeper on the subject of glazing, 2445.

Evidence in support of the assertion that the pictures cleaned in 1852 did not require the operation; opinions of competent judges as to the previous state of some of them, 2446–2459——In 1844 witness first noticed the injurious effects of the cleaning; all the pictures cleaned since that year have been irreparably and extensively damaged, 2460–2482——The commercial value of the works cleaned since 1844 has been diminished at least one half by the process, 2480–2482——The authority of Rubens shows that exposure to the sun, and not cleaning, was the best means of restoring the colours of his freshly painted works, 2483–2491——Insufficiency of the time devoted to the cleaning of the pictures in 1852; 2492–2497.

Difficulty of finding fit persons to undertake cleaning when it is really required, 2506–2510. 2515–2518. 2551–2560——Belief that cleaning is not better understood abroad than in England, and that pictures in foreign galleries have been much injured by the operation, 2519–2527. 2561–2564——The Salvator Rosa in the National Gallery is not in a bad state, but it would be improved by cleaning, 2528–2530——The David at the Cave of Adullam also requires to be properly cleaned, 2531–2534——Great care necessary to be taken in using water in the occasional washing of pictures, 2535–2549.

Letter from Lord Onslow to witness, dated 25 April 1853, stating, that in consequence of the over-cleaning, so injuriously practised in the National Gallery, he will probably revoke his bequest of certain pictures to that institution, 2550——Authority of Sir Joshua Reynolds quoted, as being much opposed to the practice of cleaning, 2564——Not only in the National Gallery, but in the private collections of this country, considerable injury has been inflicted on valuable works by the practice of over-cleaning, 2569–2574.

[Fourth Examination.]—Evidence in detail, condemnatory of the system of purchasing for the gallery since 1843, both as regards omission and commission, 9739–9860——Prior to 1843 the purchases were on the whole satisfactory, 9743——Since that period eighteen pictures have been bought, either under the keepership or trusteeship of Sir C. Eastlake, only one of which is unexceptionable, 9744–9748——Out of the entire number, only six have any pretence of belonging to the purer and greater periods of art, 9746, 9747——Nature of witness's objections to the purchase of a Portrait by Van Eyck; finer pictures by the same master have since been sold for half its cost, 9748–9755——Similar objection to the purchase of the Doge, by Bellini, as being much less valuable than other works of the same master, which have not fetched nearly so much money at public sales, 9748–9755.

Mention of several valuable acquisitions which the trustees have neglected to secure, though they had ample opportunities of doing so, 9749–9753. 9805, 9806. 9834–9844——Sum paid for Titian's Tribute-money, which might have been bought a few months previously for less than half the amount, 9755–9757——Strictures on the conduct of the trustees with respect to the purchase of the Marriage of St. Catherine (attributed to Palma), which has been re-purchased from the nation by one of the trustees, 9761, 9762——Condemnation of the purchase of the picture ascribed to Giorgione, on the ground of its being in a most dilapidated state and quite unavailable for study; former opinion of witness that this work was an original one, though he now attributes it rather to Bellini, 9762–9804——Partial condemnation of the purchases of the Jewish Rabbi, by Rembrandt, of Gerard Dow's portrait of himself, and of the Temptation of St. Anthony, by A. Caracci, on the score of better works having been obtainable for less money, 9805, 9806.

The remaining nine purchases, not hitherto criticised by witness, are altogether indefensible, 9806——The Infant Christ and St. John, by Guido, has not one redeeming virtue, and

Report, 1852-53—*continued.*

Moore, Morris. (Analysis of his Evidence)—*continued.*

and should be turned out of the gallery, 9806, 9807. 9813-9815——The picture of Lot and his Daughters should not have been bought at any price, 9806-9816——Susannah and the Elders is a work equally objectionable, and from its inferior style, can only tend to depress rather than to elevate art, 9806-9815——Condemnation of the purchase of the Monk, by Zurbaran, as being a picture produced on utterly false principles, and altogether worthless to the student, &c., as a work of art, 9806. 9816-9833——The money given for the Holbein, purchased through Sir C. Eastlake, was utterly thrown away, 9806——Designation of Guido as a very inferior painter, whose works are not worthy to be held up as a model in any respect, 9810-9815.

Comments on the price given for the Boar Hunt, by Velasquez, and on the claims of this master to hold the high rank which he has, for the present, attained to, 9834-9865——Mention of four Raphaels, which have been sold since 1843, the entire cost of which was considerably less than the amount paid for the Boar Hunt, 9834-9844——Purchase by witness of one of these pictures, the Apollo and Marsyas, for 70 *l.* 7 *s.*; opinion as to the authority and exceeding merit of this work, for which 1,000 *l.* have since been offered, 9837-9844——Evidence as to the purchase by the trustees of the Velasquez from Mr. Farrer, who induced them to believe it was going to be sent to the King of Holland, whereas it had just been rejected and returned by him, 9845. 9861-9865——Objection to the purchase by the trustees of Rembrandt's portrait of himself, as being desperately injured, 9860.

[Fifth Examination.]—Further comments on the purchase of the Velasquez from Mr. Farrer; testimony of Mr. C. B. Wall (a member of the Committee), Mr. Coningham, and Mr. Chambers Hall appealed to in regard thereto, 9868-9911.

[Sixth Examination.]—The pictures purchased since 1843 are not only of a degenerate period of art, but are, most of them, bad and damaged specimens of their class; further comments upon them severally, 9941, 9942. 9945-9950——During the same time, works of the purest period of art, and of exceeding value, might have been purchased for the gallery at extremely moderate prices; enumeration of these pictures, showing also the amounts fetched by them at public sales, as contrasted with the exorbitant sums paid for the gallery purchases, 9942-9944. 9950-10004——The keeper of the gallery, rather than the trustees, is responsible for the purchases made since 1843, as full authority and discretion were vested in him in every way, 9956.

The National Gallery, though a small collection, probably contains a larger proportion of good pictures than any other collection in Europe, 9955-9957——It is only since 1843 that the purchases have been so exceedingly ill-advised, 9958, 9959——The injudiciousness of the purchases cannot be a mere matter of opinion, inasmuch as they chiefly comprise works of inferior schools and degenerate periods of art, 9960-9963. 9981-9994——Past career and studies of witness in the cause of art adverted to, as being somewhat explanatory of the present confident assertion of his opinions, 9964-9967——Vitiated taste and judgment imputed to the public with respect to the art of painting, of which in its purity they are at present quite ignorant; how far such depreciation of art has increased of late years, 9968-9972. 9987. 9995-10009——Doubts as to whether the Angerstein collection in the gallery, or the purchases and bequests since added, contains the larger proportion of valuable works, 9973-9980.

The purchase of inferior pictures, though they may be all the more pleasing to the public, is very reprehensible, 9987-9994——The value of any picture should be tested entirely by its intrinsic merits, rather than by its authorship, 9999-10001——A perfectly faithful copy may be as valuable as the original work, 10001——Quotations from Armenini cited, to prove that glazing was used by the great masters of the Italian schools, and to show the errors made by Mr. Dyce in referring to this writer, as implying that such was not the case, 10010.

Objections to the removal of the gallery to Kensington; advantages of its present centrality, 10011-10026——Opinion that any deterioration in the pictures is not attributable to the London smoke, 10013, 10014——The advantages of a central situation are such that a very great pecuniary sacrifice should be made to secure the requisite space, &c. on the present site, 10014-10020. 10026——The evidence of mere students, who may be favourable to its removal, is not entitled to special consideration, 10021-10025——A combination under one building of pictures with statues and other antiquities is not important or essential; there is no disadvantage in having several museums in so large a place as London, 10027. 10031-10039——The National Gallery would be much improved by an addition of prints and drawings, more especially of the latter, 10027, 10028——There should be a complete collection of casts in every large town in the kingdom, 10029, 10030——If the several departments of art were concentrated on one site, considerable inconvenience might arise from crowds occasionally collecting in one particular department, 10035-10039.

Moore, Mr. Morris. Remarks on his complaints in regard to the effect produced by the late cleaning, *Rep.* x——Erroneous judgment displayed by Mr. Moore in the course

Report, 1852—*continued.*

Moore, Mr. Morris—continued.

of his comments on the recently cleaned pictures, *Uwins* 2776-2778. 2797,* 2798——Belief that the constant and energetic attacks made on the management by Mr. Moore, through the public press, have mainly led to a Parliamentary inquiry, *Coningham* 6844.——*See* also *Cleaning. Purchases* (*National Gallery*).

Munich. Remarks relative to the arrangement, &c., of the pictures in the gallery at Munich, *Dennistoun* 5902, 5903. 5906——Mode of direction at Munich adverted to, as involving the responsibility of the heads of departments to the Minister of the Interior, who exercises a control over them, *Baron De Klenze* 9365-9369——System of purchasing adopted formerly and of late years, *ib.* 9370-9375.

Answers to queries on the national collections and museums of fine arts at Munich, *App.* 753 *et seq.*——Réponse aux questions adressées par le Président du Comité de la Maison des Communes, pour l'établissement d'une Galerie nationale de Beaux Arts, à M. De Klenze, Intendant des Bâtimens de la Couronne et Conseiller Privé Actuel de S. M. le Roi de Bavière, *App.* 758——Extract from a letter addressed by the Baron De Klenze to Colonel Mure, M.P., Chairman, 3 August 1853, *ib.* 767.

See also *Pinacothek* (*Munich*).

Munro, Hugh Andrew John. (Analysis of his Evidence.)—Proprietor of a large collection of the works of the old masters, 3946——Precautions taken by witness in submitting his pictures to cleaning; he requires a knowledge of the processes used and superintends the operation, 3947-3957. 3985-4011——Suggestion by witness to the late Mr. William Seguier and Sir Charles Eastlake, that there should be an occasional cleaning of the pictures in the gallery with a silk handkerchief and wash-leather; reply of Mr. Seguier, that the regulations prevented the adoption of such suggestion, 3958-3965——Expediency of the works in the gallery undergoing the process of occasional cleaning, and of the rooms being swept more often than is the case at present; during the sweeping the pictures should be covered over with cloths, 3966-3974——Tendency of the gallery varnish to become dark and to give a disagreeable effect to the pictures, 3975-3978——Preference given to pure mastic varnish, 3975, 3976——Opinion as to the over-cleaning of several of the works that underwent the process in 1852, more especially of the Claudes, 3979-3982. 4020-4031.

Care recommended with respect to Turner's pictures; fault found with the cleaning of the Rise of Carthage without its having been previously lined, 3983, 3984——Great caution necessary in the use of spirits of wine, even when applied to old oil paintings, 3993-4000——Doubts as to the possibility of restoring injuries in the works of the great masters without detection, 4012-4017. 4021——Belief that neither time nor artistic skill can ever restore the Queen of Sheba to its former fine condition, 4015, 4016——Experience is more essential in a cleaner than a knowledge of chemistry, 4018——With the exception of the Claudes, the pictures in the gallery are not in a worse state than those in private collections, 4022-4030——Six weeks were altogether insufficient for the cleaning of the nine pictures in 1852; 4031, 4032. 4034——Advisability of protecting paintings by glass, 4033——Objections to the employment of assistant cleaners, 4035, 4036——Recommendation that the St. Ursula be exempted from cleaning, although it is not in a nice condition, 4037, 4038——Partial condemnation of the cleaning of certain works in the gallery in 1846; 4039-4048.

Murillo. The picture of the Holy Family was washed in 1852 with a sponge and water, and a little mastic varnish rubbed over it, *Seguier* 679-683——The large Murillo is varnished with mastic varnish only, *Uwins* 5869-5871.

Museo Reale Borbonico (*Naples*). Answers to queries relative to this institution, *App.* 753 *et seq.*

Museums of Antiquity. Museums of antiquity judiciously selected are calculated to afford much information, *Foggo* 7427-7429.

Newton, C. T. Letter from Mr. Newton to the Chairman of the Committee, dated 28 May 1853, submitting his views on the subject of inquiry before the Committee, *App.* 772.

Nieuwenhuys, John. (Anolysis of his Evidence.)—Native of Brussels; has had considerable practice as a picture-cleaner and dealer, 1567–1574——Objects to cleaning unless in extreme cases, 1575–1579——Suggestions with respect to the cleaning in the National Gallery; recommendation of the appointment of a commission of well known cleaners, who should see that certain precautions were observed by the operator, 1580–1592. 1708–1710——Evidence generally to the effect that the cleaning of the pictures in 1852 was not properly performed, and that the works have been much injured in consequence, 1593 *et seq.*——During the keepership of Mr. William Seguier the pictures were better preserved and less cleaned, and were in a finer condition than they have been since, 1598–1605. 1711–1716——Definition of the different processes used in cleaning, and of the best mode of applying them; the different modes are all good under skilful operation, 1610, 1611. 1648 *et seq.*——Six weeks were altogether insufficient for a proper treatment of the nine pictures, 1681——An assistant should never be trusted with anything important in the cleaning, 1682–1684.

The pictures cleaned in 1846 were greatly injured by the operation, which they did not at all require, 1685, 1686——The process of glazing or the use of transparent colours exists in all the works of the ancient masters, 1687–1692. 1725, 1726——The foreign galleries are very badly managed with respect to cleaning, 1693–1695. 1732, 1733——Deprecation of the use of a sponge and water in the washing of pictures; the colour of the varnish is generally affected thereby, 1698–1707. 1727–1729——Spirits of wine may be very injurious, even to old paintings, unless carefully applied, 1717–1724——Necessity for every picture-cleaner being acquainted with the different schools of art, and the different modes of glazing, &c., 1730, 1731.

Nieuwenhuys, Mr. Successful cleaning of some pictures by Mr. Nieuwenhuys adverted to, *Coningham* 3137.

Nineveh Sculptures. The British Museum have caused excavations to be made at Nineveh, and have obtained grants for that purpose, *Lord Aberdeen* 5325.

See also *Marbles, &c.* (*British Museum*).

Northumberland, Duke of. Statement of the number of visitors to the Duke of Northumberland's collections at Northumberland House and Sion House in the six summer months of 1851, when the Great Exhibition was open, *App.* 829.

Number of Pictures in the Gallery. See *Pictures.*

Nürnberg School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 808.

O.

Occasional Cleaning. In what occasional cleaning mainly consists, *Rep.* viii——The practice of referring to the trustees in all matters of detail, of late years, had become so strict that the keeper did not consider himself authorised to apply a silk handkerchief to the surface of a picture without express directions, *Rep.* x.

Examination with respect to the occasional cleaning of the pictures by means of a silk handkerchief, or of a sponge and water; opinion that no injury has ever arisen from the use of water, *Uwins* 165–178——The occasional cleaning by means of a silk handkerchief is done by order of witness, as circumstances require, by one of the attendants; since 1852 the feather-brush has not been much used, *Thwaites* 341–345. 355–357——As Colonel Thwaites is present during the occasional cleaning, witness considers that he is responsible for seeing the work properly executed; the orders are given by witness; only one man is trusted with the performance of this duty, *Uwins* 346–354. 368–371——Witness does not understand that he is responsible for the proper performance of the occasional cleaning, *Thwaites* 368——The occasional cleaning with a silk handkerchief, or a sponge and water, is left to the discretion and superintendence of witness, *Seguier* 730–733——How far any damage may arise from frequently rubbing a picture with

Report, 1852-53—*continued.*

Occasional Cleaning—continued.

with a silk handkerchief; this duty is performed by witness and his assistant, *ib.* 794-798. 876-879. 942-947——Reports of Mr. Seguier and Mr. Uwins relative to the occasional cleaning effected on 2 April 1853, *App.* 751, 752.

A slight cleaning or washing is often quite sufficient to restore the original tone of a picture, *Nieuwenhuys* 1696, 1697——Condemnation of the system of occasional cleaning as practised in the gallery, *Moore* 2358-2381. 2539-2549——Letter in condemnation thereof from Mr. W. G. Butler to Mr. Morris Moore, *Ev. p.* 133——Authority of the keeper, by a minute of the trustees, to superintend the occasional cleaning, *Uwins* 2877-2879——Suggestion by witness to the late Mr. William Seguier and Sir Charles Eastlake, that there should be an occasional cleaning of the pictures in the gallery with a silk handkerchief and wash-leather; reply of Mr. Seguier, that the regulations prevented the adoption of such suggestion, *Munro* 3958-3965——Expediency of the works in the gallery undergoing the process of occasional cleaning, and of the rooms being swept more often than is the case at present; during the sweeping the pictures should be covered with cloths, *ib.* 3966-3974.

Facility of removing by simple means the common accumulation of smoke, dust, &c.; the difficulty lies in the removal of the varnishes over the surface of the picture in such a manner as not to encroach upon the master's touch, *Sir E. Landseer* 4205-4212——Sufficiency of occasional cleaning by means of a silk handkerchief, &c., to keep the dust from the pictures in the gallery, and to prevent the necessity of thorough cleaning, *Cheney* 4314-4322 —— Occasional cleaning practised during witness's keepership; wiping with a silk handkerchief or sponging with water frequently unobjectionable, *Sir C. Eastlake* 4678-4684.

See also *Backs of the Pictures.* *Dust.* *Parmegiano.* *Pea-meal.* *Piombo Sebastiano, del* 1. *Soap and Water.* *Sponge-cleaning.* *Urine.* *Washing.* *Water.*

Offers of Pictures. Practice as to pictures for sale being deposited in the National Gallery for the inspection of the trustees, *Sir C. Eastlake* 5953-5957——Explanation of the term declined "on the usual grounds" occurring in the trustees' minutes as to offers of pictures, *ib.* 5984.

Officers of the Gallery. Number and designation of the officers and servants of various ranks employed in the gallery, with the salaries of each, *App.* 751.

See also *Assistant Keeper and Secretary.* *Keeper of the Gallery.* *Management of the Gallery.* *Salaried Officers.* *Secretary.*

Official Trustees. No person should in future, in virtue of any office, become a trustee, *Rep.* xv——Date of appointment of the several *ex-officio* trustees, *App.* 733.

See also *Chancellor of the Exchequer.* *First Lord of the Treasury.*

Oil Varnish. Circumstance of the old painters having mixed oil with the varnish used by them; advantages of this mixture, *Uwins* 137-147——There is greater danger in the removal of oil varnish than of mastic varnish, *Seguier* 498-501——Copal or oil varnishes are not susceptible of being removed by friction, and are difficult of removal under any circumstances, *ib.* 500, 501——Practice of witness formerly to mix oil with mastic varnish; how far this mixture possesses any peculiar advantages over the simple mastic varnish, *ib.* 629-669. 693-702.

Objections to mixing oil with mastic varnish; injuries arising therefrom, *Bolton* 987-1003, 1054-1059; *Farrer* 1288-1298. 1343-1355. 1367 *et seq.*; *Bentley* 1764, *et seq.*; *Moore* 2146-2150——A picture once varnished with oil varnish may be considered spoilt, *Farrer* 1520——Oil varnish would be the more injurious if the pictures were covered with glass, *ib.* 1555, 1556——Dangers of using oil and mastic boiled down together in varnishing paintings; oil mixed with simple mastic varnish can, however, be easily removed, *Nieuwenhuys* 1648 *et seq.*; *Farrer* 1670-1675.

See also *Gallery Varnish.* *Mastic Varnish,* 1. *Varnish.*

Old Masters. The warmth of tone and general harmony of colouring of the old masters are not attributable to the effects of time and varnish, but to the art of the painter, who produced those results at the time, *Moore* 2429-2434——Conclusion, from long researches into the ancient mechanical processes of art, that all old pictures are equally accessible to injury through the process of cleaning, *Lawrence* 3567-3576.

Oldfield, Edmund. (Analysis of his Evidence.)—Assistant in the department of antiquities at the British Museum, 8243, 8244——Was appointed by the three principal trustees in 1848; nature of his duties, 8245-8248. 8250-8254——All the officers in the institution are appointed by the three principal trustees, 8249——There are no specific regulations for the guidance of the assistants in their duties; they generally act under the superintendence of the heads of their departments, 8255-8260——Inconvenience arising from the want of sufficient space in the museum, 8265-8271——Injurious effects of dust and smoke

Report, 1852-53—*continued.*

Oldfield, Edmund. (Analysis of his Evidence)—*continued.*

smoke on the marbles and other objects, 8271-8275——Reference to a proposal for the protection of the Nineveh and other sculptures, by means of glazing, 8276-8281.

Suggestions with respect to the arrangement of the arts collections in the museum, provided they are to be combined under one system with the National Gallery, 8282-8287. 8318-8335——The collection of sculptures and bronzes and the department of antiquities generally, should be kept distinct from the pictures, 8286——There would be no serious difficulty in removing the large monuments, &c. to another site, 8288. 8289——Advantage of the site being in as dry and airy a situation as possible, such as the middle of Hyde Park, 8290-8300. 8337-8340——Amount of space requisite for the formation of a new museum of antiquities considered; the length of the present galleries, if placed in a right line, would be about a third of a mile, 8301-8317——Inexpediency of annexing the collection of medals in the museum exclusively either to a department devoted to art or to one devoted to archæology and literature, 8318-8335——Occasional existence of damp in the British Museum; means taken to avert it or to destroy its effects, 8339-8343.

The removal of the museum to the suburbs would be an inconvenience to the public, 8344——No inconvenience now arises from an over-crowding of the building; the visitors attend with a more *bonâ fide* object than those who go to the National Gallery, 8345-8356——Objection to there being any restriction to the admission of the public, 8353——Plan of a new museum of antiquities produced, and explanations thereon, relative to the contents and arrangement of the galleries, and the probable space required for its completion, 8357-8381——Use of the electrotype process in the British Museum for duplicating certain objects; advantage of its being further employed, 8382-8384——Correction of a statement that it was usual to clean bronzes in the museum, and that injury had been inflicted on them thereby; the only bronzes ever cleaned were a few brought home by Mr. Layard, and their value was much increased by the process, 8385*-8388.

Oldfield, Mr. Clumsy character of Mr. Oldfield's proposed building for a new museum of antiquities, &c., as being arranged with a view to unlimited extension, *Fergusson* 8455-8460.

Omissions to Purchase. See *Offers of Pictures. Piombo, Sebastiano del,* 2. *Purchases (National Gallery),* 3. 4. *Raphael,* 1. *Regulations, &c. (National Gallery). Rembrandt. Solly Collection. Titi, Santo di. Van Eyck. Woodburn Collection.*

Onslow, Lord. Letter from Lord Onslow to witness, dated 25 April 1853, stating that in consequence of the over-cleaning, so injuriously practised in the National Gallery, he will probably revoke his bequest of certain pictures to that institution, *Moore* 2550.

Orleans Gallery. Condemnation of the recent purchase of certain pictures from the Orleans family, *Coningham* 6982-6984. 6988.

Ornamental Grounds. Witness sees no advantage in removing the gallery out of London and surrounding it with ornamental grounds, *Hurlstone* 7177-7180——In case of the gallery being removed it is very desirable to surround it with ornamental gardens, *Dyce* 7633; *Russell* 8190; *T. Cubitt* 8802——Contemplated formation of ornamental grounds on the estate at Kensington Gore, *Bowring* 8732, 8733; *Sir W. Cubitt* 10233-10235.

Overstone, Right Hon. Lord. (Analysis of his Evidence.)—Date of witness's appointment as a trustee of the National Gallery, 5345, 5346——The earlier system of management has not occupied witness's attention, the present has, 5347, 5348——The number of trustees by whom business shall be proceeded with at their meetings is regulated by the good sense of those present, 5349-5354——The minutes are confirmed at the following meeting, 5355-5357——Under the existing system the absence of the trustees in the vacation does not embarrass the management of the gallery, the Treasury being its real controller, 5358-5365——In cases of emergency the trustees can always be brought together in the vacation, 5366——Any modifications in the constitution of the National Gallery must be determined by the objects of the nation in forming it, and the nature of its contents, 5367, 5368.

The trustees can only purchase pictures with the consent of the Treasury; it is obligatory on the keeper to assist the trustees with his advice as to purchases, 5369-5372——Measures adopted by the trustees with reference to the offer of the Manfrini collection at Venice; mission authorised by the Treasury to examine the collection, and determination of the trustees on the report thereof, not to recommend its purchase, 5373-5380. 5389-5392——(*Mr. Uwins.*) Statement as to the valuation of the Manfrini pictures, made by witness and Mr. Woodburn, 5380. 5382-5388——(*Colonel Thwaites.*) Witness thinks he can produce the valuation referred to by last witness, 5381——(*Lord Overstone.*) Purchases with which witness has been connected, 5393——The National Gallery is controlled by

Overstone, Right Hon. Lord. (Analysis of his Evidence)—*continued.*

the Treasury, aided by the trustees as to details; desultory character of the latter's proceedings, 5394. 5414.

Deficiency of our knowledge in matters of taste and art, 5395——Such pictures as the "Velasquez" recently bought, improve the public taste; suggestion as to lectures on art, 5396–5398. 5401——Purchases should be made as opportunities present themselves, 5398, 5399——Degree in which the objects of a National Gallery must regulate the principles of purchase, 5400——Want of principle in the formation of the present collection, 5402——The "Velasquez" would attract the attention of a connoisseur, without reference to the celebrity of its painter; reasons for which it was purchased, 5403, 5404——Witness declines a discussion as to the Spanish school, 5405——A National Gallery should contain specimens of every school, 5406–5409——Circumstances under which a union of collections of art might be beneficial, 5410——Injury sustained by the pictures in the present gallery, from the condition and situation of the building; expediency of its removal, 5411–5413.

Witness would substitute for the present defective constitution of management, one responsible and salaried head, who should be assisted by a council appointed by the Treasury, 5414–5420. 5432–5434——A like constitution should apply to a combined collection of art, 5421——It is not advisable to alter the practice as to the attendance of trustees at their meetings under their present constitution, 5422——Witness would prevent the evil of opportunities of purchase being lost, by giving the head in his suggested constitution, an open credit to be used under conditions restrictive of abuse, 5423. 5427, 5428. 5435——Minutes of the council's transactions should be laid before Parliament, 5424–5426.

No purchases are made without the sanction of the Treasury, 5429——Position, responsibility, and duties of the keeper of the gallery, 5430, 5431——Effect at sales from the trustees being known to be competitors, 5436–5438——The details of the Duke of Lucca's sale are not known to witness, 5439——Witness had no commission from the trustees, respecting pictures, when lately on the continent, 5440.

P.

Pacheco and Andrea del Sarto. Letter from R. Ford to Colonel Mure, M.P., Chairman, dated 24 May 1853, on Pacheco and Andrea del Sarto, *App.* 767.

Paduan School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 800.

Palma Vecchio. Lord Lansdowne purchased the picture by Palma Vecchio, (recently bought for the nation), it not being thought worth keeping by the trustees, *Sir C. Eastlake* 6218–6220——Strictures on the conduct of the trustees with respect to the purchase of the Marriage of St. Catherine, (attributed to Palma), which has been re-purchased from the nation by one of the trustees, *Moore* 9761, 9762.

Palmaroli, ——. A celebrated Roman picture-cleaner, referred to, *Sir C. Eastlake* 4488.

Panel Pictures. Destructive tendency of transferring pictures from panels to canvas, *Sir C. Eastlake* 6619–6624.

Panetti, Domenico. Statement as to the grounds on which a picture by Domenico Panetti was declined by the trustees, *Sir C. Eastlake* 5988–5992.

Panizzi, Antonio. (Analysis of his Evidence.)—Keeper of the printed books in the British Museum, 7832——Great inconvenience arising from the insufficiency of the space devoted to the library; suggestions for its enlargement, 7833–7841. 7850–7859——Recommended erection of a building in the middle of the quadrangle, which should accommodate 500,000 volumes, and serve more especially as a central reading-room, 7834, 7835. 7841. 7850–7856——Objection to the removal of works of art from the Museum, as having too intimate a connexion with the library; objects of natural history may however be very properly removed elsewhere, 7842–7849——At present, the quietest place for study in the library department is the general reading-room, 7856–7859——All due facilities are given by the trustees to distinguished literary individuals who may wish to study in the building, 7860–7862.

Pantheon, The (London). The Pantheon has a much greater number of visitors than the National Gallery, and the place, nevertheless, is kept free from dust, and the pictures are not injured by the effluvia from the crowds, *Foggo* 7357–7360.

Report, 1852–53—*continued.*

Parliamentary Grants. A fixed sum should be annually proposed to Parliament for the purchase of pictures, *Rep.* xv——Circumstances which must affect the grant for the ordinary purposes of the establishment, *Dennistoun* 5806——Explanation relative to witness's statement as to Mr. Hume's opposition to grants for pictures, *Sir C. Eastlake* 6575.——*See* also *Funds.* *Purchases* (*National Gallery*), 3. 5.

Parma School of Painting. Classified list of the masters of this school, with names of their principal followers, including painters of Modena and of other neighbouring places, from the earliest masters of note to Correggio, *App.* 805——From Correggio, *ib.*

Parmegiano. The Vision of St. Jerome was washed in 1852 with a sponge and water; a little mastic varnish was applied, on account of the great number of repairs done to it formerly, *Seguier* 679–686.

Explanation as to the non-purchase by the British Museum of a collection of the works of Parmegiano, offered for sale some years ago, *Carpenter* 9118–9126.

Patent Commissioners. Offer made to the Patent Commissioners to accommodate some portion of their models of inventions on the site at Kensington Gore, *Bowring* 8740.

Peace and War, The. See *Rubens*, V. *Wilson, Andrew.*

Pea-meal. Recommendation of a paste made from pea-meal for the removal of dirt from pictures, as preferable to either sponge or cotton with water, *Bentley* 1849, 1850. 1934, 1935——Modern pictures may never require actual cleaning, if occasionally washed with pea-meal, and slightly rubbed over with varnish, but old pictures require a different treatment altogether, *Stansfield* 3725, 3726.

Peel, Sir Robert, the late. Extract of letter from Sir R. Peel, 27 December 1846, respecting complaints made of the supposed over-cleaning of the pictures in the gallery, *Lord Monteagle* 5112——Opposition of Sir R. Peel to purchases of the early Italian school, *Sir C. Eastlake* 6023.

Reference to his opinion, with respect to the centrality of the gallery, that persons of various classes would there meet in mutual good will, &c., *Foggo* 7390——Letter from the late Sir Robert Peel to witness quoted, as expressing certain objections to the centrality of the gallery, *Russell* 8186, 8187.

Penknives. See *Steel Instruments.*

Pennethorne, James. (Analysis of his Evidence.)—Architect to the Board of Works and the Board of Woods and Forests, 8807——Has appeared before former Committees on the subject of removing or enlarging the National Gallery, 8808–8810——Has prepared several plans for its enlargement on the present site, 8811–8814——Explanation of a plan for a building (to contain paintings and sculptures) to be erected on the present site, including the barracks and workhouse at the back; the entire cost to the nation would be about 400,000 *l.*; 8815–8836——Without the barracks no suitable building can be erected even for the exhibition of pictures only, 8827, 8828.

Objection to the sites proposed by the Committee of 1851; 8837, 8838——Site formerly contemplated by witness, viz., the small barracks adjoining the corner of Kensington Gardens, 8839–8844——Advantages of a site near the Gravel Pits in Kensington Gardens, 8845–8850——The site of Gore House, taking all circumstances into consideration, is the most eligible that can be adopted, 8850–8852——Suggested plan for a national building on this site; explanation as to the height, frontage, &c., of the proposed edifice; contemplated allocation of the ground, &c., 8853–8881.

[Second Examination.]—Before the Gore House property was purchased witness examined a site at the end of Rotten Row, bordering on Kensington Gardens, for the purpose of erecting a National Gallery thereon; plans of the locality, &c., produced, 10311–10316——It would be an improvement on this plan if the building were removed further into Kensington Gardens towards the basin, 10316. 10321–10325——The length of the building proposed by witness would be about 625 feet, 10317——Consideration of a suggestion that the site be removed somewhat more eastward, and to a point directly opposite the Kensington Gore estate; objections to this site as being less desirable and involving more expense than that proposed by witness, 10318–10320. 10326–10358.

Contemplated elevation by artificial means of the site suggested at the end of Rotten Row, 10324. 10329. 10348–10352. 10355——The existence of a row of private houses, near the turnpike need not be prejudicial to this site, as, by means of ornamental grounds, their appearance could be concealed from the gallery, 10325. 10358——If the building can be kept well back from the road, its advantages as a site, independently of expense or public convenience, are still preferable to the suggested site opposite the Gore House estate, 10356–10363——The centre of Hyde Park is the finest site for architectural effect on account of its commanding position, 10364, 10365.

In the event of a public thoroughfare for vehicles, &c., being made across the park,

Report, 1852-53—*continued.*

Pennethorne, James. (Analysis of his Evidence)—*continued.*

it is more desirable that the road be on the surface, and that the broad walk through Kensington Gardens be used for the purpose, under certain restrictions, and ornamentally arranged, than that a tunnelled road along the sunk fence be provided, 10366-10389. 10406——If the site near the gravel pits were decided on the park gates should necessarily remain open during the night, which would be exceedingly objectionable, 10390-10400. 10404, 10405——Some situation in Hyde Park is on the whole the most desirable that can be selected, 10401. 10407-10410——Kensington Palace itself would be the finest and most appropriate site about London, 10402, 10403.

Periodical Investigations. Desirableness of periodical investigations in matters of art, by Committees of the House of Commons, *Sir C. Eastlake* 6559-6562.

Periodical Meetings of the Trustees. Extract from the Minutes of the Trustees of the National Gallery, 10 June 1840, respecting fixed periods for their meeting, *App.* 734.——*See* also *Meetings of the Trustees.*

Petersburgh, St. Explanation as to the collections of sculpture and painting being under the same roof at St. Petersburgh, *Baron De Klenze* 9363——Building by witness of the museum of art and antiquity at St. Petersburgh, which is arranged on the same principle as the Pinacothek at Munich, with respect to light and the hanging of the pictures, &c., *ib.* 9393, 9394. 9401. 9403. 9410, 9411——Answers to queries on the national collections and museums of fine arts at St. Petersburgh, *App.* 753 *et seq.* 836.

Picture-Cleaners:

1. *Generally.*
2. *Qualifications requisite in a Cleaner.*

1. *Generally:*

Great difference of opinion existing amongst picture-cleaners as to the best process to be adopted; witness makes no special secret of the mode pursued by him, *Seguier* 454-462——Witness's knowledge of picture-cleaning has been derived from long practice rather than from study, *ib.* 503, 504——Witness would not object to acquaint his employers with the nature of the processes used by him in cleaning pictures, *Bolton* 966, 967—— Refusal of witness to clean certain pictures for the trustees in 1844, on account of the limited discretion and authority vested in him, *Brown* 1097-1106. 1150-1156. 1176——Reluctance of witness to reveal the processes used by him in cleaning, *Farrer* 1255-1259; *Bentley* 1741-1745——The discretion of cleaning must always be entrusted to one person, *Farrer* 1497-1499——Witness has had extensive practice as a picture-cleaner, and learnt the art entirely by practical experience, *Bentley* 1732*-1736.

Generally speaking cleaners are mere empirics, *Coningham* 3040——Possibility of cleaning being properly performed; in such cases it should be left to the discretion of the cleaner, *ib.* 3134-3138——Unnecessary mystery made by cleaners of the processes used by them, which are nevertheless generally well known, *Sir T. Sebright* 3480-3483 ——Circumstance of witness having had some of his own pictures cleaned when abroad, and having entrusted the process to the discretion of the operator, *Cheney* 4323-4331 ——Picture-cleaners are too fond of practising their art; some of them describe it as a fascinating occupation; it is also interesting to painters, *Sir C. Eastlake* 4701, 4702.

2. *Qualifications requisite in a Cleaner:*

Every cleaner should have a knowledge of chemistry, and of the peculiarities of the works of the old masters, *Brown* 1234, 1235——Necessity for every picture-cleaner being acquainted with the different schools of art, and the several modes of glazing, &c., *Farrer* 1534; *Nieuwenhuys* 1730, 1731——Clear sight and great presence of mind are very essential in cleaning, *Nieuwenhuys* 1606-1609——Advantage of the cleaner being thoroughly conversant with the works of the old masters, and being acquainted with the vehicle employed in each case, *Sir E. Landseer* 4172, 4173.

See also *Assistant Cleaners. Brown, Mr. Chemistry. Cleaner to the Gallery. Farrer, Mr. Palmaroli, ——.*

Picture-cleaning. See *Cleaning.*

Pictures. Statement of the number of pictures now in the National Gallery, distinguishing those at Marlborough House, *App.* 735——Number and designation of pictures belonging to the National Collection, at present deposited in other localities, and from what cause, *ib.* 749.

Pinacothek (Munich). Building of the Pinacothek at Munich, by witness, adverted to; size of the rooms and arrangement of the pictures, &c., *Baron De Klenze* 9392. 9395-9400. 9404-9408. 9414.

Report, 1852-53—*continued.*

Piombo, Sebastiano del:

1. *The Raising of Lazarus.*
2. *The Holy Family.*

1. *The Raising of Lazarus:*

This work was washed in 1852 with a sponge and water, and a little mastic varnish was rubbed over it as being desirable on account of the considerable number of repairs, *Seguier* 679-686. 721-725——Course formerly adopted by witness to remove the worms from the Raising of Lazarus; this picture can hardly be said to have deteriorated since it has been in the gallery, *ib.* 719, 720——Opinion of the keeper of the gallery, in 1836, that this picture was then in a very perfect state, *ib.* 903-905——The Sebastiano del Piombo was endangered by the recent washing; this work has been growing darker for some time, *Farrer* 1349-1353——Noble character of the picture adverted to, as bearing comparison in former years with Raphael's Transfiguration, *Moore* 9953.

2. *The Holy Family:*

Sale of this work in 1849 adverted to, as an instance of the culpable neglect of the trustees in omitting to secure valuable acquisitions; it was purchased by Mr. Thomas Baring for 1,980 *l.*, a very moderate price for so noble a picture, *Moore* 9953-9955. 10006, 10007.

Plague at Ashdod, The. See *Poussin, Nicholas*, II.

Plass, Augustus Frederick. (Analysis of his Evidence.)—Has copied pictures in the National Gallery for the last sixteen years, 9248——Was previously a student at the British Museum, 9249——How far there is inconvenience to the students at the gallery in their periods of admission being too limited; privilege enjoyed by the Royal Academy students, 9250-9252——Insufficient space at present devoted to the pictures, 9253-9255——A removal of the gallery to Kensington would not be objectionable to the students generally, 9256-9258. 9286-9289——The pictures are fast deteriorating on the present site, 9258-9260——Inconvenience to the students of the pictures being covered with glass; it might, however, be removed during the copying, 9261-9265——The several classes of pictures are generally in equal demand among the students, 9266-9280——Inefficient ventilation of the gallery adverted to, 9281-9283——Advantage to the students of the departments of sculpture and painting being combined under one building, 9284, 9285.

Plaster Casts. See *Casts.*

Portraits (British Museum). The collection of portraits would be a valuable addition to the National Gallery, as an illustration of history, *Hawkins* 7772-7774.

Poussin, Nicholas:

I. *Characteristics of this Painter.*
II. *The Plague at Ashdod:*
1. Its Cleaning defended.
2. Condemnation of the Cleaning.
III. *The Cephalus and Aurora; its Condition, &c.*

I. *Characteristics of this Painter:*

Nicholas Poussin never used real glazing on the surface of his pictures, *Bolton* 1061, 1062——A large proportion of Poussin's pictures are painted on red grounds, *Moore* 2160——As a colourist or for finish he cannot be compared with the Venetian masters, *ib.* 2177-2180——Dangerous effect of cleaning on the glazing of Poussin's pictures, *Sir C. Eastlake* 4767-4770.

II. *The Plague at Ashdod:*

1. Its Cleaning defended:

Approval of the cleaning of this picture, *Uwins* 58. 69——The surface of the work was not penetrated in the cleaning, and no repairs were done to it; simple mastic varnish was used, *Seguier* 612-617——Improvement effected by the cleaning, *ib.*——How far this work has been improved by cleaning, *Bolton* 1023. 1028-1030——The Plague at Ashdod was always an exceedingly imperfect picture, and from its being painted on a red ground, which is gradually becoming more perceptible, will in course of time be quite lost as a work of art; the cleaning did not at all alter its condition in this respect, *Uwins* 3185-3200.

Report, 1852–53—*continued.*

POUSSIN, NICHOLAS—continued:

II. *The Plague at Ashdod*—continued:

2. Condemnation of the Cleaning:

The Plague at Ashdod has been over-cleaned, *Farrer* 1404, 1405——It has lost harmony by the cleaning, but the glazing has not been disturbed, *Bentley* 1876–1878. 1958–1969——The Plague at Ashdod has suffered much by cleaning, and the glazing or upper surface of the original work has been removed from the greater part of it, *Moore* 2153–2180——Present inharmonious and disagreeable appearance of the picture; witness is not intimate with its former condition, *Hart* 3271–3275——The former unsatisfactory condition of the Plague at Ashdod has been rendered worse by the cleaning, which was a specially injudicious risk in this case, *Dennistoun* 3377–3379——Remarks of Mr. Buchanan on the cleaning of the Plague at Ashdod, to the effect that cleaning was not required, and has been exceedingly injurious, *App.* 769.

III. *The Cephalus and Aurora; its Condition, &c.:*

The Cephalus and Aurora is a more deeply painted work than the Plague at Ashdod; it is in a fine condition, and does not require cleaning, *Moore* 2162. 2181–2184.

President of the Royal Academy. Objection to the president of the Royal Academy being one of the trustees of the National Gallery; grounds for this objection, *Hurlstone* 6724–6733——Expediency of not admitting into the management of the gallery any person who may have a divided allegiance, or may from any cause be adverse to the interests of the establishment, *Foggo* 7430.

Previous Cleanings. Liability of repairs or repaints effected in previous cleanings to be brought away by applications which would not affect the original surface of an old seasoned picture, *Rep.* xi——Imperfect state of many pictures in the gallery, from their having undergone previous cleanings in former times; in some instances the repairs and blemishes are almost imperceptible, *Uwins* 181–189——Any injuries now apparent in the nine pictures cleaned in 1852 may have been occasioned by former cleanings, but concealed under the subsequent accumulation of dirt upon the surface, *Hart* 3246–3250——Much that is unsatisfactory in the present condition of the recently cleaned pictures is due to what may have been done to them on former occasions; the concealment of defects disclosed by the cleaning would still further improve the pictures, *Russell* 4895–4901. 4939–4945.

Prints, &c. (British Museum). Opinion that the prints in the museum should be combined with the sculptures and paintings in the proposed combined departments of art, *Sir R. Westmacott* 9062–9064——Objections to the collection of prints and drawings being separated from the library and attached instead to the National Gallery, *Carpenter* 9143–9148. 9157–9167.

Faulty administration of the affairs of the print department before the appointment of Mr. Carpenter, *Hawkins* 6853——Considerable additions made to the department of prints and drawings since witness has been at the head of it; present size and character of the collection, *Carpenter* 9080–9082. 9100–9106——Insufficiency of the present space devoted to the exhibition of the prints, *ib.* 9083–9086——Room proposed to be built by Mr. Smirke to afford the necessary accommodation, *ib.* 9086–9090.

Suggested employment of screens or frames covered with glass for the exhibition of the prints; chronological arrangement might thus be better effected, and the prints could be changed every three or four years, *Carpenter* 9089. 9091–9099. 9128, 9129. 9149–9156. 9168——The several classes of prints are generally in equal demand, *ib.* 9107–9112——The great mass of visitors to the department are students, who are allowed to make sketches from the prints, *ib.* 9111–9113——There are about 130,000 prints and from 6000 to 6500 drawings in the museum, *ib.* 9100, 9101——The prints of the works of the old masters have of late years considerably advanced in price, *ib.* 9182–9184.

See also *Framing of Prints and Drawings.* *Purchases (British Museum).* *Washing (British Museum).*

Private Collections. Belief that the pictures in the National Gallery have not been worse treated in the cleaning, &c. than those in private collections, *Sir E. Landseer* 4197–4200.

Proceedings of the Committee. *Rep.* xix *et seq.*

Processes of Cleaners. See *Picture Cleaners*, 1.

Prussia. Answers to queries on the national collections and museums of fine arts in Prussia, *App.* 753 *et seq.*

Public, The. See *Admission of the Public.* *Working Classes.*

Report, 1852–53—*continued.*

Public Opinion. Greater sensitiveness of public opinion on subjects of art, as compared with other subjects, *Dennistoun* 5799, 5800——Newspaper and other criticisms to which the director proposed by witness would be exposed; extent to which public opinion is expressed on the continent, *Sir C. Eastlake* 6329–6336——The present inquiry is attributed by witness to the central position of the gallery, in being the more under the public eye, *Hurlstone* 7133. 7174–7176.——*See* also *Working Classes.*

Public Taste. Deficiency of the public knowledge as to matters of taste and art, *Lord Overstone* 5395——The National Gallery does not fulfil the conditions to be expected from a national collection, *Dennistoun* 5746——Preference of the public for the severe and earlier school of art; degree in which it may be beneficial, *ib.* 5837–5840——Witness is not prepared to say that the establishment of the National Gallery has had any effect in improving the public taste; a love of art is more generally spread than it was a few years ago, *Sir C. Eastlake* 6459–6465. 6481, 6482.

The gallery has done much to improve the public taste, and to promote the progress of art, but its effects have been far inferior to what they would have been under a better system of management, *Hurlstone* 6784–6793——Excellent effects of the British Museum in educating the people in works of art, *Sir R. Westmacott* 9030, 9031——Vitiated taste and judgment imputed to the public with respect to the art of painting, of which, in its purity, they are at present quite ignorant; how far such depreciation of art has increased of late years, *Moore* 9968–9972. 9987. 9995–10009——The purchase of inferior pictures though they may be all the more pleasing to the public, is very reprehensible, *ib.* 9987–9994.

See also *Velasquez*, II. 1.

Purchases (*British Museum*). Each department of the British Museum has a sum allotted to it by annual vote; the same objections have presented themselves in regard thereto as have been already urged against an annual grant for the purchase of pictures; but the sums have been small, *Lord Aberdeen* 5332, 5333——Approval generally of the present system of management as regards purchases by the heads of the departments under the control of the trustees, *Hamilton* 8885–8889. 8958–8987——Discretion vested in Mr. Panizzi in purchasing for the printed book department, *ib.* 8985–8987.

Restrictions imposed upon the heads of the departments in making purchases, and opportunities of valuable acquisitions frequently lost thereby, *Hawkins* 7706–7711. 7795–7801——Reference to the occurrence of mistakes under the management of the British Museum, in neglecting to purchase certain valuable prints about five years ago, *Ford* 7919–7924.

System pursued in making purchases of prints, &c.; the trustees are most anxious not to neglect any opportunities for valuable additions; discretion occasionally exercised by witness in obtaining rare acquisitions, *Carpenter* 9114–9126. 9170–9181——Judicious manner in which purchases have been made for the department of prints and drawings; this is attributable to the discretion exercised by Mr. Carpenter as director, rather than to the management of the trustees, *Wellesley* 9653–9658.

See also *Parmegiano.*

Purchases (*National Gallery*):

1. *System pursued hitherto by the Trustees in their Purchases.*
2. *Absence of any principle in the acquisition of Works of Art; Schools to which the Trustees have chiefly confined their Purchases.*
3. *Opportunities missed of making advantageous Purchases; Causes thereof.*
4. *Condemnation of the Purchases made by the Trustees of late years.*
5. *Suggestions with regard to the future.*
6. *Purchases of Pictures Abroad.*
7. *Papers laid before the Committee.*

1. *System pursued hitherto by the Trustees in their Purchases:*

The responsibility of negotiating the purchase of pictures was attached originally to the office of keeper; by the Treasury instruction of 1845 the keeper is relieved therefrom, and the duty has consequently devolved upon the trustees, who appear from an early date to have exercised it, *Rep.* iii–v.

Regulation laid down for securing the authenticity of pictures before their purchase, *Sir C. Eastlake* 4645 *et seq.*——The trustees can only purchase pictures with the consent of the Treasury; it is obligatory on the keeper to assist the trustees with his advice as to purchases, *Lord Overstone* 5369–5372. 5429——Purchases for the National Gallery with which witness has been connected, *ib.* 5393——Effect at sales of the trustees being known to be competitors, *ib.* 5436–5438.

Details of the purchases made by the trustees since 1835, *Christie* 5616–5633——Attendance of officers from the gallery at witness's sales; Mr. Seguier and Sir C. Eastlake have generally purchased, *ib.* 5675–5682——Whoever attends to bid for the National Gallery should not be known as such, *ib.* 5702–5705——It was the practice of the

Report, 1852-53—*continued.*

PURCHASES (*NATIONAL GALLERY*)—continued.

1 *System pursued hitherto by the Trustees in their Purchases*—continued.

trustees to have witness's report, as keeper, on the merits of pictures offered, *Sir C. Eastlake* 6010-6014. 6016-6019——Mode in which the trustees obtained information as to the eligibility of offers, *ib.* 6015. 6020-6022. 6075. 6187——Suggestions made by witness as to purchases, *ib.* 6025-6027——Remarks made in Parliament lessened the disposition of the trustees to make purchases, *ib.* 6034-6041. 6045-6053——Witness is not aware of any rule preventing the trustees from recommending to Parliament the purchase of collections, *ib.* 6088, 6089.

Witness has no knowledge as to purchases not being made from 1847 to 1851, *Sir C. Eastlake* 6042-6044——Reason of purchases being suspended at times, *ib.* 6202——The evils in the present system of purchasing pictures for the gallery arise from the defectiveness of the institution, and not from lack of zeal in the trustees, *ib.* 6226-6228——Details of a purchase just concluded at Christie's, in illustration of the mode in which pictures may be recommended to the trustees, and showing the necessity of immediate action on their part, without attending to the regulations of the Treasury, *ib.* 7027-7052——Mode in which purchases were effected for the gallery during its earlier periods, *Thwaites* 9678-9685.

2. *Absence of any principle in the acquisition of Works of Art; Schools to which the Trustees have chiefly confined their Purchases:*

No system has been pursued hitherto in the acquisition of pictures; the gallery ought to comprise everything that can show the progress of art; but this should not at present be made too much an object, *Lord Aberdeen* 5334-5341——Degree in which the objects of a National Gallery must regulate the principles of purchase, *Lord Overstone* 5400——Want of principle in the formation of the present collection, *ib.* 5402——Absence of system in purchases made by the trustees; their preference for the schools of Bologna and the Netherlands, *Dennistoun* 5829. 5891——Expediency of supplying the deficiency of works of the Italian, Flemish, German and Upper Rhine schools, *ib.* 5830-5836——Principle which should guide the trustees in their purchases; instance of a recent Spanish picture bought by them, *ib.* 5841. 5846. 5850. 5851.

Pictures were purchased solely for their individual merit, and without reference to any historical or chronological system, *Sir C. Eastlake* 6023, 6024, 6028——The trustees purchased chiefly of the Flemish and Bolognese schools, *ib.* 6029——The principle chiefly influencing the trustees in purchases was to confine themselves to pictures of the highest merit, *ib.* 6059. 6066. 6068, 6069——In forming a collection on any fixed system, such as Prince Albert's, a certain discretion must obtain, *Sir C. Eastlake* 6071. 6073, 6074——The trustees did not make purchases on any systematic principle, *ib.* 6073——Difficulty felt by witness in offering advice in regard to the schools from which purchases should be selected, *ib.* 6476-6480.

3. *Opportunities missed of making advantageous Purchases; Causes thereof:*

Neglect by the present managing body of sundry opportunities of acquiring valuable works for the gallery; within the last three years, the collection might have been made one of the finest in the world, *Foggo* 7257. 7329-7342——Several opportunities have recently been lost for making valuable additions to the gallery, *Ford* 8001-8004——How far the omission to make purchases is attributable to the want of funds, or the fault of the trustees, *Wellesley* 9562-9614——Mention of several valuable acquisitions which the trustees have neglected to secure, though they have had ample opportunities of doing so, *Moore* 9749-9753. 9805, 9806. 9834-9844.

Many opportunities of making advantageous purchases have slipped by, because there has not been time to apply to the Treasury; instance in regard to a recent sale of Spanish pictures, *Sir C. Eastlake* 6297. 6307-6313——The opportunities missed of purchasing pictures have resulted both from the number of trustees, and from their having no money at their disposal, *ib.* 6374, 6375.

4. *Condemnation of the Purchases made by the Trustees of late years:*

The large prices occasionally given for single pictures might have bought a dozen valuable pictures of the early schools, *Christie* 5733-5736——Condemnation of the proceedings of the present trustees, with respect to purchases made by them, as well as for omitting to purchase certain works which were really worthy of the gallery, *Coningham* 6955-6957. 6961-6988——Injudicious purchases made for the gallery of three pictures by Guido, and of the Soult Titian, *Foggo* 7315-7320——Consideration of the manner in which purchases have been made under the present system; charges of omission and commission brought against the trustees; anticipated improvement under the proposed system of one director, *Wellesley* 9541-9614. 9618-9639. 9659-9661.

Evidence in detail, condemnatory of the system of purchasing for the gallery since 1843, both as regards omission and commission, *Moore* 9739-9860——Prior to 1843 the purchases were on the whole satisfactory, *ib.* 9743——Since that period 18 pictures have been bought, either under the keepership or trusteeship of Sir C. Eastlake, only one of which

Report, 1852–53—*continued.*

PURCHASES (NATIONAL GALLERY)—continued.

4. *Condemnation of the Purchases, &c.*—continued.

which is unexceptionable, *ib.* 9744–9748——Out of the entire number only six have any pretence of belonging to the purer and greater periods of art, *ib.* 9746, 9747——Partial condemnation of the purchases of the Jewish Rabbi, by Rembrandt; of Gerard Dow's portrait of himself, and of the Temptation of St. Anthony, by A. Caracci, on the score of better works having been obtainable for less money, *ib.* 9805, 9806——Nine of the purchases (not hitherto criticised by witness) are altogether indefensible, *ib.* 9806——The pictures purchased since 1843, are not only of a degenerate period of art, but are, most of them, bad and damaged specimens of their class; further comments upon them severally, *ib.* 9941, 9942. 9945-9950——During the same time works of the finest period of art, and of exceeding value, might have been purchased for the gallery at extremely moderate prices; enumeration of these pictures; showing also the amounts fetched by them at public sales, as contrasted with the exorbitant sums paid for the gallery purchases, *ib.* 9942-9944. 9950-10004——It is only since 1843, that the purchases have been so exceedingly ill-advised, *ib.* 9958, 9959——The injudiciousness of the purchases cannot be a mere matter of opinion, inasmuch as they chiefly comprise works of inferior schools and degenerate periods of art, *ib.* 9960–9963. 9981–9994.

5. *Suggestions with regard to the future:*

Every recommendation for the purchase of a picture should originate with the proposed director of the gallery, and be made in writing to the trustees, *Rep.* xv——A fixed sum should be annually proposed to Parliament for the purchase of pictures, and placed at the disposal of the trustees, *ib.*——The most important duty attached to the management, and involving the greatest amount of responsibility, is that of picture purchasing, *ib.* xvi.

Expediency of the nation purchasing works in good condition, and of not cleaning them, *Coningham* 3101–3105——Purchases of importance should be sanctioned by the House of Commons; authority should also be given to a limited body of trustees to give a positive recommendation for the purchase of any picture, *Lord Aberdeen* 5316–5320——In cases of purchases, a jury of experts might be called in, *ib.* 5329, 5330——The objections to an annual vote for the purchase of pictures would be obviated by the responsibility of purchase resting on one individual, *ib.* 5334. 5340——Purchases should be made as opportunities present themselves, *Lord Overstone* 5398, 5399.

Whether expedient to purchase whole galleries, and then draft off such pictures as were not wanted, considered, *Christie* 5739-5745——The trustees should have power to sell such portions of collections bought by them as it is not desirable to retain, *Dennistoun* 5817–5820——No opportunity of purchasing fine pictures should be allowed to pass, *Sir C. Eastlake* 6070, 6071——It would be desirable to purchase collections when the opportunity occurred, and either sell the inferior pictures or give them to provincial galleries, *ib.* 6090–6105.

Class of works most desirable to be purchased, as well for the sake of students as for the public, *Coningham* 6959, 6960. 6987–6989——The committee of taste proposed by witness need not consist of artists or professed connoisseurs, *Foggo* 7258. 7273——Their responsibility in making purchases should be entirely of a moral and honourable kind, *ib.* 7259–7261.

Power to be vested in the director, proposed by witness, with respect to purchases; he should have control over a sum placed at his disposal by Parliament; but in special cases requiring a large expenditure, he should consult the Home Secretary, *Ford* 7899. 7904–7931. 8017–8026. 8050–8056. 8062–8066——Probability of but very few mistakes occurring in the purchases made by the director; he might, if he found it advisable, consult competent persons as to the expediency of any purchase, *ib.* 7900. 7907–7917. 7900. 7991 —— How far it might be expedient for Parliament to decide generally upon the class of works to be more especially purchased by the director, *ib.* 7990, 7991. 8050. 8154——A sum of 5,000 *l.* or 10,000 *l.* should be placed at the disposal of the director, to enable him to lay hands on a picture at a moment's notice, *ib.* 7926–7931. 8055, 8056. 8062–8066.

The expenditure and the system generally, for the first few years, should be such as would facilitate great rapidity of collection, *Russell* 8089. 8095 *et seq.*——Mode of proceeding proposed to be taken severally by the council of art and the board of trustees, &c. with respect to purchases; probability of their opinions clashing; body in whom the responsibility should be vested, *ib.* 8096–8110. 8141–8174——How far it may be desirable that Parliament should lay down any rules for the guidance of the management in purchasing works of a certain character or school of art, *ib.* 8142–8160——Résumé of witness's proposed ssytem of purchasing, as showing the several checks against improper expenditure, *ib.* 8167–8174——How far any control should be exercised by Parliament over the director in the class of purchases made by him; his instructions should be general, and he should act on his own judgment as much as possible, *Wellesley* 9618–9620. 9630–9639.

Report, 1852-53—*continued.*

Purchases (National Gallery)—continued.

6. *Purchases of Pictures Abroad:*

The proposed trustees should be empowered to send one or more of their number abroad to examine and report upon pictures offered to them, *Dennistoun* 5808, 5809——The purchase should be made on the resolution of the majority of the Board, *ib.* 5809, 5810——Individual trustees might buy pictures at their own risk when travelling, but only receive cost price for them from the Board, *ib.* 5811.

In special cases, one of the committee of taste might purchase pictures abroad, and, if necessary, the other members should go and see them beforehand, *Foggo* 7262-7264. 7274, 7275——Pictures in foreign countries may, as a general rule, be readily acquired without sending persons to look after them, *ib.* 7400-7404——Proposed employment of competent persons to travel for the purpose of inspecting or purchasing works suitable for the projected collections of art, *Dyce* 7450, 7451. 7630-7632.

7. *Papers laid before the Committee:*

Copy of the "existing regulations" alluded to in p. 49 of the return laid before the House of Commons in February 1853 (Parliamentary Paper, No. 104), by which the trustees are precluded from recommending to the Treasury the purchase of the works of living artists, *App.* 748.

Number and designation of the pictures offered for sale or as gifts since 1847, which, while otherwise eligible, have been declined by the trustees from want of room for their accommodation, *App.* 750.

List of pictures purchased or accepted, as gift or bequest, by the trustees, since the lowest date specified in the catalogue of the collection appended to the Report of the Committee on National Gallery, in the year 1850, with the prices paid for the purchased pictures, *App.* 750.

Raising of Lazarus, The. See *Piombo, Sebastiano del,* 1.

Raphael:

1. *Non-purchase, by the Trustees, of several of his Works commented on.*
2. *Former Cleaning of the Vision of a Knight adverted to.*
3. *Proposed removal of the Cartoons from Hampton Court.*

1. *Non-purchase, by the Trustees, of several of his Works commented on:*

Witness has no knowledge of the tapestries, after Raphael's cartoons, bought for the Berlin Gallery, having been for sale in England in 1840, *Sir C. Eastlake* 6168-6171——Witness does not recollect two cartoons by Raphael being refused in 1846, *ib.* 6189-6192——Enumeration of several valuable works of Raphael omitted to be purchased by the trustees, *Moore* 9834-9844. 9852-9854——Four Raphaels have been sold since 1843, the entire cost of which was considerably less than the amount paid for the Boar Hunt of Velasquez, *ib.* 9834-9844——Purchase by witness of the Apollo and Marsyas for 70 *l.* 7 *s.*; opinion as to the authenticity and exceeding merit of this work, for which 1,000 *l.* have since been offered, *ib.* 9837-9844.

2. *Former Cleaning of the Vision of a Knight adverted to:*

Witness had nothing to do with the cleaning of the Vision of a Knight some years since, *Seguier* 703-708——The picture has not been cleaned since its purchase from Mr. Egerton; Mr. Woodburn was consulted as to the purchase; statement reported to have been made by him that the picture had been cleaned and damaged; witness does not believe there is any foundation for it, *Sir C. Eastlake* 4639-4649.

3. *Proposed*

Report, 1852-53—*continued.*

RAPHAEL--continued.

3. *Proposed removal of the Cartoons from Hampton Court:*

The cartoons at Hampton Court might be nearer London, if secured from the influence of smoke, *Sir C. Eastlake* 6571, 6572——With the protection of glass coverings, the cartoons at Hampton Court would be quite secure in the National Gallery, *Hurlstone* 7155-7157——The removal of the cartoons to the National Gallery is very desirable, *Foggo* 7263. 7398, 7399. 7431.

Regent's Park. The next best site to the present would be in the Regent's Park, at the end of Portland Place; possibility of ground being obtained there for the purpose, and means by which a proper drainage could be effected, *Fergusson* 8443. 8501-8519.

Regulations (*British Museum*). There is a printed code of laws, containing regulations for general management, and these are revised by the trustees from time to time, *Hawkins* 7698-7701.

Regulations, &c. (*National Gallery*). The only documents in the nature of regulations framed by the Treasury are the minutes appointing the keeper and assistant and the trustees in 1824, *Rep.* iv——No account has been given as to the regulations referred to in the minute-book of the trustees, further than that the term alluded to such usages as prevailed, *ib.* v——The want of regulations, comparatively unimportant in the infancy of the institution, became more serious as the business increased; expediency of the Treasury or the trustees themselves having supplied this deficiency, *ib.*——The control exercised by the trustees rested on usage, and not upon any rules or resolutions, *ib.* x.

Until very recently witness was not aware of the existence of a Treasury document, dated 13 March 1824, containing certain instructions to Mr. William Seguier, the first keeper of the gallery, on the subject of picture-cleaning, *Uwins* 16-20——Regulations or instructions issued to Mr. William Seguier relative to cleaning, alluded to, *Sir C. Eastlake* 4406-4409——Such regulations were mere minutes or resolutions of the trustees, *ib.* 4410, 4411——Instructions laid down by trustees present at one meeting have been entirely lost sight of by those present at another meeting, and different directions given; exemplification thereof with respect to the cleaning of pictures by washing, *ib.* 4412, 4413.

Witness received no instructions, when appointed a trustee, as to his powers or duties; idea entertained by him as to his responsibility on undertaking the office, *Russell* 4782-4791——He is not aware of the existence of any regulations with reference to cleaning, *Russell* 4808-4812——Minute of the 9th February 1852, as to all alteration of practice in respect to occasional cleaning; circumstances which gave rise to this regulation, *ib.* 4814-4821——Witness cannot agree with Sir C. Eastlake in the opinion that the directions of the trustees in regard to the cleaning of the pictures were overpassed; Mr. Seguier did no more than remove the old varnish from the pictures, and re-varnish them, *ib.* 4839-4843——The phrase "regulations," used in the returns made of the minutes of the trustees, merely applies to usages that prevailed; none exist in writing, *Lord Monteagle* 4966——Date of appointment of Mr. William Seguier; there were no instructions or regulations of any kind laid down by the Treasury, *Lord Aberdeen* 5273-5278——Manner in which Mr. Seguier exceeded the directions of the trustees to remove the varnish from certain pictures, *Sir C. Eastlake* 5934-5936.

Copy of the "Regulations for the care of the Pictures," mentioned in p. 41 of the Return of minutes of meetings of trustees, laid before the House of Commons in February 1853, (Parl. Paper, No. 104), *App.* 748——Copy of the "Existing Regulations," alluded to in p. 49 of the same Return, by which the trustees are precluded from recommending to the Treasury the purchase of the works of living artists, *ib.*

See also *Cleaner to the Gallery. Cleaning*, I. 1. *Keeper of the Gallery*, 3. 4. *Purchases* (*National Gallery*), 1. 5. 7. *Seguier, Mr. John*, 1. *Uwins, Mr.*, 3.

Rembrandt. Incautious manner in which water was applied to and removed from the picture of the Woman taken in Adultery, when washed by Mr. Seguier and his assistant; injury likely to arise in consequence, *Moore* 2371-2381——Objection to the purchase by the trustees of Rembrandt's portrait of himself, as being desperately injured, *ib.* 9860.

Information with regard to a Rembrandt belonging to the Archbishop of York, into which witness, by Mr. Thane's desire, introduced the head of a black man, *Lance* 5230-5253.

See also *Purchases* (*National Gallery*), 4.

REMOVAL OF THE GALLERY:

1. *Expediency of such Removal.*
2. *Objections thereto.*

1. *Expediency of such Removal:*

Injury sustained by the pictures in the present gallery from the condition and situation of the building; expediency of its removal, *Lord Overstone* 5411-5413——A better situation for the gallery might be selected by going westward, *Faraday* 5525-5527——Evi-

Report, 1852-53—*continued.*

REMOVAL OF THE GALLERY—continued.

1. *Expediency of such Removal*—continued.

dence in support of the projected removal of the gallery to Kensington, *Sir C. Eastlake* 4685-4691; *Dyce* 7490-7515. 7621, 7622; *Ford* 7944-7948. 7964-7968; *Russell* 8184; *Plass* 9258-9260; *Davies* 9301-9309; *Wellesley* 9465-9470——Opinion that the removal of the gallery to Kensington would not tend to decrease the number of visitors, *Dyce* 7510-7515. 7621, 7622. 7638——Evidence in support of the opinion that no inconvenience would result to the public generally as regards attendance by the removal of the National Gallery, &c. to Kensington, *Bowring* 8626-8679——Difference of opinion among artists as to the advisability of the removal, *ib.* 8650-8652. 8662-8670.

Conclusion come to by the Committee, recommending the removal of the gallery to some more suitable locality, *Rep.* xvii.

2. *Objections thereto:*

Evidence generally to the effect that it is very undesirable to remove the gallery from its present site to Kensington, *Coningham* 6896. 6922-6934. 7005-7022; *Hurlstone* 7053-7205; *Moore* 10011-10026——The centrality of the gallery, and its accessibility to the public from all parts of the metropolis, are strong arguments against its removal to Kensington, where the number of visitors would be greatly reduced, *Hurlstone* 7058. 7122, 7123. 7136-7154. 7181-7195——The Crystal Palace at Sydenham, and the proposed national collection of fine arts at Kensington, are not parallel cases from which to imply that they will each be equally well attended by the public, *ib.* 7181-7191——Witness entirely concurs in Mr. Hurlstone's objections to the removal of the site of the gallery, *Foggo* 7355, 7356. 7390.

See also *Atmospheric Influences. Combined Departments of Art. Kensington Gore. School of Design (Marlborough House). Site of the Gallery. Students (National Gallery). Working Classes.*

Repairs. See *Previous Cleanings. Restorations of Pictures. Rubens*, IV. *Velasquez*, II. 3.

Reports. No regular reports were made by the keeper to the trustees, of the state of the pictures; periodical reports should be provided for, *Lord Monteagle* 4962——An annual report from the trustees to Parliament is desirable, *Lord Aberdeen* 5313; *Russell* 8117——An annual report should be made to Parliament under the plan of management suggested by witness; but entire publicity of detailed transactions is not desirable, *Dennistoun* 5765——The annual report ought to embody the motives guiding the trustees in their transactions, both collectively and individually, *ib.* 5772-5774.

Resinous Varnish. Employment of this varnish by witness, as an improvement on simple mastic varnish, which it nearly resembles, *Brown* 1111-1115.

RESPONSIBILITY:

1. *Nature and Extent of the Responsibility vested in the present Trustees.*
2. *On whom such Responsibility should rest for the future, considered.*

1. *Nature and Extent of the Responsibility vested in the present Trustees:*

In former years the trustees confided implicitly in the keeper of the gallery as to the care and treatment of the pictures; of late years they have exercised a more immediate control, *Rep.* x——By the exercise of this control the trustees took upon themselves the responsibility of all details in the treatment of the pictures, *ib.*

How far it may be desirable to impose greater responsibility on the trustees, *Uwins* 247-255——The form of responsibility at the gallery is not objectionable, but every care should be taken to vest that responsibility in a keeper thoroughly acquainted with the principles of the art of the old masters, *Moore* 2382. 2387. 2397-2403. 2409. 2554, 2555——Objection to the present system of management of the gallery, inasmuch as no one person is responsible to the public, *Coningham* 6808, 6809——Details of a recent purchase effected on the recommendation of witness, and showing the anomalies of the present regulations as regards responsibility in such matters, *Sir C. Eastlake* 7027-7052.

Responsibility of the proposed staff of officers relatively considered, *Foggo* 7293-7303. 7343-7354——There is a want of a proper definition of the duties and responsibilities of all the officers connected with the establishment, *Dyce* 7435——The defects of the present system of management are rather to be attributed to the entire want of definite objects in the trust itself, than to its administration by the trustees, *Russell* 8076-8078. 8081-8083——Objections to the Board of Trustees, as being an unpaid and irresponsible body; mistaken purchases effected by them, *H. Wellesley* 9510, 9511. 9541 *et seq.*

2. *On whom such Responsibility should rest for the future, considered:*

The professional reputation of the cleaner is the only practical responsibility for a proper treatment of the pictures, *Dennistoun* 3387-3398. 3406, 3407——The responsibility of advising cleaning should be vested in three artists of known reputation, instead

of

Report, 1852-53—*continued.*

RESPONSIBILITY—continued.

2. *On whom such Responsibility should rest for the future, considered*—continued.

of in the keeper or the trustees, *Roberts* 3501-3508——The persons who undertake the cleaning, &c. should be salaried officers of the establishment, as being thereby the more responsible for the result, *Ford* 3867-3869——Evils inseparable from a numerous body of trustees; salaried officers charged with a responsibility for the practical management of the details of the institution are to be preferred, *Lord Aberdeen* 5287-5293.

The responsibility desired can only be obtained by giving salaries to those in whom it is vested, *Dennistoun* 5750, 5751——Vesting the whole responsibility in one person seems the natural remedy; but witness despairs of an individual properly qualified being found, *ib.* 5752, 5753——To such an officer access to extraneous advice would continue the evil of divided responsibility, *ib.* 5754——The individual responsibility desirable might be had in a board of five or six trustees, salaried, independent of the Treasury, with large powers, and responsible to Parliament alone, *ib.* 5754-5758——One of them should be in Parliament, but not removable with the Government, *ib.* 5759——Manner in which their acts should be individually regulated, *ib.* 5760——An objection to the whole responsibility resting in one person is the difficulty of selecting a gentleman with the requisite qualifications, yet able to stand the brunt of public criticism, *ib.* 5774-5777——The whole responsibility of purchases made at home should be provided for by the proposed trustees, as it arose, *ib.* 5807.

Witness recommends individual reponsibility in his scheme for the future management of the gallery, *Sir C. Eastlake* 5973. 5977. 5983——In witness's plan for the future management of the gallery, the director should be wholly responsible for purchases, *ib.* 5975. 5977-5979——Further explanation in detail, with regard to the three officers, the director, the secretary and the superintendent, proposed by witness, under an improved system of management, and their duties; means by which the desired respon sibility would be secured, *ib.* 6236-6293. 6314-6328. 6337-6368. 6374-6383. 6392-6407. 6478, 6479——The responsibility of recommending extraordinary purchases should rest with the Government department, a Minister of the Crown having the supreme control of the collection, *ib.* 6582-6591.

Suggestion that the artistic responsibility be confined to a body of three directors, who should decide upon cleaning, purchases, &c., and report annually to Parliament, *Hurlstone* 6740 *et seq.*——The administration of the fine arts will never be placed on a sound or solid foundation until some Minister is made politically responsible for it in his place in Parliament, *Coningham* 6809——Belief that the responsibility of one person might be ample for the purposes of the gallery, as at present limited to one department; he should, however, have a secretary and a competent superintendent under him, *ib.* 6833-6836——Under a management of three directors, as proposed by witness, or even of one really responsible, the mistakes made in purchasing would have been avoided, *ib.* 6955. 6961, 6962. 6972.

Responsibility to be fixed on the three members of the committee of taste proposed by witness in making purchases, *Foggo* 7249-7253. 7259-7261——The general body of trustees should be mainly responsible to Parliament, *ib.* 7293, 7294——The standing committee of trustees, as acting under delegated authority from the general body, would be responsible to them, *ib.* 7296-7303.

Consideration generally of the question of responsibility, and the parties in whom it should be vested, under witness's scheme for the management of the combined departments of art, *Dyce* 7441 *et seq.* 7571 *et seq.*——Preference given to individual responsibility in management over the responsibility of a triune directorship, *ib.* 7649-7654——Objections to the responsibility of purchases being vested in one director, *Russell* 8157. 8161, 8162.

Responsibility (*British Museum*). Responsibility, directly or indirectly, of all the officers of the Museum to the trustees, *Hawkins* 7691-7705. 7815, 7816.

See also *Purchases* (*British Museum*).

Restorations (*British Museum*). In restoring mutilated monuments, &c. no attempt is made to represent the original, *Hawkins* 7744, 7745.

RESTORATIONS OF PICTURES:

1. *Extensive existence of Restorations; their Liability to Removal by Cleaning.*
2. *Condemnation of the Practice of Restoring.*
3. *Non-adoption of the Practice in the National Gallery.*

Report, 1852-53—*continued.*

RESTORATIONS OF PICTURES—continued.

1. *Extensive existence of Restorations; their Liability to Removal by Cleaning:*

Frequent restorations existing in the pictures in the National Gallery, and in this country generally, *Wellesley* 9493-9496——Extent to which restorations have been practised by the French at different periods since the close of the last century, *ib.* 9497-9509.

Liability of repairs or repaints effected in former cleanings to be brought away by applications which would not affect the original surface of an old seasoned picture, *Rep.* xi.

2. *Condemnation of the Practice of Restoring:*

Restorations to injuries are utterly unjustifiable, if they encroach upon the original surface, *Moore* 2420-2423——Authority of Vasari quoted against the restoration by Sodoma, though a great painter, of some injuries in a work of Luca Signorelli, *ib.* 2424-2428——Doubts as to the possibility of restoring injuries in the works of the great masters, without detection, *Munro* 4012-4017. 4021——Discretion of the restorer employed in foreign galleries to make such repairs as he considers advisable; consequent injuries thereon, *Stevens*, 4063-4065. 4103.

3. *Non-adoption of the Practice in the National Gallery:*

No restorations have been made by Mr. Seguier in his cleaning of the pictures, *Uwins* 130-132——Witness has never attempted to tone down, by glazing or otherwise, the appearance of any work, *Seguier* 910, 911——Custom in the gallery of not restoring any imperfections rendered visible by cleaning; objection to this custom, *Dyce* 3743-3747. 4258-4265. 4284——Former custom in the gallery, of restoring the pictures when cleaning rendered any injuries apparent, *ib.* 3821-3825——Witness was not authorised by the trustees to repair as well as clean pictures, *Sir C. Eastlake* 4544-4547——There is no danger under the system of management proposed by witness of the National Gallery becoming subject to the treatment to which foreign galleries are exposed with reference to the entire restoration of pictures, *Sir C. Eastlake* 6419-6421.

See also *Florence Gallery. Luini. Previous Cleanings. Retouching. Rubens*, IV. 1. *Toning. Velasquez*, II. 3.

Restorers. Remarkable skill of the artists at Rome, &c. in restoring the touch of the original master, so as to deceive the most competent judges of art, *Ford* 3932-3942. 3945.

Re-touching. Justification of the practice being adopted in the gallery of re-touching the pictures after cleaning, inasmuch as almost every old picture has been injured, and as cleaning necessarily renders such injuries apparent, *Dyce* 4258-4265. 4284.

See also *Restorations of Pictures. Toning.*

Reynolds, Sir Joshua. Much glazing was used by this painter, and his works are consequently very hazardous to clean, *Seguier* 825-830——The Age of Innocence, by Sir Joshua Reynolds, was cleaned by witness before it was received into the gallery, *Brown* 1133-1135——The works of Sir Joshua Reynolds are not particularly susceptible of injury from cleaning, *Uwins* 2799-2802——Authority of Sir Joshua Reynolds quoted, as being much opposed to the practice of cleaning, *Moore* 2564——Circumstance of his having destroyed pictures in order to learn how they were painted, *Sir C. Eastlake* 4701.

Richmond, George. Letter from Mr. George Richmond, 9th June 1853, respecting the pictures lately cleaned, *App.* 782.

Roberts, David, R.A. (Analysis of his Evidence.)—Evidence showing the injuries inflicted on several of the nine pictures cleaned in 1852; 3492-3500. 3508-3510——There is a great rawness and want of tone about the Claudes, but still they have not been damaged to the extent represented by some witnesses, 3494. 3510——The work most injured is the View in Venice, the whole harmony of which is completely gone, and can never be restored, 3495, 3496. 3498. 3508, 3509——Belief that the Grand Canal has not suffered by the cleaning, 3497——Frightful alteration in the St. Bavon attributed to the operation, 3499.

Objection to cleaning, as it must be more or less injurious, 3499. 3502——Suggestion that three artists of known reputation should be selected to decide upon the expediency of cleaning, 3501-3508——Impossibility of laying down any general rule whereby the cleaner may be guided and limited in the processes used, 3503. 3504——Approval of the system of management of Dulwich Gallery, where for the last thirty years the pictures have not been cleaned, or at all events have not suffered by the process, 3511.

Roman School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 796.

Report, 1852-53—*continued.*

Rome. Answers to queries on the national collections and museums of fine arts at Rome, *App.* 753 *et seq.*——*See* also *Restorers.* *Vatican, The.*

Rosa, Salvator. The picture in the gallery by this master was recommended by witness for cleaning in 1852, but he had no time for the matter, *Seguier* 753, 754——It is better not to clean the Salvator Rosa in consequence of the danger of removing the oil varnish which has been injuriously put upon it since its purchase by the nation, *Farrer* 1288-1294. 1372, 1373. 1452-1458——The Salvator Rosa is not in a bad state, but it would be improved by cleaning, *Moore* 2528-2530——The Salvator Rosa, though very dark, should not undergo the process of cleaning, *Coningham* 3054, 3055. 3106. 3109——The work is in a most unsatisfactory state, and should at once be cleaned, *Dennistoun* 3398. 3403.

Royal Academy. One-half of the accommodation contained in the National Gallery was made over to the Royal Academy, on the understanding that possession was contingent on its not being required for public purposes, *Rep.* v——Tenure on which the Royal Academy hold their portion of the gallery; language said to have been used by his late Majesty in delivering the keys to Sir Martin Shee, *Sir C. Eastlake* 4662-4666.

There are no reasons for continuing the accidental local connexion of the gallery with the Royal Academy, which would be severed by the removal of the former, *Dennistoun* 5887-5890——When the president of the academy was a trustee of the National Gallery he had a divided interest to influence him, and, for the sake of gaining more space at the gallery for the purposes of the academy, he memorialised Her Majesty for a grant of the whole building, thus sacrificing the interests of the public institution, *Hurlstone* 6726-6733——Condemnation of the management in allowing the Royal Academy to establish themselves in the building to the prejudice of the public, *Foggo* 7225-7230——The Royal Academy are proposed to be excluded from any occupancy in the building projected by witness on the present site, *Fergusson* 8423-8425.

Objectionable exercise of power by the trustees in granting permission to twenty students of the Royal Academy to have special privileges of painting, &c. in the gallery; peculiar advantages are thus given to a private body, to the prejudice of the students generally, *Hurlstone* 6690-6720.

See also *Admission of Students*, 1. *President of the Royal Academy.* *Smoke*, 3. *Students* (*National Gallery*).

Royal Academy of Music. Reference to an application recently made by the Royal Academy of Music for a site on the ground at Kensington Gore, *Bowring* 8723.

I. *Characteristics of this Master:*

Mode pursued by Rubens in finishing off his sketches and other works; definition of the different processes of glazing employed by him, *Evans* 2303 *et seq.*——The authority of Rubens shows that exposure to the sun, and not cleaning, was the best means of restoring the colours of his freshly painted works, *Moore* 2483-2491——Practice of Rubens to paint his works on white grounds, *Fradelle* 2716-2720. 2722, 2723——Susceptibility to injury in cleaning of the works of Rubens and the Flemish School, from the circumstance of their having painted so much in glazing colours, *Cheney* 4333-4335.

Report, 1852-53—*continued.*

RUBENS—continued.

II. *The Brazen Serpent:*

Remarks of Mr. Buchanan on the condition of this picture, to the effect that it is in a very harmonious state, *App.* 770.

III. *The Chateau of Rubens:*

Present unsatisfactory condition of this work, *Dennistoun* 3403.

IV. *The Judgment of Paris:*

1. Its Cleaning and Repairing in 1846 approved of:

When cleaned by witness in 1844, this work was in a very pure state; some repairs were exquisitely done to the picture by Sir C. Eastlake, with materials provided by witness, *Brown* 1077. 1090-1096. 1139-1149——The Judgment of Paris has been very well cleaned, and is improved in appearance thereby, *Bentley* 1860-1867. 1923-1927—— The picture required the operation, was much improved by it, and is now in excellent condition, *Stansfield* 3668-3678——Reference to the evidence given by Mr. Brown respecting certain pictures cleaned in 1844; special reference made to the Judgment of Paris, by Rubens, *Sir C. Eastlake* 4462-4466. 4511-4516——Extent to which restoration was required and carried in the course of cleaning the Judgment of Paris; satisfactory manner in which the operation was performed by Mr. Brown; parts repainted by witness, *ib.* 4524-4542.

Witness was not aware until lately that the Judgment of Paris was touched with colour; the trustees should be acquainted when such an operation is needed, *Lord Monteagle* 5086-5089.

2. Condemnation of the Cleaning:

Deterioration in the general tone of the Judgment of Paris since its cleaning, *Farrer* 1410-1419——The picture did not at all require the process, and lost much of its luminous tone thereby, *Moore* 2461-2475; *Coningham* 3085-3089——Injury done by the cleaning; time has increased rather than diminished the monotonous and insipid effect produced by the operation, *Lawrence* 3584-3591——Impression that it was toned down, or glazed a little by the cleaner; it did not require cleaning, *Munro* 4042-4048—— Improbability of time ever restoring the injuries inflicted by the cleaning, *Cheney* 4343-4345.

V. *The Peace and War:*

1. Injuries attributed to its Cleaning:

The Peace and War of Rubens suffered greatly by cleaning in 1846, *Coningham* 3084, 3085; *Moore* 2461. 2477-2479——Remarks of Mr. Buchanan to the effect that the cleaning was most injurious, *App.* 769.

2. Such Injuries not admitted:

The Peace and War was not affected by the cleaning of 1846, *Hart* 3348-3350.

This picture is an example of a previous restoration, *Sir C. Eastlake* 4484-4488. 4490.

VI. *The Rape of the Sabines:*

This work having been cleaned in 1833, has a more pleasing and harmonious tone than the St. Bavon, cleaned in 1852, *Seguier* 846-854——The picture was not repaired when it was cleaned, *Sir C. Eastlake* 4547.

VII. *The St. Bavon:*

1. Originality of the Picture contended for:

Belief that the St. Bavon is an original work, though an unfinished one, *Bolton* 1047-1049; *Bentley* 1803-1807; *Evans* 2297-2303.

2. Its Authenticity not admitted:

Doubts as to the authenticity of the picture, *Seguier* 603, 604; *Farrer* 1335-1337; *Moore* 2234, 2235——It is rather a sketch than a finished work; opinion that it was all painted by the same hand, *Moore* 2234 *et seq.*

3. Extensive Damages imputed to the recent Cleaning:

The painting has been cleaned too closely, *Farrer* 1331-1334. 1406-1409——The cleaning seems to have been uneven and irregular, *Bentley* 1801, 1802——The effect of the picture has been totally destroyed by the removal of the glazing and the disturbance of the original paint, *Moore* 2232-2293——The process of cleaning was not at all required, as the picture was at the time in a very fine condition, *ib.* 2233. 2250-2252——It is a sketch

Report, 1852-53—*continued.*

RUBENS—continned.

VII. *The St. Bavon*—continued.

3. Extensive Damages imputed to the recent Cleaning—*continued.*

sketch rather than a finished picture, but the want of detail in some of the figures is attributable to its having been over-cleaned, *ib.* 2234 *et seq.*

Witness made a copy of the St. Bavon about thirty years ago, when it was in the possession of Mr. Holwell Carr, *Evans* 2294-2296——When witness copied the St. Bavon, the over-glaze, or toning, was perfect upon it; belief that it has since been removed by cleaning, but that the inner glaze or surface of the picture has not suffered, except in the figure of one of the women; the general tone and richness of the work has certainly been marred by cleaning, *ib.* 2307-2349——Opinion that the details of some of the figures have been injured by cleaning, and part of the original paint removed, *ib.* 2338-2346.

Crude and unfinished look of the St. Bavon; it seems to have been over-cleaned, *Hart* 3284-3287——It is now in a very bad state, and most probably was much injured by the cleaning, *Dennistoun* 3382——Frightful alteration in the St. Bavon attributed to the operation, *Roberts* 3499——Testimony to the injury inflicted by the cleaning, *Lawrence* 3548, 3549——The glazings have been partly removed, and the master's touch much effaced, *Cheney* 4307, 4308.

Remarks of Mr. Buchanan on the cleaning of the St. Bavon, to the effect that the picture has been ruined thereby, *App.* 770.

4. The Cleaning not Injurious:

Approval of the cleaning of the St. Bavon, *Uwins* 58. 69; *Bolton* 1046——There was a considerable accumulation of dust, &c. to be removed from the picture; it was re-varnished with simple mastic varnish, *Seguier* 593-606. 858-861——Denial of Mr. Moore's assertion that the original surface of the St. Bavon has been touched, and some of the figures partly rubbed out, *Uwins* 3204, 3205.

VIII. *Whitehall Chapel:*

Recommended transfer to the gallery of the pictures by Rubens on the ceiling in Whitehall Chapel; they could be removed with perfect safety, and would be more appreciated if suspended against a wall, *Foggo* 7263. 7265-7272. 7408-7410.

Russell, William. (Analysis of his Evidence.)—A trustee of the National Gallery; appointed August 1850; 4780, 4781——Received no instructions as to his powers or duties; idea entertained by him as to his responsibility on undertaking office, 4782-4791——Relation in which the keeper stood to the trustees; extent to which he was consulted by them, 4792-4795——Witness is not aware that this officer had any instructions to observe the pictures and recommend any for cleaning, 4796-4798——Mr. Seguier was never consulted as to those which might require to be cleaned without the knowledge or sanction of Mr. Uwins, 4799-4802.

How far Mr. Uwins, in withholding his judgment and advice upon these occasions, may be considered not to have acted up to his duty, 4804, 4805——Witness considered that Mr. Uwins was virtually consulted at the meetings of the trustees, 4806, 4807—— He is not aware of the existence of any regulations with reference to cleaning, 4808-4812——Mr. Uwins's office implied that he should take part in the discussions, 4813——Minute of 9 February 1852, as to an alteration of practice in respect to occasional cleaning; circumstances which gave rise to this regulation, 4814-4821——Particulars as to what passed at the meeting of the trustees held 1st March 1852; terms of Mr. Seguier's report then made, 4822——Subsequent meeting held 5th April 1852; further reference to Mr. Seguier's opinion on that occasion; no discussion took place at that meeting, 4823-4825.

Résumé of the proceedings of the trustees in regard to the pictures more particularly the subject of inquiry, 4826 *et seq.*——Allusion to the report as to the protection of the pictures by glass, 4826 (*p.* 304)——Perfect coincidence between Mr. Seguier's reports and the pictures actually dealt with by him according to the instructions issued to him; witness is at a loss to see why Sir C. Eastlake does not perceive this conformity, *ib.* (*p.* 306)——Particulars as to the exact pictures included in the nine cleaned in the last vacation; each picture enumerated, 4826-4828——Five other pictures (the Salvator Rosa, and the David in the Cave of Adullam, and also the Sebastian del Piombo, the Murillo, and the Parmegiano) likewise dealt with, making fourteen in all, 4829-4831.

Explanation as to the instruction to Mr. Seguier of 5th July 1852; alteration in the wording thereof, made at the instance of Sir Charles Eastlake; opinions of Mr. Mulready and Mr. Leslie sought by witness, 4831-4833——Mr. Uwins was present at the discussion, and had full opportunity of objecting, 4833-4837——Letters from Mr. Leslie to witness respecting the Paul Veronese read, 4837 (*p.* 308, 309)——Attacks made on Mr. Seguier, impugning his skill and experience as a picture-cleaner; testimony in answer thereto, *ib.* (*p.* 309-311)——Proceedings of the trustees at the meeting held 12 November 1852; minute then made approving of the result of the cleaning of the pictures in the

Report, 1852–53—*continued.*

Russell, William. (Analysis of his Evidence)—*continued.*

previous vacation, *ib.* (*p.* 311)——Inaccuracy of recollection into which Mr. Uwins has fallen in regard to the two Turners, put in order at the same time with the pictures before referred to; evidence in correction of his statements, 4837 (*p.* 311), 4838——Terms of Mr. Turner's will with respect to these pictures, 4838.

Witness cannot agree with Sir C. Eastlake in the opinion that the directions of the trustees in regard to the cleaning of the pictures were overpassed; Mr. Seguier did no more than remove the old varnish from the pictures, and re-varnish them, 4839–4843——The present appearance of the pictures is the result of too rigid an adherence to his instructions by Mr. Seguier, 4843. 4852, 4853——Further allusion to the meeting of 12 November; no expression of dissent fell from any of the trustees, 4844–4847——This meeting was not specially summoned for the purpose of considering the effect of the cleaning; belief that no observations had appeared in the public press on this subject prior to the meeting, 4848–4851.

Effect of varnish mixed with oil, when under glass, to turn black, whereas it turns yellow when merely subjected to atmospheric influence, 4854–4857. 4956, 4957——Two occasions only on which witness originated the picture-cleaning; personal examination of the pictures instituted by witness; how far also by other trustees, 4858–4860——The practice of picture-cleaning has not been carried to excess when conducted by experienced cleaners, 4861——Further proof of the skill and experience of Mr. Seguier; confidence reposed in him by the late Mr. Wells, 4862–4866.

Objections to the use of oil in the varnish; influence exercised by witness with Sir C. Eastlake in inducing Mr. Seguier to forego its use; believing that such a point was better left to the discretion of the cleaner, witness never brought the matter before the trustees, 4867–4881——Neither has anything resulted from the recommendations of the Commission of Inquiry respecting the preservation of the backs of the pictures from dust, 4882–4885——Witness was not aware until lately that five out of the nine pictures lately cleaned were the property of the British Museum; intention of communicating an expression of regret to the trustees, 4886–4889. 4937, 4938.

Steps taken for protecting the pictures by placing certain of them in glass cases; inquiries instituted, with the view to ascertaining the best description of glass to use, 4890, 4891. 4893——Mr. Faraday's researches into the nature of the varnishes are not yet completed, 4892——Extent to which Mr. Seguier was made a judge as to the propriety of cleaning the pictures, 4894——Much that is unsatisfactory in the present condition of the recently cleaned pictures is due to what may have been done to the pictures on previous occasions; the concealment of defects disclosed by the cleaning would still further improve the pictures, 4895–4901. 4939–4945——No evidence to show that any injury has been inflicted by the recent cleanings; special reference herein to the Claudes and to the evidence given by Sir C. Eastlake in regard to their being "wooden," and also as to glazing, 4902–4920.

Condition of the Francia in regard to blistering; mitigation of the evil by Mr. Seguier by covering the picture with glass; the blistering is not owing to the use of the gallery varnish, 4921–4923. 4955——How far the vacation afforded sufficient time for cleaning the pictures; it is not desirable that the process should be confined to the vacation, 4924, 4925——Witness is not prepared to offer any definite suggestions in regard to the future management of the gallery, 4926–4928——Picture-cleaning is an operation of very great delicacy; Mr. Seguier's age has not yet disqualified him for these duties, 4929–4932.

It has not been thought necessary that Mr. Seguier should acquaint the trustees with the process he had recourse to in cleaning; they were under the impression that Mr. Uwins superintended, 4933–4936——Particulars as to Mr. Seguier's charges for cleaning, 4946——Mr. Seguier had an entirely discretionary power to clean the pictures in his own way; the trustees avoided the use of the word "cleaning" in their instructions, 4947–4953——No pictures have been lined since witness has been a trustee, 4954, 4955——Nor have there been any means of testing the question of the influence of glass on varnish with which oil has been mixed, 4956, 4957.

[Second Examination.]—The defects of the present system of management are rather to be attributed to the entire want of definite objects in the trust itself, than to its administration by the trustees, 8076–8078. 8081–8083——If the trustees had understood that they were expected by Parliament and the country to take an active part in forming a national collection, their conduct would have been much less passive than it has been, 8078. 8081–8085——Some specific instructions should be issued as to the precise character of the combined collections of art about to be formed, before the future system of management is considered and decided upon, 8079, 8080——Under a continued trusteeship of unpaid amateurs, &c. there would be no difficulty in providing for the attendance of a quorum of the trust at periodical meetings, 8084–8089. 8139, 8140. 8215–8218.

Future management of the gallery considered; suggestions in detail relative to the proposed officers and their duties, &c., 8089–8174. 8215–8218——The expenditure and the

Report, 1852–53—*continued.*

Russell, William. (Analysis of his Evidence)—*continued.*

the system generally for the first few years should be such as would facilitate great rapidity of collection, 8089. 8095 *et seq.*——The number of trustees should depend on the extent of the collections under them, but there should be at least from eight to twelve, who might be appointed by the Treasury, and whose services should be gratuitous; nature of the duties to be undertaken by them, 8090–8110. 8117–8139——Opinion that in making purchases no prejudice to the public would result from the fact of the trustees being, to a great extent, picture collectors themselves, 8092–8094——Proposed appointment of a keeper of the gallery, who should be an artist, should receive a salary of about 500 *l.* a year, and should be in frequent attendance, 8095——There should also be an assistant keeper, resident in the building, and in daily attendance, who should be somewhat conversant with art, and should have a salary of from 200 *l.* to 300 *l.* a year, 8095.

Suggested appointment of a council of art, attached to the trust, consisting of five persons versed in art, either practically or theoretically, selected by Government, and with salaries of about 300 *l.* per annum; definition of the duties to be undertaken by them, 8095 *et seq.*——Mode of proceeding proposed to be taken severally by the council of art and the board of trustees, &c. with respect to purchases; probability of their opinions clashing; body in whom the responsibility should be vested, 8096–8110. 8141–8174——The keeper should be the organ of official communication between the trustees and the council of art when any purchase is being proposed, 8097. 8170, 8171——Suggested appointment of a secretary to record the proceedings of the trustees and the council with respect to purchases, &c., 8099.

Discretion to be exercised by the Treasury before purchases are finally arranged, 8099–8110. 8131–8138——The trustees should report annually to Parliament, 8117——Instead of a fixed sum being placed at the disposal of the trustees it would be better for them to apply to the Treasury for the necessary expenditure on purchases, 8118–8127——Under the proposed system of purchasing, &c., it might be expedient that the First Lord of the Treasury no longer continue an *ex officio* trustee, 8130–8138——How far it may be desirable that Parliament should lay down any rules for the guidance of the management in purchasing works of a certain character or school of art, 8142–8160——Opinion that no predilection exists amongst the present trustees for the pictures of any inferior school or master, 8151, 8152. 8159, 8160. 8163–8166——Objections to the responsibility of purchases being vested in one director, 8157. 8161, 9162——Résumé of the proposed system of purchasing, as showing the several checks against improper expenditure, 8167–8174.

Explanation respecting the copyright of the pictures in the gallery; facilities to copy are now given to the public generally, 8175–8177——Remarks in justification of the purchase, by the trustees, of the Titian, lately in the Soult collection, 8178, 8179——Possibility of re-lining the pictures in the gallery without the slightest damage resulting therefrom, 8179——Production before the committee of a Paul Potter, belonging to the Duke of Bedford, as illustrating the skill and safety of the process of re-lining, as practised by Mr. Leedham, 8179–8183.

Objection to the present site of the gallery, as involving a numerous attendance of persons, whose object is not always that of seeing the pictures, 8184——Inexpediency of checking the admission, by obliging the public to obtain tickets at some short distance from the building, 8185, 8186. 8188——Letter from the late Sir Robert Peel to witness quoted, as expressing certain objections to the centrality of the gallery, 8186, 8187——The existence of noxious vapours and of greasy deposits on the pictures is a further argument against the present site, 8187. 8191, 8192.

How far any class of the public might be put to inconvenience by a removal of the site to Kensington, 8189——Ornamental grounds surrounding the building would be a great advantage, 8190——Inexpediency of covering the pictures with glass, unless it be essential to their preservation, 8193–8195——Desirability of the new site being as open and airy as possible, 8196–8203——Inefficiency of the ventilation of the gallery, and injuries arising therefrom, 8203–8205——Recommended introduction of cartoons and drawings by the ancient masters into the projected enlarged gallery, 8206——Objection to a strict chronological arrangement of the pictures, *ib.*——The purity of the atmosphere in the proposed gallery would probably be endangered if extensive buildings were collected together for the several departments of art, 8207, 8208——Possibility of the present gallery being sufficiently enlarged, adverted to, 8209–8214.

Russell, Mr. W. Reference by the Committee to the evidence of Mr. Russell, relative to the meeting of the trustees held 5 July 1852, and the disagreement which arose respecting the extent to which Mr. Seguier should be authorised to carry his operations, *Rep.* ix.

Schools of Design. Failure of these institutions to produce the benefits anticipated from them, *Foggo* 7424.

Sculptures (*British Museum*). It is desirable to remove the great works of sculpture from the British Museum to an establishment devoted to the fine arts; the expense would be considerable, *Lord Aberdeen* 5309-5312——There would be no serious difficulty in removing the large monuments, &c., to another site, *Hawkins* 7751-7753. 7790-7794; *Oldfield* 8288, 8289——Advantages of a removal of the sculptures from the British Museum on account of the London smoke, &c., *Sir R. Westmacott* 9024. 9028, 9029. 9074-9076.

Inexpediency of any separation of the sculptures and antiquities, *Hamilton* 8946-8948——Chronological arrangement, to a certain extent, of the various marbles and sculptures in the Museum, *ib.* 8953-8955.

See also *Casts. Combined Departments of Art. Elgin Marbles. Marbles, &c.* (*British Museum*). *Medals* (*British Museum*). *Nineveh Sculptures.*

Scumbling. The process of scumbling, as used by Claude, is somewhat analogous to glazing, and renders his pictures very susceptible of injury in cleaning, *Seguier* 487-490——The mode of glazing practised by Claude did not consist in mere toning, or in the use of varnish, but was rather a process of final painting, termed scumbling, and was not peculiar to him only, *Hart* 3412.

Solvents are better resisted by scumbling than by glazing, *Farrer* 1476, 1477——Scumbling and glazing are similar processes, differing in degree only, *Lawrence* 3569-3576——Technical explanation of the process, *Sir C. Eastlake* 4494.

See also *Claude's Pictures*, I. *Glazings.*

Sebright, Sir Thomas. (Analysis of his Evidence.)—Has had considerable experience in picture-cleaning, and formerly cleaned several paintings with Mr. Andrew Wilson, 3413-3417——Most of the pictures cleaned in the National Gallery in 1852 have a crude appearance, and have been injured by the process of cleaning, but such injury cannot be attributed to the recent cleaning only, if at all, 3418-3437. 3464-3476——The Queen of Sheba looks somewhat rubbed and over-cleaned, but time will restore its former character, 3427. 3464-3474——Evidence relative generally to the processes used in cleaning; immense danger of the operation, 3438-3457. 3480-3491——A thin coat or film of varnish over the whole picture is seldom left by the cleaner, though it would be very expedient as a precautionary measure, 3439-3447.

Practice adopted by Mr. Wilson of putting new varnish on to facilitate the removal of the old, or, if a picture were not varnished enough, of putting some on for protection; he always toned after cleaning, and took great care to prevent the necessity of re-cleaning,

Report, 1852-53—*continued.*

Sebright, Sir Thomas. (Analysis of his Evidence)—*continued.*

3449-3457. 3479-3491——The probable effect of the gallery varnish is to darken the pictures; it also requires great care in the removal, 3458-3463——Several pictures in the gallery are in a very dirty state and should at any risk be cleaned, 3477, 3478——unnecessary mystery made by cleaners of the processes used by them, which are, nevertheless, generally well known, 3480-3483.

Sebright, Sir T. His evidence as to the mode adopted by Mr. Andrew Wilson to keep his pictures clean, adverted to, *Rep.* xiv.

Secretary. In witness's plan for the future management of the gallery, the duty of the secretary would be to collect and record information, *Sir C. Eastlake* 5975. 5980——Appointment of secretary adverted to under an improved system of management, *Hurlstone* 6747-6763——The duties of the secretary, as proposed by witness, should be to conduct the ordinary correspondence and to keep the accounts of the institution, *Foggo* 7243. 7277, 7278——There should be a secretary appointed under witness's plan of management, *Dyce* 7453——Recommended appointment of a secretary, whose duties it should be to conduct the correspondence and to carry out the dictates of the director proposed by witness, *Ford* 7901-7903——Suggested appointment of a secretary to record the proceedings of the trustees and the council of art (proposed by witness) with respect to purchases, &c., *Russell* 8099.

See also *Assistant Keeper and Secretary.* *Responsibility*, 2.

Seguier, John. (Analysis of his Evidence.)—Professional picture-cleaner; has been extensively employed by the trustees of the National Gallery, and also by several of the most eminent proprietors of collections in the kingdom, 413-428. Mr. William Seguier, brother of witness, and formerly keeper of the gallery, perfectly coincided with him in his system of cleaning, 419-424——About five or six years ago a person of the name of Brown cleaned a few pictures in the gallery, 429-432——Witness was not a salaried officer of the trustees, but was merely employed from time to time, 433——The authority to clean formerly emanated from the keeper, 434-438.

Witness has recently reported, under a minute of the trustees, on the expediency of cleaning, as in the case of nine pictures cleaned in 1852, in which case the keeper exercised no authority, 439-442——The mode of cleaning these pictures was left entirely to witness, 443-445——The keeper was generally present during the operation, in order to see that it was performed satisfactorily, 446, 447——Witness has no recollection of any of the trustees having been present, 448-451——Great difference of opinion existing amongst picture-cleaners as to the best process to be adopted; witness makes no especial secret of the mode pursued by him, 454-462——It is not advisable generally to bare the actual surface of the painting, but in some instances it is essential to do so; peculiarities of the different schools of ancient art, as requiring different methods of cleaning, 463-486.

[Second Examination.]—The process of scumbling, as used by Claude, is somewhat analogous to glazing, and renders his pictures very susceptible of injury in cleaning, 487-490——The varnishes used on old paintings are mastic varnish, and oil or copal varnish; the former is more easily removed, 491-502——Witness's knowledge of picture-cleaning has been derived from long practice rather than from study, 503, 504——Desirability of leaving a small portion of varnish over the surface of each painting, 505——In the case of the two Canalettis cleaned by witness, he was obliged to remove the whole coat of varnish, 506-509. 581-586.

Evidence generally with respect to the nine pictures cleaned by witness and an assistant, during the vacation of 1852; they all required cleaning, and have been much improved thereby; detailed account of the operation, and of the subsequent re-varnishing as applied to each picture, 506 *et seq.* 836-861. 901-923——With the exception of the Paul Veronese, mastic varnish only was used in restoring the appearance of these pictures, 628——Practice of witness formerly to mix oil with mastic varnish; how far this mixture possesses any peculiar advantages over the simple mastic varnish, 629-669. 693-702——The length of the vacation, that is, six weeks, afforded ample time for the cleaning of the nine pictures, 670-677.

Other pictures cleaned or re-varnished by witness prior to the year 1852; justification of the selection of these works for cleaning, and of the process adopted in each case, 678. 687-720. 753 *et seq.*——Besides the nine pictures cleaned in 1852, there were three others washed over in the same vacation; a slight coat of mastic varnish was applied to two of them, 679-686. 721-725——Course adopted by witness to remove the worms from the Sebastiano del Piombo; this work can hardly be said to have deteriorated since it has been in the gallery, 719, 720——Claude's Queen of Sheba is now in a more pleasing state than his Saint Ursula, 726-728.

The occasional cleaning with a silk handkerchief or a sponge and water, is left to the discretion and superintendence of witness, 730-733——The sponge is never applied with any quantity of water in it, 735, 736——No attention has been paid to the backs of the pictures, notwithstanding the recommendation on the subject of the Committee of 1850,

Report, 1852-53—*continued.*

Seguier, John. (Analysis of his Evidence)—*continued.*

and of Mr. Faraday, &c.; accumulation of dust on the backs of the paintings, and injury inflicted thereby, 737-752——General authority of witness to report to the trustees as to the pictures requiring cleaning; those cleaned in 1852 were submitted to them before the vacation, as being in special need of the operation; reference to those recommended for cleaning in 1853; 753-755. 759-762. 885-889. 895-900. 922——In 1847 the instructions to clean were given by Mr. Eastlake, who personally superintended the process, 756-758.

In the removal of paint, soap is decidedly a very powerful solvent, 778, 779—— Spirits of wine will remove repairs done on mastic varnish, but will not remove the paint from the surface of an old picture, 778-781. 869-871. 912-919. 931-934——Objections to the use of simple mastic varnish, on account of its tendency to chill, 782-793. 881-884 ——How far any damage may arise from frequently rubbing a picture with a silk handkerchief; this duty is performed by witness and his assistant, 794-798. 876-879. 942-947——Employment of an assistant by witness on several occasions of his cleaning pictures in the National Gallery and elsewhere, 799-840. 955-960.

Necessity for definite attention being paid to the lining of the pictures, 890-894—— In some pictures it is decidedly injurious to use spirits of wine for the removal of varnish; Venetian paintings are most readily affected by it, 912-919. 931-934——It is incorrect to say that the pictures lately washed were deluged with water, 925-930——The frames of the pictures should be cleaned once a week, 935-944——Justification of the cleaning by witness of the Velasquez in 1846; 948-954.

[Third Examination.]—Coincidence of Mr. Uwins with witness relative to the processes employed in the cleaning, 2905, 2906——The varnish was removed from the Guercino by friction, but no injury could have resulted from the careful manner in which the operation was performed, 2907-2909——The two pictures by Canaletti were the only ones in which solvents were used for the removal of the mastic varnish, 2910, 2911 ——The soap and water employed by witness merely acted on the outer coat of dirt, 2912-2914——The composition of the gallery varnish is a small portion of oil, boiled, with mastic; witness procures it somewhere in Long Acre, and has never analysed it, 2915-2917. 2952-2958——Belief that the same varnish has always been used in the gallery, 2918-2926——It has also been much used by witness in private collections, 2927——Simple mastic varnish assumes in time quite as yellow and dark a colour as the mixed varnish, 2928-2932.

All the pictures cleaned in 1852, with the exception, perhaps, of the Annunciation, had been formerly covered with the gallery varnish, 2933-2944——An accumulation of dirt and grease had softened into the oil, which had been rubbed over the varnish; this dirt would probably not have been so great if simple mastic varnish only had been used, 2935, 2936. 2946-2948——In the case of the Queen of Sheba, oil alone has occasionally been rubbed over the gallery varnish, 2939-2945——The Paul Veronese has also been coated with oil over the varnish, 2949.

Witness does not know whether the backs of the pictures were ever dusted previously to the sitting of the Committee of 1850, and is not aware by whose authority the dust was removed in that year, 2959-2967——(*Colonel Thwaites.*) The pictures were never dusted by the authority of witness; belief that it was prior to the sitting of the Committee of 1850, that the dust was last removed from the backs, 2968-2974——(*Mr. Seguier.*) In consequence of the Report of the Committee, witness recommended, through Colonel Thwaites, that the dust should be removed from the backs of the pictures; much injury may arise from this source, 2986-2988. 2991-2994——(*Colonel Thwaites.*) No communication has been made to the trustees by witness about removing the dust, nor does he recollect that Mr. Seguier ever suggested his doing so, 2989, 2990.

(*Mr. Seguier.*) When the Queen of Sheba was purchased for the gallery, it required several restorations, which witness was employed to make, and which he afterwards coated with the mixed varnish; this varnish was removed in the late cleaning by soap and water, but the restorations were not disturbed thereby, 2995-3015——Admission that pure mastic varnish is most suited for the National Gallery, 3018-3021——Removal of the oil from Claude's picture of the Annunciation by means of soap and water, 3022-3026——Spirits of wine will not affect old paint, and may be safely used in the removal of oil varnish, 3027-3030——The pictures cleaned in 1846, when the gallery varnish was used, will in time require re-cleaning, as dirt will certainly accumulate upon them, 3033, 3034.

[Fourth Examination.] See *Uwins, Thomas, R.A.* (Third Examination), and *John Seguier* (Fourth Examination).

SEGUIER, MR. JOHN:

1. *Authority under which he acted in Cleaning; Discretion vested in him.*
2. *His competency considered.*
3. *Papers laid before the Committee.*

1. *Authority*

Report, 1852–53—*continued.*

Seguier, Mr. John—continued.

1. *Authority under which he acted in Cleaning; Discretion vested in him:*

Remarks on the circumstances which led to the instructions being given to Mr. Seguier for effecting the recent cleanings, and the manner in which he fulfilled the same, *Rep.* ix *et seq.*

Witness is not aware that Mr. Seguier expressed any opinion as to the dangers of cleaning, *Sir C. Eastlake* 4431–4433——Witness having confidence in Mr. Seguier, did not inspect his operations during the cleaning of pictures; he used greater precaution, however, in regard to Mr. Brown, *ib.* 4457–4461. 4543——Mr. Seguier was never consulted as to those pictures which might require to be cleaned, without the knowledge or sanction of Mr. Uwins, *Russell* 4799–4802——Particulars as to what passed at the meeting of the trustees, held 1 March 1852; terms of Mr. Seguier's report then made, *ib.* 4822——Subsequent meeting held 5 April 1852; further reference to Mr. Seguier's opinion on that occasion; no discussion took place at that meeting, *ib.* 4823–4825——Extent to which Mr. Seguier was made a judge as to the propriety of cleaning the pictures, *ib.* 4894.

The elder Mr. Seguier attended the meetings of the trustees regularly; the present Mr. Seguier only when sent for; occasions of his opinion being sought, *Lord Monteagle* 5094–5100——Reference to Mr. Seguier's evidence (*Q.* 862 to 864, and 699), in which he disclaims being responsible to Mr. Uwins for the cleaning of the pictures; this does not agree with witness's view of his position; he considers Mr. Seguier to have acted under the direct superintendence of Mr. Uwins, *ib.* 5108–5111.

2. *His competency considered:*

Testimony received by the Committee as to the qualifications of Mr. Seguier; opinion that the trustees in him secured the highest professional ability which it was in their power to obtain, *Rep.* xi.

No fault can be found with the cleaning by Mr. Seguier of certain pictures in 1846, *Bentley* 1994——General incompetency of Mr. Seguier as a picture-cleaner, *Moore* 2385. 2387——Injustice done to Mr. Seguier by the placing of two Claudes, recently cleaned by him, in juxta-position with two uninjured Turners; the works of these masters are not properly tested thereby, *Dennistoun* 3409–3411——Attacks made on Mr. Seguier, impugning his skill and experience as a picture-cleaner; testimony in answer thereto, *Russell* 3837 (*p.* 309–311)——Picture-cleaning is an operation of very great delicacy; Mr. Seguier's age has not yet disqualified him from these duties, *ib.* 4929–4932——Opinion upon the manner in which Mr. Seguier removed the varnish from certain pictures, *Sir C. Eastlake* 5937–5942.

3. *Papers laid before the Committee:*

Report of Mr. Seguier relative to the removal of the chill from the surface of the Velasquez, &c. on 2d April 1853, *App.* 751.

See also *Cleaner to the Gallery. Cleaning. Gallery Varnish. Lining of Pictures. Regulations, &c. (National Gallery). Rembrandt. Restorations,* 3

Seguier, Mr. William. Appointed keeper of the gallery in 1824 by Treasury Minute; amount of salary fixed; duties as defined by the Minute, *Rep.* iii, iv——No record of any pictures having been cleaned during the keepership of Mr. W. Seguier, *ib.* viii.

Reference to the opinion of Mr. W. Seguier as to all the pictures in the gallery having been in a very good state when he was keeper, *Uwins* 333–337——Witness's brother perfectly coincided with him in his system of cleaning, *Seguier* 419–424——Citation of the opinion of Mr. W. Seguier as to the fine condition, during his keepership, of certain works that have since been cleaned, *Seguier* 903–905; *Moore* 2447, 2448. 2575, 2576——During the keepership of Mr. W. Seguier, the pictures were better preserved and less cleaned, and were in a finer state than they have been since, *Nieuwenhuys* 1598–1605. 1711–1716.

Witness has had much experience of Mr. W. Seguier; the practice in his lifetime was the same as at present, *Lord Monteagle* 5011–5014——Efficiency of Mr. W. Seguier, the first keeper of the institution, adverted to; good condition of the pictures during his keepership, *Thwaites* 9703, 9704——Period of Mr. W. Seguier's death, *Sir C. Eastlake* 5908, 5909.

See also *Cleaning,* I. 1. *Keeper of the Gallery,* 1. *Management of the Gallery,* 1. *Regulations, &c. (National Gallery).*

Seville School of Painting. Classified list of the masters of this school, with the names of their principal followers, *App.* 821, 822.

Sienese School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 795.

Silk Handkerchiefs. See *Occasional Cleaning.*

Report, 1852-53—*continued.*

SITE OF THE GALLERY:

1. *Generally.*
2. *Disadvantages of the present Site; its Removal recommended.*
3. *Objections to such Removal.*

1. *Generally:*

The several proposed sites for a new building adverted to, and considered, *Rep.* xvii, xviii——In quitting the present site, the Government should not lose sight of its great value as a central position, and eminently lending itself to the architectural embellishment of the metropolis, *ib.* xvii.

Desirability of the new site being as open and airy as possible, *Russell* 8196-8203——The purity of the atmosphere in the proposed gallery would probably be endangered if extensive buildings were collected together for the several departments of art, *ib.* 8207, 8208——Advantage of the site being in as dry and airy a situation as possible, such as the middle of Hyde Park, *Oldfield* 8290-8300. 8337-8340——Disadvantages in point of space, &c. of the sites proposed by the National Gallery Commissioners as compared with that obtainable at Kensington Gore, *Bowring* 8604-8606. 8614-8616. 8723-8729——Objection to the sites proposed by the Committee of 1851, *Pennethorne* 8837, 8838.

2. *Disadvantages of the present Site; its Removal recommended:*

The present site is not well adapted for the construction of a new gallery, *Rep.* xv——Result of the inquiries of the Committee into the site and condition of the present gallery in Trafalgar-square, *ib.* xvi *et seq.*

The pictures are likely to get extremely dirty in their present situation; witness's opinion given in 1850 as to the desirableness of a change of site remains unchanged, *Sir C. Eastlake* 4685-4691——Serious objections to the site of the gallery in the centre of London, *Faraday* 5469——The want of space for an enlargement of the building is one objection to the present site, *Dyce* 7491, 7492. 7637——Objection to the centrality of the present site, as inducing persons to enter the gallery for shelter from rain, and as involving the attendance of children and noisy crowds, *Ford* 7944-7948. 7964-7968——This objection might be obviated if admission were granted by ticket, *ib.* 7945. 7969. 8042-8047——Objection to the present site of the gallery as involving a numerous attendance of persons whose object is not always that of seeing the pictures, *Russell* 8184——Insufficient space at present devoted to the pictures, *Plass* 9253-9255.

3. *Objections to such Removal:*

Evidence to the effect that the present site of the National Gallery is as good as any other that can be devised, and in consequence of its centrality far better than Kensington, *Coningham* 6896. 6922-6934. 7005-7022——The present site is perfectly dry, whereas there is a general impression that the soil at Gore House is damp, *Hurlstone* 7058. 7195-7205——Any other influences, besides that of smoke, which are likely to injure the pictures at present, would affect them equally elsewhere, *ib.* 7071——Objections to a removal of the gallery to Kensington; advantages of its present centrality, *Moore* 10011-10026——The advantages of a central situation are such, that a very great pecuniary sacrifice should be made to secure the requisite space, &c. on the present site, *ib.* 10014-10020. 10026.

See also *Atmospheric Influences. Combined Departments of Art. Enlargement of the present Gallery. George's, St., Barracks. Hyde Park. Kensington Barracks. Kensington Gardens. Kensington Gore. Kensington Palace. Ornamental Grounds. Peel, Sir Robert, the late. Regent's Park. Removal of the Gallery. Smoke. Working Classes.*

SMOKE:

1. *Pictures in the Gallery injuriously affected thereby.*
2. *Sculptures in the British Museum likewise injured.*
3. *London Smoke not necessarily injurious to Pictures.*
4. *Comparative freedom from Smoke on the projected Site at Kensington Gore, anticipated.*

1. *Pictures in the Gallery injuriously affected thereby:*

The chill or bloom on the surface of pictures attributed to the influence of the sulphur contained in coal smoke, *Rep.* xii——The comparative freedom from smoke enjoyed by private collections in the metropolis does not prove that the gallery is unobjectionable on this score, *Dyce* 7495-7502.

2. *Sculptures in the British Museum likewise injured:*

The effect of the London smoke is very detrimental to the monuments and the surfaces of the antiquities generally in the British Museum, *Hawkins* 7737-7742——Injurious effects of dust and smoke on the marbles and other objects in the Museum, *Oldfield* 8271-8275.

Report, 1852-53—*continued.*

Smoke—continued.

3. *London Smoke not necessarily injurious to Pictures:*

Opinion that the smoke of London is not of itself injurious to the pictures in the gallery; condition of the works in various private collections adverted to in support of this opinion, *Hurlstone* 7059-7070. 7110-7121. 7161-7173——The anxiety of the Royal Academy to obtain possession of the gallery infers that they do not consider smoke injurious, even to their newly painted works, and tends to prove the general advantages of the present site, *ib.* 7062-7069. 7162-7166——The present site cannot be objected to on account of the London smoke, *Foggo* 7367——Suggested coating of isinglass within the varnish as a means of protecting the pictures from the effects of smoke, &c., *ib.* 7362 *et seq.*——Possibility of the partial prevention of smoke throughout the metropolis adverted to, *ib.* 7430——Opinion that any deterioration in the pictures is not attributable to the London smoke, *Moore* 10013, 10014.

4. *Comparative freedom from Smoke on the projected Site at Kensington Gore, anticipated:*

The prevalence of smoke, arising from the projected mass of buildings on this site, need not be apprehended, as smokeless fuel will be used, *Bowring* 8596——Private houses only, and not distilleries, &c., are likely to be built around the estate, *Bowring* 8597-8602——The houses as yet to be erected in the vicinity of the Kensington Gore estate will most probably be of a large description, with but very few inferior dwellings amongst them for the working or trading classes, *T. Cubitt* 8754-8779——The best class of houses only will be erected, and the prevalence of smoke will not be nearly so great as in the crowded vicinity of the present gallery, *Sir W. Cubitt* 10187-10196——It is extremely improbable that any baths and wash-houses or factories of any kind will be built in the neighbourhood, *ib.* 10191-10196. 10286-10290. 10294-10305——The fact of the prevailing winds being from the south-west, will not make the smoke specially injurious to the picture gallery, as there will be no factories, &c. in that direction, *ib.* 10247-10251.

See also *Atmospheric Influences. Elgin Marbles. Isinglass. Kensington Gore,* 2.

Soap and Water. Soap and water is a solvent in use at the National Gallery; purposes for which chiefly required; should be applied with extreme caution, *Rep.* vii.

The oil outside the mastic varnish was generally removed by witness with soap and water, which does not produce any effect upon the varnish, *Seguier* 649-653——In the removal of paint soap is decidedly a very powerful solvent, and great care is necessary in its use, *ib.* 778, 779. 3005-3015. 3022-3026——With proper care there is no danger in the application of soap and water, *Brown* 1197-1202——The soap and water employed by witness merely acted on the outer coat of dirt, *Seguier* 2912-2914.

Objections to the use of soap and water in the occasional cleaning of pictures, *Bentley* 1847-1853.

Solly Collection. Details of pictures sold at Mr. Solly's sale, from which specimens of the earlier and purer schools might have been obtained, *Christie* 5634-5674. 5683-5689. 5711, 5712——The pictures alluded to would fetch much higher prices now, *ib.* 5690-5701——Most of the early pictures of Mr. Solly are still in this country in private collections, *ib.* 5737.

Character of the Solly collection sold at Mr. Christie's, *Sir C. Eastlake* 6054-6059. 6064——Observations as to the "Luini" in that collection, *ib.* 6060-6065——Reasons for which no pictures were bought from the collection for the National Gallery, *ib.* 6076, 6077.

Solvents. Conflicting opinions as to the safety of solvents in picture-cleaning; solvents most in use in the National Gallery, *Rep.* vi, vii.

In applying solvents to mastic varnish, the whole of the varnish must be removed, *Seguier* 587-592. 823, 824——A judicious use of solvents will remove the varnish without injury in nine cases out of ten, *Bolton* 993-996——In removing the varnish from certain pictures in the gallery in 1844, solvents only were used by witness, *Brown* 1071-1085——The use of solvents in removing the oil varnish from the pictures cleaned in 1852 has certainly been injurious, *Farrer* 1297 *et seq.*; *Moore* 2048 *et seq.*——The mixed varnish used in the gallery can be removed without injury by solvents carefully applied, *Bentley* 1832-1846. 1895-1899——Spirits of wine or any other solvents are dangerous to the original surface of a picture, *Moore* 2045-2050.

All parts of a picture are not equally affected by solvents, *Moore* 2095——Extreme danger of using solvents unless most judiciously applied; the oil paint, as well as the varnish, may be removed unless great care be taken, *ib.* 2389——Solvents should never be applied to a picture, *Sir T. Sebright* 3452——Recommended use of some solvent that should be so thick that it could not penetrate below the varnish, *Lawrence* 3552——Axiom laid down with regard to the use of solvents, that whatever will remove varnish will remove in some degree the under parts of a picture, *Faraday* 5524.

See also *Cleaning,* II. 1. *Gallery Varnish,* 1. *Mastic Varnish,* 1. *Soap and Water. Spirits of Wine. Turpentine.*

Report, 1852-53—*continued.*

Soult Collection. Mr. Woodburn was commissioned to bid for particular pictures at the sale of Marshal Soult's collection, *Sir C. Eastlake* 6209-6211——Witness does not think that the fruit of that commission was satisfactory, *ib.* 6214——Prices Mr. Woodburn was authorised to bid, *ib.* 6215-6217.

Spanish Pictures. Character of the Spanish collection lately sold in London, *Dennistoun* 5842-5845——Witness would exclude no school of painting from the National Gallery; he has heard of the increasing desire of Spain to retain works of art in that country, *ib.* 5848, 5849——The treatment of religious subjects by Spanish masters will be frequently open to criticism, *ib.* 5852, 5853.

Spanish School of Painting. Classified list of the masters of the several schools, with the names of their principal followers, *App.* 820 *et seq.*——*See* also *Zurbaran.*

Special Meetings. See *Meetings of the Trustees.*

Spence, W. B. (Analysis of his Evidence.)—Is well acquainted with the Uffizzii and Pitti collections of pictures at Florence, 10041——Appears before the Committee for the purpose of affording them any details which they may require concerning the Florentine Gallery, in addition to the information already forwarded to them by the directors thereof, 10042, 10043——Opinion of Cornelius, the celebrated German painter, adverted to, as being extremely favourable to the architectural arrangements of the Florentine Gallery, and the mode therein adopted of combining the several departments of art under one roof, 10044-10047——Considerable attention paid in the gallery at Florence to the colour of the walls and floor, and to other incidental circumstances in regard to the effect of the pictures; document relative thereto handed in, 10048-10052. 10127——Desirability of similar attention being paid to such matters in the National Gallery, 10053, 10054.

Explanation of the system of cleaning and restoring practised in the Florentine Gallery; employment of a restorer in each of the collections; they are salaried officers, and their services are exclusively required for the gallery, where there is always enough for them to do in removing the old varnishes, &c., 10055-10075. 10090-10097. 10111, 10112——Generally speaking, the operations of the restorers have been beneficial to the pictures, 10067, 10068. 10100——Qualifications requisite in the restorers appointed to the Florentine Gallery, 10069-10071——How far it is essential that they understand chemistry, 10072-10075——Recent introduction of the Damar varnish into the gallery at Florence; composition of this varnish, which has been found to answer extremely well; care taken in its preparation, 10072. 10076-10082. 10121-10126——Great importance attached in Florence to the quality of the varnish applied to pictures, 10083, 10084——There are from 18 to 20 officers of various kinds engaged in the Florentine Gallery; multiform duties undertaken by them, 10085-10089.

Difficulty of removing the amber varnish from the Bolognese and Florentine pictures of the 17th century, 10091-10098. 10102——Inferior pictures are constantly being restored and repainted in Florence, for purposes of sale, &c., 10099, 10100——Occasional use of a penknife in Italy in removing dirt and varnish from pictures, 10103-10108——There are from 5,000 to 6,000 pictures in the Uffizzii Collection, 10109, 10110——The restorers in the Florentine Gallery are paid about 40 dollars a month each, which is considered a high salary, 10113-10116——Ample time taken by them in the process of cleaning some pictures, 10117——Explanation as to the class of works admitted into the Florence Museum (as stated by the directors of the gallery); copies, in casts, from marbles are not admissible, 10118, 10119——Effects of time and varnish on paintings, as showing that after the process of cleaning, the operator may not be blameable for any alteration in their appearance; illustration of the necessity of cleaning being resorted to, 10120.

Spence, Mr. Papers referred to in Mr. Spence's evidence respecting the arrangement, &c. of pictures and statues in the Florentine Gallery, *App.* 830.

Spirits of Wine. A vehicle of pure oil is little, if at all, affected by an application of spirits of wine, *Rep.* vii——A slight addition to that oil of varnish, or of any resinous substance, would render the paint susceptible of decomposition, *ib.*——Such addition has been more or less customary with some painters in every period, *ib.*——Danger therefrom to be apprehended from the incautious application of chemical solvents to the works of the ancient masters, *ib.*

Danger of using spirits of wine in removing the varnish from pictures, *Uwins* 247; *Seguier* 587-592. 822-832——Spirits of wine will remove repairs done in mastic varnish, but will not remove the paint from the surface of an old picture, *Seguier* 778-781. 869-871. 912-919. 931-934. 3027-3030——In some pictures it is decidedly injurious to use spirits of wine for the removal of varnish; Venetian paintings are most readily affected by it, *ib.* 912-919. 931-934——The safest solvent to be applied to old paintings is spirits of wine, which will not affect oil; care to be taken in ascertaining that the surface of any work about to be cleaned is in pure oil paint, *Brown* 1183-1196. 1203-1216——Necessity of great care in the use of spirits of wine; glazings and

paint

Report, 1852-53—*continued.*

Spirits of Wine—continued.

paint are susceptible of injury from their application, *Farrer* 1539-1543; *Moore* 2045-2050.

The removal of all the varnish cannot be safely effected by spirits of wine, *Nieuwenhuys* 1610-1614——Spirits of wine may be very injurious even to old paintings, unless carefully applied, *ib.* 1717-1724——Objection to the use of spirits of wine in cleaning, *Ford* 3870-3874——Great caution necessary in the use of spirits of wine, even when applied to old oil paintings, *Munro* 3993-4000——Mr. Seguier did not use spirits of wine in removing the varnish; witness would not have objected, *Sir C. Eastlake* 4548, 4549.

Detail of the experiments tried for the removal of the varnish by means of spirits of wine; conclusion arrived at that as regards varnish of this kind, there was no tendency to the removal of the surface of the picture with it; results of these experiments on certain pictures (by Mr. Penry Williams), *Faraday* 5472-5508. 5556-5559——Effect of spirits of wine in cases where water-colour had been used as a wash, or to paint transparently on the surface of a picture, *ib.* 5509-5514.

See also *Friction.* *Turpentine.*

Spitalfields School of Design. How far any inconvenience may arise to the students at the Spitalfields School of Design, by a removal of the departments at Marlborough House to Kensington, *Bowring* 8617-8625. 8628, 8629.

See also *School of Design* (*Marlborough House*).

Sponge Cleaning. In the cleaning of certain pictures in the gallery with a wet sponge, witness believes that the sponge was squeezed nearly dry, but he was not present on the occasion, *Uwins* 338-340. 386——With respect to the recent washing of some pictures with a sponge, witness cannot say whether the sponge was squeezed dry, or whether it was saturated with water; the process was not different from what it always has been, *Thwaites* 387-395——The sponge is never applied with any quantity of water in it, *Seguier* 735, 736——It is incorrect to say that the pictures lately washed were deluged with water, *ib.* 925-930——Deprecation of the use of a sponge and water in the washing of pictures; the colour of the varnish is generally affected thereby, *Nieuwenhuys* 1698-1707. 1727-1729.

See also *Occasional cleaning.* *Parmegiano.* *Piombo, Sebastiano del,* 1. *Velasquez,* II. 5.

Stansfield, Clarkson, R. A. (Analysis of his Evidence.)—Has expressed himself favourably with respect to the four pictures in the gallery cleaned in 1846; 3592, 3593——Is well acquainted with the former appearance of the works recently cleaned, and considers that several of them required the operation, 3594-3599——Evidence to the effect that they have not been injured by the process; the richness of tone may have been reduced, but it will be restored by time, whilst the original touch of the master has not been disturbed in any case, with the exception of one of the Canalettis, 3600-3606. 3626 *et seq.* ——The process of cleaning used in the gallery should not be kept secret from the directors, 3607-3610——Precautions to be observed in appointing any person to the office of cleaner to the gallery, 3611-3616——The varnish used by witness on his own pictures is mastic, with a little oil to prevent its chilling, 3618-3625.

Remarks on the process of glazing used by Claude, and the general character of his works, 3630-3647——The St. Ursula is not in a preferable state to the Queen of Sheba, and should undergo the process of cleaning, 3655-3667. 3706-3708——The Judgment of Paris, cleaned in 1846, required the operation, was much improved by it, and is now in an excellent condition, 3658-3678——With respect to varnish, there is great danger in applying it to a picture recently painted, 3680-3682——A certain amount of time adds tone to a picture, but in the course of years such tone becomes obscured by the gradual accumulation of dirt, and it is then expedient to have recourse to cleaning to restore the picture to its pristine condition, as well as for its general preservation, 3693-3716——The pictures cleaned in 1846 improved in tone as time elapsed after the cleaning, and the same result may be anticipated from those cleaned in 1852; 3710-3716.

Unless a picture is very dirty throughout, there should be left an inner film of varnish over the surface, untouched by the cleaner, 3717, 3718——Modern pictures may never require actual cleaning, if occasionally washed with pea-meal, and slightly rubbed over with varnish; but old pictures require a different treatment altogether, 3725, 3726——Opinion of Turner referred to, showing that he considered his works would be improved by time, 3727, 3728——There is a speedier accumulation of dirt on pictures in the National Gallery than in private collections, 3729-3732.

State of the Pictures. With the exception of the Claudes, the pictures in the gallery are not in a worse state than those in private collections, *Munro* 4022-4030.

See also *Pantheon, The.* *Seguier, Mr. W.*

Report, 1852-53—*continued.*

Steel Instruments. Use thereof in removing dirt and incrustations, *Rep.* vi——Such instruments are used by many picture-cleaners, especially in Italy, *ib.*——No evidence to show that they have been employed in the National Gallery, *ib.*——Occasional use of a penknife in Italy in removing dirt and varnish from pictures, *Spence* 10103-10108.

See also *Friction.*

Stevens, Alfred. (Analysis of his Evidence.)—Was professionally educated in Italy as an artist, 4049-4052——Has since been employed as a teacher in the School of Design, but resigned in consequence of an alteration in the system of teaching, 4053-4058——Definition of the mode of cleaning, or rather of repairing, adopted in the galleries of Florence, Venice, &c., 4061-4071——Discretion of the restorer employed to make such repairs as he considers advisable; consequent injuries thereon, 4063-4065. 4103——Evidence to the effect that the over-glaze or general toning has been removed from all the pictures in the National Gallery cleaned in 1852, with the exception, perhaps, of the small Guercino, 4072-4098——Necessity of a picture being re-varnished, but not cleaned, after it has been lined afresh, 4099-4102.

Students (*British Museum*). Future career of the students at the Museum adverted to, *Sir R. Westmacott* 9032-9036——How far the accommodation in the Museum may be defective for those students who require to remain there during the day, *ib.* 9047-9049——The centrality of the Museum is very convenient to the students, *Carpenter* 9146-9148——Convenience to students in being allowed to attend in the British Museum on every day in the week, except Saturday, *Hayes* 9197, 9198.

Students (*National Gallery*). Complaints made of undue privileges having been granted to the students of the Royal Academy over other classes, *Rep.* v——No regulations of the trustees respecting the admission of students, *ib.*

Reference to the greater satisfaction felt by the students in the gallery with the pictures cleaned in 1852 than with their former dirty state, *Uwins* 2903, 2904——It often happens that students are refused leave to copy pictures, from want of space in the gallery, *Sir C. Eastlake* 6455, 6456——Objectionable exercise of power by the trustees of the National Gallery, in granting permission to 20 students of the Royal Academy to have special privileges in the gallery; peculiar advantages are thus conferred on a private body to the prejudice of students generally, *Hurlstone* 6690-6720——Privilege enjoyed by the students of the academy in their periods of admission to the gallery being extended, *Hayes* 9227, 9228; *Thwaites* 9705 *et seq.*——Objections to a combination of the departments of sculpture and painting for the purpose of students in art; the extensive objects comprised in such a collection would create distraction in a young mind, *Hamilton* 8929-8945——The several classes of pictures are generally in equal demand among the students, *Plass* 9266-9280——Insufficient size of the rooms, which are occasionally crowded in parts by the students, *Davies* 9296-9300. 9312-9314.

Opinion that a removal of the sculptures and paintings to Kensington would be no inconvenience to the students, *Sir R. Westmacott* 9026, 9027. 9069-9072——The general feeling of the students is rather against the removal of the gallery to Kensington, *Hayes* 9187-9189——Advantages to the students of a combination under one building of sculpture and paintings, *Hayes* 9195, 9196. 9199-9205; *Plass* 9284, 9285; *Davies* 9303-9305. 9309——A removal of the gallery to Kensington would not be objectionable to the students generally, *Plass* 9256-9258. 9286-9289——Inconvenience to the students by a removal of the National Gallery to Kensington, *Loft* 9335-9345——Insufficient time now devoted to students; improved arrangements which may be effected if the gallery be removed, *ib.* 9347, 9348. 9352, 9353.

See also *Admission of the Public*, 2. 3. *Admission of Students. Copying of Pictures. Glass*, 3. *Royal Academy. Witnesses Examined before the Committee.*

Subordinate Officers. Definition of the duties of the subordinate officers proposed by witness to be employed under the director of the gallery, *Dyce* 7450-7452. 7476-7478. 7579-7582. 7618-7620.

Summonses to attend Meetings. See *Meetings of the Trustees.*

Sunday Admission. If the gallery were to be thrown open on Sundays (as it ought to be) it would be an argument in favour of the Kensington site, *Coningham* 6896. 7009-7011——The public should be admitted to the gallery on Sundays, as enjoying thereby a rational, innocent, and instructive amusement, *Ford* 8013-8016——Recommendation that the projected building at Kensington Gore be opened on Sundays, *T. Cubitt* 8801. 8803, 8804.

Sunrise in a Mist, The. See *Turner's Pictures.*

Superintendent of the Gallery. The person superintending the gallery need not be a professional picture-cleaner, *Sir C. Eastlake* 4746-4749——In witness's plan for the future management

Report, 1852-53—*continued.*

Superintendent of the Gallery—continued.

management of the gallery, the superintendent should have the general management of the gallery, *ib.* 5976, 5977. 5981, 5982.

See also *Responsibility*, 2.

Surfaces of Pictures. Observations relative to the danger of so far removing the old varnish, &c., as to leave the surface of the picture entirely exposed; this danger is greater in the case of some pictures than of others, *Uwins* 101-124——It is not advisable generally to bare the surface of the painting, but in some instances it is essential to do so; peculiarities of the different schools of ancient art as requiring different methods of cleaning, *Seguier* 463-486.

Evidence in proof of the desirability of leaving a small portion of varnish over the painting, so as not to lay bare the surface, *Seguier* 505; *Bolton* 968-971; *Farrer* 1248-1254. 1276, 1277; *Fradelle* 2595-2597. 2601-2603; *Sir T. Sebright* 3439-3447; *Ford* 3899-3902; *Munro* 3986-3990——A thin coat or film of varnish over the whole picture is seldom left by the cleaner, though it would be very expedient as a precautionary measure, *Sir T. Sebright* 3439-3447——Unless a picture is very dirty throughout, there should be left an inner film of varnish over the surface, untouched by the cleaner, *Stansfield* 3717, 3718——A picture may be over-cleaned by too great a removal of the surface varnish, &c., without the original paint being encroached upon, *Sir E. Landseer*, 4120-4129.

The outer coat of varnish was entirely removed from several of the pictures cleaned in 1852, *Fradelle* 2696-2698——Belief that the entire coat of varnish was not removed from any of the pictures cleaned by Mr. Seguier, *Uwins* 2727-2729. 2749-2754——The entire coat of varnish was removed from all the nine pictures, *Stansfield* 3723.

Experiments instituted by witness with reference to the value of varnish as a means of protecting the surfaces of pictures from atmospheric effects, *Faraday* 5442-5445.

T.

Temptation of St. Anthony, The. See *Purchases* (*National Gallery*), 4.

Teniers. Peculiar preparation by Teniers of the panel or back ground on which he painted, *Hart* 3334.

Thane, Mr. Treatment of the Velasquez in his hands, whilst undergoing the process of re-lining, *Sir C. Eastlake* 4477. 4779.——*See* also *Rembrandt.* *Velasquez*, II. 3.

Theatres. It is not expedient to include theatres in the jurisdiction of the proposed management of the projected institution at Kensington Gore, *Sir C. Eastlake* 6550, 6551.

Thick, ——. (Analysis of his Evidence.) The pictures in the gallery were all taken down and the dust removed from the backs, in the vacation of 1850; the order to dust them was given to witness by Mr. Uwins, 2975-2985.

Thwaites, George Saunders. (Analysis of his Evidence.)

[First Examination.]—See *Uwins, Thomas*, R.A., and *George Saunders Thwaites.*

[Second Examination.]—Witness is the oldest officer in the gallery under the trustees, 9667——Part taken generally by the trustees in the business of the gallery from 1824 to the present time; the management at first was mainly entrusted to the keeper, and there was no meeting of the trustees till 1828; gradual increase of late years in the activity and control of the trustees, 9668-9702——Efficiency of Mr. Seguier, the first keeper of the institution, adverted to; good condition of the pictures during his keepership, 9703, 9704——System of the students' admission to the gallery considered; privilege extended to the Royal Academy students to the prejudice of others; discretion of the keeper to admit supernumeraries or students not resident in London; mode in which the list of those to be admitted is prepared, 9705-9736——The adoption of the term "trustees" in lieu of that of "committee," by which the managing body were first known, took place at a very early period of the institution, 9737, 9738.

Thwaites, Colonel. Appointed assistant keeper and secretary; salary assigned; instructions given, *Rep.* iv.

Titi, Santo di. Statement as to the grounds on which a picture by Santo di Titi was declined by the trustees, *Sir C. Eastlake* 5988-5992.

Titian. Belief that simple glazing was not used by this master as a finishing process, *Uwins* 2890–2893.

Expediency of the picture of Bacchus and Ariadne being newly lined, 893, 894——The application of a mixture of oil and mastic varnish has injured the tone of this picture, *Bolton* 1054. 1058——Remarks of Mr. Buchanan condemnatory of the cleaning of the Bacchus and Ariadne, *App.* 769.

Oil varnish has had an injurious effect on the Venus and Adonis, *Bolton* 1054.

Successful restoration by witness, some years ago, of the Orleans Titian, *Farrer* 1544–1548——Explanation with respect to the purchase and sale, by witness, of the Orleans Titian, the defects of which had been concealed by the restorations of Mr. Farrer; witness was quite mistaken in placing a high value on this picture, *Coningham* 3094–3100. 3140–3145.

Witness is not aware if the Tribute Money was ever in this country before, *Sir C. Eastlake* 6221, 6222——The picture of the Tribute Money, recently bought for the gallery, is not genuine, and was a most scandalous purchase, *Coningham* 6986, 6987——Remarks in justification of the purchase of the Tribute Money, *Russell* 8178, 8179——A single director would not have made so bad a purchase, *Wellesley* 9543, 9544——Large sum paid for the Tribute Money, which might have been bought a few months previously for less than half the amount, *Moore* 9755–9757.

See also *Farrer, Mr.*

Toledo School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 820, 821.

Toning. When a picture has passed through the cleaning processes it still requires a certain tone to be given to it, without which it will appear crude and inharmonious, *Rep.* vii——How this tone can be attained is a matter of dispute; different opinions on the subject considered, *ib.*——Other opinions, that the tone of a painting once lost can never be restored, *ib.*——The practice of toning does not appear to have been resorted to in the National Gallery, *ib.*

Practice occasionally adopted by witness of mixing a little colour with simple varnish in order to harmonise the general tone of pictures after cleaning, *Farrer* 1278–1282. 1367, 1368. 1376, 1377——Condemnation of the practice of toning down pictures as adopted by some cleaners, *Moore* 2416–2419——A certain amount of time adds tone to a picture, but in the course of years such tone becomes obscured by the gradual accumulation of dirt, and it is then expedient to have recourse to cleaning to restore the picture to its pristine condition, as well as for its general preservation, *Stansfield* 3693–3716——The pictures cleaned in 1846 improved in tone as time elapsed after cleaning, and the same result may be anticipated from those cleaned in 1852, *ib.* 3710–3716——Evidence to the effect that the over-glaze or general toning has been removed from all the pictures in the National Gallery cleaned in 1852, with the exception, perhaps, of the small Guercino, *Stevens* 4072–4098——It was never understood that the cleaner was to repair or tone down pictures; the Bacchus and Ariadne of Titian was slightly touched up, *Lord Monteagle* 5039. 5088——Materials used for toning and glazing pictures, *Sir C. Eastlake* 6229–6231.

Travelling Trustee or Director. See *Purchases* (*National Gallery*), 6.

Treasurer. The office of treasurer to the gallery might be undertaken by one of the trustees, who should report on the expenditure of the funds, *Foggo* 7243. 7279——His services should be gratuitous, *ib.* 7311.

Treasury, The. The Treasury appointed all the officers to the National Gallery, *Lord Monteagle* 4960——Circumstances of the management of the collection devolving upon the Treasury, *Lord Aberdeen* 5271, 5272——Instances of the Treasury declining to purchase on the trustees' recommendation, *Sir C. Eastlake* 6203–6208.

Control proposed to be vested in the Treasury or the Chancellor of Exchequer by witness in his suggested scheme for the management of the combined departments of art, *Dyce* 7440–7443. 7455. 7576, 7577. 7586–7603——Discretion proposed by witness to be exercised by the Treasury before purchases are finally arranged, *Russell* 8099–8110. 8131–8138——Instead of a fixed sum being placed at the disposal of the trustees, it would be better for them to apply to the Treasury for the necessary expenditure on purchases, *ib.* 8118–8127.

TRUSTEES:

1. *Management of the Gallery under the Trustees, considered; Defects of the System.*
2. *Suggestions for the future Management under modified Forms of Trusteeship.*
3. *Proposed Abolition of the System of Trustees.*
4. *Recommendation by the Committee that a Board of Trustees be continued under certain Conditions of Appointment, &c.*
5. *Papers laid before the Committee.*

1. *Management of the Gallery under the Trustees, considered; Defects of the System;*

Terms of the appointment of the original committee of gentlemen; no salary was assigned to them, *Rep.* iv——Gradual change which took place in the constitution of the body; increase in the number of members; change of the name of Committee for that of Trust, *ib.*——Meetings held; resolution passed in 1840 for holding periodical meetings, *ib.* iv, v——*Ex-officio* trustees, *ib.* v——The responsibility in regard to the purchase of pictures now vested entirely in the trustees, *ib.*——The entire responsibility in regard to picture-cleaning also assumed by them since the appointment of Mr. Uwins to the office of keeper, *Rep.* v——Practice of the trustees to abstain from recording their dissent in the minutes, *ib.* ix.

Witness has no recollection of any of the trustees having been present at the cleaning of the nine pictures in 1852, *Seguier* 448-451——When witness was employed at the gallery in 1844 in cleaning, he had no direct communication whatever with the trustees, *Brown* 1158–1166——Proceedings of the trustees at the meeting held 12th November 1852; minute then made approving of the result of the cleaning of the pictures in the previous vacation, *Russell* 3837 (*p.* 311)——Résumé of the proceedings of the trustees in regard to the pictures, more particularly the subject of inquiry, *ib.* 4826 *et seq.*——Further allusion to the meeting of the 12th November; no expression of dissent fell from any of the trustees, *ib.* 4844–4847——The meeting, 12th November, not specially summoned for the purpose of considering the effect of the cleaning; belief that no observations had appeared in the public press on this subject prior to the meeting, *ib.* 4848–4851.

Origin of the expression "Trustees;" terms in which spoken of by Lord Liverpool, in the original minute appointing them, *Lord Monteagle* 4967, 4968——Legal status of the trustees; illustration thereof in recent proceedings, *ib.* 4969, 4970——The trustees were not in the habit of delegating their authority to one of their body; instance of witness singly acting for the whole body (10 April 1848), *ib.* 5090——How far, therefore, the application of Sir C. Eastlake to Sir R. Peel, in 1845, with reference to the cleaning of the Susanna and the Elders, was consistent with propriety; instances when witness was a minister of his acting without the knowledge of the trustees, *ib.* 5090–5093.

Witness is one of the surviving original trustees of the National Gallery; circumstances of the original foundation, *Lord Aberdeen* 5266–5270——Suitability of the original constitution of the trust to the earlier stages of the institution, *ib.* 5279–5286——The number of trustees by whom business shall be proceeded with at their meetings, is regulated by the good sense of those present, *Lord Overstone* 5349–5354——The minutes of the trustees' transactions are confirmed at the following meeting to that in which they arise, *ib.* 5355–5357——Under the existing system, the absence of the trustees in the vacation does not embarrass the management of the gallery, the Treasury being its real controller, *ib.* 5358–5365——Manner in which business was transacted in the absence of the trustees from town, *Sir C. Eastlake* 5967–5969.

Part taken generally by the trustees in the business of the gallery, from 1824 to the present time; the management at first was mainly entrusted to the keeper till 1828, gradual increase of late years in the activity and control of the trustees, *Thwaites* 9668–9702——The adoption of the term "Trustees" in lieu of that of "Committee," by which the managing body were first known, took place at a very early period of the institution, *ib.* 9737, 9738.

The defects of the present management are chargeable on the system, rather than on the individual trustees, *Rep.* xiv——No code of rules exists for the government of the trust; witness's idea as to what those duties cast upon the trustees were, *Lord Monteagle* 4959. 4966. 4971–4977——If the trustees had understood that they were expected by Parliament and the country to take an active part in forming a national collection, their conduct would have been much less passive than it has been, *Russell* 8078. 8081–8085.

Report, 1852-53—*continued.*

TRUSTEES—continued.

2. *Suggestions for the future Management under modified Forms of Trusteeship:*

Recommendation that the trustees be retained as a supervising body over the directors (proposed by witness), whom they should have power to appoint and to dismiss, and that they report to Parliament upon the general conduct of the institution, *Hurlstone* 6736-6739. 6767 *et seq.*

The amount of salary for the five or six trustees proposed by witness, is a question of detail, *Dennistoun* 5761——Class of persons recommended for trustees, *ib.* 5761, 5762——Regulations for them and the establishment might be agreed upon, on the commencement of the system suggested, *ib.* 5763, 5764——The proposed board ought to have the entire control of the Parliamentary grants, *ib.* 5778-5880——The principle rather than the amount of salary would compel an onerous discharge of the board's duties, *ib.* 5781-5786——The proposed board should be appointed by the Treasury in the first instance, *ib.* 5787-5789——The trustee in Parliament, as head of the board, need not be salaried, *ib.* 5790——The danger of disagreement among trustees selected as proposed, would be less than the inconvenience of undivided responsibility, *ib.* 5791——In the event of a combination of the art collections, it would be advisable to adhere to the proposed plan of a board of trustees for the control of the pictures, *ib.* 5882-5886.

Proposed appointment of trustees by the Treasury as an inspecting body; they should not be remunerated, and should be responsible to Parliament; there should be an acting committee of trustees apart from the general body, with certain powers and duties peculiar to themselves, *Foggo* 7233-7242. 7291-7303. 7343-7354.

The number of trustees should depend on the extent of the collections under them, but there should be at least from eight to twelve, who might be appointed by the Treasury, and whose services should be gratuitous; nature of the duties to be undertaken by them, *Russell* 8090-8110. 8117-8139——Opinion that in making purchases no prejudice to the public would result from the fact of the trustees being to a great extent picture collectors themselves, *ib.* 8092-8094——No predilection exists among the present trustees for the pictures of any inferior school or master, *ib.* 8151, 8152. 8159, 8160. 8163-8166.

3. *Proposed Abolition of the System of Trustees:*

Objections to the trustees being retained in the management of the proposed Fine Arts Institution, *Coningham* 6843-6853——The constitution of the trust is of a very cumbersome character, and the trusteeship should be abolished altogether, *Dyce* 7435. 7437, 7438—Objection to the trustees being still retained as a visiting or inspecting body, in case a director with general powers of management be appointed, *Ford* 7923.

4. *Recommendation by the Committee that a Board of Trustees be continued under certain Conditions of Appointment, &c.:*

Opinion that a system of management by a Board of Trustees should be continued, *Rep.* xv——Expediency of diminishing the number of trustees as vacancies occur, *ib.*——The trustees should be appointed by the Treasury, *ib.*——No person should in future become a trustee of the National Gallery in virtue of any office, *ib.*

5. *Papers laid before the Committee:*

Date of the appointment of the several trustees of the National Gallery, *App.* 733——Dates of the meetings held by the trustees of the Gallery in each year, 1828 to 1843, *ib.* 734——Extract from the minutes of the trustees of the Gallery, 10 June 1840, respecting fixed periods for their meetings, *ib.*——Copy of the minutes of the trustees of the Gallery of the year 1844, *ib.* 735——Extracts from the minutes of the trustees of the Gallery, from the 1st Nov. 1852 to the present time, having reference to the cleaning, &c. of pictures, and the management of the Gallery, *ib.* 743.

Periodical Meetings of the Trustees. President of the Royal Academy. Purchases (National Gallery). Quorum of Trustees. Regulations, &c. (National Gallery). Responsibility. Uwins, Mr.,* 2.

Trustees (British Museum). Testimony to the excellent manner in which the trustees of the British Museum have discharged their duties, *Lord Aberdeen* 5326, 5327——There are altogether between 50 and 60 trustees of various classes, *Hawkins* 7674-7676——Objections to the body of trustees as being too numerous, and tending to encumber the management, *ib.* 7712, 7713. 7813-7816——The trustees may act without consulting the opinions of the officers of the museum, *ib.* 7813, 7814——All the officers in the institution are appointed by the three principal trustees, *Oldfield* 8249——Approval of the system of management by trustees and heads of departments under them as the best that can be devised, *Hamilton* 8889. 8975. 8979-8987.

See also *Purchases (British Museum). Responsibility (British Museum).*

Report, 1852-53—*continued.*

Turner's Pictures. Remarks relative to the cleaning of Turner's pictures, the Building of of Carthage and Sunrise in a Mist; filthy state of the former picture; explanation as to the necessity of its having been cleaned in a limited time, *Uwins* 153-164——These pictures were in a very filthy state, but were easily washed with soap and water without the surface of the works being affected, *Seguier* 712-718——Care recommended with respect to Turner's pictures; fault found with the cleaning of the Rise of Carthage without its being previously lined, *Munro* 3983, 3984——Inaccuracy of recollection into which Mr. Uwins has fallen in regard to the two Turners put in order at the same time with the pictures before referred to; evidence in correction of his statement, *Russell* 4837 (*p.* 311), 4838——Terms of Mr. Turner's will with respect to these pictures, *ib.* 4838.

Injury likely to arise to Turner's pictures from their being allowed to remain in his house, *Uwins* 287, 288. 327-329——Absurd extent to which the works of this artist are over-rated, *Moore* 2559——Opinion of Turner referred to, showing that he considered his works would be improved by time, *Stansfield* 3727, 3728——Objection to the purchase of Turner's pictures for the nation; extreme inferiority of his works to Claude, *Coningham* 6994-6997.

Turpentine. Recommendation of a mixture in equal parts of turpentine and spirits of wine, for removing the varnish, &c. from pictures; spirits of wine alone are dangerous to the original paint, *Fradelle* 2600-2602. 2693-2695.

Tuscany. Answers to queries on the national collections and museums of fine arts in Tuscany, *App.* 753 *et seq.*

U.

Uffizzii Gallery (*Florence*). Remarks relative to the class of pictures in this gallery, and their arrangement, &c., *Dennistoun* 5904, 5905. 5907——There are from 5,000 to 6,000 pictures in the collection, *Spence* 10109, 10110——Particulars respecting the arrangement of pictures and statues in the Gallery of the Uffizii, *App.* 831.

Ulm and Colmar School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 807, 808.

Upper Rhine (*Basel, Strasburg*) *School of Painting.* Classified list of the masters of this school, with names of their principal followers, *App.* 809.

Urine. The best liquid to use in the occasional washing of pictures is urine, *Nieuwenhuys* 1728, 1729.

Ursula, St., The. See *Claude's Pictures,* III. 3.

Uwins, Thomas, R. A., and George Saunders Thwaites. (Analysis of their Evidence.)—(*Mr. Uwins.*) Keeper of the National Gallery; has held the office since November 1847; 1-4——(*Colonel Thwaites.*) Has been assistant keeper and secretary to the trustees since the formation of the gallery in 1824; 5-7——(*Mr. Uwins.*) Produces a Treasury Minute, dated November 1847, appointing witness to the office of keeper, (vacant by the resignation of Mr. Eastlake,) with a salary of 200 *l.* per annum, 8, 9——On his appointment, witness consulted Mr. Eastlake on the nature of his duties, but received no special instructions whatsoever from the trustees, 10-20——During the vacation witness, of necessity, acts on his own responsibility, and from general instructions; nature of his duties; matters of importance are laid by him before the trustees at their periodical meetings, 14, 15——Until very recently witness was not aware of the existence of a Treasury document, dated 13th March 1824, containing certain instructions to Mr. William Seguier, the first keeper of the gallery, on the subject of picture-cleaning, 16-20——Witness does not reside in the building, but visits it, on an average, four days in the week, 21-27——Colonel Thwaites has apartments on the premises, and is constantly in attendance at all seasons of the year, 28.

With respect to the cleaning of the pictures, witness is merely instructed to employ Mr. John Seguier, and is personally irresponsible in the matter; nor does he consider it any part of his duty to offer an opinion as to the advisability of cleaning; the subject is generally arranged between Mr. Seguier and the trustees, witness merely attending during the process to see that no mischief is done to the pictures, 29-53. 83-92——The Paul Veronese is the only picture ever recommended by witness for cleaning, 32. 46, 47. 309-311——Evidence with respect to the cleaning of nine pictures during the vacation of 1852; names of these pictures; belief that the cleaning has been a considerable improvement, 44-69. 110. 125-149. 286. 309-324. 398, 399——The cleaning of pictures is an exceedingly dangerous and delicate operation; great variety of opinion as to the merits of different processes; each cleaner has his own process, which he would be very reluctant

Report, 1852–53—*continued.*

Uwins, Thomas, R.A., and George Saunders Thwaites. (Analysis, &c.)—*continued.*

to divulge, 70–82——Opinion that six weeks, the length of the vacation, afforded sufficient time for the cleaning of the nine pictures alluded to, 93–100.

Observations relative to the danger of so far removing the old varnish, &c. as to leave the surface of the picture entirely exposed; this danger is greater in the case of some pictures than of others, 101–124——It is very doubtful whether glazings were used at all by the Venetian or other old masters, 113–124——Mr. Seguier, as instructed by the trustees, used simple mastic varnish in the cleaning of the nine pictures, 133–136. 148, 149. 206, 207. 281–283——Circumstance of the old painters having mixed oil with the varnish used by them; advantages of this mixture, 137–147——Remarks relative to the cleaning of Turner's pictures, the Building of Carthage and Sunrise in a Mist; filthy state of the former picture; explanation as to the necessity of its having been cleaned in a limited time, 153–164.

Examination with respect to the occasional cleaning of the pictures by means of a silk handkerchief or of a sponge and water; opinion that no injury has ever arisen from the use of water, 165–178——With respect to injuries to pictures from the dust penetrating through the back of the canvas, no precautions have been taken on this point, the shortness of the vacation preventing the adoption of proper measures, 179, 180. 263–271——Imperfect state of many pictures in the gallery from their having undergone previous cleanings in former times; in some instances the repairs and blemishes are almost imperceptible, 181–189——Difficulty of ascertaining how far the discolouring of a picture arises from internal change in the colours or from the incrustations of varnish or of dirt, 190–192.

(*Colonel Thwaites.*) Witness does not act under any special instructions from the trustees, but is rather under Mr. Uwins; definition of his duties, as communicated by the Treasury on 31 March 1824; the instructions to Mr. W. Seguier in 1824 were not seen till lately by witness, 193–200——(*Mr. Uwins.*) The orders for cleaning the nine pictures emanated from the trustees, but were not given in writing; discretionary power exercised by witness in the matter, and on the occasional cleaning of pictures generally during the vacation, 201, 202. 208–246. 272–274——The responsibility of cleaning the pictures in a proper manner rests entirely with Mr. Seguier, who may, at his own discretion, use whatever means he considers most desirable; he is, however, only responsible to the trustees, 239–262. 275–280——How far it may be desirable to impose greater responsibility on the trustees, 247–255——Injury likely to arise to Mr. Turner's pictures from their being allowed to remain in his house, 287, 288. 327–329.

Opinion that the cleaning must always be entrusted to the judgment of some one picture-cleaner; how far this is the case on the Continent, 289–308. 397——Out of about 300 pictures in the National Gallery, only nine have been cleaned since 1846; 302–304——Agreeable effect produced by time on the general tone of well-painted pictures, 325——The fading of Sir J. Reynolds's works is mainly attributable to improper cleaning, 326——Reference to the opinion of Mr. W. Seguier as to all the pictures in the gallery having been in a very good state when he was keeper, 333–337.

In the cleaning of certain pictures with a wet sponge, witness believes the sponge was squeezed nearly dry, but he was not present on the occasion, 338–340. 386——(*Colonel Thwaites.*) The occasional cleaning, by means of a silk handkerchief, is done by order of witness, as circumstances require, by one of the attendants; since February 1852 the feather brush has not been much used, 341–345. 355–357——(*Mr. Uwins.*) As Colonel Thwaites is present during the occasional cleaning, witness considers that he is responsible for seeing the work properly executed; the orders are given by witness; only one man is trusted with the performance of this duty, 346–354. 368–371.

(*Colonel Thwaites.*) Though considerable dust settles on the frames, there is but little on the face of the pictures from their being slanted forward from the top; there has been no occasion for the use of the handkerchief for the last month or so, 357. 372–377——The frames have been dusted only once during the last three or four weeks; opinion that the dust should be removed from them daily, 358–367——Witness does not understand that he is responsible for the proper performance of the occasional cleaning, 368.

(*Mr. Uwins.*) Necessity for great care in the use of water in cleaning pictures, 380——The nine pictures cleaned by Mr. Seguier were submitted to the trustees by him in a list, as requiring cleaning, 381–384——(*Colonel Thwaites.*) With respect to the recent washing of some pictures with a sponge, witness cannot say whether the sponge was squeezed nearly dry or whether it was saturated with water; the process was not different from what it always has been, 387–395——(*Mr. Uwins.*) The Boar Hunt of Velasquez was cleaned with a sponge in a delicate manner; a tear on the picture existed before the cleaning, 400 404——(*Colonel Thwaites.*) Witness did not observe the tear on this picture prior to the cleaning; a soft cloth as well as a sponge was used, and the water was taken from a bucket, 405–412.

Report, 1852-53—*continued.*

Uwins, Thomas, R.A., and George Saunders Thwaites. (Analysis, &c.)—*continued.*

Uwins, Thomas, R.A. [Second Examination.]—Personal superintendence constantly exercised by witness during the process of cleaning by Mr. Seguier; nature of this process; further approval of the operation, 2725-2754. 2894, 2895——Reasons assigned by witness for not ordering the great accumulation of dust on the backs of the pictures to be removed therefrom; improbability of the operation having been performed without his knowledge, 2755-2775. 2883-2885. 2896-2902——With respect to the cleaning of the nine pictures, a list of them was put into his hands by the trustees, but he never recommended the operation, 2756. 2763——Though witness is responsible generally to the trustees of the gallery and to the public for the protection of the pictures, his only responsibility on the subject of cleaning is to superintend the process, 2764. 2862, 2863. 2877-2879.

Erroneous judgment displayed by Mr. Morris Moore in the course of his comments on the recently cleaned pictures, 2776-2778. 2797*, 2798——Denial of his assertion that the glazing has been partly removed from the surface of the Paul Veronese, 2777, 2778. 2798——Explanation with respect to witness's view of the use of glazing by the old masters; difference of opinion between him and Mr. Moore on this point, 2779-2797. 2880-2882. 2886-2893——Belief that glazing was part of the process of the painter, but that neither the Venetian nor other masters ever finished off their works with it; they rather finished their pictures in thin tints of semi-opaque colour, 2781-2793. 2880-2882. 2886-2893——The Italian terms for glazing, "velare" and "velatura," as defined in the Dictionary of the Academy of Bologna, relate most probably to the preparation of the canvas, 2794-2797——Denial of the assertions of Messrs. Moore and Arney, that certain parts of the original surface of the Queen of Sheba have been completely removed by the cleaning, 2797*, 2798——The works of Sir Joshua Reynolds are not particularly susceptible of injury from cleaning, 2799-2802.

(*Mr. Uwins and Col. Thwaites.*) Non-production before the Committee of the written list of the trustees which specified the nine pictures to be cleaned, 2803-2827. 2859-2861——(*Mr. Seguier.*) Belief that there was no written list; the pictures were recommended for cleaning by witness, and he most probably received verbal instructions through Colonel Thwaites or Mr. Uwins to undertake the operation, 2828-2858.

(*Mr. Uwins.*) The Paul Veronese was the only picture which witness remembers to have ever recommended for cleaning, 2864-2869——Vague nature of witness's instructions on his accession to the office of keeper of the gallery; he cannot now recollect the instructions given him by Sir C. Eastlake, 2870-2876——Authority of witness, by a minute of the trustees, to superintend the occasional cleaning, 2877-2879——Reference to the greater satisfaction felt by the students with the pictures cleaned in 1852 than with their former dirty state, 2903, 2904.

Uwins, Thomas, R.A. [Third Examination], *and John Seguier* [Fourth Examination]. (Analysis of their Evidence.)—(*Mr. Uwins.*) Further statement in refutation of the charges brought by Messrs. Moore and Arney against the cleaning of the Queen of Sheba, 3146-3152. 3159, 3160——(*Mr. Seguier.*) The repairs formerly executed by witness in this picture were on the lower part of it; they are not now visible, 3153, 3154. 3156, 3157——(*Mr. Uwins.*) Evidence to the effect that the Paul Veronese is now in an exceedingly fine state; instead of the shadows having been removed and the picture generally injured, as asserted by Mr. Moore, it has been restored by cleaning to its pristine beauty, 3161-3173——Belief that no glazing was ever used in the Isaac and Rebecca, or, if there was, that it is still there; the aerial perspective has not been in the least affected by the cleaning, 3174.

Witness cannot observe any of the defects pointed out by Mr. Moore in the View in Venice, 3175-3179——Any imperfection in the perspective of the water of the Grand Canal is attributable to the fault of the master rather than to the recent cleaning, 3180-3184——The Plague at Ashdod was always an exceedingly imperfect picture, and, from its being painted on a red ground, which is gradually becoming more perceptible, will in course of time be quite lost as a work of art; the cleaning did not at all alter its condition in this respect, 3185-3200——The injuries imputed to the Guercino are not visible to witness, 3201——Improvements effected in the Annunciation by the late cleaning, which has restored the former beautiful tone of the picture, 3202, 3203——Denial of Mr. Moore's assertion that the original surface of the St. Bavon has been touched, and some of the figures partly rubbed out, 3204, 3205.

Circumstance of some of the pictures in the gallery being the property of the trustees of the British Museum, whose authority, however, was not consulted about their cleaning, 3206-3210——(*Mr. Seguier.*) The removal of the gallery varnish may be safely effected by a judicious use of soap and water, 3211-3215. 3228——The backs of the pictures are very much less dusty now than they were prior to the removal of the dust three years ago, 3216-3220——(*Mr. Uwins and Colonel Thwaites.*) No remonstrance has been made by any of the trustees of the Museum with respect to the over cleaning of their pictures, 3221-3227.

See also *Farrer, Henry.*

Report, 1852-53—*continued.*

Uwins, Mr.

1. *His Competency as Keeper of the Gallery, considered.*
2. *Extent to which Responsible for Cleaning.*
3. *Papers laid before the Committee.*

1. *His Competency as Keeper of the Gallery, considered:*

Comments, in detail, on the inefficiency of the keeper to superintend the cleaning, *Moore* 2384, 2385. 2387-2397. 2409. 2444, 2445. 2453-2458. 2564. 2575, 2576——Remarks on the evidence of Mr. Uwins, controverting that of Mr. Morris Moore, *Rep.* x, xi.

2. *Extent to which Responsible for Cleaning:*

Practice pursued by the trustees as to consulting Mr. Seguier respecting the cleaning of particular pictures; Mr. Uwins' statement, that he was not consulted by the trustees, somewhat surprises witness, *Sir C. Eastlake* 4446-4454——How far Mr. Uwins, in withholding his judgment and advice, may be considered not to have acted up to his duty, *Russell* 4804, 4805——Witness considered that Mr. Uwins was virtually consulted at the meetings of the trustees, *ib.* 4806, 4807——Mr. Uwins' office implied that he should take part in the discussions, *ib.* 4813——Mr. Uwins was present at the discussion, and had full opportunity of objecting, *ib.* 4833-4837.

Mr. Uwins' statement, that with reference to the nine pictures lately cleaned, his opinion was not asked by the trustees, comes upon witness with a great deal of surprise; evidence in proof of a contrary state of things, *Lord Monteagle* 4987-4995——Witness was present at the meeting of 5th July; Mr. Uwins also; evidence showing that Mr. Uwins is responsible for having approved of the cleaning, *ib.* 5050-5064——Evidence of Mr. Uwins quoted with reference to his opinion not having been asked in regard to the nine pictures; surprise of witness at the view taken by Mr. Uwins of his position, *Lord Monteagle* 5101, 5102.

The trustees since the appointment of Mr. Uwins, have assumed the entire responsibility in regard to picture-cleaning, which in Sir C. Eastlake's time had been largely shared by the keeper, *Rep.* v——Remarks on the evidence given by Mr. Uwins, to the effect that he never spoke to the trustees on the subject of picture-cleaning, nor was ever consulted by them, *ib.* ix——Mr. Uwins does not appear to have been consulted respecting the varnishes used in the gallery, *ib.* xii.

3. *Papers laid before the Committee:*

Documents laid before the Committee by Mr. Uwins, 26 April 1853:—Copy of the "Regulations for the care of the Pictures," mentioned in p. 41 of the Return of Minutes of Meetings of Trustees, laid before the House of Commons in Feb. 1853 (Parl. Paper, No. 104), *App.* 748——Copy of the "Existing Regulations" alluded to in p. 49 of the same Return, by which the trustees are precluded from recommending to the Treasury the purchase of the works of living artists, *ib.*——Number and designation of the pictures in the National Gallery, cleaned by the removal of coats of discoloured or decayed varnish, since that collection has been deposited in the present gallery in Trafalgar-square, *ib.*——Number and designation of the officers and servants of various ranks employed in the galleries, with the salaries of each, *ib.* 751——Report of Mr. Uwins relative to the occasional cleaning effected on 2d April 1853, *ib.* 752.

See also *Backs of the Pictures. Cleaning. Keeper of the Gallery*, 4. *Turner's Pictures.*

V.

Vacation. The six weeks of annual vacation allotted in 1852 to the execution of the cleaning of nine pictures has been stated by many witnesses to be inadequate for the safe treatment of so many pictures, *Rep.* xi——Particulars of the pictures dealt with in the recent vacation, *ib.*

Opinion that six weeks, the length of the vacation, afforded sufficient time for the cleaning of the nine pictures in 1852, *Uwins* 93-100; *Seguier* 670-677——With a proper assistant, six weeks was ample time for the operation, *Bolton* 952, 953.

Six weeks was a very insufficient time in which to undertake the cleaning of the nine pictures, *Farrer* 1497. 1504-1514; *Nieuwenhuys* 1681; *Bentley* 1814, 1815. 1854-1859; *Moore* 2492-2497; *Fradelle* 2690-2692; *Munro* 4031, 4032. 4034; *Sir C. Eastlake* 4550——How far the vacation afforded sufficient time for cleaning the pictures; it is not desirable that the process should be confined to the vacation, *Russell* 4924, 4925.

The process of cleaning should be continuous throughout the year, in a room devoted to the purpose, *Dennistoun* 3405——The restriction of the cleaning to the vacation only is an inconvenient practice; witness stated that in a printed letter addressed to Sir R. Peel, *Sir C. Eastlake* 4577, 4578. 4654, 4655——The cleaning takes place in the lower rooms, and always during the vacation; the cleaner had full authority to take more or less time, *Lord Monteagle* 5019-5025.

Report, 1852–53—*continued.*

Vacation—continued.

During the vacation the keeper, of necessity, acts on his own responsibility, and from general instructions; nature of his duties; matters of importance are laid before the trustees at their periodical meetings, *Uwins* 14, 15——In cases of emergency the trustees can always be brought together in the vacation, *Lord Overstone* 5366.

Valencia School of Painters. Classified list of the masters of this school, with names of their principal followers, *App.* 823, 824.

Value of Pictures. The value of any picture should be tested entirely by its intrinsic merits, rather than by its authorship, *Moore* 9999–10001——A perfectly faithful copy may be as valuable as the original work, *ib.* 10001.

See also *Commercial Value of the Pictures.*

Van Eyck. Nature of witness's objections to the purchase by the trustees of a portrait by Van Eyck; finer pictures by the same master have since been sold for half its cost, *Moore* 9748–9755.

Varnish. Various methods in vogue for restoring the brilliancy of the varnish; description of those most commonly in use, *Rep.* viii——The species of varnish generally preferred in this country is mastic varnish; Mr. Seguier has been in the habit of mixing a certain portion of linseed oil therewith, *ib.* xii——The subject of the varnish used does not appear to have ever been under the consideration of the trustees, *Rep.* xii——The change to pure mastic varnish was the result of a suggestion incidentally made by a single trustee to Mr. Seguier, *ib.*——Mr. Uwins does not appear to have been consulted, *ib.*

Conflict of opinions as to the effect of this mixture; its objectionable qualities stated; such objections practically admitted by Mr. Seguier, its use in the gallery having been abandoned, *Rep.* xii——The question of varnishes was one which it was always deemed better to leave to the discretion of the cleaner, *ib.* xii, xiii——No chemical knowledge has at any time been brought to bear with the view of ascertaining the exact composition and quality of the varnishes employed, *ib.* xiii.

Recommendation that no varnish be used in the gallery without the sanction of the director, who shall be responsible for its composition and quality, *Rep.* xiii——Practicability of covering pictures with two coats of varnish, the upper coat being light and delicate and easily removable, considered, *ib.* xiv.

The varnishes used on old paintings are mastic varnish and oil or copal varnish; the former is the more easily removed, *Seguier* 491–502——Successful removal of old varnishes by the application of the same substance as that of which they are composed, *Lawrence*, 3553, 3554——There is great danger in applying varnish to a picture recently painted, *Stansfield* 3680–3682——Witness, as keeper, did not interfere with Mr. Seguier or Mr. Brown in the use of the particular varnishes which they applied; Mr. Seguier has high authority for the use of oil; Mr. Brown used nothing but mastic varnish, *Sir C. Eastlake* 4601–4607. 4610–4612.

Experiments instituted by witness with reference to the value of varnish as a means of protecting the surfaces of pictures from atmospheric effects; these experiments did not extend to the "gallery varnish," *Faraday* 5442–5445——Explanation relative to a varnish described by Armenini as having been used by Correggio and Parmegiano for the preservation of their works; recommended application of this varnish to the pictures in the gallery, *Dyce* 7525–7570. 7639–7643. 7645, 7646.

List of pictures varnished with mastic varnish only, *App.* 747——Pictures which have not been varnished since their reception, but presumed to be varnished with mastic varnish, *ib.*

See also *Amber Varnish. Armenini. Cleaning. Damar Varnish. Faraday, Mr. Florence. Friction. Gallery Varnish. Isinglass. Mastic Varnish. Occasional Cleaning. Oil Varnish. Resinous Varnish. Solvents. Spirits of Wine. Surfaces of Pictures. Turpentine.*

Vatican, The. Confusion arising from the concentration of heterogeneous works of art in the Vatican, adverted to, as implying a similar confusion in the case of the proposed national collection of fine arts in this country, *Hurlstone* 7208–7213.

Velare. See *Glazing*, 2.

VELASQUEZ:

I. *The Adoration of the Shepherds.*

II. *The Boar Hunt:*

1. Its Value as a Work of Art considered.
2. Circumstances attending its Purchase from Mr. Farrer.
3. Existence of Restorations in the Picture.
4. Contradictory Opinions relative to the Effect of its Cleaning in 1846.
5. Its recent Washing adverted to.

Report, 1852-53—*continued.*

VELASQUEZ—continued.

I. *The Adoration of the Shepherds:*

Objection to the purchase by the trustees of this work, as being of a very inferior description, *Wellesley* 9545, 9546. 9550-9553.

II. *The Boar Hunt:*

1. Its Value as a Work of Art considered:

Pictures such as the Velasquez, recently bought, improve the public taste; suggestion as to lectures on art, *Lord Overstone* 5396-5398. 5401——The Velasquez would attract the attention of a connoisseur, without reference to the celebrity of its painter; reasons for which it was purchased, *ib.* 5403, 5404——Remarks in justification of the purchase, as a very valuable addition to the gallery, *C. B. Wall* 9940.

The Boar Hunt is one of the most unfortunate specimens of the master that could have been selected by the trustees for purchase, *Coningham* 6965-6967——Comments on the price given for the picture, and on the claims of this master to hold the high rank which he has for the present attained to, *Moore* 9834-9865.

2. Circumstances attending its Purchase from Mr. Farrer:

Evidence as to the purchase by the trustees of the Velasquez from Mr. Farrer, who induced them to believe it was about to be sent to the King of Holland, whereas it had just been rejected and returned by him, *Moore* 9845. 9861-9865. 9940——Willingness of witness to take the Velasquez from the trustees at the same price which he paid Lord Cowley for it, viz., 2,000*l.*, *Farrer* 9867——Denial of Mr. Moore's assertion, that witness was guilty of much impropriety in the sale of the picture to the gallery, *ib.* 9867——Grounds for the assertion, that Mr. Farrer acted in a very improper manner in the sale of the Boar Hunt to the trustees; testimony of Mr. C. B. Wall, Mr. Coningham, and Mr. Chambers Hall appealed to in confirmation of this assertion, *Moore* 9868-9911——Explanation of the circumstances connected with the purchase of the Velasquez from witness; part taken by the late Sir R. Peel in the matter, through the instrumentality of Mr. C. B. Wall; the transaction was conducted without any recourse to deceit or imposition, *Farrer* 9912-9936——Instrumentality of witness, as directed by the late Sir Robert Peel, in purchasing the Velasquez for the gallery; how far his account of the transaction is confirmatory of certain contradictory statements on the subject by Messrs. Moore and Farrer, *C. B. Wall, M.P.*, 9937-9940.

3. Existence of Restorations in the Picture:

The Boar Hunt was very much injured long before it came into the National Gallery; damage done to it in the process of re-lining; restorations effected by Mr. Lance, *Sir C. Eastlake* 4477 *et seq.*——Details respecting the restorations effected by witness to the Velasquez alluded to by Sir C. Eastlake (Q. 2447), as having been seriously injured whilst in the hands of a picture-cleaner named Thane, *Lance* 5120-5229. 5253-5264——Letter from witness to the Chairman of the Committee, adverted to, as stating that certain restorations in the Velasquez were not executed by witness; he cannot, however, be positive that these touches have been introduced since the picture was in his hands, *ib.* 7863 7867——Witness cleaned the picture of the Boar Hunt about 35 years ago, when it was in the possession of Sir Henry Wellesley; it was then in an exceedingly fine and pure condition, and had never been restored or re-touched, *Day* 7870-7881——He has lately seen the picture, and considers it in a very harmonious state, but has detected the appearance of modern colouring, *ib.* 7882-7885.

4. Contradictory Opinions relative to the Effect of its Cleaning in 1846:

Justification of the cleaning by witness of the Boar Hunt, in 1846, *Seguier* 948-954——The picture has been improved by the operation, *Eastlake* 4741, 4742——The application of oil varnish has injured the picture, but witness cannot say that the cleaning was not beneficial, *Bolton* 1057.

The tone of the Boar Hunt has been injuriously affected by the cleaning, *Farrer* 1420-1445; *Bromley* 4368-4370——The great charm of the master, his aerial perspective, has been removed, and the picture has been generally injured by the cleaning, *Ford* 3878-3880——Since the cleaning it seems to want air and distance, *Munro* 4041——It has been over-rubbed in many places, and the glazings have been removed, *Cheney* 4336-4343.

5. Its recent Washing adverted to:

The Boar Hunt was washed with a sponge in a delicate manner; a tear on the picture existed before the washing, *Uwins* 400-404——Witness did not observe the tear on this picture prior to its recent cleaning with water; a soft cloth as well as a sponge was used, and the water was taken from a bucket, *Thwaites* 405-412——Profuse manner in which water was applied to this picture when being washed by an assistant of Mr. Seguier, on 2 April 1853; injury likely to arise therefrom, *Moore* 2362-2370. 2535-2549.

See also *Thane, Mr.* *Wilson, Andrew.*

Velatura. See *Glazing*, 2.

Report, 1852–53—*continued.*

Venetian School of Painting. It is by no means certain that the Venetian masters used glazings or transparent colours in finishing off their pictures; there is, however, something very peculiar in Venetian art, *Uwins* 114–124. 203–205——Further remarks to the effect that though glazing was to a certain extent practised by them, it was not used in the actual finishing of their pictures, *ib.* 2779–2793. 2890–2893.

There can be no doubt but the Venetian masters used glazing, *Seguier* 467. 479–482; *Bolton* 977. 980; *Moore* 2435–2443. 2511–2514. 10010; *Hart* 3314–3318——Definition of the process of glazing used by them, *Seguier* 479–481; *Nieuwenhuys* 1687, 1688; *Hart* 3239 *et seq.*; *Sir E. Landseer* 4208–4212——Descriptions of the glazing are given in the works of Marco Boschini and other old writers, and the process is generally well understood, *Hart* 3275–3283. 3314–3318.

The works of the Venetian school are especially susceptible of injury in cleaning on account of the peculiar glazing used by them, *Seguier* 466, 467. 479–482. 831–835. 920; *Bolton* 977–980; *Brown* 1116–1123; *Farrer* 1269–1277. 1536–1542; *Bentley* 1756–1760; *Moore* 2022–2031——Experiments tried by witness conjointly with Sir C. Eastlake some time since on pictures of this school, *Faraday* 5520–5523.

Classified list of the masters of this school, from its commencement to Giovanni Bellini, with names of their principal followers, *App.* 797——From Giovanni Bellini to the followers of Bassano, *ib.* 798, 799——From the followers of Bassano to the close of the 18th century, *ib.* 799.

See also *Glazings.* *Veronese, Paul.*

Ventilation. Sufficiency of the ventilation in the National Gallery, *Hurlstone* 7113——The effluvia within the gallery attributed to defective ventilation, *Foggo* 7388——Inefficiency of the ventilation of the gallery, and injuries arising therefrom, *Russell* 8203–8205; *Plass* 9281–9283——There would be no objection, on the score of ventilation, to the extended building proposed by witness on the site of the present gallery, *Fergusson* 8436. 8439, 8440. 8520——Inconvenience in the gallery from the rain occasionally dropping through the roof, and from the defective ventilation, *Davies* 9323.

Venus and Adonis, The. See *Titian.*

Vernon Collection. See *Graves, Harry, & Co.*

VERONESE, PAUL:

I. *Characteristics of this Master.*
II. *The Consecration of St. Nicholas:*
1. Statements as to its Originality.
2. Its Cleaning recommended by Mr. Uwins.
3. Injuries attributed to the Operation.
4. Evidence in approval of the Cleaning.

I. *Characteristics of this Master:*

Authority of Boschini quoted, as showing the use of water-colours by this master; consequent danger in cleaning his work, *Dyce* 3830–3832——Further quotations from Boschini, as showing that Paul Veronese did not use glazing in his draperies; definition of the same authority of the peculiar process used by this master in finishing off his works, *ib.* 3826–3846. 4237–4244.

Quotations from Armenini, who wrote in 1586, cited as showing the errors of Mr. Dyce in stating that Paul Veronese and other great masters did not actually use glazings in their pictures, *Moore* 10010.

II. *The Consecration of St. Nicholas:*

1. Statements as to its Originality:

Inference from the writings of Boschini, that the Consecration of St. Nicholas is not an original work by Veronese, but probably designed by him, and painted by one of his pupils, *Dyce* 4245–4255——Probable reasons which influenced Mr. Dyce in giving the opinion he has done in regard to this picture not being original; reference to Boschini as being quoted by him too literally, *Sir C. Eastlake* 4594–4600.

2. Its Cleaning recommended by Mr. Uwins:

The Consecration of St. Nicholas is the only picture cleaned upon the recommendation of Mr. Uwins, *Rep.* ix——The Paul Veronese is the only picture in the gallery ever recommended by witness for cleaning, *Uwins* 32. 46, 47. 309–311. 2864–2869——It had previous to the cleaning been coated with oil over the varnish, which accounted for its being so dirty, *Seguier* 2949——Filthy state of the picture before it was cleaned, *Uwins* 3161–3166——It was the only one of the nine pictures that witness would have submitted to the process, *Hart* 3323–3326——The Paul Veronese, and probably some others, required the operation, *Bromley* 4357, 4358.

Report, 1852-53—*continued.*

Veronese, Paul—continued.

II. *The Consecration of St. Nicholas*—continued.

3. Injuries attributed to the Operation:

The picture of the Consecration of St. Nicholas has lost much of its mellowness; the glazing was probably removed on some former occasion, and not by the recent cleaning, *Bolton* 1037-1039——The glazings of the work and its former brilliancy have been removed by the cleaning, *Nieuwenhuys* 1637-1639——The cleaning has been somewhat uneven, but none of the original glazing has been removed by the process; excellent condition of this picture when in the possession of M. de la Hante, *Bentley* 1818-1822——It has been damaged by the removal of part of the glazing, and by a general depreciation of tone in consequence, *Moore* 2202, 2203——Opinions of Dr. Waagen and Mr. John Landseer as to the former fine condition of the picture, *ib.* 2452-2454——The glazing or original surface of the picture has been partly removed by cleaning, and its harmonious effect is quite lost, *Coningham* 3059-3061——Some slight injury has been done by the removal of some of the tints and glazings, *Hart* 3257-3259.

The injuries inflicted by the cleaning, consist chiefly in the removal of nearly all the little dark shadows throughout the pictures; this has been effected by the disturbance of the surface glazings; former engraving of the picture produced in illustration of these injuries, *Lawrence* 3524-3537. 3577-3583——A discoloration in the sky may have been the effect of a former cleaning, *Dyce* 3780——Doubts as to the removal of the glazings from the draperies in the Paul Veronese, *ib.* 3826——Injuries to the sky and cloud, by which their perspective has been affected; uneven character of the cleaning generally; how far time may restore the former appearance of the picture, *Sir E. Landseer* 4135. 4227-4235——The uneven character of the cleaning in 1852, is very observable in the case of the Paul Veronese; recommendation that those parts which have been over-cleaned should be touched slightly in water-colours to reduce their force, *Dyce* 4256, 4257——Opinion that the defect in the sky is not the result of a Pentimento, *ib.* 4256——The Consecration of St. Nicholas has been much less injured than is represented, but the acolyte, in white, to the left of the picture, and the angel, have somewhat suffered, *Cheney* 4303, 4304. 4346, 4347.

4. Evidence in approval of the Cleaning:

Approval of the cleaning by Mr. Seguier of the Consecration of St. Nicholas, *Uwins*, 32 *et seq.* 203-205. 309-319. 330-332.; *Sir C. Eastlake* 4594——Detail of the condition of the work when cleaned and re-varnished by witness; circumstance of his having mixed a little oil with the mastic varnish on account of the repairs requiring to be touched, *Seguier* 553-573——The work has been cleaned very successfully, *Farrer* 1322-1324. 1393-1402——Denial of Mr. Moore's assertion, that the glazing has been partly removed from the surface of the picture, *Uwins* 2777, 2778. 2798——Evidence to the effect that the Paul Veronese is now in an exceedingly fine state; instead of the shadows having been removed, and the picture generally injured, as asserted by Mr. Moore, it has been restored by cleaning to its pristine beauty, *ib.* 3161-3173——Splendid condition of the work when in the possession of M. De la Hante, some 30 or 40 years ago; it is now in an equally perfect state at present, *ib.* 3168-3173.

Witness copied the Consecration of St. Nicholas about 25 years ago, when its appearance was very similar to what it is now, *Hart* 3232-3235——It was the only one of the nine pictures cleaned in 1852 that required the process, and was benefited by it, *Dennistoun* 3360-3362. 3380——Belief that it has not been injured by the operation, *Bromley* 4362-4364——Letters from Mr. Leslie to witness respecting the Paul Veronese, read, in which he approves of the cleaning of that work, *Russell* 4837 (*p.* 308, 309).

Veronese School of Painting. Classified list of the masters of this school, with names of their principal followers, *App.* 800.

Vinci, Leonardo da. This master was not accustomed to put any opaque colours over the glazing of his pictures, *Moore* 2609.

Vision of a Knight, The. See *Raphael*, 2.

Vision of St. Jerome, The. See *Parmegiano.*

Visitors to the British Museum. The attendance of the public in the Museum is never so numerous as to cause inconvenience, *Hawkins* 7743——No inconvenience now arises from an over-crowding of the building; the visitors attend with a more *bonâ fide* object than those who go to the National Gallery, *Oldfield* 8345-8356.

Visitors to the National Gallery. Witness has never seen the gallery too numerously attended, *Dennistoun* 5880, 5881——There is seldom or ever any inconvenience in the gallery from too numerous an attendance of the public, *Foggo* 7357. 7387——Suggestion that a return be procured of the number of persons visiting the gallery on certain days, distinguishing those from the country from the town visitors, *Dyce* 7626, 7627.

Means

Report, 1852-53—*continued.*

Visitors to the National Gallery—continued.

Means by which too numerous an attendance of the public in the gallery might be prevented, *Dyce* 7504-7509. 7624-7626——Proper regulations in the gallery, by means of an efficient staff of attendants or policemen, are quite ample for the purpose of preventing too numerous an attendance of the public, or for the preservation of order and security generally, *Hurlstone* 7072. 7127-7129——Admission by ticket would prevent the crowding of the gallery, but it is very desirable that the public should attend as numerously as possible; and witness has never experienced any inconvenience from too great an assemblage of persons, *ib.* 7073. 7093-7100. 7113. 7122-7131.

Great number of visitors at the Great Exhibition, Kew Gardens, Hampton Court, Windsor Castle, &c., &c., as implying that a numerous attendance may be expected at the National Gallery if removed to Kensington, *Bowring* 8627. 8630. 8638-8643. 8677-8679——Impression that there will be a numerous attendance, at the projected departments at Kensington, of persons desirous of receiving instruction in art, *Bowring* 8653-8664. 8713——If the several departments of art were concentrated on one site, considerable inconvenience might arise from crowds occasionally collecting in one particular department, *Moore* 10035-10039.

Statement of the number of visitors admitted to visit the British Museum, the National Gallery (distinguishing the Vernon Gallery), the Zoological Gardens, Kew Gardens, and Hampton Court Palace, in the Years 1850, 1851, and 1852. *App.* 829 —— Statement of the number of visitors to the Duke of Northumberland's Collections at Northumberland House and Sion House, and also to the Bridgewater Gallery and Windsor Castle, in the six summer months of 1851, when the Great Exhibition was open, *ib.*

See also *Admission of the Public.* *Louvre, The.* *Management of the Gallery*, 2. *Removal of the Gallery.*

W.

Waagen, Dr. Undue propensity for picture-cleaning attributed to Dr. Waagen, of the Berlin Gallery, *Moore* 2451. 2525-2527——Faulty administration of the affairs of the Berlin Gallery referred to, where Dr. Waagen is chiefly responsible, and has committed several blunders in the purchase of pictures, &c., *Coningham* 6889-6894. 6973-6977—— Reference to the opinion of Dr. Waagen in 1835, as being unfavourable to an extensive system of copying by students or artists, *Dyce* 7668——Activity of Dr. Waagen in acquiring valuable works for the Berlin institution, *Ford* 8005-8009.

See also *Berlin Gallery.*

Wall, Charles Baring, M.P., (Member of the Committee). (Analysis of his Evidence.)—Instrumentality of witness, as directed by the late Sir Robert Peel, in purchasing the Velasquez for the gallery; how far his account of the transaction is confirmatory of certain contradictory statements on the subject by Messrs. Moore and Farrer, 9937-9940 ——Remarks in justification of the purchase, 9940.

Wash Leather. See *Occasional Cleaning.*

Washing (*British Museum*). Occasional washing of the prints and engravings adverted to; hot water only is used, and no damage has been inflicted thereby, *Carpenter* 9130-9137. 9169.

Washing (*National Gallery*). There is no regulation of the trustees with respect to the cleaning of pictures by washing; it has been done as if such instructions had been given, *Sir C. Eastlake* 4412, 4413——It has been contended that properly wiping with a silk handkerchief implies a previous washing, *ib.*

See also *Occasional Cleaning.* *Parmegiano.* *Piombo, Sebastiano del*, 1. *Regulations, &c.* (*National Gallery*). *Soap and Water.* *Sponge Cleaning.* *Urine.* *Velasquez*, II. 5.

Water. Variety of opinions with regard to the application of water to the surface of a picture, *Rep.* viii——The application should be limited to a mere moistening of the surface as distinguished from washing, *ib.*

Great care is necessary in using water in the occasional washing of pictures, *Uwins* 380; *Moore* 2535-2549——How far there may be objections to the use of water or of soap and water in occasional cleaning, *Seguier* 649-653. 778, 779. 3005-3015. 3022-3026; *Bolton* 1010-1018; *Brown* 1197-1202; *Bentley* 1847-1853.

See also *Occasional Cleaning.* *Rembrandt.* *Soap and Water.* *Sponge Cleaning.* *Velasquez*, II. 5.

Watering the Floors. See *Floors of the Gallery.*

Wellesley, Rev. Henry, D.D. (Analysis of his Evidence.)—Has been familiar with the pictures in the National Gallery since they were in Mr. Angerstein's collection, 9437—— Opinion that they have gradually deteriorated since that time, 9438——Such deterioration

Report, 1852-53—*continued.*

Wellesley, Rev. Henry, D.D. (Analysis of his Evidence)—*continued.*

is due to the London atmosphere, the smoke, and the cleanings to which they have been subjected, 9439-9442——The general effect only, and not the actual surface of the pictures, has been injured by the cleaning process; possibility of some of the glazings having been removed, 9443-9464——Approval of the projected removal of the gallery to Kensington, 9465-9470——Objections to the use of mastic varnish, as tending to produce a chill on the pictures, 9471-9483.

Further reference to the cleaning in the gallery, as being chiefly injudicious, from its having removed that peculiar mellowness of tone which was induced by time, and which it will require many years to restore, 9484-9487——Necessity for the occasional restoration of pictures, 9488-9492——Frequent restorations existing in the pictures in the National Gallery, and in this country generally, 9493-9496——Extent to which restorations have been practised by the French at different periods since the close of the last century, 9497-9509.

Suggestions with respect to the future management of the gallery; defects of the present system, 9510 *et seq.*——Objections to the Board of Trustees as being an unpaid and irresponsible body; mistaken purchases effected by them, 9510, 9511. 9541 *et seq.*——Recommended substitution, in lieu thereof, of a director, in whom the chief management and responsibility and very full powers should be vested, and who should have control over the heads of the several departments, 9512-9540. 9566. 9578. 9617-9621——The director should have as nearly as possible the same powers and duties as directors-general in foreign galleries, 9524-9540. 9578. 9617. 9621.

Consideration of the manner in which purchases have been made under the present system; charges of omission and commission brought against the trustees; anticipated improvement under the proposed system of one director, 9541-9614. 9618-9639. 9659-9661——How far any control should be exercised by Parliament over the director in the class of purchases made by him; his instructions should be general, and he should act on his own judgment as much as possible, 9618-9620. 9630-9639——Probability of persons being easily found who are competent to undertake the proposed directorship; the appointment should not be restricted to artists, or any particular class, 9640-9642.

Approval of the principle of combining the fine arts departments of the British Museum with the national pictures; objection to the combination on the score of the expense and practical difficulty attending it, 9643-9652——Judicious manner in which purchases have been made for the department of prints and drawings in the Museum; this is attributable to the discretion exercised by Mr. Carpenter, as director, rather than to the management of the trustees, 9653-9658. 9662-9666.

Westmacott, Sir Richard. (Analysis of his Evidence.)—Has been employed for nearly 40 years in the arrangement of the marbles at the British Museum, 8988, 8989——Effect of the smoke of London in discolouring the Elgin Marbles, 8990. 8992, 8993——Occasional washing with water does not restore their original whiteness, 8990-8992——Objection to their being covered with glass, 8994-8999——Desirability of the art collections in the Museum being combined in one building with the pictures in the National Gallery, 9000-9009. 9017-9022——Students in painting as well as in sculpture are first taught by means of plaster casts, 9000-9004——The bronzes in the Museum should not be separated from the sculptures, 9006, 9007.

Insufficiency of the present space at the Museum, even supposing the central quadrangle to be covered over and devoted to antiquities, 9010-9016. 9029, 9030——Doubts as to the propriety of the medals being removed from the Museum and combined with the sculptures in the proposed collections of art, 9018-9021——Expediency of removing the National Gallery to Kensington for the sake of available space; injuries at present inflicted on the pictures by the London smoke, 9023-9025. 9028, 9029. 9072, 9073. 9076——Advantage of a like removal of the sculptures for similar reasons, 9024. 9028, 9029. 9074-9076——Opinion that a removal of the sculptures and paintings to Kensington would be no inconvenience to the students, 9026, 9027. 9069-9072.

Excellent effects of the Museum in educating the people in works of art, 9030, 9031——Future career of the students at the Museum adverted to, 9032-9036——Advantages of students in painting being first instructed from plaster casts rather than from the statues themselves, 9037-9046——How far the accommodation in the Museum may be defective for those students who require to remain there during the day, 9047-9049——The juxtaposition of the Nineveh sculptures to the Elgin Marbles is not likely at any time to weaken or prejudice the public taste for the latter, which are the most admirable things in the world, 9050-9059.

Desirability of students in a school of design studying from the antique in sculpture by means of casts, 9060, 9061——Opinion that the prints in the Museum should be combined with the sculptures and paintings, 9062-9064——Advantage of there being a library attached to the projected combined departments, 9065-9068——Objection to a removal of the Elgin Marbles to Hampton Court, as being too far from London; they may be removed to Kensington with great advantage, 9074-9076.

Whitehall

Report, 1852–53—*continued.*

Whitehall Chapel, Pictures. See *Rubens,* VIII.

White Lead. Tendency of this pigment to grow transparent with time; consequence therefore, that to a picture painted on a dark ground, time does harm rather than good, *Sir C. Eastlake* 4559.

William IV., King. Expressions made use of by his late Majesty in placing the keys of the portion of the building appropriated to the Royal Academy in the hands of Sir M. Shee, *Sir C. Eastlake* 4662.

Wilson, Mr. Andrew. Mode adopted by Mr. Wilson for keeping his pictures clean, adverted to, *Rep.* xiv——Practice adopted by Mr. Wilson, of putting new varnish on to facilitate the removal of the old, or if a picture were not varnished enough, of putting some on for protection; he always toned after cleaning, and took great care to prevent the necessity of re-cleaning, *Sir T. Sebright* 3449–3457. 3479–3491——The Peace and War of Rubens was restored under his direction in 1802, *Sir C. Eastlake* 4484.

Windsor Castle. Statement of the number of visitors to the Duke of Northumberland's collections at Northumberland House and Sion House; and also to the Bridgewater Gallery and Windsor Castle, in the six summer months of 1851, when the Great Exhibition was open, *App.* 829.

Witnesses Examined before the Committee. Remarks on Mr. Morris Moore's statement, that the evidence given by almost every witness is worthless, *Rep.* x.

Worthless character of the evidence hitherto given by the witnesses, excepting Mr. Nieuwenhuys, *Moore* 2390. 2396——Past career and studies of witness in the cause of art adverted to as being somewhat explanatory of the present confident assertion of his opinions, *ib.* 9964–9967——The evidence of mere students, who may be favourable to the removal of the gallery, is not entitled to especial consideration, *ib.* 10021–10025.

Woman taken in Adultery, The. See *Rembrandt.*

Wood. See *Canvas. Panel Pictures.*

Woodburn Collection. Negotiation entertained with the late Mr. Samuel Woodburn for the purchase of his collection; it was broken off on account of the inadequacy of the funds; it was a great loss, *Lord Aberdeen* 5343, 5344*——Mr. Woodburn's collection is still unsold, *Christie* 5738——Refusal by the trustees of Mr. Woodburn's offer of a collection of drawings, *Sir C. Eastlake* 5993–6000——Recent purchase of a Giorgione formerly in his possession; amount of the purchase-money; former history of the picture, &c., *ib.* 7028–7037.

Woodburn, Mr. W. Mr. William Woodburn is one of the best connoisseurs in the country, *Sir C. Eastlake* 6223–6225.

See also *Manfrini Collection. Soult Collection.*

Working Classes. Inconvenience to the lower orders in attending the gallery if removed to Kensington, *Coningham* 7013–7017; *Hurlstone* 7136–7153——The removal of the gallery to Kensington would be exceedingly injurious and imprudent, more especially as regards the working classes, *Foggo* 7390–7392——Positive dislike expressed by the working classes in different parts of the metropolis to the removal of the gallery, *ib.* 7391, 7392.

Opinion that the Kensington Gore site will be very accessible to the humbler classes, and that their attendance will not be affected by the removal of the National Gallery, &c., thither, *Bowring* 8626 *et seq.*——It would be more convenient and advantageous to the working classes if the gallery were at Kensington instead of on the present site, *T. Cubitt* 8793–8802.

Z.

Zurbaran. Condemnation of the purchase of the Monk (by Zurbaran) as being a picture produced on utterly false principles, and altogether worthless to the student, &c., as a work of art, *Moore* 9806. 9816–9833.
